Il Clearco (favola musicale, L. Cortesi), carn. 1661, lib pubd in Rome, music lost

cantatas

all for soprano and continuo

Affe, di mia vita mostrandoti, *I-Rc*; Amo troppo e non s'acqueta, *Rdp*; Begl'occhi, merce, ed. A. Parisotti, *Arie antiche*, iii (Milan, 1900); Begl'occhi, scoccate saette, *Rvat*; Bella cosa è l'inconstanza, *Nc*; Cangia, mio cor cangia pensiero, *Rc*; Cessate, o pensieri, d'affligermi, *MOe*; Che musica è questa, *Fc*; Che sarà, con tanti guai, *B-Bc*; Che volete ch'io canti, *I-Nc* [quotes the opening recitative of L. Rossi's Un ferito cavalier]

Che volete più da me, *B-Bc*; Chi ama che fa, *I-Nc*; Chi credete ch'havesse poi il vanto, *Nc*; Compatitemi, Zerbina, se disprezzo i vostri affetti, *Nc*; Cor mio, tu ti lamenti, *F-Pthibault*; Costanza, mio core, *I-Rc*; Crudele che chiamarti crudele, *Nc*; Dal suo bel sol lontano, *Nc*; Doppo che la magia di prieghi, *Rc*; Dove frondoso il bosco, *Nc*

Ecce torna a penar per te, *Nc*; E tu parti, mia vita, *Nc*; E tu resti, mia vita, *B-Bc*; E ve lo credereste che senza, *Bc*; Filla mia, tue luci belle, *I-Nc*; Il dolore ch'ogn hor mi tormenta, *Fc*; Il nocchier che torna al lido, *A-Wn*; In che da il cercar, *I-Rn*; In mare di sdegno il legno, *Rc*; Io non lo so, son tanto fuor di me, *B-Bc*; Io per me cosi l'intendo, *Bc*; Io vo morir per te, *Bc*

La mia dama arcibizzarra, *I-Fc*; Libertà, grida mio core, *Rc*; Maledetto sia quel dì, *B-Bc*; Manco male che nel mio cor, *I-Nc*; Mentre in seno a flutti, *Nc*; Mi fa rider la speranza, *Nc*; Misero chi si fida, *Rn*, excerpts ed. L. Torchi, *Eleganti canzoni* (Milan, 1894); Misero e con quai larve, *Rc*

Nel'atlantico Dori, *Nc*; No, che mai lo dirò (C.P. Mandosi), *F-Pthibault*; No, che non basta, no, *B-Bc*; Non diamo in barzellette, *GB-Och*; Non la finite mai, *B-Bc*; Non la saprò ben dire, *Bc*; Non si da il caso mai, *Bc*; Non si può vivere con questi amanti, *Bc*; Non voglio che alberghi nel core, *I-Nc*; ?Nova Cinthia africana, *Nc*

Occhi, lingue di bellezza, *Rc*; Ogni cosa è variabile, *Nc*; Oh, che bizzarro humor, *A-Wn*; O quante punture mi sento, *B-Bc*; O questa è gustosa, *Bc*; Pensieri, che dite, speranza mi chiama, *I-Rvat*; Perche aprite col bel riso, *Rc*; Quanto è meglio esser suo, *MOe*

Sappia o pianga ogni core, *Nc*; Se fosse cosi conforme, *Bc*; Sereno per me non è più, *Rc*; Su le spiaggie Tirrene, *Rvat*; Udite, o degli amanti, *Nc*; Una nova è giunta, amanti, *Rdp*; Un impazzido ciglio, un sguardo ardito, *Nc*; Un pensier dal cor m'è uscito, *Rvat*, ed. F. Vatielli, *Antiche cantate d'amore* (Bologna, 1920); Vezzosa fanciulla ch'amore, *Rc*; Voglio parlar con voi, *Nc*

other works

A chi vive, ogn'hor contento, S, S, bc, *I-Nc*; Cor mio, ti credi tu, S, S, B, bc, *P-La*; Nel'alto rigore d'un volto, S, S, bc, *I-Rc*; O bell'onde fortunate, S, S, bc, *Nc*; Son disperato, abbandonato, S, S, bc, *GB-Lbl*; Sospiri, chi sete, messaggi del core, S, S, bc, *I-Nc*

Madrigals: Madonna udite come questa, A, T, B, bc; E cosi pur languendo me'n vo, A, T, B, bc: both in 1653[4]

doubtful works

Che ti resta, o mio core, *B-Bc*; Con amor si pugna invano, *I-Nc*; Crederesti, o mio tesoro, *B-Bc*; Del bel Serbeto a i lidi, *I-Nc*; Due pensieri ho nel pensiero, *B-Bc*; E quando ve n'andate, speranze, ed. A. Parisotti, *Arie antiche*, ii (Milan, 1900), attrib. C. Caproli in *GB-Ouf*; Mia fortuna trova quiete, *I-Nc*; O quanto più bella saresti, *B-Bc*; Quando sarà quel dì, *I-Rc*; Quanto vi costerà, occhi, *B-Bc*; Son fanciulla che d'amore, *I-Nc*

ELEANOR CALUORI/JEAN LIONNET

Tendre, tendrement

(Fr.: 'tender', 'tenderly').

A designation often found in French Baroque music. François Couperin headed over 30 pieces *tendrement*, sometimes with the qualification *sans lenteur*. Rousseau (1768) defined it in terms of the Italian Amoroso.

See also Tempo and expression marks.

Tenducci, Giusto Ferdinando

(*b* Siena, *c*1735; *d* Genoa, 25 Jan 1790). Italian soprano castrato and composer. He made his début in Cagliari in 1750, during the wedding festivities of the Duke of Savoy. After appearing both in minor roles and in comic opera in Milan, Naples, Venice, Dresden and Munich, in 1758 he went to London, where he spent two seasons at the King's Theatre and sang in Cocchi's *Ciro riconosciuto* as secondo uomo. His extravagant living led to a short spell in a debtors' prison in 1760, but in 1762 he created Arbaces in Arne's *Artaxerxes*, subsequently appearing in the première of J.C. Bach's *Adriano in Siria* (1765). He visited Dublin in 1765 and the following year (despite some scandal) married Dora Maunsell, the daughter of a Dublin lawyer. Her relations were outraged; Tenducci was jailed and his wife kidnapped, though Casanova claimed the couple had two children. Tenducci spent a year or more in Edinburgh before returning in 1770 to London, where he sang in a pasticcio of Gluck's *Orfeo* and was responsible for popularizing 'Che farò'. Impressed with 'Scotch' songs, he persuaded his friend J.C. Bach to arrange some for insertion into English operas, a practice which was then widely adopted by other composers, notably Linley in *The Duenna*. Tenducci left England and returned to Italy until 1776 (repeating *Orfeo* in Florence), and then appeared in London (1777–85), Paris (1777) and Dublin (1783–4). Smollett described his voice as particularly lyrical and the *ABCDario Musico* (Bath, 1780) compared him with Gioacchino Conti; he was widely known as another Senesino. He adapted several operas, but none was very successful; his singing tutor *Instruction of Mr Tenducci to his Scholars* (London, 1782) is of more lasting value.

WORKS

operas

all first performed in Dublin

Amintas (R. Rolt, after P. Metastasio), July 1765 [all-sung adaptation of G. Rush: The Royal Shepherd]; with addns by S. Arnold, London, CG, 15 Dec 1769, Act 2 (London, 1769)
The Revenge of Athridates, 1767 [trans. and adaptation of D. Perez: Il Farnace]; Favourite Songs (London, 1767)
Il castello d'Andalusia, 1783 [? adaptation of Arnold: The Castle of Andalusia]
The Campaign (afterpiece with spoken dialogue, Jephson), 1784; arr. W. Shield, London, CG, 1785

other works

Single songs, incl. 1 for ballad op Love at First Sight (1763)
6 English Songs 'Sung at Ranelagh' (London, 1763)
Lessons for the Harpsichord or Piano & Forte (Edinburgh, 1768)
6 French Songs (London, *c*1770)
A Collection of Favorite Airs in Score (London, *c*1775)
6 Italian Songs 'perform'd at Mr Bach's Concert' (London, 1778)
? Overture, lost

Instruction of Mr Tenducci to his Scholars (London, 1782; with portrait)

ROGER FISKE, DALE E. MONSON

Tenebrae

(Lat.: 'darkness').

A name commonly applied to the combined Offices of Matins and Lauds on the Thursday, Friday and Saturday of Holy Week. The service is marked by the extinction of 15 candles, one after each psalm. At the end of the canticle *Benedictus Dominus* all the candles are extinguished and what follows is said or sung 'in tenebris'. The musically significant parts of the service are the first three of the nine lessons of Matins, taken from the *Lamentations* of Jeremiah, and the responsories that follow each lesson. The plainchant of the Lamentations is an elaborated psalm tone, and there is a continuous history of polyphonic settings from the 15th century to the early 19th (sometimes under different titles, as in Couperin's *Leçons de ténèbres* or, in a later, non-liturgical context, Stravinsky's *Threni*; *see* Lamentations). The responsories were set with particular frequency after the Council of Trent (1545–63; *see* Responsory, §5). Other texts from Tenebrae set polyphonically include the Benedictus (ii) and the Miserere from Lauds. These two items, alone of the four psalms and two canticles of Lauds, are unchanged on each of the three days, which is no doubt why they alone were set. Composers of Tenebrae music (apart from the Lamentations) include G.M. Asola, Gesualdo, Jacob Handl, Lassus, Morales, Pomponio Nenna, Palestrina and Victoria. Although the Lamentations remained popular as a Baroque form, the setting of other Holy Week texts appears to have been largely confined to the Counter-Reformation.

JOHN CALDWELL

Teneramente

(It.: 'tenderly').

A direction indicating a style of performance rather more sentimental than that called for by *dolce* (sweet), but on the whole having much the same meaning and use in music. A good instance of the distinction between the terms is found in the second movement of Beethoven's Piano Sonata in E minor op.90, where the subject, at its first entry labelled *dolce*, is subsequently directed to be played *teneramente*, it being evidently intended that the music should become slightly more impassioned as it goes on. *Con tenerezza* ('with tenderness') is also found.

See also Tempo and expression marks.

GEORGE GROVE/R

Teng, Teresa.

See Deng Lijun.

Teniers, Guillaume [Willem] Albert

(*b* Leuven, bap. 20 April 1748; *d* Amsterdam, 12 Feb 1820). Flemish violinist and composer. The great-grandson of the painter David Teniers, he travelled for many years in the Netherlands, England and France as a violinist in theatre orchestras. In 1775 and 1776 he was a first violinist at the Théâtre des Spectacles at Brussels, and in 1780 he was a first violinist and *maître des simphonies* at The Hague opera. From 1792 he was a member of the Théâtre de la Monnaie orchestra in Brussels. After an unsuccessful attempt to gain a place at the court he joined a travelling opera company. By 1800 he was a member of the Théâtre Français orchestra in Hamburg; he finally settled in Amsterdam as a music teacher and first violinist at the Théâtre Français. His compositions are primarily for the violin.

WORKS

3 concs., vn, orch, op.1 (Amsterdam, n.d.)
3 sonates, va, va acc., op.6 (Hamburg, *c*1790)
Variations: 12 for vn, va acc., op.7 (Amsterdam, n.d.); Aria variée de l'opéra Léonce [?Isouard], 2 vn, pubd; 6 … sur la contredanse Hoep Marianetie, 2 vn, pubd; 6 … sur l'angloïse de Mlle Furioso la cadette, 2 vn, pubd
Andante avec le Roxolane de … [J.] Haydn, arr. vn, va (Berlin, n.d.)

JACQUES VAN DEUN

Tenney, James (Carl)

(*b* Silver City, NM, 10 Aug 1934). American composer and theorist. He studied the piano with Eduard Steuermann at the Juilliard School of Music and composition with Lionel Nowak at Bennington College (BA 1958). He went on to study at the University of Illinois (MMus 1961) with Kenneth Gaburo (composition) and Lejaren Hiller (information theory and electronic music). He also worked briefly with Partch. He has taught at the California Institute of the Arts, the University of California, Santa Cruz, and York University, Toronto (1976–).

After graduating from the University of Illinois, Tenney moved to New York where he became an important member of the musical avant garde. He co-founded and directed the Tone Roads Ensemble (1963–70), performed with the Steve Reich and Philip Glass ensembles, and worked in close association with a wide variety of musicians and artists including Stan Brakhage, John Cage, Carl Ruggles, Edgard Varèse, Morton Feldman, Max Neuhaus and others. Tone Roads became an important force in the Charles Ives renaissance, and also gave influential performances of works by Cage, Feldman, Ruggles and others. Between 1961 and 1964 Tenney engaged in pioneering research at Bell Telephone Laboratories, becoming one of the first composers to work extensively in the area of digital synthesis. His research in acoustics, psychoacoustics and music cognition has informed his compositional approach, particularly his formal structures, which respond to theories on the phenomenological bases of music perception. Other interests include experimental intonation (which he calls 'harmonic space') and computer-assisted composition.

LARRY POLANSKY

Tennstedt, Klaus

(*b* Merseburg, 6 June 1926; *d* Kiel, 11 Jan 1998). German conductor. After studies with his violinist father (Hermann Tennstedt), he studied the violin and piano at the Leipzig Hochschule für Musik. In 1948 he was appointed leader of the orchestra of the Halle Stadttheater, but a growth between two fingers of his left hand forced him to turn to the piano and conducting. He made his conducting début in Halle in 1952 and from 1954 to 1957 worked as first Kapellmeister at the Chemnitz Opera. While holding appointments as Generalmusikdirektor for the Dresden Staatsoper (1958–62) and then the Mecklenburg Staatstheater of Schwerin (1962–71), he also appeared as guest conductor of the Leipzig Gewandhaus and Dresden Staatskapelle orchestras and other orchestras in the Soviet bloc. A concert in Sweden gave him the chance to defect in 1971. Settling there, he worked at Göteborg's Stora Teater, for the Swedish RSO, and from 1972 to 1976 as Generalmusikdirektor of the Kiel Opera.

The turning-point in Tennstedt's career came in 1974. After hearing him conduct Bruckner's Seventh Symphony, Walter Homburger invited him to the Toronto SO for concerts that garnered stunning reviews; shortly thereafter he appeared with the Boston SO in a performance of Bruckner's Eighth Symphony that attracted international attention. He accepted invitations from Chicago, New York, Cleveland, Philadelphia and elsewhere, making his British début with the LSO in 1976. This led to equal acclaim in Europe and concerts with the Orchestre de Paris, the Berlin PO and the Vienna PO. He was the first German to conduct the Israel PO (1978) and became the principal conductor of the NDR SO in Hamburg

(1979–81), and principal guest conductor at the Minnesota Orchestra (1979–83) and the LPO (1980–83). As the LPO's music director from 1983 to 1987 he led major overseas tours and made many recordings. In 1983 he made his Metropolitan début in *Fidelio*. However, success came at a terrible personal cost. His physical and emotional health began to fail, cancellations abounded, and periods of retreat and recuperation were ordered. He returned from two hip replacements and radiation for throat cancer in March 1986 to give overwhelming performances of Mahler and Bruckner, but after collapsing at an LPO rehearsal in 1987 he resigned within the hour. He was then made the orchestra's conductor laureate, appearing occasionally until his retirement in 1994.

Although emotionally fragile, Tennstedt was an uncommonly charismatic musician, bringing to his work a rare urgency and intensity, and an impressive command both of detail and the larger form. Like Furtwängler, whom he deeply admired, he was both praised and criticized for his extreme tempo fluctuations and for interpretations which valued spontaneity and breadth of line over exactitude. His greatest recorded legacy remains his cycle of Mahler symphonies with the LPO.

<div align="right">CHARLES BARBER, JOSÉ BOWEN</div>

Tenor

(from Lat. *tenere*: 'to hold').

In polyphony between about 1250 and 1500, the structurally fundamental (or 'holding') voice, vocal or instrumental; by the 15th century it came to signify the male voice that sang such parts, and later it was applied not only to singers covering roughly *c* (called Tenor C) to *a'* but also instrumental parts occupying approximately that register (*see* Tenor violin, for example). In some 18th-century sources 'tenor' means 'viola'. In Change ringing, the 'tenor' is the largest and deepest bell in a peal.

1. Early uses of the word.
2. The word in early polyphony.
3. The voice up to *c*1600.
4. 1600–1800.
5. 19th century.

Tenor

1. Early uses of the word.

The word is found only once in Cicero but more often in Virgil, Livy and later writers, with the meaning of 'a holding fast' and thence of 'an uninterrupted course' or 'a career'. Nor do its earlier musical uses have any particular consistency. But with the exception of Cassiodorus, who used it for string tension or pitch, and Guido, whose several uses include one

where it apparently means the duration of a note, most of the early music theorists used the word only in discussions of chant modality.

Even there, however, usage varied from writer to writer and even from passage to passage. For Jacobus of Liège, *tenor* was the final or key note of a mode, whereas for Aurelian of Réôme 400 years earlier it seems to have been one reciting-note, more commonly called *tuba* and in modern discussions of modality often called the dominant. Yet another meaning, rather more common, is that of 'melodic formula': Aurelian, again, seems to have used *tenor* for a psalm tone, and many theorists up to the 16th century used it for the termination formula of a psalm tone. Indeed, as late as 1701, T.B. Janovka began his definition of tenor: 'in musica alicuius melodiae (ut Ariae, Sarabandae &c) significat processum, & quendam fluxum' ('in melodious music it means [melodic] progression or turn of phrase'); he then proceeded to define the word in terms of the high male voice.

Tenor

2. The word in early polyphony.

In medieval and Renaissance polyphony the counterpoint in all other voices was normally calculated in relation to the structurally fundamental tenor: if one voice was to proceed in longer note values that voice would be the tenor; if one voice was to carry a borrowed Cantus firmus that voice would nearly always be the tenor before 1400 and often thereafter; all writings about counterpoint were concerned primarily with the relation of the discanting voice (discantus) to the tenor; and during the 15th century nearly all polyphony retained that firm 'discant' relationship between discantus and tenor even when there were several other voices, both above and below them.

Before 1300 such voices were labelled 'tenor' in the sources only when they were not taken from chants or when the chant was not known; and about 1300 Johannes de Grocheio specifically described tenors as those fundamental voices in polyphony that had not been taken from chant. But in 14th-century sources any such voice could be labelled 'tenor', and in the 15th century practically all such voices could be so labelled. In the 16th century the hegemony of the tenor-discant pair broke down as fully imitative polyphony developed its own requirements and rules; but it was still common to give the name 'tenor' to any voice carrying a cantus firmus, and there were several forms in which the old rules continued to hold sway.

The long-held assumption that 13th-century musicians called the bottom line of polyphony a 'tenor' (from Lat. *tenere*: 'to hold') because it 'held' the pre-existing chant melody has been called in question (Hoffmann-Axthelm, §II, 1). It was based on a passage in Johannes de Garlandia's *De mensurabili musica* (second quarter of the 13th century), where in reference to the two lines of polyphony, 'primus cantus' and 'secundus cantus', it is said that the 'tenor' part is the one called 'primus cantus' ('a parte tenoris, qui dicitur primus cantus'). The true meaning of this is probably that the first line the composer wrote in polyphony was called the tenor because it 'held up' or supported the harmonic structure of the counterpoint. Such is the meaning conveyed by two later treatises, Franco of Cologne's *Ars cantus mensurabilis* (*c*1250) and an anonymous treatise

of about 30 years later from St Emmeram; the latter equates 'tenor' with the concept of a foundation, or 'fundamentum'. In view of the fact that almost all names for the voices in early polyphony derive from the actual process of composing music (cf the early 14th-century *contra-tenor*, a line composed against a tenor; or the late 15th-century *basis-tenor*, a tenor that acts as a foundation), this explanation of the original meaning of the word 'tenor' is entirely plausible.

In the late 14th and early 15th centuries any tenor line in polyphony was almost invariably paired with a Contratenor part. These two lines, overlapping in range, shared the functions of providing both a harmonic foundation and a harmonizing part. (The contratenor, in fact, was occasionally called a 'concordans', a word that lingered in French usage well into the 19th century as a term for the baritone voice.) With the late 15th-century progression from three- to four-voice composition a *contratenor bassus* was introduced, which assumed the role of providing a harmonic foundation. Tenor and contratenor then became more clearly distinguished from one another, and the old contratenor became known as the Contratenor altus. It tended to lie slightly higher in range than the tenor – with the result that the word 'tenor' came more and more to refer to a vocal range.

In the late 14th and 15th centuries the French word 'tenoriste', or 'tenoristre', and the Italian 'tenorista' were used for a highly skilled singer able to perform the lower lines of polyphony, contratenor as well as tenor. The word tended to be reserved, however, as a title for the most eminent singers, some of whom appear to have functioned also as choir directors. In the late 15th century, as four-voice polyphony became the norm, some singers were given such titles as 'tenorista basso', 'controriste', 'contro alto' or simply 'contro'. From this confusion of terminology, however, there gradually emerged the word 'tenore', and this term became clearly fixed with the publication of partbooks.

Tenor

3. The voice up to *c*1600.

Nothing certain can be said about the voice ranges of early monophonic music since the available notation is not related to a fixed pitch. For sacred polyphony of the 15th century, however, there are features that make it possible to guess at the normal performing pitch. The arguments can be summarized as follows. Three-voice sacred polyphony before 1450 almost always has two voices in the same range (called tenor and contratenor) with one voice in a range roughly a 5th higher. Sometimes the written range goes down only to *f* but it varies and can go as low as *G*. But the relative ranges of the voices remain the same, the three voices covering a total range of just over two octaves. From this Bowers and others (see Boorman, 1983) have drawn the conclusion that the music, like plainchant, was not notated at a fixed pitch-standard and that all such pieces would normally have sounded in the same range. Evidently this music was sung only by grown men, so the difficult question is whether that range was low (with two bass-baritones and a tenor) or higher (with two tenors and a falsettist or at least a man singing in a very high range). Two considerations favour the latter conclusion: first, that when four-voice music

became routine for sacred polyphony the fourth voice seems to have been added to the bottom of the texture, the other three retaining the relationship they had in three-voice music (Bowers in Boorman, 1983); second, there are three pieces from the middle years of the 15th century that specify the alternation of boys with men on the top line and, moreover, there is documentation from 1470–1530 of the choirmaster apparently doubling the boys' lines (Fallows in Boorman, 1983). It therefore seems very likely that most polyphony before about 1450 operated in a range an octave above and below middle C, thus that the top line was sung in a falsetto or *haute-contre* voice and that the other lines were sung by what we would call tenors (though this is to avoid the question of voice production techniques). That also means that a very large proportion of polyphonic singers in the Middle Ages used the tenor register. Projecting those hypotheses backwards, they would seem to suggest that the earliest substantial polyphonic repertories of the 12th and 13th centuries, with a range of about a 12th, would have been sung in the tenor register, surely a suitably exciting sound for the florid lines of early organum.

In the 16th century, when pitch-standards are slightly easier to establish, there seems clearer evidence that the tenor voice continued in favour. The solo vocal repertory with instrumental accompaniment was published with the voice part mostly in either the treble or the soprano clef. Although these clefs were the common property of all high voices, male or female (the tenor clef being reserved for tenor voice in ensembles), the texts suggest that the bulk of the Renaissance lute-song repertory was most appropriate for male singers (tenors). In the second half of the century the art of vocal ornamentation was cultivated to a high degree. Although treatises make it clear that ornamentation was not limited to any particular voice range, most of the important writers were themselves tenors. Perhaps the most influential was Giulio Caccini, whose *Le nuove musiche* (1601/2) contained the most elaborate description of this virtuoso art 'which admits of no mediocrity'; ornamentation is even more explicitly notated in his *Nuove musiche e nuova maniera di scriverle* (1614). Caccini became the first tenor to enjoy an international reputation as a soloist.

The leading male roles in the earliest operas were also written for tenor: the role of Orpheus in the *Euridice* operas (1600) of Peri and Caccini is for tenor, as is Monteverdi's in his *Orfeo* (1607), where the role was probably sung by Francesco Rasi, tenor, composer, and student of Caccini.

Tenor

4. 1600–1800.

(i) Italian opera.

The title role in Monteverdi's *Il ritorno d'Ulisse in patria* (1639–40) is also for tenor, but the principal male part of his *L'incoronazione di Poppea* (1643), that of Nero, is for castrato, as are other secondary roles. Several operas by Francesco Cavalli have principal parts for tenors (*Egisto*, 1643, and *Ormindo*, 1644, for example), but during the remainder of the century heroic roles and those of lovers were increasingly assigned to castratos, and tenors came to be allotted only small or comic roles, as servants, grotesques (for example, Irus in *Il ritorno d'Ulisse*) or even, in travesty, old women, especially nurses, which roles tenors often interchanged with

contraltos (*see* Travesty). By and large, Italian cantata traditions followed the lead set by opera; of Carissimi's approximately 150 cantatas for voice and continuo, none are for tenor solo, and of those for more than one voice, only three include tenor.

With the operas of Alessandro Scarlatti, the tenor voice begins to see a revival. Scarlatti's early pastoral *Gli equivoci nel sembiante* (1679) has only four characters, two pairs of lovers, played by two sopranos and two tenors, but that is unusual. In most of Scarlatti's operas, the tenor remains subordinate to the castrato, but plays a serious role portraying a neighbouring or opposing king, a prince or a military commander. In *Tigrane* (1715), for example, the tenor plays Doraspe, king of Damascus (sung by Gaetano Borghi in 1715 and Gaetano Mossi in 1716); this part is assigned four arias in comparison with 11 for the castrato title role. In *Marco Attilio Regolo* (1719), the tenor part of Santippo, a Spartan commander, was played by Annibale Pio Fabri, one of the most renowned tenors of the period; Burney wrote of him that 'the merit of this tenor was often sufficient in Italy to supply the want of it in the principal soprano'. Fabri sang for two seasons with Handel in London, 1729–31.

Handel wrote for several tenors of distinction. Francesco Borosini, the son of an Italian tenor who had performed in operas by Steffani and Caldara, went to London in 1724 and sang Handel's first important operatic tenor role, Bajazet in *Tamerlano* (1724), a role he had earlier sung in a setting of the same story by Francesco Gasparini; he also created Grimoaldo (*Rodelinda*, 1725). Fabri created the roles of Berengario (*Lotario*, 1729), Emilio (*Partenope*, 1730) and Alexander (*Poro*, 1731). The English tenor John Beard sang in ten Handel operas, creating roles in several of them, including Lurcanio in *Ariodante* and Oronte in *Alcina* (both 1735); he later appeared in English operas, notably in works by J.C. Smith and in Arne's *Artaxerxes* (1762). Handel also adapted a number of roles in revivals for tenor.

(ii) French, German and English traditions.

At the beginning of the 17th century, the music of France, Germany and England was strongly influenced by Italian traditions. In winter and spring 1604–5, Caccini, residing at the French court, inspired a vogue for Italian singing that can be traced through the French tenor and singing teacher Pierre de Niert to his student, the tenor Bénigne de Bacilly, whose treatise *Remarques curieuses sur l'art de bien chanter* (1668) remains, with Caccini's, one of the most important sources on singing in the period. The five-part French motets of the late 17th and 18th centuries typically contained three tenor parts (*haute-taille*, Taille, and Basse-taille) between the soprano (Dessus) and the bass. With the development of French opera under Lully, however, the solo tenor voice was little valued. Nor did the French ever favour the castrato; they developed instead the Haute-contre, a very high tenor voice similar in range to the English Countertenor or the alto castrato. Although Rousseau (*Dictionnaire*, 1768) states that the tenor voice ('taille') 'is most convenient to the common voice of man', he allows that 'we hardly make use of any tenor in French operas'. The contrary assertion of Le Cerf de la Viéville (*Comparaison de la musique italienne et de la musique françoise*, 1704–6), that 'a third of the leading roles in the

Operas of Lully are those of ordinary tenors' ['simple tailles'], is not supported by examination of the scores themselves (unless he includes the *haute-contre* as a subspecies of tenor). In Lully's *Atys* (1676), the title role and three others are assigned to *haute-contre*, five to bass or baritone and only one (Phantase, one of three sons of the god of Sleep) to tenor. Similarly, in Rameau's *Hippolyte et Araicie* (1733), the role of Hippolytus and three others are for *haute-contre* and three for bass or baritone; only the solo role of Mercury and one of a trio of voices representing the three fates are assigned to tenor. When Gluck's Viennese operas calling for castrato soloists were arranged for Paris he rewrote these parts for *haute-contre*.

In Germany, the tenor voice fared better, especially as a solo voice in sacred music. Of the 20 solo motets in Schütz's *Symphoniae sacrae* op.6 (1629), the tenor is soloist, or part of a duet or trio with other male voices, in eight, although the tenor voice is less prominent in his second and especially his third volume of solo motets (1647, 1650). Of Buxtehude's 114 sacred cantatas, three are for tenor solo, but 19 are for soprano (two are for soprano or tenor). Bach's only sacred cantata for tenor solo is *Ich armer Mensch* (1726). However, these dwindling numbers tell only part of the story. Schütz, Buxtehude and Bach all continued to write for tenor solo in larger concerted works, such as in Bach's cantatas and B minor Mass, and in Passion music the tenor voice became identified with the important role of the *testa* or Evangelist, a function still evident in the solo tenor part of Handel's *Messiah*.

German opera also embraced the tenor voice. Johann Mattheson, theorist and composer, was himself a tenor who sang more than 60 principal roles. He wrote leading roles for himself, such as Antony in *Cleopatra* (1704), and Handel composed the leading male roles in his first two Hamburg operas for Mattheson (Fernando in *Almira*, 1704, and the title role of *Nero*, 1705). Of the five male roles in Handel's *Almira*, three are for tenor and two for bass. Telemann's comic opera *Der geduldige Socrates* (1721) has nine male roles, six for tenor.

In England, the solo tenor voice was regularly used in sacred music, court odes and theatre music, as Purcell's compositions demonstrate. Handel inherited this tradition. In one of his first compositions for the English court, the Ode for the birthday of Queen Anne (1713), Handel wrote solo parts for Richard Elford, a tenor for whom John Blow and John Eccles had written. For an early English patron, James Brydges (later Duke of Chandos), Handel composed a set of anthems (1716–17) for soprano, three tenors and bass, to use the forces available at Brydges' residence. His first English dramatic work, *Acis and Galatea*, and his first English oratorio, *Esther*, both for Brydges (1718), use the same set of voices.

In Handel's late oratorios, the tenor assumed the title role in *Samson* (1743), *Belshazzar* (1745), *Judas Maccabaeus* (1747) and *Jephtha* (1752). These roles, and many other leading parts, were created by John Beard, who had sung in Handel's late operas; he also appeared in English opera and ballad opera (one of his most popular roles was Macheath in *The Beggar's Opera*). His competitor was Thomas Lowe, said by Burney to have 'the finest tenor voice I ever heard'; Lowe's lack of application,

however, made him a lesser singer overall. Handel wrote the title role in *Joshua* (1748) for him.

(iii) Mozart's tenors.

Mozart's use of tenors follows previous traditions: the castrato played the romantic hero in his serious Italian operas and the tenor took the secondary male role, of a king or military commander (even when the title role, as in *Mitridate*, *Lucio Silla*, *Idomeneo* and *La clemenza di Tito*); in German Singspiels he wrote romantic leading roles for tenor. These conventions are followed not only in Mozart's earliest but also his latest operas: in the Singspiel *Bastien und Bastienne* (1768), the young lovers are tenor and soprano, as they are in *Die Zauberflöte* (1791); and in *Lucio Silla* (1772) the leading male role, Cecilius, is a castrato while the usurping dictator, Silla, is a tenor, a pattern that still applies in *La clemenza di Tito* (1791), where the youthful romantic part (Sextus) is for castrato and the emperor (Titus) is tenor. In his mature Italian comic operas, the leading roles are largely for baritone (Don Giovanni, Count Almaviva) while the tenor roles are comic (Basilio) or distinctly secondary (Ottavio); the tenor role of Ferrando in *Così fan tutte* (1790) is an exception, although the outrageous disguise he and the bass Guglielmo adopt for most of the opera while deliberately wooing the other's betrothed moves both roles a good way from the serious lover (like the tenors Tamino and Ottavio) towards the older comic tenor and bass roles.

The most famous tenor for whom Mozart composed was his first Idomeneus, Anton Raaff, who in 1781 was close to the end of his career; he had been a pupil of the famous castrato Bernacchi in Bologna and had sung widely across Europe, and was probably the foremost tenor in serious opera in the age of Hasse, Jommelli and J.C. Bach. A Mozart singer of a different stripe was the Irish tenor Michael Kelly; he studied with the castrato Rauzzini, who had earlier created the leading role in Mozart's *Lucio Silla* (1772) and for whom Mozart wrote the motet *Exsultate, jubilate* (1773). Kelly went on to create the roles of Basilio and Curzio, and his *Reminiscences* (1826) provide a first-hand account of his working relationship with Mozart. The leading Viennese tenor in Mozart's time was the German, Valentin Adamberger, who created Belmonte in *Die Entführung aus dem Serail* (1782) and sang in a number of Gluck revivals. Most of Mozart's tenor roles in his Viennese years were created by singers of no great reputation: Antonio Baglioni (Ottavio and Titus), Vincenzo Calvesi (Ferrando) and Benedikt Schack (Tamino).

Tenor

5. 19th century.

Until the late 18th century and even the early 19th, most tenors in the Italian tradition emphasized the lyrical quality of their top range and, when required, carried their voices with ease into the 'head voice' or Falsetto register. As Joseph de Lalande wrote (*Voyage d'un françois en Italie*, 2/1786), 'the *tenor* goes from *C* to *g′* in full voice and to *d″* in *falzetto* or *fausset*'. During the first half of the 19th century, however, this traditional manner fell into disuse as tenors began to pull the full weight of their middle voice into the highest registers. The new dramatic potential of the tenor voice led to its increasing dominance over the castrato or *musico* for

leading roles and the development of specific tenor voice types, including the lyric, the lyric coloratura, the *Heldentenor*, the *spinto* and the *robusto*.

(i) Italy, France, Russia, England.

Early in the 19th century, Rossini and his contemporaries required a high degree of accomplishment in florid work and in many of their operas, as in some of Bellini's, great demands are made on the upper range of the voice. Rossini's *Semiramide* and Bellini's *I puritani*, for instance, show that the ready availability of notes above the staff was taken for granted, and in *I puritani* 'Credeasi misera' notoriously rises to an *f″*. These roles were undoubtedly sung with head voice (Voce di testa) or some form of fortified falsetto. Rossini's great tenors included Giovanni Davide, Andrea Nozzari, Manuel García and Giovanni Rubini.

In 1814, Rossini wrote Narciso in *Il turco in Italia* at La Scala for Davide, then 23, the first of his six Rossini premières. At Naples, Davide found Nozzari already installed, but the two complemented one another perfectly: Davide's voice was very flexible, with a three-octave compass, strong at the top, while the main strength of Nozzari's voice lay in the middle register. Nozzari sang Leicester in *Elisabetta*, and took the title role of *Otello* with Davide as Rodrigo; both sang in *Ricciardo e Zoraide*, *Ermione* and *Zelmira* as well as *La donna del lago*, in which Nozzari sang Roderick Dhu and Davide was James. Nozzari also took part in the premières of *Armida* (as Rinaldo), *Mosè in Egitto* and *Maometto II* and later created the title role of Donizetti's *Alfredo il grande* (1823).

García created Norfolk in *Elisabetta* and Almaviva in *Il barbiere di Siviglia* (1816) at Rome; he was greatly admired for his Otello, which he sang at the London première. Rubini also scored many triumphs as Otello: his voice, with a powerful falsetto extension up to *f″* or *g″*, inspired several composers, in particular Donizetti and Bellini. Between 1822 and 1835 he sang in eight Donizetti premières and four Bellini, including Elvino (*La sonnambula*) and Arturo (*I puritani*). These roles, with their very high tessitura and long, flowing lines, were tailored to his special talents. A comparison with his roles for other tenors – Arturo (*La straniera*, 1829) for Domenico Reina, Pollione (*Norma*, 1831) for Domenico Donzelli (earlier the creator of two Rossini roles), Orombello (*Beatrice di Tenda*, 1833) for Alberico Curioni, all with heavier and lower voices – shows the care Bellini took in writing for individual singers.

During the 1820s and 30s many roles were written for the leading tenor at the Opéra-Comique, Jean Baptiste Chollet, including Auber's *Fra Diavolo* (1830); his most popular creation was Chapelou in Adam's *Le postillon de Lonjumeau* (1836), in which he was able to display his magnificently strong and secure *d″*. The tenor roles in Rossini's works for the Opéra (1826–9) were all adapted to the voice of Adolphe Nourrit, who combined Davide's flexibility, range and tonal brilliance with Nozzari's strength. Particularly successful as Arnold in *Guillaume Tell*, he had no difficulty with the high tessitura; he also created the title role in Meyerbeer's *Robert le diable* and Raoul in *Les Huguenots*.

Nourrit was replaced as principal tenor at the Opéra by Gilbert Duprez. Although French by birth, Duprez studied in Italy and sang there for several

years, creating Ugo in Donizetti's *Parisina* (1833), Henry II in *Rosmonda d'Inghilterra* (1834) and Edgardo in *Lucia di Lammermoor* (1835). His voice, though less trumpet-toned, was similar in quality and range to that of Nourrit, many of whose roles he took over at the Opéra. He created the title role of *Benvenuto Cellini* (1838), sang in the premières of three of Donizetti's French operas, and created Gaston in Verdi's *Jérusalem* (1847). He famously caused a sensation in 1837 by singing a *c″* in *Guillaume Tell* with the full weight of the chest voice: not because of the quality of the note (which some, including Rossini himself, considered highly disagreeable) but simply by showing that it could be sung in this way. Other singers strove to emulate him, and composers began to demand this bigger sound in the highest registers.

By 1850, tenors at the Italian Opera in London were required to take on roles of very varied weight and character. After Rubini's retirement, Giovanni Matteo Mario, a lyric tenor who had created Ernesto in *Don Pasquale* (1843), added a falsetto extension to his voice to allow him to sing Rubini's roles; at the same time he embarked on the heavier Verdi repertory, singing Oronte (*I Lombardi*) and Jacopo Foscari (Verdi wrote a new cabaletta rising to *f″* for him) and later the Duke, Alfredo, Riccardo (*Un ballo in maschera*) and Manrico. Manrico was first sung in London by Enrico Tamberlik, a tenor more robust in voice and much admired as a forceful exponent of Rossini's Otello. Tamberlik created Don Alvaro in *La forza del destino* at St Petersburg (1862) and was an early exponent of carrying the chest voice up to *c″*.

Among Russian tenors, Nicola Ivanoff, a protégé of Glinka, passed his whole career in Western Europe, and the tenor roles in Glinka's *A Life for the Tsar* (1836) and *Ruslan and Lyudmila* (1842) fell to Leon Leonov, whose basically lyrical voice could encompass roles as different as Mozart's Count and Meyerbeer's Robert le diable. The roles of Don Juan in Dargomïzhsky's *The Stone Guest* (1872) and Grigory in *Boris Godunov* (1874) were created by Fyodor Komissarzhevsky, a lyrical but stronger singer. Nikolay Figner, after singing in Italy and at Covent Garden (Ernani, Elvino in *La sonnambula* and the Duke), returned to Russia to create two Tchaikovsky roles: Hermann in *The Queen of Spades* (1890) and Vaudèmont in *Iolanta* (1892); later he became a powerful Radames and Otello. Dmitry Smirnov, the finest of all Russian tenors heard in Western Europe before the Revolution, sang Grigory in the Paris première of *Boris Godunov*, the Prince in Dargomïzhsky's *Rusalka* at Monte Carlo and Lefko in the British première of Rimsky-Korsakov's *May Night*.

During the 1870s and 80s the presence again of several fine tenors at the Opéra-Comique encouraged composers to write interesting roles. Paul Lhérie, who created tenor roles in works by Massenet and Delibes, was the first Don José in *Carmen* (1875); he later became a baritone. Jean-Alexandre Talazac created Offenbach's Hoffmann (1881) and Massenet's Des Grieux (1884), and was the first Paris Samson. The finest tenor in the French repertory at the end of the century was the Polish-born Jean de Reszke, who had begun his career as a baritone. Massenet persuaded him to pursue a career as a tenor and sing John the Baptist in the Paris première of *Hérodiade*; he went on to create Rodrigue in *Le Cid* (1885) and

became an outstanding Des Grieux and Werther, as well as Faust, Romeo, Raoul and Don José.

At this period the outstanding Italian dramatic tenor was Francesco Tamagno, who created roles in two Ponchielli operas and, at La Scala, sang Gabriele Adorno in the 1881 revision of *Simon Boccanegra* and the title role of *Don Carlos* in the première of its revised Italian version (1884). Verdi chose him to create the title role of *Otello*, which he repeated at Covent Garden, the Metropolitan, the Opéra and elsewhere; the very high natural placement and limitless power of his voice have caused problems ever since for singers of the role.

The light, lyric tenor continued to hold the stage in operetta. Offenbach relied on the sweet, clear voice of José Dupuis, who created many of the leading tenor roles in his *opéras bouffes*: Paris in *La belle Hélène* (1864), the title role of *Barbe-bleue* (1866) and Piquillo in *La Périchole* (1868). In Sullivan operettas at the Savoy after 1888, Courtice Pounds succeeded George Power and Durward Lely as the principal tenor, creating Fairfax (*The Yeoman of the Guard*, 1888) and Marco (*The Gondoliers*, 1889); he later turned to musical theatre and became particularly renowned for his creation of Ali Baba in *Chu Chin Chow* (1916).

(ii) Germany.

The specialization that affected tenor roles from about 1850 was not apparent at the beginning of the century. Joseph Demmer, Florestan at the première of the first version of *Fidelio* (1805) in Vienna, was a lyric tenor. So was Heinrich Stümer, who created Max in *Der Freischütz* (1821); his repertory included Belmonte and the Count as well as Florestan and Gluck's Pylades, Achilles, Admetus, Renaud (*Armide*) and Orpheus. Anton Haizinger, the Austrian tenor who first sang Adolar in *Euryanthe* (1823), was a notable Ottavio; later he became the first Paris Florestan, Max and Huon (*Oberon*).

Even Wagner's early operas did not necessitate a special kind of tenor: Joseph Tichatschek, the Bohemian who created Rienzi and Tannhäuser, had earlier sung Tamino at Dresden: when he had difficulty in singing a passage in the Act 2 finale of *Tannhäuser* Wagner obligingly cut it before the première (1845). Aloys Ander, who sang Lohengrin when Wagner first heard his opera (1861), had previously introduced the roles of Raoul, John of Leyden, Faust and Arnold to Vienna; when *Tristan und Isolde* was under consideration there it was proposed that Ander should sing Tristan, but he lost his voice and his nerve and stood down, despite Wagner's offer to shorten Act 3. When the Paris version of *Tannhäuser* was given at the Opéra in 1861, Albert Niemann, having often sung the title role, as well as that of Rienzi and Lohengrin, in Germany, refused Wagner's suggestions on performance or interpretation. Ludwig Schnorr von Carolsfeld, who created Tristan at Munich in 1865, considered it an honour to work with the composer and Wagner in turn admired his Lohengrin, Tannhäuser (in which he restored the cut made for Tichatschek) and Tristan. Schnorr died, aged 29, five weeks after the *Tristan* première.

The search for singers in general and tenors in particular continued to preoccupy Wagner. Max Schlosser, an actor and singer of operetta, was

engaged as David for the première of *Die Meistersinger* in Munich (1868) and, when he proved successful, as Mime in the première of *Das Rheingold* (1869). Schlosser also sang Mime in *Siegfried* in the first complete *Ring* at Bayreuth (1876). The first Walther and Froh in Munich was Franz Nachbaur, also a fine Lohengrin, much admired by King Ludwig II; he sang Loge, Siegmund and Tannhäuser during his long career in Munich. Heinrich Vogl, who created Loge and Siegmund there, sang that role as well as Tristan and Parsifal at Bayreuth.

Wagner's main casting difficulty before the first Bayreuth *Ring* was to find a Siegfried. He refused Niemann, ostensibly because he did not want the same singer as Siegmund and Siegfried, or Vogl, for reasons more obscure, and chose Georg Unger, who was no great success; Niemann and Vogl became legendary interpreters of the role. Ferdinand Jäger, another of Wagner's protégés and one of three tenors who sang Parsifal at Bayreuth in 1882, was also a disappointment, though he sang Siegfried in Berlin and Vienna; the two others, Hermann Winkelmann and Heinrich Gudehus, proved successful as interpreters of Tristan and Walther. Other admired Wagner tenors at the close of the century were Max Alvary (who sang the four main roles under Mahler in the first Covent Garden *Ring*) and Ernest Van Dyck (also a specialist in the French repertory).

Tenor

6. 20th century.

Tenors have increasingly been categorized by voice type and repertory; these factors have superseded national differences. Four main types may be delineated: the dramatic tenor voice, continuing late 19th-century traditions; the lyric tenor voice, particularly valued in song as well as a range of operatic roles; the lyric coloratura tenor, specializing in the *bel canto* repertory and earlier music; and the theatre and popular singer.

(i) Dramatic tenors.

Richard Strauss, following the *Heldentenor* tradition, demanded extraordinary stamina and power from his tenors, who were also the leading Wagnerians of their day. In *Guntram*, the title role was created by Heinrich Zeller, who must have found Tannhäuser (which he later sang at Bayreuth) easy by comparison. Herod was originally entrusted to Karel Burian (1905), who also sang it at the Metropolitan in the American première of *Salome*. Bacchus (*Ariadne auf Naxos*, 1912) was first sung by the Latvian Hermann Jadlowker, who had created the King's Son, also calling for lyricism and dramatic strength, in Humperdinck's *Königskinder* at the Metropolitan (1910): he sang Raoul and other florid roles but was more often heard as Florestan, Lohengrin and Parsifal.

The Austrian-Czech tenor Leo Slezak made his début in 1896 as Lohengrin, a role he continued singing for 30 years, and to which he added Tannhäuser and Walther as well as Verdi's Manrico, Radames and Otello; his singing combined robust power and beauty of tone. The relation of the *Heldentenor* voice to a high baritone is clear from the number of tenors who began their careers as baritones; among them was Lauritz Melchior who, after several years as a baritone in Copenhagen, made his tenor début there as Tannhäuser in 1918. His international fame dates from

1924, with Siegmund at Covent Garden and Parsifal at Bayreuth; he gradually acquired almost all the major Wagner roles and for 25 years lavished his large, resplendent voice on them at the Metropolitan.

Wagnerian tenors were in short supply when Bayreuth reopened after World War II. For some seasons Wolfgang Windgassen held the fort virtually alone, singing every tenor role from Erik to Siegfried; his Tristan was especially memorable. Then a new generation of heroic tenors, mostly from the Americas, began to appear: the Chilean Ramón Vinay (initially a baritone); the American Jean Cox; the Canadian Jon Vickers (superb as Parsifal and Siegmund), and the Americans Jess Thomas and James King, one of the best interpreters of Strauss's Bacchus, who also sang the high-lying role of Apollo in *Daphne*, revived in 1964, on Strauss's centenary. Richard Cassilly (who also sang Florestan, Otello and Radames with enormous involvement and intensity) and in the 1990s the Canadian Ben Heppner have stepped into this repertory with striking success.

If Tamagno was the major *tenore robusto* of the last decades of the 19th century, in the first two of the 20th the field was dominated by Enrico Caruso, who caused a sensation at Covent Garden in 1902 with the beauty and power of his voice. Early in his career Caruso sang such lyrical roles as Edgardo, Nemorino and Nadir; later he took on heavier ones, mainly French, including Samson (Saint-Saëns), Don José and Eléazar (*La Juive*). Canio, Radames and Enzo (*La Gioconda*) headed the list of parts he sang most often, but the backbone of his repertory was Puccini; only one part, Dick Johnson, was written for him, but Puccini's major tenor roles fitted Caruso's voice perfectly.

Giovanni Zenatello took on these heavier tenor roles at Covent Garden when Caruso did not sing there for six years; he had made his début as a baritone. Noted for his rich and powerful voice, he sang Otello more than 300 times. After Caruso's death in 1921, Giovanni Martinelli assumed his heroic roles; he first appeared as Dick Johnson at Rome, Naples, La Scala and other Italian centres, and sang at the Metropolitan for 32 seasons in a repertory that ranged from Gérald in *Lakme* to Otello, but was based on Radames, Don José, Manrico and Canio.

In the posthumous première of Puccini's *Turandot* (1926) at La Scala, Calaf was sung by Miguel Fleta, the Spanish tenor who also created Romeo in Zandonai's *Giulietta e Romeo* (1922); his voice was lighter than that of Giacomo Lauri-Volpi, the first Calaf at the Metropolitan, who was admired for his trumpet-like top notes. The first Calaf at the Opéra was Georges Thill; although he sang other Italian parts, including Radames, and the lighter Wagner roles (Lohengrin, Parsifal and Walther), he was above all a superb exponent of French style, with a repertory from Gluck to Massenet, and at his best as Aeneas in *Les Troyens à Carthage* where his eloquent diction was allied to a firm, even voice.

The *tenore robusto* parts in Italian opera of the postwar period were dominated by Mario del Monaco, a heroic tenor with a voice of unlimited power who was a formidable Otello, and Giuseppe di Stefano, who began his career as a lyric tenor (Nemorino, Edgardo, Almaviva and Alfredo) before moving on to a heavier repertory (Cavaradossi, Radames). In the same period, Franco Corelli was the leading exponent of *spinto* roles,

especially Calaf, Radames and Manrico as well as Don José. The American tenor Richard Tucker sang for over three decades at the Metropolitan in similar repertory. The Spanish tenor Plácido Domingo began his career as a baritone, developed from a lyric to a dramatic tenor admired in the French repertory as well as in Puccini and Verdi. He has also sung Siegmund and Parsifal; Otello is among his finest roles.

(ii) Lyric tenors.

After Caruso stepped down, his lyrical roles devolved on Beniamino Gigli, distinguished for his golden beauty of tone if apt to be lachrymose in style. Many of Caruso's Metropolitan roles were inherited by the Swedish tenor Jussi Björling; a notable interpreter of Verdi, he was an elegant singer and an implacable stylist, greatly admired in French roles. Among this generation the most notable *tenore di grazia* was Tito Schipa, who in a long career at Chicago and the Metropolitan shone in lyrical Italian roles and in French opera.

Lyric tenors from mid-century include Nicolai Gedda, of Swedish-Russian parentage, whose wide-ranging repertory included several high-lying roles; he created Anatol in Barber's *Vanessa* at the Metropolitan (1958), made a spectacular Cellini at Covent Garden and was especially admired for his elegant singing in French opera. Carlo Bergonzi began his career as a baritone; as a tenor, he became an exceptionally stylish Verdi specialist, who could sing heroic roles (though not Otello) as easily as the more lyrical ones. José Carreras, a lyric tenor by nature, has also taken on such heavier roles as Manrico and Don Carlos with success, and his Don José has been particularly acclaimed.

Britten composed roles in nine operas (12 including the church parables) for Peter Pears, a lyric tenor whose highly placed, flexible voice had a peculiar individuality of timbre: they include between 1945 and 1973 Peter Grimes, Albert Herring, Captain Vere (*Billy Budd*), Quint (*Turn of the Screw*) and Aschenbach (*Death in Venice*). Richard Lewis, a fine Grimes and an even finer Vere, was vocally heavier than Pears but lighter than Vickers; he created roles in two Tippett operas, Mark (*The Midsummer Marriage*, 1955) and Achilles (*King Priam*, 1962), and sang Aaron in the British stage première of Schoenberg's opera (1965) and Alwa (*Lulu*): he was admired in Mozart and in Handel oratorios.

Outside opera, lyric tenors have continued to be prized in other repertory. Specialists in song repertory include the Danish tenor Aksel Schiøtz, whose elegant voice was particularly well suited to lieder as well as Mozart operatic roles. Racial prejudice prevented black American tenor Roland Hayes from performing opera on stage; he concentrated on concerts and recitals where his beautiful voice and excellent musicianship found a welcome repertory in German and French songs and American spirituals. Ernst Haefliger, especially noted for Schubert song cycles, made his début in 1942 as the Evangelist in Bach's *St John Passion*, and his performance of Bach tenor parts remained central in his repertory. More recently, the English tenor Ian Bostridge has combined beautiful tone and phrasing with distinctive interpretations of lieder by Schumann and Schubert and of Britten's music for tenor.

The internationalization of singing has been especially apparent in the expanded cohort of lyrical Mozart tenors, the ranks of which include the Irish tenor John McCormack, who also excelled in Handel, Donizetti and lieder; the English tenor Heddle Nash, whose elegant voice was particularly praised in Mozart and Handel; the Austrian Richard Tauber, for whom Lehár composed roles in his operettas; the Canadian Léopold Simoneau, greatly admired in French and Italian repertory; and the Italian Cesare Valletti, successor to Schipa, whose repertory included Donizetti, Bellini, Rossini and Verdi. Among German tenors, Fritz Wunderlich, whose refined and mellifluous voice, deployed with perfect control, was silenced by his early death in 1966, and Peter Schreier, who became the main representative of the Mozart tradition in the 1970s and 80s, stand out.

(iii) Bel canto.

The revival of interest in early 19th-century opera demanded agile voices that could handle the high tessitura. Gianni Raimondi's warm timbre, flexibility and brilliance in his top register led to great success in revivals of such operas as *Armida*, *Guillaume Tell* and *Lucia di Lammermoor*. The American tenor John Alexander was also admired for his versatility in *bel canto* roles, including Pollione (*Norma*) as well as in Mozart and French repertory. The Spanish singer Alfredo Kraus was an elegant stylist whose well-placed voice lasted over 35 years; he excelled in *bel canto* roles such as Arturo (*I puritani*) as well as in French opera (Werther, Des Grieux and Hoffmann). Luciano Pavarotti also began his career in *bel canto* repertory, where his roles included Bellini's Elvino (*La sonnambula*) and Donizetti's Edgardo (*Lucia di Lammermoor*); later he moved on to heavier Verdi and Puccini roles, including Manrico (*Il trovatore*), Radames and Otello (in concert performance): sheer beauty of tone and suppleness of phrasing served amply to overcome any dramatic limitations.

Three American tenors have made this repertory a speciality: Chris Merritt, a Rossini specialist with a powerful voice and upper extension; Rockwell Blake, who has also sung Mozart, Donizetti and Bellini as well as Rossini, with a voice extending to *f″* and remarkable flexibility; and John Aler, who has a clear and light voice, used to good effect in earlier music. Among other singers suited to the needs of the early music movement, with use of head voice at the top of the range, is Anthony Rolfe Johnson, who has sung Ulysses (Monteverdi), Jupiter (Handel's *Semele*) and Mozart's Idomeneus as well as Aschenbach (Britten's *Death in Venice*).

(iv) Theatre and popular tenors.

Classical tenors frequently cross over into popular repertory, especially lyric tenors who are well suited to operetta and musical theatre. Tauber is one example. Another is Carreras, who recorded both *West Side Story* (in an unhappy collaboration with Bernstein) and *South Pacific*. A good example is Jan Peerce, who after singing standard repertory and performing with many ensembles, appeared in such films as *Tonight We Sing* and *Goodbye, Columbus*, sang as a cantor and recorded Jewish liturgical music, and in 1971 made his Broadway début as Tevye in *Fiddler on the Roof*. Mario Lanza, by contrast, was a popular singer in the operatic tradition, best known for his films and recordings, among them songs from *The Student Prince* and 'Arrivederci, Roma'.

The tenor phenomenon at the end of the 20th century has been 'The Three Tenors', Carreras, Domingo and Pavarotti, who first appeared together at the Baths of Caracalla in Rome in 1990 during the football World Cup and then in other arenas of similar gargantuan size, performing repertory from opera to popular love songs. Classical artists are not generally able to adopt a popular singing style easily (and The Three Tenors are no exception), any more than classical style transfers easily to popular singers; but among popular singers in the tenor range who performed popular repertory with ease and natural delivery, Tony Martin and Johnny Mathis stand out as exquisite balladeers.

Tenor altino.

A type of Tenor voice.

Tenorbass [Tenorbasshorn]

(Ger.).

See Euphonium.

Tenor bassoon.

See Tenoroon.

Tenor C.

The note *c*, an octave below Middle c.

Tenor cor.

See Mellophone.

Tenor drum.

See Drum, §II, 3.

Tenore [flicorno tenore]

(It.). Italian equivalent to the baritone horn. *See* Baritone (ii).

Tenore di forza

(It.: 'tenor of force'; Fr. *fort-ténor*).

Term used for tenors of the early-middle 19th century, sturdier than the lyric tenor, less powerful than the *tenore robusto*; it applies to singers of the more heroic Donizetti roles or the roles in French *grand opéra*; Adolphe Nourrit and Gilbert Duprez are the best-known exponents of this voice-type.

See Tenor, §5.

Tenore di grazia

(It.: 'graceful tenor').

Term used for the lighter type of Italian lyric tenor voice, appropriate to the comic operas of Rossini and Donizetti and such Verdi roles as Alfredo (*La traviata*) or the Duke (*Rigoletto*); the voice also serves in the French repertory and in Mozart roles (e.g. Ottavio, *Don Giovanni*) and earlier music.

See Tenor, §5.

Tenore robusto

(It.: 'robust tenor').

Term for the type of robust or heroic tenor that came into prominence in the first half of the 19th century, the Italian counterpart to the German Heldentenor. Typical roles are Manrico (*Il trovatore*) and Radames (*Aida*).

See Tenor, §5.

Tenorfagott

(Ger.).

See Tenoroon.

Tenor horn

(Fr. *bugle alto*, *saxhorn alto*; Ger. *Althorn*; It. *genis*).

A valved brass instrument of alto pitch, like a small euphonium in shape; in British brass band scores it is usually referred to as 'E♭ horn'. It has as its fundamental E♭ (though this note is seldom used) and is thus intermediate in pitch between the cornet and the euphonium. It is a transposing instrument, its music being written a 6th above sounding pitch. The full compass is from (written) *f* to *c‴*, but in the band it is used mostly between *a* and *a″*, sounding *c* and *c″*.

Although used as an alto instrument in many continental military bands, it is not used by British ones; it is an essential component in the British brass band, however, three tenor horns being required for the standard line-up (their parts generally described as 'solo horn', 'first horn' and 'second horn').

Historically, the tenor horn is the modern form of the E♭ alto Saxhorn, which in its early days in France, Britain and the USA was also termed 'tenor'; thus, in a catalogue (*c*1850) of Henry Distin, London, it appears as 'Saxhorn, tenor, E♭. The instrument of the brass band that stands in B♭, a 4th below the tenor horn, is known in Britain and the USA as the 'baritone' and in Germany as *Tenorhorn* (*see* Baritone (ii)).

Tenorino.

A type of Tenor voice.

Tenorlied

(Ger.: 'tenor song').

The principal type of German polyphonic lied from about 1450 to about 1550. Tenorlieder are characterized by a cantus firmus (or 'tenor') which frequently consists of a pre-existing melody and is most often found in the tenor part. The cantus firmus is generally surrounded by three contrapuntal voices, giving a total of four parts, though early examples are usually in three parts and late ones sometimes in five or more. Many Tenorlieder are in bar form (*AAB*).

The Tenorlied seems to have grown out of monophonic traditions derived from Minnesang; its stylistic features were influenced by the 15th-century Franco-Flemish chanson favoured at German courts. At the beginning of the 16th century the Tenorlied attained great popularity, with many fine examples by Hofhaimer, Isaac, Heinrich Finck and others. Works by these composers sometimes begin with voices entering in imitation, though the imitation rarely persists for more than a few bars, and the cantus firmus character of the composition is seldom in doubt. The outstanding composer in the genre was undoubtedly Senfl, whose nearly 250 surviving lieder show sensitivity to text declamation, melodic freshness and a high degree of contrapuntal skill. Lassus also composed Tenorlieder, but by his time the genre was being supplanted by German secular compositions influenced by the villanella and madrigal. Many Lutheran chorale melodies are borrowed from the Tenorlied repertory, and in texture and melodic idiom the Tenorlied exerted a strong influence on the first generation of polyphonic chorale settings.

Tenorlieder texts range from serious poems of high literary quality to the humorous and obscene; they are generally anonymous. Most texts are strophic, and since the same music had to serve more than one stanza there was little opportunity for the text-painting associated with other 16th-century genres.

'Tenorlied' is a modern term, originally used in connection with a theory advanced by Moser, Schering and others that only the tenor was designed to be sung, the other parts being intended for instruments. This notion was questioned by Geering and others, and more recent writers tend to use the term to indicate the structural use of a cantus firmus in any voice and without necessarily implying any particular performing practice. *Das Tenorlied* (ed. N. Böker-Heil, H. Heckman and I. Kindermann, CaM, ix–xi, 1979–86) is a valuable thematic index of the entire repertory.

Tenor mass.

A setting of the five sections making up the Ordinary of the Roman Catholic Mass in which the same borrowed material appears as a cantus firmus in the tenor of each section. Although the several hundred tenor masses composed between about 1420 and about 1520 constitute a coherent tradition, unified by a complex of recurring compositional conventions, the genre designation is a modern invention that has no counterpart in writings on music from the period. This is not to say that no significance was attached at the time to the choice and treatment of mass cantus firmi. Rather, it underlines that any compositional choice, including free composition, tended to be evaluated principally in terms of appropriateness (or usefulness) to context. Tenor masses seem to have inherited the association with significant political, ecclesiastical and liturgical events that characterized the early 15th-century tenor motet (from which the genre evidently originated).

Post-Enlightenment models of historical explanation, on the other hand, have placed greater emphasis on the intrinsic compositional interest of 'cyclic unification', which was seen to reflect the new artistic spirit of the Renaissance. Although little is known about the historical occasions for which individual settings must have been composed, there has been no shortage of proposals in recent decades. This seems to reflect an intellectual trend away from the assessment of medieval and Renaissance compositions purely as autonomous art works and towards contextualized interpretation, drawing on the study of political and cultural history, archival documents, scholastic and theological doctrine and much more. Identification of original performance contexts has generally proved more feasible in the case of liturgical cantus firmi, whose connections to specific feasts or particular devotional practices may provide important clues. Du Fay's Missa 'Ave regina celorum' has now been convincingly associated with an endowment of the feast of Our Lady of Snows at Cambrai Cathedral, made by the composer himself in 1472. Similarly, Obrecht's masses for St Martin and St Donatian's can be connected to two endowments at the church of St Donatian, Bruges, in 1486 and 1487, respectively. It is not inconceivable that Josquin's Missa Hercules dux Ferrarie was written for a votive service for the spiritual benefit of Duke Ercole d'Este (and probably endowed by him), since there were few other liturgical contexts in which it was useful to mention a living individual so prominently by name. The anonymous English 'Caput' Mass, based on the final melisma of the Maundy Thursday antiphon Venit ad Petrum, seems to have carried baptismal or apostolic significance, though we know little about its occasion other than it was probably in the 1440s. Significantly, all these works circulated well beyond their original performance contexts, indicating a certain tolerance for liturgical or musical incongruity.

Even greater tolerance is suggested by the widespread practice of modelling tenor masses on secular songs. It is possible that the song texts or incipits (which were hardly ever borrowed as well) could provide significant clues, given apparent parallels in later tenor motets. (A good example is Compère's prayer to the Virgin Omnium bonorum plena, based on Hayne van Ghizeghem's song De tous biens plaine, or Josquin's Stabat mater, which quotes the tenor of Binchois's Comme femme desconfortée). This possibility has been explored with particular intensity in the case of the L'homme armé masses, which are believed to have been associated, at least during the mid-15th century, with Europe's political mobilization against the Turkish threat. A connection with warrior saints is however suggested by Regis's setting, which quotes a chant for St Michael along with the L'homme armé tune. (The same explanation cannot be advanced for the anonymous mass for St John the Baptist, probably by Obrecht, which was modelled on Busnoys's L'homme armé mass, though without actually quoting its cantus firmus.) It also the possibility that, for instance, tenor masses such as O rosa bella, Ma maistresse, or De tous biens plaine were written for Marian feasts. Many cases of apparent incongruity remain, however, especially when masses are based on popular songs with allusions to carnality or infidelity (e.g. Se tu te marie or L'ami Baudichon). Contemporary sensitivity to such considerations is not apparent until the early 16th century, when ecclesiastics and reformers openly objected to the inclusion of 'lascivious songs' in religious ceremonies. At the same time an emerging interest in the personal circumstances underlying cantus-firmus

choices can be discerned, as is illustrated by Glarean's anecdote about Josquin's *Missa 'La sol fa re mi'*.

Tenor masses offer much more of historical and musical interest than contemporary authors may have cared to articulate in their writings, however. The genre was unprecedented in compositional dimensions and scope, and composers proved themselves astonishingly imaginative in addressing the artistic problems they faced. The definitive study of cantus-firmus treatment remains Edgar Sparks's *Cantus Firmus in Mass and Motet, 1420–1520* (Berkeley, 1963). Sparks identified two broad tendencies in the 15th-century tenor mass: one that favoured literal quotation and schematic treatment ('rational'), and one in which pre-existing melodies were freely rhythmicized and melodically ornamented, sometimes almost beyond recognition ('irrational'). Although there are several composers whose oeuvre exemplifies both tendencies (Du Fay, Caron, Josquin), many others developed a consistent preference for one tendency. This preference gives them a distinctive profile (Sparks spoke of 'rationalists' and 'irrationalists'), and in some cases one may even identify lineages or local traditions. Strictness of cantus-firmus treatment and the prominent use of *Kanonkünste* seem to have been peculiarly Flemish tendencies (Domarto, Busnoys, Obrecht), whereas free elaboration tends to be associated with composers active in central France (Ockeghem, Faugues, Basiron, the exception being the Flemish composer Johannes Martini). Domarto's *Missa 'Spiritus almus'* (*c*1450) prominently applies mensural transformation, one of several compositional habits that Busnoys seems to have adopted from him and Obrecht in turn adopted from Busnoys. A work that carries the 'rationalist' trend to extremes is the anonymous *Missa 'L'ardant desir'* (perhaps by Busnoys or a composer close to him), which applies not only mensural transformation but also transposition, augmentation and schematic sampling techniques, as well as a unique form of inversion that literally involves reading the notation upside down and thus affects the rhythmic interpretation of ligatures. At the other extreme are settings whose treatment of pre-existing material in the tenor is so casual or ornate that it is hardly worthwhile to distinguish them from freely composed masses. Examples include Bedyngham's Mass *Dueil angoisseux*, whose tenor makes only fleeting allusions to Binchois's song tenor, and the anonymous *Missa 'D'ung aultre amer'* (early 1470s, presumably from central France), in which the degree of melodic ornamention varies according to the composer's compositional design, generally retaining only a token presence towards the end of the longer movements.

Generally speaking, the 'rationalist' trend remains closer to the traditions of the Ars Nova motet and to the practice of contrapuntal improvisation. Some composers make explicit allusions to this practice, such as Obrecht in his *Missa De Sancto Martino*, whose 'Pleni' may be the nearest we have to a written-out example of *cantare super librum*. The ties between the tenor motet and the tenor mass remained close also in another respect: until about the 1470s tenor motets tended to be structured similarly to tenor mass movements. This may explain why mass movements were sometimes lifted from their contexts and retexted for performance as a motet. A peculiar tradition in the mid-15th century is the mass-motet cycle, in which a motet is added as a sixth mass movement, being identical in

formal layout and cantus-firmus treatment to the other movements (often the motets in question circulated independently).

ROB WEGMAN

Tenoroon [tenor bassoon]

(Fr. *basson quinte*; Ger. *Tenorfagott*; It. *fagottino*).

A small bassoon normally pitched a 5th above the standard bassoon; *see* Bassoon, §10.

See also Organ stop.

Tenor tuba.

See Tuba (i), and Euphonium. The German term *Tenortuba* can designate either a Euphonium or Baritone, or a tenor Wagner Tuba (for further information see *MGG2* ('Bügelhorn'; E. Tremmel)).

Tenor violin.

A term for a string instrument, most often denoting a type of viola or a small cello. From the 16th century onwards the term was most commonly applied to a large viola with four strings tuned like a modern viola in 5ths upwards from *c*. By 1556 Jambe de Fer was using 'tenor-contralto' (*taille/haute-contre*) in this sense. In its earliest uses, however, 'tenor violin' must have referred to a three-string viola tuned upwards in 5ths from *c*, according to theorists such as Ganassi (1543) and Martin Agricola (1545).

Sometimes 'tenor violin' refers to an instrument resembling and played like a small cello, with four strings tuned upwards in 5ths from *F* or *G* (i.e. a tuning between that of the modern viola and cello). This instrument never attained the status of a principal member of the violin family; although its 'banishment' was regretted by Arnold Dolmetsch, Gerald Hayes and others, its use was peripheral and sporadic, and it was hardly noticed by the theorists or explicitly called for in music after the mid-17th century. It was a victim of the clear historical tendency, in the violin family, to keep the number of members to a minimum (i.e. three) and at the same time to increase the playing range and variety of colour of which each member was capable.

The *c*-tuned 'tenor violin' was actually a regular *c*-tuned viola, but the term implied a viola of large size, normally used to play in the lower part of the

viola register. In contrast, the 'alto' (or 'contralto') viola was smaller and favoured a higher tessitura. This explains why Stradivari referred to his 'Tuscan' tenor viola as 'T.V.' and the contralto of the same set as 'C.V.'. Some of these early 'tenors', especially before 1700, were very large instruments whose body lengths extended the player's arm to the limit – one reason most of them were later cut down in size. The Stradivari 'Tuscan' tenor (now in Florence) has a body length of 47·9 cm, and the magnificent viola of Andrea Amati, made for Charles IX of France and dated 1574 (now in the Hill Collection, in the Ashmolean Museum, Oxford), measures 47 cm. Some instrument makers continued to construct very large violas intended to be played on the arm (e.g. the Ritter *viola-alta* in the 19th century), but all these instruments almost immediately disappeared owing to the physical difficulty of playing them.

In the 16th and 17th centuries the four parts of an ensemble, corresponding to soprano, alto, tenor and bass ranges, were typically assigned to one violin, two violas (one being larger than the other) and bass violin. According to Mersenne (1636–7), the five parts of a string ensemble were allotted to one violin, three (*c*-tuned) violas of differing sizes and bass violin. In Mersenne's 'ordinary ensemble' the three violas were called *quinte* or *cinquiesme, haute-contre* (contralto) and *taille* (tenor). In this typical ensemble there was no 'tenor' between the range of the viola and cello. Around 1700 partbooks labelled 'tenor viola' and 'alto viola' were both intended to be played on the *c*-tuned viola, but one part was in a lower range of the viola than the other. In Italian music and most other music after 1700 the four parts of an ensemble were more generally allocated to two violins, viola and cello; and, if in five parts, to two violins, two violas (alto and tenor) and cello.

DAVID D. BOYDEN

Tenredus.

A 12th-century monk mentioned by John of Salisbury in his *Metalogicon*, possibly identifiable with Theinred of Dover.

Tenso [tenson].

A debate between two or more troubadours or trouvères in the form of a poem. According to Guilhem Molinier, in *Las leys d'amors* (1328, rev. 1337), there is a clear difference between a *tenso* and a partimen (*see* Jeu-parti). The *tenso*, supposedly, was used for a debate in which each participant presented his own opinion or conviction on a topic 'as in a trial', whereas in the partimen the participants seem to have chosen sides for the

sake of discussion only. Consequently the *tenso* could be rather free in form, each participant contributing as much text as he saw fit. However, Molinier ruefully admitted that the two terms were often used the wrong way and often a *tenso* was called 'partimen' and vice versa. In the poems there is almost complete corroboration of this remark; furthermore, in manuscripts that separate the poems by genre, debates may be separated from other poems, but there is no clear distinction between the various kinds of debates.

HENDRIK VAN DER WERF

Tenth

(Fr. *dixième*; Ger. *Dezime*; It. *decima*).

The interval of a compound Third, i.e. the sum of an octave and a 3rd.

Tento

(Port.).

See Tiento.

Tenuë

(Fr.).

A form of Tie. *See also* Ornaments, §7.

Tenuto

(It.: 'held'; past participle of *tenere*: 'to hold', 'hold back', 'restrain').

A performance instruction normally applied to single notes or groups of notes, also abbreviated to *ten*. It can denote either a holding of individual notes to their full length or a complete interruption of the metre. C.P.E. Bach (1753) stated that 'Notes which are neither staccato nor legato nor sostenuto are held for half their value unless the word "ten." is placed over them, in which case they have to be sustained'; D.G. Türk (*Clavierschule*, 1789) wrote that 'When playing notes in the ordinary manner, that is, neither staccato nor legato, the finger should be lifted shortly before the written value of the note requires it … Where single notes are supposed to be held for their full value they have to be marked *ten*. or *tenuto*'. The predominantly detached style of playing which made this necessary seems to have gone out of favour around 1800; but it is presumably in this sense that the first note of each of the repeated-note patterns in the second movement of Beethoven's Seventh Symphony is marked *ten*. In the second

sense it is often used for a delay of the metre in bravura operatic lines, particularly to indicate that the upbeat must be held back; there are many instances in Verdi. The term has a distinguished position as one of the first to be used in music: according to Notker's letter to Lambertus (*GerbertS*, i, 95f) the Romanus letter *t* meant 'trahere vel tenere debere', though Aribo asserted that it meant 'tarditas'.

For bibliography *see* Tempo and expression marks.

DAVID FALLOWS

Teodorini [de Monzunu], Elena

(*b* Craiova, 25 March 1857; *d* Bucharest, 27 Feb 1926). Romanian singer. She studied the piano and theory in Craiova and Milan, and singing with Stephănescu at the Bucharest Conservatory. In 1877 she made her début in Cuneo as Gondì (*Maria di Rohan*). She sang mezzo-soprano roles at the Teatro Dal Verme, Milan, before appearing at La Scala in 1880 as Gounod's Marguerite; she remained until 1893, creating the title role in Smareglia's *Bianca di Cervia* (1882). In 1886 she sang Gioconda, Valentine and Donna Anna at Covent Garden. She toured widely in Europe, Africa and South America until her retirement in 1904, and was a leading singer in the Italian opera company and the Romanian Opera in Bucharest. Her repertory included *Norma*, *Aida*, *Il trovatore* and *Un ballo in maschera*; with her exceptional range, she was equally at ease in lyric and dramatic soprano, mezzo and contralto roles. Her stage presence was imbued with her passionate dramatic temperament. After her retirement she taught in Europe and South America.

Teplice

(Ger. Teplitz). Town in north Bohemia, Czech Republic. It became a spa town in the 15th century. There are records of the church choir (the 'literati') performing contemporary polyphonic music, from the 16th century, including two songbooks from 1560 and 1566. In the 16th and 17th centuries Teplice also had town musicians, and there were performances by foreign musicians in the entourages of the spa's titled guests. Regular music performances in the town are, however, recorded only from the 18th century. The private theatre in the castle was built in 1751. In 1789 a public theatre (the 'Comoedien Haus') was opened in the castle grounds, which was used for summer performances and from 1794 hired out to opera and theatrical groups such as the Patriotic Theatre, led by the Prague director Anton Grams. In the 19th century performances continued under other Prague directors. There were also guest performances, among them in 1807 Schikaneder's group from Vienna. The most prominent local opera composer was the mayor of Teplice, Joseph Wolfram (1789–1839), whose *Die bezauberte Rose* (1826) and *Der Bergmönch* (1829) became popular all over Germany. A new summer theatre was built in 1856. At the town theatre, opened in 1874, the local opera company alternated with private groups. The directors and conductors were mainly German, including Siegfried Wagner and Felix Weingartner. Czech performances started in 1924, with guest performances by companies including those from the Prague National Theatre and Vinohrady Theatre.

From the 18th century, concerts were organized in the theatre, the castle and the rooms of distinguished guests. In the early 19th century Teplice had a group of town musicians, a brass band and a spa orchestra, the latter consisting of 16 members, growing to 48 by the end of the century. Many famous musicians stayed and performed in Teplice, among them Beethoven, Chopin, Liszt, Paganini, Slavík, Laub, Wagner, Destinn, d'Albert, Lehmann, Carreño, Sarasate, Ysaÿe, Kreisler, Hubermann, Jan Kubelík and Ondříček, as well as chamber ensembles and orchestras. In 1948 a symphony orchestra was created. Teplice also has its own conservatory. (See also B. Plevka: *Severočeské hudební kapitoly* [Chapters from the history of music in north Bohemia], Teplice, 1983.)

Terawsky, Wladzimir Vasil'yevich

(*b* Romanovo, Minsk Province, 11/23 Nov 1871; *d* Minsk, 10 Nov 1938). Belarusian folklorist and composer. A prominent figure in the Belarusian national renaissance of the early 20th century, he was the son of a priest, studied at the spiritual college in Slutsk, and in the Minsk Seminary or,

supposedly, at the choristers' cappella in St Petersburg (around 1889). He taught singing in Russian high schools and music clubs, and in the 1890s was invited to join the *Slavyanskaya kappella* ('Slavic cappella'), organized by D. Agrenev-Slavyansky in Moscow, as chorus master and singer. With the cappella he went on concert tours to England, France and Switzerland. According to the reminiscences of contemporaries, during the first decade of the 20th century he was one of the most respected musicians in Minsk. He directed one of the choirs of the Minsk Orthodox Eparchy, worked with poets, pamphleteers and playwrights in the 'Belorusskaya khatka' club, and also with the Association of Art Workers in Minsk.

In 1914 Terawsky established the Belarusian Folk Choir which soon exerted an influence on the development of the national theatre. Continuing the practice established by the Agrenev and Ig'nat Buynitsky choirs, Terawsky gave his concerts a ritualistically theatrical character. The First Belarusian Association of drama and comedy involved Terawsky in the staging of plays by Kupala and others (1917–18) before Terawsky wrote incidental music for numerous productions at the Belarusian State Theatre (1920–35). The basis for this music was Belarusian folklore (he collected and arranged about 500 Slavic melodies). His transparent choral writing combines homophonic and polyphonic harmonic elements its resonant song-like texture renders it suitable for large, small and children's choirs. The three collections of songs and choruses contain old and contemporary folksongs from the collections of P. Sheyn, D. Agrenev, N. Shimkus, M. Kashin and V. Rogovsky, as well as those which Terawsky himself had notated and composed. They include the first vocal works written to words by Yanka Kupala, such as *Akhto tam idze?* ('Who Goes There?'), *Adveku mï spali* ('We Were Sleeping Eternally') and *Gey, w lese* ('Hey, in the Forest'). Terawsky directed the Belarusian Folk Choir until 1937, but was a victim of the purges and died in 1938. The whereabouts of his papers are unknown.

WORKS

Incid music: Advechnaya pes'nya [Eternal Song] (Ya. Kupala); Antos' Lata (Ya. Kolas); Bezvinnaya krov' [Innocent Blood] (V. Golubok); Koval'-voyevoda [The Blacksmith Voyevoda] (Ye. Mirovich); Na kupalle [On Kupala] (M. Charot); Pavlinka [The Peacock] (Kupala); Pinskaya shlyakhta [The Polish Gentry from Pinsk] (V. Dunin-Martsinkevich); Raskidanaye gnyazdo [The Ravaged Nest] (Kupala); Son na Kurgane [A Dream on the Burial Mound] (Kupala); V zimniy vecher [On a Winter's Evening] (E. Orzeszkowa)

Sacred choral: arrs. of melodies from the Orthodox Obikhod and liturgy

Other vocal: Choruses, romances and songs to words by Z. Byaduli, Kolas, M. Kravtsov, Kupala and N. Rodzevich

Editions: Belaruski spewnik z notami na trï golasï pavodle narodnïkh melyodïy [Belarusian songbook with music for three voices in accordance with the folk melodies] (1921); Belaruski lirnik: spewnik na 4 galasï [The Belarusian lyre player: a songbook for 4 voices] (1922); Belaruski spewnik muzïki Wl. Terawskaga [The Belarusian songbook of Wl. Terawsky] (1926)

Teregulov, Yevgeny Davidovich

(*b* Lyubertsï, Moscow region, 15 Nov 1950). Russian composer and pianist. He graduated in 1973 having studied composition with Khrennikov and the piano with G. Aksel'rod at the Moscow Conservatory. He taught the piano and composition at various music schools (1972–84) and from 1984 to 1989 he worked for the International Musicians' Union. Between 1980 and 1989 he was represented by Soyuzkontsert and from 1993 has been deputy president of the Moscow Union of Composers. He is best known for the opera *Kuznyets svoyego schast'ya* ('The Maker of his own Good Fortune'), the ballet *Pugachov* and numerous vocal and instrumental works.

Teregulov freely reinterprets the fundamental aspects of Baroque and Classical styles, and combines western European traditions with eastern ones; most notably he has been influenced by the classical Azerbaijani composer Uzeir Hajibeyov. He prefers to develop his material on polyphonic principles, and uses original devices of articulation which are reflected in the process form-building (especially in the second and third violin sonatas, the Sonata-Toccata, and the Preludes and Fugues to verses by A. Blok).

Teregulov regularly performs as a pianist; his repertory combines Classical and 20th-century works. He is also involved in research into expressive devices in the performance of Baroque keyboard music, notably the directions given by Haydn; this has resulted in two books: the first stresses the importance of articulation in the keyboard music of the Baroque era; the second concerns the causes of the distortions in Romantic readings and editions of Haydn's sonatas and the original sense of the composer's directions.

ALLA VLADIMIROVNA GRIGOR'YEVA

Terence [Publius Terentius Afer]

(*b* north Africa, *c*190 bce; *d* ?159 bce). Roman comic playwright. Only six plays survive, all *fabulae palliatae* (i.e. with Greek settings; *see* Plautus, Titus Maccius). Like Plautus, he adapted specimens of Greek New Comedy, but with far less lyric diversity (only 25 lyric lines out of 6000) and a heavy preponderance of spoken dialogue. The musical element was nevertheless more important than appears from the text; a considerable portion of the plays is recitative *cantica*, lines recited or intoned to an accompaniment on the pipes. (See Beare for a dissenting view.)

The *didascalia* (prefatory information) to each of Terence's works names a slave or freedman, Flaccus, as composer of the music (*modi*) and mentions the kinds of double reed pipe used. These are 'equal' in length, 'unequal', 'right', 'left' or, for one play, 'Sarranian'. Commentaries by the 4th-century grammarian Aelius Donatus also specify them for each play, and identify equal pipes as Lydian and unequal as Phrygian, but the connections he suggested between these terms and the ethos or mood of the piece seem arbitrary and should be treated with caution (Wille, 169ff).

According to Donatus, some recitative portions of the plays were marked 'M.M.C.' (*mutatis modis cantica*), *cantica* with a change of *modi*. *Modi* could mean either 'melodies' (*Weisen*: Wille, 164) or 'measures' (Duckworth, 362); the metres in these passages do not differ radically from those of other recitative *cantica*.

References to music in Terence are rare. The adjective *musicus* occurs in three prologues (*Heautontimorumenos*, 23; *Phormio*, 17; *Hecyra*, 23, 46), referring to poetry and specifically to comic drama. The plural substantive *musica* denotes 'music' as a main part of the Hellenistic curriculum once

(*Eunuchus*, 476–7). *Fidicinae* and *psaltriae*, girls skilled in playing the lyre or psaltery, occur as characters in the plays (*Eunuchus*, 985; *Adelphoe*, 842, 967); they are little more than concubines.

The single neumed line of Terence's *Hecyra* (861) in a 10th-century manuscript (Pöhlmann, no.13*) is not an authentic fragment of the original music for this play.

WARREN ANDERSON/THOMAS J. MATHIESEN

Terény [Terényi], Ede [Eduard]

(*b* Tîrgu-Mureş, 12 March 1935). Romanian composer and musicologist of Hungarian descent. He studied the piano at the Music Lyceum in Tîrgu-Mureş with Jósef Trózner, who was to prove a major influence. After studying composition with Jodál at the Cluj Academy (1952–8), Terény joined Cluj University as a tutor (1960), assistant lecturer (1962), lecturer (1978) and professor (1990). Composition has remained his primary concern throughout his career. Early works such as *Sonata aforistică* (1961) were heavily influenced by Bartók. Téreny formulated a compositional theory involving geometric and gravitational layering, then abandoned this for experimentation with serial techniques. In the 1970s he was preoccupied with abstract and non-figurative principles and with mathematical structures, then in the 1980s he began to explore elements of Baroque music in a series of concertante scores. His works of the 1990s combine classical techniques with rhythmic and metric experimentation. Terény's prolific and diverse output is modern in aesthetic, vigorous in rhythmic accent, highly coloured in harmony and timbre and rich in imagery.

OCTAVIAN COSMA

Teretismata.

Meaningless syllables such as te re re, ti ri ri, to ro ro, etc, which first appear in Byzantine musical manuscripts of the 14th century.

Terfel, Bryn

(*b* Pwllheli, 9 Nov 1965). Welsh bass-baritone. Brought up in a village in North Wales where singing in chapel and elsewhere was part of the culture, he went on to study at the GSM in London with Rudolf Piernay. With a voice exceptionally mature for his age, he won the GSM's gold medal in 1989, having the previous year won the Kathleen Ferrier Memorial Award. In 1989 he also won the Lieder Prize in the Cardiff Singer of the World Competition, which led to auditions with important conductors and impresarios. He made his operatic début as Guglielmo with the WNO in 1990, later singing Mozart's Figaro for the company. His international operatic career began in 1991 when he sang the Speaker (*Die Zauberflöte*) at Théâtre de la Monnaie in Brussels. That year he also had great success singing Figaro for the ENO, and made his US début with Santa Fe Opera, also as Figaro. In 1992 he appeared both at the Salzburg Easter Festival, singing the role of the Spirit Messenger in *Die Frau ohne Schatten*, and at the main Salzburg Festival, as Jokanaan in *Salome*, and also made his Covent Garden début, as Masetto. Over the following two years he sang Figaro to acclaim at the Théâtre du Châtelet in Paris, the Vienna Staatsoper, in Lisbon and at the Metropolitan Opera. He also sang the role at La Scala in 1997. Terfel's other roles have included Donner, Wolfram (*Tannhäuser*), Nick Shadow and Balstrode (*Peter Grimes*).

Terfel has also developed a flourishing career as a recitalist. With an acute feeling for language (he is bilingual in Welsh and English), he has been particularly successful in lieder, both in German-speaking countries and elsewhere. His vivid, magnetic personality, matching his imposing stature, is ideally suited to the demands of recital work, and the dramatic point of songs has always been a vital element in his interpretations.

Terfel's rapid emergence as an international star has owed much to his careful use of the voice. In his early career he concentrated on Mozart rather than weightier Verdi or Wagner roles, even though the dark, highly individual timbre and magnificent resonance of his voice pointed towards that repertory. More than once he cancelled projected performances when he found the demands of a role excessive, as with the title role in Berg's *Wozzeck*, planned for the 1997 Salzburg Festival. Shrewdly analytical in his interpretations as well as in his vocal technique, Terfel has the rare gift of translating intensive preparation into spontaneous expression, as can be heard on his many recordings, among them Jokanaan (his début role on disc), Mozart's Figaro, Don Giovanni and Leporello, *Elijah*, *Belshazzar's Feast* and discs of Schubert and Schumann lieder and English song.

EDWARD GREENFIELD

Termen, Lev Sergeyevich [Theremin, Leon]

(*b* St Petersburg, 15 Aug 1896; *d* Moscow, 3 Nov 1993). Russian inventor of electronic instruments. He graduated from the Petrograd Officers Electro-Technical School as a Military Radio Engineer in the Imperial Russian Army in 1916, and in the same year also graduated as a cellist from the Petrograd Conservatory of Music. He was stationed at the Tsar's Winter Palace at the beginning of the 1917 October Revolution but soon deserted his comrades to join the Bolsheviks and run the Red Army's local radio station. During this period he became fascinated with radio interference and electromagnetic field capacitance, and combined his musical interest and training as a physicist to develop a new electronic musical instrument, which he called initially the 'Ėtherophon' (*see* Theremin). In 1919 he set up a research laboratory in the newly founded Petrograd Physics-Technical Institute, where he continued work on his new instrument, giving its first public demonstration on 5 August 1920. In 1922 he was invited to give a demonstration of the instrument to Lenin at the Kremlin, after which he invited Lenin to try playing Glinka's *The Lark* with his assistance. Impressed by the proletarian potential for such an instrument, Lenin ordered 600 to be made but unfortunately died before his offer was realized.

With his flair for publicity and his enthusiastic salesmanship, Termen persuaded the Soviet authorities to grant permission for tours to France, Germany and England in 1927. These European concerts were a success with performances being sold out at the Royal Albert Hall, London, and riot police being needed to control the crowds at the Paris Opera. At the end of 1927 Termen travelled to New York, where his American debut recital at the Metropolitan Opera House on 31 January 1928, entitled 'Music from the Ether', had an enthusiastic reception. On the 28 February 1928 his instrument was patented under the name 'thereminvox', but was later just called 'theremin' (his choice of the French spelling for the American market reflected his original French ancestry). Termen's New York company Teletoch manufactured some 2000 electronic instruments of various kinds. Among his other inventions were the Rhythmicon (1931), a complex rhythmic instrument constructed for Henry Cowell with funds provided by Charles Ives, which unfortunately proved too unreliable for concerts, the Terpsitone (1932), an electric dance floor through which the motions of the dancer are transferred directly to changes in pitch allowing synchronization between sound and movement, a colour television system and security systems installed in the Sing Sing and Alcatraz prisons in the 1930s.

Termen's stay in the USA came to an abrupt end in 1938, when he was secretly taken back to the Soviet Union by NKVD agents (forerunners of the KGB) and imprisoned. He was taken to Moscow, where he was held without charges or trial and was sentenced to eight years hard labour in Siberia. In 1939 he was moved first to a labour camp at Omsk and later to a special centre for scientists under arrest in Koochino, near Moscow,

where he worked until 1947 inventing radio-controlled aircraft, developing speech recognition research to aid telephone tapping and other surveillance projects as well as inventing the famous Buran, the miniature listening device, for which he received the Stalin Prize First Class. After his release, Termen worked at the Moscow Conservatory, where he was professor of acoustics, until his laboratory was destroyed in 1977, following the discovery that he was continuing with his inventions of electronic instruments. Subsequently he worked at the Moscow Polytechnic Institute, where he undertook research on a system to reverse the aging process while continuing his acoustic research.

STEPHEN MONTAGUE

Termination.

In Latin monophonic psalmody, the formula with which a psalm tone may end (*differentia*). *See* Inflection, (1) and Psalm, §II, 7(iv). *See also* Mode.

Termos, Paul

(*b* Hilversum, 15 Jan 1952). Dutch composer and saxophonist. He studied composition at the Amsterdam Conservatory with Ton de Leeuw and took saxophone lessons from Leo van Oostrom. He formed part of various trend-setting ensembles which appeared at the interface between composition and improvisation, such as the Maarten Altena Quartet, the Guus Janssen Trio and the Instant Composers Pool. Since 1988 he has performed with his own Termos Tentet. His first significant composition was *Nieuw werk* (1976) for bass clarinet and piano, in which a few recognizable aspects of his music are already prominent, for example the use of clearly defined, archaic motifs from which his works are built up and which also play a role in his improvisations, and the clearly articulated and observable form.

Termos's music is tonally orientated with an often monumental character. Tension arises not so much from the use of chromatics and dissonance but from irregular repetitions with unexpected variations and turns in the formal development of the piece. A typical work is *Expres(s)* (1984), which deals with many topics that recur elsewhere in his output.

Ternaria

(Lat.).

A *ligatura ternaria* or ligature comprising three notes. *See* Ligature (i).

Ternary form.

A tripartite musical form, usually symbolized as *ABA*.

1. Definition.

It is perhaps the most fundamental of musical forms, based on the natural principles of departure and return, and of thematic contrast then repetition. The term is most commonly associated with the so-called composite ternary form, as found in the da capo aria or the minuet and trio, but is also applied to the 'small ternary' form, where the *ABA* shaping governs a single structure. The section that returns as the second *A* (which, if modified, may be better expressed as *A'*) is different in nature from and more substantial

than, say, the returning theme in a rondo, which is constructed in such a way as to demand both immediate and several subsequent repetitions. Ternary form works on a broader scale: whereas the intervening episodes of a rondo may not be very distinctive thematically, the *B* section of a ternary form is frequently highly contrasting. Even if it in fact continues in some way with the material of *A*, there will be some fundamental shift, for example of mode, scoring or tempo. The *B* section is often harmonically closed, particularly in instrumental composition, and less commonly in the da capo aria, where the *B* section is generally harmonically incomplete, moving from one key to a cadence on another. The first *A*section will almost always be closed, in the tonic. This distinguishes it from rounded Binary form, often popularly thought of as being ternary, where the *A* section mainly closes in the principal alternative key area (such as the dominant or the relative major). The subsequent *B* section tends to be continuous harmonically and thematically with this.

2. To 1750.

The value of ternary form as an obvious means of achieving both the variety implied in a form with a contrasting central section and the sense of unity that results from a return to the opening material was grasped early in the history of Western music. At its simplest, ternary form is found in German song from the 12th century to the 16th in the work of the Minnesinger and in chorale melodies, and it occurs in some Italian *laude* of the 13th century (e.g. HAM no.21*a*). Other comparatively early instances, the more interesting in that the musical shape is not conditioned by a textual repetition, occur in Josquin's chanson *Faulte d'argent* (HAM no.91) and in a number of basses danses such as *La volonté* set by Claude Gervaise (HAM no.137, 1).

Ternary form, however, is a more natural outcome of a primarily homophonic idiom than of polyphony. Rare during the Renaissance, it inevitably became a scheme of great importance during the Baroque period, being discussed as early as 1676 in Printz's *Phrynis* and receiving theoretical recognition by such critics as Mattheson (*Das neu-eröffnete Orchestre*, 1713). Monteverdi used it for the shepherd's song at the beginning of Act 1 of *Orfeo* (1607) ('In questo lieto e fortunato giorno') and in the closing duet of *L'incoronazione di Poppea* (1643) ('Pur ti miro'). During the course of the 17th century arias and duets were increasingly often cast in da capo form, and in the late Baroque period choruses were often written in this form too (e.g. the opening chorus of J.S. Bach's *St John Passion*).

Early examples of ternary form tend to emphasize contrasts between the *A* and *B* sections. The ground bass at the opening of Monteverdi's 'Pur ti miro' is dropped for the middle section, and in Steffani's aria 'Un balen' from *Henrico Leone* (HAM no.244) a new texture and movement are established at this point. Later, composers often cast the *A* section in binary form, drawing material from it for the *B*section which began in a related key but was tonally an 'open' structure leading back naturally to the reprise, often lavishly decorated, of *A*. In Handel's music the middle section is generally much shorter than the first, and usually differentiated from it in texture: a continuo accompaniment may replace that of the full string band,

or an obbligato wind instrument present in the *A* section may be discarded for the *B*. Handel also achieved striking dramatic effects by curtailing the da capo or abandoning it altogether (e.g. 'Why do the nations' in *Messiah*, 'A serpent in my bosom warm'd' in *Saul*, or the duet 'Prendi da questo mano' in *Ariodante*), but such effects derive their force from the fact that a full da capo was usual and therefore expected.

3. After 1750.

After its initial period of intense cultivation, principally in Baroque instrumental music and the da capo aria up to the end of the 18th century, the clear outlines of composite ternary form were gradually softened and apparently complicated. With a strongly contrasting *B* section the scheme was very effective, and could add an extra expressive dimension precisely through its fundamental simplicity. Such is the case in the slow movement of Haydn's Piano Trio no.27, where a very warm, diatonic, syntactically regular violin melody in E is succeeded by a *B* section that changes to the tonic minor, with pizzicato strings and extravagant improvisatory piano writing. When the *A* section is then repeated exactly, it has acquired a stronger identity simply through the agency of the contrast. In the majority of cases, though, where there was greater relative continuity of thought between *A* and *B*, this large-scale symmetry came to seem less appropriate.

One of the first structural areas to be developed was the join between *B* and *A'*. The need for a link or retransition increased once *B* sections began to be set in more remote keys: thus Haydn requires a harmonic link between the trio in B flat major and the minuet in D major in his Symphony no.104. However, most modifications to the basic scheme came to involve various sorts of rewriting of the *A'* section. The end of *A'*, for example, was often recast, allowing for some extension or rounding of the form after the symmetrical requirements of return had been fulfilled. A good illustration is the end of the Intermezzo op.117 no.3 by Brahms, which provides a more expansive and climactic treatment of the material that ended the first *A* section; the original tonic pedal gives way to a grand reharmonization, the apex of the melodic line is presented in augmentation, and the whole is directed to be played more slowly, with a marked ritenuto towards the end.

Material from *B*, often from its initial part, could also reappear as a brief coda to imply an *ABAB* outline. The penultimate bar of Chopin's Prelude in F♯ op.28 revives the opening of the *B* section to round off the structure. In the Allegretto of his Sonata op.14 no.1 Beethoven introduces a specially designated coda that repeats the final phrase of the Trio (marked 'Maggiore'). By retaining its retransitional chords, which effect a move from the C major of the Trio back to the E minor of the Allegretto, Beethoven also cancels the rather tentative *tierce de Picardie* that concluded the *A* section. This final restoration of E minor indicates the symbiotic relationship of the *A* and *B* parts of this ternary form.

A more dramatic instance of structural softening may be heard in Chopin's Nocturne in B op.32 no.1: just at the point where the return of *A* might be anticipated, the smooth course of the movement is interrupted by a mysterious 4-2 chord on F, a tritone away from the expected B. This leads to a charged recitative-like section. The opening music is never recovered

and the work finishes in B minor. Although the consequent larger structure is no longer ternary in any standard sense, the Nocturne must be heard against the background of ternary form. It represents an extreme deflection of what was obviously perceived more and more as the over-mechanical nature of *ABA* in its simplest state. Indeed, any full return of *A* became increasingly unlikely, and where it did occur, it was often because a deliberate formal simplicity was required. This effect was used especially in a nationalist context, such as in Grieg's *Lyric Piece* op.71 no.1, 'Der var engang'. Here the almost identical outer sections, suggesting a nostalgic present, frame the Norwegian dance of *B*, which suggests an idyllic memory.

By contrast, in Brahms's Intermezzo in A minor op.116 no.2, the return to Andante after a quicker middle section does not coincide with a precise return to the earlier material. From bar 51 a modified, uncertain version of the Andante music is heard, in A major rather than minor. The sense of harmonic and thematic return is thus partial and ambiguous; the ensuing passage acts in a way as a transition, a means of gradually restoring the mood and movement of the opening. The contortions of the circle-of-fifths sequence in bars 63–5 suggest the effort required to justify and make convincing the 'mechanical' return to *A* that follows from bar 66. A shortening of the returning section could also accomplish the desired flexibility. In the slow movement of Clementi's Sonata op.50 no.1, the returning *A* section (based on the Sarabande from Bach's English Suite no.2) omits the original first six-bar strain, beginning with the equivalent of bar 7. A more drastic reduction may mean that *A'* takes on the proportions of a coda; this is the case in the Scherzo of Fauré's Piano Quartet op.15. Another kind of structural blurring can be achieved by beginning the return off-key; on a dominant pedal, for example, in Grieg's *Lyric Piece* op.68 no.5, 'Bådnlåt'.

Another way of adding a perceived dynamism to the form was to create a five-part structure that repeated the *B* section, yielding an *ABABA* that is nevertheless essentially ternary. An early example is found in the third movement of Haydn's String Quartet in E♭ op.64 no.6, where the trio is heard twice. Its second appearance is identical save for the insertion of some very high first violin writing near the end. A more familiar instance of this scheme is the Scherzo of Beethoven's Symphony no.7.

In post-tonal language the definition of ternary form becomes less fraught, since matters of tonal argument and closure lie outside the structural equation. The fundamental principles of the form ensure that it has remained much in use, particularly with a relatively free treatment of the second *A* section. The slow movements of Bartók's second and third piano concertos both employ ternary designs. In no.2 the returning *A* material, much abridged and altered, is used to calm the music after the presto middle section. In the *A'* section of no.3 the piano continues with *B*-like figuration in the manner of divisions, so that yet again a final part of a ternary form acts to reconcile the abrupt contrasts of its first two sections.

Ternina [Trnina], Milka

(*b* Doljnji, Moslavina, 19 Dec 1863; *d* Zagreb, 18 May 1941). Croatian soprano. She studied in Zagreb with Ida Winterberg and at the Vienna Conservatory with Josef Gänzbacher and, while still a student, made her début in 1882 at Zagreb as Amelia in *Un ballo in maschera*. In the following year she was engaged at Leipzig, where she sang Elisabeth in *Tannhäuser*. After performances at Graz and Bremen, in 1889 she made guest appearances in Munich as Valentine in *Les Huguenots*, Amelia and Elisabeth, and in 1890 she inaugurated her engagement as a member of the company singing Leonore in *Fidelio*. She made her Covent Garden début as Isolde on 3 June 1898, later appearing as Sieglinde in *Die Walküre*, Brünnhilde in *Siegfried* and *Götterdämmerung* and as Leonore. In 1899 she sang Kundry in *Parsifal* at Bayreuth, and returning to Covent Garden the following year, she sang both Elsa and Ortrud in *Lohengrin* and Tosca in the first London performance of Puccini's opera (12 July 1900). She made her American début at Boston in 1896, singing Brünnhilde and Isolde with the Damrosch Opera Company, and first appeared at the Metropolitan, New York, in 1900 as Elisabeth. Her later Metropolitan roles included Tosca, which she sang at the American première of the opera (1901), and Kundry (1903) in the first staged performance of *Parsifal* outside Bayreuth. In 1906 she made her Covent Garden farewell as Elisabeth on 28 May, and her final stage appearance at Munich on 19 August, as Sieglinde. She had a superb voice whose 'overwhelming plentitude of warm, mellow tone' (*New York Times*) was heard to best advantage in the great Wagner roles, while her dramatic gifts were magnificently displayed in such parts as Leonore and Tosca. After her retirement, she taught singing, first at the Institute of Musical Art, New York, and then in Zagreb, where Zinka Milanov was among her pupils.

ELIZABETH FORBES

Ter-Osipov, Yury Grigor'yevich

(*b* Kirovabad, 4 November 1933; *d* Moscow, 16 Nov, 1986). Armenian composer and teacher. He graduated from the Hajibeyov Conservatory of Azerbaijan (1958) in the composition class of Kara Karayev, and in the class for children's compositions of Boris Zeydman. He then taught at a music school and then the Institute of Arts in Dushanbe, Tajikistan (1958–74) where he taught a whole pleiad of Tajik composers. From 1974 he lived

in Moscow, where he worked as an editor in the publishing house Sovetskiy Kompozitor.

His style has its roots in sources as varied as the ancient traditions of Armenian monody to the neo-Romantic which appeared in the 1970s and 80s; ancient canticles – or *sharakhans* – are subtly refracted through a typically Romantic outlook. His scores are regulated down to the smallest details and vividly portray the contrasting spheres of his work – those of deep meditation, explosive drama and an almost childlike directness of expression. Thus, elements of symphonism, the concerto and vivid theatricality organically co-exist in his works, as do various features of contemporary symphonic architecture including discrete development, 'still shot' dramatization, a tendency towards inner unification and plasticity of form.

Ter-Osipov provided an epigraph for his last score, the *Simfoniya-dialogi*: 'I am holding discourse with the entire world… the greatest moral truth is the brotherhood of people… man can and must avert fatal danger in our world…. The law of this world must be dialogue – the dialogue of brotherhood and love…'. This epigraph can be understood as the composer's spiritual testament.

ALLA VLADIMIROVNA GRIGOR'YEVA

Terpander

(*fl c*675 bce). Lyric poet of Lesbos. He became famous in the musical life of Sparta during its brief period of brilliance. According to a late tradition, he had been brought to Sparta at a time of public discontent, which he quieted through his music. Only this minor episode links him with the Greek belief in the power of musical ethos. His importance consists rather in his having been an innovator, the first significant and credible figure in the early history of Greek music.

Terpander's most remarkable achievement was the successful introduction of the seven-stringed lyre. In one fragment of his verse (Campbell, frag.6), he described the revolutionary change by which it supplanted the four-stringed phorminx, familiar since the Homeric period. According to the

Aristotelian *Problems* (xix.32), Terpander tuned this lyre so that the seven strings would span an octave. Elsewhere (Campbell, frag.7), Terpander associated Spartan valour and music, as did Alcman a generation later. The authenticity of the surviving fragments, however, has been called into question. In later sources, he was credited with having introduced a new type of composition, the lyric Nomos, which according to Pollux (*Onomasticon*, iv.66) was comprised of seven parts: *eparcha*, *metarcha*, *katatropa*, *metakatatropa*, *omphalos*, *sphragis* and *epilogos*. As in the case of aulos *nomoi*, to which an even earlier origin was ascribed, later generations remembered the melody rather than the sung text. Terpander is also credited with the invention of the Skolion (Pseudo-Plutarch, *On Music*, 1140f), and he was thought to be the first to make lyric settings (almost certainly monodic, like the *nomos*) of epic hexameters, not only those of Homer but his own as well. These, with their settings for lyre, constituted the *prooimion* or prelude prefacing recitations of Homer (Pseudo-Plutarch, *On Music*, 1132c–1134f).

Terradellas, Domingo Miguel Bernabe [Terradeglias, Domenico]

(*b* Barcelona, 1711; *d* Rome, 20 May 1751). Spanish composer. He probably received part of his musical instruction from Francese Valls, choirmaster of Barcelona Cathedral. In 1732 he moved to Italy. Sponsored by the Prince of Belmonte, he registered as a student at the music conservatory Poveri di Gesù Cristo in Naples on 23 May, at the same time committing himself to stay in the conservatory, where he studied with Francesco Durante, and to contribute to its music for a period of six years. His first important work, the oratorio *Giuseppe riconosciuto*, was written in 1736 while he was still a student. His professional career as a dramatic composer began in Carnival 1739 with the production in Rome of his heroic opera *Astarto*. He then returned to Naples where he wrote his second oratorio, *Ermenegildo martire* (performed 1739), and his single comic opera, *Gl'intrichi delle cantarine* (performed 1740).

In 1743 he achieved his first outstanding success with the presentation in Rome of his opera *Merope*. The Neapolitan envoy at the papal court, Cardinal Acquaviva, was so impressed that he wrote a strong recommendation for the composer to the court authorities in Naples, claiming that *Merope* had obtained a success in Rome 'the like of which no one can remember for many years'. But the Neapolitan court took no interest, and Terradellas stayed in Rome where he secured an appointment at the church of S Giacomo degli Spagnoli. During his years in this post (1743–5) he wrote many church compositions. According to Carreras, he left S Giacomo in 1745 because of differences with his colleagues. In 1746 he went to London where, in the course of a winter season, he composed two operas and arranged a pasticcio, all for the King's Theatre. In spring or early summer 1747 he returned to the Continent by way of Paris. By 1750 he was back in Italy. During carnival that year he was at Turin for the production of his new opera *Didone*, and in May he was at Venice for the production of another new opera, *Imeneo in Atene*. *Sesostri re d'Egitto*, his last opera, was performed with great success in Rome in Carnival 1751. The following May he died; how he died is still a mystery. The lurid report in the *Allgemeine musikalische Zeitung* of 12 March 1800 (cols.430–31) that, after a period of intense rivalry between him and another composer, Nicolò Jommelli, he was murdered and his body thrown into the Tiber, is nowadays discounted.

Though Terradellas was Spanish by birth, his taste and musical style were thoroughly italianate. His reputation rests primarily on his Italian *opere serie*. The structure of these operas was the usual one of the period: recitatives alternate with lyrical items, most of which are da capo arias. Terradellas used accompanied recitative sparingly but always to good advantage in moments of heightened dramatic intensity, and often increased its effectiveness by introducing wind instruments; before the 1740s composers had usually supported accompanied recitative with

strings and continuo alone, and Terradellas was one of the first to popularize the use of wind instruments in this context. Ferocity of expression, caused primarily by the vigorous orchestral accompaniment, marks many of his arias in fast time. His arias are generally distinguished by their strong contrasts, created by such means as changes of colour and texture, of key (from major to minor and back again), of time signature and of speed. Such features are among the advanced elements of Terradellas's music. The Italian aria of his period was gradually developing into a variegated piece, characterized by variety rather than by uniformity of texture and style, and Terradellas contributed to the course of this development.

His church music contains the same degree of vigour and the same elements of contrast. Here he demonstrated his skill in composing for large choir, often divided into two or four groups which might themselves be doubled in loud passages. Well-developed choral fugues occur in some of his masses. At the end of his career he is said to have reacted against these types of technique. Following a meeting with Terradellas, which presumably occurred in Paris in about 1747, Rousseau reported in his *Lettre sur la musique française* (Paris, 1753) that the composer expressed himself ashamed of his earlier motets with their 'laboured' choruses. 'Once upon a time', Rousseau quotes him as saying, 'I loved to create noise; now I try to make music'.

MICHAEL F. ROBINSON/ROSA LEONETTI

Terrasse, Claude (Antoine)

(*b* Grand-Lemps, Isère, 27 Jan 1867; *d* Paris, 30 June 1923). French composer. He studied the organ at the Lyons Conservatory and then entered the Ecole Niedermeyer in Paris. His teacher was Eugène Gigout, organist of St Augustin, with whom his studies continued privately after Gigout left the Niedermeyer in 1883. After a period in the army and as a piano teacher at Arcachon (Gironde), Terrasse returned to Paris in 1895 where he became organist at La Trinité (1896–9). He began to compose incidental music for the theatre, notably for Alfred Jarry's *Ubu-Roi* (1896) and Ferdinand Hérold's *Savitri* (1898). He had previously written only piano

music and a few religious works, but he now found his métier in *opéra bouffe*; his works formed a conspicuous part of the renaissance of this genre which followed the last examples by Audran and Strauss, and was contemporary with Lecocq's last pieces. Debussy, reviewing *Le sire de Vergy* (1903), acknowledged Terrasse's success and praised his invention and orchestration.

The appeal of Terrasse's works in over 30 years came partly from the distinction of his librettists, who were active contributors to a vintage period of French light comedy; they included De Flers and De Caillavet, Tristan Bernard and Franc-Nohain. Jarry himself was a co-librettist. Terrasse also wrote incidental music for Georges Courteline's *Godefroy, L'expulsion d'Antoine* and *Panthéon-Courcelles*, and contributed music criticism to the literary revue *La Vogue*.

WORKS

printed works published in Paris

*c*28 operettas, first perf. in Paris unless otherwise indicated, and pubd in same year, incl.: La petite femme de Loth (2, Tristan Bernard), 1899; La fiancée du Scaphandrier (1, Franc-Nohain), 1901; Les travaux d'Hercule (3, R. de Flers and G.A. de Caillavet), 7 March 1901; Le sire de Vergy (3, Flers and Caillavet), 16 April 1903; Le Cagliostro (1, E. Demolder and A. Jarry), 1904; M. de la Palisse (3, Flers and Caillavet), 2 Nov 1904; Le mariage de Télémaque (5, M. Donnay, after J. Lemaître), 4 May 1910; Pantagruel (5, Demolder and Jarry), Lyons, 30 Jan 1911

Incid music to several plays incl. Ubu-Roi (Jarry), 1896, pubd (pf and vs) in Répertoire des pantins (1898)

Vive la France! (trilogie à grand spectacle pour marionettes, Franc-Nohain), 1903

Les lucioles (ballet), OC (Favart), 28 Dec 1910

Songs, incl. 3 chansons à la charcutière (Franc-Nohain) and 3 others, pubd in Répertoire des pantins (1898)

[19] Petites scènes familières, pf (1895); other pf and inst music

2 masses; motets

DAVID CHARLTON/CORMAC NEWARK

Terraza, Emilio (José)

(*b* Bahia Blanca, 26 March 1929). Brazilian composer, pianist, conductor and teacher of Argentine birth. He attended the Domingo Amadori Conservatory of his native city, then studied piano with Ruwin Erlich and composition with Ficher in Buenos Aires (1948–56). He also studied

composition with Tony Aubin in Paris and conducting with Rafael Batista in Rio de Janeiro. He settled in Brazil in 1959 and became a Brazilian citizen in 1961.

From 1959 to 1964 he conducted the University of Rio de Janeiro SO. He taught at the National Theatre Conservatory in Rio de Janeiro (1967–9), was professor of music at the University of Brasília (1969–72), then headed the music department at the Federal University of Piauí (1973–5). He returned to the University of Brasília, where he headed the music department (1984–6) and taught composition and music theory until his retirement in 1993.

Terraza has written about 50 works for solo instruments, voices, chamber groups and solo with orchestra, revealing great concern for technical matters and for a non-nationalist Latin American expressive character. Several of his works were presented at the Brazilian Contemporary Music Festival in the 1980s and 1990s.

Terry, Charles Sanford

(*b* Newport Pagnell, 24 Oct 1864; *d* Westerton of Pitfodels, nr Aberdeen, 5 Nov 1936). English historian and Bach scholar. Descended from a line of doctors, he was educated at St Paul's Cathedral Choir School, where he was a solo boy under Stainer, and later at Lancing. He read history at Cambridge, devoting his spare time to music. In 1890 he went to Newcastle upon Tyne as lecturer in history at what was then the Durham College of Science and founded the College Choral Society. In 1898 he took a similar post at the University of Aberdeen, where he set up a choral society of 150 with an orchestra of 70, which he conducted himself, and in 1903 he was appointed professor, retiring in 1930. In that year he lectured on Bach in America and Canada, and in 1935 he became an honorary PhD of Leipzig. He received several other honorary degrees and distinctions, and in 1914 Elgar dedicated a partsong to him.

As a historian, he contributed to the Cambridge Medieval and Modern Histories, dealing chiefly with Scottish affairs. In musical matters he sometimes made elementary mistakes, which is strange, considering his wide practical experience; he never knew the difference between Bach's writing and his wife's; and his original ideas – such as his attempt to show that Bach wrote the *Orgel-Büchlein* in prison – were not always sound. But he was excellent at collecting and organizing information. He was the first to take J.C. Bach seriously as a subject for general research. His biography of J.S. Bach is both detailed and readable; its merits were immediately recognized, and a German translation appeared within a year. His complete edition of the chorales (adequately supplied with German and English words), his translations of Forkel (London, 1920) and of cantata texts, with his studies of the Leipzig liturgy, the origins of the chorales, and the instruments of the period, remain valuable if used with caution. He also helped to popularize the major choral works by producing booklets that served as superior programme notes. In his time, he probably did as much as any man to advance the study of Bach. His widow gave his Bach library to the RCM; with it is a pencil portrait of Terry by J.B. Souter.

WALTER EMERY/R

Terry, Clark [Mumbles]

(*b* St Louis, 14 Dec 1920). American jazz trumpeter and flugelhorn player. He performed with Charlie Barnet (1947) and in Count Basie's big band and small groups (1948–51) before beginning an important affiliation with Duke Ellington, which lasted from 1951 to 1959. During this period Terry took part in many of Ellington's suites and acquired a lasting reputation for his wide range of styles (from swing to hard bop), technical proficiency and infectious good humour. After leaving Ellington he became a frequent performer in New York studios and a staff member of NBC; he appeared regularly on the 'Tonight Show', where his unique 'mumbling' scat singing became famous. He also continued to play jazz with musicians such as J.J. Johnson and Oscar Peterson (with whom he recorded *The Oscar Peterson Trio Plus One – Clark Terry*, 1964, Mer.), and led a group with Bob Brookmeyer which achieved some popularity in the early 1960s; among their recordings was the album *Mumbles* (1965, Mstr.). In the 1970s Terry began to concentrate increasingly on the flugelhorn, from which he obtained a remarkably full, ringing tone. In addition to his studio work and teaching at jazz workshops, he toured regularly in the 1980s with small groups (including Peterson's) and as the leader of his Big B-A-D Band (formed in 1967) and a nonet, the Spacemen. His humour and command of jazz trumpet styles are nowhere more apparent than in his 'dialogues' with himself, either on different instruments (i.e. trumpet and flugelhorn) or on the same instrument, muted and unmuted.

J. BRADFORD ROBINSON

Terry, Sir R(ichard) R(unciman)

(*b* Ellington, Northumberland, 3 Jan 1865; *d* London, 18 April 1938). English organist and musical scholar. He became organist and choirmaster of St John's Cathedral, Antigua, in 1892, and in 1896 was appointed to a similar post at Downside Abbey, Somerset, where he began reviving the music written for the Latin ritual by early English composers. He was the first to perform liturgically the three- and five-part masses by Byrd and works by Tye, Mundy, Morley, Parsons, White and others. When Westminster Cathedral was built he was appointed organist and director of music, a post which he held with great distinction from 1901 until 1924, when he resigned after increasing criticism of his bold choice of works. Terry established there a tradition of musical treatment for the whole of the Roman liturgy in England based on the principles in the *Motu proprio*, so that the Use of Westminster offered an example to Roman Catholic church musicians unequalled anywhere outside Rome itself. He set a high standard of performance and demonstrated the great wealth of English liturgical music of the finest period. He revived Peter Philips's *Cantiones sacrae*, Byrd's *Gradualia* and *Cantiones sacrae*, the *Cantiones* of Tallis and Byrd, White's Lamentations, and motets by Dering, Fayrfax, Sheppard, Tye and others. He also performed the fourth volume of Jacob Handl's *Opus musicum*.

Terry did much editorial work, especially of early English church music (e.g. Byrd's Mass for five voices, London, 1935; 24 motets in Novello's series of Tudor motets, London, 1937). He also published modern editions of Calvin's first psalter of 1539 (London, 1932) and the Scottish Psalter of 1635 (London, 1935). He was the first chairman of the Carnegie Trust's editorial committee for Tudor Church Music, and his *Westminster Hymnal* (London, 1912, 7/1937) was for many years the standard hymnal for Roman Catholic use in Britain. He was awarded the honorary MusD by Durham University in 1911 and knighted in 1922.

J.A. FULLER MAITLAND/H.C. COLLES/PETER PLATT

Terry, Todd

(*b* 1967). American club DJ, musician, producer and entrepreneur. While at school in Brooklyn, he was a DJ for street parties as part of the Scooby Doo Crew, first gaining fame with a remix for the Jungle Brothers', *I'll house you*, one of the first 'hip house' (hip hop with house) crossovers. Solo singles followed (released as the Todd Terry Project) including *Bango (To the Batmobile)* and *Weekend* (both 1988) which were popular in both Europe and the USA. By the mid-1990s, the popularity of hip house had waned but Terry created a garage groove for a remix of Everything but the Girl's mid-tempo guitar track, 'Missing' (from *Amplified Heart*, 1994). The remix grew via Ibiza clubs into an anthem which achieved mass commercial success and revitalized the career of Everything But the Girl. Terry followed this success with the house anthem *Keep on Jumpin'* and continued working on remixes (Janet Jackson, Björk, Annie Lennox) and production (Browstone, Garbage). He co-founded the Freeze label (1992), mainly as an outlet for *Unreleased Projects* EPs, having recorded under numerous pseudonyms including Sound Design, Torcha, Static Black Riot and most importantly Royal House. His prolific output and ability to move with the times are reflected in his nickname 'Todd the God', and his high profile was retained through the 1990s with a DJ residency at London's Ministry of Sound, the release of *A Night in the Life of Todd Terry* (1995) mix set and further development with the drum 'n' bass-inspired *Resolutions* (Astralwerks, 1999).

IAN PEEL

Ter-T'at'evosian, Jivan Gurgeni

(*b* Yerevan, 14 Sept 1926; *d* 27 June 1988). Armenian composer and violinist. He graduated from Portugalov's violin class at the Yerevan Conservatory in 1952, and from Mirzoian's composition class in 1960. He had previously worked as a violinist (1942–52) and was later head of the Saradzhev Music School (1952–9). He lived in Moscow and Yerevan for

the remaining years of his life and became an Honoured Art Worker of Armenia in 1986. His music combines national traditions with new techniques; the individuality of this style was evident in his earliest works, despite the debts to Shostakovich and Mirzoyan. Two features are particularly characteristic: an emphasis on the linear, sometimes leading to polytonality, and a predilection for monothematic variation. Expressive force is sometimes enhanced by construction in vast planes, or by the clash of contrasting thematic areas. The use of a single germinal motif is exemplified by the First Symphony; the integrity of the Second Quartet is assured by means of 12-note serialism. Later in his career, he became inclined towards neo-romanticism and many instrumental works feature the development of particular melodic or rhythmic cells. His Violin Concerto is unusual in that violas and cellos are omitted from the orchestra in favour of a bass guitar.

SVETLANA SARKISYAN

Terterian, Avet Rubeni

(*b* Baku, 29 July 1929; *d* Yekaterinburg, 11 Dec 1994). Armenian composer. He studied at the Baku Music College (1948–51) and then at the Melikian Music College in Yerevan. He undertook extended studies in composition at the Yerevan Conservatory (1952–7) with Mirzoian and Sarian, and later took a higher degree (1964–6). He became a member of the Armenian Composers' Union in 1956; he was later executive secretary (1960–63) and deputy chairman (1963–5). He was employed in the Armenian Ministry of Culture (1970–74) and at the same time taught orchestration at Yerevan Conservatory, where he was appointed professor

in 1985. He also gave masterclasses at the Conservatory of the Ural (1993–4) and has participated in a number of theoretical seminars, including one on electronic music in 1992 held at the House for Working Moscow Composers. In 1994 he spent several months at Wiepersdorf on a grant from the Ministry of Culture of Landes Brandenburg. He composed mainly at Dilijan, a house for composers near Lake Sevan. He received numerous official awards and prizes including the State Prize of Armenia in 1977 (for the Third Symphony) and the Khachaturian Prize in 1993, and he was made a People's artist of the USSR in 1991.

Terterian breathed new life into Armenian symphony and music theatre, both of which he interpreted standing at an individual intersection of music, anthroposophy, and both Eastern and Western philosophy. He is among those 20th-century composers for whom music is a manifestation of a universal mind, its order and motion. For him, 'a knowledge of the world beyond the senses' as envisaged by Rudolph Steiner entailed new and specific principles of formal organization and sonic space. Aesthetically drawn to sonoristic methods and the practices of Xenakis and the New Polish School, Terterian developed his concept of timbral-acoustic dynamics based on a synthesis of strict and equal temperament, differentiated according to his material and phonic choice. He frequently extends orchestral sonorities by the addition of voices, folk instruments such as the *duduk*, *zurna*, *kyamancha* and *dap*, church bells and *burvar* (Armenian thurible), many of which are put to symbolic use. The overall choice of sounds often depends on antithetical propositions inherent in phenomena such as the continuum from a single sound as musical phoneme through orchestral unisons to a chromatic cluster as morpheme, or the acoustic relationship between natural and recorded sound, as well as the multi-measured and cosmological perceptions of the space. Terterian frequently composed in blocks of sound, each of which is differentiated in time, internal structure and the nature of its development. Ostinato fulfils a formal function analogous to fermentation in his music. The ostinato line, the chordal pedal or cluster, continuous sound and the rotated figure all play their part in building up overall texture; they each have their own effect on the changing functions of individual textural strata and on the constantly fluctuating process of their compression and attenuation.

Terterian's eight symphonies, composed between 1969 and 1989, are built around the concept of meditation. Traditional thematic material is replaced by prolonged pauses interspersed with concentrations on extended sonic complexes or a single, absolute sound (the composer has spoken of 'submergence in sound'). A sense of time and space usually associated with Eastern music and religious traditions and the use of germs of melody from early Armenian song as bases for improvised development intensify the hieratic atmosphere of this music, especially that of the last five symphonies and the opera *Das Erdbeben*. His most innovative ideas first emerged in the opera *Krake Ōghakum* ('The Fire Ring') of 1967. Following a number of vocal-orchestral and chamber works written in the post-Khachaturian manner, this work resolutely embraced modernity in its dramatic expression. The use of the sharakan (medieval hymnody), free atonality and dodecaphonic writing, together with a new perception of the orchestra and rhythm, coincided with the general turning-point in Armenian

music that took place in the 1960s. The originality of the ballet *Monologi Richarda III* ('Monologues of Richard III'), completed in 1979, lay in the relativity of its musical language which is aphoristic rather than narrative. The logic of its dramatic symbolism is achieved by stylistic layering and a combination of natural and recorded sound in which musical and found sonic sources are modified. Allegorical context is intensified in the opera *Das Erdbeben* (1984); here the combination of elements from different dramatic genres – opera, mystery play, the masque and eurhythmics – results in music of kaleidoscopic expressiveness. Terterian's symphonies have wide international currency and have been performed in Berlin (and many other German cities), Boston, Helsinki, Kiev, London, Minsk, Moscow, Prague, Tallin, Tbilisi, Warsaw, Wrocław, Yerevan and Zagreb.

Tertian

(Ger.).

An Organ stop.

Tertiary [tertian] harmony.

A term for a harmonic system based on the interval of a 3rd (such as the major–minor tonal system), as opposed to the Quartal harmony (1) of some early medieval polyphony and certain 20th-century styles.

Tertis, Lionel

(*b* West Hartlepool, 29 Dec 1876; *d* London, 22 Feb 1975). English viola player. He studied violin at the Hochschule für Musik in Leipzig and at the RAM, London, where the principal, Alexander Mackenzie, urged him to specialize in viola playing. Following this sound advice he became the foremost player of his instrument and toured Europe and the USA as a soloist. He had to overcome much prejudice before the public accepted the viola as a solo instrument, and to do a great deal of pioneer work to find music to play. Many British composers wrote specially for him: John McEwen, Bax, Benjamin Dale, Bowen, Bridge and Harry Farjeon. Although much of this music failed to maintain a permanent place, it served the double purpose of providing an immediate repertory and an inspiration to such later composers as Walton, Vaughan Williams and Bliss.

Tertis produced a big powerful tone of much beauty and intensity. He played on a large viola to achieve his aim of a rich and resonant C-string tone which bordered on the quality of a cello and avoided the characteristic nasal quality of the smaller viola. So keen was he on this depth of tone that he designed a large viola in collaboration with the English maker Arthur Richardson; through his enthusiasm he inspired players and instrument makers to adopt his ideal (*see* Viola, fig.1*b*). On similar principles, he designed a cello in 1960 and a violin in 1962. In 1936 Tertis retired, and spent his time teaching and encouraging interest in the viola. He continued to play for special occasions, the last being when he was 87. He made numerous transcriptions, many of which filled gaps in the scanty repertory; others, like those of Mozart's Clarinet Concerto and Elgar's Cello Concerto, were criticized as concert pieces but are valuable to students. In 1950 he was made a CBE. He made some notable recordings, including Mozart's Sinfonia concertante (with Sammons), viola sonatas by Bax and Dohnányi and his own arrangement for viola of Delius's Violin Sonata no.2.

WATSON FORBES/R

Teruggi, Daniel

(*b* La Plata, Argentina, 11 March 1952). French composer. While taking a degree in physics at the National University of La Plata, he also studied

music at the La Plata Conservatory (1973–7). He moved to France in 1977 and entered the electro-acoustics class at the Paris Conservatoire, gaining his diploma in 1980. In 1983 he joined the Groupe de Recherches Musicales. As a specialist in computer-generated music, he is particularly concerned with teaching, and with the SYTER (*système en temps réel*) audionumeric system. In 1984 he took over artistic responsibility for the group, and became its director in 1997. He has pursued a parallel career teaching at the Sorbonne since 1986. At present his activity as a composer is in two directions: on the one hand the production of works for tape such as *Eterea* (1984), *Focolaria-Terra* (1989), *Instants d'hiver* (1993) and *Fugitives voix* (1997), and on the other hand works combining electro-acoustic with instrumental music, for instance *Summer Band*, for bandoneon and tape (1996), and *Reflets éphémères*, for 16 instruments and tape (1997). The principal characteristics of his music are its rich and flexible material, coherent formal and dramatic articulation, and mastery of the sound spectrum.

BRUNO GINER

Terz

(Ger.).

An Organ stop (*Tierce*).

Terzago [Terzagus, Terzagi], Bernardino [Bernardinus]

(*b* ?Rome, *fl* 1623–5). Italian composer and singer, active in Poland. He worked at Kraków Cathedral from September 1623 to August 1625. He went to Poland from Rome, where he had probably been born, since in the cathedral records he is sometimes described as 'Romanus'. He was a member both of the Cappella Rorantistarum, which sang in the so-called Sigismund Chapel, and of the cathedral's main vocal and instrumental forces. Three four-part compositions by him are known (all ed. in ZHMP, xxv, 1976): *Patrem omnipotentem* (dated 25 December 1623); an antiphon

of St Martin, *O beatum pontificem* (dated 1624); and *Sancte Sebastiane* (written on 18 January 1624). The first two are for boys' and men's voices and must therefore have been intended for the main cathedral chapel, while the third, which is for low voices, must have been written for the Cappella Rorantistarum, which consisted only of natural men's voices. Despite some rhythmically interesting polyphony in *O beatum pontificem*, the pieces are stereotyped and conservative, an impression reinforced by the even note values of the cantus firmi. The title of *Patrem omnipotentem* continues 'na augment Bernardyńskie'. It is not clear what this means, though it probably suggests that the cantus firmus was derived from the melody of a pseudo-chorale.

MIROSŁAW PERZ

Terzakis, Dimitri

(*b* Athens, 12 March 1938). Greek composer. He studied the piano under Thurneissen and theory and composition under Yannis Papaioannou at the Hellenic Conservatory, Athens (1959–64). Then he spent the years 1965–9 at the Hochschule für Musik in Cologne, where he studied composition with Zimmermann and electronic music with Eimert. Works by him have been performed at the ISCM Festival in Basle (1970), the Darmstadt summer courses (1970) and the Hamburg Das Neue Werk series (1972). He taught counterpoint and fugue (1974–94) and Byzantine music and composition (1989–94) at the Musikhochschule, Düsseldorf. In 1985–6 he was guest professor of composition at the Musikhochschule, Berlin, and in 1994 he was appointed to teach composition at the Musikhochschule, Berne, and at the Felix Mendelssohn Musikhochschule in Leipzig. In 1980 he also began to organize summer courses in Western and south-eastern European music in Nauplia, Greece.

His music has developed from an expanded tonality (*Prelude* and *Legend*) through 12-note serialism (e.g. the Sinfonietta) to a fruitful exploration of micro-intervals and glissandi, principally in his melody, based on Byzantine music. In recent years, Terzakis's view of Western harmony, polyphony

and the tempered system as constituting only an extended episode in the evolution of music has increasingly led him to an essentially monophonic output. In this he has drawn example from Greek traditional music, as well as from other parts of the Mediterranean and the Near East.

GEORGE LEOTSAKOS

Terza mano

(It.).

An accessory Organ stop acting as a coupler.

Terzet

(Ger. *Terzett*; It. *terzetto*).

A composition for three solo voices with or without accompaniment. The term was defined by J.G. Walther (*Musicalisches Lexicon*, 1732) and occasionally appears in scores from the first half of the 18th century (e.g. Handel's *Solomon*, 1748, and J.S. Bach's Cantata no.38). Many compositions for three voices were written before then, however, in the forms of the tricinium, the madrigal and the villanella in the Renaissance; accompanied pieces for three similar voices were not infrequent in 17th-century opera and oratorio, for example the three *famigliari* in Monteverdi's *L'incoronazione di Poppea* (1642) and the interludes for the three shepherds and three wise men in Schütz's *Historia, der … Geburth … Jesu Christi* (1664).

In the Classical period the 'terzett' (so named in the scores) frequently appears. Mozart's *Le nozze di Figaro* and *Die Zauberflöte* contain celebrated examples. In the latter work, that for the Three Boys, 'Seid uns zum zweitenmal willkommen', continues the earlier operatic tradition of trios for similar voices (which survived to Wagner's time in the three Norns and three Rhinemaidens of the *Ring*), although in general the name implies no such limitation of voices nor any particular style of treatment. For the little trio 'Soave sia il vento' in *Così fan tutte* Mozart used the diminutive, 'terzettino'. The terzetts in Weber's *Der Freischütz* include one with a choral conclusion; that from Mendelssohn's *Elijah* for the three angels, 'Lift

thine eyes to the mountains', is in every feature simply an unaccompanied partsong. Chamber terzets are found in the works of Haydn, Mozart and Schubert. Dvořák called his op.74 trio for two violins and viola 'Terzetto', but the use of the term for instrumental music in the sense of 'Trio' is uncommon. (*MGG2*; G. Reinäcker)

MICHAEL TILMOUTH/R

Terzflöte

(Ger.).

Flute a minor 3rd above the normal flute; *see* Flute, §II, 3(ii).

Terzgeige

(Ger.). A small violin, or Violino piccolo, tuned a 3rd higher than the violin.

Terzi, Giovanni Antonio

(*fl* Bergamo, *c*1580–1600). Italian lutenist and composer. Terzi's output comprises two large collections of lute music published in Venice by Amadino in 1593 (dedicated to Bartolomeo Fino) and Vincenti in 1599 (dedicated to Sillano Licino). Both collections contain compositions in a wide variety of genres including fantasias, French, Italian and German dances, and intabulations of motets, madrigals, chansons and ensemble music. The second book also contains transcriptions of 'canzonette a 3, 4, & 5 voci, con le sue parole', with texts printed beneath the tablature. Terzi's arrangements of motets and madrigals closely resemble the intabulations of Vincenzo Galilei (Fronimo, Florence, 1584) in reproducing all the voices of the vocal original. Many of these intabulations are technically demanding, with thick textures and the clever use of chord formations in high positions that include the stopped seventh course. Terzi also arranged madrigals and chansons by Palestrina, Striggio, Ingegneri, Lassus and Willaert as duets for two lutes, pitched either at the unison or a fourth apart; the first lute part contains a literal intabulation of the madrigal and can be played on its own, while the second lute part ('contrapunto') proceeds in a florid improvisatory style. Some of the second lute parts are labelled as suitable for performance 'in concerto', perhaps meaning that this part could also be used in a performance of the vocal original. Terzi appended a similar designation to his arrangement of Striggio's *Chi farà fede* for bass lute, made 'in the style of the viola bastarda' (division viol) and displaying an idiomatic arpeggiation of chords. Among the intabulations of instrumental music are 11 four-voice canzonas by Florentio Maschera (Brescia, 1584) and three canzonas by Claudio Merulo arranged as duets. The 1599 book closes with a canzona in double choir style scored for four lutes, using two pairs of instruments tuned a fourth apart.

DAVID NUTTER

Terzian

(Ger.).

An Organ stop (*Tertian*).

Terzian, Alicia

(*b* Córdoba, 1 July 1934). Argentine composer, musicologist and conductor of Armenian descent. She studied composition with Ginastera at the National Conservatory, Buenos Aires, where she graduated in 1958 and won the Gold Medal in 1959. She also studied Armenian sacred music in Italy with Father Leoncio Dayan at the S Lazzaro monastery near Venice, and pursued private studies in conducting with Mariano Drago. She has won many honours in Argentina and France and the St Sahak and St Mesrob Medal from Catholicos Vazken I of Armenia (1993), and has received commissions not only in Argentina but also from London, New York, Zagreb, Grenoble, Salzburg, Radio France and the National SO of Buenos Aires. In 1978 she founded Encountros Internacionales de Música Contemporánea to introduce international audiences to Latin American, and specifically Argentine, avant-garde music; under her direction, the group has participated in about 200 festivals. She is General Secretary of UNESCO's Music Council of the Three Americas. She has been professor of composition at the National Conservatory and has lectured widely on contemporary music.

Terzian's works possess both a bold imaginative drive and a solid inner logic, and often exploit tone colour as an element of musical form. Her style has evolved to embrace polytonality, microtonality, electronic transformation and digital transposition. Her Violin Concerto (1955), scored

for large orchestra, is virtuoso yet lyrical, and the brilliant technical display of the solo instrument is supported by a classical design. *Cuaderno de imágenes* (1964) features stationary and shifting note clusters, its unconventional organ registrations creating striking effects. *Carmen criaturalis* (1969–71) reveals an elemental grandeur, its horn soliloquy formed within a framework of amorphous and grotesque sonorities. *Canto a mí misma* (1986) combines the traditional sound of the string orchestra with its electronic metamorphosis, while the concert hall itself serves as a sonorous dome. In *Oda a Vahan* (1996), for piano and tape, Terzian utilizes a realization of a chant by Khosrovidukht, an 8th-century Armenian woman musician, and integrates it within an austere piano part, creating a distilled, evocative, almost ritualistic manifestation.

ŞAHAN ARZRUNI

Terziani, Eugenio

(*b* Rome, 30 July 1824; *d* Rome, 30 June 1889). Italian conductor and composer, son of Pietro Terziani. He studied under Mercadante at the Naples Conservatory and later under Giuseppe Baini in Rome. He became a member of the Filarmonica in Rome in 1842. His first opera, *Giovanna I regina di Napoli*, was performed at Ferrara in Carnival 1845. He fought as a volunteer in the Garibaldi brigade (Legion Lipari, 1848). From 1847 to 1868 he was the conductor of the Teatro Apollo in Rome, and from 1867 to 1871 at La Scala. The Milanese did not like him, but Verdi admired him and entrusted him with the revised *La forza del destino* (1869). From 1871 to 1875 he was again at the Apollo, but his stay was marred by critical opprobrium. Nevertheless, he was considered by many one of the most illustrious and learned of Roman musicians. From 1875 he held the composition chair at the Liceo Musicale di S Cecilia; he also taught singing.

The last of Terziani's three operas, *Niccolo de' Lapi* owes much to Verdi: the short Prelude with two motifs; the texture of tremolo chords under a melody doubled by voice and orchestra as in *Aida*; and a scena and monologue for the tenor. The musical style is more interesting than that of most Italian operas of the day. Among his other works are two ballets, sacred pieces including a Requiem (1882), and occasional items.

Terziani's son Raffaele (1860–1928) was artistic director of the Reale Filarmonica Romana (1890–95), a singing teacher at the Accademia di S Cecilia, and later its acting director (1915–16) and vice-director (1917–23). He composed sacred music, instrumental pieces and an opera, *Aman*; although never performed, it won a prize in the first Sonzogno competition (1889).

WORKS

Giovanna I regina di Napoli (op, 3, C. Giuliani), Ferrara, Comunale, 26 Dec 1844

Alfredo (op, 4, G. Cencetti), Rome, Apollo, 21 Feb 1852

Niccolo de' Lapi [L'assedio di Firenze, ossia Palleschi e Piagnoni] (dramma lirico, 4, F. Guerrazzi), Rome, Apollo, 24 Feb 1883, vs (Milan, n.d.)

MARVIN TARTAK

Terziani, Pietro

(*b* Rome, 1765; *d* Rome, 5 Oct 1831). Italian composer. A pupil of G.B. Casali in Rome, in 1780 he entered the Conservatorio di S Onofrio, Naples, where Carlo Cotumacci and Giacomo Insanguine were his teachers. He afterwards returned to Rome to study the strict *a cappella* style of composition, again under Casali. In 1784 he was admitted to the Bologna Accademia Filarmonica, composing a four-part antiphon as his test piece, and at about the same time also became a member of the Rome

Congregazione di S Cecilia, of which he was an officer from 1797 to 1803. In the early years of his career he composed two operas, *Il geloso imprudente* (Rome, 1785) and *Creso* (Venice, 1788), and some oratorios. After the French invasion of Italy at the end of the century he went to Vienna, where he remained until the end of the Napoleonic wars, composing an opera there (*I campi d'Ivri*, 1805). He then returned to Rome and in 1816 became *maestro di cappella* at S Giovanni in Laterano and later at the churches of Il Gesù, S Ignazio di Loyola and S Silvestro. In this period he devoted himself exclusively to sacred music. He composed in both the strict and free accompanied styles and was highly regarded as a contrapuntist, although Schilling regarded his works as insufficiently powerful for performance in large churches. A large number of masses, graduals, offertories, antiphons, psalms, hymns, motets and other sacred pieces survive in libraries and church archives in Italy and elsewhere (*A-Wgm*, *Wn*, *B-Bc*, *D-Mbs*, *MÜs*, *I-Baf*, *Bc*, *Bsf*, *Mcap(d)*, *MOe*, *Nc*, *Rsc*, *US-NYp*); some were published.

Terziani's sons Gustavo and Eugenio both became musicians; Gustavo (*b* Vienna, 17 Feb 1813; *d* Rome, 31 Aug 1837) was a pupil of his father and Baini, but died of cholera before establishing a reputation as a composer.

Teschemacher, Margarete

(*b* Cologne, 3 March 1903; *d* Bad Wiessee, 19 May 1959). German soprano. She studied in Cologne, where she made her début in 1923 as Ruth in *Die toten Augen*. Her first great success came the following year as Micaèla, also at Cologne. Engagements followed at Aachen (1925–7), Dortmund (1927–8), Mannheim (1928–31), Stuttgart (1931–4), Dresden (1935–46) and Düsseldorf (1947–52). At Dresden she created the title role in Strauss's *Daphne* (1938) and Miranda in Sutermeister's *Die Zauberinsel* (1942); she was also the first Dresden Countess in *Capriccio* (1944). She sang Pamina and Elsa at Covent Garden in 1931 and Countess Almaviva and Donna Elvira during the Dresden Staatsoper's visit to London in 1936. In 1934 she appeared at the Teatro Colón, as Arabella, Senta, Sieglinde and Mařenka. Teschemacher's roles also included Jenůfa, Minnie, Kundry and Zandonai's Francesca da Rimini. Her warm lyric-dramatic voice can be heard on several recordings, most notably as Eva on Karl Böhm's 1938 version of the third act of *Die Meistersinger*.

HAROLD ROSENTHAL/ALAN BLYTH

Teschner, Gustav Wilhelm

(*b* Magdeburg, 26 Dec 1800; *d* Dresden, 7 May 1883). German singer, teacher and music editor. He studied singing and composition with C.F. Zelter and Klein in Berlin, then went to Italy, where he studied with Giorgio Ronconi, Eliodoro Bianchi and Girolamo Crescentini. Through his acquaintance with Fortunato Santini he became interested in old Latin and German church music. Returning to Germany, he studied singing in Dresden, and then settled in Berlin as a singing teacher using Italian principles. In 1873 he was appointed Royal Prussian Professor. His numerous editions of old church music include H.L. Hassler's *Psalmen und christliche Gesänge*, Eccard's *Geistliche Lieder auf den Choral* and *Preussiche Festlieder* by Eccard and Stobaeus. He also published several collections of solfèges by Minoja, Crescentini, Zingarelli and Clari, as well as some of his own vocal exercises. His collection of early music is in the Deutsche Staatsbibliothek, Berlin. (*MGG1*, R. Schaal)

ELIZABETH FORBES

Teschner, Melchior

(*b* Fraustadt [now Wschowa], Silesia, 29 April 1584; *d* Oberpritschen [now Przyczyna Górna], nr Fraustadt, 1 Dec 1635). German composer. From 1602 he studied theology, philosophy and music at Frankfurt an der Oder; Bartholomäus Gesius was among those who taught him music. In 1605 he became Kantor at Schmiegel (now Smigiel). After further study, at the universities of Helmstedt and Wittenberg, he became Kantor of the Protestant Kirche zum Kripplein Christi at Fraustadt in 1609. From 1614

until his death he was pastor of the church at Oberpritschen. The pastor with whom he worked at Fraustadt from 1609 was Valerius Herberger, who wrote the text of the hymn *Valet will ich dir geben* in 1613 after surviving a plague. Teschner made two five-part settings of it, which were published at Leipzig in 1614. The second of them (in Winterfeld), which is modelled on the Geneva psalm *O Seigneur, que de gens* by Loys Bourgeois (1550), is still popular and has been reprinted in hymnals up to the present day, often with different words; with some modification it appears in English hymnbooks as the Palm Sunday hymn *All glory, laud and honour*. Teschner is otherwise known as a composer only by two wedding songs published respectively at Liegnitz in 1614 and at Leipzig in 1619.

FRITZ FELDMANN/DOROTHEA SCHRÖDER

Tesi (Tramontini), Vittoria ['La Moretta', 'La Fiorentina']

(*b* Florence, 13 Feb 1700; *d* Vienna, 9 May 1775). Italian contralto. She received her first instruction from Francesco Redi in Florence and from Campeggi in Bologna. (An alleged meeting with Handel in Florence, in connection with the performance there of his opera *Rodrigo* in 1707, rests on a confusion between Tesi and Vittoria Tarquini.) She first appeared as an opera singer in 1716, in Parma (*Dafni*) and Bologna (*Il sogno avverato*). In the 1718–19 season she was in Venice as *virtuosa di camera* to Prince Antonio of Parma. By 1719 she was in Dresden, where she sang in Lotti's *Giove in Argo* for the opening of the new opera house on 3 September, and ten days later appeared as Matilda in his *Teofano*, thereby numbering (along with the singers Coralli, Durastanti, Santa Stella Lotti and the castrato Senesino) among the most prominent performers in the musical festivities surrounding the marriage of the Saxon electoral prince to the Archduchess Maria Josepha. With the dissolution of the Italian Opera, Tesi left Dresden to return to Italy; in Carnival 1721 she sang in Florence and from there travelled until 1747, visiting all the great theatres of Italy between Naples, Venice and Milan, with a guest appearance in Madrid (1739–40) and perhaps a trip to Frankfurt, 1741–2, for the emperor's coronation. Her career reached a peak at the opening of the Teatro S Carlo in Naples (1737, with Domenico Sarri's *Achille in Sciro*) and again ten years later when she appeared there with Caffarelli, Gizziello, Manzuoli and others in Calzabigi's serenata *Il sogno d'Olimpia*, with music by Majo.

On 14 May 1748 she appeared in Vienna (as *virtuosa di camera della Sacra Cesarea Reale Maestà*), taking the title role in Gluck's setting of Metastasio's *Semiramide riconosciuta*. Details of who arranged her appearance there remain uncertain; Gluck had met her in Venice in 1744, when she sang the title role in his *Ipermestra*, but Metastasio had also known her previously, although he had no high opinion of her abilities (calling her a 'grandissima nullità') until her appearance in *Semiramide* convinced him to the contrary. Further successful stage appearances in Vienna included the title roles in Jommelli's settings of Metastasio's *Achille in Sciro* and *Didone abbandonata* (1749) and her later appearance as Lisinga in Metastasio's *Le cinesi*, set by Gluck for the famous Schlosshof festival of 24 September 1754. In the early 1750s she began her retirement from the stage. She was not engaged for the 1751–2 season in Naples because of her age; Metastasio, who shortly before had found her 'rejuvenated by 20 years', mentioned in autumn 1751 that Tesi was 'costume director' for the Vienna court theatre. After retiring from the stage Tesi devoted herself to the education of younger talent with considerable success; among her pupils were Caterina Gabrielli, Anna Lucia de Amicis and Elisabeth Teyber. In Vienna she enjoyed the special patronage of Maria Theresia and of Prince Joseph Friedrich of Hildburghausen, in whose palace (the present Palais Auersperg) she resided. Among those who met her there were Casanova (1753) and Leopold and W.A. Mozart (13 December 1762). She held the honorary title *virtuosa della corte imperiale* until the end of her life and her husband was an honorary *consigliere del commercio*. Two years before her death Ange and Sarah Goudar, apostrophizing her personality and achievement, called her 'perhaps the first actress who recited well while singing badly'. Many of her contemporaries, including Quantz, Mancini, Metastasio, Dittersdorf and Burney, found her incomparable in expression and stage bearing, and to Gerber (1792) she was one of the greatest singers of the century.

A Faustini Tesi, who combined the names of the famous singers Faustina Bordoni and Vittoria Tesi, may possibly be related to the latter; she was active from 1765 at various Italian theatres, including Venice (1765), Piacenza (1775) and Naples (1777). Zinzendorf in 1778 mentioned 'cette Tesi vieille et laide' in Trieste.

GERHARD CROLL

Tess(arolo) [Tessi, Tessaroli], Giulia

(*b* Milan, 9 or 19 Feb 1889; *d* Milan, 17 March 1976). Italian soprano and director. She studied in Verona and made her début as a mezzo-soprano at Prato in 1904; in 1909 she sang Mignon at La Fenice, Venice. After appearances in Prague, Vienna, St Petersburg and other centres as Adalgisa, Léonor (*La favorite*), Amneris and Charlotte, she became a soprano and a leading exponent of the *verismo* repertory. She created Jael in Pizzetti's *Dèbora e Jaéle* at La Scala (1922) and continued to appear in Milan until 1936 in roles that included Salome, Electra and Orsola in the première of Wolf-Ferrari's *Il campiello*. She was the first Italian Composer in *Ariadne auf Naxos* (1925, Turin), and sang the title role in the Italian première of Honegger's *Judith* (1937, Naples). She left the stage in 1940 and worked as a director in Florence, Bologna and Milan, then returned to sing Orsola in her own production of *Il campiello* in Cagliari (1949) and Palermo (1950).

HAROLD ROSENTHAL/R

Tessarini, Carlo

(*b* Rimini, *c*1690; *d* ?Amsterdam, after 15 Dec 1766). Italian violinist and composer. The earliest known reference to him is in a charter of 15 December 1720, where he is mentioned as a violinist in the *cappella* of S Marco, Venice: his work here is documented up to 1735. Between 1723 and 1730 he was active in the Ospedale dei Derelitti, Venice, and his *Sonate* op.1 (Venice, 1729) names him *maestro de' concerti* there. In 1731 he applied for a post at Urbino Cathedral, where his presence is documented from 1733: his involvement there was interrupted several times for various journeys. From 27 December 1738 there is again documentation of his activities at Urbino Cathedral, but in the preceding years he seems to have been *direttore della musica instromentale* at the court of Cardinal Wolfgang Hannibal von Schrattenbach in Brno (as indicated in his *Sei sonate*, Amsterdam, *c*1737). As early as the 1730s Tessarini had begun, together with one of his relations, Giovanni Francesco, to publish music: he issued his own works and those of others. In 1740 he was appointed first violin at the Teatro di Valle, Rome, but the death of Pope Clement XII meant that the theatre closed on 6 February of the same year. On 13 February he set off for Naples. While he was in Rome Pierleone Ghezzi made a caricature of him. There is no further trace of Tessarini at Urbino Cathedral from 1743, and on the frontispiece of his op.5 (*c*1744) he described himself as *direttore perpetuo* of the Accademia degli Anarconti in Fano, near Urbino. From 1744, however, many of his works were published by Boivin in Paris and dedicated to members of the

Parisian nobility, which suggests that he lived there for a time (although there is no documentary evidence to support this). On 17 February 1747 he gave a concert at Arnheim (now Arnhem) in the Netherlands. In the same year he arrived in London, where he was engaged as leader of the orchestra of Ruckholt House, a pleasure garden in Essex where every Monday morning during the summer there was a breakfast concert followed by a dance. The season opened on 24 April and Tessarini's name appeared regularly until October, when it was replaced by that of Richard Collet. On 9 March 1748 Tessarini began a subscription series for his *Allettamenti armonici* op.13 and his *VI Sonate* op.14: every Friday morning at his lodgings with 'Mr Roure's, Peruke-maker, in Oxenden Street near the Haymarket' music could be heard. On 18 April of the same year he appeared in Hickford's Room in the ninth concert of a series open to the paying public organized by Palma, performing many of his violin concertos. London sources occasionally call him 'Carlo Tessarini il Catelgarreuil'; it is not known what this nickname means. From 1750 to 1757 he was again active, with brief interruptions, at Urbino Cathedral. On 6 September 1752 he gave a concert in Frankfurt; on 17 March 1761 he was again at Arnheim; and at the beginning of December of the following year he played at Gronigen. Between 1762 and 1763 his compositions were published in Holland, suggesting that he spent a considerable time in that country. The last information on Tessarini is a reference to a concert he gave at the Collegium musicum in Arnheim on 15 December 1766; after this all trace of him disappears.

Tessarini's work is exclusively instrumental and consists mostly of sonatas and concertos. While there are influences of Vivaldi in his music, there is no more documentary evidence for his being a pupil of Vivaldi than for Fétis's assertion that he was a pupil of Corelli. Tessarini began to publish his works at a relatively advanced age, and his productivity increased considerably during the course of his life. Already in his early works there are formal innovations, and the cyclical form of the solo concerto became the norm in his sonatas. Tessarini's musical idiom, characterized by syncopated, cheerful, clear themes, often with a dance quality, provides an early example of the features of *galant* style. As a violinist he must be counted among the best of his age, even if technically, in his compositions, he does not normally go beyond seventh position. His violin method, *Grammatica di musica* (Rome, 1741), is one of the first such methods and contains specific information on cadenza and ornamentation practice. There are still no detailed studies on Tessarini's output as a whole.

AREND KOOLE/ALBERT DUNNING

Tessier, André

(*b* Paris, 8 March 1886; *d* Paris, 2 July 1931). French musicologist. He studied law and literature at the Ecole de Droit and the Ecole de Langues Orientales but later became interested in art history, studying at the Ecole du Louvre, where he took a diploma in 1921 with a dissertation on the painter and stage designer Jean Berain; on the basis of this he was appointed archivist of the Ministry of Fine Arts in the same year. However he had also attended Romain Rolland's lectures on musicology at the Sorbonne (1919) and this discipline began to take precedence, although his special interest remained the history of music and painting in Italy and France during the 17th and 18th centuries. As secretary of the Société Française de Musicologie (1927–31) Tessier was closely associated with the preparation of the third French edition of Riemann's *Lexikon* (Paris, 1931). He contributed a volume on Couperin to the series Les Musiciens Célèbres and numerous articles to *Echo musicale*, *Rassegna musicale*, *Revue musicale* and *Revue de musicologie*, of which he was editorial secretary; he also produced a complete edition of Chambonnières (in collaboration with Paul Brunold) and editions of Lully's ballet music (for the

complete edition by Prunières) and a volume of Gaultier's lute music. He initiated a complete edition of Couperin, but had prepared only a single volume of secular vocal music before his death: Maurice Cauchie succeeded him as editor of that project.

JOHN TREVITT

Tessier [Tessiery, Thessier], Charles [Carles]

(*fl c*1600). French lutenist and composer. He was probably the son of the Breton composer Guillaume Tessier, and was perhaps related to Valère Tessier, a lutenist active in Paris in 1609. Fétis claimed that Charles was born at Pézenas in about 1550, but no confirmation has been found. He probably visited England some time after 1580, and his *Premier livre de chansons et airs de cour tant en français qu'en italien et en gascon à 4 et 5 parties* was published in London in 1597; however, the title-page refers to Charles as *musitien de la chambre du roy* (i.e. Henri IV of France). The dedication of the volume and two of its songs are addressed to Lady Penelope Rich, sister of Robert Devereux, 2nd Earl of Essex; the texts praise her beauty, voice and lute playing. Nine of the 35 pieces from the book appear in arrangements for solo voice and lute in an undated manuscript (*GB-Ob* Mus.Sch.D.237) dedicated to George Brouc (or Brooke), which contains a total of 28 *airs* signed by Tessier.

These signatures match those of three letters Tessier wrote in 1597 to Anthony Bacon, secretary of foreign affairs to the Earl of Essex, seeking his patronage or support in finding employment with some suitable English gentleman, and mentioning his newly composed chansonnettes and *airs de cour*. The tenor of one of the chansonnettes is now among the Cecil Papers (200/84) in the library of Lord Salisbury at Hatfield House, Hertfordshire. Nine *airs* from the *Premier livre* were also printed in anthologies in Paris (1596[6] and 1597[11]); five reappeared in the *Airs et villanelles franc[ais], espag[nols], suice[s] et turcq[s] … à 3, 4 et 5 parties*, published in Paris in 1604. This set was dedicated to the Protestant Moritz, Landgrave of Hesse-Kassel (Dowland's patron), who had been impressed by Tessier's lute playing at Poitiers in 1602–3. Tessier travelled to Marburg to present his new work to the landgrave, but in June 1604 he wrote to Ludwig, Landgrave of Hesse-Darmstadt, still seeking employment. In August 1609 he was paid 50 francs in Nancy for presenting some of his *airs* to Duke Henri II of Lorraine. The second edition of the *Airs et villanelles* (1610) was dedicated to King Matthias of Hungary, yet all the while Tessier was still described as *musitien de la chambre du roy*.

Nearly all the pieces in both publications are strophic airs with the tune in the superius, equally suitable for performance by voices or solo voice and lute. A few such arrangements survive in the collections of Mangeant (1608

and 1615) and of Bataille (RISM 1611[10]). While some of these *airs* have a folk-like simplicity, others have more flexible rhythm and ornamented melodies. Most have a clear bipartite structure with a repeated final couplet. Melodies in transposed Ionian and Dorian modes predominate and are mostly harmonized with root position chords. In the autograph manuscript the simple lute tablature generally corresponds to the lower three parts of the four-voice versions but does not reproduce the melody line as do earlier French airs arranged by Adrian Le Roy and others. Thus Tessier's *airs* represent some of the earliest examples of a monodic approach to song in France. His pieces have a notable affinity with certain English ayres of the late 16th century and the early 17th, particularly those of John Dowland, whom he probably first met in Paris in 1580.

FRANK DOBBINS

Tessier [Thessier], Guillaume

(*fl* 1580–82). French composer. He may be the 'Guillaume Tixier musicien' active at Lyons in 1575. In 1580 he approached Henry Cobham, Queen Elizabeth I's ambassador in France, requesting permission to travel with his two sons to seek employment at the English court. The ambassador, whose retinue included the young John Dowland, advised against the journey, but Guillaume may have undertaken the visit later since his only publication was dedicated to Elizabeth. This collection entitled *Premier livre d'airs tant francois, italien, qu'espaignol* (Paris, 1582), appeared in two editions (the second as *Il primo libro dell' arie*, also 1582) and was reprinted in 1585. The first piece is a five-voice 'madrigale all Sereniss[ima] and Sacratiss[ima] Regina d'Inghilterra'; while the preceding dedication in Italian signed 'Devotissimo servo et schiovo G. Tessieri, Brettone' at Paris on 10 May 1582 was probably also addressed to the English queen. The fact that Robert Dowland's *Musicall Banquet* (London, 1610) includes Tessier's setting of Ronsard's *Le petit enfant amour* in a version for voice and lute as *In a grove most rich of shade* (the words are from Sidney's *Astrophel and Stella*) suggests similar English contacts (e.g. Lady Penelope Rich, John Dowland) to those of Charles Tessier (perhaps his son), whose *Premier livre de chansons* was published in London by Thomas East in 1597.

Most of Guillaume's 34 French pieces are four-voice settings of short strophic verses by contemporary poets (Baïf, Bussy d'Amboise, Jacques de Constans, Desportes, Catherine and Madelaine des Roches, Amadis Jamin and Ronsard) set in the new rhythmically flexible, syllabic homophony of La Grotte, Courville, Caietain and Le Blanc: Tessier however composed entirely new music for the four texts (three by Jamin) which had appeared in four-voice settings by Le Blanc in 1579. The influence of the Académie de Poésie et de Musique is reflected in two successive *chansonnettes mesurées* – *Lesse moy osu* and *Cruelle sçais-tu pourquoy*? – which faithfully adhere to Baïf's metrical patterns. Although the dance-like rhythms with frequent syncopation and alternation of simple and compound metres prevail, as in the four-voice *airs* of Courville and Caietain, Tessier occasionally adopted the freer style of dramatic *récit*, involving the use of melismatic diminutions, that had been employed the previous year in the *Balet comique de la Royne* (e.g. *Pressé d'ennuis*, the monodic character of which is even more marked in the arrangement for superius and lute in RISM 1609[13]). The three 'espagnolles' and five 'napolitanes' at the end are, like those in Caietain's second book of *airs*, lively ditties using dance rhythms with varied metre; all but the final two more madrigalian pieces (the last – like the opening piece – adding a second superius) are cast in clear binary form with one or both sections repeated.

FRANK DOBBINS

Tessier, Roger

(*b* Nantes, 14 Jan 1939). French composer and teacher. After studying music in his native city he entered the Paris Conservatoire in 1959, to study analysis with Messiaen, harmony with Challan, fugue with Weber and conducting with Bigot. He became a prominent champion of contemporary music in 1972–3, as one of the co-founders of the group Itinéraire. His enthusiasm for an original avant garde led to his appointment as founder-director of the Angers Festival of 20th-Century Music in 1982 and to participation in the Darmstadt Festival in 1984. In 1987 he became director of the Angers Conservatoire and was elected to the executive of ISCM. Since 1991 he has been director of the conservatory of the 14th arrondissement in Paris where he set up a composition class.

His work has earned him several awards, including the Prix Chapelier-SACEM (1978), Lauréat de la Fondation de France (1980), the Grand Prix de l'Académie du Disque Français Charles Cros (1981), and the Durand and Schmitt prizes of the Académie des Beaux-Arts (1990, 1991). He realizes his aesthetic theories in techniques involving the direct modification of sound, which progressively diminishes individual

instrumental identity in favour of a collective sound in a quest for a new sonority.

See Girò, anna (maddalena).

Tessitura [testura]

(It.: 'texture').

A term used to describe the part of a vocal (or less often instrumental) compass in which a piece of music lies – whether high or low, etc. The tessitura of a piece is not decided by the extremes of its range, but rather by which part of the range is most used. The role of Siegfried in Wagner's *Ring*, for example, ranges from *c* to *c''*, but its tessitura would be described as high (and very demanding) because the tenor is required to sing phrases in the range *c'* to *a'*, with great frequency (and often at high volume).

OWEN JANDER

Testagrossa, Giovanni [Gian, Zoan] Angelo

(*b* Pavia, 9 April 1470; *d* ?Urbino, Dec 1530). Italian lutenist, singer and teacher. In Milan in 1492 he provided improvised accompaniments for *ottava rima* recitations, a manner of *strambotto* performance that was later cultivated at Mantua. By 1495 or 1496 Testagrossa had succeeded Girolamo Sextula at the Gonzaga court in Mantua as lute teacher to

Isabella d'Este; he remained there until about 1500. A number of letters between Isabella and Testagrossa exist. His travels away from the court are not known until 1506, when he reported in January from Parma about a viol and wrote from Busseto in December that he had obtained a lucrative post under the patronage of Galeazzo Pallavicino. It may have been between 1500 and 1506 that Testagrossa returned to Milan, where he taught Francesco Canova da Milano. By early 1510 Testagrossa had returned to Mantua to teach Isabella's son Prince Federico. Later that year he entertained Francesco Gonzaga, then captive in Venice, and travelled with Federico to Rome, pausing briefly at the Duke of Urbino's court, where he was offered a post and where he met Leo X's lutenist Gian Maria Alemanni. Testagrossa remained at Mantua, however, until 1513, when he moved to Ferrara as lutenist to Isabella's brother Cardinal Ippolito d'Este. In November 1517 Isabella, recommending him to the Marchioness Anna of Casale Monferrato as teacher for her daughter, wrote that 'he has sensitive fingers and an unexcelled method of teaching'. Testagrossa remained in Casale, somewhat dissatisfied with his situation, until he had to seek new employment in October 1518, when the marquis died. He received an offer from the Queen of France, but pleaded with Isabella for a return to Mantua, promising to bring a 'bona compagnia' of viol and lute players, singers and composers, and a remarkable collection of instruments: his 'old lute', two large lutes, five 'violoni', a chest of 'flauti', a crumhorn and 'an instrument called a "fagot"'; but it was only after Francesco Gonzaga's death in 1519 that Testagrossa was invited to return. He received Mantuan citizenship in 1525, but that year accepted a position at the court of Eleanora Gonzaga in Urbino. Although none of Testagrossa's music has survived, his style of playing may be reflected in Petrucci's publications of lute music and in the compositions of Francesco Canova da Milano. Francesco Marcolini, in his *Intabolatura di liuto* (RISM 1536[11]) ranked him with Josquin and Alemanni among the most eminent musicians of the Petrucci generation.

ARTHUR J. NESS

Tester, Scan [Lewis]

(*b* Chelwood Common, Sussex, 7 Sept 1887; *d* Horsted Keynes, Sussex, 7 May 1972). English traditional musician. He learnt to play the anglo-concertina from his elder brother and the fiddle from old men in the villages around Ashdown Forest. On leaving school, he augmented his income by busking and, at the end of each summer, by playing with his brother for step-dancing in the Kent hop-fields. In the inter-war years, he formed Testers' Imperial Band, a local dance band that included his wife, daughter and brother on drums, piano and bandoneon respectively. In 1957 he was invited to join the West Hoathly Country Band of Musicians, a group of young traditional music enthusiasts. This brought him into contact with the Folk Revival (*see* England, §II) where he found a new and enthusiastic audience for his music. By playing in folk clubs, concerts and at festivals for the next 15 years, while continuing to play locally, he became nationally admired and had continuing influence.

DAVE ARTHUR

Testi, Flavio

(*b* Florence, 4 Jan 1923). Italian composer and musicologist. He studied with Gedda and Peracchio at the Turin Conservatory, and took an arts degree at Milan University (1951). He then worked for Suvini Zerboni and Ricordi while also composing, pursuing his interest in music history and working on various radio projects for the RAI. From 1972 he devoted himself to educational activities, teaching music history at the Padua Conservatory and then taking up teaching posts at the Milan and Florence conservatories.

Testi's first vocal and instrumental works date from the mid-1950s. In *La crocifissione*, whose première at La Scala in 1954 attracted considerable attention, the influence of Stravinsky emerged strongly, along with an already personal dramatic sensibility, evident equally in such orchestral works as the Concerto (1954) and Divertimento (1956). The expressive vein of *La crocifissione* was taken up again in the *Stabat mater* (1957) and, much transformed, in *New York: oficina y denuncia* (1964). This García Lorca setting, with its rough-hewn blocks of sound, denounces the dehumanizing environment of the modern metropolis. The work coincided with the Testi's conversion to the Marxist cause, and was followed by other compositions highlighting social and political concerns, including the

Neruda setting *Canto a las madres de los milicianos muertos* (1967) and *Cori di Santiago* (1975). Testi's operas evolve towards junctures of violent scenic-musical realism. *L'albergo dei poveri* (1966) displays a clearly characteristic attitude of rough dramatic purpose, confirmed in *Il sosia* (1981) and *Riccardo III* (1987), works which probe intensely into the psychology of their characters. In general Testi's style, rather than adhering to the radicalisms of the post-Webern avant garde, re-elaborates and reflects, not without eclecticism, certain crucial 20th-century achievements, from Stravinsky and Bartók to early Schoenberg.

RAFFAELE POZZI

Testo

(It.: 'text').

A term commonly used in 17th-century Italian *oratorio volgare* and Passion settings for the narrative portions of the text and, by extension, the role of the narrator; it corresponds to the 'historicus' in the Latin oratorio and to the Evangelist in German Passion settings. In the 18th century, when narrative was almost entirely dropped from oratorio in favour of continuous dramatic dialogue, the term fell into disuse. The *testo* part was normally set as recitative with continuo accompaniment and sung either by one or more soloists or (less often) by a group of soloists forming a *coro*.

In secular music the term was occasionally used for the narrator in dramatic dialogues and similar works. Monteverdi used a solo tenor for the testo in his dramatic madrigal *Il combattimento di Tancredi e Clorinda* (1624).

See also Dialogue.

Testore.

Italian family of violin makers active in Milan from 1690 until the end of the 18th century. Once even derided as the 'Milanese cheapjacks', the Testores were an industrious family of makers whose instruments are far more appreciated today than they can have been at the time of their manufacture. The demand of the time and place was evidently for something inexpensive, so that hasty construction from commonplace materials was most often the rule of the day. They worked 'Al segno dell'Aquila', and often branded their work with an eagle emblem.

(4) Pietro Testore

CHARLES BEARE/CARLO CHIESA

Testore

(1) Carlo Giuseppe Testore

(*b c*1665; *d* Milan, 5 March 1716). Violin maker. He was the most skilled of the family, having been, according to his earliest labels, a pupil of Grancino. His violins are often mistaken for those of his teacher, the chief differences being that Carlo Giuseppe's had slightly longer and more sweeping corners, and less distinctive soundholes. The volute of the scroll tends to bulge diagonally in contrast to the perfect roundness of a Grancino, a feature unique to the Testore family, whose later members copied and even exaggerated it. Carlo Giuseppe's varnish, like that of Grancino, varied from a rich, dark orange-brown to pale yellow, and there is little that distinguishes the two makers tonally.

Testore

(2) Carlo Antonio Testore

(*b* Milan, 1 Sept 1693; *d* Milan, *c*1765). Violin maker, elder son of (1) Carlo Giuseppe Testore, whose style he followed closely, but with less charm, using a more brittle, light-coloured varnish. He sometimes scratched a double line on the backs of his violins instead of inlaying the purfling, a feature occasionally seen in the work of Grancino and Carlo Giuseppe Testore. Another sign of haste was a flat back to the pegbox, in place of the normal fluting. Late in his working life he had the assistance of a son, Giovanni Testore (1724–65).

Testore

(3) Paolo Antonio Testore

(*b* Milan, 14 June 1700; *d* Milan, 30 March 1767). Violin maker, younger son of (1) Carlo Giuseppe Testore. Although his working habits were the same as those of his brother, he had independent ideas of outline and modelling, not always as successful. His least inspired instruments appear awkward, if not crude, but where the situation demanded he would purchase handsome wood, work it with talent and character, and abandon the dull brown or yellow varnish for a soft orange of real quality.

Testore

(4) Pietro Testore

(*b* Milan, 17 Oct 1732; *d c*1800). Violin maker, son of (3) Paolo Antonio Testore. He was the least skilled of the family. Every aspect of his work is of poor quality, including the choice of wood and the dark brown varnish. Nevertheless, his instruments usually have good acoustical properties, and the violas are particularly sought after.

In violin making literature there are references to a Gennaro Testore, but there is no evidence that a luthier of this name ever existed. For further information on the Testore family, see C. Chiesa: 'Violin Making and Makers on the Contrada Larga in Milan', *Journal of the Violin Society of America*, xiv/3 (1996), 3–41

Testori, Carlo Giovanni

(*b* Vercelli, 24 March 1714; *d* Vercelli, 20 May 1782). Italian theorist and composer. His father was a violinist and Testori himself studied the violin and composition in Milan. He returned to Vercelli and remained there for the rest of his life as a violin teacher. His compositions, all now lost, included sacred music and trio sonatas; but he is chiefly remembered for his *La musica ragionata* (1767; 3 suppls., 1771–82), a treatise based on Rameau's theories and dealing with composition in up to eight parts as well as the fundamentals of keyboard playing.

Testori [Testore, Textoris], Guglielmo

(*fl* 1566–71). ?Italian composer and singer. The existence of his name in a Latinized form may indicate that he was of French or possibly Flemish origins. He was employed as a singer at the Gonzaga court at Mantua between 1566 and 1570; he was also responsible to the duke or to the *maestro di cappella*, Wert, for hiring new singers. His only known printed works are *Il primo libro de madrigali* (Venice, 1566) for five voices and a *laude spirituale* in Giovanni Arascione's *Nuove laudi ariose* (RISM 1600⁵). The madrigal book is dedicated to a member of the Flemish aristocracy, Jacques Pinson, and opens with an encomiastic piece addressed to him; the rest of the contents are dedicated to individual Italians. His two five-voice masses (in *I-Mc*), *In festis semiduplicibus minoribus* and *In festis apostolorum*, were specifically written for the use of the ducal basilica of S Barbara in Mantua, and form part of an extensive repertory of *alternatim* mass settings specially composed for the basilica.

Testudo

(Lat.: 'tortoise').

The Latin name for the Greek lyre, the body of which was sometimes made from the shell of a tortoise, though the word could also mean any arched structure. In medieval Latin it came to be used for the lute, since no specific term existed for that instrument (the genitive and ablative forms, *testudinis* and *testudine*, are often used in the titles of Renaissance collections of lute music). Another word for lute, Chelys, is borrowed direct from the Greek for tortoise. Both these words are of feminine gender, yet all the derivations from the Arabic *al-'ūd* are masculine, with the exception of the German (*die Laute*).

See also Lyre, §1(ii).

IAN HARWOOD

Tetrachord

(from Gk. *tetra*: 'four'; *chordē*: 'lyre string').

(1) In ancient Greek theory (*see* Greece, §I), a system of four notes, contained within the limits of a perfect 4th. It serves as a basis for melodic construction in much the same way as the Hexachord functions in medieval polyphony and the major and minor scales in tonal music. Essentially tetrachords fall into three types, or genera, according to the size of the intervals between their notes: diatonic, chromatic and enharmonic. Reckoned upwards, the diatonic genus comprises the intervals semitone–tone–tone; the chromatic genus is based on the succession semitone–semitone–minor 3rd; the enharmonic genus is built on the intervals quarter-tone–quarter-tone–major 3rd. In medieval theory (for example in *Musica enchiriadis*) the form tone–semitone–tone was common.

The tetrachord was also used to define a particular register within the general notational systems as set forth by Aristoxenus; the Greater and Lesser Perfect Systems. The lowest of these tetrachords, the *hypaton*, consisted of the interval from *B* to *e*; the *meson* extended from *e* to *a*. The *diezeugmenon* was an octave higher than the *hypaton* (*b* to *e'*); the highest tetrachord, called the *hyperbolaion*, was an octave higher than the *meson* (*e'* to *a'*).

(2) In 20th-century theory, a Set of four pitch classes. In *The Structure of Atonal Music* (New Haven, CT, 1973), Allen Forte identified 29 possible tetrachords (plus inversional equivalents) available from the 12 notes of the tempered scale. In this definition the name 'Bach' (*see* B–a–c–h) can be derived from a chromatic tetrachord A–B♭–B♮–C (in Forte's system, set 4–1), but in the order B♭–A–C–B♮; Webern in his string quartet op.28 employed a 12-note row consisting of this tetrachord and two transpositions (D♮–E–C♮–D♭ and G♭–F–A♭–G♮), the first of them inverted.

Tetrazzini, Luisa [Luigia]

(*b* Florence, 29 June 1871; *d* Milan, 28 April 1940). Italian soprano. She studied at the Istituto Musicale of her native city and with her elder sister Eva (1862–1938), who was herself a soprano. In 1890 Luisa made a surprise début at the Teatro Pagliano in Florence, as Inès in *L'africaine*. She next sang in Rome, and toured with growing success throughout Italy, adding to her repertory all the more famous roles for coloratura soprano; she also made a reputation abroad, notably in St Petersburg, Madrid, Buenos Aires and Mexico. Her Covent Garden début in 1907, as Violetta, caused a sensation, and she returned to London for every summer season from 1908 to 1912, singing also Lucia, Gilda, Rosina, Amina, Lakmé, Leïla in *Les pêcheurs de perles* and Marguerite de Valois in *Les Huguenots*. Immediately after her London début she was engaged by Hammerstein for his Manhattan Opera House, where, in 1908, she repeated her London triumph, again in the role of Violetta. In three consecutive seasons there, in 1911–12 at the Metropolitan and 1911–12 and 1912–13 in Chicago, she

appeared in most of her London roles, as well as in several others, including Mathilde (*Guillaume Tell*), Bellini's Elvira, Donizetti's Linda, Adina and Marie (*La fille du régiment*) and Thomas' Ophélie and Philine. These pre-war years were the climax of her career. Thereafter, she made numerous lucrative concert tours, appearing for the last time in New York in 1931, and in London in 1934.

Tetrazzini possessed technical gifts of the highest order, and could dazzle audiences with the ease and agility of her chromatic scales, both ascending and descending, and with her staccato, trills and florid effects of every kind, especially above the staff. A slightly pallid quality in the lower-middle register was felt to impair the absolute consistency of her tone, which was otherwise of a warm, clarinet-like beauty. Her cantilena was shapely, spontaneous and flowing. Between 1908 and 1914, the years of her prime, Tetrazzini recorded extensively. Her records of such pieces as 'Una voce poco fa', the Polonaise from *Mignon* or 'Ah! non giunge' from *La sonnambula*, rank among the most brilliant ever made; while her skill and taste in the delivery of a simple melody show to admiration in her account of Tosti's *Aprile*.

Tevo, Zaccaria

(*b* Piove di Sacco, nr Padua, 16 March 1651; *d* Treviso, ? between May 1709 and March 1712). Italian theorist and composer. He entered the Franciscan convent at Treviso on 14 March 1665 and took minor orders

there in December 1667. He recorded that his early musical education was from a text on counterpoint by Padre F.M. Angeli. He studied in various cities, including Padua, Macerata, Fermo (where he gained a bachelor's degree in philosophy and theology on 8 December 1670), Treviso, Padua again (where he studied 'the thunderous bassoon') and Venice. Having completed his studies he was accepted as a father at the convent of S Francesco, Treviso, in February 1678. In the following years he undertook various responsibilities: guardian of the convent, vicar of the choir, *maestro di cappella* (from 1684 probably until July 1705) and, occasionally, organist. Tevo left Treviso in mid-1705, possibly to oversee personally the printing of his musical treatise *Il musico testore* (Venice, 1706/*R*). His name appears in the convent register in June 1706 but disappears entirely after 1 May 1709.

An autograph manuscript (*I-Pu*) of *Il musico testore* shows that it was written in Treviso over a number of years and was already complete in 1700. In four parts, it is a compendium of theories by Greek, Latin and Italian medieval writers, with a particular predilection for Franciscans. It has an educational aim and the treatment of technical musical questions, accompanied by short musical examples, covers all theoretical areas from acoustics to notation and intervallic theory to counterpoint. It is a broad, organized and clearly written critical anthology of writing on music, and it was praised by many. As a composer Tevo is known to have published two books of motets, only the second of which has survived (in *I-CF*).

Tex-Mex

(*Tejano conjunto*).

Popular music genre originally from southern Texas, which has some similarities to the Mexican *norteño*, but also is also influenced by several American musical genres and in particular features elements of polka. The basic duo of accordion and *bajo sexto* (12-string bass guitar) has grown to include other instruments (drum kit, bass guitar etc.) but these two instruments still characterize the sound of the ensemble. As the repertory has diversified a sub-genre known as 'Tejano music' (which is more rock and pop orientated) has also emerged.

(2) A general expression for text underlay and Text-setting.

Textoris, Guglielmo.

See Testori, Guglielmo.

Text-setting [setting]

(Ger. *Vertonung*).

The composition of vocal music to a given text. Music with one note per syllable is known as 'syllabic setting' and that with many notes per syllable as 'melismatic setting'; text-setting in which new syllables are enunciated at regular intervals (regardless of the number of notes per syllable) is referred to as 'isochronic'.

A distinction may be drawn between text-setting and Text underlay, the latter being concerned principally with the allocation in editing and performance of given syllables to given notes. This distinction is not absolute, however, since the two areas often interact. Knowledge of the text-setting priorities of a given composer may help resolve questions of text underlay in sources of that composer's music (as with Zarlino's

explanation of the practice of Willaert); on the other hand, when text-setting priorities are not independently attested, a sympathetic understanding of underlay may be one of the only ways to find out about those priorities (as in much polyphony of the 14th and 15th centuries). The term 'texting' is sometimes used as a general expression for both text-setting and text underlay, but is more often associated with the latter.

The study of text-setting may conveniently be divided into two broad areas: the syntactic and the semantic. Syntactic questions involve musical and verbal structures, and include relations between the overall form of a setting to that of the text, between individual textual and musical phrases, and between verbal and musical accentuation patterns. Semantic questions involve the relation of the setting to the meaning of the text, and are thus of central significance in discussions of musical meaning (*see* Philosophy of music). An additional bone of contention, contested in both the syntactic and semantic realms, is the matter of literary or musical predominance: commentators and practiioners at various times have argued on the one hand that vocal music should 'serve' the demands of the verbal text (especially when this has previously led a purely literary life of its own), or on the other that literary concerns must be of subsidiary importance to the demands of music.

Strictly speaking, the term 'text-setting' applies only to those cases where music is supplied for a pre-existing verbal text, as in Beethoven's setting of Schiller's *An die Freude*. Closely analogous interpretative issues are raised, however, in scenarios where words and music are conceived simultaneously as part of the same creative act (as in the works of Wagner, and some works by Schoenberg and Stravinsky), where words and music originate from a collaboration between composer and poet (or 'lyricist', as in the songs of George and Ira Gershwin), where words are supplied for pre-existing music (as in all contrafacta, for example, Samuel Barber's *Agnus Dei*, set to music from his own String Quartet, or in Michael Flanders's song 'Ill Wind', in which the text is set to music by Mozart), or where it is impossible to tell (as in early repertories). In this broader sense, indeed, text-setting is a central concern of virtually all vocal music (for exceptions, *see* Absolute music).

The earliest musical notation systems – both ancient and medieval – originated as extensions of linguistic punctuation schemes, and it is therefore no surprise that relations between music and language are of the utmost significance to the earliest written repertories. Words remained important in vocal polyphony from the 13th century to the 15th, and the matter of text-setting was taken up with renewed vigour in the 16th, when many theorists issued instructions for both the semantic and syntactic matching of music to words.

The Council of Trent (1563) established textual intelligibility as a priority for music in the Roman Catholic liturgy, and works by Palestrina were later endorsed by church authorities as meeting this criterion. Meanwhile, Italian madrigal composers were exploring ways of representing poetic moods and images in music, including the use of 'madrigalisms' such as word-painting; this tradition was the context in which in 1605 Monteverdi proclaimed his 'seconda pratica', according to which music was to be

always 'the servant of the words'. Further means of realizing this aspiration were developed throughout the 17th and early 18th centuries as part of the exploration and discussion of connections between rhetoric and music.

Mozart wrote in a much-quoted letter that 'in an opera the poetry must be altogether the obedient daughter of the music'. For much of the time in Mozart's operas, though, while the poetry may be subservient to the music, both the poetry and the music (together with the text-setting practices that bind them together) are themselves subservient to the drama. This relationship was most fully worked out in the 19th and 20th centuries in writings by and about Wagner (for a discussion and extensive bibliography of word–music relations in opera see Trowell, in *GroveO*). Though less hotly contested, text-setting remained a key element in the development of non-operatic vocal forms throughout the 18th, 19th and 20th centuries. The 20th century in particular saw an expansion in techniques for combining words and music, including Schoenberg's *Sprechgesang* (halfway between song and speech) and the musical use of spoken language (as in melodrama).

The significance of the relationship between music and language is by no means confined to the Western tradition, but has been observed in a great many musical cultures around the world.

JONATHAN KING

Text underlay

(Ger. *Textunterlage*). In the notation of vocal music, the alignment of notes and syllables; in oral traditions, the relationship of notes and syllables as performed. The term 'underlay' tends to imply a notational procedure of placing syllables beneath notes; the reverse procedure, that of placing notes above syllables, is occasionally referred to as 'music overlay', and in cases where order of copying is itself under discussion the neutral terms 'text placement' and 'texting' are sometimes preferred.

DON HARRÁN

Text underlay

1. Introduction.

Although it pertains to vocal music of all times and cultures, text underlay is most often discussed in connection with European art music, with special emphasis on 15th- and 16th-century polyphony. This is because the most detailed prescriptions for underlay, which form the cornerstone of later practice, occur in the writings of 16th-century theorists. The applicability of these prescriptions to earlier periods, of which the most problematic seem to be the 14th and 15th centuries, has been questioned, and text underlay has been described as 'one of the biggest problems facing performers and editors of music before 1600' (Meconi).

Text underlay connects with the topic of text-music relations at large by virtue of the most fundamental of its prescriptions, stated in an uninterrupted line of writings from antiquity on, namely that there should be an appropriate alliance of speech and song (*see also* Text-setting). Text underlay thus concerns different kinds of accommodation between music and words in matters of both syntax and semantics. Specific relationships between notes and syllables reflect the varying ways music and language settle one another's demands.

At one extreme there is a text that shapes the music and at the other music that imposes its order on the text; in between there are a great many textually or musically induced combinations. That 16th-century theorists were aware of the relevance of the general to the specific is clear from the writings of Vicentino and Zarlino, both of whom preface their instructions on underlay with chapters on music and speech. They sometimes took extremist positions: Jean Le Munerat described heated debates between grammarians (i.e. humanists) and musicians at the College of Navarre in the 1490s on the primacy of speech over music or the contrary (see Harrán, 1989).

It might seem strange that a topic of such consequence had limited resonance in detailed writings on music before 1500 (with one exception, a folio added to Antonius de Leno's *Regulae de contrapuncto*, *c*1440; see Harrán, 1978). However, general prescriptions on the adaptation of music to speech can in fact be culled from many sources from Plato onwards.

Text underlay

2. 16th-century theory.

Prescriptions for text underlay can be extracted from the larger, more systematic discussions of several 16th-century theorists, principally those by Lanfranco (8 rules), Zarlino (10) and Stoquerus (15). Zarlino based his set on Lanfranco's (Harrán, 'New Light', 1973) and Stoquerus seems to have based his on Zarlino's. The number of rules expands considerably when one takes into account specified exceptions. For example, Lanfranco wrote that 'in mensural music all single notes (excepting, nearly always, the semiminim) carry their own syllable': from this the rule emerges that in mensural music the semiminim and obviously smaller values almost never carried syllables. About 110 distinct points of procedure in all can be signalled in more that 360 theoretical statements from antiquity to the 17th century (see Harrán, 1986). These include general ordinances for adapting music to speech and more specific rules for accentuation, syntax, elision, the notes best suited to carrying syllables, how syllables should be positioned within the phrase, semiminims (single or in a series) and subsequent notes, dots and subsequent notes, dissonances, syncopations, leaps, repeated notes, repeated motives or phrases, textual replication and, with respect to performance, breathing, articulation and pronunciation.

These rules fall into three broad categories: (1) a suitable relationship between speech and music, as covered by rules which, in a sense, pre-empt and subsume all others, be they for the affective handling of words or for the details of syllable placement; (2) syntax, or the division of music in accordance with larger and smaller semantic units; and (3) accentuation, or the adaptation of pitches to long/short or accented/unaccented syllables or larger portions, among them the 'sentence accent' discussed by Stoquerus.

Five basic assumptions lie behind the rules. One is that vocal music as composed and performed should relate in one or more ways to speech. Another is that the structure and content of the text should be audible. There are different kinds of audibility: declamatory writing facilitates the apprehension of words, but their emotive content is sometimes more finely perceived in more florid styles. The third assumption is that syllables should be treated either syllabically or melismatically; it follows that some note values are suited to carrying their own syllable (notes of medium or longer duration) and others to melismatic use (shorter values), and that different procedures of text underlay obtain for syllabic and melismatic textures. The fourth is that 'accentuality', or the musical differentiation between emphasized and unemphasized portions of speech, should not be construed as merely an adaption of notes to word stresses, but rather as a principle that operates on varying morphological and semantic levels, each premising its own kind of textual–musical relationships. The fifth is that these same relationships are subject to a principle of 'integrality' whereby, in composition and performance, separate demands are reconciled.

Some works exemplify these rules more by breaking them than by observing them. 16th-century theorists formulated the rules mostly in relation to their own music, which, on the whole, illustrates the operability of these rules; just as there is consistency between the various styles of composition from the 1520s on, so there is also consistency between instructions for underlay from the 1530s (Lanfranco) to the 1570s

(Stoquerus). However, the same theorists implied that rules changed according to changing styles or practices. For example, Lanfranco spoke of rules for placing words under melodies whereas Zarlino's rules were for placing notes under words, a distinction which signals different approaches to text-setting: an earlier one in which words often bent to musical (or otherwise scribal) considerations, and a later one in which music was more noticeably shaped by words. Lanfranco, moreover, said that his instructions pertained to masses and motets, but implied different procedures for chansons and madrigals, which lay beyond his purview. Vicentino remarked on the different accentual treatment of different languages. All the theorists intimated exceptions to the rules in specific stylistic or rhythmic situations, and Stoquerus spoke of varying degrees of observance between earlier and later generations, represented by Josquin and Willaert; he gave a set of 'compulsory' rules for both and a separate set of 'optional' ones for each. The rules, then, provide a framework for addressing problems of note–syllable relations but cannot always be rigorously enforced, since the theorists themselves suggested their adjustment where necessary to musical realities.

As a premise for operability of the rules in earlier styles, one might refer to Stoquerus's thesis that the rules accord with natural speech habits. Given the age-old connection between music and speech and the fundamental affinity between musical and speech behaviour as cognate forms of rhetorical expression, it can be assumed that certain rules are indeed of relevance to earlier styles. Lanfranco and Zarlino, moreover, exposed their rules by comparison with those for plainchant, noting their similarity. Since plainchant was the basis for early sacred polyphony (e.g. organum) and persisted as borrowed material for later masses and motets, it would seem that a line of continuity can be drawn, in text–music relations, from earlier to later styles. The same can be said of secular traditions: the concern of the composers, in secular monophony, with textual form, syntax and often prosody carried over into its later polyphonic equivalent, if not in all voices then at least in those that carried text.

Text underlay

3. Editorial practice.

Early polyphony raises fewer problems of text underlay for the modern editor than does the music of the 15th century. As Edwards has put it (1987):

> we need only go back to around the middle of the 15th century to find ourselves at the end of an extended era when composers wrote many songs in which scope for ambiguity in text underlay is minimal; enough to reveal an extraordinary long-term consistency of texting practice and to provide a more than adequate guide to what is required in those songs which might otherwise land us in difficulties. Moreover, the earlier sources, while by no means free of ambiguity and error, characteristically show a concern with the correspondence between notes and words that is quite lacking in their later counterparts.

The problems that beset the editor and performer of music from the late 14th century and the 15th are due to the often haphazard inscription of words in the sources, not to speak of textual variants. As preliminaries to their solution, the sources (including literary sources of the texts, if available) have to be ranked and collated; decisions must be made about which part or parts were sung with text (the appearance of a textual incipit in a voice may not necessarily mean that full text should be added) and about the treatment, within a phrase, of textless initial, medial or final portions: these may be performed on instruments, vocalized to a single syllable, or texted; and the text itself must be completed or corrected when marred by scribal negligence or inaccuracy.

Manuscript text placement is often complicated by the profusion of melismas. It is not that the melismas were lacking in earlier polyphony; however, they had usually occurred in initial or terminal positions. In the late 14th century and the 15th it seems that melismas invaded the phrase in all its portions; the resultant major difficulty is how to spread the syllables in relation to a phrase's melodic and rhythmic content. In Kyrie sections of English, Burgundian or early Netherlandish masses, for example, it is often unclear how the words 'Kyrie eleison' and 'Christe eleison' should be aligned with their notes, and how many times they should be repeated, if at all.

One noticeable difference between earlier and later underlay practices is the often 'incorrect' accentuation of words in the former, with weak syllables receiving musical stress (by being placed at the beginning of a tactus or by rhythmic extension) and strong ones ignored. Zarlino, by contrast, prescribed as a cardinal rule the appropriate handling of syllabic stress, a rule that reflected his humanist orientation.

From the casual or even indifferent placement of words or from their faulty musical accentuation it need not be concluded that earlier works were open to as many interpretations as their different versions in the sources, that composers, scribes and singers were uncertain or unconcerned about how the words were to be delivered, or that since it did not seem to matter to them, then neither should it to modern editors. Rather, it may be possible to arrive at a more orderly text underlay by invoking certain larger principles, provided their applicability is sustained by the melodic and rhythmic material at hand (see Perkins, 1974). Because of their generality, the following principles allow ample room for alternative solutions.

(1) syntactic articulation: co-ordinating the musical phrases with larger and, as far as possible, smaller verbal units;

(2) initiality: it is usually safe to assume that the first note of a phrase will carry the first syllable of a word (in practice, however, syllables may need to be extended across phrase boundaries);

(3) finality: the last syllable is likely to fall on the last note of a phrase, though a terminal melisma may force it to occur earlier;

(4) ligature groupings: there are two kinds of ligatures, those explicitly notated and those implied by musical design; in both kinds the syllable

usually falls on their first pitch only, though ligatures sometimes have to be broken;

(5) successivity: for purposes of audibility it is preferable, when feasible, to present syllables in close succession, leaving the last accented one to be delivered on the notes that remain;

(6) accentuality: long notes suggest an adaptation to stressed syllables and shorter notes to unstressed ones. But other kinds of accents should be considered, namely the rhetorical accent, which implies its own patterns of stress; and the musical accent, whereby certain words are highlighted for inherently musical reasons (see Harrán, 1986);

(7) verbal substantiality: where possible, significant notes (tonally or rhythmically accented or melodically extended) should be associated with significant syllables (belonging to nouns, verbs, adverbs, etc., but not to conjunctions or to definite or indefinite articles);

(8) linguistic consistency: different systems of accentuation apply to different languages, and the same language may be pronounced differently by speakers of different nationalities;

(9) textural demands: syllabic writing premises a tighter co-ordination of musical and verbal elements than does melismatic writing.

Other difficulties in earlier music, with no easy solution, may have to do with a piece of music's artificial association with a certain text, as happens in contrafacta, where a new text, with its own syntax and accentuation, is applied to a melody that originally carried a different text; or may have to do with the adaptation to music of successive stanzas, whereby grammatical and syntactical inaccuracies are sometimes unavoidable (few sources transmit texts underlaid beyond their first stanza).

Texture.

A term used when referring to the sound aspects of a musical structure. This may apply either to the vertical aspects of a work or passage, for example the way in which individual parts or voices are put together, or to attributes such as tone colour or rhythm, or to characteristics of performance such as articulation and dynamic level. In discussions of texture a distinction is generally made between homophony, in which all the parts are rhythmically dependent on one another or there is a clearcut distinction between the melodic part and the accompanying parts carrying the harmonic progression (e.g. most solo song with piano accompaniment),

and polyphonic (or contrapuntal) treatment, in which several parts move independently or in imitation of one another (e.g. fugue, canon). Between these two extremes is a free-part style (Ger. *Freistimmigkeit*), characteristic of much 19th-century writing for the piano, in which the number of parts can vary within a single phrase. The spacing of chords may also be considered an aspect of texture; so may the 'thickness' of a sonority as determined by the number of parts, the amount of doubling at the unison or octave, the 'lightness' or 'heaviness' of the performing forces involved and the arrangement of instrumental lines in an orchestral work.

Although textural control has been a major consideration for composers since the Middle Ages, with the advent of twelve-note composition and serialism in the 20th century and the consequent breakdown of the tonal system in Western art music, texture became an even more important feature of composition. This tendency can be seen particularly in works of Webern, in works (especially aleatory music) of Ives and Cowell and of Varèse, and in the distinctive textures of Crumb and Ligeti.

The word does not have an exact equivalent in any other language; the etymologically related Italian 'testura' and 'tessitura' refer to the register of a single part, usually vocal. Only the German Satz, which in certain contexts denotes contrapuntal organization (*Dezimensatz* – counterpoint round the interval of a 10th) or part-writing style (*Kantilenensatz* – in the style of 14th- and 15th-century song with a melodic upper voice and more 'accompanimental' lower voices), approaches the meaning of texture.

PETER BRANSCOMBE

Teyber

(1) Matthäus Teyber

(*b* Weinzettel, *c*1711; *d* Vienna, 6 Sept 1785). Violinist and, from 1757, court musician in Vienna. He became a violinist in the Empress Elisabeth Christine's Kapelle on 1 March 1741 and on 13 June married Therese Riedel in Vienna (F.I.A. Tůma and Giuseppe Bonno were witnesses at the wedding); four of their children attained distinction as musicians. He and

his family were on friendly terms with the Mozart family by 1773, as Leopold's letters to his wife in August that year indicate. Apart from the four most important members of the family (their dates and even their names are subject to considerable variation in musical literature), another son, Friedrich (*b* Vienna, bap. 13 June 1748; *d* Vienna, 8 Jan 1829), was a talented amateur violinist who became a senior civil servant and was ennobled, and another daughter Barbara (*b* Vienna, ?1750; *d* Vienna, 30 Jan 1832) sang Sara in the première of Haydn's *Il ritorno di Tobia* on 2 and 4 April 1775 in the Kärntnertortheater. Clemens Tauber, a cellist in the Esterházy orchestra early in 1788, was probably no relation.

Teyber

(2) Elisabeth Teyber

(*b* Vienna, bap. 16 Sept 1744; *d* Vienna, 9 May 1816). Soprano, daughter of (1) Matthäus Teyber. After study with Hasse and Tesi she made her career mainly in Italy, following a series of Vienna performances in the 1760s, including the production of Hasse's *Partenope* in 1767 (Leopold Mozart was not particularly impressed by her – see his letter of 29 September 1767; for Hasse's own more favourable opinion, see Mennicke). She then sang with great success in Italy, appearing at Naples, Bologna, Milan and Turin. She married a Marchese Venier but was widowed early. She is said to have sung in Russia in the 1770s but to have been obliged for health reasons to return to Italy, and was not able to resume singing there until 1784. It is by no means certain that she appeared in Vienna again in 1788, as is sometimes stated, or even that she gave a solitary guest appearance there ten years earlier, on 8 September 1778. On this date Ulbrich's *Frühling und Liebe* was given for the first time. The playbill includes 'Mlle. Teyberinn' (i.e. Therese Teyber) as Fiametta, and 'Mlle. Tauber' in the role of her stepmother, Markesinn Bellavita. It seems almost certain that this 'Mlle. Tauber' was in fact not Elisabeth Teyber but the unrelated Maria Anna (or Marianne) Tauber (or 'Taube'), a soprano of the Esterházy company who in March of that year had impressed the Emperor Joseph II in Starzer's oratorio *La passione di Gesù Cristo*, but was less successful in subsequent appearances and left Vienna at the end of September.

Teyber

(3) Anton Teyber

(*b* Vienna, bap. 8 Sept 1756; *d* Vienna, 18 Nov 1822). Composer, pianist, organist and cellist, son of (1) Matthäus Teyber. After early education in Vienna he studied for some years in Bologna with Padre Martini, being there almost certainly as late as 1775. He then appeared in several Italian musical centres, touring with his sister Elisabeth, and in Spain and Portugal (also Germany and Russia, according to a biographical sketch in *A-Wgm*), before returning to Vienna about 1781. He was admitted to the Viennese Tonkünstler-Sozietät in 1784, and in 1787 entered the Hofkapelle at Dresden as first organist. At the end of 1791 he returned to Vienna and on 1 December took up a post as deputy to Joseph Weigl at the National-Hoftheater. However, cuts in the musical establishment under Franz II led to his losing his post, though he was successful in petitioning the emperor for help; on 1 March 1793 he was appointed court composer (a post that

had not been filled after Mozart's death) and instructor in keyboard to the imperial children. A *Missa solemnis* in C minor was written for and performed on the occasion of Archduke Rudolph's appointment as Cardinal and Archbishop of Olmütz (Olomouc) in 1819 (the archduke was a pupil of both Teyber and Beethoven), and he is recorded as having conducted other large works in the imperial chapel in 1820 and 1821; a mass by him was performed with great success at Olmütz Cathedral on Easter Sunday 1822. He also wrote a melodrama *Zermes* (or *Zerbes*) *und Mirabelle* (1779), two oratorios, *Gioas, rè di Giuda* and *La passione di Gesù Cristo* (performed in 1805 for Teyber's benefit at the Tonkünstler-Sozietät), and a quantity of orchestral, chamber and church music, most of which was bought from his widow by Archduke Rudolph and later passed with his estate into the possession of the Gesellschaft der Musikfreunde.

WORKS

for fuller list see MGG1

vocal

Stage: Zermes (Zerbes) und Mirabelle (melodrama), Vienna, Kärntnertor, 15 July 1779

Oratorios: Gioas, rè di Giuda (P. Metastasio), Dec 1786, *A-Wgm*; La Passione di Gesù Cristo, *c*1790, perf. 1805, *Wgm*

Sacred: 11 masses, 4vv, orch, *Wgm*, *D-Dlb*; Requiem pro defuncta Imperatrice Ludovica, 4vv, orch, *A-Wgm*; Dixit Dominus, 1778, Salve regina, 1v, insts, *Wgm*; mass sections, grads, ants, motets, fugues, *Wgm*, *Wn*, *Wst*

Other vocal: [7] Gesänge für Musikkenner beim Clavier (Vienna, 1797), 1 ed. in DTÖ, lxxix, Jg.xlii/2 (1935/*R*); 12 lieder in C.F. Kriegel: Lieder beym Clavier zu singen, i–ii (Dresden, 1790–93); further lieder in contemporary anthologies; occasional works, lieder, arias, in MS

instrumental

Orch: Grande sinfonie, op.1 (Offenbach, 1799); 35 further syms., 16 in *Wgm*; 6 vn concs., 5 in *Wgm*; 4 kbd concs., *Wgm*; 2 hn concs., *Wgm*; double conc., vn, kbd

Chbr (mostly in *Wgm*): 3 octets, 4 str, 2 ob, 2 hn; 2 sextets, 4 str, 2 ob; 3 str qts, op.1 (Vienna, 1788); 3 str qts, op.2 (Dresden, n.d.); 23 further str qts, ?6 lost; 14 qts, kbd, str; 3 pf trios; 6 str trios; 12 minuets, 2 vn, b (Vienna, *c*1808); vn sonata (Vienna, 1786); 2 cassations

Kbd: 3 sonatas, *Wgm*; XII Menuetten aus dem … Redouttensaal (Vienna, 1796); XIII deutsche Tänze (Vienna, 1796); 3 nocturnes, 4 hands; further dances, incl. minuets, marches (Vienna, 1797–1808), also in MS, incl. *Wgm, Wn, D-Bsb*

Various pedagogical works, *A-Wgm*

Teyber

(4) Franz Teyber

(*b* Vienna, bap. 25 Aug 1758; *d* Vienna, 21 or 22 Oct 1810). Composer, organist, bass singer and conductor, son of (1) Matthäus Teyber. After receiving musical instruction from his father and Wagenseil he undertook extensive tours of Swabia, Switzerland and Baden, and then in or about 1786 he joined Schikaneder's travelling troupe as conductor and composer, having been in Vienna again the previous season. Leopold Mozart, discussing the company's Salzburg season of 1786, refers to

Teyber as 'my very good acquaintance from Vienna; a thorough, excellent musician, good composer, organist, and violoncellist' (letter of 5 May 1786). In 1788–9 Teyber was in Karlsruhe, in 1791–3 in Cologne, and then in Regensburg and Augsburg. From 1796 until 1798 he was at Berne and then returned to Vienna. He was honoured with the task of writing the opera for the opening performance at the new Theater an der Wien on 13 June 1801: *Alexander*, to a libretto by Schikaneder, which was given 44 times in less than three years. None of his later works for this theatre enjoyed much success, and his name disappears from the repertory list after a setting of Huber's *Der Zerstreute* in January 1805. He moved to the Leopoldstadt Theatre in 1807, and on 13 August 1810 was appointed court organist (from the previous year he had been organist at St Stephen's Cathedral). Despite his honours and successes, he died in penury. Wurzbach related that one of his last works was an oratorio, *Der sterbende Jesus*, performed in the Leopoldstadt Theatre for the musicians' benefit fund; this is presumably identical with the oratorio *Die sieben Worte des Heilands* (no composer named) that was given on 25 March 1810.

WORKS

dramatic

all first performed in Vienna unless otherwise stated

Laura Rosetti (op, 3, ? G. Stephanie the Younger), Pressburg, Aug 1785, *A-Wgm*

Die Dorfdeputierten (comic op, 3, G.E. Heermann, after C. Goldoni), Kärntnertor, 18 Dec 1785, *Wn*

Karl von Eichenhorst (op, 2), Freising, 1786

Adelheid von Veltheim (Spl, 4, G.F. Grossmann), Karlsruhe, 26 Nov 1788

Rudolph von Hochburg (comic op, 2, after Bürger), ?Augsburg, 1795 (text printed Augsburg 1795)

Fernando und Jariko oder Die Indianer (Spl, 3, K. von Eckartshausen), Freihaus, 5 Sept 1789; ov., arr. kbd (Vienna, 1802)

Alexander (grand op, 2, E. Schikaneder), an der Wien, 13 June 1801

Der Schlaftrunk (Spl, 2, C.F. Bretzner), an der Wien, 12 Nov 1801

Der Neuigkeitskrämer oder Der Telegraph (Spl, 2, F. Gewey), an der Wien, 12 May 1802

Pfändung und Personalarrest (Spl, Schikaneder), an der Wien, 7 Dec 1803

Der Zerstreute (comic op, 3, F.X. Huber), an der Wien, 29 Jan 1805

Andrassek und Jurassek (pantomime, 2, F. Kees), Leopoldstadt, 20 Feb 1807

Ruthards Abenteuer oder Die beiden Sänger (comic op, 3, W. Neubauer), Leopoldstadt, 26 July 1808

Pumphia und Kulikan (caricature op, 2, J. Perinet, after J.F. von Kurz), Leopoldstadt, 8 Oct 1808

Der bezauberte Blumenstrauss (pantomime, 2, J. Worelly), Leopoldstadt, 29 Aug 1809

Der lebendige Postillonstiefel oder Die Luftreise des Arlequin und der Columbina (pantomime, 2, Kees), Leopoldstadt, 7 July 1810

Plays with songs (all Vienna, Leopoldstadt, except where otherwise stated): Die Entführung, oder Ritter Karl von Eichenhorst (play with music, 4, after G.A. Bürger), Cologne, 1793; Scheredin und Almanzor oder Die Unsterblichkeit auf der Probe (4, I. Castelli), 1804; Der Schiffmeister von Straubing (3, K. Schikaneder), 1807; Aragis von Benevent (3, J.A. Gleich), 1807; Der Lohn der Nachwelt (4, Gleich),

1807; Die Vermählungsfeier Alberts von Oesterreich (4, Gleich), 1808; Die beiden Marillo (3, Gleich), 1808; Eppo von Gailingen (3, Gleich), 1809; Das Strafgericht (4, J.S. von Menner), 1809; Das Spinner-Kreuz am Wienerberge (3), 1811

other works

MSS in A-Wgm, Wn, Wst

Vocal: Missa de sanctissima Trinitate, vv, orch, 1806; Ky, 17 Aug 1776; Lamentations and Bs for Holy Week, 2–3vv, str; Der sterbende Jesus, oratorio, ?1810, lost; Die Entführung oder Ritter Karl von Eichenhorst (G.A. Bürger), narrative song, pf acc., 1793

Inst: 3 qts, kbd, str (Mannheim, *c*1789); 6 str qts; 3 sonatas, pf, vn acc. (Vienna, after 1803); sonata, pf, vn, vc (Vienna, *c*1808); preludes, org, 1809–10; dances, marches (Vienna, 1803–9), also in MS

Teyber

(5) Therese Teyber

(*b* Vienna, bap. 15 Oct 1760; *d* Vienna, 15 April 1830). Soprano, daughter of (1) Matthäus Teyber. She was a pupil of Bonno and Tesi. She made her début at the Vienna court theatre on 8 September 1778 as Fiametta in Ulbrich's *Frühling und Liebe*. (A letter of 8 February 1778 from Gebler to Nicolai mentions a 'Mlle Teuberin, until now at Prince Esterházy's Opera' among future attractions, but this doubtless refers to Maria Anna Tauber, who had probably already been engaged to sing in Starzer's *La passione di Gesù Cristo* in March, and who also sang in *Frühling und Liebe* in September; she is the only singer in the Esterházy records with that or a similar name. This information is corroborated by the *Wiener Diarium* of 1778, no.87.) Teyber was a popular portrayer of young lovers and artless girls, and in the early 1780s she also appeared in the concerts of the Tonkünstler-Sozietät. Her last appearance at one of these concerts seems to have been in March 1784, when she sang Sara in Haydn's *Il ritorno di Tobia* (her sister Barbara had sung this part in the first performances in 1775). She created the role of Blonde in *Die Entführung aus dem Serail* on 16 July 1782 and appeared with success in many other operas and Singspiele; contemporary reviews praised the charm of her acting ('the best of the women') and singing, though one critic accused her of letting her tongue run away with her in dialogue. In her early years with the court theatre she was one of the lower-paid singers (in 1783 she drew 800 florins, less than a quarter of the salary of Nancy Storace). In autumn/winter 1785–6 she married the tenor Ferdinand Arnold, who had also sung in *Frühling und Liebe* in 1778; he rejoined the court opera company on 1 September 1785. The Arnolds are reported to have performed together with much success at Hamburg, Berlin, Warsaw and Riga, though the chronology of these appearances is confused. It seems reasonable to assume that it was Therese (and not, as is often stated, Elisabeth) who replaced Mombelli as Zerlina in the later Viennese performances of *Don Giovanni* in 1788. Therese is certainly the 'Mad:selle Täuber' ('Teyber') referred to in Mozart's letters of 29 March and 12 April 1783; they took part in each other's benefit concerts that Lent. Therese Teyber occurs in the court exchequer records of 1792 (the year after her

retirement) as 'Arnoldin vormalige Sängerin' with a pension of 466·40 florins.

Tê y Sagau, Jayme de la

(*b* Barcelona, *c*1670; *d* Lisbon, 1736). Catalan printer, composer and poet. The son of a singer, he was probably the harpist Sagau who in 1689 replaced Felip Roca in Barcelona Cathedral. He may have acquired his printer's skills through his contacts in Madrid with Joseph de Torres y Martinez Bravo, who had founded his Imprenta de Musica there by 1699. Sagau arrived in Lisbon in 1708 in the retinue of the Jesuit diplomat Álvaro Cienfuegos, who assisted in arranging the marriage of João V with Princess Marianna, daughter of Leopold I of Austria, and remained under his protection until 1715. On his arrival in Lisbon he began composing Italian-style cantatas on Spanish texts in the new queen's honour and from 1713 onwards he also wrote music for palace festivities such as the zarzuela *El poder de la armonía* (1713), and an oratorio and various villancicos for Lisbon Cathedral, the Church of S Justa and the Convento da Esperança (1719–1723). Despite his humble origins, he was admitted to the Order of Santiago in 1716 through the queen's favour and he later also obtained a pension.

On 12 October 1715 he obtained a ten-year royal privilege to establish an Imprenta de Música which published his own villancicos and sacred and secular cantatas, both in single issues and in collections, as well as 12 *Cantatas humanas a solo* by Astorga (1726). His own cantatas reflect the influence of the Italian cantata combined with dance rhythms of Iberian origin. Several of them continued to be sung as far away as Guatemala and as late as 1788. He probably married in Portugal and he bequeathed his press to his son Jayme Domingos de la Tê y Sagau, who did not, however, continue to print music.

WORKS

lost unless otherwise stated

[166] Cantatas humanas, 1–2vv, bc (Lisbon, 1715–26) [incl. 51 lost]

MANUEL CARLOS DE BRITO

Teyte [Tate], Dame Maggie

(*b* Wolverhampton, 17 April 1888; *d* London, 26 May 1976). English soprano. She studied in London, then with Jean de Reszke in Paris. Her first public appearances were in a Mozart Festival organized in 1906 by Reynaldo Hahn and Lilli Lehmann. In the following year she appeared at Monte Carlo, notably as Zerlina, and in various roles at the Opéra-Comique in Paris. Her big chance came in 1908, when Debussy selected her to succeed Mary Garden in the role of Mélisande; besides coaching her, he accompanied her in recitals of his songs, and from that time French song in general, and Debussy in particular, played a prominent part in her career. On her return to England she sang Mélisande and many other roles, including Cherubino, Blonde, Butterfly, Marguerite and Offenbach's Antonia, with the Beecham Opera Company and in later years with its successor, the British National Opera Company; with the latter she was the first Princess in Holst's *The Perfect Fool* at Covent Garden in 1923.

Teyte sang for three consecutive seasons (1911–14) with the Chicago Opera Company, both in Chicago and in Philadelphia and New York. Among her parts with this company was the title role of Massenet's *Cendrillon*, with Mary Garden as Prince Charming. At Boston, where she was a member of the Opera Company from 1914 to 1917, her Mimì and Nedda were specially admired; but her Mélisande was not heard in the USA until the late 1940s (in concert in 1947 and with the New York City Opera the following year). In England, between the wars, she appeared a good deal in operetta and musical comedy (*Monsieur Beaucaire*, *A Little Dutch Girl*, *Tantivy Towers*) and was even in some danger of being regarded as a lightweight artist, when, in 1937, her career received a fresh impetus. The occasion was a commissioned record album of Debussy songs, with Cortot as pianist, followed in 1940 by a second album of French song from Berlioz to Debussy. During the next eight years she made many further records of Fauré and other French songs with Gerald Moore, and her London recitals became notable events. In 1951 she appeared at the Mermaid Theatre as Purcell's Belinda to the Dido of Kirsten Flagstad; and in 1955 she made a final concert appearance at the Royal Festival Hall. The exquisite purity and perfect placement of her tone, together with her spontaneity and distinction as an interpreter, secured for her a unique position, which was recognized when she was made a Chevalier of the Légion d'Honneur in 1957 and DBE in 1958. Her voice recorded ideally, and her discs of the French repertory set a standard, as can be confirmed on numerous CD transfers.

DESMOND SHAWE-TAYLOR

Thabart, Pierre.

See Tabart, Pierre.

Thackray, Thomas

(*b* York, bap. 16 June 1740; *d* York, 4 Nov 1793). English guitarist and composer. He was probably trained in music by his father, Thomas (*d* 1764), a 'linen weaver and musician', who played in a country dance band at the York Assembly Rooms during Race Week most years, 1733–62. Thackray published his *Six Lessons for the Guittar* op.1, in York in 1765, but was probably in London by June 1769 when he issued his *Six Lessons* op.2, with its impressive list of subscribers for 633 copies. Shortly after he seems to have returned to York to continue his business of linen-draper alongside that of musician. He played the cello in the York theatre band in the 1770s, and at Marylebone Gardens in 1776. In March 1778 he was appointed Musician in Ordinary to George III, but probably the position was a sinecure and he lived mainly in York. In 1784 he played first violin in the Handel Commemoration Concerts at Westminster Abbey and the Pantheon. Besides his opp.1 and 2 Thackray wrote a set of 12 divertimentos for two guitars, op.3 (London, 1772), a collection of 44 airs (1772) and a few minuets and other miscellaneous pieces. His music displays no particular originality but was workmanlike enough to satisfy the amateur demand for simple, tuneful pieces for the newly fashionable English guitar.

ROBERT SPENCER

Thailand, Kingdom of (Parthet Thai).

Country in South-east Asia. It is bordered by Myanmar (Burma) to the west, Laos and Cambodia to the east and Malaysia to the south. The population is a mixture of Thai people from southern China, indigenous peoples of the region and peoples from the kingdoms of Srivijaya (6th–14th century) in the south, Yonok Chiang-saen (8th–12th century) in the north, the Mon kingdom of Davaravati (6th–11th century) in the central region and the Khom (ancient Khmer) tradition. Thai culture is predominantly agricultural and based on Theravāda Buddhism.

Thailand's first capital city was established at Sukhothai in the north, from 1238 to 1378. Music of this period was highly developed; most present-day instrument types were in use, including the three-string fiddle *so sām sāi* for court music and an older type of *pī phāt* ensemble for ritual music. The second capital city, Ayutthaya, was located in the central region and

remained the capital for 417 years (1350–1767). During this period art, literature, music and drama became standardized including the performance genres of *khōn* (masked drama), *lakhon* (stage drama) anad *nang* (large shadow puppet theatre), as well as instrumental ensembles, musical compositions, aspects of performing practice and the functions of music. The *pī phāt* ensemble was widely used, with the ceremonial suite *phlēng ruang* as its main repertory. *Mahōrī*, the court music ensemble that combines strings, flute and melodic percussion, began in a quartet format (*mahōrī khruang sāi*), becoming standardized by the middle of the Ayutthaya period.

The capital was established at Thonburi for 15 years before it was moved to Krungthep (Bangkok) in 1782. The most important musical event was the creation of the tri-partite form *thao* in the mid-19th century by Pra Pradit Phairau and the development of contemporary virtuoso performance technique in the early 20th century by Luang Pradit Phairau. Although the Thai people were in contact with Western culture from the middle of the Ayutthaya period, Western music appears not to have influenced Thai music until the reign of King Rama IV of Bangkok (1851–67), when the military band tradition was established and taught by Western music teachers.

I. Classical music
II. Regional and popular music

PANYA ROONGRUANG

Thailand

I. Classical music

Originally composed as court music, Thai classical music is also performed outside the court. There are many kinds of ensembles, used according to the particular social context; the three most prominent are *pī phāt* (percussion and oboe), *khruang sāi* (strings, percussion and flute) and *mahōrī* (strings, flute and percussion). Each may be divided into sub-types based on their size and instrumentation.

The notation of Thai classical music in Western staff format began in 1930 at the same time as Thai cipher notation was created by Luang Pradit Phairau; cipher notation was further developed by later Thai musicians. Currently two types of notation (cipher and alphabetical) are widely used at the beginning level of study along with oral methods. Once a student has memorized a piece and its style, then notation is no longer used.

The main patrons of classical music were formerly the court and the noble class working with the king, as well as common people who hired musicians for seasonal ritual ceremonies. After the revolution in 1932 the court no longer supported music; its patronage was replaced by governmental institutions of music and drama.

In order to survive, traditional performing arts have had to adapt to social change. Adaptations have included the staging of performances and the addition of pop songs and Western instruments, for example the incorporation of drum kit and guitar in northern *mo lam sing* and the inclusion of drumkit, keyboard and sometimes guitar to southern *nōrā* and

central *likē*. Theatrical stories and costumes have been modernized. Beginning in 1987 classical and regional musics have been included in the educational system. Classical music is still performed on many occasions, particularly during ritual ceremonies, for tourists and to entertain patrons in hotels and restaurants. People listen mostly to popular music of many styles but revere classical music as a symbol of Thai culture.

1. Instruments and ensembles.

The percussive instruments common to all kinds of ensembles are a pair of small hand cymbals (*ching*) that outline the metre (the sound 'ching' occurs on the upbeat and 'chap' on the accented downbeat); a pair of small cymbals (*chāp*) that play an interlocking pattern with the *ching*; a pair of wooden sticks (*krap*) that are struck together at the same time as the damped downbeat stroke of the *ching*; many kinds of drums (*klong*) which control musical structure by playing cycles of rhythmic patterns called *natab*; and, finally, a single gong (*mōng*) to mark the end of the rhythmic pattern.

(i) Pī phāt.

The essential instruments in the *pī phāt* ensemble include two circular gong-chimes, the larger (*khong wong yai*) consisting of 16 tuned bossed gongs and the smaller (*khong wong lek*) of 18 gongs. The gongs are placed horizontally in a circular frame laid on the floor and played with two disc-shaped mallets; the player sits in the centre of the circle of gongs. There are two sizes of xylophone: *ranāt ēk*, which is the higher-pitched and has 21 wooden keys on a boat-shaped wooden resonator, and *ranāt thum*, lower-pitched and with 16 keys on a rectangular, box-shaped resonator. The keys are strung on cords that are hung over hooks on the endboards and are played with two padded mallets. The quadruple-reed oboe (*pī nai*; fig.1) has a wooden body that flares out at each end and bulges slightly in the middle, with a cylindrical bore and six fingerholes. The drums used in *pī phāt* comprise *taphōn*, a double-headed drum on a stand, two *klong that* (large barrel drums) and sometimes a long, double-headed barrel drum (*Klong song nā*).

There are five types of *pī phāt* ensemble. *Pī phāt khruang hā* (fig.2) is the smallest, consisting of a quintet of *khong wong yai*, *ranāt ēk*, *pī nai*, *ching*, *taphōn* and *klong that*. *Pī phāt khruang khū*, the double *pī phāt,* consists of both circular gong-chimes, both xylophones and one oboe. *Pī phāt khruang yai*, the large *pī phāt* (fig.3), consists of the instruments of *khruang khū* plus two metallophones, *ranāt ēk lek* and *ranāt thum lek*. These three types of *pī phāt* may be played with either soft or hard beaters to provide a soft or loud sound and are called *pī phāt mai nuam* and *pī phāt mai khaeng* accordingly. The funeral ensemble *pī phāt nāng hong* consists of the essential instruments of *pī phāt khruang khū* but with the *pī nai* replaced by

pī chawā oboe and the addition of two *klong malāyū*, double-headed drums with cow-skin heads. *Pī phāt dųk dam ban*, the soft indoor *pī phāt*, consists of two xylophones, large circular gong-chime, low-pitched metallophone (all played with soft mallets), *khlui ū* (large flute), *so ū* (low-pitched fiddle), two *taphōn* drums played with soft sticks, and *khong hui*, a set of seven large gongs, graduated in size.

Pī phāt mon (fig.4) is a special type of *pī phāt* derived from Mon tradition and is widely used for funerals and cremations. It consists of *khong mon*, a U-shaped circular gong-chime, *taphōn mon*, a large double-headed drum, *pī mon*, a large oboe with a metal bell, *poeng māng khok*, a set of graduated, double-headed drums hung on a circular frame, and large and small cymbals.

(ii) Khruang sāi.

This ensemble combines flute and percussion with strings; other instruments, even Western ones, may also be added. The leading instrument is the *so duang*, a two-string, high-pitched, bowed lute, made of wood (fig.5). It has a cylindrical soundbox, the front of which is covered with snakeskin. A horsehair bow is placed between the two silk strings. The secondary bowed lute is the low-pitched *so ū* which has decoratively carved soundholes and a soundbox made of coconut-shell, the front of which is covered with calfskin. The plucked zither *čhakhē* has three strings, two made of silk and the third made of brass. These strings are placed on a small piece of bamboo that is laid on the bridge over the soundbox to provide a buzzing sound when played. The duct flute *khlui* is made of bamboo, wood or even plastic and has seven fingerholes. *Khlui* are made in four sizes: *khlui ū* (largest), *khlui phīang o* (medium-sized), *khlui līp* (small) and *khlui krūat* (smallest); only the medium and small sizes are commonly used. A rhythmic pattern is played by a pair of drums, a goblet drum called *thōn* and a frame drum called *rammanā*.

The *khruang sāi* ensemble exists in two sizes: the small ensemble, with one of each essential instrument, and a double ensemble (two of each). Other instruments may also be included, such as the dulcimer (*khim*), organ or violin, in which case the ensemble is called *wong khruang sāi prasom* (mixed string ensemble). *Khruang sāi pī chawā* replaces the flute with the double-reed oboe of the same name.

(iii) Mahōrī.

This ensemble mixes the instruments of the *khruang sāi* and the *pī phāt*, with the exception of the oboe. The circular gong-chime and xylophones were formerly smaller in size because they were played by females at court. As the instruments are now played by both males and females, regular-sized instruments are also used. One important instrument of this ensemble is the three-string fiddle *so sām sāi* (fig.6) with a coconut-shell soundbox covered with cow- or goat-skin and without a soundhole. The long cylindrical neck passes through the soundbox and is attached to the foot of the instrument, and the three silk strings, played with a bow separated from the fiddle, are attached to three tuning pegs on the top. The player turns the instrument while playing instead of changing the bow angle. The *so sām sāi* always plays with the ensemble, accompanying the

vocalist. Sometimes the *kračhappī* (long-necked plucked lute) is also included. The *mahōrī* also exists in three sizes: small, medium and large.

2. Musical principles.

(i) Tuning.

The Thai tuning system has seven equidistant pitches, the interval between any two pitches being ideally 171·4 cents (slightly more or less in practice). Thai music is highly ornamented, particularly the performance styles of string and wind instruments, so that the pitches between the seven basic tones are also used. The *pī phāt* is tuned to the *pī* (oboe) and the *khruang sāi* and *mahōrī* to the *khlui* (flute). A standard pitch for the tonic note of *thang phiang ao*, close to B□ of the Western scale, is widely used (see Table 1 for a comparison of Western and Thai tuning systems).

Seven scales (*thang*) are built on each pitch of the tuning system. The seven *thang* are called *thang nai lot*, *thang nai* (for normal *pī phāt*), *thang-klang* (for large *pī phāt*), *thang phiang ao* (for *khruang sāi* and *mahōrī*), *thang nawk* (for outdoor *pī phāt*), *thang haep* and *thang lip*.

(ii) Tempo and metre.

There are three prominent proportional tempos (*chan*): *sām chan*, *song chan* and *chan dieo*. *Sām chan* is twice the length of *song chan* and four times that of *chan dieo*; each may be played at slow, medium or fast speeds depending on the ensemble and type of composition. Pieces played by *pī phāt* ensemble are always faster than those of the *khruang sāi* and *mahōrī*. The proportion between each *chan* is articulated by the rhythmic pattern called *nathap*, which is continuously played by one or a set of drums throughout a section or piece. Three main types of *nathap* are used: *piset*, *prop kai* and *song mai*. *Nathap piset* is used for ritual music, some theatrical music and music with a 'foreign accent'. *Prop kai* is twice the length of *song mai*; both are organized into *sām chan*, *song chan* and *chan dieo* and used for any secular music. One cycle of a particular *nathap* consists of many sets of drum strokes; each stroke has a name, such as *tang*, *ting*, *jong*, *jah* or *tha*. One cycle of *nathab prop kai sām chan* consists of four sets of drum strokes, whereas *song mai sām chan* consists of two sets (ex.1). An accented beat occurs every 4, 8 or 16 beats. The frequency depends on the *chan* and is articulated by the dampened stroke of *ching*; the strongest beat is at the end of the cycle of *nathap* and is marked by a single gong (*mōng*). One cycle of *nathap* is called *čhangwa*; a piece or a section of a piece may have many *čhangwa*. The music is normally notated with four beats per bar and eight bars per line (ex.2). One *jangwa* of *prop kai sām chan* consists of two lines, *song chan* one line and *chan dieo* half a line.

(iii) Texture.

Thai music is linear and non-harmonic: each instrument plays its own specific idiom based on a common principal melody. In the *pī phāt* ensemble this principal melody is played by the *khong wong yai*, while instruments such as the *ranāt ēk*, *ranāt thum*, *khong wong lek*, *so duang*

and *so ū* elaborate this melody with their decoration and ornamentation. The principal skeletal melody played by the *khong wong yai* is based on the rhythmic pattern (*nathap*). For example, *nathap sōng mai sām chan* consists of two sets of drum patterns that fit two principal melodic structures; each structure consists of four measures of Thai notation broken down into two smaller sections of two measures each. The last note of each section is the most significant and is called *siang tok* or *luk tok*. The fast-moving instruments such as *ranāt ēk* and *so duang* play the full pre-composed melody or recreate it within the boundaries of an appropriate idiom, maintaining the same *siang tok* as the principal melody. The slow-moving instruments such as *ranāt thum* and *ranāt thum lek* play in their own idioms, also observing the same *siang tok*, producing complex polyphony (ex.3).

(iv) Instrumental idiom.

Idiomatic instrumental style is one of the most important elements of Thai music. The idiom of each instrument differs to a greater or lesser degree from other instruments in the timbral character of the instrument and its technical limitations. For example, the *ranāt ēk* has a high-pitched, strong, bright sound in three octaves and can play in a more ornamented and complex style than the *ranāt thum*, which has a low, mellow sound and a range of only two octaves. Musicians learn the appropriate idioms from their teacher and from listening to the music of numerous ensembles before they are able to re-create the idioms themselves. A brief example of different idiomatic instrumental rendering of notes 6, 1, 2 and 3 is given in ex.4.

(v) Peformance styles.

One melody can be rendered in several different instrumental idioms, not only in traditional classical style but also in regional and international styles, which are called *samniang phāsā* ('foreign accent'). Thai musicians have borrowed from various cultures elements such as musical instruments and language, tunes and musical idioms, and have either re-created them in Thai versions or have created new, 'exotic' music based on those elements. Specific pieces include *čhīn khim lek* (*Čhīn* referring to Chinese influence), *Lao duang doen*, *Khamēn sai yoke* (*Khamēn*, Cambodian) and *Farang ram thao* (*Farang*, Western). The inclusion of nationality in the title of the piece suggests the scales, rhythmic patterns and instrumental idioms to be played in a particular composition; this may also include percussion borrowed from the tradition concerned. A traditional Thai piece could be played in any *samniang pasa* by developing new musical idioms according to the particular 'foreign accents'.

Thailand, §I: Classical music

3. Genres.

There are two main types of compositions: those that are highly motivic, with unarticulated phrasing, and more lyrical pieces with clear cadences; the latter are known to the general public and often arranged for other media.

(i) Phlēng naphat.

This instrumental music is performed only on *pī phāt mai khaeng* (loud-style *pī phāt*), using a special rhythmic pattern (*nathap piset taphōn klong*) played by the double-headed *taphōn* drum and two *klōng that* barrel drums. *Phlēng naphat* is divided into two types, high and normal. High *naphat* is usually performed in Buddhist ritual ceremonies (e.g. paying homage to the teacher) and some is included in the overture genre *phlēng hōm rōng*. Normal *naphat* (together with some high *naphat*) is used to accompany stage drama (*lakhon*) and mask drama (*khōn*). *Phlēng naphat* was probably created in the 13th century.

(ii) Phlēng ruang.

This is an old, motivic style of instrumental suite, existing at least since the 14th century. About 60 suites are still practised, consisting of several pieces in each of three tempos: slow *plēng chā*, medium *song mai* and fast *plēng reo*. They are the main sources of original tunes developed into *thao* form in the mid-19th century.

(iii) Phlēng hōm rōng.

This instrumental overture genre is divided into three types: ritual, theatrical and purely musical. The ritual type is performed at Buddhist ceremonies such as *hōm rōng chao* (prelude in the morning), *hōm rōng klang wan* (prelude at noon), *hōm rōng yen* (evening) and as prelude to chanting (*hōm rōng tet*); it is normally played by *pī phāt mai khaeng*. Theatrical overtures are performed before a stage drama, masked dance or puppet performance. Musical overtures have a specific form and are performed to greet the music teacher, welcome the audience and warm up the musicians. This kind of overture is always in *prop kai sām chan* tempo and closes with a coda (*wa*).

(iv) Phlēng tap.

This entertainment suite consists of many short pieces, usually performed with a vocalist. There are two types: a narrative suite (*tap ruang*) with vocalist, and a musical suite (*tap phlēng*) in which the main focus is the music itself, with or without vocalist. Each piece in a suite is in the same *thang* and tempo.

(v) Phlēng thao.

This tri-partite form was created in the mid-19th century. It begins in a slow tempo level (*sām chan*) and proceeds to a medium (*song chan*), then fast tempo (*chan dieo*), usually ending with a fast coda (ex.5). Each tempo level consists of one or more sections based on the same principal melody and ending with the same cadence. The *song chan* sections consist mostly of original tunes extracted from the old *phlēng ruang*, which are extended in the slow section, while the fast section is a condensed version. *Thao* may be performed by any kind of ensemble as entertainment music with or without vocalist (*see als* South-east Asia, §4(ii)).

(vi) Phlēng yai.

This major work consists of many sections in a special musical form called *thayoi*, in which the melodic line is played in a call-and-response style and

ends with a joint statement of the melody (*luk yōn*) before shifting to another mode for the new statement (ex.6). The entire piece may either be in the form of an overture, *thao*, or in many sections in *sām chan* tempo. The rhythmic pattern is usually of the *song mai* type, and pieces may or may not include singing.

(vii) Phlēng dieo.

This solo genre consists of one or many sections in *thao* form or simply in *sām chan* tempo and requires highly skilled performers. There are two main parts in each section: a slow, sweet section (*thang wān*) and an exciting, fast section (*thang kep*). The solo instruments (e.g. *ranāt ēk*, *so sām sāi*) are usually accompanied by *ching* and *drums*.

(viii) Phlēng la.

This farewell music usually includes singing and is performed at the end of a concert. Pieces include a special musical style called *dok*, in which the vocalist sings a farewell verse, the melody of which is repeated by a solo instrument. Pieces are usually in *thao* form.

(ix) Phlēng klet.

These are miscellaneous pieces that do not fit into any other genre; most are extracts from suites or *thao*, although some are created separately. They are performed in concert or to accompany drama. Some short *phlēng klet* are known as *phlēng hang kruang* and are usually played after the main piece in order to prolong the music for the audience's enjoyment.

Thailand, §I: Classical music

4. Vocal music.

Vocal sections in the genres mentioned above are usually accompanied by *ching* and drum and, in the *mahōrī* ensemble, three-string fiddle *so sām sāi*. The vocal quality is without vibrato and uses frequent glottal sounds, particularly a falsetto glottal ornament at the end of a held pitch, which is often a third higher than the principal pitch. An acoustically complex, highly ornamented melismatic style without vibrato (*on*) occurs especially in *sām chan* and less in *song chan* and *chan dieo*. Song texts are from well-known Thai poetry, although occasionally a new poem is composed for a special occasion. There are four vocal styles in Thai music: *rong song*, a vocal section with essentially the same pitch structure as the more complex ornamented instrumental sections that follow; *rong khlao*, a vocal section accompanied by instruments playing a different melodic line; *rong khlaw*, in which vocal and instrumental lines have the same melody; and *rong nua tem*, in which each syllable of text matches each note of the instrumental line without melisma; this style has been incorporated into popular music.

Thailand, §I: Classical music

5. Musical contexts.

Classical music is performed for ritual ceremonies, funerals, various forms of theatre and entertainment.

(i) Ritual music.

Ceremonies and festivals always require Buddhist rites, which include music. The particular details and order of events depend on the kind of ceremony, but generally speaking all usually last for three days or more, beginning on the first day with an evening prelude by the *pī phāt* ensemble followed by the evening chant of a group of five or nine monks. Music is prohibited for monks, and such unaccompanied chant is not recognized as song. In the meantime, ensembles provide entertainment music (*sēpha*) consisting of *phlēng ruang*, *phlēng tap* or *phlēng thao*; the next morning they perform the morning prelude before the food offering for the monks, also playing music during breakfast, for the arrival and departure of the monks and, accompany other rituals that may take place. Ritual music at court features the same types of ensembles and special ensembles, such as a group of conch shells and bronze drums. One important ritual for all Thai musicians is the ceremony of paying homage to the teacher (*wai khru*), during which the most important and highest level *naphat* music is played.

(ii) Funeral music.

The ensemble that performs for Buddhist funeral ceremonies is the *pī phāt nāng hong*, which plays a piece of the same name, or the *pī phāt mon*, which plays *mon*-style music. Sometimes the special *bua loi* ensemble is featured, consisting of a pair of double-headed drums played with hands and sticks, the *pī chawā* oboe and a single thick gong, *khong mēng*. The ensemble plays the piece *bua loi*. For a cremation ceremony given by the king, a set of four drums played with sticks and a *pī chawā* are added.

(iii) Theatrical music.

Music accompanies many kinds of drama (*lakhon*), including street drama (*lakhon nok*), court drama (*lakhon nai*), masked drama (*khōn*), bamboo puppet theatre (*hun krabok*) and miniature drama (*lakhon lek*). The ensemble most often used is the *pī phāt*, with hard or soft beaters depending on the story, events and mood of the drama. Three genres of music are associated with the theatre: the overture *hōm rōng* (morning, afternoon and evening types depending on the time and types of theatre), music accompanying the characters' movements (*naphat*) and miscellaneous pieces (*phlēng klet*) in *song chan* with the text sung by a solo vocalist or chorus.

(iv) Entertainment music.

Formerly *sēphā* referred to a repartee genre accompanied by music; now that the genre is obsolete, the term is used to refer to music performance for entertainment. Although the main function of a ceremonial ensemble is to accompany ritual, it also provides entertainment music. All genres are performed except *naphat*. Competitions used to occur in which several ensembles were hired and in which the skills and abilities of the musicians were displayed as the ensembles played pieces ranging from standard to the highest level. The modern idea of stage performance began in the late 19th century, with musical interludes between acts of modern stage dramas later developing into separate performances. Currently recorded music is the most popular entertainment music; live performances are more rare.

6. Composers.

Although the composers of older Thai tunes are anonymous, as Thai custom precluded revealing the composer's name (a similar situation applied to Thai literature), the composers of the Bangkok period are well known among musicians, scholars and classical music lovers. Compositions are generally not written down, and many composers create the piece in a generic version, which individual musicians then perform within their own instrumental idiom. Some composers have used notation: Luang Pradit Phairau (1881–1954) notated his music in cipher notation, where as Montri Tramote used staff notation. Most composers have their own ensemble and teach their musicians to play a particular idiom for each instrument, so that the piece is completely composed in full orchestration. Some of the best known composers of Thai music include King Prajatipok (Rama VII, 1893–1941), composer of *Hōm rōng khluen kratop fang* ('Sound of the Surf' overture), *Ratri pradap dao* ('Starlit Night') and *Khamen la-o ong* ('Refined One'); Pra Pradit Phairau, the first to compose in the *sam chan* style (the origin of *thao* form); Luang Pradit Phairau, the founder of Thai notation and the modern style of Thai music performance, whose musical style and compositions are part of common performing practice; and Montri Tramote (1908–95), a composer of the late 20th century who specialized in dance music.

Thailand

II. Regional and popular music

Each region has its own unique styles of performing arts based on traditions from the remote past. Such music and dance fits the lifestyle of an agricultural society and is only well known among regional peoples. Modernization and social changes have necessitated changes in these musics in order for them to survive; most are now preserved by the cultural centres established by the government in each province.

1. North.

Mainstream northern music is in the *Lan na* tradition. The three main types of music are entertainment, processional and ritual music.

Entertainment music is widely used for many occasions. The ensemble *wong salo* includes one or more of three main melodic instruments: *salo*, a two-string spike fiddle with separate bow and coconut-shell resonator; *sueng*, a wooden lute with brass strings; and *pī*, a side-blown, free-reed aerophone made from bamboo. Sometimes a small flute, *khlui*, is added and accompanied by a double-headed drum on a stand. The ensemble may play alone or with voice. Another ensemble used for entertainment is the *pī* ensemble (*pī čhum*), which consists of four or more different sizes of *pī* with or without singing.

Processional music is performed by several kinds of ensembles, the most prominent consisting of *klong ae* or *tueng nong* (a huge, single-headed, long-waisted drum), *ma lot pot* or *ta lot pot* (a long, double-headed drum), large- and medium-sized gongs, large cymbals and one or two sizes of

quadruple-reed oboe. This ensemble accompanies most kinds of processions, especially processions of the Buddha's image; it also accompanies the nail dance (*on lep*) and candle dance (*fon thian*). The *teng thing* ritual ensemble is usually found in Buddhist monasteries and is named after the sound of the *teng thing* barrel drum. Melodic instruments include two sizes of xylophone (*phat ek* and *phat tum*), one or two circular gong-chimes (*phat kong*), one or two double-reed oboes (*nae*) and small and large cymbals.

Solo instruments include a musical bow with two or more brass strings and a coconut-shell resonator that is attached to the player's chest when played (*phīn phia*), and a large frame drum on a beam (*klong sa bat chai*), which is carried by two men and played by another with a pair of soft beaters in an elaborate style.

Northern folk tunes are pentatonic, simple and short, usually repeated many times to extend the length. The two prominent kinds of vocal music are *joi* and *so*; *joi* is used mostly for ceremonies and *so* (Lit. 'to sing') for any occasion. Usually accompanied by a solo instrument or ensemble, these are sung in local dialect. *So* can be sung by a solo vocalist, as male and female repartee or in a play (*lakhon so*) by a group of performers, although performance has declined.

2. North-east.

North-eastern Thailand is divided into two parts. The upper part includes the main area of this region, which is Lao-influenced and which features *khaen* (bamboo mouth organ) and *mo lam* (repartee genre) performance; the lower part includes three provinces next to the Cambodian border, which are Khmer influenced and where music of the *kantrum* ensemble is prominent.

The Khaen is the most widely used instrument in the upper part of the region. It is played alone, in ensembles and to accompany singers (*see* Laos, §6.) The *pong lang* is a log xylophone made of hard wood, which is hung vertically on a stand and played with a pair of hard wooden beaters. It is usually played in ensembles that consist of *khaen*, a plucked long-necked lute made of soft wood (*phīn*), a drum (*klong hang*), cymbals (*sing*) and a pair of concussion sticks (*kap kaep*).

Mo lam is a vocal repartee style sung in local dialect by male and female singers and accompanied by the *khaen*. Two basic types of singing (*lam*) are practised, *lam thang san* (fast) and *lam thang yao* (slow). *Lam* includes courtship, didactic and narrative songs. *Mo lam* is performed on many different occasions, and during the last decade of the 20th century a modern style of *mo lam* (*mo lam sing*) was developed, incorporating drum kit and electric guitar.

The most prominent music of the lower north-east region is *kantrum*, named after the pair of double-headed drums played in the ensemble. Other instruments include one or more Khmer-style fiddles (*trua*), double-reed bamboo oboe (*paey aw*), small cymbals and one or two pairs of sticks (*krap*) played by a performer who sometimes also dances. The *kantrum* of Koktachai district in Buriram province includes a local crocodile-shaped

zither (*ta kay*), a long-necked lute made of soft wood with brass strings (*jap pei*) and a quadruple-reed oboe (*pī*). A funeral ensemble found in this area is called *tum mong* and consists of a set of seven gongs, large barrel drum and a large single gong with or without a wind instrument. The vocal music *jariang* is normally accompanied by *jab pei* or an ensemble.

3. Central.

Many kinds of vocal repartee are found all over this region. These folksongs are usually sung during seasonal ceremonies and include harvest songs (*phlēng kiao khao*) and boat songs (*phlēng rua*). A group of performers is divided into male and female sections, within which members take turns as lead singer. The leader sings a pre-composed text as well as adding impromptu text suited to the situation, while the rest sing a refrain, sometimes with percussion accompaniment. Because of changes in farming practices, songs that pertain to the agricultural cycle have mostly disappeared, although some are being actively preserved by the government. Two of this genre, *phlēng choi* and *lam tat*, are used in stage performances. The *lam tat* is accompanied by two or more large frame drums (*rammanā*) played by hand. Subjects of the texts include religion, stories, social events, sex and comedy.

Important theatrical arts include *likē*, a type of folk opera in which the performers sing and dance, accompanied by small *pī phāt*, and the folk drama *lakhon chātrī*, which is accompanied by *pī phāt chātrī*.

4. South.

The main artist forms of southern Thailand are theatrical. *Nōrā* is a stage drama with three main characters with colourful costumes, headdresses and long fingernails. Characters perform many standard gestures and usually portray the story of Prasuthon Manohra. *Nang talung* is a type of small shadow-puppet theatre. The puppets are cut from cowhide, colourfully painted and manipulated behind a white screen by a puppeteer who also sings and narrates the story. The ensemble for both *nōrā* and *nang talung* consists of a small quadruple-reed *pī* oboe (fiddle is also included in *nang talung*), a pair of single-headed drums (*tab*), one or two *klong nāng* (small barrel drums; *thōn* are substituted in puppet theatre), a pair of small gongs (*mōng khū*) and small cymbals (*ching*). A funeral music called *gaelaw* consists of one oboe (*pī haw*), a pair of small barrel drums (*thōn*) and a single gong. Other folksong genres are *phlēng bawk*, *phlēng cha nawng* and *pleng rong rua*.

5. Popular music.

Western-style jazz-influenced popular music was introduced in the first half of the 20th century by the students of Phra Jan Duriyang (Peter Fiet), who laid the foundations for Western music in Thailand. The earliest indigenous popular song developed after World War II from the melodic singing style (*rong nua tem*) of classical music. The singer was accompanied by a Thai string ensemble, to which were added Western instruments such as organ and violin. Songs were performed as preludes and interludes in modern theatrical presentations. The two main styles of popular song were the polished urban *lūk krung* and the rural *lūk thung*, which contained more

elements of folk music. Pop songs now derive from many sources, including classical and regional Thai music and popular music of the United States and Hong Kong.

Thakur, Omkarnath

(*b* Jahaj, near Baroda, 1887; *d* Bombay, 1968). North Indian (Hindustani) vocalist, educator and musicologist. He was born to an impoverished military family. In about 1909 a wealthy Parsi patron sent him for musical training in the Gwalior style of singing to Vishnu Digambar Paluskar's Gandharva Mahāvidyālaya in Bombay. In 1916 Paluskar assigned Thakur the position of principal of the school's Lahore branch; there he became acquainted with the Patiala *Gharānā* style. In 1919 he started his own musical institution, the Gandharva Niketan, in Broach. In the 1920s he was involved with Mahatma Gandhi's non-cooperation movement and served as president of the Broach District Congress Committee.

Swept up in the 1930s 'India for Indians' movement, Thakur undertook research into the 'glorious' ancient tradition of Indian music, decrying foreign influence and the contributions of generations of Indian Muslim

musicians on whom he and other Hindu musicians placed the blame for a 'corrupted present' in contrast to a 'pure past'.

Thakur was among the first Indian musicians to perform widely in Europe, and between 1933 and 1954 he gave concerts in many cities. His *Khayāl* style differed in important ways from the Gwalior *gharānā*. Emphasizing emotive content, he exploited dynamics and vocal timbres and cultivated *tān* more than *bol-tān*. Rhythmic *tihāī* cadences were the extent of his *bol-bat* and he occasionally improvised to *sargam*.

His legacy is substantial. He founded the college of music at Banaras Hindu University to incorporate both musicology and performance. In 1963 he was given the President's award for Hindustani Vocal Music from the Sangeet Natak Akademi and an Honorary Doctorate of Literature from Banaras Hindu University. In 1964 he received an honorary doctorate from Rabindra Bharati University in Bengal and the first Padma Shri title from India's President.

Thalben-Ball, Sir George (Thomas)

(*b* Sydney, 18 June 1896; *d* London, 18 Jan 1987). British organist and church musician of Australian birth. A chorister and piano pupil of G.D. Cunningham, organ student at the RCM under F.A. Sewell and Walter Parratt and protégé of Walford Davies, he was at first known as a pianist.

He took the solo part in Rachmaninoff's Third Piano Concerto under Stanford when he was 19. Thalben-Ball was appointed director of music at the Temple Church, London, in 1919, a post he held until 1981; he came to national attention in the 1920s through a series of recordings with the Temple Church choir, including one of Mendelssohn's *Hear my prayer* with Ernest Lough as treble soloist. Over the next half-century he was at the forefront of international recitalists. He was frequently heard on the radio as an organist and as director of the BBC Singers, and was musical adviser to the BBC's religious broadcasting department (1941–69). He made many solo appearances at the Proms, and was curator of the Royal Albert Hall organ from 1934 until his death, as well as being both city and university organist in Birmingham (from 1949). For many years he taught at the RCM. Honours included a fellowship of the Royal College of Organists (1915), followed by the presidency (1948–50) and a knighthood (1982).

Thalben-Ball's organ repertory was large and varied, and included many new works dedicated to him. His playing was colourful and full of energy, and his programme planning for recitals tended to be dramatic. Although not always stylistically fashionable, his performances were notable for their rhythmic vigour, intense musicality and direct appeal to audiences.

JONATHAN RENNERT

Thalberg, Sigismond (Fortuné François)

(*b* Pâquis, nr Geneva, 8 Jan 1812; *d* Posillipo, nr Naples, 27 April 1871). German or Austrian pianist and composer. He was said to be the illegitimate son of Count Moritz Dietrichstein and the Baroness von Wetzlar, but his birth certificate states that his parents were Joseph Thalberg and Fortunée Stein, both of Frankfurt. Although the certificate describes them as 'mariés', the wording rather suggests that each was married to someone else. It seems possible that Dietrichstein induced Joseph Thalberg to assume paternity and that the mother was a baroness in disguise; but the circumstances remain mysterious.

At the age of ten Thalberg was sent to Vienna to prepare for a career in the diplomatic service, but he studied music at the same time, receiving a rudimentary training from Mittag, the first bassoonist at the Court Opera, and then studying theory with Simon Sechter and the piano with Hummel. From the age of 14 he appeared with great success as a salon pianist, and two years later his first works were published. His international career began in 1830 when he toured in England and Germany and later in other European countries. He continued his studies with J.P. Pixis and Kalkbrenner in Paris and Moscheles in London. In 1836 he won considerable success and renown in Paris, and this was further increased the following year when Liszt, returning from Switzerland to challenge Thalberg's position as the leading virtuoso in Paris, wrote an article in the

Revue et gazette musicale harshly criticizing his compositions. This article was the start of an animated controversy between Liszt and Fétis, who considered Thalberg the greatest living pianist and defended his compositions in the *Revue et gazette musicale*; Berlioz joined the controversy on the side of Liszt, who pressed his claim in some very forthright articles and gave numerous concerts. The rivalry came to an end with a concert the two pianists gave jointly for the Princess de Belgiojoso; this symbolic reconciliation was sealed by their agreeing to cooperate with other famous virtuosos in composing one variation each for *Hexaméron*, as a tribute to the princess (the other composers were Pixis, Herz, Czerny and Chopin). From that time Thalberg enjoyed enormous popularity throughout Europe. In 1855 he travelled as far as Brazil and Havana, and he then lived for several years in the USA, where he gave successful concerts, taught and organized opera productions. He married the daughter of the opera singer Luigi Lablache in 1844, and in 1858 he bought a villa in Posillipo, near Naples. He continued to tour during the next five years, though with less frequency, and then retired to Posillipo, where he spent his last years as a vintner.

Together with Liszt, Thalberg must be ranked as the greatest virtuoso pianist of the mid-19th century, a view endorsed by Mendelssohn in a letter of 30 March 1840. In keeping with the virtuoso tradition he played almost exclusively music of his own composition, which consisted mainly of fantasias on favourite opera arias by Rossini, Meyerbeer, Donizetti, Verdi and sometimes Weber and Mozart. His Fantasia op.33, on themes from Rossini's *Moïse*, brought him wide recognition, and the dazzling technique it demanded aroused admiration. Later it was realized that Thalberg's basic compositional method was relatively simple, consisting of placing the melody in the centre of the keyboard first in one hand, then in the other (the thumbs and the sustaining pedal used in particular to prolong the sound), and ornamenting it with florid counterpoint and chords above and below. Nevertheless, an image of Thalberg as a stupendous virtuoso composer had been created, and the cartoonist Dantan portrayed him as having ten hands.

Fétis admired Thalberg for his ability to combine the merits of 'brilliant' technique, derived from Clementi, and of the singing style of Hummel and Mozart; in Thalberg's art, regard for phrasing and expression did not conflict with sparkling passage-work, but the two techniques were superimposed on each other; he combined dash and power with unfailing care for bel canto. In this context one of his most significant works is *L'art du chant appliqué au piano*, in which arrangements of opera arias are used as teaching pieces for the piano.

With regard to Thalberg's merits as a composer Schumann, who was not at all favourably disposed towards virtuosos, made an exception in this case; in his reviews for the *Neue Zeitschrift für Musik* he gave high praise to the Fantasia and Variations op.12 on themes from *Norma*, the E minor Caprice op.15, the Nocturnes op.16, the Variations op.17 and the Scherzo op.31. Nevertheless, Thalberg's compositions are of questionable value, and neither the Concerto op.5 nor the Sonata op.56 is worthy of attention. A few minor pieces, such as the nocturnes, the *Romances sans paroles*, the studies and the Ballade op.76 are more appealing. The most interesting

works are the long fantasias: though they give the impression of a potpourri method more often than of genuine invention on well-known themes, they are skilfully and effectively written. Using popular operas as their basis, they helped to bring to the art of piano playing the same kind of emotional feeling which the great singers aroused. Neither of Thalberg's own operas, however, enjoyed any success.

WORKS

piano works based on opera themes

many with orch accompaniment ad lib

Fantasias and variations: on Euryanthe, op.1; on Robert le diable, op.6; on La straniera, op.9; on I Montecchi ed i Capuleti, op.10; on Norma, op.12; on Don Giovanni, op.14; 2 on Les Huguenots, opp.20 and 43; on Moïse, op.33; on Benedict's The Gipsy, op.34; on Oberon, op.37; on La donna del lago, op.40bis; on the Serenade and Minuet from Don Giovanni, op.42; on the Andante finale from Lucia di Lammermoor; on Beatrice di Tenda, op.49; on Lucrezia Borgia, op.50; on Semiramide, op.51; on Auber's La muette de Portici, op.52; on Hérold's Zampa, op.53; on the Triumphal March from Berlioz's L'apothéose, op.58; on Il barbiere di Siviglia, op.63; on Don Pasquale, op.67; on La fille du régiment, op.68; on Il trovatore, op.77; on La traviata, op.78; 1 variation in Hexaméron, variations on a theme from I puritani (1837), collab. Liszt and others

Other works: Impromptu, on Le siège de Corinthe, op.3; Mélange on Guillaume Tell, op.5bis; Les soirées musicales, divertimento on favourite themes by Rossini, op.18; Caprice, on La sonnambula, op.46; Caprice, on Halévy's Charles VI, op.48; Decaméron, 10 pieces [based on opera themes], op.57; Souvenir de Un ballo in maschera, op.81; Souvenir de Rigoletto, op.82

other piano works

2 caprices, e, op.15, E♭, op.19; 8 nocturnes, F♯, B, op.16, A♭, D♭, a, op.21, E, op.28, 'Le trémolo' op.35, B, op.51bis; over 15 waltzes, 12 as op.4, others as op.47, op.62, 'Les capricieuses' op.64; 16 studies, 12 as op.26, 1 in op.38, 1 in op.40, 1 in op.45, 'Le départ' op.55; 5 romances, 1 in op.38, 3 'sans paroles', E, F♯, g, op.41, 'dramatique' op.79bis

7 variation sets: on a Scottish theme, op.2, 2 on Russian themes, op.17, on a funeral march, op.59, on 'Home, Sweet Home', op.72, on 'The Last Rose of Summer', op.73, on 'Lilly Dale', op.74

5 fantasias: op.22, on 'God Save the Queen', op.27, 'Souvenir de Beethoven' op.39, on Styrian melodies, op.61, on 3 melodies by Schubert, op.79

Miscellaneous: Divertimento, f, op.7; Deux âmes, melody, op.26bis; Scherzo, C♯, op.31; Andante, D♭, op.32; 10 Pieces, op.36; Sonata, c, op.56; Tarantelle, op.65; Les soirées de Pausilippe: hommage à Rossini, 24 pensées musicales, op.75, Ballade, g, op.76; La napolitaine, dance, op.80

other works

Ops: Florinda (E. Scribe, trans. Giannone), London, 1851; Cristina di Svezia, Vienna, 1855

Vocal: lieder, 1v, pf, opp.8, 11, 13, 23–5, 29–30

Orch: Pf Conc., f, op.5

Chbr: Duo concertant, on themes from Semiramide, vn, pf, op.54, collab. Bériot; Pf Trio, op.69

Pedagogical: L'art du chant appliqué au piano, op.70

ROBERT WANGERMÉE

Thalberg, Zaré [Western, Ethel]

(*b* Derbys., 16 April 1858; *d* London, 1915). English soprano. Contrary to popular belief, she was not the daughter of the pianist Sigismond Thalberg, but a pupil who adopted his name professionally. After studying in Paris and Milan, she made her début at Covent Garden on 10 April 1875 as Zerlina in *Don Giovanni*. During the five seasons that she appeared in London, she also sang Cherubino in *Le nozze di Figaro*, Zerline in *Fra Diavolo*, Adina in *L'elisir d'amore*, Lady Harriet in *Martha*, Frau Fluth in *Die lustigen Weiber von Windsor* and Elvira in *Ernani*. After a promising start to her career, at the age of 22 she lost her singing voice and became an actress under her real name of Ethel Western, touring the USA with Edwin Booth's Shakespearean company.

ELIZABETH FORBES

Thalesio [Talesio], Pedro

(*b* c1563; *d* Coimbra, c1629). Portuguese (or possibly Spanish) theorist and composer. On the recommendation of Cardinal Albert, viceroy of Portugal, he was appointed *mestre de capela* of the hospital of Todos-os-Santos at Lisbon on 30 June 1593, at an annual salary of 16,000 réis with other benefits for being married. While at Lisbon he claimed to have been

the first to introduce polychoral singing. In 1603 he helped to found the Confraria de S Cecélia, a protective association for musicians. He became *mestre de capela* of Guarda Cathedral in 1610, and in 1612 professor of music at Coimbra University, at a salary of 60,000 réis, raised in 1616 to 70,000. In a receipt for royal bounty of 10 January 1616 he signed himself a resident of Madrid but he returned to Coimbra in September of that year. In 1618 Thalesio published *Arte de canto chão* (Coimbra, revised 2/1628), a text on plainchant; he received financial aid for its publication from his protector, Bishop Furtado de Mendonça. Although heavily indebted to Cerone, the manual is a work of individual merit which goes far beyond its announced subject and is particularly valuable for its allusions to the use of plainchant in Renaissance polyphony. A manuscript treatise on counterpoint, fugue and composition, and a Lenten eight-voice motet *Iam de somno* were in the library of King João IV of Portugal. Of the three vesper psalms with alternate verses that survive (in *P-VV* choirbook 11), *In exitu Israel de Aegypta*, for four and five voices, is a plangent fourth tone outcry.

ROBERT STEVENSON

Thalia.

The Muse of comedy, light poetry and the idyll. *See* Muses.

Thaller, Johann Babtist

(*b* Röhrmoos, 10 Dec 1872; *d* Endorf, Bavaria, 2 Feb 1952). German composer and church musician. He studied in Freising at the Royal Gymnasium, the Klerikalseminar and the Royal Lyceum, and was ordained in 1897. A particularly gifted organist, he held appointments as a priest and church musician in Munich and elsewhere before settling in Endorf in 1934. His compositional style, which during his formative years was of a Romantic cast, became gradually closer to that of Reger, and he used varied vocal and instrumental forces while allowing for the capacities of the small congregations he served.

WORKS

(selective list)

Masses: C, F, op.1, 2vv, org, 1896; A♭, op.2, 2vv, org, 1897; Missa pro defunctis, E♭, chorus, org/4 brass, 1902; Deutsche Messe, op.40, unison vv, org, 1929; d, op.50, 2vv, org; Requiem, d, chorus, orch, org

Other choral works: 2 cants., 3 hymns, 32 offertories, many other sacred pieces

Tharbart, Pierre.

See Tabart, Pierre.

Tharpe, Sister Rosetta

(*b* Cotton Plant, AR, 20 March 1915; *d* Philadelphia, 9 Oct 1973). American gospel singer and guitarist. She was brought up in Chicago, where she was influenced by her mother's singing of spirituals and was attracted to blues guitar techniques and to the ecstatic religion of the Sanctified Church. She gained a reputation as a singer-evangelist in Chicago and then moved to Harlem, where she became known for her compositions and her electrifying performances at the Church of God in Christ, Sanctified. In 1938 she appeared in the 'From Spirituals to Swing' concerts at Carnegie Hall and sang with Cab Calloway. Later she sang with the swing orchestras of Benny Goodman and Count Basie and made recordings with Lucky Millinder. Her first recording was a lively and rhythmical version of Thomas A. Dorsey's *Hide me in thy bosom* coupled with the secularized title *Rock me* (1938, Decca 18386), which she performed both in theatres and churches, altering the lyrics to suit the location. She had a hit with *Strange Things Happening Every Day* (1944), recorded with the Sammy Price Trio, and she recorded several outstanding vocal duets with her mother, Katie Bell Nubin (1880–1969), and with Sister Marie Knight. Later she used choirs and accompanists, including the Richmond Harmonizing Four and the Sally Jenkins Singers of the Church of God in Christ, New York (e.g. *I have good news to bring*, 1960, Mer. 14057). Tharpe's guitar technique was closest to that of the blues singer Big Bill Broonzy; accompanying groups tended to cloud the bright sound of her voice and the brilliance of her guitar playing, which she offset later by using an electric guitar. In the 1960s she made two European tours.

PAUL OLIVER/R

Thawon, Prasit

(*b* Ayuthaya, Thailand, 1921). Thai classical musician, renowned for his skill as a *ranāt ēk* (xylophone) player. He entered the newly-formed School of Dramatic Arts in 1934 at the age of 13 and quickly became accomplished on the *ranāt ēk*, studying with Luang Pradit Phairau and Montri Tramote. He worked in the Department of Fine Arts in the Music Division as a full-time performer (and eventually as a teacher in the School of Dramatic Arts) from 1950–73. The *ranāt ēk* was also Luang Pradit Phairau's main instrument, and Thawon has been the major transmitter of his teacher's style. He absorbed Phairau's method of using the mallets in different ways to create different effects and also inherited his famous solo arrangements for the instrument.

Thawon's major innovation was Wong Mahaduriyang ('the Great Musical Ensemble', first assembled in 1972), a *mahōrī* (string, wind and percussion) ensemble consisting of anywhere from one to 400 musicians; whereas traditional ensembles usually have no more than 15 musicians with no instruments doubled, the Great Ensemble had multiples of each instrument. He retired from the Department of Fine Arts in 1982 at the age of 61 and was immediately made a special teacher at Chulalongkorn University, where he helped establish the music curriculum. He also opened a music shop, selling classical Thai instruments of superb quality, and has been actively involved in various music contests for children. He was named a National Artist in 1988 in recognition of his skill as a performer and his commitment to pedagogy.

DEBORAH WONG

Thayer, Alexander Wheelock

(*b* South Natick, MA, 22 Oct 1817; *d* Trieste, 15 July 1897). American musicologist. He was awarded the BA, MA and LLB degrees at Harvard in 1843, 1846 and 1848. In 1845–7, while an assistant in the Harvard College library, he gathered materials for a history of American psalmody from 1620 to 1800; published in *World of Music* (1846–7), it includes numerous bio-bibliographical data now nowhere else accessible. During the years 1848–52, he also contributed to the *Philharmonic Journal*, *Boston Musical Gazette* and *Musical Times*. In May 1849 he went abroad to study German and to prepare a corrected translation of Anton Schindler's *Biographie von Ludwig van Beethoven* (1840, 2/1845); immediately upon reaching Germany, however, Thayer expanded his project and began to prepare a full-scale Beethoven biography of his own. His first European sojourn lasted 30 months; a second trip, also devoted to Beethoven research, took

place from late 1854 to early 1856. Beginning in 1852 with 'Beethoven and his Third Symphony (Extract from an Unpublished Work)' he wrote numerous articles for the newly established *Dwight's Journal*, becoming its most prolific contributor during the next decade. He was also on the staff of the *New York Tribune* for two years and in 1856 and 1857 he catalogued Lowell Mason's private library, then the richest in German works in the USA. Thereafter, except for brief spells in 1871 and 1880, he remained in Europe until his death, acting as American consul at Trieste (1866–82). During these years, Thayer continued his study of Beethoven; the biography, covering Beethoven's life up to 1816, was first published in three volumes in 1866, 1872 and 1879, translated into German and edited by Hermann Dieters. It was later completed by Hugo Riemann (1907–8); Henry Krehbiel, who published the first English edition, considered the work to be 'the greatest and in its history the most extraordinary of all books dealing with the lives of musical composers' (*MQ*, iii, 1917, p.640).

Thayer's less well-known contributions to European musical scholarship include six pioneering biographical articles on the Bachs, Handel, Haydn, Gluck, Mozart and Beethoven in Appleton's *New American Cyclopaedia* (1858–61), three on Dussek, Gyrowetz and Salieri that were serialized in *Dwight's Journal* (1861, 1863, 1864), and some 20 Beethoven-related articles in *Grove 1*. Two series entitled 'From my Diary', published in *Dwight's Journal* in 1852–4 and 1858, touch on topics as varied as the psalmody of praying Indians at Natick, the singing of Mohawk children, the earliest six-syllable psalm tunebooks, William Billings, Benjamin Franklin's musical instruments, the excellence of singing in Methodist camp meetings, Jenny Lind, George F. Root's *The Flower Queen*, Bristow's *Rip Van Winkle* and Woodbury's *Oratorio of Absalom*. Thayer also published a volume of short stories (1862) which includes the novelette *Signor Masoni*.

ROBERT STEVENSON

Thayer, (Whitney) Eugene

(*b* Mendon, MA, 11 Dec 1838; *d* Burlington, VT, 27 June 1889). American organist and composer. After early study in Worcester, Massachusetts, he became a pupil of John Knowles Paine in 1862. He participated in the inauguration concerts for the Boston Music Hall organ (1863) and the Worcester Mechanics Hall organ (1864). He studied with Carl August Haupt and Wilhelm Friedrich Wieprecht in Berlin during 1865, then settled in Boston as a performer and teacher in 1866. In April 1869 he instituted free-admission recitals at the Hollis Street Church, apparently the first such in America. From 1874 to 1877 he edited the *Organist's Quarterly Journal and Review*. He also conducted the Boston Choral Union and New England Church Music Association. In September 1881 Thayer moved to New York as organist of Fifth Avenue Presbyterian Church. Declining health forced him to retire in May 1885, the same year he earned a doctorate from the College of Wooster (Ohio) by passing an examination and submitting a cantata. In May 1889 he moved to Yantic, Connecticut. A month later, in Burlington, Vermont, for William H. Sherwood's summer music school, he committed suicide.

Apart from a few choral works, Thayer composed almost exclusively for the organ. His works for that instrument include five sonatas, six sets of variations (two of them taken from the sonatas) and miscellaneous individual pieces. He also published two organ methods and a volume of technical studies.

JOHN OGASAPIAN

Thayssner [Deissner, Theussner, Theissner, Tayssner, Theyssner], Zacharias

(*fl* 1668–1705; *d* Saalfeld, 1705). German organ builder. He was probably the son of Andreas Thayssner the elder (*fl* 1674–1703), organ comptroller of Halle, and possibly the brother of Andreas Thayssner the younger.

Zacharias was the most prominent member of the family. Fine organ fronts by Zacharias are preserved in St Wenzel, Naumburg (1695–1705; repairs and rebuilding) and Merseburg Cathedral, although the attribution to him of the latter is doubtful. He had his workshop first in Quedlinburg, where he built the organ for St Servatius (1680) and made repairs to the organ at St Blasius (1668), and later in Merseburg. His contemporaries J. Adlung (*Musica mechanica organoedi*, 1768) and J.G. Walther (1732) give conflicting accounts of his work: the latter lays particular emphasis on his 'great and valuable work' in Merseburg Cathedral (?1693–1705), and Friedrich Wilhelm Zachow described the organ in the Vitikirche on the Altenburg at Merseburg (built in 1696) as a triumph without any major fault. Dietrich Buxtehude also spoke in glowing terms of Thayssner's craft in a letter of 1695. On the other hand, the wind supply to the organs in the Kollegiatskirche, Jena (1704; repairs) and Naumburg was criticized, and various reports on organs express some criticisms of his instruments in the Nikolaikirche, Leipzig (1693–4; rebuilding) and Jena. In his report of 1698 on the organ of Merseburg Cathedral, the organ builder Dietrich Christoph Gloger also mentioned numerous failings, and he carried out extensive improvements to this instrument.

The only two extant specifications for Zacharias Thayssner's organs, for the instruments in Merseburg Cathedral and Naumburg, reflect both north German influence (the *Werk* principle, incorporating a high proportion of reed stops) and central German influence (utilizing characteristic individual stops, such as Viola da gamba and Flaute douce). His pupils are thought to have included Jakob Theodor Berns (Karlstadt) and Johann Konrad Funtsch (Amberg). He was employed to supply reports on organs on several occasions: these included the Herbst organ in the Jacobikirche, Magdeburg (1694) and the Schnitger organ in the Johanniskirche, Magdeburg (1695).

FELIX FRIEDRICH

Theatre organ (i).

The organ used in theatrical entertainments, operas, oratorios and concerts, chiefly in Italy and England, during the 17th, 18th and early 19th centuries. Such organs were located in theatres, concert rooms and pleasure gardens rather than in churches, although their makeup differed little from that of small church organs during this period. (*See* Organ, §V; *see also* Continuo, §4.)

BARBARA OWEN

Theatre organ (ii).

The term used in America for the specialized organ designed to accompany and provide sound-effects for silent films during the 1920s and 30s (*see* Cinema organ).

Théâtre Royal de la Monnaie.

Opera theatre in Brussels opened in 1700, also called the Koninklijke Muntschouwburg; in 1963 it became the Théâtre Royal de La Monnaie.

Théâtres de la Foire

(Fr.: 'fair theatres').

The name by which the troupes performing at the two Paris fairs, the Foire St Germain and the Foire St Laurent, in the 17th and 18th centuries, were commonly known. The fairs were important in the history of the musical stage in the late 17th century as the sites for the *comédie en vaudevilles*, out of which grew the musically more elaborate *opéra comique*. The Foire St Germain was located about where the Hôtel des Examens and the Marché St Germain are now; by the end of the 17th century it always opened on 3 February and ended on Palm Sunday. The Gare de l'Est now occupies the approximate site of the Foire St Laurent, whose season was somewhat variable, generally lasting from July to the end of September.

The fairs had been the scene of popular farces, acrobatic displays and animal shows since the Middle Ages and, after 1642, of marionette plays. Before the 1670s, when they were limited by the restrictive patents granted to Lully, these spectacles made extensive use of accompanying musical instruments, as appears from Scarron's poem *La Foire St Germain* (1643):

> Le bruit des pénétrants sifflets,
> Des flûtes et des flageolets,
> Des cornets, hautbois et musettes …

In 1678 the Foire St Germain came under the direction of the acrobats Claude and Pierre Alard and Maurice van der Beeck. Their first theatrical production, *Les forces de l'amour et de la magie*, pleased the king, and they were granted a patent to present 'jumping acts accompanied by some discourse … with the condition that there be no singing or dancing' (4 February 1679).

In 1697, when the Comédie-Italienne was suppressed and its actors expelled from France, the Théâtres de la Foire quickly appropriated its large repertory (published in 1694 by Evaristo Gherardi as *Théâtre italien*), thereby filling the gap left by Arlequin and Scaramouche. The musical content of these comedies consisted of original compositions (overtures, dances, dramatic *symphonies*), vaudevilles and extended parodies of the most popular Lully operas. In 1699 (20 and 27 February) the Théâtres de la Foire felt the full force of their main antagonist, the Comédie-Française. The *forains* were forbidden to perform entire comedies or farces, but they circumvented this by performing fragments; when all dialogues were forbidden in 1707, the *forains* converted to monologues. In 1708 Guyenet, director of the Opéra, gave them permission to use songs, dances and scenery changes, but in 1710 this privilege was revoked, and the *forains* were reduced to using large placards ('écritaux') displaying each performer's text, at first in prose and later in *couplets* (stanzas in French poetry). With the Opéra's permission these *couplets* were set to popular vaudeville tunes. The orchestra, which by 1714 consisted of nine or ten instruments, played the tunes, the audience sang the words and the actors performed in mime. A.-R. LeSage created the vaudeville almost singlehandedly in his *Arlequin roi de Sérendib* (1713) (Heartz, 1985). In 1716, in return for an annual payment of 35,000 livres, the Opéra permitted the Théâtres de la Foire to give 'spectacles mixed with music, dance and *symphonies* under the name of Opéra-Comique'. This term had first appeared on publicity notices in 1715, and the first work to bear the title was LeSage's *Télémaque*, a parody of Destouches' opera. On the opening day of the Opéra-Comique at the Foire St Laurent (25 July 1715) 'the Comédie and the Opéra were deserted', according to the *Mercure de France*. The Comédie-Française retaliated; from November 1718 to 1724 only marionette shows and tight-rope dancers were allowed at the Théâtres de la Foire. In 1716 a troupe of Italian players under the direction of Luigi Riccobini was summoned by the Regent to Paris. They were known as the Nouveau Théâtre Italien and took up residence in the Hôtel de Bourgogne in the Marais. The Nouveau Théâtre Italien took advantage of the new round of restrictions mentioned above and filled the gap at La Foire St Laurent with regular performances from 1721 to 1723.

The most productive years of the early Opéra-Comique began after its return to the Foire St Germain in 1724. Its repertory from 1724 to 1737 appears in the ten volumes of LeSage and D'Orneval's *Le Théâtre de la Foire ou l'opéra comique*. These plays continued to depend heavily on vaudevilles, although descriptive *symphonies*, dances, overtures and vaudeville finales were common. In addition to supplying original music, the

most important task of the first generation of *opéra comique* composers (including Mouret, Gillier, Aubert, Dornel, Corrette and, early in his career, Rameau) was to arrange the vaudevilles and to provide them with orchestral accompaniments. The playwrights (chiefly LeSage, D'Orneval, Fuzelier, Piron and, later, Favart) selected the vaudeville tunes from the large number available and often used the same tune repeatedly for a specific situation until it became associated with that situation from play to play. Parfaict, in his *Dictionnaire*, noted that the 'vaudevilles translate with minute exactitude successive degrees of the same sentiment and the most rapid, minute shifts within one action. Thus … the pursuit of a kiss could scarcely be posed'.

The Opéra-Comique flourished until 1744, the second year of Jean Monnet's directorship, when it was again suppressed by the Comédie-Française. In 1752 it reopened, remaining under Monnet until 1758, when the privilege passed to a group including Favart and Delresse. In 1762 the Opéra-Comique merged with the Comédie-Italienne, transferring its operations to the Hôtel de Bourgogne.

JAMES R. ANTHONY

Theatron

(Gk.: 'seeing place', from *theasthai*, 'to see'; Lat. *theatrum*).

A term originally used to designate the area from which an audience viewed a spectacle. It came to have, even in antiquity, a broader meaning, signifying the whole of an ancient Greek or Roman structure whose function was to provide a place for the performance and viewing of musical and dramatic forms. Remains of many ancient theatres survive, and some even accommodate modern performances, such as the theatre dating from the 4th century bce at Epidaurus and the restored theatre of Herodes Atticus (2nd century ce) in Athens.

These structures varied widely in size: the largest theatre on the Greek mainland, at Megalopolis, seated 21,000; those at Epidaurus and Dodona held about 14,000, and the small one at Priene about 3000. Although there is evidence that some early Greek theatres were rectangular, the horseshoe or semicircular shape became typical in Greek and Roman antiquity.

1. The classical period.

As the cultural centre of drama during this period (5th and 4th centuries bce), Athens exercised considerable influence on theatre construction in other Greek cities. The origins of the Athenian theatrical tradition date to the 6th century bce. During the reign of Pisistratus (560–527)

performances for the festival of Dionysus took place in a circular orchestra in the Agora, while the audience watched from wooden bleachers. It may have been the collapse of these bleachers in the early 5th century bce that provided the impetus for the building of the permanent theatre of Dionysus on the Acropolis. The history of this structure is difficult to trace archaeologically, since many of the early features were erased or significantly modified by later innovations and repairs. Below the Acropolis on its southern side was a precinct of Dionysus, which included a temple to the god. On a terrace above this temple the Athenians built a circular orchestra about 20 metres in diameter, with an altar at the centre. During dramatic performances a tent (*skēnē*) was erected behind the orchestra for costume changes. In productions of Aeschylus's plays and the early works of Sophocles, additional scenery probably consisted of lightly built, temporary structures. Both actors and chorus entered the performance area by paths (*parodoi*) that led from the lower terrace to each side of the orchestra.

The slope above and to the north of the orchestra provided a natural foundation for tiered seating. Originally spectators probably sat or stood on the ground. Literary and archaeological evidence suggests that in the early phase of the theatre's development straight wooden benches were installed in polygonal tiers around the orchestra. Access was facilitated by aisles radiating up from the orchestra and dividing the seating area into wedge-shaped sections About halfway up a *diazōma*, or pathway, further separated the seating area into two galleries; a third was later added, giving the auditorium a seating capacity of about 17,500. Because of the shape of the hillside, as well as the proximity of the odeum of Pericles and the sanctuary of Asclepius, only the lower gallery formed a neat horseshoe slightly exceeding a semicircle.

Changes were made to the theatre of Dionysus in the later 5th century, probably during the Peace of Nicias (421–415 bce), a period of relative calm in the Peloponnesian War. A stone stoa was built, creating a foyer of a type frequently attached to later theatres throughout the Graeco-Roman world; steps and a doorway led from its interior on to the orchestra. The stoa's portico faced south towards the precinct of Dionysus, with its back wall situated behind the orchestra opposite the audience. Sockets cut into the outside of the wall provided support for a temporary and probably adjustable wooden building (also called a *skēnē*) at the rear of the orchestra; it retained its original role of a changing room for the actors and chorus, and perhaps also served as a storage area for scenery. Whether the *skēnē* supported a raised stage at this time is doubtful, although still a matter of controversy. Side structures called *paraskēnia* probably projected from either end of the *skēnē* towards the seating area. The *parodoi*, now defined by the space between the *paraskēnia* and the sides of the seating area, formed entryways for the spectators as well as performers. Actors could also enter through doors in the *skēnē*.

As scenery became more sophisticated, the *skēnē* provided a wooden framework for painting and decoration. In addition there is evidence of mechanical scenic devices such as the *periaktoi*, three-sided structures that could be rotated in order to create a quick change of scene, and the *enkuklēma*, a movable platform on which scenery could be rolled onto the

performance area. Both Aristophanes and Euripides wrote plays calling for the use of a 'flying machine' or crane to hoist actors over the stage.

Some of the wooden benches for spectators, especially those closest to the orchestra that were reserved for priests and officials, may have been replaced with stone seats in the 5th century. The entire seating area was finished in stone during the time of the orator Lycurgus (338–326 bce). In the course of these renovations the orchestra was moved slightly northwards cutting into the slope and making the seating area somewhat steeper. It was probably at this time that the *skēnē* and its attached *paraskēnia* were rebuilt in stone, although some scholars believe that this structure dates from the late 5th century.

Literary and epigraphic evidence confirms that the stone theatre at Epidaurus also dated from the second half of the 4th century. Like the theatre of Dionysus, it had an altar at the centre of the orchestra and doorways leading from the auditorium to the corners of the *skēnē* above the *parodoi*. Other Greek theatres that are similar in plan to the classical theatres at Athens and Epidaurus have been dated to the 5th or 4th century.

2. The Hellenistic period.

The architectural evolution of the theatre during the Hellenistic period (late 4th to 1st century bce) was largely motivated by changes in dramatic forms, in particular the New Comedy of the 3rd century bce, which emphasized dialogue among a small cast of characters instead of a large chorus. One of the most distinctive features of the Hellenistic theatre was the *proskēnion*, a single-storey building, either closed in or colonnaded, that stood in front of a two-storey *skēnē*. The *proskēnion* was used as a stage for performance from the mid-2nd century; the Roman architect Vitruvius stated that actors performed on the *proskēnion* roof, roughly 3–3.5 metres above the orchestra. The second storey of the *skēnē* originally consisted of a solid wall with doors leading on to the *proskēnion*; actors also entered from the sides by means of ramps along the *parodoi*. By the 2nd century, however, the doors had been replaced by wider openings which displayed backdrops that would be removed to represent interior scenes.

The orchestra was still used for musical performances and for productions of older works requiring a chorus. Some theatres were slow to incorporate certain innovations that were designed for the newer comedies but interfered with the performance of the older tragedies. Dinsmoor argued that since the theatres in Athens, Epidaurus and elsewhere had to accommodate performances of classical as well as newer works, their *proskēnia* were removable and temporary. In other locations, however, such as the large theatre built at Syracuse in the latter half of the 3rd century bce, the *proskēnion* was part of the original construction.

3. The Roman period.

Roman theatre represents a blending of Greek tradition and earlier forms, largely popular comedies known as Atellan or Oscan farce. They were usually performed on temporary wooden stages that could be

disassembled and moved, as they often had to share performance areas with athletic games and other popular entertainments. Greek tragedies and comedies first came to Rome in about 240 bce and were performed, in translation, on temporary wooden stages. Although it is difficult to trace the early architectural development of these structures, it is safe to say that a distinctive 'Roman' style emerged by the 1st century bce.

When the Romans began to build permanent theatres, they probably modelled the stage on the earlier Italian theatre, while borrowing other features from the Greek tradition. Roman theatre design differed from the Greek in that it represented a structural joining of components. The Greek theatre had been a complex of separate but related structures: the auditorium, orchestra and *skēnē* were usually physically separate. The Romans brought these parts together into an architectural whole. The shape of the seating area changed from a horseshoe to a semicircle, and the open space between the seating area and the stage buildings disappeared, so that the seats often directly adjoined the *paraskēnia*.

Greek theatres were usually built in or next to a sanctuary and depended on existing topography to provide good acoustics, a level performance area and a natural foundation for seating. By Roman times the linkage between theatre and sanctuary had largely dissolved. The only religious elements were shrines sometimes built above the semicircular seating area (*cavea*) or on the colonnaded gallery at the top of the auditorium. Moreover, Roman construction and engineering techniques allowed for more options when sites for a theatre were being considered; Vitruvius's primary concern was that it be built in a 'healthy' location (v.3). Like the Greeks, the Romans sometimes took advantage of natural features in the landscape to attain the 'bowl' shape necessary for good acoustics. However, they achieved a more symmetrical shape by using extensive substructures, often built of concrete and with magnificent façades.

The roofed colonnade that ringed the top of the auditorium provided some shelter for the audience in the event of rain. Most of the spectators entered the theatre not through *parodoi* as in Greek theatres but via entryways leading from behind and outside the seating area, much as in a modern stadium. The *parodoi* still provided access to the orchestra, but they were now covered with a vaulted roof, creating a structural link between the seating area and the stage building. Above the Roman *parodoi* were box seats called *tribunalia*, reserved for the sponsors of the play.

The *proskēnion* stage of the Greek theatre was replaced by a lower and deeper stage (*pulpitum*) that according to Vitruvius stood a maximum of 1.5 metres above the orchestra. Vitruvius specified that the depth of this stage was to be half the radius of the orchestra, and it encroached on the orchestra so as to make it only half a circle. The reduced orchestra no longer served as a main performance area, but functioned as a seating area for senators, city council members and other distinguished guests. Both musicians and actors now performed on the *pulpitum*, the width of which was approximately twice the diameter of the orchestra, whereas the stage building in the Greek theatre was at most only slightly wider than the orchestra.

Behind the *pulpitum*, occupying the place of the *skēnē* in earlier theatres, was an elaborate stage-house façade. This *scaenae frons* was richly covered with architectural and plastic decoration, in contrast to the lightly built, painted set pieces of the Greek *skēnē*, and it would be adapted to represent a palace, more ordinary dwellings or rural scenes as needed. The typical *scaenae frons* had three doors by which performers could enter the stage. In addition, two side entrances onto the ends of the *pulpitum* were provided by rectangular *paraskēnia*.

DENISE DAVIDSON GREAVES

Thebom, Blanche

(*b* Monessen, PA, 19 Sept 1918). American mezzo-soprano of Swedish parentage. In New York she studied with Margarete Matzenauer and Edyth Walker. She made her first appearance with the Metropolitan on tour in Philadelphia as Brangäne in 1944 and her New York début with the company as Fricka in *Die Walküre* in the same year; she remained with the Metropolitan until the 1966–7 season, singing much Wagner and a variety of other leading roles. In 1950 she sang Dorabella at Glyndebourne, and in 1957 she had considerable success at Covent Garden as Dido in the first English professional staged performance of *Les Troyens*. In 1967–8 she was artistic director of the Atlanta Opera Company. Thebom had a wide-ranging mezzo-soprano of generally fine quality, not a great voice, but one capable of most pleasing effect, confirmed by souvenirs of her Dorabella, Eboli and Brangäne on disc. Her article 'Singing or Acting?' was published in *Opera News*, xxix/21 (1964–5), 9–11, and details of her Metropolitan broadcasts can be found in P. Jackson: *Sign-off for the Old Met* (New York, 1997).

Theeus [Teeus, Theeuwes, Theewes, Tyves].

Flemish family of harpsichord makers of the 16th century, active in Antwerp and London. Three members of the family are known as instrument makers, Jacob (*fl* 1533–57), Lodewijk (i) (*fl* 1557) and Jacob's son, Lodewijk (ii) (*fl* 1561–79). Jacob and Lodewijk (i) may have been brothers, but little is known about them except that both were members of the group of ten instrument makers who applied to form a separate section for harpsichord makers within the Guild of St Luke in Antwerp in 1557; no instrument made by either has survived. Lodewijk (ii) was admitted into the Guild in 1561 but subsequently emigrated to England, where he is listed in 1568 as 'Lodewyke Tyves, Virginall-maker, a Dutchman' living in the parish of St Martin's-le-Grand, London. In 1579 he built the earliest surviving harpsichord made in England, part of a claviorgan (now in the Victoria and Albert Museum, London); the organ was probably added to the harpsichord by another maker. This instrument provides important evidence both of Antwerp harpsichord building practice before the Ruckers family and of English characteristics (oak casework, embossed paper decoration around the soundboard and chromatic compass from *C*).

EDWIN M. RIPIN/JOHN KOSTER

Theile, Johann

(*b* Naumburg, 29 July 1646; *d* Naumburg, bur. 24 June 1724). German composer, theorist and teacher. He is noted particularly for his sacred music, and he was a specially skilful contrapuntist.

1. Life.

Theile received his first musical training from Johann Scheffler, Kantor of Magdeburg, and attained enough skill to support himself as a law student at the University of Leipzig from 1666 until about 1672. Friends helped to pay for his first publication, *Weltliche Arien* … (1667), a set of student songs. Membership of the university's collegium musicum gave him musical experience and contacts, and some time between 1666 and 1672 he studied with Schütz. It is doubtful whether he completed his legal studies. He may have taught in Stettin before moving to Lübeck, where he was living in 1673, numbering among his friends Reincken and Buxtehude.

In 1673 Theile was appointed Kapellmeister at Gottorf. There he may have written his first operas or opera-like works, as Duke Christian Albrecht spent money on 'musical entertainments' as well as plays. Political developments soon interrupted the duke's promising reign: he was kidnapped and forced to cede territory, and in 1675 he fled to Hamburg. Theile was released from service when the Kapelle was dissolved but went with his patron to Hamburg. There his first opera inaugurated the new opera house in the Gänsemarkt on 2 January 1678. Though he remained on good terms with Christian Albrecht he probably considered the duke's unstable situation a strong enough reason to take a new position. He served as Kapellmeister at Wolfenbüttel from 1685 to 1691, after which he entered the service of Duke Christian I at Merseburg. As he had done in previous positions, he continued to teach at both places. One of his pupils at Wolfenbüttel, Georg Oesterreich, 'moved into the Kapellmeister's house and lodged with him, [and he] instructed him … quite untiringly and faithfully in composition'. A pupil at Merseburg, Johann Ziegler, 'studied composition with various teachers … [until he] finally found more satisfaction with Kapellmeister Theile'.

Where Theile lived after Duke Christian's death in 1694 is not certain, but he may have been connected with the Prussian court in Berlin: dedicating his *Andächtige Kirchen-Music* to King Friedrich I, he stated 'I taught Your Majesty the oboe'. He spent his last years with his son at Naumburg; he had moved there by 1718. Mattheson paid him this simple tribute in *Critica musica*, ii: 'he was a specially pious, honest man and thoroughly understood the harmonious arts'. Christoph Wolff has identified as Theile the young gamba player in the painting 'Häusliche Szene' (1674) by Jan Voorhuit. Now in the Musuem für Hamburgische Geschichte, it shows Theile with his friend Buxtehude and the organist J.A. Reincken.

2. Works.

Much of Theile's music survives in manuscript; many works have been lost. The first of his few extant published works is *Weltliche Arien* (1667), a collection of 24 secular solos, five duets and a quartet, with instrumental ritornellos. In his *St Matthew Passion* (1673), which was also published, he followed the traditions of the turba, a 'halo' of sound for the words of Jesus, and a closing chorus of thanksgiving. The most progressive aspect of the work is the addition of four strophic arias, to words not taken from biblical or chorale texts, commenting on the crucial parts of the story; this is one of the first instances of such interpolations in Passion music. His published masses are in the *stile antico*, as are the Kyries in the theoretical treatises.

It is in his concerted sacred music that Theile made his most important contribution. Of 34 extant works, 22 are settings of Latin or German psalms; other pieces are settings of other biblical texts, Luther's Litany and independent verses. The words of six works consist of an introductory scriptural verse followed by a poem expanding its central ideas; five of these works are in the *Andächtige Kirchen-Music*, Theile's last collection. This type of cantata may have resulted from a desire for a compromise between the Orthodox preference for scripture and the Pietistic desire for devotional poetry in services. Theile presented each verse of his text as a short movement, with new thematic material, changes of key, metre and

texture, and alternation between soloists and chorus; while such movements do not of course constitute full-scale compositions, they are a step in that direction. The forces for which Theile wrote range from solo soprano, two strings and continuo to five-part chorus with two violins, two violas, bassoon, two clarinos, timpani, two cornetts and three trombones; he included parts for oboes in the *Andächtige Kirchen-Music*. The instruments strongly support the vocal line; in choral works the first violin plays a higher contrapuntal line, while the other instruments double the vocal parts.

Among his contemporaries Theile was called 'the father of contrapuntists', and polyphonic textures indeed assume a paramount role in his music. Rather than relying on simple imitation, however, he seemed almost obsessed with the intricacies of invertible counterpoint. His polyphonic sections present the subject in tonic and dominant keys in all the voices, and the countersubjects are invertible and treated as such. There is complete reliance on these subjects, with almost no other musical material. While others were content with brief sections of imitation, Theile seems to have written the first vocal fugues. His contrapuntal skill is also demonstrated in six theoretical treatises, each of which is concerned with double counterpoint. The most important, *Das musikalische Kunstbuch*, must have circulated widely since five copies survive. The most complete of these, copied by J.G. Walther, contains canons, arias, suites, sonatas and other compositions illustrating various contrapuntal techniques. It has been compared to Bach's *Art of Fugue*, but there is one major difference: Theile does not employ the same theme in each work. The compositions stand alone as illustrations, without rules or instructions. For some Theile provided all the parts, while in others he left it to the student to work out an omitted voice, to find possible inversions and retrogrades and to discover versions of canons which may be inverted in several different ways. His instructions are given in clever rhymes stating the problem to be solved and commenting on the mental powers needed to solve it. The music seems rather stiff in comparison to the invertible fugues of the motets. This is not an elementary book, but rather it illustrates the skill of a master. The other treatises are similar, but shorter.

In most aspects of composition Theile was conservative. Traditional dissonance treatment, careful text-setting (with some word-painting) and moderate ranges are all characteristic. His harmony consists of simple basic progressions, enlivened by frequent changes of key and intensified by occasional chromatic alterations. Although reprises and ritornellos appear, he preferred varied repetition of his material. In his motets he took great care over contrasts of texture and the placing of climaxes. The quality and style of his output are remarkably uniform; with deference to the traditions of his time and with skill and sensitivity, he remained faithful throughout his career to a personal means of expression.

A complete edition of Theile's works was prepared in the 1930s by Willy Maxton, but was never published. Maxton's manuscripts are now in the Staats- und Univeritätsbibliothek, Hamburg.

JOCELYN MACKEY

Theinred of Dover [Theinredus Doverensis]

(*fl* 12th century). English theorist. He was probably a cleric, and may be identifiable with the grammarian Tenredus mentioned by John of Salisbury (*Metalogicon* i.14). Nothing is known of his life. His *De legitimis ordinibus pentachordorum et tetrachordorum* survives only in a late 14th-century copy (*GB-Ob* Bodley 842, ff.1–44*v*). It is addressed to one Alveredus of Canterbury (otherwise unknown) and is divided into three books. Book I deals mainly with intervals and their proportions; the discussion follows Boethius, and is notable only for its thoroughness. Book II addresses issues of consonance and dissonance; in it Theinred explains the admissibility of 3rds and 6ths into organum, and compares the relative consonance of the pure 3rds (5:4, 6:5) to the ditonus and semiditonus (81:64, 32:27), thus anticipating Walter Odington. Theinred also mentions the Greek genera, and defends the perfect 11th as a consonance.

Book III is an extended and original discussion of the problem of chromatically altered tones (beyond the B♭ accepted by Guidonian theory) in plainsong. Tacitly rejecting modal theory, Theinred completely reworks species theory. He recognizes no pre-existing scale or gamut – though he assumes the diatonic system – and defines species stictly in terms of internal intervallic arrangement. Through various permutations, he derives complexes that include the seven diatonic pitches plus B♭, E♭ and F♯. This material is presented not in musical notation, but in letter notation, modified for the chromatic tones (see illustration).

Theinred mentions Guido several times, and some diagrams accompanying the discussion present his results in terms of the hexachord system (*see* Solmization, fig.3); the approach, however, is based firmly on

the relationships of pentachords and tetrachords. Theinred illustrates and justifies his work by citing some 30 items from Gregorian chant, classifying them by their usage of chromatically altered tones. The treatise also includes two tuning cycles, the first (in Book I) generating the diatonic scale and the second (in Book II) the chromatic scale. It concludes with a borrowed discussion of organ pipe dimensions.

Thematic catalogue.

1. Definition and organization.
2. History and function.
BIBLIOGRAPHY

BARRY S. BROOK

Thematic catalogue

1. Definition and organization.

A thematic catalogue is an index to a group of musical compositions that incorporates citations of their opening notes (incipits), or principal melodic features (themes), or both. These citations may be given in various forms, such as conventional notes, neumes, tablatures, syllables, numbers, letters or computer codes. In practice, defying etymology, most thematic catalogues are concerned with incipits rather than with themes.

The semantic confusion arose in the late 18th century, when the terms 'theme' and 'thematic catalogue' were first regularly used. Because compositions almost always began with their main theme, the words 'theme' or 'themata' were treated as synonymous with what has only recently come to be called 'incipit'. In the 18th century, they were used interchangeably with 'initia', 'beginnings', 'commencements', 'Anfänge', 'subjects' or 'first few bars'. The combined term 'thematic catalogue' was first used in print by J.J. Hummel in 1768 for what was really an incipit index (but not the earliest: see §2(i) and (iii) below). In the 20th century, in the relatively few instances where true themes rather than incipits are

catalogued, the adjective 'thematic' is avoided in the title (e.g. H. Barlow and S. Morgenstern: *Dictionary of Musical Themes*, New York, 1948, 2/1975, H. Schiegl and E. Schwarzmaier: *Themensammlung musikalischer Meisterwerke*, Frankfurt, 1959– and D. Parsons: The Dictionary of Tunes and Musical Themes, Cambridge, 1975).

The thematic catalogue is superior to the non-thematic one as a research aid since its incipits provide identification in a minimum of space and symbols. For most music an incipit of about a dozen pitches suffices. When rhythmic values accompany the pitches, the incipit is almost inevitably unique. While the non-thematic list may identify a work by its composer, title, opus number, key, instrumentation, movement headings, first line of text, date, publisher, dedicatee, plate number etc., no one of these, indeed no combination of these, can normally provide as certain an identification as an incipit. Even transposed works can be readily identified in properly organized incipit files. In dealing with works that are anonymous or of disputed authorship, incipits become indispensable.

The organization of a thematic catalogue will vary in accordance with what it covers. Ideally it should include (as suggested by A. Hyatt King) the following elements: (*a*) title, opus or other identification numbers, references to standard and complete editions, author or other source of text, date and place of composition; (*b*) incipits of each movement, noting the number of bars in each movement where applicable and indicating variants among sources; (*c*) full description, location and shelf-mark of autographs; (*d*) description of significant copies, their shelf-marks, dates and important differences or special markings; (*e*) bibliographical description of first editions, including date, imprint, price and plate number, and of all subsequent editions or arrangements published in the composer's lifetime or reflecting changes made or sanctioned by him; (*f*) references to contemporary diaries, memoirs and newspapers, thematic and non-thematic catalogues; and (*g*) references to significant citations in scholarly studies. With the burgeoning of musical source studies since King's article, in many situations (e.g. voluminous major composers or surveys of large repertories) this ideal cannot result in traditional publication.

While the few notes of an incipit may be sufficient for the recognition of a particular work, their presentation must take into account the requirements of the genre from which they are quoted. Two incipits for a single piece may often be required, for example, a vocal entry after an orchestral ritornello, or the beginning of an aria following a recitative. Furthermore, the practice of quoting only the uppermost voice may be misleading in polyphonic works when that voice is not the first to enter. In such cases, it may be useful to quote the opening of the piece in short score, with indication of vocal disposition or instrumentation. The original clefs, tempo, expression, phrasing and dynamic indications should normally be included, following the chosen (and specified) source. In certain repertories, reproduction of the original notation may be advantageous.

Thematic catalogue

2. History and function.

The history of thematic catalogues may best be outlined in terms of their functions, eleven of which may be specified.

(i) Mnemonic aid.
(ii) Table of contents.
(iii) Guide to a composer's output.
(iv) Inventory of a library's holdings.
(v) Copying firm advertisement.
(vi) Publishing firm advertisement.
(vii) Legal documents.
(viii) Index of themes.
(ix) Musicological documentation.
(x) The locator catalogue.
(xi) Computer applications.

Thematic catalogue, §2: History and function

(i) Mnemonic aid.

This type of thematic catalogue helps the performer recall the beginnings of well-known tunes or melodic formulae. Some tonaries of the 10th and 11th centuries (e.g. those by Odo of Cluny, *d* 942, or Guido of Arezzo, *d* after 1033) belong to this type and can be considered the earliest examples of thematic catalogues. These treatises contain musical incipits to guide the reader in choosing the proper tone or formula to connect the end of the psalm verse with the antiphon. Interestingly enough, the first printed thematic catalogue had a similar function. In 1645 William Barton published *The Book of Psalms in Metre*, a 304-page collection of psalm texts, which contains an incipit index of 'The beginnings of [22] G[eneral] and P[articular] tunes now used in London'. Most of the book's psalm texts are marked with one, two or three asterisks so they can be sung to one or more of the popular 'common tunes' represented by similarly marked incipits. This practice survives in the handwritten incipit lists used by some song leaders and in the 'fake books' of café pianists, and is related to metrical indexes in hymnals.

Thematic catalogue, §2: History and function

(ii) Table of contents.

This is an incipit index appearing in a printed or manuscript volume of musical pieces as a guide to its use. The first known thematic index of this type was prepared by Heinrich Lübeck in 1598 for King Christian of Denmark as the index to a volume containing 202 trumpet sonatas and fanfares (*DK-Kk*, Gl.kgl.S.1874.4). Thematic tables of contents are common in 19th- and 20th-century editions, such as the piano music of Beethoven or Chopin.

Thematic catalogue, §2: History and function

(iii) Guide to a composer's output.

The earliest catalogues of this type were compiled by composers themselves as a means of organizing their works or protecting their authorship against counterfeiters before copyright laws were established. In 1686 J.K. Kerll published a set of *Magnificat* versets for organ, *Modulatio organica super Magnificat*, to which he attached a ten-page thematic index entitled 'Subnecto initia aliarum compositionum'. It contained 32 incipits for

22 of his other keyboard works (not included in the *Modulatio*) which, he said, he had seen 'in more than one place … ascribed to someone else'; with this catalogue Kerll was asserting his authorship and publicizing his wares at the same time. It was not until almost a century later that similar catalogues by other composers began to appear (e.g. J.G. Schürer, *Catalogo della musica di chiesa, c*1765, *D-Dlb*; Haydn, the 'Entwurf Katalog', *c*1765–*c*1805, *D-Bsb* mus.607; and Mozart, *Verzeichnüss aller meiner Werke vom Monath Febraio 1784 bis* [*15 Nov 1791*]). After 1800 the increasing tendency to use chronologically ordered opus numbers (Beethoven being the first great composer to do so systematically) reduced the need for composers to prepare their own thematic catalogues. During the 19th century the compilation of such catalogues was taken over largely by publishers and scholars (see (vi) and (ix)), the latter led by a famous collector of musical manuscripts, Aloys Fuchs (1799–1853). From around 1830 to shortly before his death Fuchs prepared over 20 thematic catalogues of the works of 17th- and 18th-century composers, from Albrechtsberger to Vivaldi (now in *D-Bs*). His work on Mozart, for example, served as an important starting-point for Köchel. Some of his catalogues have not been superseded (for illustrations *see* Haydn, Joseph, fig.3 and Mozart, fig.11).

Thematic catalogue, §2: History and function

(iv) Inventory of a library's holdings.

In the 18th century the contents of many large church, court and private music collections were catalogued thematically for the purpose of facilitating the location and identification of works. Such catalogues could be arranged by date of acquisition, by composer's name, or by storage shelf. The earliest known example of a thematic library catalogue (*Des Herren General Major Frey Herrn von Sons' Feldt musicalisches Cathallogium*, *c*1728–60, in Schloss Herdringen, Germany, Fü 3720*a*) was compiled for the Prussian general Friedrich Otto von Wittenhorst-Sonsfeld. Other manuscript catalogues include those of the Rheda library (*Catalogi musici, D-MÜu*), the library of Maria Anna of Bavaria (*Catalogo de libri di musica, c*1750–90, *D-Mbs* mus.1648), the abbey of Herzogenburg (*Catalogus selectiorum musicalium*, 1751–?, *A-H*), and the library of the Italian flautist Filippo Ruge (*Catalogue de la collection symphonique, c*1757, *US-SFsc*). When such catalogues list works that have since been lost, as they often do, they may prove useful in the identification of anonymous works or those of disputed authorship and in tracing patterns of music dissemination.

Among the earliest printed thematic library catalogues are those by Coussemaker of the anonymous masses in Cambrai (in *Notice sur les collections musicales de la Bibliothèque de Cambrai*, 1843), by Haberl of sacred works in the Cappella Sistina at the Vatican Library (in *Bibliographischer und thematischer Musikkatalog des päpstlichen Kapellarchives zu Rom*, 1888), and by Kade of the collections in Schwerin (*Die Musikalien-Sammlung des grossherzoglich Mecklenburg-Schweriner Fürstenhauses aus den letzten zwei Jahrhunderten*, 1893–9). The considerable growth, in recent years, in thematic cataloguing of library holdings, including that for *RISM*, represents a major advance for musicological research. Especially noteworthy is the series *Kataloge*

Bayerische Musiksammlungen, an ongoing project begun in 1958 under the direction of Robert Münster.

(v) Copying firm advertisement.

Such catalogues display incipits of the works, manuscript or printed, that the establishment has on hand; copies of these works were made on demand at so much per page. There is evidence of the existence of only three such catalogues: the famous Breitkopf *Catalogo*, published between 1762 and 1787, with 888 pages and over 14,000 incipits; Ringmacher's *Catalogo*, published in 1773, 628 incipits; and the lost *Der grosse thematische Catalogus* of Christian Gottfried Thomas, issued in Leipzig in manuscript copies from 1778 onwards. Despite their rarity, the significance of such catalogues is great. The Breitkopf catalogue, by virtue of its size, breadth of coverage and sociological import, may well be the most useful single bibliographic aid to 18th-century research, for despite its inaccuracies it remains indispensable for dating and attribution. Catalogues such as Breitkopf's, containing incipits mainly of manuscripts, often cite rare and even unique works, and the incipits may be the only evidence of a composition's existence or the sole means of identifying anonymous and doubtful works (for illustration *see* Breitkopf & Härtel).

(vi) Publishing firm advertisement.

These catalogues present incipits of a firm's own publications. They may be devoted to one or several composers and may be issued either as part of a musical edition (e.g. a single leaf added to a violin part) or in a self-contained volume. The earliest example of such a catalogue appears to be that of J.J. and B. Hummel: *Catalogue thématique ou Commencement de touttes les oeuvres de musique* (Amsterdam, 1768–74: this is the first time the term 'thematic catalogue' appears in print). Others were subsequently published by Corri in Edinburgh (*A Select Collection*, *c*1779), Bland in London (*Catalogues of Subjects or Beginnings of the Several Works*, 1790–?1793), Bossler in Speyer (1790–94), Imbault in Paris (*Catalogue thématique*, *c*1792) and Artaria in Vienna (*Catalogue thématique*, 1798). The earliest publishers' catalogues of the works of individual composers include Forster's 'Catalogue of the works of Giuseppe Haydn' in his edition of op.50 (London, ?1785) and Artaria's *Catalogue thématique* of Pleyel's chamber works (Vienna, 1789).

During 19th century there was a flowering of catalogues of this type, such as those of Mozart (published by Monzani, *c*1805), Mauro Giuliani (Steiner, 1815), Beethoven (Hofmeister, 1819), Gelinek (André, ?1820), Czerny (Diabelli, ?1827), Mendelssohn (Breitkopf & Härtel, 1843), Schubert (Diabelli, 1852), Schumann (Schuberth, 1850s), Chopin (Breitkopf & Härtel, 1855) and Schumann (Dörffel, 1860). In some instances the catalogues were prepared or corrected by the composers themselves, like those of Moscheles (published by Probst, 1825) and Liszt (Breitkopf & Härtel, 1855). The high season of publishers' sales catalogues was reached in the mid-19th century, but similar ones continue to be produced, mainly in France.

(vii) Legal documents.

Contracts, bills of sale, *inventaires après decès* and similar documents have made use of incipits for positive identification. Two such by Haydn are known, one of which includes 20 incipits and declares: 'I acknowledge to have received seventy pounds [from William Forster, London publisher] for 20 symphonies, sonatas … composed by me' (1786, *GB-Lbl* Eg.2380, f.12). There are five such documents by Boccherini, including his *Catalogo della opere da me … cedute in tutta proprieta al Sigr Ignazio Pleyel* (1796). Similar documents exist concerning Michael Haydn (1808, *A-Wn* 2103) and Mayseder (1819, *A-Wst* MH 9171/*c*). A famous example of an estate inventory containing incipits is the *Verzeichniss des musicalischen Nachlasses des vestorbenen Capellmeisters C.P.E. Bach* (1790).

(viii) Index of themes.

Such catalogues will usually quote complete themes or leitmotifs (as distinct from incipits) and may serve (*a*) for analysis of musical works (E. Tanzberger: *Jean Sibelius: eine Monographie mit einem Werkverzeichnis*, Wiesbaden, 1962); (*b*) as guides for the music lover (E.M. Terry: 'Leading Motives of the Operas', *A Richard Wagner Dictionary*, New York, 1939; R. Burrows and B.C. Redmond: *Symphony Themes*, New York, 1942); and (*c*) as pedagogical tools (D.J. Echelhard: *A Thematic Dictionary and Planning Guide of Selected Solo Literature for Trumpet*, diss., U. of Montana, 1969, which contains solo trumpet passages 'grouped into various levels of metric, rhythmic, ornamental, and miscellaneous problems').

(ix) Musicological documentation.

Thematic catalogues prepared with scholarly thoroughness and accuracy represent a new direction in cataloguing that began about 1850. Such catalogues may be related in function to some of those previously mentioned, but primarily they serve as the essential, initial step in the answering of historical, analytical and musico-sociological questions. These catalogues may be based on a genre, form, period, country, region, publishing house, library, a specific monumental or complete works edition, or an individual composer or group of composers. They may either be buried in the supplement to an unpublished dissertation or represent the efforts of many scholars working collectively on a substantial union-cataloguing project such as RISM.

The model for this scientific approach was Ludwig Ritter von Köchel's *Chronologisch-thematisches Verzeichnis* of Mozart's works. He began research in the early 1850s and published it with Breitkopf & Härtel in 1862. Köchel went far beyond the mere listing of a work's title, date, instrumentation and opening bars by providing such additional information as location of autographs, lists of early editions, references to literature about the work, and multiple-staff incipits for all movements.

This new direction in cataloguing coincided with the 19th-century development of musicology as a discipline and the publication of complete

editions, especially in Germany. Many of the catalogues that appeared during the second half of the century were prepared in conjunction with such editions. These rarely approached the Köchel catalogue in scholarship, and remained closer in purpose and coverage to publishers' sales catalogues (F.W. Jähns's detailed work on Weber is a notable exception).

After a lapse following World War I, publication gained momentum primarily with the work of Alfred Einstein on the third edition of the Köchel catalogue, published in 1937. Catalogues also appeared for Reger, Kreisler, Volkmann and Domenico Scarlatti, as well as a number of facsimiles of 18th-century manuscript catalogues (especially Larsen's invaluable *Drei Haydn Kataloge in Facsimile*, Copenhagen, 1941). It was not until the 1950s and the postwar resurgence of musicological activity that the full impact of Köchel's innovations began to be felt. At last there appeared definitive, scholarly thematic catalogues of the works of Bach (W. Schmieder: *Thematisch-systematisches Verzeichnis der musikalischen Werke*, Leipzig, 1950, enlarged 2/1990), Beethoven (G. Kinsky: *Das Werk Beethovens: thematisch-bibliographisches Verzeichnis seiner sämtlichen vollendeten Kompositionen*, Munich, 1955), Couperin (M. Cauchie: *Thematic Index of the Works*, Monaco, 1949), Schubert (O.E. Deutsch and D.R. Wakeling: *Schubert: Thematic Catalogue of All his Works in Chronological Order*, London, 1951), Haydn (A. van Hoboken: *Joseph Haydn: thematisch-bibliographisches Werkverzeichnis*, Mainz, 1957–78), Boccherini (Y. Gérard: *Thematic, Bibliographical and Critical Catalogue of the Works*, London, 1969), Handel (B. Baselt: *Thematische-systematisches Verzeichnis*, Leipzig and Kassel, 1978–86), Chopin (K. Kobylańska: *Thematisch-bibliographisches Werkverzeichnis*, Munich, 1979; J.M. Chomiński and T.D. Turło: *Katalog dzieł Fryderyka Chopina/A Catalogue of the Works of Frederick Chopin*, Kraków, 1990), Lully (H. Schneider: *Choronologisch-thematisches Verzeichnis sämtlicher Werke*, Tutzing, 1981), Telemann (W. Menke: *Thematisches Verzeichnis der Vokalwerke*, Frankfurt, 1982–3, 2/1988), Wagner (J. Deathridge, M. Geck and E. Voss: *Thematisches Verzeichnis der Werke*, Mainz, 1985), Vivaldi (P. Ryom: *Répertoire des oeuvres d'Antonio Vivaldi: les compositions instrumentales*, Copenhagen, 1986), Berlioz (D.K. Holoman: *Catalogue of the Works*, Kassel, 1987), C.P.E. Bach (*Thematic Catalogue of the Works*, New Haven, CT, 1989), and others.

During the 1980s and 90s it became increasingly apparent that Einstein's third edition of Köchel's catalogue of Mozart's works, long a model of musicological excellence, was no longer adequate. Not only had Einstein included many works of dubious authenticity and provided excessive information for genuine compositions, but a vast quantity of significant new research had taken place (Alan Tyson's paper studies, Wolfgang Plath's studies of Mozart's handwriting, Gertraut Haberkamp on first editions). A new and completely revised Köchel appeared inevitable. This new revision has commenced under the editorship of Neal Zaslaw, Ulrich Konrad and Cliff Eisen; it will also reflect the new discoveries reported in the many conferences and periodicals of the Mozart year, 1991.

A dramatic example of how Einstein's edition of Köchel could be misleading occurred in 1982 in Odense, with the discovery of a set of

manuscript parts bearing Mozart's name and matching the incipit listed as k16*a*/Anh.220 in the Köchel catalogue. Amid great publicity the work was published and performed, and a conference held with the participation of leading Mozart experts (*Die Sinfonie KV16a 'del Sigr. Mozart': Odense 1984*). The majority opinion was that this work could not have been composed by Mozart. There was no valid physical evidence linking the work to him, and those who studied it were convinced it was by someone else. Einstein had included the incipit from a list he had found in a publisher's archive; the parts had been distributed by an unscrupulous manuscript dealer. The work was paraded throughout the world in print, concert and recording as a 'newly discovered' work by Mozart.

Thematic catalogue, §2: History and function

(x) The locator catalogue.

A further development, growing out of the need to navigate through a large repertory, is the locator or finder catalogue. Such a catalogue will usually list incipits in some logical order, e.g. chronologically or by genre, and in some findable order, e.g. by number, letters, intervals, codes or patterns. One of the earliest and best known examples of a locator catalogue is the Barlow and Morgenstern *Dictionary of Musical Themes*, which lists 10,000 (instrumental) themes by composer and genre and provides an alphabetical finding index of themes transposed to C major or C minor. Locator catalogues exist for Bach (M.D. Payne: *Melodic Index to the Works of Johann Sebastian Bach*, New York, 1938, enlarged 2/1962), Mozart (G.R. Hill and M. Gould: *A Thematic Locator for Mozart's Works*, Hackensack, NJ, 1970) and Haydn (S.C. Bryant and G.W. Chapman: *Melodic Index to Haydn's Instrumental Music*, New York, 1982).

In recent decades there has been a tendency to create all-inclusive thematic catalogues that exceed existing ones in size and coverage. This development is in part a result of the work on RISM, which was originally intended to include all early music, printed and manuscript, up to 1800 (in some countries it has been extended to 1900). This 'mega-catalogue' expansion has been facilitated by advances in automation and has been applied to library holdings, specific genres and individual composers.

Thematic catalogue, §2: History and function

(xi) Computer applications.

A number of effective non-conventional and machine-readable codes have been developed to simplify the control of and access to data. Among the earliest of these were Nanie Bridgman's intervallic system, Ingmar Bengtsson's 'Numericode', Barry Brook's 'Simplified Plaine and Easie Code', Sefan Bauer-Mengelberg's Ford-Columbia language, and the melodic code used by Franklin B. Zimmermann.

Broad interest in the machine processing of musical data developed in the early 1960s, but it was not until the 1980s and 90s that computers became available with sufficient power to store the quantities of information and provide the quick access necessary for electronic thematic catalogues to become a reality. The advent of CD-Rom and the Internet have provided the possibility for the complete distillation of musical, analytical, literary, contextual and chronological information, its quick and inexpensive

dissemination, and facilities for sorting and searching the material. The fifth, cumulative edition of RISM appeared in 1997 on both CD-Rom and the Internet.

Thematic transformation.

See Transformation, thematic.

Thematik

(Ger.).

The approach to Theme and Motif as musical resources; the characteristic use of themes and motifs by a composer or school, piece or set of pieces etc.

Thematische Arbeit

(Ger.).

A term used to describe the process of musical development whereby thematic material is expanded, broken into its motivic elements, regrouped, rhythmically reinterpreted or subjected to transformation in some other way. It seems to have been in use by the end of the 18th century, for it is mentioned in Koch's *Musikalisches Lexikon* (1802). In 20th-century writings

it usually characterized complex part-writing within a melody-accompaniment framework (as in the string quartet), rather than overtly contrapuntal textures such as fugato or fugue. *See* Development; Fortspinnung; Period; Sonata form; and Transformation, thematic.

Theme.

The musical material on which part or all of a work is based, usually having a recognizable melody and sometimes perceivable as a complete musical expression in itself, independent of the work to which it belongs. It gives a work its identity even when (as is frequently the case with a theme and variations) it is not original to the work.

The Greek *thema* (from the verb *tithēmi*: 'to set or place'), as it was used in ancient rhetoric and composition, generally referred to a proposed idea or argument (i.e. a subject for discussion). It was first used as a musical term by Zarlino in *Le istitutioni harmoniche* (1558), where it denoted a melody that was repeated and subjected to variation in the course of a work. 'Thema' thus meant much the same as 'punto', which was then the standard term among Italian theorists; Thomas Morley was later to call this the 'point', in *A Plaine and Easie Introduction to Practicall Musicke* (1597). Zarlino also contrasted 'thema' with 'soggetto', which was a fixed line that underlay the structure of a piece but did not interact with the other voices – hence a cantus firmus. This distinction was not, however, maintained in the 17th and early 18th centuries, when many writers used the vernacular equivalents of 'theme', 'subject' and 'invention' synonymously. Bach seems to have preferred 'thema' for his fugue subjects, though he often used the Latin *subjectum* for the second subject of a double fugue, or for a counter-subject maintained rigorously in the course of a fugue. The definition of 'Thema' in J.G. Walther's *Musicalisches Lexicon* (1732) as 'the subject [Satz] of a fugue' is characteristic of the use of the term in the 18th century, namely for a melodic line worked out contrapuntally. Towards the end of the century, however, it connoted the leading section or phrase (Ger. *Hauptsatz*) of a sonata movement; for Koch (*Musikalisches Lexikon*, 1802) it referred specifically to the first four-bar phrase of the initial eight-bar Period.

By the mid-19th century 'theme' had taken on three important attributes which it has retained: it was no longer restricted to the very beginning of a work but might appear in any part of a composition (hence the notions of 'first theme' and 'second theme'); it had a certain completeness, a roundedness, which distinguished it from the shorter and more elemental Motif (theme and motif had often been treated synonymously in the early 19th century); and a theme was a recognizable entity, something that could be used to identify a work – thus it was not until the 19th century that the now pervasive requisite of originality in theme writing became a significant part of composition. However, the most important aspect of theme remained that which Zarlino had discussed three centuries before: its repetition and variation in the course of a work. As early as 1802 Koch discussed *thematische Arbeit*, the development of thematic materials. The related idea of Thematic transformation (sometimes 'transformation of themes') has been current in English writings for some time, denoting the

interrelatedness of many themes (particularly by their melodic shape) in a single composition, that is their derivation from a common source. The process of thematic transformation is encountered frequently in the works of Liszt, appearing ubiquitously in his symphonic poem *Les préludes*.

In much contemporary music it is difficult to draw a line between what is proposed (i.e. the theme) and what is worked out from the proposal. Writers have increasingly turned away from using 'theme' in any but a formal sense, for example to show the first and second 'themes' of a work clearly modelled on the sonata form of the Classical and Romantic period. Thus the theme of, say, a 12-note instrumental composition by Schoenberg might well be viewed conceptually as the 12-note set on which it is based; in a descriptive analysis of the work, however, the 'first theme' might be indicated by its opening bars. As applied to earlier music 'theme' has taken on one new characteristic, namely that it can be viewed as polyphonic in design. A distinction between 'subject' and 'theme' has yet to be worked out rigorously, although the former has maintained its supremacy in discussions of fugue, while the latter has begun to be more widely accepted in its polyphonic totality, instead of merely being thought of as a leading melody.

See also Subject; Subject group; Melody.

WILLIAM DRABKIN

Theme group.

First Subject group.

Theobald, Lewis

(*b* Sittingbourne, Kent, bap. 2 April 1688; *d* London, 18 Sept 1744). English dramatist, librettist and editor. He first wrote for the stage in 1708, when his play *The Persian Princess* was performed at the Drury Lane Theatre. His early work included translating plays by Sophocles and Aristophanes as well as writing articles for newspapers. By 1718 he was working for John Rich at Lincoln's Inn Fields, providing librettos for works such as *Pan and Syrinx* (14 January 1718), and a run of extremely successful pantomimes including *Harlequin Sorcerer* (21 January 1725), *Apollo and Daphne* (14 January 1726), *The Rape of Proserpine* (13 February 1727) and *Perseus and Andromeda* (29 January 1730). J.E. Galliard provided the music for many of these works. Among Theobald's later theatre works were librettos for Lampe's *Orpheus and Eurydice* (Covent Garden, 12 February 1740) and Galliard's *The Happy Captive* (Little Theatre, Haymarket, 16 April 1741). As well as writing for the stage Theobald was a serious scholar. In 1726 he published his criticism of Alexander Pope's edition of Shakespeare, and Pope took his revenge by making Theobald the central figure in the first version of *The Dunciad* (1728). In 1730 Theobald was among the candidates for Poet Laureate, but the post went to the actor-

manager and dramatist Colley Cibber. Theobald is best known for his own edition of Shakespeare's dramatic works, which was reprinted many times between 1733 and 1773.

Theobaldus Gallicus

(*fl* 13th century). Composer or scribe involved in the later transmission of the *Magnus liber* and related collections of mensural polyphony, working probably in Paris between the time of Robertus de Sabilone and that of Franco. He is mentioned only by the theorist Anonymous IV (ed. Reckow, 1967, i, 50).

For Bibliography *see* Organum and discant.

IAN D. BENT/EDWARD H. ROESNER

Theocritus [Theokritos]

(*b* Syracuse, *c*308 bce; *d* ?Syracuse, *c*240 bce). Greek poet. A Sicilian by birth, he apparently spent most of his life outside Sicily, and much of it in Alexandria. His surviving works (including some false ascriptions) consist of 27 epigrams and 30 longer poems; the latter, composed almost entirely in hexameters, came to be called idylls (*eidullia*) and contain some of the first and most perfect surviving specimens of 'pastoral poetry', later imitated in Virgil's *Eclogues*. The shepherds of the *Idylls* usually play the syrinx (panpipes). This was rectangular, with the individual pipes (*kalamoi*) stopped with wax in graduated amounts; it thus differed from the triangular *fistula* of the Romans. When Theocritean shepherds play any other instrument it is a single reed, pierced with finger-holes but lacking a mouthpiece (e.g. *Idyll* v.7). This was probably a simple form of the *surinx monokalamos*, like the oat-straw *avena* in Italy (*see* Virgil). The mention of a double aulos and of a transverse flute (*plagiaulos*) in *Idyll* xx.29 is one of many indications that this poem is not Theocritean.

The professional performance of music is illustrated in the *Idylls* by the singing of an elaborate lament (*ialemos*) for Adonis (xv.100–44), and by several references to playing on the double reed pipes by an *aulētris*, a flute-girl. Theocritus reserved his most detailed comments for the sphere of amateur music-making, as in the description of fine panpipes (i.128ff) and the praise of a singing harvester who 'skilfully measured out the [?]shape of the tune' (*idean harmonias*; x.39). Singing and piping do not occur simultaneously in the *Idylls*; this apparent assumption of alternation was a literary convention that did not correspond to reality, as Homer's description of the Linus song shows.

Impromptu singing matches between shepherds are the most celebrated element of Theocritean pastoral; such 'flyting' has been noted even in the 20th century as a feature of gatherings of Greek and Sicilian country people. However, the evidence of ethnomusicology and details of the *Idylls* suggest that Theocritus was not describing a universal folk practice but drawing on a specific and strong local tradition.

Theodonus de Caprio

(*b* ?Sant'Agata; *d* Capua, 1434). Italian theorist. He was a Benedictine at the monastery of Montevergine (Avellino), and prior of the abbey of Capua. His treatise *Regule contrapuncti*, in an addition to the manuscript *I-Rvat* Barberini lat.307, is dated 13 July 1431. It begins with a description of the nine consonances, five perfect (unison, 5th, octave, 12th, 15th) and four imperfect (3rd, 6th [major and minor], 10th, 13th), and continues with illustrations of their possible combinations in compositions for two voices. At the end of the same manuscript, under the date 31 March 1432, Theodonus had begun to copy the *Libellus cantus mensurabilis* of Johannes de Muris.

F. ALBERTO GALLO

Theodorakis, Mikis

(*b* Chios, 29 July 1925). Greek composer. He studied in Athens with Philoktitis Economides (1889–1957). As a political activist, he participated with the communist side in the Greek Civil War (1944–9) and was imprisoned and exiled (1947–52). In 1954 he enrolled at the Paris Conservatoire, studying with Messiaen and Eugène Bigot. In Paris, he wrote music for film and collaborated with the Royal Ballet, the Covent Garden and the Stuttgart Ballet. He won the first prize at the Moscow Music Festival (1957), the American Copley Prize for the European Composer (1959) and the first prize of the International Institute of Music in London. His work combined orchestral writing with elements from Byzantine chant, folk and urban popular song, to create unique works of personal style such as his monumental *To Axion Esti* [Worth of Being] (1959–64). He composed symphonic, choral, ballet, chamber and film music, then returned to Greece (1960).

Theodorakes turned to popular music through concerns over musical accessibility and involvement, and his first published song cycle, *Epitaphios* (1960), to texts by Yiannis Ritsos (1909–90), gave new dimensions to the popular Greek song. Music, poetry and the bouzouki (an instrument banned for years and used in *rebetika*, the urban underworld song style), combined to form the *entechno laïko tragoudi* [popular art song]. During the 1960s, Theodorakis composed song cycles, metasymphonic works (which combine symphonic and choral writing with popular song), ballet, music for drama, theatre and film. These include *Axion Esti*, *Elektra* (1960), *Romiosini* [Hellenism] (1966), *Mauthausen* (1967) and *Zobas o Ellenas* ('Zorba the Greek', 1964; an American hit record for Herb Alpert, 1966). In an attempt to make symphonic music and the works of other Greek contemporary composers more accessible to the public, he founded the Athens Little Orchestra (1967) and the Piraeus Musical Organization.

In 1967, Greece fell under a dictatorship and Theodorakis was arrested and imprisoned, his music was banned from public performances and he was exiled to Paris. While in exile he composed some of his best song cycles, inspired by the brutalities of the junta (*Ta tragoudia tou Andrea* [The Songs of Andreas], 1968, and *Tragoudia tou agona* [Songs of the Struggle], 1970–71). With the fall of the dictatorship (1974), he returned to Greece and participated in the restoration of democracy. In 1983 he became a minister of state and received the Lenin Peace Prize. From 1960 to 1980, he wrote mainly song cycles, but returned in the early 1980s to large symphonic and choral forms. His late works combine the symphony orchestra with choruses, soloists and aspiring poetic text. In the late symphonic works, a predominant tonality, counterbalanced with dissonant harmonies and polyrhythmic transformations related to Stravinsky and Shostakovich, joins with distinctive melodic and thematic material of

Hellenic origin and colour, such as in the symphonies nos.1–4 and no.7, *Kata Saddoukaion pathe* [Sadducees Passion], *Medeia*, *Elektra* and *Antigone*.

WORKS

(selecive list)

dramatic

Ops: Costas Karyotakis-metamorphosis tou Dionysou [Costas Karyotakis-Metamorphoses of Dionysos] (C. Karyotakis and Theodorakis), S, Mez, T, Bar, B, orch, 1985–6; Medeia [Medea] (Euripides), v, female vv, orch, 1988–90; Elektra, 1992–3

Ballets: To panigyri tes Asi-Gonias [The Asi-Gonia Festival), 1946–7; Orpheas kai Eurydike [Orpheus and Eurydice], 1952; Photia sta baroutia [Fire at the Gunpowder], 1958; Les Amants de Teruel, 1958–9 [arr. of music from film score]; Antigone (Sophocles), 1959; To tragoudi tou nekrou adelphou [The Ballad of the Dead Brother], 1962; Elektra, 1979; Zorbas o Ellinas [Zorba the Greek], 1987–8 [arr. of music from film score, 1964]

Music for plays: Phoinisses (Euripides), v, chorus, orch, 1959–70; To tragoudi tou nekrou adelphou [The Ballad of the Dead Brother] (Theodorakis), 1960–62; Enas omeros [The Hostage] (B. Bean, trans. EVAGORAS KARAGEORGIS

Theodorici, Sixt.

See Dietrich, Sixt.

Theodoricus.

See Gerarde, Derrick.

Theodoricus, Georg.

See Dietrich, Georg.

Theodoricus de Campo.

Supposed author of the mid-14th-century treatise on mensural notation preserved anonymously in *I-Rvat* Barberini lat.307, ff.21–27. The attribution was due to Coussemaker's error in reading the name Theodonus de Caprio, as well as linking the name with a treatise quite different from those bearing it in the manuscript. The short set of counterpoint rules and the fragment of johannes de Muris's *Libellus cantus mensurabilis* attributed to Theodonus, no doubt as copyist, are in fact a later addition. The value of the anonymous work is that it bridges the gap in our knowledge of mensural theory between Franco of Cologne and the later 14th century. The French and Italian Ars Nova notational methods of Vitry, Johannes de Muris and Marchetto are discussed; there is valuable information about the values of the various types of semibreve in use immediately preceding the period of the Ars Nova, and the newer note forms such as the semiminim and dragma are also treated.

GILBERT REANEY

Theodoricus Petri Nylandensis [Ruutha, Didrik Persson; Rwtha, Didrik Persson]

(*b* near Borgå [Porvoo, Nyland, Finland], *c*1560; *d* ?Poland, probably before 1617). Swedish government official and music editor. His family originally came from Denmark and he seems to have attended the cathedral school at Viborg (then part of Sweden, now Vïborg in the Russian Federation). He studied at the University of Rostock from 1581 to 1584, during which years he published a few poems in Latin and had his song collection *Piae cantiones* printed in Greifswald (1582). He then entered the service of the King of Sweden and was governor of Västerbotten in the north of the country in 1598–9. After the revolution against the Catholic King Sigismund (also King of Poland), he left Sweden, and is believed to have died in Poland. His family was ennobled by King Gustav Vasa.

Theodoricus's famous songbook is entitled *Piae cantiones ecclesiasticae et scholasticae veterum episcoporum, in inclyto regno sueciae passim usurpatae, nuper studio viri cuiusdam reverendissimi de ecclesia Dei et schola Aböensi in Finlandia optime meriti accurate a mendis correctae, et*

nunc typis commissae, opera Theodorici Petri Nylandensis: his adiecti sunt aliquot ex psalmis recentioribus (Greifswald, 1582/*R*; ed. G.R. Woodward, London, 1910). The clergyman at the cathedral school of Åbo (Turku) mentioned in this title was Jacobus Finno. It has been suggested that he was the true editor of the collection and that it contains the medieval repertory of the Åbo school, but Finno's part in the anthology was probably no more than the granting of a Lutheran imprimatur. The volume contains 74 songs, 12 of which are for two to four voices. As the title indicates, some of the songs are intended for use in church services, while the Christmas songs are for church or school use. Fewer than 40 are known in earlier sources from other countries. An enlarged and revised edition, *Cantiones piae et antiquae*, was printed in Rostock in 1625, but later only parts of the collection were reissued, mostly in Finland and often with changes in the melodies that are typical of an oral tradition. 17 songs were reprinted in Johann Lindell's *Cantilenarum selectiorum editio nova* (1776) and Sibelius made three arrangements in *Carminalia* (1899). In the mid-19th century a copy of the original edition was brought from Stockholm to England, where it came into the hands of J.M. Neale, through whose carols several of the *Piae cantiones* melodies have become widely familiar (e.g. 'Good King Wenceslas looked out'), as has Holst's fine setting of 'Personent hodie'.

FOLKE BOHLIN

Theodoricus Sistinus.

Latinized name of Truid Aagesen.

Theodor of Würzburg [Theodorus Herbipolensis, Theodorus Francus, Theodorus Franconian, Theodor Franck]

(*fl* 1480–95). German printer, active in Venice. He is called Theodorus Francus, or Franconian, in the single book he printed, a *Grammatica* by Franciscus Niger (published by Johann Santritter in 1480). Book 8 contains sections on metre, rhythm and harmony, the last illustrated with six pages of the first printed mensural music. The *Grammatica* is a rare example of music carefully printed from metal type in space left for hand-drawn staves;

the reverse technique, printed staves for handwritten music, was common in the 15th century. Theodor's fount of white mensural type has nine designs, four of which are longa in varying stem sizes. The designs and measurements resemble the next mensural fount, used by Petrucci in Venice in 1501.

M.K. DUGGAN

Theogerus of Metz [Dietger of Metz]

(*b c*1050; *d* Cluny, 29 April 1120). Music theorist from south-west Germany. Theogerus was born in East Francia, perhaps of noble descent, and was taught the liberal arts by Manegold of Lautenbach. In 1073 he became a canon at St Cyriacus in Neuhausen, near Worms, but in the late 1070s he converted to the monastic life and entered the Cluniac-reformed monastery of Hirsau. Wilhelm, Abbot of Hirsau and Theogerus's mentor, ordered several scholarly works from him, including perhaps the *Musica*, a concise treatise on chant for cantors written in about 1080. In 1082 Theogerus was appointed by Wilhelm to the priory of Reichenbach-Murgtal and in 1088 became abbot of St Georgen, another Hirsau foundation, where he remained for the next 30 years, becoming widely influential as a charismatic spiritual leader who contributed to the spread to the Hirsau monastic reform throughout southern Germany and Alsace. In 1117 Theogerus was elected bishop of Metz, but this undesired honour embroiled him in a political power struggle that weakened his health and eventually led to his death from a fever at Cluny, his burial-place. During the 12th century Theogerus was venerated as a saint in southern Germany. The fragmentary *Vita Theogeri*, written between 1138 and 1146 by Wolfger of Prüfening, is partly based on eyewitness accounts and forms one of the most extensive biographies of a medieval music theorist.

Despite the conservatism of its musical substance, Theogerus's *Musica* is a well-crafted treatise with original approaches to chant theory, including the division of the monochord, musical ratios and modal theory, and with notable historic influence; it follows in the line of the works of Berno of Reichenau, Hermannus Contractus and Wilhelm of Hirsau. The author's training in Platonic epistemology informs the overall structure, the vocabulary and specific doctrines of the work. The first section (chaps.1–28) discusses the theory of systems according to the unchangeable laws of nature (*natura*) as discovered through arithmetic proportions and tetrachord theory. The second section (chaps.29–45) is a study of the chant repertory according to mode and range and is organized in the form of a tonary, following the changeable rules of custom (*usus*).

Traceable manuscript copies of *Musica* were disseminated mostly through the network of monasteries affiliated to Hirsau and St Georgen. The number of extant sources far exceeds that of the works of Hermannus Contractus and Wilhelm of Hirsau, and the quantity and quality of surviving excerpts and glosses of the *Musica* bear witness to the treatise's influence in southern Germany throughout the 12th century and beyond. Theogerus's work on music theory may also have inspired the unique allegorical interpretation in the *Vita Theogeri* of a musical dream vision experienced at the monastery of Amtenhausen between 1107 and 1110.

FABIAN LOCHNER

Theokritos.

See Theocritus.

Theon of Smyrna

(*fl* Smyrna [now Izmir], early 2nd century bce). Greek philosopher and mathematician. His work was dependent on that of Thrasyllus of Alexandria (*d* 36 ce), Tiberius's court astrologer, and Adrastus, a member of the (Aristotelian) Peripatetic School (*fl* 1st–2nd century ce), but not on the *Almagest* (i.e. the *Mathēmatikē suntaxis*) of Ptolemy. Besides two treatises about Plato, now lost, Theon wrote a dissertation *On Mathematics Useful for the Understanding of Plato* (*Tōn kata to mathēmatikon chrēsimōn eis tēn Platōnos anagnōsin*). This mathematical introduction to the study of Platonic philosophy survives in two separate sections, one concerned with the study of numbers and harmony, the other with astronomy. Part of the work seems to have been lost, for Theon in his preamble promises discussions of five numerical sciences: arithmetic, geometry, stereometry, astronomy and music (ed. Hiller, 1.13ff; 16.24ff).

The second main section of this work is devoted to music, which Theon divides into three main categories: the 'noetic', or intelligible, music of numbers (*hē en arithmois mousikē*), deduced from arithmetical theorems; the 'aesthetic' music of instruments (*hē en organois mousikē*), perceived through the senses; and the music of the cosmos (*hē en kosmō harmonia kai hē en toutō harmonia*), or harmony of the spheres. Although he regarded the music of the cosmos, rather than the music of instruments, as the proper subject for consideration, he deals with instrumental music first on the grounds that the music of numbers is thereby made easier to grasp.

The section on instrumental music represents chapters from a mathematical treatise on musical intervals following the tradition of the Pythagoreans, rather than a discussion of melody or scale in the manner of the disciples of Aristoxenus. In it he quotes Thrasyllus (47.18ff) concerning notes, harmonic sounds, intervals and *harmonia*. The consonances (*sumphōniai*) are graded according to the simplicity of their ratios, or their ability to blend, first as *antiphōnia* (the octave or double octave) and *paraphōnia* (4th and 5th) – the cornerstones of the tonal system, and then as consonances 'according to proximity', that is, indirectly related (whole tone, *diesis*). Theon quotes Adrastus (49.6ff; 61.18ff), also using excerpts from Thrasyllus dealing with physical experiments (56.9ff), concerning the analogy between speech and music; the requirements for the production of notes; the principal consonances, whole tones and semitones; the three genera; and the *diesis*, the combination and categorization of the consonances, the whole tone and the limma.

His section on the music of numbers, or computable music, is purely arithmological, and again draws on Thrasyllus and Adrastus. It gives an account of ratios (74.15ff), proportions, with a digression on the division of the monochord (82.16ff), and finally of means (106ff).

Only in the third main section, on astronomy (120–205), does Theon touch upon the music of the cosmos. In a fragment of a didactic poem by Alexander of Ephesus quoted by Adrastus, the planets are for the first time assigned specific pitches in a nine-degree chromatic scale, an organization to which Greek and Roman authors would later return.

There are striking correspondences between Theon's sources and those parts of the writings of the Latin Neoplatonists Chalcidius, Favonius and Macrobius that deal with the theory of number, even discounting the Pythagorean and Platonic tradition common to all of them. Possible connections between Theon's musical classification and that of Boethius, which was to become authoritative in the Latin Middle Ages, have yet to be investigated; but like the similar categorization of Ptolemy, Theon's categorization of the intervals according to their degree of consonance, which he had derived from Thrasyllus, continued to exert an influence for a further millennium, especially through the works of Byzantine theorists such as Psellus and Bryennius.

Theorbe

(Ger.).

An Organ stop.

Theorbo [chitarrone, theorbo lute]

(Fr. *téorbe*, *théorbe*, *tuorbe*; Ger. *Theorb*; It. *tiorba*, *tuorba*).

An instrument of the Western lute family with stopped courses considerably longer than those of a lute and with a separate nut and pegbox for a set of longer, unstopped bass strings (diapasons). The Italian names Chitarrone

and *tiorba* were used synonymously for the same instrument, depending on personal or regional preferences. During the 17th century and part of the 18th the theorbo was popular as an accompanying instrument, and in the 17th century a certain amount of solo music in tablature was published for it.

The pegbox for the stopped strings of a theorbo is nearly aligned with the neck, not bent back sharply as on a lute. Beyond the upper end of this pegbox the neck extends to an additional pegbox for the additional bass strings. The extension is of the same piece of wood as the first pegbox, and the bass strings are kept from crossing the stopped courses by setting the extensions at a slight angle off centre.

The stopped courses of the theorbo are much longer than those of the ordinary tenor lute – too long for the highest strings to withstand the tension necessary to tune them as they would be tuned on the lute. Consequently the first course, and usually the second, was tuned down an octave. The third course was thus the highest in pitch and in solo music became the melody course. (Mace advocated in 1676, however, that if the second course could withstand the higher tuning only the first course should be tuned down.) The octave displacement of the upper course or courses is an important factor distinguishing the theorbo (Chitarrone) from the lute-sized Liuto attiorbato (*see also* Archlute), which retained the normal lute tuning for its fretted courses. The 17th- and early 18th-century English term 'theorbo lute' probably referred to a theorbo.

Praetorius (2/1619) distinguished a *paduanische Theorba* from a *lang romanische Theorba: Chitarron* (see fig.1), but Italian writers used 'chitarrone' and 'theorbo' synonymously (see Mason, 1989). Praetorius also illustrated a 'theorboed lute' (*testudo theorbata*) but described that instrument in his tuning charts as merely a 'lute with a long neck', i.e. a *liuto attiorbato*. Elsewhere he alluded to two varieties of theorbo, one strung with gut and the other with brass and steel. He gave the following tuning for a 14-course theorbo: *F′–G′–A′–B′–C–D–E–F–G–c–f–a–d–g*; he also included bass strings. Banchieri (1611) indicated a G tuning with only the first course at the lower octave, as did Mace and other English sources. However, all other sources, Italian and French, indicate that the tuning *G′–A′–B′–C–D–E–F–G–A–d–g–b–e–a* was by far the most common.

The theorbo (chitarrone) appears first in late 16th-century Italy and seems to have been invented by the Florentine humanists, who were responsible for creating the famous *intermedi* performed at the Medici wedding celebrations of 1589. The souvenir description of the event (Bastiano de' Rossi: *Descrizione dell'apparato, e degl'intermedi*, Florence, 1589) is the earliest documented reference to the instrument.

Tablatures of solo music for theorbo were idiomatically written to take into account the octave displacement of the first two courses. Thus the left hand occasionally has to finger the third course up to the 12th fret, leaving the first two courses to fill in the harmony. The greater length of the theorbo's strings precluded some of the more difficult chord patterns commonly found in solo lute music. Belerofonte Castaldi (*Capricci*, 1622), however, published some duets for theorbo and 'tiorbino al ottava', presumably a small theorbo pitched an octave above; an instrument in the

Vienna Kunsthistorisches Museum fits this description. Sources of ensemble and solo music for the theorbo in staff notation include an early 17th-century manuscript (*I-Rn* 156/1–4) containing works by Stefano Landi, Giovanni Priuli and Filippo Nicoletti; Athanasius Kircher's *Musurgia universalis* (Rome, 1650) containing music by Lelio Colista; and *Pièces de théorbe et de luth mises en partition dessus et basse* (Paris, 1716) by the theorbo player Robert de Visée. By the end of the 17th century the theorbo was used also as a virtuoso single-line bass instrument for obbligato accompaniments in opera arias. Domenico Gabrielli's *Il Maurizio* (1689) uses a 'tiorba' extensively in this capacity. Other works with 'tiorba obligato' include J.J. Fux's *La decima fatica d'Ercole* (1710) and *Orfeo ed Euridice* (1715) The repertory of music using the theorbo as a Continuo instrument is large; it requires the theorbo player to read from a bass line and devise his own accompaniment (like a keyboard continuo player). In this role the instrument was used in large-scale ensembles as well as to accompany solo songs. A number of continuo tutors for the instrument were published, including Nicolas Fleury's *Méthode pour apprendre facilement à toucher le théorbe sur la basse-continuë* (Paris, 1660/*R*); A.M. Bartolotti's *Table pour apprendre facilement à toucher le théorbe sur la basse-continuë* (Paris, 1669); H. Grenerin's *Livre de théorbe* (Paris, *c*1670); E.D. Delair's *Traité d'accompagnement pour le théorbe et le clavessin* (Paris, 1690/*R*, 2/1723); and François Campion's two works *Traité d'accompagnement et de composition selon la règle des octaves de musique* (Paris, 1716/*R*) and *Addition au traité …* (Paris, 1730/*R*).

IAN HARWOOD, ROBERT SPENCER, JAMES TYLER

Theory, theorists.

Theory is now understood as principally the study of the structure of music. This can be divided into melody, rhythm, counterpoint, harmony and form, but these elements are difficult to distinguish from each other and to separate from their contexts. At a more fundamental level theory includes considerations of tonal systems, scales, tuning, intervals, consonance, dissonance, durational proportions and the acoustics of pitch systems. A body of theory exists also about other aspects of music, such as composition, performance, orchestration, ornamentation, improvisation and electronic sound production. (There are separate articles on most of these subjects, but for more detailed treatment of the most fundamental of them *see* in particular Acoustics; Analysis; Counterpoint; Harmony; Improvisation; Melody; Mode; Notation; Rhythm.)

The Western art music tradition is remarkable for the quantity and scope of its theory. The Byzantine, Arabic, Hebrew, Chinese and Indian traditions are also notable in possessing significant bodies of theoretical literature. Recently there has also been some theoretical treatment of jazz and other genres of popular music. This article, however, will deal exclusively with the Western art music tradition. (For these other traditions *see* particularly Arab music; China, §II; India, §III; Iran, §II; Japan, §I; Jewish music, §III; *see also* Byzantine chant, §17; Greece, §I; Mode, §V; Jazz; Popular music.)

CLAUDE V. PALISCA (1–10), CLAUDE V. PALISCA/IAN D. BENT (11–14), IAN D. BENT (15)

Theory, theorists

1. Introduction.

Treatises as disparate as *De institutione musica* (*c*500) by Boethius, *L'arte del contraponto ridotta in tavole* (1586–9) by Giovanni Maria Artusi, *L'armonico pratico al cimbalo* (1708) by Francesco Gasparini, and *Der freie Satz* (1935) by Heinrich Schenker are all commonly subsumed under the category of thought called music theory. Yet these four books have little in common. That of Boethius was totally divorced from the music of his time and probably not intended to be read by musicians or composers. In it a student of the liberal arts sums up the speculations about music of a number of Greek authors, mainly from the 2nd century. Artusi's book was a text for the training of musicians and composers in counterpoint as practised and taught by his, then older, generation. Gasparini's is a manual for harpsichordists on the art of accompanying from a thoroughbass. Schenker's expounds some fundamental hypotheses about masterpieces of 18th- and 19th-century music through an analysis of their tonal and harmonic content.

Even allowing for the span of time encompassing them – from about 500 to 1935 – and the changing practice of music, the absence of any significant overlap in these four books, whether of content, purpose or intended audience, demonstrates at once the diffuseness and richness of the concept of theory. The term can be given an inclusive or an exclusive definition; in the one case it will embrace all of these works, in the other only one or two of them. It is useful to begin with an attempt at an inclusive definition.

Theory, theorists

2. Definitions.

The word 'theory' itself has broad implications. Its Greek root *theōria* is the noun form of the verb *theōreō*, meaning to inspect, look at, behold, observe, contemplate, consider. A *theōros* is a spectator, as at a festival or game. Etymologically, then, theory is an act of contemplation. It is observing and speculating upon as opposed to doing something.

Aristides Quintilianus, who understood the concept in this way, constructed a plan of musical knowledge about ce 300 that may be outlined as follows:Although Aristides separated the purely theoretical from the practical, the entire field that he ordered is theoretical in a broad sense, the

division under 'Theoretical' being what might now be called precompositional theory, while the category 'Practical' deals with compositional theory and the theory of performance. He was not so much dividing music as what can be said about music, consequently musical knowledge and thought.

Not much needs to be added to this outline to embrace all modern musical knowledge. Certain of the categories need to be broadened; for example, the 'arithmetical' ought to include mathematics in general, communications theory and artificial intelligence; 'natural' theory should include psychological and physiological as well as physical acoustics. Under 'Theoretical' one would add history, aesthetics, psychology, anthropology and sociology of music. Among the 'Artificial' categories, the 'harmonic' as understood by Aristides applied to tonal relations in terms of successive pitches and would have to be extended to simultaneous relations. Another technical category that one would add is that of 'timbre', comprehending instrumentation, orchestration and electronic media. Similarly, under 'Practical', 'melodic' would be complemented by 'harmonic', while 'poetic' would, as in Aristides' day, embrace both written and improvised composition. A modern version of Aristides' plan might then look as follows:

This entire field has sometimes been called *Musikwissenschaft*, the science of music, or musicology. Although it is all 'theoretical' in the sense that its method is thoughtful observation, only a relatively small part of this scheme is acknowledged as the province of the modern working theorist, namely the Theoretical–Technical (I.B), the Theoretical–Critical–Analytical (I.C.1), the Practical–Creative (II.A) and the Practical–Pedagogical (II.B) categories, which may be assumed under the catchwords 'theoretical', 'analytical', 'creative' and 'practical'. Yet many of the books from earlier times that are commonly referred to as 'theoretical treatises' address themselves to the whole area represented by the above outline. In this survey it will be important, therefore, to keep in mind three things: the conception of the theoretical function prevailing at a particular time, the audience for which a treatise was written, and the philosophical or practical goals of the author.

Theory, theorists

3. Antiquity.

This article cannot be a complete historical survey; it aims only to illustrate the variety of music theory through the ages, particularly its changing scope and methodology, although the central problem of tonal systems will be given special attention.

The earliest theorist for whom a significant body of writing has survived is Aristoxenus (4th century bce; *see also* Greece, §I, 6(iii)); much of his *Harmonic Elements* and fragments of his *Rhythmics* are extant. The *Harmonic Elements* concerns pitches as audible phenomena and their relationships to each other in melody; consequently it is dominated by the theory – he used the word *theōria* – of scales (*systēmate*) and keys (*tonoi*). If one goes beyond the theory of scales and keys to their use in the service of composition (*poiētikē*), he contended, one passes outside the science of harmonics to the science of music. He who possesses this larger science is a musician. The theory of music contained a number of components that

Aristoxenus did not specifically enumerate; so far as poetics or composition is concerned, it comprised melody and, one assumes, versification. His scheme of the science of music may be partly reconstructed as shown in .

Among the topics considered by Aristoxenus are high and low pitch, intervals, scales, keys, species of motion – diastematic and continuous – the nature of diastematic melody, concords, species of consonances, tetrachords, the genera and the shades of tuning. These are studied through the hearing and intellect: by hearing one judges the magnitude of intervals, by intellect one contemplates the functions of notes. Aristoxenus eschewed questions such as that which asks what makes a good melody, because he was concerned with describing exhaustively the medium – the materials from which melody is made. His motive was at least in part to counteract the theories of the Pythagoreans, who based their harmonic science on numerical ratios, and the 'harmonists', who dealt exclusively with the enharmonic scale. As a scientific tract the *Harmonic Elements* was unique in completely excluding mathematical speculation. It is unlikely that Aristoxenus reached musicians, though it would have pleased him; rather he was studied by those who aspired to be philosophers.

Theory, theorists

4. Hellenic period.

The scope of music theory widened with the Hellenistic writers of the 2nd and 3rd centuries. Claudius Ptolemy, the most systematic of these writers, took theory from the narrow sphere of tonal relationships to the larger one of natural philosophy. Musical observations were for him only one facet of the total natural universe. As an astronomer he recognized parallels between the order of planetary measurements and that inherent in musical ratios. Cosmology, human and world harmony, and aesthetics were all manifestations of musical organization.

Ptolemy fundamentally revised the methodology of musical investigation. Whereas Aristoxenus began with sense-experience of musical sounds and built a theory on it through dialectical analysis, Ptolemy saw a further function of reason as an aid to sense-observation itself. It was not enough to experience two sounding strings as consonant; it was necessary to measure their length numerically. Particularly in dealing with the smaller intervals, the imperfection of the senses demanded the aid of the intellect and of scientific instruments. For example, he was dissatisfied with the kanōn – i.e. the monochord – as a device for investigation. He recognized that Didymus made an improvement when he plucked and measured the string of the monochord from both left- and right-hand sides of the bridge, facilitating comparison of sounds. But this did not go far enough. Ptolemy constructed a 15-string 'polychord' that permitted comparison of like strings of different tension or length. While the first two books of Ptolemy's *Harmonics* differ little in content from the treatise of Aristoxenus (they are mainly about scales and tunings) the third book goes beyond these considerations to the relationship between observed sounds and other natural facts, and to the relationship of music to human needs. Thus music involves judgment of good form, which does not reside in the natural material but in the artist's choices; and it employs as tools or servants the

highest and most wonderful of our senses, sight and hearing, which among all the leading parts of the soul perceive and judge an object not according to desire but rather according to beauty (*Harmonics* iii.3). The genera of music are analogous to the virtues, the tetrachords to the aspects of the planets, and the greater perfect system is a microcosm for the ecliptic – the great circle formed by the intersection of the plane of the earth's orbit with the celestial sphere.

Aristides Quintilianus, who wrote *Peri mousikēs* ('On music') around 300 ce, continued the expansion of the subject of music theory. As is evident from the outline of his division of the field (given above), he was concerned not only with the purely theoretical or speculative, but also the practical. The science of music includes both. 'Theory defines the principles and rules of the art as well as its parts, and beyond that goes back to the origins and natural causes of the concord of all things. Practice, by following the rules of the art, aims to realize a goal, namely an edifying one [*paideutikon*].' Aristides' first book was concerned with the classic triad: harmonics, rhythmics and metrics. In the second book he proceeded to the practice of music, which for him meant education through music, developing right feeling in children as a preparation for right thinking. In the third book music is treated as an art of numerical relationships allied with other numerical arts; there is much speculation, for example, on masculine and feminine principles, temperance and beauty. Thus practical theory came to include pedagogical, aesthetic and psychological aspects of music. Both Ptolemy's and Aristides' treatises seem to have been directed towards a learned audience, the same readers who would have studied the *Almagest*. Whereas Aristoxenus had a message for the musicians of his time, the two Hellenistic authors give the impression of being aloof from contemporary musical practice.

The tonal systems described by the post-classical Greek authors differ in details, as might be expected for theoretical constructions made over a period of seven centuries. Cleonides (2nd century) attributed to Aristoxenus 13 keys or *tonoi*, one on each semitone step of the octave, and to his followers 15 keys, thereby extending the range by two more semitones. Ptolemy accepted only seven keys, because only that number was needed to produce the seven possible varieties of diatonic octave species within the central octave of the male vocal range. He also considered the boundaries of the double-octave *systēma teleion* or 'perfect system' to constitute an absolute pitch limit, so that transpositions of the 'natural' Dorian system to other keys would lose at the top the steps gained at the bottom (Table 2). Alypius (3rd or 4th century) adopted the system of 15 keys, each with 15 steps from dynamic *proslambanomenos* to *nētē hyperbolaiōn*. Each step is assigned two notational symbols, one vocal, the other instrumental. The total range exceeds the double octave by a 3rd below and a 9th above. All the systems, from Aristoxenus on, assume that three genres of melody are possible in each key: diatonic, chromatic and enharmonic; and most of them also assume various 'shades' of tuning for each genre. It is believed that all the theoretical schemes represent ideals rather than the realities of practice, though the notation of Alypius is borne out by surviving examples of music. The neatest scheme and the only one propagated in western Europe by Boethius is that of Ptolemy represented in Table 2. *See also* Greece, §I.

5. Early Middle Ages.

Boethius (*c*480–*c*524) inherited the tradition of the learned musical treatise, and his theory was a watershed. He knew a number of the treatises of antiquity, but those who read him in succeeding centuries did not. As a transmitter of ancient authority he could not be challenged until the 15th century, when scholars began reading ancient Greek sources again. The *De institutione musica* (*c*500) was a youthful effort. Like his even earlier book on arithmetic it was based principally on the work of the 2nd-century Greek Nicomachus. The two manuals were originally accompanied, it is believed, by similar manuals on geometry and astronomy, the other sciences of the Quadrivium. It is possible that Boethius intended his book as a teaching text for the study of music within the Quadrivium as part of the liberal arts curriculum, for Augustine of Hippo had accepted this as a suitable foundation for the study of theology; but it may have had no pedagogical aim.

There were some elements in Boethius's doctrine that appear to be original, such as the classification of music into cosmic (*mundana*), human and instrumental, and the rather thorough treatment of the physical basis of sound (*see* Music of the spheres). But the first four of the five books were largely based on the work of Nicomachus, whom Boethius frequently acknowledged. The first book was based on the brief *Manual* of Nicomachus, while the second to the fourth books are probably reworkings of a lost major treatise by the same author; the fifth book is a compendium, so far as it goes, and not without some misreadings, of the first book of Ptolemy's *Harmonics*. At no point, not even in an aside, did Boethius reveal the slightest interest in the musical practice of his time, which in any case would have been irrelevant to his purpose. Book 1 is a brief outline of the science of harmonics; book 2 concentrates on the arithmetical theory of proportions and the exposition of the intervals; book 3 is on semitones and other small intervals, particularly the comma; book 4 describes the Greek notation, derives the scale through the division of the monochord and briefly describes the system of *tonoi*, which Boethius called 'modes' (*modi*); book 5 goes over the foundations of harmonics again, this time as seen through Ptolemy, with his polemics against such ancient authors as Archytas and Aristoxenus. Boethius's treatise, however unoriginal and limited, is a concise, studious and dedicated exposition of difficult matter. If there were better compendia of the best of Greek theory in Latin, they did not survive.

Boethius was not, of course, the only source of Greek music theory for the writers of the Middle Ages. Martianus Minneus Felix Capella (4th to 5th century; *De nuptiis Philologiae et Mercurii libri ix*), Cassiodorus (*c*485–*c*580; 'De musica', chap.5 of bk 2 *De artibus ac disciplinis liberalium artium* of his *Institutiones*) and Isidore of Seville (*c*559–636; *Etymologiarum sive originum libri xx*), among others, supplied topical, etymological and, occasionally, technical information from Greek sources; and John Scotus Erigena (*c*810–77), a translator and commentator on Dionysius the Areopagite, in his writings divided music into 'natural' (*naturalis*), music praising God in the eight modes, and 'artificial' (*artificialis*), or instrumental

music. But Boethius, and he was not unworthy of it, became the principal fount and methodological model of music theory in the Middle Ages.

Boethius could provide a model only for that part of theory which underlies but does not give rules for composition or performance. The first surviving strictly musical treatise of Carolingian times is directed towards musical practice, the *Musica disciplina* of Aurelian of Réôme (9th century), but it bolsters this practical theory with concepts, definitions and rationalizations drawn from Boethius, Cassiodorus and Isidore. Aurelian's aim was to make the *cantor* – the singer – more of a *musicus* – the literate connoisseur whom Boethius placed in the highest class of musicians, one who investigated reasons and could make judgments of quality. Aurelian's first seven chapters contain a miscellany of traditional doctrine: the definition and classification of music, basic terminology, an introduction to the consonances and their ratios, and an enumeration of the Greek *tonoi* (called *toni*), the last based not on Boethius but on Cassiodorus. Although these chapters are preparatory, they relate only distantly to what follows in chapters 8 to 17, concerning the eight modes of plainchant, in 19, on the psalm formulae, and in 20, on chants of the Office and Mass in general. As an attempt to arrive at guidelines for usage, the portion from the eighth chapter onwards is more truly theoretical than the previous chapters, which, though based on traditional speculations, add up to no theory at all. Thus Aurelian pioneered a new kind of theory concerning the performance of plainchant. But because he did not use a nomenclature for the notes of the gamut, whether letters or Greek string names, he was forced to make his points with the utmost circuitousness, straining his readers' memories for countless passages of chant in order to fix his meaning concretely.

Hucbald (*c*840–930), writing at the end of the same century, saw that it was essential to establish a gamut, a pitch notation and a nomenclature if any meaningful discourse were to be carried on regarding plainchant. His *Musica* has a cyclical form, proceeding three times through the elementary principles of music. First he explained melodic intervals and simultaneous consonances and the distinction between these without reference to pitch names or a gamut by recalling, as Aurelian did, segments of chant (*GerbertS*, i, 104*a*–109*b*). Then he developed the gamut through dasia-like interval notation and spatial diagrams supplemented by the Byzantine Noneane syllables (109*b*–114*b*) and organized in ascending tone–semitone–tone tetrachords (see fig.1). Finally he used the Greek string names to locate the system within a pitch framework, this time organized according to the Greek–Boethian descending tone–tone–semitone tetrachords. In the course of this, he introduced letter signs, i, m, p, c, f, for the descending series *mesē* to *lichanos hypatōn* (our *a* to *d*) in order to make the existing neumes more specific in their pitch reference while retaining the temporal and vocal subtleties communicated by neumes.

Thus Hucbald used Greek theoretical concepts as transmitted by Boethius to organize a gamut previously carried in the memory, registered only in the keys of hydraulic organs. In so doing he revealed a dichotomy between the Greek-based *A* to *aa* system and a 21-note keyboard system starting with *C*, although he never referred to these letters but only to tone–semitone complexes. Whereas Boethius used the letters A to O and in another place A to P as geometrical points in monochord measurement,

Hucbald and certain other medieval writers (not to mention modern commentators) took these to be an alternative system for the Greek string names or even a letter notation. Indirectly the Boethian letters may have inspired the gamut *A* to *a* that must have predated that of Pseudo-Odo, Γ to *a* (see Table 3).

Hucbald's treatise is practical without being addressed to either performance or composition, and puts forward a system that made discourse about these possible. Thus it is purely theoretical in the modern sense of being concerned with precompositional tonal systems; at the same time it does not give the impression of being a primer, because it assumes a wide acquaintance with chant. It is the essay of an author who had something significant and fundamental to communicate to his colleagues, and, having accomplished this, went no farther.

What relationship there may be between Hucbald's treatise and the two anonymous works once attributed to him, *Musica enchiriadis* and *Scolica enchiriadis*, is uncertain, but they appear together in four of the seven theoretical manuscript anthologies that contain the *enchiriadis* texts (*see* Musica enchiriadis, Scolica enchiriadis). Hucbald's treatise seems almost to prepare the way for the *enchiriadis* tracts, but not altogether, because both their notation and their gamut depart from those of Hucbald, and they cover intervals, consonances and modes again. *Musica enchiriadis* broke new ground in providing the earliest instruction in the improvisation of organum, using the intervallically precise if cumbersome dasian notation. Whereas *Musica enchiriadis* is entirely practical in its thrust, the *Scolica*, a dialogue between master and disciple, proceeds from instruction in organum to definitions of mathematics (the Quadrivium) and a consideration of the ratios of intervals, classes of proportions, and the various types of mean. *Scolica enchiriadis* is thus the first of a genre of treatise in which complementary practical and theoretical approaches are merged; the first approach was obviously intended to train singers, the second to invite them to become educated in the Quadrivium.

The real successors to Hucbald's treatise were not the *enchiriadis* tracts but the *Dialogus* attributed to Odo and the *Micrologus* of Guido. Michel Huglo (C1971) showed that the *Dialogus* attributed to Odo is probably by an anonymous Italian from the Milan area, and that the Prologue attached to it in some manuscripts was written later by a different anonymous author as a preface to an antiphoner. The *Dialogus* tackles the same question that Hucbald confronted: how to help singers learn new chants quickly and correctly. Again a letter notation is part of the solution, with the letters Γ (*gamma*) followed by the double octave *A–a–a* (Table 3). To locate these letters in a diatonic system the author proposed a new method, which involved learning to sing the intervals by imitating the sounds of the monochord. The monochord was carefully divided according to a new set of rules, starting with two ninefold divisions to obtain the first two Pythagorean whole tones whose ratios are 9:8, namely Γ–*A* and *A–B*. Thanks to an easily accessible gamut, the author was able to give the clearest exposition so far of the determination of the modality of chant, including that of chants ending on the co-finals or transposed by B♮.

Guido of Arezzo's *Micrologus* deserves its fame, because its independence and originality of thought, breadth and clarity have rarely been equalled; it is also one of the few manuals whose context can be precisely established. It was written about 1026 to train a choir, probably that of Arezzo Cathedral, and includes some topics of traditional theory – intervals, scales, species of consonances, and the division of the monochord – but only in so far as they meet the needs of the choir singer. Guido explored several new areas: the emotional qualities of the various modes, the internal phrase structure of plainchant, the temporal meaning of the neumes, various types of repetition in chant composition, considerations underlying the composition of new chant, and a mechanical method of inventing melodies for a given text using the vowels *a, e, i, o, u (see* Guido of Arezzo). Two chapters on *diaphonia*, or organum, come closer to describing and illustrating real music than any previous account. In the last chapter, almost as an afterthought, Guido recounted the story of the hammers of Pythagoras and finally gave the numerical ratios of the consonances, using the values 12, 9, 8, 6.

The system of hexachords with which Guido is usually credited does not appear in any of his extant works. In the *Epistola ad Michaelem* he proposed the syllables *ut*, *re*, *mi*, *fa*, *sol*, *la*, derived from the hymn *Ut queant laxis*, as a mnemonic aid for locating the semitones in the central part of the gamut, *C–D–E–F–G–a* (see fig.2). He probably used the hand for the same reason, but neither the fully developed Guidonian hand nor the system of natural, hard and soft hexachords (*see* Hexachord and Solmization, §I) can be securely attributed to him. Both systems, though, are true to this method, for his theorizing was eminently practical. And there is hardly a trace of Boethius, whose book, he said, was 'not useful to singers, only to philosophers' (*GerbertS*, ii, 50*b*).

To reconcile the exigencies of practice with the Boethian tradition was the tendency, on the other hand, of a group of theorists from the Rhineland, among them Berno of Reichenau (*d* 1048), Hermannus Contractus (1013–54), Wilhelm of Hirsau (*d* 1091), Aribo Scholasticus and Johannes Cotto. Whereas Guido tended towards the octave and hexachord as tonally organizing structures, these men were fond of speculating with the antique species of 4ths, 5ths and octaves and of dividing their gamut into tetrachords. These they named in imitation of the Greeks; the two conjunct lower tetrachords were of the *graves* and *finales*, then after a tone of disjunction the upper two conjunct tetrachords were of the *superiores* and *excellentes*. But instead of starting from B, working upwards semitone–tone–tone, they started from A, working upwards tone–semitone–tone. This gamut is compared in a chart (Table 3) with the Greek system and other solutions before and after.

Berno in the *Prologus in tonarium* adopted the methodology of the ancient species of consonances but announced that modern authors counted the species differently, as shown in Table 4. His seven modern octave species were combinations of the species of 4ths and 5ths (first four), then of 5ths and 4ths (next three). These species agreed with the formation of the modes. Hermannus developed more explicitly the rationale for this arrangement: the first species of 4th was formed from the first step of the tetrachord of the *graves* and the first of the *finales*; the first species of 5th

from the first of the *finales* and the first of the *superiores*; the first species of octave from the first of the *graves* and the first of the *superiores*, etc. Similarly, the first authentic mode was built from the first of the *finales* to the first of the *excellentes*, and so on. Hermannus assigned the names Hypodorian, Hypophrygian etc. to the octaves *A–a, B–b* etc., this being in agreement with the anonymous author of the commentary to the first 'Quidam' in the *Alia musica* (ed. Chailley, 121ff). In explaining why there should be two modal octaves *d–d'*, one Dorian, the other Mixolydian, Hermannus pointed out several important characteristics of modes: the Dorian made frequent use of its final *d* and middle pitch *a* for colons, commas and conclusions and emphasized by melodic contour its species of 4th and 5th, *a–d'* and *d–a*, while the Hypermixolydian was marked by returns to *g* and *d'* and the species of 4th *d–g* and 5th *g–d'*.

The most scholastic author of the group is Aribo, who dedicated his *De musica* to Ellenhard, Bishop of Freising (*d* 1078), and probably wrote it in Freising between 1068 and 1078. He included much of Hermannus's material in a more elaborately argued and minutely and didactically subdivided format, including many arresting and cogent diagrams. It clothed what previously was presented informally in an erudite and correct academic garb. Of particular significance is the great attention paid not only to the division of the monochord but to the measurement of organ pipes, a new topic for a general treatise. As a commentary and critique perhaps of Boethius's famous threefold classification, of players of instruments, inventors of songs and the true musicians (those who can judge and reason about music), Aribo divided musicians into 'natural' (*naturalis*) and 'artful' (*artificialis*). The 'natural' were mere minstrels (*histriones*), while the 'artful' understood all the intervals, modes and steps, knew by heart the qualities of hexachords, and could distinguish worthy melodies and correct corrupt chants. His treatise ends with a series of glosses on difficult passages in Guido's *Micrologus*.

A more extensive gloss on Guido, with many original comments, is the *De musica* of Johannes Cotto. The manuscript tradition, the repertory of chants quoted, little-known notational devices described, the geographical distribution of the authors he used, and other circumstances suggest that it was produced about 1100 by a monk in the St Gallen region to educate the boys of a cathedral or choir school. Casually unsystematic about such matters as the gamut and prone to technical errors, Johannes displayed great competence in the plainchant repertory, and his views about the correction of the readings and performance of chants and the norms of the modes reveal more about the practice of composition, notation, transcription and performance in his time than any other book of its age.

Theory, theorists

6. Early polyphony and mensural music.

With the 12th century, writing about music entered a new phase dominated by the problems of improvising and writing organum and discant. The consonances recognized by Greek theory – the unison, octave, 5th and 4th – remained the cornerstones of note-against-note concurrences, but with the preference for contrary motion. Other intervals, particularly 3rds and 6ths, were tolerated, as in the anonymous 13th-century *Quiconques veut*

deschanter (*F-Pn* lat.15139). In melismatic organum, the instructions and examples of the Vatican organum treatise (*I-Rvat* Ottob. lat.3025; ed. Zaminer) showed that a framework of note-against-note organum existed as a middleground behind the improvised melismas; indeed each word of text in the examples ends on a unison, 4th, 5th or octave (*see* Discant, §I, 2, and Organum, §§6 and 7).

It was only about the second quarter of the 13th century, with Johannes de Garlandia's treatise *De mensurabili musica*, that a new consonance theory appeared. Perfect consonances were now the unison and octave, imperfect were the major and minor 3rds, while the 4th and 5th were intermediate (*medie*), being partly perfect, partly imperfect. The dissonances were also classified; imperfect: major 6th, minor 7th; intermediate: whole tone, minor 6th; perfect: semitone, tritone, major 7th (the terms used are *diapason*, *ditonus*, *ditonus cum diapente* etc.). Intervals compounded with the octave were classed together with their corresponding simple intervals. Johannes de Garlandia's symmetrical classification of consonances and dissonances into perfect, intermediate and imperfect is one of many instances of his application of the scholastic method taught in the universities; indeed his book is believed to have been intended as a text for the University of Paris. Each genre of music is defined by dividing it into species, and each of the species is then defined by further division. For example, in his first chapter the genus mensural music (*musica mensurabilis*) or organum is divided into three species: discant, copula and organum. Discant is then divided into six *maneries* (the rhythmic modes), of which the first, second and sixth are measurable (*mensurabiles*), and the third, fourth and fifth are beyond measure (*ultra mensurabiles*). These are then identified more concretely with music examples. In subsequent chapters Johannes de Garlandia applied a similar method to the description of the notes and ligatures that underlie certain rhythmic modes. Thus the longa may be *recta*, *duplex* or *plicata* and the ligature may be *cum proprietate* or *sine proprietate*. By this method he realized a clear exposition of a potentially confusing subject, even if many of its points now seem obscure because of his language. The result is a highly theoretical exposition, independent in great part of previous writing, and exhaustive beyond the possibilities of practical application.

Johannes de Garlandia's disciplined focus on enumeration, definition and classification is all the more striking when compared with the treatise of Anonymous IV (*c*1270–80; ed. Reckow), which is clearly prescriptive as well as descriptive, at once a guide to composition and a commentary on existing compositions, excerpts from some of which are actually quoted. It includes an elementary introduction to arithmetical proportions and to the rules of discant, and was perhaps meant for the training of singers at Bury St Edmunds, where the author worked. The *Ars cantus mensurabilis (c*1250) of Franco of Cologne, for all its insistence on innovation and the importance of his step to unequivocal rhythmic reading of ligatures, broke no new ground either in redefining the nature of theory or in methodology. This can be said also for the St Emmeram Anonymous (1279; ed. Yudkin).

Deserving closer attention as a new type of treatise is Jerome of Moravia's *Tractatus de musica*. Written in Paris shortly after 1272, possibly in the monastery of the rue St-Jacques, it sums up the contemporary state of

music theory, or at least as much as the compiler thought relevant. It is made up largely of carefully extracted and identified passages, and a few entire treatises, by authors from Boethius right up to immediate contemporaries, such as the Aristotelian commentary by Thomas Aquinas, *De celo et mundo*, completed in 1272 (hence the earliest probable date for Jerome's compilation). The first chapter, for example, compares definitions of music and the musician by Boethius, al-Fārābī, Richard of St Victor, Isidore, Hugh of St Victor, Guido, Johannes Cotto and Johannes de Garlandia. Its theoretical topics include the etymology of 'music', its inventors, its parts, instruments (the latter two based on Isidore), the classification of music according to al-Fārābī (*activa* and *speculativa*), Boethius, Richard of St Victor and Aristotle, its effect and its subject. The technical aspects begin with the tenth chapter, surveying the gamut, solmization, mutation, the intervals, the consonances (Nicomachus, Philolaus and Ptolemy, whom he knew through Boethius), the species of arithmetical proportions and means, the ratios of intervals (Boethius), monochord division (Johannes Cotto), the Greek *tonoi* (Boethius), the modern modes (Johannes), the psalm tones, composition of new chants (Johannes, with apparently original commentary), the duration of notes and rests, voice quality and ornaments in the performance and notation of plainchant (original), discant (full text of four treatises: Anon., *Discantus positio vulgaris*, Johannes de Garlandia, *De musica mensurabili positio*, Johannes de Burgundia (or Franco), *Ars cantus mensurabilis* and Petrus de Picardia, *Musica mensurabilis*), Greek notation (Boethius), and finally the construction, tuning and technique of the fiddle and rebec (original). Jerome thus discussed almost all that in this article has been defined as theory: the precompositional, compositional, executive and critical.

Theory, theorists

7. 14th century.

Jerome of Moravia's treatise must not lead to the conclusion that the 14th century inherited this broad curriculum. Only one manuscript is known of the treatise, left to the Sorbonne by Petrus of Limoges in 1304 (*F-Pn* lat.16663). It was not an isolated example of the musical summa or encyclopedic compilation of learning. Walter Odington's *Summa de speculatione musice* (again only one complete copy, two fragmentary; early 14th century) is another such work, with greater emphasis than Jerome's on the mathematical side, more summary and synthetic on the practical. The most remarkable example of the summa is the *Speculum musice* of Jacques, believed to have been written in Liège in his old age, not before 1330, after he had spent most of his life perhaps in Paris. It is the biggest and most complete theoretical work of the Middle Ages. The critical edition by Roger Bragard (1955–73) occupies eight volumes. Jacques de Liège divided music into *theorica*, whose subdivisions were heavenly (*celestis*), cosmic (*mundana*), human, and sonorous or instrumental; and *practica*, whose subspecies are *plana* and *mensurabilis*. He spent little time on the non-sonorous categories and devoted most of the first five books to the theory of the sonorous realm, the sixth book mainly to the modes – ancient, intermediate and modern – the seventh book to measured music. Jacques de Liège's normal method was to cite one or more authorities and to make an extensive gloss on each. He displayed broad erudition; among the Greek sources he cited are Plato's *Timaeus*, Aristotle's *Physics*,

Nicomachean Ethics, *Politics*, *De anima*, *Categories*, *De coelo*, Euclid's *De arte geometria* in Boethius's translation; among the Roman writers, Virgil, Lucan, Seneca, Persius, Priscianus; among medieval writers, Augustine, *De musica*, Simplicius, Macrobius, Boethius, Gregory the Great, Jordanus Nemorarius, Petrus Comestor, Robert Kilwardby, Ibn Rushd, al-Fārābī. Among the musical theorists he credited some by name; others he honoured only by quotation or paraphrase. They include Guido, Hermannus, Johannes Cotto, Franco, Pseudo-Aristotle, Philippe de Vitry and Prosdocimus de Beldemandis. Some of the questions he proposed yielded to his method; others, such as 'Why does a diatessaron sound more consonant above a diapente than below?' (vii.8), elude his dialectics. Jacques was not just a dispassionate scholar, however; perhaps the best-known chapters (vii.9ff) are his angry diatribes against the mensural practices of the 'moderni', the composers and theorists of the Ars Nova.

More characteristic of the 14th century than Jacques de Liège's encyclopedic approach are the fundamental revisions of practical theory by Johannes de Muris, Johannes de Grocheo, Marchetto da Padova and Philippe de Vitry. Johannes de Muris, a *magister artium* of the University of Paris, left a *Musica speculativa secundum Boetium* (*GerbertS*, iii, 249–83; completed 1323), known to have been used in university curricula, for example at Kraków, Prague, Vienna, Leipzig and Erfurt. Johannes was not content with repeating the traditional numerical theory, but applied his mathematical skills to the observation of contemporary musical practices, as he also did to the observation of eclipses. His *Notitia artis musice* (1321; ed. in CSM, xvii), a youthful work, takes an objective stance on the controversial question of the duple versus triple division of note values. 'Time belongs to the genus of continuous things, therefore may be divided in any number of equal parts' (*GerbertS*, iii, 300*b* = CSM, xvii, *Notitia artis musice*, chap.13, p.104). He showed that the option between duple and triple operated at four levels or *gradus*: *maximodus*, *modus*, *tempus* and *prolatio (see* Notation, §III, 3). The relation of the shortest note, the *minima*, to the longest, the triplex long, was in the ratio of $1:3^4$ or 1:81. Johannes de Muris may have derived the concept of four levels of musical time from his friend Philippe de Vitry, although the treatise *Ars nova* attributed to him may be spurious. There the author implied a fifth level, at which the *minima* was divided into *semiminime*. Its principal innovation was the proposal of four signs whereby the singer could recognize immediately the way in which long and *brevis* were to be divided (Table 5).

Johannes de Grocheo in his untitled treatise of about 1300 rejected the Boethian classification of music into *mundana, humana* and *instrumentalis*, noting that Aristotle denied the existence of celestial music; he also rejected the dichotomy between the immeasurable and the measured, because all music and art depend on measurement. Every region, linguistic culture and city should have its own classification; for Paris he proposed three genres: common (*vulgaris*) music of the city; measured (*mensurata)*, composed, regular or regulated music; and ecclesiastical (*genus ecclesiasticum*), made up of the other two brought to their highest perfection for the praise of the Creator. Thus the study of music was the taxonomy of compositional genres. In the first category he distinguished between song (*cantus*) and melody (*cantilena*), the former including *cantus gestualis* (epic poems), *cantus coronatus*, monophonic conductus and

cantus versicularis (popular songs), while within *cantilena* he cited the rondeau (*rotundellus*), *estampie* (*stantipes*), and *ductia*. For each type he discussed the function, versification, form and manner of composition, but his descriptions are subject to a variety of interpretations. Measured music includes the motet, organum and hocket. Among the genres of ecclesiastical music, which he admitted varied with local custom, he named hymns, responsories, versicles, antiphons and parts of the Ordinary and Proper of the Mass.

The growing interaction of folk, popular and other secular music with church music documented by Johannes de Grocheo was bound to arouse discussion of the conflicting musical systems that existed side by side; even within church polyphony the favourite cadence form, that of major 6th progressing to octave, made it necessary to recognize the alteration of the gamut of the Guidonian hand, or *musica vera*. Magister Lambertus (*c*1270) argued that the practice of *falsa musica* or *falsa mutatione* was 'necessary, because of the search for good consonance' (*CoussemakerS*, i, 258*a*) and defined it as making a semitone out of a whole tone or vice versa. Odington recognized in his gamut E♭, F♯ and C♯ as well as B♮ (ed. in CSM, xiv, 97–8). Johannes de Grocheo associated the need for *musica falsa* with the *estampie* and *ductia* and claimed that any tone could be made into a semitone through the rounded flat sign known as *b rotundum*, and any semitone into a tone through the square-shaped sign known as *b quadratum*.

In his *Lucidarium* (1326–7) Marchetto da Padova began to confront the theoretical implications of this usage by dividing the whole tone into five *dieses* (Tractatus II, chap.5; ed. Herlinger, 130–41) of which two, or on some occasions only one, would comprise the melodic semitone from *mi* to *fa*. He also implied, as indicated in ex.1, that the ratio for a semitone comprising two *dieses* was 18:17. While these formulae are mathematically incompatible with each other and with Pythagorean calculations, they indicate clearly enough that Marchetto preferred a melodic semitone to amount to less than half of a whole tone. Marchetto's calculations aroused objections from his Paduan compatriot Prosdocimus de Beldemandis, who adhered to the ratios of Pythagorean intonation and applied them to two chromatic monochords: in one the minor semitone preceded the major, in the second the opposite. Then he merged the two to provide both a flat and a sharp between each note of the regular monochord (*Parvus tractatulus de modo monacordum dividendi*, 1413; ed. Herlinger, 72–118). In his *Contrapunctus* (1412; ed. Herlinger) he had shown that any note could become a *mi* by placing the *b quadratum* before it, or a *fa* by placing the *b rotundum* before it.

Theory, theorists

8. 15th century.

The 15th century inherited several theoretical difficulties that had not been squarely faced; one was the definition of consonance. The 3rds and 6ths were accepted in counterpoint as imperfect consonances: the major 6th somewhat reluctantly by Anonymous IV and fully by the *Ars contrapuncti secundum Johannem de Muris* (*CoussemakerS*, iii, 60), Anonymous II (late 13th century; *CoussemakerS*, i, 312), and Anonymous XIII (14th century;

CoussemakerS, iii, 496); the minor 6th was admitted by the anonymous *Ars contrapunctus secundum Phillippum de Vitriaco* (*CoussemakerS*, iii, 27) and the anonymous *Ars discantus secundum Johannem de Muris* (*CoussemakerS*, iii, 70); while the 4ths were rejected. Yet no theoretical justification had yet appeared. Walter Odington was on the verge of one when he called the 3rds and major 6th 'concordant discords' (*concordes discordiae*: ed. in CSM, xiv, 75), and recognized that since the 3rds are close to the sesquiquarta and sesquiquinta ratios (in which the difference is one) many considered them consonant; and, he added, 'if in numbers they are not found consonant, the voices of men with its subtlety leads them into a smooth mixture and full consonance' (CSM, xiv, 70–71).

Allied to the problem of consonance was that of tuning. The theoretically accepted tuning, even for Odington, was the Pythagorean, in which the ditone was 81:64 and the semiditone 32:27, both harsh-sounding. Also associated with the use of imperfect consonances was the use of *musica ficta*, which demanded potentially a full chromatic octave. Boethius provided no model for the division of the octave into semitones, whether equal or unequal.

While the problems just mentioned all involved mathematics in one way or another, conflicts also arose between traditional pedagogy and the realities of musical practice. Polyphony had inherited from plainchant a system of modes; but composers, even when basing their work on chant melodies, could not reconcile the purity of the modes with the desire for sweet and full concordance and smooth linear flow. The primacy of the modal octave *d–d'*, inherited from Byzantine music, conflicted with the C orientation apparent in several keyboard gamuts as early as the 10th century. The mutations of the hexachord system defied the limits of the octave and destroyed modal consistency, often going beyond the single flat of the Guidonian gamut to as many as three flats and three sharps, requiring hexachords starting on B♭, E♭, D and A. Moreover the single species of hexachord, *ut–la*, rendered meaningless the traditional species of 4ths, 5ths and octaves, and it was not clear how the modular tetrachord fitted into the modern systems, which now descended below Γ (*see also* Solmization, §I). The admission of the duple division of time into written art music in the 14th century opened the gates to combinations of duple and triple divisions at several levels and to questions of relation of duration to speed of performance. This subject was becoming so complex that it was tempting to subject it to mathematical analysis.

Ugolino of Orvieto, author of the *Declaratio musice discipline* (*c*1430; Seay, ed.: CSM, vii), was on the threshold of the recognition of these problems. He discarded the tetrachordal gamuts, extended the normal range down one step to *F*, and alternatively recognized a further extension down to *C*, a 4th below (ii, 34). He permitted hexachords to begin on D, E, A and B♭ as well as C, F and G. Appended to his treatise in several of the manuscripts was a *Tractatus monochordi* that developed, in an elaborate and musicianly fashion, the three monochords described by Prosdocimus – of which the third was, according to Ugolino, more useful for organs than for singing (*see* Temperaments and Enharmonic keyboard). A fourth monochord added notes midway between B and C and E and F respectively, which Ugolino said were not sung by the moderns but had

been by the ancients; this was a reference to the enharmonic genre of classical Greece.

Ugolino was in step with his age also in reviving the Quadrivial aspect of music, for the Boethian curriculum of arithmetical proportions of intervals and the metaphysics and physics of music are thoroughly explained in the fourth and fifth books, with many new insights drawn from the works of Aristotle and an otherwise unknown author cited as Petrus Hispanus (probably Petrus de Osma). Ugolino anticipated the early Renaissance also in separating *musica theorica* from *musica practica*. The first two books cover the Guidonian curriculum of the choir school brought up to date by Johannes Cotto and the discant and counterpoint tutors. The third book is a commentary on the mensural music treatise of Johannes de Muris. These three books constitute a summa of *musica practica*; the last two are a summa of *musica theorica*.

Reading the treatises of the 13th and 14th centuries leads one to question how much of Boethius was studied or understood during those years of swiftly changing musical practices or how relevant the book was considered. Only Jacques de Liège gave evidence of having studied all of it. Although he admitted that he came on it late in his studies, it must have been available in every major monastic library. For a practising musician there was no compelling incentive for studying it. Careful study of Boethius was a phenomenon of the Italian Renaissance, and led to a search for the texts and authors whom Boethius mentioned, sometimes with praise as he did Nicomachus and Ptolemy, often deprecatingly, as Aristoxenus and Archytas.

The revival of Boethius elicited two opposite reactions: it led to his adulation, as in the writings of John Hothby, Johannes Gallicus, Nicolaus Burtius, Giorgio Anselmi, and in his youth Franchinus Gaffurius; it also started an anti-theoretical movement. The latter was personified in Bartolomeo Ramos de Pareia, a Spanish mathematician who settled and lectured in Bologna. The title of his *Musica practica*, published there in 1482, is misleading, because the first of three parts is virtually all *musica theorica*, but conclusions are reached empirically rather than through citation and explanation of authorities. It is not lacking in citations, for the book gives evidence of wide reading, but more often than not Ramos cited other authors only to disagree with them. He discarded both tetrachordal gamut structure and hexachordal solmization, replacing them with an octave system of eight syllables, *psal-li-tur per vo-ces is-tas*, based on *C*, from where his gamut started, a 5th below Γ, to accommodate the range of contemporary organs and 'polichorda'. Mutation was accomplished by substituting *psal* for any of the other syllables.

Ramos revised Boethius's monochord division, which in any case he found too laborious and subtle for young musicians, to yield most of the imperfect consonances of diatonic music in their simple ratios: 5:4 (major 3rd), 6:5 (minor 3rd), 5:3 (major 6th) and 8:5 (minor 6th), and he constructed out of this division a new chromatic monochord (*see* Temperaments, §2, and Just intonation), which, like his other innovations, caused him to be attacked by his fellow-theorists Hothby, Burtius and Gaffurius. Although only Giovanni

Spataro took up his defence at that time, many echoes of his theories, tempered in the forge of debate, found acceptance in the 16th century.

Johannes Tinctoris, in a series of 12 treatises (*c*1472–84) that exhausted current knowledge of musical practice, continued the empirical trend. His scepticism of the wisdom of the past was not confined to such mirages as *musica mundana* but to the entire repertory and foundation of older music, which he found inept and unworthy of performance. If he was fond of quoting the ancient Greek theorists and philosophers and even Boethius, the citations were more rhetorical ornaments than underpinning for his theories, which were founded squarely on the realities of everyday performance, composition and improvisation. Thus his citation of authorities is rendered pointless, as when he preferred Ptolemy's opinion reported by Boethius, that the 11th is a consonance, to that of Boethius himself, who considered it a dissonance, but finally rejected it from counterpoint as 'intolerably harsh' (*Liber de arte contrapuncti*, 1477; ed. in CSM, xxii/2, bk 1, chap.5, p.26). Tinctoris's great merit was not erudition but acute observation and analytical description. Thus his penetrating dissection of how the dissonant suspension, for which he had no word, works on various levels of time value and in different proportions and prolations, and his recommendations for when to use or avoid it, represents theorizing of the highest order (ibid., chaps.23–9, pp.121–38). His important distinction between the standards of consonance and dissonance treatment in improvisation, *super librum cantare*, and written composition, *res facta*, was an important step in removing the art of counterpoint from trial and error. The *Proportionale musices* (*c*1473–4) was an exhaustive statement of the system of temporal relationships and their notation that reached the ultimate point of exploitation about that time. But the *Liber de natura et proprietate tonorum* (1476) said little that was new and did not come to terms with the nature of modality in polyphonic music.

It was Tinctoris who inspired Gaffurius to deepen his theoretical studies. From 1480 for 20 years Gaffurius was engaged in a constant search for the best truths of the past and tried to reconcile these with the most advanced knowledge and practices of his time. From almost complete dependence on Boethius in his *Theoricum opus*, he progressed in the *Theorica musice* of 1492 to the use of several previously unknown Greek treatises in Latin translation. He profited most from Francesco Burana's Latin version of the musical treatise of Bacchius, Ficino's Latin translation of Plato, Ermolao Barbaro's Latin translation of Themistius's *Paraphrases* on the *De anima* of Aristotle, and Pietro d'Abano's translation and commentaries on Aristotle's *Problems*. Added to his careful and critical reading of Boethius, they informed his work with a freshness of thought that merits our calling him the first real humanist in music. In preparation for his final speculative work, *De harmonia musicorum instrumentorum opus* (1518), he had translated for him the *Harmonics* of Ptolemy and the musical treatises of Aristides Quintilianus, Manuel Bryennius and the author now known as Bellermann's Anonymous. He also used Giorgio Valla's translation of Cleonides and Valguglio's of Plutarch. To cite only a few examples of the fruits of his studies, Gaffurius was able to communicate to Western musical readers for the first time Themistius's sophisticated theory of sound, the shades of tuning described by Ptolemy, including the syntonic diatonic soon to be championed by Spataro (see fig.5), and a glimmer of how the Greek tonal

system differed from that of the medieval modes. The dynasty of Boethius was finally broken.

9. 16th century.

Hardly an author on music in Italy after 1500 escaped the powerful tides of the revival of ancient learning. The first half of the century was particularly swayed by Ptolemy's argument that, since sound is sensation, judgments concerning sounds should be made by the sense of hearing with the assistance of the reasoning faculty. The Pythagorean view, which had dominated earlier speculative theory, was that only the reason could make a final judgment, because the senses are easily corrupted. This principle had a particularly profound effect in the investigation of tuning. Even Gaffurius, who never departed from his advocacy of the Pythagorean tuning, recognized that keyboards were tempered by flattening the 5ths (*Practica musice*, 1496, bk 2, chap.3). Spataro, a disciple of Ramos, upbraided Gaffurius for saying that the major and minor 3rds in the ratios 81:64 and 32:27 were inaudibly different from 5:4 and 6:5 (*Errori de Franchino Gafurio*, 1521). He maintained that singers used only the latter, because they were 'softer' (Error 19, f.20*v*; Error 23, f.22*v*). Indeed Spataro identified the syntonic diatonic tuning of Ptolemy as 'that which is applied in musical practice today' (Error 16, f.21*v*).

Lodovico Fogliani, without citing either Ptolemy or Spataro, defended a similar tuning on the grounds that the ear is the natural judge of consonance and dissonance and esteems the 3rds and 6ths as consonances no less than octaves and 5ths; therefore it demanded that these intervals be in their best intonation (*Musica theorica*, 1529).

Gioseffo Zarlino too advocated the syntonic diatonic tuning (*Le istitutioni harmoniche*, 1558), but Giovanni Battista Benedetti soon proved that it was impossible to sing polyphonically with this intonation without the pitch slipping, and that therefore the tuning had no practical application in modern music (letter to Cipriano de Rore, *c*1563; *Diversarum speculationum*, 1585). Vincenzo Galilei raised other objections and, convinced that equal temperament was the only solution for instrumental music, proposed a uniform semitone of 18:17 for placing the frets on a lute (*Dialogo della musica antica et della moderna*, 1581, p.49); voices, he admitted, strove for a juster intonation that, however, could not be defined. Giovanni Maria Artusi, although a disciple of Zarlino, later came to a similar conclusion (*L'Artusi*, i, 1600, f.34*r*). Both Galilei and Artusi supported their theories with the authority of Aristoxenus, whose *Harmonics*, translated in 1562 by Antonius Hermannus Gogava, implied an octave divided into equal semitones.

However much they believed in equal division, one of the practical problems that defied theorists schooled in Boethius was that no integer could be found between the terms of a superparticular ratio that would divide it equally. So the Pythagorean whole tone, 9:8, could only be split into a lesser and greater but not two equal semitones. Euclid's *Elements*, printed in 1482 in a 13th-century Latin translation by Johannes Campanus, offered geometrical constructions to make this division, and these were applied to this musical problem by Jacobus Faber Stapulensis (*Musica*

libris demonstrata quatuor, 1496), Erasmus Horicius (*Musica*, *I-Rvat* reg.lat.1245, *c*1504–8) and Henricus Grammateus in *Ayn new kunstlich Buech* (1518).

At the moment when *musica ficta* hexachords became accepted on almost every step (Pietro Aaron in *Lucidario in musica*, 1545, recognized them on A, B, D and E), the nature of modality in polyphonic music began to be clarified, first by Aaron (*Trattato della natura e cognitione di tutti gli tuoni di canto figurato*, 1525), then by Heinrich Glarean (*Dodecachordon*, 1547). Leaning on the tradition that in ancient times there had been as many as 13 or 15 'modes', Glarean finally faced the problem of the finals on A and C. Although he claimed to understand it, he misrepresented the Greek tonal system. This did not prevent him from constructing a well-ordered array of 12 practicable modes, and showing how the great composer Josquin could endow them with every variety of emotion and musical fantasy.

Only when Girolamo Mei circulated his treatise *De modis musicis* (completed 1573) among a small circle in Florence did the truth, that the plainchant modes and those of Glarean bore no resemblance to the Greek 'modes' or *tonoi*, begin to penetrate musical, literary and scientific circles. Mei had studied in Greek every surviving ancient piece of writing on music and had concluded that the Greek *tonoi* were transpositions of one system higher or lower than the normal or 'Dorian' range. Francisco de Salinas (*De musica libri vii*, 1577), who also read Ptolemy in the original Greek, clearly showed that the *tonoi* were not modes, but reproductions of the same system at different levels of pitch, although he attributed to the octave species a modal function.

Zarlino first accepted the 12 modes of Glarean (*Le istitutioni harmoniche*, 1558); later he renumbered them (*Dimostrationi harmoniche*, 1571) so that the series started on C. But the removal of an antique precedent tended to discredit the modes towards the end of the 16th century. Galilei (*Il primo libro della prattica del contrapunto intorno all'uso delle consonanze*, 1588–91, *I-Fn* Gal.1, ff.99–100; ed. Rempp, 70–72) with rare candour proclaimed that the plainchant modes were meaningless in modern polyphonic composition.

If 16th-century humanism deprived the modes of one of their main props, it gave legitimacy to the technique that helped destroy them – chromaticism. The medieval tradition was that the chromatic and enharmonic were abandoned by the ancients because they were difficult and ungratifying to the ear. But anyone reading Plutarch's *De musica* would have gathered the opposite. The enharmonic, he said, was the most beautiful of the genera, practised by the ancients because of its nobility but later undeservedly neglected (ed. Lasserre, chap.38). Gaffurius, taking his cue from this source, said it was the most artful of the genera, favoured by the most distinguished musicians but unknown to the common class of them, who could not discern the small intervals (*De harmonia*, ii, 8, f.xiv). The principal champion of the chromatic and enharmonic was Nicola Vicentino (*L'antica musica ridotta alla moderna prattica*, 1555), who modernized the two 'dense' genres by dividing the entire octave, not merely the dense segments or *pycna* of the tetrachords as the ancients did, into semitones

and microtones. Salinas followed a similar procedure. The special instruments that Vicentino built and that were used by several distinguished musicians, notably Luzzasco Luzzaschi and Carlo Gesualdo, translated the exotic genres from antique theory into modern practice.

As has been seen, 3rds and 6ths and their compounds were considered consonances in the practical handbooks for some time. But in *musica theorica* the 3rds and 6ths were still in a limbo, because they were outside the accepted Pythagorean ratios, those whose terms were made up of the numbers 1 to 4. Gaffurius, for example, although he admitted that the 3rds and 6ths were excellent in sound, attributed to them no perfection of ratio, indeed no determinable ratio, and, therefore, they were irrational (*De harmonia*, i, 3, f.5*r*). Fogliani was able to surmount the difficulty by proving that sound had no material existence but was an 'accident' of violent motion and therefore not subject to mathematical, only to aural, judgment (*Musica theorica*, 1529, ii, 1–3, ff.12ff). What the community of musicians and composers considered consonant was indeed so.

Zarlino took a step backwards, however, by reinstating the dominance of *ratio* over *sensus*, rationalizing a new numerical limit for consonance: the *senario*, or numbers 1 to 6, which took in the 3rds and the major 6th. This required that he hypothesize a 'natural' tuning, Ptolemy's syntonic diatonic, in which these imperfect consonances were 'just' or 5:4, 6:5 and 5:3. When this was shown to be impractical, the *senario* theory too had to fall. Galilei opposed any limits, arguing that all musical intervals, whether within or outside the *senario*, were natural. He contended that there was theoretically an infinity of consonances (*Discorso intorno all'opere di Messer G. Zarlino*, 1589, pp.92–3). Zarlino's practical theory of counterpoint, based on the premise of the *senario*, severely limited the introduction of dissonances to suspensions and passing notes; Galilei was much more pragmatic about them, opening the way to the free uses of the *seconda pratica* (*Discorso intorno all'uso delle dissonanze*, 1588–91). Thus Zarlino's heroic effort to bring *musica practica* and *musica theorica* together again was a failure because he bent theory to suit practice and misrepresented practice to fit the theory.

The aspect of the theory of music that was most affected by humanism was concerned with the goals and effects of music. Hardly a book on music failed to recount some of the stories that the ancient philosophers told about its miraculous therapeutic, moral or corrupting effects. The late 15th and early 16th centuries were dominated by the Platonically inspired judgment that only music that strengthened moral character was desirable. But those who followed Aristotle, and particularly commentators on the *Poetics* after 1550, emphasized the positive value of all kinds of music, particularly that which could induce the catharsis of the passions and could move listeners to feel the affections of a poem or a dramatic character. Mei condemned polyphonic music as impotent for this, because the different vocal parts pulled in opposing directions; only monodic music could have the power that Greek music possessed. Galilei, who espoused Mei's ideas, wrote a vehement critique of polyphonic music (*Dialogo della musica antica et della moderna*, 1581) but was rather vague about what should take its place. More than at any time in the past, practical theory became prescriptive, the cutting edge of innovation.

10. The Baroque period.

In the first half of the 17th century musical practice caught up with the aesthetic ideals proclaimed in the second half of the previous century and practical theory caught up with improvised practice. The ideal of moving the affections was realized in the *seconda pratica*. Claudio Monteverdi (Preface, *Quinto libro de madrigali*, 1605) used this term to distinguish his own freer approach to contrapuntal writing, particularly dissonance treatment, from the practice taught in Zarlino's *Istitutioni* in which dissonances were very strictly controlled (*see* Prima pratica). His brother, Giulio Cesare Monteverdi, in commenting on this statement ('Dichiaratione', *Scherzi musicali*, 1607), explained that in the *seconda pratica* harmony is a servant of the text, while in the *prima pratica* the harmony is mistress over the text. The two prefaces were written in response to the criticisms of Giovanni Maria Artusi (*L'Artusi*, 1600), who enumerated some of the new style's characteristics more explicitly than its defenders: unprepared or improperly prepared suspensions, unprepared diminished 5ths and 7ths, false relations, difficult melodic intervals, incorrect part-writing after a flat or sharp, abuse of note-against-note chordal style, and other departures from the learned manner of writing counterpoint. Although Artusi described the style in negative terms, he made the astute observation in his dialogue that a number of these departures were characteristic of improvised music or improvised elaborations of written music. Thus some of the freely introduced dissonances were *accenti* and other grace notes normally added by the singer. Several singing teachers had written tutors for embellishing written music, for example Girolamo Dalla Casa (*Il vero modo di diminuir*, 1584). Other dissonances resulted from following the rules of counterpoint *a mente* or *supra librum* rather than the rules of *res facta*, or from imitating the free clashes allowed in instrumental figurations and runs. Thus many of the innovations of Monteverdi had been frequently heard before, but seldom written. In this sense the theory of written counterpoint was simply adjusting to the realities of performing practice.

In due time a theory developed to account for the new licences, but the *prima pratica* remained a viable option. Thus Girolamo Diruta (*Seconda parte del Transilvano*, 1609) considered *contrapunto osservato* (strict counterpoint) and *contrapunto commune* (the free modern style) as alternatives for the modern composer. Adriano Banchieri (*Cartella musicale*, 1614) and Marco Scacchi (*Epistola* to Werner, *c*1648; *Breve discorso sopra la musica moderna*, 1649) specified some of the norms by which these two co-existent styles were to be distinguished. Scacchi, his pupil Angelo Berardi, and Christoph Bernhard, who also came under Scacchi's influence, developed a system of stylistic classification that represents the first efforts at a theory of musical style. Bernhard was the most assiduous of these in detailing the licences of the various styles, the freest of which was the recitative. Since the devices, like the figures of rhetoric, were at once a form of embellishment and of forceful expression, he gave them names derived from rhetorical theory, as Joachim Burmeister had done earlier in arriving at a terminology for the technical and

expressive devices of polyphonic writing (*Musica autoschediastike*, 1601; *Musica poetica*, 1606).

Although the *prima pratica* continued to be applied in composition, particularly of sacred music, it became mainly a pedagogical style known as *stile antico* in which the pupil was expected to become proficient before attempting the modern style. Diruta taught five species of 'observed' or strict counterpoint, types that were later adopted, with modifications by Banchieri, Lodovico Zacconi (*Pratica di musica, seconda parte*, 1622), Berardi (*Ragionamenti musicali*, 1681, *Miscellanea musicale*, 1689) and Johann Joseph Fux (*Gradus ad Parnassum*, 1725). The *prima pratica* is thus the first example of a historical style that became the basis of a pedagogical theory, a phenomenon that was to mark the teaching of theory throughout the 19th and 20th centuries.

Another improvisatory practice that was annexed by written theory is that of florid elaboration, embellishment and variation on a written line or harmonic scheme. Throughout the 16th century musicians were taking melodic schemes or *arie* for singing poetry, and performing impromptu arrangements and variations on them, whether in reciting strophic poems or in playing variations or dances on a lute or other instrument. When performing the top line of frottolas and madrigals written in simple chordal style, singers would supply runs and other embellishments, especially in approaching the cadence. Some handbooks were published in the 16th century to guide the improviser, for example *Trattado de glosas sobre clausulas y otros generos de puntos en la musica de violones* (1553) by Diego Ortiz, and *Libro llamado Arte de tañer fantasia* (1565) by Tomás de Santa María. Singing tutors, such as that of Dalla Casa mentioned above or of Giovanni Battista Bovicelli (*Regole, passaggi di musica*, 1594), provided sample runs, figurations and models for the embellishment of both sacred and secular polyphonic music. A more tasteful, expressive and dynamically nuanced kind of ornamentation was developed in Giulio Caccini's *Le nuove musiche* (1601/2), which became a model for French treatises, such as Marin Mersenne's 'L'art de bien chanter', the fifth book of *Harmonie universelle* (1636–7). (Mersenne's contributions to music theory are not discussed in detail in this article since they pertain to acoustics and organology rather than theory proper.)

Accompanying from a bass was also probably an unwritten practice for many years before a basso continuo with figures was first printed in the score of Emilio de' Cavalieri's *Rappresentatione di Anima, et di Corpo* (1600). The earliest rules for playing from a bass appeared in prefaces, such as that to Cavalieri's score or to Lodovico Viadana's *Cento concerti ecclesiastici* (1602). Soon it became the subject of short tracts, the most notable of which is Agostino Agazzari's *Del sonare sopra 'l basso con tutti li stromenti e dell'uso loro nel conserto* (1607). The usage and theorizing about it spread quickly to Germany (Michael Praetorius, *Syntagma musicum*, chap.6, 'De basso generali seu continuo', 1618), quite late to England (Matthew Locke, *Melothesia, or Certain General Rules for Playing upon a Continued-Bass*, 1673) and France (Saint Lambert's *Nouveau traité de l'accompagnement du clavecin, de l'orgue et des autres instruments*, 1707; first edition, 1680, lost).

The first phase of thoroughbass theory is best summed up by Lorenzo Penna's *Li primi albori musicali* (1672). Although this consisted largely of instructions for accompanying, its detailed rules, prescribing part-movement, interval content of chords, cadence formulae, rhythmic figures, and ornaments, make it by implication a book on composition; one section, indeed, showed how to supply a bass for an otherwise finished piece. The connection of thoroughbass with composition was made explicit in Johann David Heinichen's *Der General-Bass in der Composition* (1728). Though focussed on accompaniment, the book was invaluable for composers. One of its important contributions was that Heinichen clarified and expurgated the use of dissonances in the theatrical style in keeping with the renewed desire for correctness.

The chordal structure of Baroque music was obviously intuitively conceived and empirically understood by the thoroughbass theorists. But no theory had evolved that related the chords to a single goal or limited collection of pitches. The modes, through commonly used transpositions and accidentals, had been reduced in practice to just a few distinct octave species. Zarlino had already noted that the modes could be divided into two classes, those that began by rising a major 3rd, and those beginning with a minor 3rd. In England it became common to speak of 'sharp song' and 'flat song' for what in practice were the modes reduced to two (Christopher Simpson, *The Division-Violist*, 1659). In 1683 Jean Rousseau took the radical step of proclaiming that there were only two modes, major and minor, although he still clung to the concept of 'natural' and 'transposed' keys (*Méthode claire, certaine et facile pour apprendre à chanter*). Charles Masson went a step further and discarded the natural and transposed categories, accepting eight major and minor keys, omitting only the major keys on G♯, A♯, D♯ and E♯ and minor keys on G♯, A♯, B♭ and D♯ (*Nouveau traité des règles pour la composition de la musique*, 2/1699). He recognized in each key a 'final', a 'mediant' and a 'dominant', which he called the 'essential notes'.

These developments prepared the way for Rameau's conception of the notes and chords of a key as emanating from a single source pitch. Rameau acknowledged that the inspiration for this breakthrough came from Descartes' method, which was to build a system of natural law on a self-evident principle. In his *Traité de l'harmonie reduite à ses principes naturels* (1722) Rameau identified this first principle as the first six divisions of the string; these could be shown to generate all the consonant and dissonant intervals and chords as well as the rules for their interconnection. But it was first necessary to recognize as an *a priori* fact that a note and its octave-replicates were identical. From this ensued the principle of inversion (see fig.6). Through inversion it was possible to incorporate the major 6th, 8:5, into the consonances of the *senario*, because it could now be explained as the inversion of the minor 3rd, 6:5. Thus Rameau marked a return to naturalism and rationalism after the pragmatic theory of the thoroughbass.

By arithmetic manipulation of the ratios representing the primary division of the string, ½ (octave), 1/3 (octave-plus-5th, reducible to a 5th by the rule of octave equivalence), 1/5 (double-octave-plus-3rd, reducible to a 3rd), he was able to generate the primary major triad. A triad, although it had three

possible bass notes, had only one 'fundamental bass' note. A progression of chords could now be viewed as the movement of a fundamental bass line that might or might not actually be sounded. The leaps or steps of the fundamental bass were controlled by a system of cadences having closing, evasive or interruptive functions, and all harmony could be viewed as an 'imitation of cadences'. Numerical ratios were used also to rationalize the elementary relationships of chords to the tonic and to each other. The triple proportion 1–3–9 represented the polarity of the subdominant (1) and the dominant (9) and their attraction to the tonic (3). This dominant he called the 'tonic dominant' (*dominante tonique*) to distinguish it from dominants on other than the fifth degree, which were simply 'dominants' (*dominantes*). The dominant chords normally carried a 7th, while the subdominant was normally accompanied by an added 6th, but this chord could also be interpreted as a 7th chord on the second degree, leading to the concept of 'double employment'. The diminished triads, diminished 7th chords and chords of the 9th, 11th and so on demanded a different explanation. For these Rameau invented the notion of assuming (*par supposition*) a fundamental bass note a 3rd or 5th above the actual lowest note of the chord.

While these general lines of his theory remained stable, many details, such as the derivation of the minor triad and the minor scale, experienced fluctuation in the course of a lifetime of publications. The most important change was his shift of the burden of the first principle from string division to the phenomenon of overtones in the *Nouveau système de musique théorique* (1726). Although Descartes had adumbrated the idea and Mersenne reported observing the overtones as early as 1623 (*Quaestiones celeberrimae in Genesim*), and John Wallis had explained their physical origin (*Philosophical Transactions*, xii, 1677, pp.839–42), it was through the work of Joseph Sauveur ('Système général des intervalles des sons', 1701) that Rameau became aware of the phenomenon. Sauveur had there given a detailed experimental and theoretical account of the partials that are heard in most vocal and instrumental sounds. This provided Rameau with an even more fundamental and natural first principle than string division, for the 3rd and 5th were actually generated by the fundamental pitch.

Rameau, while he clarified many aspects of harmonic practice, also left a legacy of unsolved problems – many of them in reality false issues – that occupied theorists long after him. The notion that the generation of each chord had to be explained led to a multitude of theories about the generation of the minor chord, the diminished triad, the diminished 7th chord, the augmented triad, and 7th chords on steps other than the dominant. The search to derive the minor and chromatic scales from some natural phenomenon exercised Rameau and many of his successors. How the fundamental bass should be permitted to move and how these movements were related to modulation raised other questions. Which was the primary dissonance, which dissonances could be attacked unprepared, and which had to be prepared were other problems seeking solution. There is hardly a theorist in the 18th or 19th centuries who did not engage in a dialogue across the years with Rameau on some of these and other issues first raised by him.

Rameau's most faithful interpreter, if also a severe critic, was Jean le Rond d'Alembert. While appreciating the great contribution he made to simplifying musical syntax, as a mathematician d'Alembert was shocked by Rameau's misuse of geometry and by his errors of method. He managed to distil the essence of Rameau's musical syntax in a little manual, *Eléments de musique théorique et pratique suivant les principes de M. Rameau* (1752). Among other critics, Leonhard Euler (*Tentamen novae theoriae*, 1739) challenged the assumption that a pitch and its octave were identical and contested the validity of the principle of inversion.

Another attempt at a natural theory of music was Giuseppe Tartini's application of the difference tone or 'the third sound' that he had observed as being heard when two notes are sounded simultaneously (*Trattato di musica secondo la vera scienza dell'armonia*, 1754). Although Georg Andreas Sorge (*Vorgemach der musicalischen Composition*, 1745–7) and Jean-Baptiste Romieu (*Nouvelle découverte des sons harmoniques graves*, 1751) had previously discovered the phenomenon, it was Tartini who showed that it corroborated six other fundamental observations previously made: string division; the notes of the trumpet marine, the trumpet, the hunting horn, and of organ mixtures; and notes derived by attaching weights to strings. All these produced the same series of notes, which added up to the diatonic system and supported the concept of the fundamental bass and the primacy of the triad. Tartini was not content with this deduction, but indulged in daring mathematical and geometric speculations, which two mathematicians soberly refuted: Benjamin Stillingfleet in *Principles and Power of Harmony* (1771) and Antonio Eximeno in *Dell'origine e delle regole della musica* (1774).

Theory, theorists

11. The Classical–Romantic period.

Rameau's theory spread to Germany through the efforts of Friedrich Wilhelm Marpurg, whose *Systematische Einleitung in die musikalische Setzkunst nach den Lehrsätzen des Herrn Rameau* is in great part a translation of d'Alembert's handbook. Johann Philip Kirnberger (*Die Kunst des reinen Satzes in der Musick*, 1774–9) accepted many of Rameau's ideas, such as inversion, but he gave more importance to melodic functions. Thus he recognized two kinds of dissonance, the 'essential', as found in the 7th chord, and the 'incidental', as found in the suspension, which requires preparation. He united the study of counterpoint with harmony, counterpoint being given the subordinate role of arpeggiating the chordal harmony and colouring it through passing notes.

D'Alembert's handbook may have influenced two German writers who examined the capacity of a given chord or note to have different harmonic meanings in different contexts. Abbé Georg Vogler was the first to give this capacity a name, 'multiple meaning' (*Mehrdeutigkeit*), in two treatises ('Summe der Harmonik', 1780, in the *Betrachtungen der Mannheimer Tonschule*, and the *Handbuch zur Harmonielehre*, 1802). Through multiple meaning, Vogler developed an advanced theory of modulation to remote as well as nearby keys. He seems to have been the first to use Roman numerals to denote the degrees of the scale on which chords reside in a given key: the F major triad is thus 'I' in the key of F major, 'IV' in C major

and 'V' in B♭ major etc. With Gottfried Weber (*Versuch einer geordneten Theorie der Tonsetzkunst*, 1817, 3/1830–32) this nomenclature evolved into a fully-fledged system using large and small Roman numerals (for major and minor scale-degrees respectively, often preceded by an upper- or lower-case Roman letter to indicate the prevailing key) and upper- and lower-case gothic letters to identify root and chord-quality directly. Numerals and letters were qualified by symbols such as the superscript circle indicating diminished quality, superscript 7 indicating a minor 7th and dashed '7' for a major 7th. This system was adopted by subsequent theorists, and essentially remains in use to the present day for simple chordal analysis. Weber also expanded Vogler's mutiple meaning greatly. With him it applied not only to notes and chords but also to interval, voice-crossing, composite melody, distance from the bass and many other categories. Into his discourse is woven a sense of the ear (*das Gehör*) as an agent actively perceiving, evaluating, remembering and understanding musical phenomena, a sense that gives Weber's theory a perceptual and cognitive character unprecedented for its time.

François-Joseph Fétis retained the main lines of Rameau's method, which he consecrated as 'the laws of tonality' (*Traité complet de la théorie et de la pratique de l'harmonie*, 1844). But he rejected mathematical and acoustical foundations for harmony, convinced by his study of history that the rules of composition were dictated not by nature but by feelings, needs and tastes of men in a given time and place. He identified four phases in the development of harmony: 'unitonic' (*unitonique*) or the unmodulating single tonality of plainchant; 'transitonic' (*transitonique*), in which through dissonance a tonality tended to expand outwards but was still held in check by a single centre as in plainchant; 'pluritonic' (*pluritonique*), the post-16th-century system in which the urge to express the passions led to a multiplying of the relationships one tonality had to others, so that any one harmony could now resolve in several ways; 'omnitonic' (*omnitonique*), the music of the future, in which any sound in a harmonic combination could progress to any other by a generalized application of the device of alteration.

Another theorist who put aside natural explanations was Moritz Hauptmann in *Die Natur der Harmonik und Metrik* (1853). Disturbed by explanations founded on the harmonic series because of its potentially infinite and all-inclusive nature – containing as it does both dissonant and consonant members – he preferred to construct a purely autonomous musical system by means of Hegelian logic. The intervals directly understood, the octave, 5th and major 3rd, were the fundamental building-blocks of all harmony. Chord succession depended not only on the progression of roots, which he adopted from Rameau, but on the joining together of chords that possess notes in common. These make the connection intelligible as the other notes of the chord move on. Hauptmann applied the same logical principles to the unfolding of time: the dialectic process that activates the triad also activates metre as duple, triple or quadruple, and extends it to larger units of time.

A return to natural theory is marked by Hermann von Helmholtz in *Die Lehre von den Tonempfindungen als physiologische Grundlage für die Theorie der Musik* (1863), which laid the foundation for modern physical

and physiological acoustics. It is a book rich in new insights, among the most original being his explanation of dissonance through the intensity of beats, and of difference tones as subjective non-linear auditory responses to pitch. Helmholtz's forays into music theory were not productive of new theory so much as of authoritatively expressed syntheses, for example his definition of the principle of tonality (original italicized): 'the whole mass of tones and the connection of harmonies must stand in a close and always distinctly perceptible relationship to some arbitrarily selected tonic, and … the mass of tone which forms the whole composition must be developed from this tonic, and must finally return to it' (pt.iii, chap.13; Eng. trans., 1875, p.249).

The physicist Arthur von Oettingen (*Harmoniesystem in dualer Entwicklung*, 1866), influenced by both Hauptmann and Helmholtz, sought a theoretical system in which the minor chord was granted the same status as the major chord rather than deriving from higher overtones or arising as a variant of the major chord or being explained in some other non-systematic way. His new system, relying on acoustics and mathematics, was founded on the opposition of 'being' and 'having'. The notes of the major triad 'are' all overtones of a common fundamental (*c'*, *e'* and *g'* are the 4th, 5th and 6th overtones of *C*). The notes of the minor triad, on the other hand, are fundamentals that 'have' a common overtone (*c'*, *e♭'* and *g'* have *g'''* as their 6th, 5th and 4th overtone respectively). The tones of the former (major) are in a relationship of 'tonicity' (*Tonicität*), their common element being called the 'tonic fundamental'. The tones of the latter (minor) are in a relationship of 'phonicity' (*Phonicität*), their common element being called the 'phonic overtone'. From this arises a symmetrical system. C major is spoken of as 'tonic C', while A minor is spoken of as 'phonic e'; and whereas the cadential 7th chord in the former is *g–b–d'–f'*, that of the latter is a *a'–f'–d'–b* – the same intervals, but top-down. Major and minor thus become mirror worlds, and the hierarchies of keys to which they can modulate mirror universes. Such a system is called 'dual', and the approach is 'dualism'.

In appropriating Oettingen's dual system, Hugo Riemann revisited a notion briefly considered but rejected by Rameau (1737). In *Musikalische Syntaxis* (1877) he took the mirror worlds of tonic and phonic, which had been derived by different means from the one familiar harmonic series, a stage further by envisioning two harmonic series, mirror images of one another: overtones and undertones. Major was constructed from the overtone series, minor from the undertone series. Nomenclature now reflected this total inversion of worlds. The notes of the major triad were still called 'tonic' (*c*), 'third' (*e*) and 'fifth' (*g*), and represented by 1, 3 and 5, those of the minor triad were now read downwards as 'prime' (*e*), 'third' (*c*) and 'fifth' (*a*), and represented by I, III and V.

Whether Riemann truly believed in the undertone series is unclear, but he distanced himself from it, indeed from reliance on harmonic series altogether, in mid-career. What emerged was his theory of 'harmonic function', in which the primary relationships around a tonic were those of the perfect 5th above and below: tonic, overdominant and underdominant, or more simply tonic, dominant and subdominant (T, D and S). Long in gestation, the system was unveiled in a practical manual entitled

Vereinfachte Harmonielehre ('Harmony simplified') (1893, Eng. trans., 1896), with the essential statement: 'There are only three kinds of tonal functions … namely tonic, dominant and subdominant. In the change of these functions lies the essence of modulation' (p.9). Scale degrees no longer existed in their own right. However, since in C major the chord of D minor was the parallel (relative) minor of F major, D minor could be used as a 'substitute chord' (*Stellvertreter*) for the subdominant, designated 'Sp'; likewise E minor for the dominant ('Dp') and A minor for the tonic ('Tp') (pp.71–4). At the same time, E minor is the 'leading-note chord' of C major, thus E minor could also substitute for the tonic, as could A minor for the subdominant (pp.75–6). The reverse was true in the minor key. Riemann developed this system through later editions of his *Handbuch der Harmonielehre*.

Theory, theorists

12. Theory of genres: 16th to 18th centuries.

The theory of genres and the norms for their composition received increasing attention. Its rather sketchy beginnings are to be seen in Pietro Pontio's *Ragionamento di musica* (1588), where the standards for composing motets, masses, madrigals, psalms and the like are discussed. Similar instructions occur in Pietro Cerone's *El melopeo y maestro* (1613) and in Michael Praetorius's *Syntagma musicum* (iii, 1618). Johann Mattheson's *Vollkommene Capellmeister* (1739) and Johann Adolph Scheibe's *Der critische Musicus* (1737–40) are virtually textbooks of musical genres and forms. These instructions are symptomatic of the way in which the distinctive affective, compositional and associative traits attached to specific genres, each with its proper style and level of artfulness, came to be recognized during the Baroque period. Mattheson (pt.ii, chap.13) took up 16 such vocal genres, including the recitative, cavata, arioso, cantata, serenata etc., and 22 instrumental types, including 11 of the most common dances, and the sinfonia, overture and concerto grosso. Johann Adolph Scheibe was perhaps more typical of his time when he paid greater attention to technical method and formal structure than to affective character in describing such types as the sonata, symphony and concerto. Still, the descriptions are impressionistic, and it was only with Heinrich Christoph Koch (*Versuch einer Anleitung zur Composition*, pt.iii, 1793) that detailed enough models were presented to serve a composer embarking on a sonata or concerto movement. With Koch, too, the instrumental forms and genres occupied the foreground for the first time. They were not abstract, however, for he conceived of instrumental music as still bound up with feelings and emotions, if in a non-specific way.

The more this group of theorists focussed on the purely musical logic of genres of composition, the more they resorted to literary and visual models for both concepts and vocabulary (*see* Rhetoric and music). Burmeister had described a motet as having, like an oration, an *exordium*, a *confirmatio* and a conclusion. Mattheson named six parts in a well-developed composition, the *exordium, narratio, propositio, confirmatio, confutatio* and *peroratio* – that is, introduction, report, proposal, corroboration, refutation and conclusion (pt.ii, chap.14). Although the example he used was an aria of Benedetto Marcello, the text is never considered, only the musical continuity. Moreover, musical punctuation is

seen as breaking the structure down into paragraphs, sentences, phrases etc.

Koch borrowed from visual art, and specifically from J.G. Sulzer's *Allgemeine Theorie der schönen Künste* (1771–4), the concept of the *Anlage* or layout, a plan or sketch in which the most salient features of the final work are set down. Following this outline of the work, the artist proceeds to the *Ausführung* or execution, and finally the *Ausarbeitung* or elaboration of details. Koch realized that the parallel was imperfect and he was forced into literary analogies to convey his formal ideas. For music, though amenable to spatial imagery, was a temporal art like literature. Thus, the musical *Anlage* is a statement of the principal ideas and an exposition of how they relate to each other within the main periods. When he went on to speak of the articulation of sections, he called upon grammatical terms such as *Redetheile* (parts of speech), periods, commas, semicolons, caesuras, periods and even subject and predicate. Koch's preoccupation with explaining every detail of the anatomy of a piece led him to consider both minute and large-scale temporal units.

Theory, theorists

13. Theory of rhythm: 17th to 19th centuries.

Interest in temporal problems was awakening after the long hiatus brought on by the simplification of rhythm in the 16th and 17th centuries. Most of the texts during these centuries continued to repeat, sometimes dutifully, often with a tinge of scorn, traditional discussions of prolations and proportions. One of the treatises most attuned with the times was Agostino Pisa's *Battuta della musica dichiarata* (1611), a tutor for 'conductors' on beating time. As was conventional in the 16th century, he divided all metres into two parts, the *positione* and *elevatione*, the lowering and raising of the hand; but with uneven metres the downbeat marked the larger part, for example two beats down against one up in triple. The proportional signatures, such as 3/2, lost their precise meaning before theorists took note of the new practice of indicating tempo by adjectives of mood and gait, such as *allegro* and *andante*. Michel de Saint-Lambert (*Principes du clavecin*, 1702) claimed that the proportions still held in some cases – for example C was twice as fast as C, though both were at a walking pace – but Thomas Morley (*Plaine and Easie Introduction*, 1597) a century earlier already found composers using the two indifferently.

A new approach to the organization of time is reflected in the dialogue by Joseph Riepel, *Anfangsgründe zur musicalischen Setzkunst* (1752–68). He was aware that the patterns of note values, their repetition in themes and their direction towards a cadence were subtly related to melodic and harmonic factors. In the first chapter, 'De rhythmopoeia oder Von der Tactordnung' (1752) the pupil is instructed to pay close attention to the length of phrases and the effect of adding them together. Although a preference is shown for four-bar modules, Riepel's preceptor shows that two-, three- and five-bar phrases (*Zweyer*, *Dreyer*, *Fünfer*) are also possible. Koch broke down temporal structure into even smaller units, which he called *Einschnitte* (incises), while at the level of the phrase or *Absatz* he differentiated those that tended towards the fifth degree from

those that closed on the tonic. *Absätze* cumulated into periods and these into full compositions.

Jérôme-Joseph de Momigny (*Cours complet de composition*, 1803–6) introduced the principle that musical units proceed prototypically from upbeat (*levé*) to downbeat (*frappé*), these two components being termed 'antecedent' and 'consequent', the two making a 'cadence'. Antonín Reicha furthered the theory of phrase structure in his *Traité de mélodie* (1814), and evolved a theory of primary and subsidiary motives (*idées mères* and *idées accessoires*) and their 'exposition' and 'development' in his *Traité de haute composition* (1824–6). A.B. Marx developed a systematic theory of motif (*Motiv*) in the first volume of his *Die Lehre von der musikalischen Komposition* (1837–47). A motif here was a small unit, expansible by repetition and variation to form a phrase, passage, period and eventually whole piece. From this Marx created a taxonomy of musical forms, beginning with the simplest 'song form' (vol.ii) by way of theme and variation, simple and complex rondo forms, sonatina and sonata form, through to 'mixed forms' including multi-movement structures (vol.iii). Wagner adumbrated a theory of large-scale motivic structure, and while putting it into practice left to others, notably Hans von Wolzogen in his thematic guides (1874–82), the task of articulating it, using the terms *Motiv* and *Leitmotiv*.

In his *Katechismus der Phrasierung* (1890, with Carl Fuchs), Hugo Riemann revitalized the phrase-structure theory of Riepel, Koch and Reicha, particularly adopting Momigny's upbeat–downbeat principle. Aimed at the general public, this work introduced a set of symbols denoting structural groupings, accentuation and articulation – symbols that Riemann was to use in many subsequent theoretical works, and also in his editions of classical keyboard music (called 'phrase-structure editions'). Riemann had already deployed these symbols in a far from populist work, the *Musikalische Dynamik und Agogik* (1884), which systematizes all possible motif forms under all metrical conditions, and extends to dealing with polymetres. In this work, in which time and amplitude are treated as integral and reciprocal, the time-patterns being constantly dynamically 'shaded' with crescendos and decrescendos, Riemann sought completely to revise traditional theory of metre and rhythm. He was writing against the background of Hauptmann's dialectic metric theory, and was considerably influenced by the work of Mathis Lussy (*Le rhythme musical*, 1883).

Theory, theorists

14. 20th century.

The most crucial force in 20th-century theory was not Wagner's chromaticism, Debussy's non-functional harmony or Schoenberg's 12-note system, but the historical perspective that made it inconceivable to try to explain music, past, present and future, by a single universal theory. Many 20th-century theories are deliberately limited in their applicability, such as Alfred Lorenz's analyses of large-scale architecture in Wagner's music dramas (*Das Geheimnis der Form bei Richard Wagner*, 1924–33, 2/1966), or Heinrich Schenker's analytical system, which grew out of his studies of Beethoven.

Schenker's is probably the most original and influential retrospective analytical theory of the century. Developed over a period of 40 years (*Neue musikalische Theorien und Phantasien*, 1906–35), it revealed a new breadth of logic in tonal music. Although in a difficult style and accompanied by novel graphic representations, much of his writing was destined for the performer. As such it is parallel to the thoroughbass methods, such as C.P.E. Bach's *Versuch über die wahre Art das Clavier zu spielen* (1753), which Schenker greatly admired. It resembles them also in beginning with musical practice – that is actual compositions rather than abstract principles – and evolving general principles by an inductive process. The most radical aspect of Schenker's approach is probably his view that discrete musical forms, such as single movements, are explicable in the 18th and 19th centuries as structures within a single key; sections conventionally interpreted as modulations are seen as 'prolongations' of a chordal or harmonic scale-step (*Stufe*) within the central key. To apprehend the basic structure of a piece as entirely in the tonic requires that it be reduced to its basic melodic and harmonic movements, that is to the 'background' level. This level, in turn, is derived by converting the written music first to a 'foreground' sketch containing the most cogent linear movement noticed by the ear, then to a 'middle-ground'. As in Kirnberger's method, harmony and counterpoint are united. The synthesis thus reveals the interaction of a skeletal melody with a distilled harmonic progression. Schenker's theory (*see also* Analysis, §II, 4–5) influenced a few German and Austrian theorists, notably Oswald Jonas (*Das Wesen des musikalischen Kunstwerks*, 1934). His impact was most pronounced among theorists and teachers in the USA, however. The Austrian Hans Weisse, a pupil of Schenker's, established Schenkerian studies at the Mannes School of Music in New York in 1931–32, and the Austrian Ernst Oster and the German Felix Salzer (*Structural Hearing*, 1952) taught at the Mannes School. The American-born scholar William J. Mitchell, with Salzer, founded the journal *Music Forum* (1967–), dedicated mainly to Schenkerian studies; Allen Forte, at Yale University, was the driving force behind the systemization of Schenkerian theory widely called 'Schenker(ian)ism' (*JMT*, iii, 1959), and in his *Introduction to Schenkerian Analysis* (with S.E. Gilbert, 1982) he furnished 'an unambiguous method to master the complexities of this useful analytical technique'. Carl Schachter at the Mannes School pioneered a method of rhythmic analysis in conjunction with tonal progression, based on Schenker's earlier rhythmic reductions (*Music Forum*, iv, 1976; v, 1980).

It was remarkable that a theory so authoritarian in tone, underpinned by nationalistic and monarchist beliefs, could eventually be embraced by the liberal, egalitarian world of American academia and rendered acceptably scholarly and 'scientific'. It became aguably the dominating music-theoretical paradigm of the second half of the 20th century (see Rothstein, 1990). So fully absorbed was it that it influenced basic textbooks of counterpoint (F. Salzer and C. Schachter: *Counterpoint in Composition: the Study of Voice Leading*, 1969) and harmony (E. Aldwell and C. Schachter: *Harmony and Voice Leading*, 1978–9). The period from 1979 saw the production of critical English translations of Schenker's major works (by Ernst Oster, John Rothgeb, Jürgen Thym, William Drabkin and others), such that by 2000 only the *Erläuterungsausgaben* (1913–20) and *Der Tonwille* (1921–4) remained unpublished, although translations of both

were in progress. In the same period, Schenker's work became a focus for study within the context of cultural and intellectual history (Pastille, 1984–5; Blasius, 1996; Snarrenberg, 1997).

The search for a means of interpreting early 20th-century music led to a number of explanations based on the harmonic series. Schoenberg proposed that dissonances were not qualitatively distinguishable from consonances, since both could be found in the harmonic series (*Harmonielehre*, 1911, chap.2); he thus justified 'emancipating' dissonance from the restrictions of conventional counterpoint. Henry Cowell (*New Musical Resources*, 1930) applied the harmonics to rhythm by constructing a numerical series of durations analogous to the pitch numbers of the partials of a fundamental. Hindemith (*Unterweisung im Tonsatz*, 1937–9) used a synthesis of the harmonic series and the phenomenon of combination tones to classify chords according to the tension produced by their intervallic content. By this means he also determined the roots of chords and consequently, the relationships among them. Harmony, grounded in root progression – a kind of fundamental bass – and progressing through a 'fluctuation' of tension, lent directional meaning to free flights of melody, which could be broken down into chordal and non-harmonic notes. Hindemith's system was thus both analytical and compositionally prescriptive.

Other research proceeding from the harmonic series sought new tonal systems. Harry Partch (*Genesis of a Music*, 1949) used scales based on just intonation, including a 43-note scale, developed the theory for these scales, adapted and invented musical instruments, and wrote compositions. The Dutch physicist Adriaan Fokker (*Neue Musik mit 31 Tönen*, 1966) developed a 31-note scale that influenced a number of composers. Others developed theories of microtonal scales that relied on the equal-tempered scale. That of Alois Hába (*Neue Harmonielehre des diatonischen, chromatischen, Viertel-, Drittel-, Sechstel- und Zwölftel-Tonsystems*, 1927) was perhaps the most fully theorized, extending as far as the 12th-note scale. Hába wrote numerous compositions in his quarter-note, sixth-note and 12th note systems.

The roots of 12-note compositional theory lie in the 1910s; Hauer and Schoenberg arrived at independent methods around 1920. Hauer provided the theory of his method, which was based on hexachords (*Vom Melos zur Pauke*, 1925; *Zwölftonetechnik: die Lehre von den Tropen*, 1926). Schoenberg's earliest complete composition derived from a single row was his Piano Suite op.25 (1923); he never furnished a theory as such (see *Style and Idea*, 1975, pp.207–50), nor did Berg or Webern. The earliest formalizations of Schoenberg's method were those by Krenek (*Studies in Counterpoint based on the Twelve-Tone Technique*, 1940), Rufer (*Die Komposition mit zwölf Tönen*, 1952, Eng. trans., 1954) and Jelinek (*Anleitung zur Zwölftonkomposition*, 1952–8), and early analytical-descriptive accounts of the method were given by Leibowitz (*Schoenberg et son école*, 1947; *Introduction à la musique de douze sons: les variations pour orchestre Op.31, d'Arnold Schoenberg*, 1949). 12-note theory was furthered by others, such as Eimert (*Grundlagen der musikalischen Reihentechnik*, 1963) and Perle (*Serial Composition and Atonality: an Introduction to the Music of Schoenberg, Berg, and Webern*, 1962, and

many subsequent works). Perle suggested that it was not so much 12-note ordering in itself but individual concepts such as permutation, inversional symmetry and complementation, and invariance under transformation that were most fruitful for future composition.

At this point there was an essential bifurcation of theories. On the one hand, Boulez (*Penser la musique aujourd'hui*, 1964; Eng. trans., 1971) took Webern as the 'bridge' to the new music, and related Webern's compositional practices to Messiaen's use of 'mode' involving not only pitch but also duration, loudness and attack. From these he placed several parameters of musical sound under the governance of a single serial system, the result variously called 'integral serialism' and 'total serialism'. On the other hand, Babbitt, working more from the later works of Schoenberg, treated 12-note compositional method as a system, characterizable entire by stating its elements, the relations among the elements and the operations (inversion, retrogression etc.) performable on those elements. In his hands the method became a branch of mathematical ordered set theory and group theory, the elements of a set being represented not by musical but by 'integer' notation: thus in 0,0; 1,9; 2,8; 3,2; 4,5 …, the first of each number-pair representing the element's order in the set, the second representing its pitch within the chromatic octave (irrespective of register, i.e. its pitch-class). Of particular interest for both composition and analysis are those characteristics that remain unchanged when particular operations are performed on the set, a phenomenon known as 'invariance'. The first and second six elements of a set are its 'hexachords'. These have been the subject of much study, certain hexachords possessing a special property known as 'combinatoriality' (as do certain trichords and tetrachords). Babbitt's exploration of the multifarious properties of musical sets are presented most notably in five key articles (*The Score*, no.12, 1955; *MQ*, xlvi, 1960; *JMT*, v, 1961; *PNM*, i/1, 1962–3; *College Music Symposium*, v, 1965). This work has been continued by many writers, including Lewin, Martino, Boretz, Forte, Clough and Morris.

Arising at an early stage out of this work was the study of the unordered set, for which the repertory of atonal but non-serial music written by Schoenberg between 1907 and 1923, and also by Berg and Webern, offered an unparalleled field of investigation. Lacking organization of either the tonal or the serial type, what gives music such as Webern's Five Movements for string quartet (1909), or Schoenberg's *Six Little Piano Pieces* op.19 (1911) their coherence? What enables listeners to make sense of and derive pleasure from hearing them? Forte (*The Structure of Atonal Music*, 1973) laid out a formal theory of unordered set operation dealing with sets of anything from two to 12 elements (i.e. pitch-classes). He established 'prime forms' for sets, each with a description of its total interval-content (an 'interval vector'), and a canonical list of the 220 set prime-forms containing three to nine elements. He further developed a theory of 'set complexes' and 'subcomplexes', formalizing relations among sets and facilitating descriptions of entire compositions. Schmalfeldt (*Berg's 'Wozzeck': Harmonic Language and Dramatic Design*, 1983) provided an analytical realization of that theory, and Forte himself (*The Harmonic Organization of 'The Rite of Spring'*, 1978) did likewise for atonal music outside the Second Viennese School. Baker (*The Music of Alexander*

Skryabin, 1986) and others have since used Forte's theory in conjunction with that of Schenker to strive for comprehensive analytical descriptions of whole works of great length and complexity.

A new strand of music theory was begun in France in the 1970s. Ruwet (*Langage, musique, poésie*, 1972) and Nattiez (*Fondements d'une sémiologie de la musique*, 1975), building on the work of Saussure (*Cours de linguistique général*, 1916), C.S. Peirce, Eco (*La structure absente*, 1972), Lévi-Strauss (*Anthropologie structurale*, 1958; *Le cru et le cui*, 1964) and others, sought to forge a semiology (or Semiotics) of music, i.e. a science of musical signs. Musical semiology sees music as a stream of sounding elements governed by rules of 'distribution'. Under analysis, a piece of music is placed on a grid of which the horizontal dimension marks the continuity of the musical stream (the syntagmatic plane) and the vertical dimension the identities and equivalences of segments of the music (the paradigmatic plane). The piece comes thus to be viewed all at once (i.e. synchronically), not in time, and consequently described in terms of 'units' (i.e. segments that cannot be further subdivided) and the laws that govern their distrubution. Nattiez, based in Canada since the early 1970s, produced a classical model of such analysis (*Densité 21.5 de Varèse*, 1975), as did Morin (*Essai de stylistique comparée (Les variations de William Byrd et John Tomkins sur 'John Come Kiss Me Now')*, 1979) working with Nattiez at the University of Montreal. Nattiez produced a string of significant contributions to the field (*Tétralogies (Wagner, Boulez, Chéreau): essai sur l'infidélité*, 1983; *De la sémiologie de la musique*, 1987, Eng. trans., 1990; *Musicologie générale et sémiologie*, 1987; *Wagner androgyne*, 1990). Important contributions to the musical semiology have since been made by Hatten (*Musical Meaning in Beethoven: Markedness, Correlation, and Interpretation*, 1994), Tarasti (*A Theory of Musical Semiotics*, 1994) and Samuels (*Mahler's Sixth Symphony: a Study in Musical Semiotics*, 1995).

The most formidable challenge that music theory has had to confront is to explain aleatory, electronic and colouristic music that exploits broad sound gestures rather than formal devices. It is apparent that informational, psychological, physiological, statistical, acoustical and even sociological approaches must figure prominently in theorizing concerning much new music. A growing reaction to some of the objective theories is also apparent; they are criticized for detecting micro-, macro- and hidden structures that are not apparent to the listener's hearing or related to his experience. This has led to an attempt to establish a phenomenological basis for analysis (Thomas Clifton, *JMT*, xiii, 1969; xix, 1975) and a critique of the use of verbal means to refer to non-verbal qualities (Benjamin Boretz, *PNM*, iv, 1966; viii, 1969).

A healthy trend is the recognition that music theory cannot be shielded from historical considerations, that analysis of structure divorced from stylistic, historical and sociological contexts falsifies the music it aims to describe. It is being recognized that only a multi-dimensional and pluralistic attack on the musical object can reveal its true nature and unique qualities.

Theory, theorists
15. New theoretical paradigms, 1980–2000.

In a series of articles from 1977, culminating in *A Generative Theory of Tonal Music* (1983), Lerdahl and Jackendoff developed an influential theory that formalized the listener's understanding (i.e. mental representation) of the common-practice tonal repertory – broadly, the music of the late Baroque, Classical and early Romantic periods. It sought to provide 'a principled account of what the experienced listener must know in order to sense the relative structural importance of events in a musical surface' (p.178). The theory drew from certain insights in Schenkerian theory, especially the general notion of unified hearing, and the complementary processes of reduction and prolongation; but its principal thrust was to 'model' the listening process according to the concepts of formal linguistics. Reflecting the generative-transformational linguistics of Noam Chomsky, it formulated musical procedures as a 'grammar' having verifiable 'rules'. However, rather than striving to conceive music as constructed in sentences made up of words and containing meaning, it addressed musical structure in its own terms, involving 'such factors as rhythmic and pitch organization, dynamic and timbral differentiation, and motivic-thematic processes' (p.6). From among these, it identified four focusses for modelling hierarchically: 'grouping structure', 'metrical structure', 'time-span reduction', and 'prolongational reduction', furnishing each with two sets of rules: 'well-formedness rules' (analogous to the rules of linguistics) and 'preference rules' (which acknowledge the nature of music as an art form). Much of what Lerdahl and Jackendoff investigate is, loosely speaking, psychological in nature. The formulation of their theory coincided with, while also providing a stimulus to, the growth in studies of what has since become an independent, mostly experimentally based discipline with its own professional international and national societies: music cognition (*see* Psychology of music). The new discipline maintains close links with parts of the field of music theory, with certain scholars active in both. Contributors at the intersection of the two disciplines include Epstein (1979, 1995), Gjerdingen (1988), Parncutt (1989), Roederer (1995), Narmour (1990, 1992), and Lerdahl himself, who has extended the original joint theory to apply to extended-tonal works of the late Romantic period and to atonal music. In the last of these, the organizing principle of stability in tonal music gives way to one of 'salience', which in turn forms the basis for prolongation, perceptual principles such as 'auditory streaming' being invoked in order to distinguish structural from ornamental levels.

A new theoretical paradigm of considerable power was developed by David Lewin in the early 1980s and formalized in his *Generalized Musical Intervals and Transformations* (1987). The theory speaks of points in a conceptual musical 'space', and of distances between such points. These points are called 'elements', and the distances 'intervals'. 'Space' is conceived broadly to denote any of three musical dimensions: pitch, time, and timbre. Pitch space denotes any collection of pitches or pitch-classes arranged in scale order; Lewin's examples cite diatonic and chromatic scales, each either in just intonation (extending infinitely upwards and downwards, hence its elements are 'pitches') or in equal temperament (recycling with each octave, hence elements are pitch-classes mod-7 and mod-12); but any other kind of scale applies equally well – pentatonic, whole-tone, octatonic, or any of the church modes (mod-5, mod-6, mod-8, mod-7 respectively, in recycling). Temporal space is marked off by pulses

called 'beats', or if time is considered as circular, 'beat-classes' (mod-4, mod-8, mod-16, etc.), or by 'durations' or 'duration-classes', by 'ratio-classes', even by 'tempo-classes'. Timbre space comprises a collection of steady-state timbres, defined by their harmonic spectra (i.e. absence or presence of individual harmonics, and strength of those harmonics present). In all of these cases, the elements in the spaces are conceived as having 'intervals' between any two – pitch-, rhythm-, or timbre-intervals – the intervals in each space having the properties of a mathematical 'group', and capable of being formalized as a single 'Generalized Interval System' (GIS), and giving rise to the operations of transposition, inversion and interval-preservation.

Lewin proceeds to generalize certain aspects of unordered set theory (including Forte's 'interval vector', 'complex' and 'subcomplex' – see above) so as to be invoked within the theory of GIS. He next moves to a higher music-organizational level. Instead of starting with elements in a space and examining the operations that occur between them, he starts with the *operations* themselves, and conceives them as forming GIS structures. This renders the theory more intuitive in that listeners, for cultural reasons, tend to hear in terms of such operations (transposition, modulation; we might add augmentation, diminution, change of tempo, etc.) rather than of individual notes, time-points, durations, etc. Lewin thus subsumes GIS theory within a broader transformation theory of musical relations. The latter, although cast in mathematical form, in turn connects interestingly with existing theories such as motivic transformation and tonal prolongation. In particular, Lewin invokes *tonal function theory*, as explicated by Hugo Riemann (1893 and later: see above §11), using 'Klang' for consonant triad, and treating 'dominant', 'subdominant', 'relative', 'parallel', etc. as transformational functions. Thus the form '(C,-)MED = (A♭,+)' reads 'C minor become the mediant of A♭ major', and so forth. Lewin incorporates also Riemann's 'leading-tone exchange' (Leittonwechsel) relations, thus '(E,-)LT = (C,+)', i.e. 'E minor becomes the leading-tone exchange chord of C major'. He develops a method of graphic analysis to present such transformations, and applies them analytically to passages from Wagner's *Ring* and *Parsifal*, while also formalizing them mathematically. In *Musical Form and Transformation: 4 Analytic Essays* (1993), Lewin applied his transformation theory to works by Debussy, Webern, Dallapiccola and Stockhausen.

The final part of this theory itself spawned a new line of enquiry known as 'Neo-Riemannian theory', which goes back to Lewin's first article on the topic (*JMT*, 1982). Dissertations by Hyer (1989) and Kopp (1995) made important contributions, another by Mooney (1996) explored further Riemann's *Tonnetz* (network of tonal relations), bringing Riemann's theoretical evolution and the theories of Hauptmann (1853) and Von Oettingen (1866) into the framework of the new theory, as also did Harrison's reinterpretation of dualism (1994). To these, Cohn (1996, 2000) has drawn in the progressive harmonic theories of Weitzmann (1853). Elements of later 19th-century tonal theory have, in this way, been revalidated and formalized as tools for examining late 19th- and early 20th-century harmonic practice.

In 1985, *Music Theory Spectrum* gave over an entire issue to articles on 'Time and Rhythm in Music'. It recognized a growing body of work on temporality in music (by writers such as Ingmar Bengtsson, Diana Deutsch, Paul Fraisse, Lewis Rowell, Carl Schachter and Karlheinz Stockhausen) that by no means cohered as a field of inquiry. It sought to foster a sense of common purpose, pointing beyond rhythm and metre to such issues as 'motion and stasis, continuity and discontinuity, progression, timelessness, pacing, proportion, duration, and tempo' (p.72). Since then, seminal studies have been Kramer's *The Time of Music* (1988), Epstein's *The Shaping of Music* (1995), and publications by Caroline Palmer, Justin London, Christopher Hasty, John Roederer, and many others. Indeed, this work, which has roots in music theory of ancient Greece, India, medieval Europe and elsewhere, operates across a broad front, connecting directly with philosophy, physics, psycho-acoustics, ethnomusicology and performance practice (*see* Metre and Rhythm).

Joseph Kerman's blast across the bows of musicology (1985), while hardly striking terror into the hearts of Schenkerians, set-theorists, and other practitioners, did give encouragement to several lines of investigation already underway and assisted their emergence and professional recognition. For some of these, *see* Hermeneutics; Gender; Women in music; Feminism; Narratology, narrativity; Postmodernism; Reception. Music theory in 2000 is a far more diverse, more interdisciplinary, and less balkanized field the world over than it was in the 1970s. It is impossible to assess which of its recent efflorescences will take hold and change the nature of the discipline. The programme for the millenial joint meeting of the Society for Music Theory and 15 other American and Canadian music societies, at Toronto in 2000, showed Schenkerian and set-theoretical studies retaining their places in the world of English-language music theory, alongside transformational theory, cognition-based studies, and temporal theory, together with the history of music theory, which, already strong since the 1950s, experienced a rejuvenation in the 1980s and 1990s (*see* Bent, 1993).

Thérache, Pierrequin [Pierquin] de

(*b c*1470; *d* 30 March 1528). French composer. His entire musical career seems to have been spent at the ducal court of Lorraine at Nancy, where he was master of the choirboys and *trésorier* in the local church of St Georges without significant interruption between October 1492 and 1527, becoming a canon of St Georges in 1505. In 1518 he was made *maître de la chapelle privée* at the court of Antoine, Duke of Lorraine. Indeed, no firm evidence survives that he ever left the ducal capital during his tenure there. Fétis's claim that Thérache had once been a singer with the royal court of France is unsubstantiated. Vincenzo Galilei, the late 16th-century Florentine music theorist, claimed that 'P.ro de terache' was among a group of famous Renaissance masters who gathered in Italy for the coronation of Pope Leo X in 1513, but this musician might possibly have been the Perroctus Terrache who then served as *cantore* at the ducal court of Savoy.

Thérache's apparent physical isolation did not prevent his works from enjoying wide distribution in manuscript and printed sources of France, Italy and the Netherlands; nor should it suggest that his musical style suffered from insularity. His two settings of sequence texts, *Verbum bonum et soave* and *Clare sanctorum*, rework the monophonic melodies upon which they depend in flowing, euphonious counterpoint typical of his contemporaries Josquin and Mouton. (The former was used as the model for a polyphonic mass by Mouton). Thérache's *Magnificat*, too, attends closely to the intonational formula typical of its genre and, adhering to the formal

convention of its generation, sets only the even-numbered verses (which were doubtless sung *in alternatim* with the remainder of the text).

Thérache's cyclic masses reveal his skill with cantus firmus technique and demonstrate his evident awareness of the chanson tradition of the late 15th century. His use of individual melodic lines and at times of contrapuntal combinations) from chansons by Antoine Busnoys and Loyset Compère is both thorough and subtle. These works moreover contain repeated allusions to a fauxbourdon-like fabric that appears to have been a favourite device of Thérache's. This same signature returns in the *Missa 'Comment peult avoir joye'*, a work preserved anonymously in a manuscript of the early 16th century, but which seems likely to be the *Missa 'Comment peult avoir joye'* cited by Nicolaus Wollick in his *Enchiridion musices* (Paris, 1512/*R*) as having been composed by 'Pierrequin de Nancy'.

Therapy.

See Music therapy.

Theremin [Termenvoks].

A monophonic electronic instrument developed by Lev Sergeyevich Termen and named after him; it was one of the earliest electronic instruments, and the first successful one. The instrument, originally inspired by Termen's similar 'radio watchman', and initially called the 'Êtherophon', was first demonstrated in 1920; subsequent presentations were made for Lenin in March 1922, and in many parts of the Soviet Union, under the name 'termenvoks'. At the end of 1927 Termen travelled to the USA, where he gave concert demonstrations under the name 'thereminvox' (later just called 'theremin'). From 1929 the RCA manufactured 500 theremins. Among its leading performers have been Clara Rockmore, Lucie Bigelow Rosen, Samuel J. Hoffman, Lydia Kavina and Dennis James. The theremin has been featured in over 100 concert works and more than 35 films.

A notable feature of the theremin lies in its manner of performance, for the player does not actually touch it. The frequency of the single pitch emitted from its loudspeaker is dependent on the distance of the performer's hand from an antenna rising vertically from the instrument ('space control'). It employs a beat-frequency oscillator (BFO), which consists of two radio-frequency oscillators, one at a fixed frequency and the other controlled by the capacitance between the right hand and the antenna; the resulting frequency lies within the audio range (in the first version the sound was audible only over headphones; Termen replaced these first with a large 'earphone' with a cardboard horn and in the mid-1920s with the newly invented loudspeaker). Moving the hand back and forth creates pitch changes over a wide range (early sources mention three to four octaves and Moog, 1954, gives a compass of five octaves). The volume is controlled by a similar procedure, with the left hand moving in relation to a horizontal metal loop (Termen's original system consisted of a volume pedal and a left-hand interrupter switch). Different timbres can be chosen by setting a switch that controls a system of filters. The disadvantage of the theremin is the difficulty of controlling the transition from one pitch to another, because a glissando invariably accompanies any move from note to note, unless the left hand disguises it with loudness variations or, for small intervals, the player uses right-hand 'fingering'. Termen developed other versions of the instrument in which these problems were alleviated, including a four-octave, monophonic keyboard theremin (*c*1928; a five-octave version was constructed later) and a cylindrical fingerboard theremin (1929–30), which resembled a cello, but they lacked the unique appeal of the original.

The first orchestral work with a solo electronic instrument was Pashchenko's *Simfonicheskaya misteriya* ('Symphonic Mystery') for theremin and orchestra, which received its first performance in Leningrad on 2 May 1924 with Termen as soloist. In the same year it was also prominent in Valentin Yakovlevich Kruchinins score for the science-fiction film *Aelita*. Later composers for the instrument include Joseph Schillinger, with the *First Airphonic Suite* (1929) for theremin and orchestra, Varèse, who requested two special theremins for *Ecuatorial* (1932–4), although the revised score specifies ondes martenots, Anis Fuleihan, Grainger, Martinů and Schnittke. The fingerboard theremin was used by Stokowski to reinforce the double basses in the Philadelphia Orchestra at the end of 1930, though it was soon replaced by a specially constructed space-controlled instrument, which was in turn replaced in the mid-1930s by an ondes martenot. The three types of theremin were used for popular dance music by the Electrio in New York in 1931, and larger ensembles of theremins were assembled in New York in 1930 (14 space-controlled, 1 fingerboard) and 1932 (the Theremin Electrical Symphony, consisting of 16 fingerboard and keyboard instruments). The theremin has also been used in music-hall and variety performances, in film scores and by some rock groups, for example the Beach Boys in *Good Vibrations* (1966).

Several space-controlled instruments between the early 1920s and the late 1930s were based on the theremin, including the Sfaerofon, Croix sonore, Electronde, Elektronische Zaubergeige and Ethonium. Robert A. Moog manufactured five models of the theremin between the mid-1950s and mid-1960s, and in 1965 applied the same system in a controller developed for

Cage's *Variations V*, in which dancers moving between a number of antennae affect the sound produced. The theremin was little used from the mid-1960s to around 1990, when 'glasnost' in the Soviet Union enabled Termen to make several visits to the West, increasing interest in analogue electronic music, and Moog's company Big Briar started manufacturing theremins with up-to-date technology. Subsequently more than 15 different models have been produced by Big Briar and at least nine other manufacturers, including PAIA, Longwave (including a pocket version), Tony Henk and Doepfer; some of these use analogue circuitry, not always based on the BFO, while others are digital. Theremins have also been used as MIDI controllers.

RICHARD ORTON/HUGH DAVIES

Thern, Károly

(*b* Igló [now Spišská Nova Ves],13 Aug 1817; *d* Vienna, 13 April 1886).Hungarian composer, conductor and pianistof Austrian origin. He could not speak Hungarian fluently until the age of 13, but as early as 1832 he founded a musical society in Miskolc. In 1834 he formed an orchestra there, which he conducted and for which he composed. For a time he taught at a girls' boarding school in Balassagyarmat. In 1836 he moved to

Pest; the following year he entered the university there, where he soon attracted the attention of Hungarian literary society with incidental music to József Gaál's *Peleskei nótárius* ('The Notary of Peleske', 1838), *Szvatopluk* (1839) and Szigligeti's *Rontó Pál* (1839). He was made assistant conductor of the National Theatre in 1841, and in this capacity wrote the operas *Gizul* (1841), *Tihany ostroma* ('The Siege of Tihany', 1845) and *A képzelt beteg* ('The Imaginary Invalid', after Molière, 1855). In 1853 he was appointed harmony and piano teacher at the Conservatory of the Pestbuda Society of Musicians.

In 1864 Thern moved with his sons Vilmos (*b* Buda, 22 June 1847; *d* Vienna, 7 April 1911) and Lajos (*b* Pest, 18 Dec 1848; *d* Vienna, 12 March 1920) to Leipzig to secure a more thorough education for them. They studied with Reinecke and Moscheles at the conservatory, later with Liszt in Weimar, and won European renown with their concert tours of two-piano recitals from the mid-1860s. They often played works by Liszt, who transcribed four Schubert marches for them for piano duet. Vilmos later taught at the Horák music school in Vienna, Lajos at the Vienna Conservatory. Their father returned to Pest in 1868, where he conducted the Pest Music Lovers' Orchestra and the Concordia and Aurora choirs. After his retirement he spent his last years in Vienna.

Thern's music shows a sound theatrical inventiveness but does not rise above the level of most Hungarian operatic music of the time. He was most successful in adapting folksongs for use in popular stage works such as 'Hortobágyi pusztán' ('On the Hortobágy Puszta') in *Peleskei nótárius*. Although stage works dominate his output, he also published songs, piano music (including *Musikalische Bilder aus Weimar* op.32, Hungarian dances and fantasies) and chamber works (including a String Trio in F op.60), and composed a symphony (1871) and a few other orchestral works. Some of his compositions and transcriptions were published under the pseudonym Károly Réth N.

MARIA ECKHARDT

Thesis.

(1) A musical 'position' in Byzantine musical theory which is, in effect, a realization of subsidiary signs in the notation known as cheironomiai.

(2) *See* Arsis, thesis.

Thessaloniki [Salonica].

City in Greece. The earliest recorded performances of opera date from 1876; and in the 1880s and 1890s several Italian touring companies visited

the city. Performances by touring Greek companies (primarily the Elliniko Melodrama) in the Municipal Theatre began in 1905. Between this date and 1989, 76 operas (including eight by Greek composers) were performed, either by the National Opera established in Athens in 1940 (see Kyrtsani) or by important foreign companies appearing annually between October and November at the Demetria Festival; in addition 43 operettas were performed between 1940 and 1983.

Attempts by Thessaloniki's own institutions to produce opera have been sporadic. In 1930 the Thessaloniki State Conservatory presented Georgios Sklavos's *Kyra Frossyni* and in 1932 *Cavalleria rusticana*, and it has more recently given fine performances of Mozart's *Apollo et Hyacinthus* (1981), Weber's *Abu Hassan* (1990) and Offenbach's *La belle Hélène*. In 1977 Spyros Evanghelatos established the Opera Thessalonikis, affiliated to the Northern Greece State Theatre, the drama company of which he was head; performances took place in the company's theatre (cap. 1050). Its first production, *Fidelio*, was given in January 1978 with players from the Thessaloniki State Orchestra, but after four years it had to abandon its activities for lack of funding. Among other operatic ventures have been those of the Opera Dhomatiou Thessalonikis (Thessaloniki Chamber Opera) and the Opera Dhomatiou Voriou Ellados (Chamber Opera of Northern Greece).

The first permanent orchestra in Thessaloniki was the Orchistra tou Kéndrou tou Lefkou Pyrgou (Orchestra of the White Tower Café, 1919–33), followed in the 1920s by the Macedonian SO and the Great Macedonian Mixed Chorus (1928), which performed *Messiah*, Mozart's Requiem and Mendelssohn's *Athalie* and *Antigone*. In 1959 the composer and conductor Solon Michaelides founded the Symphoniki Orchistra Voreiou Elladhos (Northern Greek SO), which later became the Kratiki Orchistra Thessalonikis (Thessaloniki State Orchestra): its subsequent directors were Georgios Thymis (1971–83), Alkis Baltas (1983–92), K. Galilaeas (1992–4) and Leonidas Kavakos (from 1995). The Symphoniki Orchistra tou Dhimou Thessalonikis (Thessaloniki Municipal SO), was founded, initially as a string ensemble, in 1987. In 1993 Dimitris Agrafiotis became its conductor. In 1999 the Aristoteles University founded a 43-member SO.

Thessaloniki represents the centre of Greek choral activity. For decades the Aristoteles University Chamber Choir and Instrumental Ensemble, founded in 1953 by chorus conductor Yannis Mandakas, was one of the city's most prestigious institutions.

In 1911 the composer Sotirios Graekos founded the first conservatory in northern Greece, which survived until the 1950s. In 1915 the Thessaloniki State Conservatory was founded: except for the music departments in Greek universities, it remains the only state institution of its kind in the country. In 1926 the conductor Epaminondas Floros founded the Makedhonikon Odheion (Macedonian Conservatory), which for decades played an important role in the city's musical life. Thessaloniki's other private conservatories today include the Odheio Voreiou Elladhos (Northern Greek Conservatory, founded 1942), Neo Odheio (New Conservatory, founded 1984) and the Synchrono Odheio (Contemporary Conservatory, founded 1985).

In 1966 the Demetria Festival, held annually in October and November was founded. In addition to bringing foreign ensembles to Thessaloniki it provides opportunities for local musicians. A second festival, inaugurated in 1969, is the Moussiki Evdhomadha Neon Kallitechnon (Young Artists' Music Week), held annually in September as part of the Dhiethnis Moussikes Imeres (International Music Days). In 1997, when Thessaloniki was cultural capital of Europe, hundreds of concerts of all kinds took place in the city.

Thessaloniki's main concert halls are the theatre of the Etaeria Makedhonikon Spoudon (Society of Macedonian Studies, cap. 1050) and hall of the Aristoteles University. Smaller halls include the Olympion cinema, the recently restored Moni Lazariston (Lazarists' Monastery) and the Avlaea (Curtain) Theatre. Summer concerts are given at the open air amphitheatre in the Sheikh Su forest. The Megaro Moussikis (Thessaloniki Concert Hall, cap. 1476) was inaugurated in January 2000.

GEORGE LEOTSAKOS

Thesselius, Johann

(*b* ?Erfurt, *c*1580–90; *d* Hermannstadt [now Sibiu], 1643). German composer and musician active in Austria and Transylvania. In 1604 he applied unsuccessfully for a post as court musician at Kassel and matriculated at the University of Leipzig in the following year. His first known work, *Carmen musicum* (Leipzig, 1605; only at *D-W*, inc.), was written there for a wedding. When he published his *Neue liebliche Paduanen, Intraden und Galliarden* (Nuremberg, 1609), Thesselius was already in the service of Baron Carl Jörger at Aschach (near Linz). He

probably stayed there until Jörger, a member of one of the leading Protestant families in Upper Austria, was arrested in the course of the counter-reformation in October 1620, dying in prison three years later. Thesselius then went via Vienna to Siebenbürgen (Transylvania) where he was employed as Kapellmeister to Duke Gábor Bethlen at Klausenburg (now Cluj-Napoca). Bethlen's court was a centre of musical activities, with musicians coming from Germany, Poland, Hungary and Italy; as the Duke himself proudly stated, a mythological ballet, staged by his Spanish dancing-master Diego de Estrada in 1628, could have met with approval even at the imperial court. After Bethlen's death in 1629 Thesselius seems to have moved to Hermannstadt (now Sibiu), where he married and worked as organist at the Protestant church from 1639 to 1643.

Thesselius's volume of 1609 consists of ten suites (ed. V. Roth, Celle, 1990), which he explained were played as *Tafelmusik* at Schloss Aschach. In two significant respects they are similar to the important suites (published from 1611 onwards) of Paul Peuerl, who from no later than 1 November 1609 lived not far from him at Steyr and who may have got to know him. In the first place, each suite consists of a paduana, intrada and galliard, a sequence matched by Peuerl, who, however, added an extra movement between the last two. Thesselius thematically connected the beginning of the fourth suite with its end, a procedure anticipating the creation of the variation suite, with which Peuerl has long been credited. The five-part texture of his suites is paralleled not only in those of Peuerl but in those of many other composers of the time. Thesselius wrote his suites in a wide range of keys and arranged them in pairs, in four of which the keys are a 5th apart: D/G, D minor/G minor, E major/A minor and C/F; the fourth pair, in C/B♭, is the exception. Most of the documents and music manuscripts from the Transylvanian court and towns were destroyed during the subsequent wars against the Turks, but an incomplete six-part motet, *Wem ein tugendsam Weib bescheret*, by Thesselius survives (in *H-Bn*, inc.). A collection of *Tricinia sacra* (Vienna, 1615), for which the council of Leipzig paid him 6 florins in 1616, is lost. (P. Király: 'Johannes Thesselius, Kapellmeister von Gabriel Bethlen', *Ungarn-Jb*, xxi (1995), 19–31; incl. 1 paduana from *Neue Paduanen*)

Thévenard, Gabriel-Vincent

(*b* Orléans or Paris, 10 Aug 1669; *d* Paris, 24 Aug 1741). French singer. He went to Paris in 1690 and was a pupil of Destouches, who wrote several roles for him including Hylas in *Issé* (1698) and Amadis in *Amadis de Grèce* (1699). A member of the Académie Royale de Musique, he performed for over 30 years in some 80 *tragédies* and ballets, including premières of works by Campra, Collasse, Desmarets and Marais, as well as revivals of works by Lully. He frequently portrayed the role of a king, god or a grand priest (his *basse-taille* range was approximately *G* to *e'*) and was admired for the character and nobility which he imparted, and particularly for his ability to declaim recitative in a speech-like manner; in the words of Titon du Tillet:

> Sa voix était sonore, moelleuse, étendue; il grasseyait un peu, mais, par son art, il trouvait moyen de faire un agrément de ce défaut. Jamais musicien n'a mieux entendu l'art de chanter. C'est à lui que l'on doit la manière naturelle et coulante de débiter le recitative, sans le faire languir en appuyant sur les tons pour faire valoir sa voix.

He excelled at tragic roles in which, especially in the works of Destouches, he often performed an emotional lament as a monologue. His duets with Mlle Journet, famous for her portrayal of tender roles, were much appreciated (such as 'Que j'éprouve un supplice horrible', the duet for Peleus and Alcyone in Marais' *Alcione*, 1706).

He was described as 'robust' (Noinville) and enjoyed drinking, which, he said, strengthened his voice. In 1729, when nearly 60, he married a young girl and retired from the opera. According to Campardon and others, his birthplace was Orléans, but an engraving of him by G.F. Schmidt after a painting by Geuslain gives Paris.

Thibaud, Jacques

(*b* Bordeaux, 27 Sept 1880; *d* Mont Cemet, nr Barcelonette, 1 Sept 1953). French violinist. He was first taught the violin by his father, and appeared in public at Bordeaux when he was eight years old. At 13 his precocious talent took him to the Paris Conservatoire, where he studied with Marsick and graduated with a *premier prix* in 1896. Working at the Left Bank Café Rouge, he was heard and engaged by Edouard Colonne for the Concerts Colonne, at which he appeared some 54 times as a soloist in winter 1898–9, thereby establishing the basis of his reputation. He then began touring widely in Europe, making frequent appearances in Britain, and in the USA from 1903. He formed a trio with his brothers, a pianist and a cellist of ability, but it was as the partner of Cortot and Casals in a famous trio, chiefly active from 1930 to 1935, that he is remembered as an ensemble player. Their 1926 recording of Schubert's Piano Trio in B♭ d898 has long been acknowledged a classic in its unanimity of musical thought and beauty of interpretation; this and other recordings by the trio have been reissued on CD, as have Thibaud's solo recordings.

Thibaud was distinguished by the silvery purity of his tone and the exquisite polish of his technique, which combined with instinctive warmth of expression in performances that were refined rather than robust. He excelled in Mozart and in works from the French Romantic school. For some years he played a violin by Carlo Bergonzi, and later acquired the 'Baillot' Stradivari. He remained in France throughout World War II, refusing to give concerts in Germany. In 1943, with the pianist Marguerite Long, he founded the Marguerite Long-Jacques Thibaud International Competition for violinists and pianists (triennial for each instrument). Thibaud never retired; he appeared in London when he was over 70 and gave his last concert at Biarritz ten days before he was killed in an air crash on his way to a concert tour in the East Asia.

Thibaud, Pierre (Jacques)

(*b* Proissans, 22 June 1929). French trumpeter. He studied the violin at the Bordeaux Conservatoire and won a *premier prix* for the trumpet at the Paris Conservatoire at the age of 18, after only one year's study with Eugène Foveau. He joined the Israel PO as first trumpeter in 1960, played with the band of the Garde Républicaine from 1964 to 1966, and from 1966 to 1992 was first trumpeter of the Paris Opéra. He was professor at the Paris Conservatoire from 1975 to 1994, where he taught many pupils who went on to occupy orchestral positions, as well as Håkan Hardenberger.

Thibaud's method of playing is based on a particularly low breath support derived from the *hara* of karate, a head and throat position similar to the singer's falsetto, relaxed lips and precise articulation with the syllable 'ta'.

<div align="right">EDWARD H. TARR</div>

Thibaudet, Jean-Yves

(*b* Lyons, 7 Sept 1961). French pianist. He studied at the Paris Conservatoire with Lucette Descaves, Reine Gianoli and Aldo Ciccolini, winning a *premier prix* at the age of 15. His career was launched in 1981 when he won the New York Young Concert Artists' Trust. Shortly afterwards he signed an exclusive contract with Decca. His discs include the complete solo works of Ravel (including a stylish and scintillating performance of *Gaspard de la nuit*), both the Ravel piano concertos, much Debussy, Messiaen's *Turangalîla-symphonie*, Liszt and Wolf recitals with Brigitte Fassbaender and the complete Rachmaninoff concertos and Rhapsody on a Theme of Paganini. In 1989 Thibaudet made his UK début, playing Liszt's First Concerto with the Bournemouth SO; his Proms début followed in 1992 and his Carnegie Hall début in May 1993. The geniality and sparkle of his playing are heard to best advantage in Romantic works and in the French repertory. More recently he has recorded 'Conversations with Bill Evans' in memory of the American jazz pianist, using multi-track techniques to create a personal and highly sophisticated tribute.

<div align="right">BRYCE MORRISON</div>

Thibault, Geneviève [Comtesse de Chambure]

(*b* Neuilly-sur-Seine, 20 May 1902; *d* Strasbourg, 31 Aug 1975). French musicologist. She was a pupil of Lazare Lévy (piano, 1912–20), Eugène Cools (harmony and counterpoint, 1915–20) and Nadia Boulanger (fugue and organ, 1917–23) and also studied at the Sorbonne, where after obtaining the licence ès lettres (1919) she studied musicology with André Pirro (1919–25). She specialized at first in music of the 15th and 16th centuries, particularly 15th-century French song, but from 1923 she also developed an interest in old instruments; in 1925, with Lionel de La Laurencie, Georges Le Cerf and Eugénie Droz, she founded the Société de Musique d'Autrefois whose aim was to perform early music on authentic instruments and in 1953 she founded *Annales musicologiques*, a scholarly review devoted to music of the Middle Ages and the Renaissance. In 1967 she founded the Centre d'Iconographie Musical in Paris, the oldest and by far the largest national centre (since 1992 located at the Musée National des Arts et Tradition Populaires). She succeeded Georges Migot as keeper of the instrument museum of the Paris Conservatoire (1961–73) and in 1968 became president of the Comité International des Musées et Collections d'Instruments de Musique (CIMCIM). Thibault accumulated a fine collection of old instruments and an invaluable library of 15th- and 16th-century manuscripts and editions, and of works of music, which she

kept at the disposal of musicians and scholars. She was president of the Société Française de Musicologie from 1968 to 1971.

Thibault de Courville, Joachim.

See Courville, Joachim Thibault de.

Thibaut IV, Count of Champagne and Brie, King of Navarre

(*b* Troyes, 30 May 1201; *d* Pamplona, 7 July 1253). Trouvère. He was one of the most important of the northern French trouvères, with a larger surviving output of poetry and music than any other trouvère. His grandmother, Marie de France, patroness of Gace Brule, Conon de Béthune and Chrétien de Troyes, was a daughter of King Louis VII and Eleanor of Aquitaine. His mother, Blanche of Navarre, was the daughter of

King Sancho VI. His father, Thibaut III, had been named head of the 4th Crusade, but died suddenly on 24 May 1201, before departure. To obtain the protection of King Philip II Augustus, his mother contracted that Thibaut IV should spend four years at court and should pay homage to the king when he came of age. But because he was born only after his father's death, Thibaut's titles were twice challenged – in 1221 by Erard de Béthune and his wife Philippine, and in 1233 by Alix, Queen of Cyprus.

Thibaut was present at the Battle of Bouvines (1214) and took part in the siege of La Rochelle in 1224 in the war against the English. He fulfilled his duties as vassal at the siege of Avignon in 1226, but then left secretly against the wishes of Louis VIII. He refused to attend the coronation of Louis IX late that year, and joined a league of powerful nobles opposed to the regent, Queen Blanche of Castile. His submission and that of the Count of Bar was speedily enforced. This aroused the enmity of his former allies, who invaded Champagne and retired only after the threat of royal intervention. The bitter feelings were aired in sirventes by Hue de la Ferté.

Thibaut was crowned King of Navarre on 7 or 8 May 1234, after the death of his uncle, Sancho the Strong. His efforts to regain fiefs sold to the royal house to meet the settlement granted to Alix of Cyprus were frustrated.

In 1239 he left France for the Holy Land as the head of a crusade and, after visiting Jerusalem, returned the following year. He supported the French against the English in 1242, and in 1244 lost a battle in Gascony against English forces led by Nicolas de Molis. His headstrong, authoritarian attitudes led to quarrels with the clergy resulting in an interdiction, lifted after a 1248 pilgrimage to Rome. He married three times.

Thibaut's work was mentioned in the *Grandes chroniques de France*, and by Dante, by the theorist Johannes de Grocheio and by the Minnesinger Wahsmuot von Mülnhûsen. Quotations appear in Girardin d'Amiens' *Meliacin* and in Matfre Ermengau's *Perilhos tractat*.

Prolific and versatile, Thibaut wrote not only *chansons courtoises* but also *chansons de croisade*, jeux-partis, *débats*, pastourelles and religious works, including a lai, a serventois, and chansons to the Virgin. His poetry exhibits a wide variety of strophic structures, most strophes being isometric (many of them in decasyllables) but some having several different line lengths. His chansons normally contain five strophes, his jeux-partis six. Four works each use a fixed refrain and one has a variable refrain. The device of re-using the same strophic form for three pairs of chansons, and for one of these pairs using the same melody also (*Sire, loez moi a loisir*), is unusual for the period – parallels may be found in the work of Richart de Semilli and Moniot d'Arras. Most of the jeux-partis draw on poetic structures and melodies of older poems. It is possible that neither of the extant melodies to *Baudouin, il sont dui amant* was by Thibaut and that this jeu-parti was intended to use the melody to Bernart de Ventadorn's *Quan vei la lauzeta mover*. In turn, several of Thibaut's works (*De bone amour*, *Empereres ne rois*, *Tant ai Amours*, *Ausi com l'unicorne* and *Tuit mi desir*) served as models for later chansons, one of them being imitated three times.

Most of Thibaut's melodies are cast in bar form. However, some (*Une doulours enossee*, *A envis sent mal*, *Savés pour quoi Amors* and *Ausi com l'unicorne*) are non-repetitive, while others (*Li dous penser*, *Je ne puis pas bien metre*, *Li rossignous*, *Au tens plain de felonie*) contain unorthodox repetitions. *Pour mal tens* and *Robert, veez de Pieron* use forms characteristic of the rotrouenge. *Ausi com l'unicorne*, cited by Grocheio as a 'cantus coronatus', begins near the peak of its range, defines the upper tetrachord in the first two phrases and the lower pentachord in the next two, cadencing on the lowest note and creating a momentary impression of finality. The remaining phrases explore primarily the upper tetrachord, ending on its lowest tone. *Chanter m'estuet*, cited by Grocheio as a *cantus versualis*, has a simpler, more symmetrical tune which moves primarily within the pentachord above the final. Like a large number of his melodies, these two are in the modes on G; Thibaut has in fact a clear preference for modes with a major 3rd above the final. (Except for melodies ending on F, he preferred authentic to plagal forms.) The nearly syllabic settings of these two songs, punctuated by brief cadential flourishes, are representative of many works. He normally began on or just above the final and expanded the melody upwards. Examples that descend from the 7th or octave (*De novel*, *Qui plus aime*, some versions of *En chantant veul*) are rare. Often the manuscript sources are divergent in essential features of modality. For example, the refrain of *Pour mal tens* ends on four different notes in five of its sources, and is lacking altogether in a sixth, causing still another note to appear as final. While most melodies by Thibaut make clear the importance of the final as the main tonal centre, some are ambiguous or even misleading. Most remain within the range of a 7th, 8th or 9th, but a few extend to an 11th. Mensural rhythm is indicated in about 20 melodies. *Dieus est ensi* is notated in first rhythmic mode in one source (*F-Pn* fr.12615). Many of the remaining examples, in the Chansonnier Cangé (*Pn* fr.846), show inconsistencies and contradictions in the notation. Disposition of patterns in some melodies sometimes hints that modal interpretation may be acceptable for other tunes.

THEODORE KARP

Thibaut, Anton Friedrich Justus

(*b* Hameln, 4 Jan 1772; *d* Heidelberg, 28 March 1840). German legal scholar and amateur musician. After leaving the Gymnasium in Hanover, he began to study law in 1792 at the University of Göttingen, where he may have heard Forkel lecture. In the next year he moved to Königsberg to hear Kant, and in 1794 went to Kiel where he took the doctorate in law (1796) and formed a lasting friendship with Niebuhr. He was appointed professor in 1798 and four years later was called to Jena, where he met Schiller and wrote his principal legal work, *System des Pandektenrechts*. He moved to Heidelberg in 1805 to assume a chair of law and remained there for the rest of his life. The War of Liberation inspired him to write a collection of essays in 1814 urging codification of German laws: he was challenged by Savigny in a treatise which formulated the leading ideas of the historical school of law.

While in Jena Thibaut began collecting sacred vocal music and folksongs; with Ett and Klein generously contributing copies of works from several European libraries, the collection became one of the largest of its kind in Germany and attracted the attention of Zelter and Kiesewetter. In 1811 Thibaut assumed the direction of a small Heidelberg amateur chorus with which he gave annually about four concerts of works from the 16th to 18th centuries, trying to stimulate an appreciation for earlier music. As the chorus grew in size and reputation its otherwise private weekly rehearsals were occasionally attended by such figures as Goethe, Tieck, Mendelssohn and Schumann. Thibaut's most influential musical achievement was his book *Über Reinheit der Tonkunst* (1825), which is comparable to the writings of Baini and Kiesewetter in the importance of its contribution to early 19th-century Cecilian reforms. In this work, which was criticized by Nägeli, Thibaut expressed ideas similar to those of Hoffmann and Reichardt, arguing that the declining contemporary musical tastes could best be refined through study of older sacred choral music, especially that of Palestrina and Handel and their contemporaries.

RICHARD D. GREEN

Thibaut, Jean-Baptiste

(*b* St Etienne, 5 Oct 1872; *d* Lorques, nr Varennes, 7 April 1938). French writer on Byzantine music. In 1891 he joined the Assumptionists and began to study Byzantine music, an interest developed during his long residence in the East. In 1900 he was ordained priest in Constantinople; thereafter he lived in Jerusalem, several Turkish and Bulgarian cities, Odessa (1907–11) and St Petersburg (1911–14). During World War I he worked as an army chaplain, returning to Turkey in 1920. He retired to France in 1922.

Thibaut was the first scholar to make a systematic investigation of Byzantine musical notation and to try to deduce the origin of Latin neumes from Constantinople. He divided Byzantine notation from the 11th to the

18th centuries into three phases: the first originated in Constantinople, the second in Jerusalem and the third was invented by Koukouzeles. His studies were based on manuscripts from all periods of which he edited an important collection. Together with J.B. Rebours he also edited several treatises on Byzantine musical theory, but he was unable to decipher the notation.

NANNA SCHIØDT

Thibaut de Blaison [Blason, Blazon]

(*d* after March 1229). French trouvère. He was Seneschal of Poitou, and of a noble family with holdings in Blason and Mirabel; his uncle, Maurice, was Bishop of Poitiers. Thibaut was among the negotiators of the truce of 1214 between King Philip II Augustus of France and King John of England. Together with Hue de la Ferté, he was among the nobles at the coronation of Louis IX (St Louis). He took part in a crusade against the Moors in 1212,

and participated in the siege of Toulouse in 1218 during the Albigensian crusade. His name appears with that of Amauri de Craon (also a trouvère) in a document of 1219. Thibaut IV, King of Navarre, dedicated a song, *De ma dame souvenir* (R.1467), to Thibaut de Blaison; he also based a religious poem (R.1475) on the structure and melody of Thibaut de Blaison's *Amours, que porra devenir*. The melody of Gautier d'Espinal's song (R.1059) is also taken from the latter. The rhythms of the polyphonic conductus *Quid frustra consumeris* and *Sol sub nube latuit* may perhaps have some validity as the basis for *Bien font Amours lor talent* and *Chanter et renvoisier seuil*.

11 poems, including one of contested authorship and one spurious, have been ascribed to Thibaut de Blaison in trouvère and troubadour manuscripts; three anonymous items may also be his work (poetry ed. T.H. Newcombe, Geneva, 1978). Thibaut's songs display a preference for simpler poetic constructions, containing at most one change in line length; *Bien font Amours*, *Bon jour ait hui cele* and *Quant je voi esté venir* are nevertheless more varied. The use in three chansons of *ouvert* and *clos* endings within each *pes* and the use of earlier material or symmetrical repetition within the cauda are among the distinctive traits of Thibaut's melodic structures, all in bar form. *Amours, que porra devenir*, *Chanter et renvoisier seuil* and *Huimain par un ajourant* remain within the range of a 6th; this interval is exceeded only once in *Li miens chanters*, but other melodies move more freely. (The simple restricted movement of *Bien font Amours* accords with Thibaut's style, but is in contrast to the more flamboyant melodies of Gautier de Dargies, to whom the piece is also attributed.) In the Chansonnier Cangé (*F-Pn* fr.846), the first six lines of *Quant je voi esté venir* are notated in the first mode; however, mensural indications are lacking for all other pieces. Most melodies are comparatively syllabic, although *Li miens chanters* is moderately ornate.

THEODORE KARP

Thibouville.

French family of woodwind and brass instrument makers whose origins go back to the 17th century. Martin Thibouville *l'aîné* (*b* 1793) founded a woodwind instrument workshop in La Couture in 1820 and opened a Paris shop just before 1848. He is known for artistically made woodwind instruments, including a metal double bassoon and a wooden Boehm-system flute with a metal head (both from 1888). His successors were his son Martin Denis (*b* 1833), who established a steam-powered factory in 1870, and then his grandson Martin Victor Gustave (*b* Tilly, 1856), before the firm passed in 1900 to Eugène Bercioux (*b* Paris, ?1820; *d* 1914).

Martin Denis's other son, Eugène (*b* 1832; *d* Ivry-la-Bataille, 1891), established his own firm by 1855 in Paris; by 1862 it was located in Ivry-la-Bataille as 'Noblet & Thibouville'. This was succeeded in 1886 or 1887 by 'Eugène Thibouville et fils', the two sons being Adrien (*b* Ivry-la-Bataille, 1855) and Camille (*b* Ivry-la-Bataille, 1864). By 1890 it was called 'les fils d'Eugène Thibouville' and in 1909 'Thibouville frères', which continued, after 1910, under the management of Adrien's younger son George (*b* Ivry-la-Bataille, 1886; *d* Ivry-la-Bataille, 1957), passing in 1957 to Maurice Masson. The woodwind instruments made by Thibouville frères could also be stamped on request with the mark of any of 18 different clients. Camille and Adrien each established independently in Ivry-la-Bataille in 1910; Adrien's elder son Eugène (*b* Ivry-la-Bataille, 1884; *d* 1915) was killed in the war.

Another 'Thibouville frères' had been established in La Couture by Louis, Nicolas and Pierre Thibouville at an unspecified date. Their firm branched

into two: under Pierre as 'Thibouville-Hérouard' (1842) and under Nicolas as 'Thibouville-Buffet' (before 1873). Pierre's eldest son remained at La Couture and another, Jean-Baptiste (*b* 4 May 1832) founded a shop in Paris in 1857, reviving the name 'Thibouville frères'. When Pierre's eldest son died in 1864, he was briefly replaced by his cousin Béranger, son-in-law of Nicolas, who died one year later. In 1869 'Thibouville-Béranger' was renamed 'Thibouville-Cabart' (Cabart having already been established in Paris in 1842) and the factory moved to Ezy. The firm was famous for oboes and clarinets, and from about 1893 marked its quality instruments 'Cabart'; in 1914 they styled themselves 'Thibouville gendre et succ[esseu]r' and in the 1930s 'Cabart à Paris (Thibouville succr.), Ezy'. The name 'Cabart' was finally appropriated from about 1946 by a French maker-dealer.

A 'Thibouville-Coudevillain' (*fl* Paris and La Couture, 1886–93), successor to Isidor Lot, merged with Thibouville-Cabart in 1893. A 'Thibouville-Creutzer' (*fl* Paris, 1900–11) is reported in 1900 as proprietors of the woodwind instrument makers Lefèvre. Other woodwind instruments, mostly flutes, survive from 'Thibouville frère' (*fl* La Couture, 1800–50), 'Thibouville frère *aîné*' (*fl* Paris, 1800–50), 'Thibouville-Noë' (*fl* La Couture, *c*1858), 'Thibouville-Noë & fils' (*fl* Paris, late 19th century), 'Thibouville père' (*fl* Paris, *c*1850) and 'Thibouville père & fils' (*fl* Paris, 1800–50). A 'Massin & Thibouville', making woodwind and brass instruments, existed in Paris from before 1889 until 1892, when it merged with Lecomte.

'Jérôme Thibouville-Lamy', founded in 1790, became one of the largest factories of all kinds of musical instruments in the world by the last third of the 19th century. (Louis Emile) Jérôme Thibouville-Lamy (*b* Mouettes, La Couture, 1 Feb 1833; *d* 1902), son of Louis Martin Thibouville (*b* 1807) and Marie Josephine née Grandin (a flageolet by 'Thibouville-Grandin' survives), had worked with 'Husson-Buthod & Thibouville' from about 1857, becoming sole proprietor just before 1867. He gradually introduced mechanization, resulting in lower-priced instruments, and in the Vienna exhibition of 1873 presented violins for five, ten and 20 francs. By 1878 he employed 420 workmen in four factories, one each at Mirecourt (stringed instruments) and La Couture (woodwind instruments), and two in Grenelle (for brass instruments, and strings for stringed instruments, respectively), plus a workshop for organs and musical automata; and by 1926 there were 100 workers in six factories. In 1889 his son Louis Jérôme Emile and Alexandre Alfred Acoulon were partners, and from 1896 to 1908 Acoulon was sole proprietor. Around 1895, a branch office in New York was opened. The firm was dissolved in 1961 by its last president, A.E. Acoulon (*b* 1887).

During its heyday 'Jérôme Thibouville-Lamy' produced the finest brass instruments, notably C trumpets with four and five valves, developed in 1912 and 1916, respectively, with Merri Franquin. The fourth valve was an ascending whole-tone valve, a sensible idea which has since been revived by the Boston maker Tottle (*d* 1976) and others. The firm was the first to manufacture horns in F/B♭ with an ascending third valve, with Louis Vuillermoz (*c*1928). The London branch, opened in 1880, still flourishes in Woodford Green as a dealer mainly in accessories.

EDWARD H. TARR

Thick, Henricus.

See Tik, Henricus.

Thiele, Siegfried

(*b* Chemnitz, 28 March 1934). German composer. At the Leipzig Hochschule für Musik he studied composition with Wilhelm Weismann and Johannes Weyrauch, and conducting (1953–8); his studies were completed in Leo Spies's masterclass at the German Academy of Arts in East Berlin (1960–2). He lectured at the music schools in Radeberg and Wurzen, Saxony (1958–62), and since 1962 he has lectured at the Leipzig Hochschule für Musik, where he founded and conducted the Leipzig Youth Symphony Orchestra. In 1984 he became a professor of composition at the Musikhochschule. He has held classes in musical analysis and has given musicological papers throughout Germany and also abroad. Among other awards, he has received the GDR's Mendelssohn Scholarship. In 1990 he became director of the Leipzig Hochschule für Musik und Theater. This directorship was also an acknowledgment of his upright attitude during the years of communist dictatorship in East Germany. In 1995 Thiele became a founding member of the Saxon Academy of Arts.

His music employs tonalities coloured by modal turns and non-orthodox 12-note procedures. In his perception of music, the traditional idiom is present as often as contemporary styles. His compositions are directly influenced by his academic examination of the music of earlier periods. Of particular fascination to him are the similarities between the isorhythmic motets of the fourteenth century and the serial techniques of the twentieth century in relation to the proportion of pitch and duration.

ECKART SCHWINGER/LARS KLINGBERG

Thielemann, Christian

(*b* Berlin, 1 April 1959). German conductor. He began studying the piano at the age of five and soon added composition, conducting and the viola (with Giusto Cappione). After piano studies with Helmut Roloff at the Berlin Hochschule für Musik, he worked as a répétiteur at the Deutsche Oper in Berlin and as Karajan's assistant. He took positions in Gelsenkirchen, Karlsruhe and Hanover before becoming principal conductor of the Deutsche Oper am Rhein in Düsseldorf in 1985. In 1988 he moved to Nuremberg as Generalmusikdirektor and, after appearing in the principal Italian opera houses, became principal guest conductor of the Teatro

Comunale di Bologna in 1993. Thielemann has also conducted in Japan (with the orchestra of the Accademia di S Cecilia and the Deutsche Oper, Berlin) and with the Israel PO, the Philharmonia, the Berlin PO, the Concertgebouw, the Leipzig Gewandhaus Orchestra, the New York PO, the Chicago SO and the Philadelphia Orchestra. In 1997 he became music director of the Deutsche Oper, Berlin. Beethoven, Strauss and Pfitzner quickly became Thielemann's calling cards after he conducted *Elektra* in San Francisco (and later at Covent Garden) and *Der Rosenkavalier* and *Arabella* at the Metropolitan, and recording works by all three composers (including Beethoven's symphonies nos.5 and 7) for Deutsche Grammophon. He cultivates Karajan's feeling for the long line, but his verve and often relentless intensity place him even more in the Solti mould.

JOSÉ BOWEN

Thielemann [Thilemann], Johann Christoph

(*b* Wichmar, nr Camburg, Thuringia, 9 March 1682; *d* Gotha, 4 Aug 1755). German organ builder. Nothing is yet known of J.C. Thielemann's youth and education, or of the date when he moved to Gotha and opened a workshop there, but it was probably before 1710. In 1711 he married in Gotha, and his son Johann Heinrich was born the following year. In 1735 he was granted a privilege to build organs and appointed court organ builder. Johann Stephan Schmalz, Jacob Bärwald and J.H.H. Bätz worked for him as journeymen from 1729 to 1733. In 1729 Thielemann was commissioned by G.H. Stölzel, Kapellmeister of Gotha, to build 'three Satyric organs, each with 8 pipes', for the performance of a serenade. In 1734 he assessed T.H.G. Trost's first organ design for the famous organ in the Altenburg Schlosskirche. After 1746 Carl Christian Hoffman worked with Thielemann, and succeeded him as court builder in 1755.

Thielemann is regarded, with Trost, as one of the most important Thuringian organ builders of the 18th century. In his extant instruments, the structure of the front is notable for its delicate, ornamental charm and the flat surface design. His specifications show that he preferred a *Brustwerk* (*Unterwerk*) to the usual *Oberwerk*, and they display several characteristics that were common in Thuringia, such as the emphasis on fundamental tones, many wooden stops, and the characteristic Violonbass 16' even in small instruments, as well as many Cymbelsterne and Glockenspiele. His best preserved organ is in Gräfenhain (1728–31); it was restored in 1993–6.

His other organs include: Boilstädt (1710); Schloss Tenneberg (1721; partly preserved); Wölfis (1737–9; extant); Grabsleben (1738–9; extant); and Rehestädt (1750; completed by Schmalz). He also made repairs to the organs at Hohenkirchen (1724) and Goldbach (1753).

FELIX FRIEDRICH

Thielo, Carl August

(*b* Copenhagen, 7 Feb 1707; *d* Høsterkøb, 2 Dec 1763). Danish composer, theatre director and writer, of German descent. His father was Johann Hiob Thielo from Erfurt (*c*1685–1735), who as a young man settled in Copenhagen where in 1708 he became organist of the church of Our Saviour. According to his own account (*Grund-Regeln*), the younger Thielo was sent to Germany to learn music; from the age of eight until 12 he was taught keyboard and thoroughbass playing in Saxony but not until he became a pupil of J.G. Walther in Weimar did he really make progress. He returned to Copenhagen in 1726 and set himself up as a music teacher. He married in 1733 and in 1735 a daughter, Caroline Amalie, was born; she made her stage début at an early age and by the time of her death under mysterious circumstances at the age of 19 was the most admired actress of her day.

Thielo was organist of Citadelkirken in Copenhagen from 1739 to 1743, where in the latter year he composed and produced a Passion oratorio. In 1744 a musical society was founded and Thielo was asked to provide a book of musical instruction for the members as required by the society's statutes. The result was *Tanker og regler fra grunden af om musik for dem, som vil laere musiken til sindets fornøjelse, saa og for dem, som vil gjøre fait af klaver, general-bassen og synge-kunsten* ('Thoughts and rules providing an introduction for those who wish to learn music to delight the mind, as well as for those who wish to learn keyboard playing, thoroughbass and the art of singing', Copenhagen, 1746). This book, the first about music in Danish to be published in Copenhagen, provides in addition to its practical information a lively picture of the Copenhagen musical scene in the mid-18th century.

An active member of the musical society was the distinguished dramatist Ludvig Holberg, on whose recommendation Thielo was granted at the end of 1746 a royal privilege to establish a Danish theatre. He gathered a company and in April 1747 the 'Danish Comedy' gave its first performance. Thielo now turned his hand to playwriting as well but with so little success that Holberg condemned his efforts and his actors refused to perform them. He was forced to assign his rights to the actors in return for which he was pensioned at a salary equal to that of the best actors. He continued to be actively associated with the theatre in a variety of capacities: music adviser, arranger, accompanist, copyist and composer. This connection provided him with the material for the enterprise for which his name is most remembered today – the publication of a number of collections of theatre music from the first period of 'Syngespil' and opera in Danish. Between 1751 and 1754 he published four collections of *De oder, som paa den*

Danske Skue-Plads udi Kiøbenhavn ere blevne opførte ('The odes which have been performed at the Danish Theatre in Copenhagen'). The contents of the first three were to a large extent reprinted in 1755 in three volumes under the title *Musikaliske comødiestykker* ('Pieces from the musical comedies'), of which a fourth appeared in 1761. In addition Thielo published a collection of German *Oden mit Melodien* (1754), not composed for the theatre, and numerous other pieces of vocal and instrumental music, most of which are now lost. He also published other pedagogical works including a textbook in German, *Grund-Regeln wie man bey weniger Information sich selbst die Fundamenta der Music und des Claviers lernen kan* (1753); a weekly musical magazine containing music by famous foreign composers, as well as himself, together with instructions in playing and singing, of which four issues were advertised in 1756; and a book to teach pastors to chant properly, *Musikalisk underretning at messe for altret* (1762). His literary activities included a series of novels and a weekly paper *Spionen* ('The spy', 1758), in which he included two of his 'Syngespil'. He applied to the university in 1757 for the title of professor and to Roskilde Cathedral in 1759 for the position of organist, but was unsuccessful in both applications. These disappointments, together with the temporary failure of the Danish opera, apparently decided him to abandon the ungrateful life of musician in the capital city. In 1762 he bought a farm north of Copenhagen, but before he could try this new career, while waiting for a house to be built, he died in Høsterkøb Inn.

JOHN BERGSAGEL

Thieme [Thiem, Thime, Tieme, Time], Clemens

(*b* Grossdittmannsdorf, nr Dresden, 7 Sept 1631; *d* Zeitz, 27 March 1668). German composer and instrumentalist. He studied under Philipp Stolle in Dresden, then in 1642 was taken by Heinrich Schütz to Copenhagen, where he was a choirboy at the court. He returned to Dresden after his voice broke, and began studying various instruments at the expense of the Elector of Saxony. On Schütz's recommendation he joined the elector's Kapelle in 1651. In 1663, after unsuccessfully seeking a post at Hamburg and again with Schütz's help, he entered the Kapelle of Duke Moritz of Saxony at Zeitz, where he rose to become Konzertmeister. Although none of his music was ever published, it enjoyed great popularity in and around Zeitz. Well over 100 titles are known by name, but only 18 have been located. The sonatas, which are among the best composed in the wake of Rosenmüller's, alternate lively homophony and fugal writing over a firm

bass. The structure of the sacred works depends on the alternation of equally balanced choral and solo sections; homophonic, polyphonic and fugal elements again complement each other. The style of these works lies midway between the older contrapuntal style and the more expressive Italianate manner that informs the church music of Schütz's time.

HANS-JOACHIM BUCH

Thiéme, Frédéric [Thieme, Friedrich]

(*b* Reims, 3 June 1750; *d* Rouen, 29 March 1802). French theorist and composer. He became known in France and Germany for his pedagogical publications. He was active in Rouen where he worked as a teacher, editor and publisher. His didactic works include piano and violin methods, and *Eléments de musique pratique et solfèges nouveaux* (1784). A revised edition of the work, *Eléments de musique … avec un basse chiffrée suivant … l'abbé Roussier*, appears never to have been published. He advocated a reform of metre signatures and tempo markings in *Nouvelle théorie sur les différens mouvemens des airs … avec le projet d'un nouveau chronomètre* (1801/*R*). He may have been in Paris briefly during the Revolution, as there

was a Thiéme who worked at the Ecole Royale de Musique between 1793 and 1795. About 1794–5 he published arrangements of two operatic overtures by Le Sueur. His only surviving compositions are violin duos.

CYNTHIA M. GESSELE

Thieriot [Thierot, Thierrot], Prudent

(*b* 1732; *d* Paris, 9 Dec 1786). French maker of woodwind instruments. His earliest training was in carpentry with his father. In 1747 he entered a six-year apprenticeship with the woodwind instrument maker Charles Joseph Bizey; in an initial contract of 27 April he signed himself 'Prudent Bizey' while Bizey signed as his uncle, perhaps indicating that the apprentice was regarded as one of the Bizey family; the deal was finalized in a further contract on 17 May. (Prudent used the Bizey surname again when he witnessed Bizey's marriage contract in 1751.) In signing his instruments Prudent exhibited a similar reticence towards the use of his surname, preferring simply the marque '[fleur-de-lis]/prudent/a paris'.

Prudent married Marguerite Chalopet, sister of Bizey's wife, on 6 April 1758; through this union (and, later, Bizey's death) Prudent became master maker of the workshop on the rue Dauphine. He supplied instruments to the Opéra and the Théâtre Italien, as well as to military regiments. In 1765 he was, with Paul Villars, the expert valuer for the inventory of the workshop of Thomas Lot (iii). In 1772–3 he was *juré comptable* of the *communauté des maîtres luthiers*.

An inventory of Prudent's workshop at the time of his death, with valuations by Christophe Delusse and Dominique Porthaux, lists 142 clarinets, 130 flutes, 30 tierce flutes, 258 flageolets, 41 recorders, 205 bassoons, several octave oboes and 50 piccolos. On 20 December 1786 Prudent's widow sold the instrument business to her brother-in-law Dominique Porthaux for 7022 livres. Prudent's son Jean François Thieriot (*b* Paris, 1779; *d* Paris, 20 Oct 1834) had an instrument making workshop at 351 rue St Denis.

Prudent played a significant role in improving the design and development of the clarinet in France during a period when the instrument was growing in popularity as both an orchestral and a solo instrument. His standing as a French maker of clarinets and bassoons was unsurpassed. Extant instruments by Prudent include eight one-keyed flutes, ten oboes of two and three keys, three clarinets of five and seven keys and ten bassoons of five and six keys.

TULA GIANNINI

Thierri de Soissons

(*fl* 1230–60). French trouvère. Four songs (R.1267, R.1978, 2063 and 2107) survive with attributions to both Raoul de Soissons and Thierri de Soissons, the former being probably correct. Whether the two men are identical, the name Thierri being an error, is the subject of debate. No 'Thierri' has as yet been traced among the family of the counts of Soissons, but such a relationship is perhaps not obligatory. Ascriptions to Thierri appear in *F-Pn* fr.845, which does not make mention of Raoul, and in *F-Pa* 5198, which does. The latter circumstance would argue against the presumed identity were it not for the fact that mention of Thierri occurs as part of a larger series of attributions to trouvères also presented earlier in the manuscript, precisely in the place where the recurrence of Raoul might be expected. One song attributable to Raoul (*E, cuens d'Anjou*, R.1154) and two ascribed to Thierri, *Destrece de trop amer* and *Quant avril*, are all dedicated to Charles, Count of Anjou. *Se j'ai lonc tens* presents an unusual musical structure, $ABCC^1DEFC^2\ C^3$ (phrase *D* containing some elements of *C*), in the setting of a poem that opens with an *ABBA* rhyme scheme. The disregard in *Sens et raison* of the *pedes*-plus-cauda structure in a non-repetitive musical setting is also noteworthy. The melody for *Destrece de trop amer* has a seldom-used final, *b*, located in the upper portion of a range *d–e'*. It would seem, however, that the number of works known under the names of the two trouvères is too few to permit firm conclusions regarding the existence of two different artistic personalities.

GUY OLDHAM/PIERRE HARDOUIN

Thierry

(1) Pierre Thierry

(*b* Paris, late 1604; *d* Paris, 15 Sept 1665). He studied music with Florent Bienvenu, organist of the Ste Chapelle, and was apprenticed to Valeran De Héman in 1623. Between 1634 and 1636 he worked with Crespin Carlier at St Nicolas-des-Champs. Later he set up on his own and worked at Notre Dame, St Jean and St Gervais, Paris. He added a 4' stop to the Pedal of the St Gervais organ in 1649; in 1659–60, under the supervision of Louis Couperin, he added to the *Positif* a new 8' Bourdon, a 4' Flûte made out of the old Bourdon, a Nazard and a Tierce, as well as a fourth manual (an *Eccho* of three octaves from *c*) placed between those of the *Grand orgue* and the *Cornet séparé* and containing Bourdon et octave, Doublette,

Nazard et tierce, Cromhorne and Cimballe. He also added the *A* to all the stops of the *Positif* and Pedal, and arranged that the *Grand orgue* to Pedal coupler could be engaged at the discretion of the organist (these changes presumably according to the instructions of Louis Couperin as well).

Thierry's most important organs were at the Hôtel-Dieu at Pontoise (1637–41), St Paul, Paris (1644–6), and the church of the Mathurins, Paris (containing the first combined wind-chest for the *Grand orgue* and *Récit*). In 1657, with Pierre Desenclos, he introduced a *Grand écho* division of seven stops on the organ at Rouen Cathedral. His masterpiece was the St Germain-des-Prés organ (1661; the *Récit* borrowed several stops from the *Grand orgue* by communication). On the death of Desenclos in 1664 he became *facteur du roi*. In addition to (2) Alexandre Thierry, two of his other sons became organ builders: Jean (*b c*1638; *d* Paris, Oct 1689), who built the organ at St Père-en-Vallée, Chartres; and Charles (*b* Paris, 15 Nov 1641), whose signature is on a *Trompette* pipe from the St Germain organ (now in the organ at St Merri, Paris).

Thierry

(2) Alexandre Thierry

(*b* 1646/7; *d* Paris, Dec 1699). Son of (1) Pierre Thierry. With the completion of the organ at St Séverin in 1675 (built in collaboration with his brother Charles), he established himself as the leading French organ builder of his time. The following year he made a new Cornet for the St Gervais *Cornet séparé* manual, replacing the mechanism for borrowing by communication the Cornet of the *Grand orgue*; between 1678 and 1684 he completed the chorus Tierce on the *Grand orgue* by adding a Quarte de nazard, and replaced the Flageolet on the *Positif* with a Larigot (soon after used by François Couperin in his famous *Dialogue sur les trompettes … et le bourdon avec le larigot du positif*). As organ builder to the king, he worked at Saint Cyr (1686); St Louis-des-Invalides, Paris (1679–87: for specification *see* ..\Frames/F004895.htmlOrgan, Table 14; survives in part); St Victor, Paris (1679; part now at St Germain-des-Prés); the abbey of Bucilly (part now at Aubenton); and St Eustache, Paris (1681–9: his masterpiece, incorporating a 16' Bombarde). Towards the end of his life, he worked with Hippolyte Ducastel (Notre Dame, Paris, 1691) and Robert and Jean Baptiste Clicquot (Anchin). His last work was at the Ste Chapelle, Paris (1697). His second wife, Marguerite, compiled a volume of organ pieces (published as no.25 of *L'organiste liturgique*, Paris, 1960).

Thierry

(3) François Thierry

(*b* Paris, late 1677; *d* Paris, 22 May 1749). Nephew and pupil of (2) Alexandre Thierry. He worked at Nemours (1703), St Gervais, Paris (1714; Trompette récit) and Rouen Cathedral (1717; his first 16' Bombarde), and built organs for Saint Germain-en-Laye (1709–10) and the church of the Cimetière des Innocents, Paris (1723; part now at St Nicolas-du-Chardonnet). He completely reconstructed the organ at Notre Dame, Paris (1730–33; apparently the first organ to be built with a separate *Bombarde* manual, of Bombarde 16', Trompette 8', Clairon 4' and Cornet V, all coupled to the *Grand orgue*). He later worked in the cathedrals of Reims,

Beauvais and Tours, and advised the canons of Toul (1740). Andreas Silbermann worked for him between 1704 and 1706 (Orléans Cathedral; part survives in Fleury).

Thill, Georges

(*b* Paris, 14 Dec 1897; *d* Paris, 17 Oct 1984). French tenor. After two years' study at the Paris Conservatoire, and two more in Naples with De Lucia, he sang Don José and other roles at the Opéra-Comique before making his début as Nicias in *Thaïs* on 4 February 1924 at the Opéra. There he stayed for 16 years, graduating from the lighter French repertory to Admetus (*Alceste*) and Aeneas, Parsifal and Tannhäuser, and later Samson. At La Scala and Verona he sang Calaf; Buenos Aires invited him for Don Carlos, Calaf and Boito's Faust. He also sang at the Metropolitan Opera in 1931 and 1932, in Vienna and at Covent Garden. He bade farewell to the stage at the Opéra-Comique as Canio, as late as 1953. With his brilliant, robust tone, his spirited phrasing and aristocratic enunciation, Thill was the most distinguished French heroic tenor of his time. His recordings of such roles as Admetus, Werther and Gounod's Roméo set standards and kept alive a tradition of singing which would otherwise have vanished. He also appeared in several films, the most interesting of which is Abel Gance's *Louise* with Grace Moore.

Thillière, Joseph Bonaventure.

See Tillière, Joseph Bonaventure.

Thillon [née Hunt], Sophie Anne [Anna]

(*b* Calcutta or London, 1819; *d* Torquay, 5 May 1903). English soprano. She studied in France with Bordogni, Tadolini and Claude Thomas Thillon, conductor of the Havre Philharmonic Society, whom she married. After appearances in Le Havre, Clermont and Nantes, she was engaged for the Théâtre de la Renaissance, Paris (Salle Ventadour), making her début there when she created the title role of Grisar's *Lady Melvil* on 15 November 1838. On 11 August 1840 she first appeared at the Opéra-Comique as Mathilde in Auber's *La neige*; she created Catarina in his *Les diamants de la couronne* (6 March 1841) and Geraldine in Balfe's *Le puits d'amour* (20 April 1843), and sang in operas by Adam and Monfort. She made her English début on 2 May 1844 as Catarina at the Princess's Theatre, London, and in 1845 and 1846 was at Drury Lane, where on 14 May 1845 she created Stella in Balfe's *The Enchantress*. From 1851 to 1854 she sang in the first San Francisco opera seasons. Her last stage appearance was in 1855 at the Lyceum, London.

ALEXIS CHITTY/HAROLD ROSENTHAL

Thilman, Johannes Paul

(*b* Dresden, 11 Jan 1906; *d* Dresden, 29 Jan 1973). German composer. After studying at the teachers' training college in Dresden (1919–26), he completed a course in cultural studies at the Dresden Technical University (1927–30). Initially self-taught as a composer, he received encouragement from Hindemith and Scherchen, before studying with Grabner in Leipzig (1929–31). After serving in the army during World War II, he began to establish a reputation as a composer. In 1953 he was appointed to a post at the Dresden Musikhochschule (professor 1956). He became a corresponding member of the Berlin Akademie der Künste of the DDR in 1970.

Orchestral and chamber works are central to Thilman's oeuvre. In his early compositions, written under the influence of Hindemith and Grabner, he refined the polyphonic thinking that remained an outstanding feature of his work. He was also influenced by the neo-classicism of Stravinsky. During the 1960s, however, he struck out in a new direction, avoiding traditional forms and striving to achieve greater individuality in his works. Although he continued to write for a traditional early Romantic orchestra, usually supplementing it with additional percussion, in his chamber music he experimented with unconventional ensembles, returning to the string quartet only in his final compositions.

VERA GRÜTZNER

Thiman, Eric (Harding)

(*b* Ashford, Kent, 12 Sept 1900; *d* London, 13 Feb 1975). English composer and organist. After childhood lessons at Trinity College of Music he was largely self-taught. He obtained the FRCO diploma in 1921 (Turpin

Prize) and in 1927, after coaching from Harold Darke, the degree of DMus at London University. He was appointed professor to teach harmony and other subjects at the RAM in 1932, and he became examiner to the Royal Schools of Music in 1938. In 1952 he was appointed examiner to the Faculty of Music at London University, where he was also dean of the faculty (1956–62). He was appointed organist and director of music to the City Temple, London, in 1957.

Thiman made extensive examination and recital tours, both in England and elsewhere (South Africa in 1940 and 1941, Australia and New Zealand in 1952 etc.). In 1962 and 1964 he was adjudicator to the Hong Kong Schools Music Festival. He was a prolific composer in the best Kapellmeister tradition, writing sacred and secular cantatas, anthems and services, unison songs and partsongs, and piano and organ music, all of which have proved enormously popular with less ambitious school and amateur musicians. Chief among his extended choral works are *The Last Supper* (1930), *The Parables* (1931), *The High Tide on the Coast of Lincolnshire* (1932) and *The Temptations of Christ* (1952). Such titles accurately reflect the line of musical descent from Stainer, Stanford and Parry. He wrote several orchestral pieces, but these have not enjoyed the widespread popularity of his vocal music.

Thiman's work is distinguished by a neat, textbook craftsmanship and easy melodic flow, and a firm grasp of what is practical and effective for the amateur. A similar utilitarian outlook informs his many textbooks on harmony, counterpoint, musical form and fugue. His principal London music publishers are Novello, Curwen, Boosey & Hawkes, and Ascherberg.

MICHAEL HURD

Thime, Clemens.

See Thieme, Clemens.

Thimus, Albert, Freiherr von

(*b* Aachen, 23 May 1806; *d* Cologne, 6 Nov 1878). German music theorist. He studied law in Bonn and Heidelberg, became a judge in Cologne and represented the centre party as a member of the Reichstag. In Heidelberg, A.F.J. Thibaut and G.F. Creuzer stimulated his interest in symbological studies, and together with music theory and mathematics he took up Chinese, Arabic, cuneiform writing and hieroglyphics, thus embracing philological disciplines. Convinced that the fundamentals of music, above all intervallic proportions, were the basis of teaching in the ancient Chinese, Hebrew, Egyptian and Greek civilizations, he sought to establish a symbolic expression of these fundamentals as a formulating principle of the ancient cosmogonic theories. His results were set down in a three-volume

work, *Die harmonikale Symbolik des Altherthums*, the first two volumes of which were published (Cologne, 1868–76/*R*) but found little acceptance until they were taken up again by Hans Kayser in 1926; the manuscript of the third volume no longer survives.

Thimus's primary goal was to shed light on the harmonical foundations of Pythagorean theory, the most important discovery in this area being the *lambdoma*, a numerical table with wide-ranging applicability (used today in crystallography and cybernetics). He was also responsible for a new interpretation of the 'Timaeus scale', discussed in the writings of Plato. He demonstrated the existence of analogous harmonical theorems in Chinese, Hebrew and Greek sources whose symbolic content was identical to that of ancient musical myths. Often, however, it is not clear what part of his work is based on philological research and what part is his own speculation.

Third

(Fr. *tierce*; Ger. *Terz*; It. *terza*).

The Interval between any two notes that are two diatonic scale degrees apart (e.g. C–E, E♭–G, F♯–A); 3rds are the intervals formed when a perfect 5th is divided into two consonant intervals to make a Triad. A 3rd made up of two whole tones is called a major 3rd (the medieval Latin name was *ditonus*); if it is made up of a tone and a diatonic semitone it is called a minor 3rd. A major 3rd that has been increased by a chromatic semitone is called an augmented 3rd (e.g. C–E♯; B♭–D), and a minor 3rd that has been decreased by a chromatic semitone is called a diminished 3rd (e.g. C–E♭♭; C♯–E♭).

In Just intonation major and minor 3rds are pure, that is, they are based on ratios of small integers (5:4 and 6:5 respectively), and therefore the unisons among their overtones do not beat (when the timbre is purely harmonic). In the Pythagorean tuning system, intervals are derived from the pure 5th (ratio 3:2). The major 3rd is normally reckoned as the difference between five 5ths and three octaves, which gives a ratio of 81:64; this is more than $\frac{1}{5}$ of a semitone larger than the major 3rd in just intonation. The minor 3rd, the difference between three octaves and four 5ths, has a ratio of 32:27 and is more than $\frac{1}{5}$ of a semitone smaller than the minor 3rd in just intonation. A paradoxical feature of Pythagorean intonation, however, is that its diminished 4th and augmented 2nd (i.e. the difference between eight and nine pure 4ths, respectively, and three octaves) differ from a pure major and minor 3rd by an almost imperceptible interval (less than $\frac{1}{50}$ of a semitone), a fact exploited in a significant proportion of extant keyboard music from the early to mid-15th century.

Throughout the Middle Ages, 3rds were regarded as imperfect consonances. They occurred regularly and were even necessary in counterpoint in more than two parts, but they did not figure in the final chord at cadences. Not until about 1500 were they used at final cadences, and then only the major 3rd could occur above the final – even in a minor-mode piece (this raised 3rd was later called the Tierce de Picardie). The acceptance of the minor 3rd as a consonance as good as the major 3rd coincided with the recognition of all 3rds as the basic units of chord structure in the early 18th century. Since Rameau, the Root of a chord (in tonal music) is normally determined as the lowest of its notes when arranged in a series of 3rds.

WILLIAM DRABKIN

Third flute.

Flute a minor 3rd above the normal flute. *See* Flute, §II, 3(ii).

Third stream.

A term coined by Gunther Schuller, in a lecture at Brandeis University in 1957, for a type of music which, through improvisation or written composition or both, synthesizes the essential characteristics and techniques of contemporary Western art music and other musical traditions. At the heart of this concept is the notion that any music stands to profit from a confrontation with another; thus composers of Western art music can learn a great deal from the rhythmic vitality and swing of jazz, while jazz musicians can find new avenues of development in the large-scale forms and complex tonal systems of classical music.

The term was originally applied to a style in which attempts were made to fuse basic elements of jazz and Western art music – the two mainstreams joining to form a 'third stream'. This style had been in existence for some years, and is exemplified by such pieces as Red Norvo's *Dance of the Octopus* (1933, Bruns.), Ralph Burns's *Summer Sequence* (recorded by Woody Herman's band, 1946, Col.), George Handy's *The Bloos* (1946,

Jazz Scene), Robert Graetinger's *City of Glass* (recorded by Stan Kenton's orchestra, 1951, Cap.), Alec Wilder's *Jazz Suite* (1951, Col.) and Rolf Liebermann's *Concerto for Jazz Band and Orchestra* (recorded by the Sauter-Finegan Orchestra, ?1956, Vic.). Since the late 1950s the application of the term has broadened, notably through the work of pianist Ran Blake, to encompass fusions of classical music with elements drawn not only from African-American sources but also from other vernacular traditions, including Turkish, Greek, Hindustani, Russian and Cuban music, among others.

The third-stream movement attracted much controversy and has often erroneously been allied with the symphonic jazz movement of the 1920s; symphonic jazz, however, lacked the essential element of improvisation. Other critics have seen the movement as an inevitable outcome of postwar eclecticism and stylistic and technical synthesis. Third stream, like all musical syntheses, courts the danger of exploiting a superficial overlay of stylistic exotica on an established musical idiom, but genuine cross-fertilization has occurred in the work of musicians deeply rooted in dual traditions.

Composers and performers associated with the third-stream movement include J.J. Johnson, André Hodeir, Milton Babbitt, Bill Russo, Gunther Schuller, Don Ellis, Bill Smith, Jimmy Giuffre, Larry Austin, Mike Mantler, Ran Blake, Anthony Braxton, Leo Smith, Steve Lacy and Dave Douglas. A large number of third-stream works have been published by Margun Music; others have been issued by such publishers as MJQ Music, C.F. Peters and Cireco Music.

GUNTHER SCHULLER

Thiriet, Maurice

(*b* Meulan, 2 May 1906; *d* Puys, 28 Sept 1972). French composer. At the Paris Conservatoire (1925–30) he studied fugue and counterpoint with

Koechlin, and composition, orchestration and aesthetics with Roland-Manuel. In the early 1930s, he learnt the techniques of film music from Jaubert. During the German occupation, at the request of the director Marcel Carné, Thiriet agreed to act as a front for the Jewish composer Joseph Kosma for *Les visiteurs du soir* (1942) and *Les enfants du paradis* (1945). After World War II he devoted most of his attention to film music, writing more than 80 scores.

Thiriet remained faithful to the orthodox standards of the Conservatoire. His music is clearly and brilliantly orchestrated, bold and lyrical in feeling, most often light-hearted, but occasionally poignant and melancholy. His best film work is undoubtedly in *Les visiteurs de soir*, in which he collaborated with Kosma to portray a stylized medieval world; the film is especially memorable for the three ballads sung by the wandering minstrels. In *L'homme au chapeau rond* (1946), Thiriet's uncharacteristically brooding score masterfully underlines the sombre atmosphere of the film.

WORKS

(selective list)

16 ballets incl. La nuit vénitienne (A. de Musset, choreog. L. Darsonval), 1938; L'oeuf à la coque (R. Petit), 1948; Psyché, 1950; Héraklès (A. Boll, choreog. J. Charrot), 1953; Deuil en 24 heures (Petit), 1953; La reine des îles (Boll, choreog. D. Parlic), 1955; Le maure de Vénise, 1959; La chaloupée, 1961; Les amants de Mayerling, 1961; La chambre noire, 1969

MARK BRILL

Thirteenth.

The interval of a compound Sixth, i.e. the sum of an octave and a 6th.

Thirty-second-note.

American term for Demisemiquaver. *See also* Note values.

Thiry, Louis

(*b* Fléville, 15 Feb 1935). French organist. One of a long line of blind instrumentalists who have made successful careers in France, he studied at the Nancy Conservatoire, and then worked with André Marchal and Gaston Litaize. After winning a *premier prix* for organ in Rolande Falcinelli's class at the Paris Conservatoire (1958) and prizes for counterpoint and fugue, he was appointed organ professor at the Rouen Conservatoire. Thiry is interested in early music (of the Middle Ages, the 17th century and Bach) and the works of Messiaen, of which he made a complete, award-winning recording in Geneva Cathedral (1972). He has performed widely in western Europe and Russia, and has distinguished himself in France as an outstanding, historically aware interpreter of Frescobaldi, Sweelinck, Titelouze, Grigny, Couperin and Bach (whose *Das wohltemperirte Clavier* and *Art of Fugue* he has recorded). Thiry has also transcribed chamber works by Mozart for organ.

FRANÇOIS SABATIER

Thoinan, Ernest [Roquet, Antoine Ernest]

(*b* Nantes, 23 Jan 1827; *d* Paris, 26 May 1894). French writer on music. A merchant by trade, he took the opportunities offered by business journeys to England, Italy and Russia to accumulate an extensive music library which included early printed books and manuscripts. He became a contributor to the periodicals *La France musicale* and *L'Art musical*, later publishing his articles (and others) as pamphlets. He worked exclusively on the history of French music, basing his research firmly on primary sources and using an unusually transparent methodology which involved the critical evaluation of items of secondary material in annotated bibliographies. His work built upon that of Fétis in particular, correcting many of the inaccuracies in the Belgian scholar's writings. Much of the strength of Thoinan's work lies in his ability, amply demonstrated in his essay on Maugars, to see isolated historical events in a larger perspective.

La musique à Paris, written jointly with Albert de Lasalle, reveals equal mistrust of Gounod's 'impotent melody' and 'the musical cholera recently

imported from Germany by M. Wagner'. By contrast, the authors supported those composers, such as Félicien David and (ironically, in view of his Wagnerian sympathies) Ernest Reyer, in whom they perceived originality which rose above the eclectic confusion and regression to the mean of prevalent styles.

English piano maker, co-inventor with William Allen of the Compensation frame, patented in 1820. *See* Pianoforte, §I, 6.

Thomán, István

(*b* Homonna, 4 Nov 1862; *d* Budapest, 22 Sept 1940). Hungarian pianist, composer and teacher. He studied with Erkel and Volkmann and later with Liszt at the Buda Music Academy and in Weimar and Rome. From 1888 to 1906 he taught the piano at the Buda Music Academy, where his pupils included Bartók, Fritz Reiner and Dohnányi. An inspirational teacher, Thomán did much to assure the continuity of Liszt's artistic credo in his native country, laying particular emphasis on the elimination of extraneous artificiality in performance. Thomán himself was particularly effective in the music of Chopin, Schumann and Liszt, and would demonstrate at length the effects he sought in the student without insisting upon slavish imitation. He was especially concerned with imaginative colour effects and tone production as well as a systematic, though not doctrinaire, approach to the solution of technical problems; his six volumes of technical studies (*A zongorázás technikaja*) are still in use. Many of his own compositions, such as the Intermezzo and Caprice in octaves and *Six fantaisies mignonnes hongroises pour la jeunesse*, op.3, have a clear didactic purpose, while his song writing displays a sensitive understanding of vocal tessitura. Thomán was also a persuasive writer on music, contributing numerous articles to various Budapest journals.

His wife Valerie (*b* Budapest, 16 Aug 1878; *d* Budapest, 8 Sept 1948) had a successful career as a singer and gave early performances of works by Kodály and Bartók; their daughter Mária (*b* Budapest, 12 July 1899; *d* Budapest, 25 Feb 1948), a pupil of Hubay, Vecsey and Flesch, toured Europe as a solo violinist and chamber music player.

Thomas, (Charles Louis) Ambroise

(*b* Metz, 5 Aug 1811; *d* Paris, 12 Feb 1896). French composer. Born into a musical family, Thomas was groomed for a career in music and by the age of 10 was accomplished both as a pianist and as a violinist. His father had played in the theatre orchestras of Metz, and in his 20s had been swept up in the post-Revolutionary currents of change which affected the orchestra and opera there no less than elsewhere in France; he subsequently became a respected teacher and published pedagogical works. Thomas' mother was an accomplished singer and also taught.

After his father's death Ambroise's elder brother Charles moved to Paris, where he played the cello in the Opéra orchestra. In 1828, aged 17, Ambroise joined him to enter the Conservatoire, studying the piano with P.-J.-G. Zimmerman and harmony and counterpoint with Doulen. He won *premiers prix* in these subjects in 1829 and 1830. He also studied the piano with Kalkbrenner and became known as a pianist of both sensitivity and virtuosity, particularly esteemed for his playing of Chopin. He later became a composition pupil of Lesueur at the Conservatoire and in 1832, at the second attempt, won the Prix de Rome with his cantata *Hermann et Ketty*. During his subsequent stay in Rome he became friendly with the painter Ingres, with whom he shared an admiration for both Mozart and Beethoven, and also met Berlioz who gave him a favourable mention in several articles. In Italy he composed a number of piano pieces, chamber works and songs, some of them modelled on Italian music, and he also wrote a Requiem. A String Quartet in E minor, whose designation as op.1 seems to indicate the composer's own approval, is reminiscent of Beethoven and has passages of skilful contrapuntal writing. After a short sojourn in Germany Thomas returned to Paris in 1835 and began writing for the stage.

Between 1837 and 1843 Thomas had no less than eight operas performed, all except two *opéras comiques*, as well as a full-length ballet *La gipsy*. The most successful was the first, *La double échelle*, which was praised by Berlioz for its 'extreme vivacity and wit'. The ladder of the title is the principal player in this mix-up of couples. By 1845 it had run to 187 performances at the Opéra-Comique, and had also been staged in Belgium, New Orleans, Berlin, Vienna and, in translation, in London. The other works, including the two first performed at the Opéra, had little success, although *Le panier fleuri* achieved 128 performances. Its title refers to a cabaret faced with a new decree enforcing its closure at 8 o'clock each night; a policeman promises to override the decree as long as the cabaret's manager, Angélique, is 'propice à ses désirs'. The somewhat dated moral of the one-act spectacle is that everything is all right as long as there is wine, song and men 'served by charming women'.

Thomas' next success was the opera *Le Caïd* which was the most frequently performed of his operas after *Mignon*, achieving 362 performances at the Opéra-Comique by the time of the composer's death. An intrigue of two couples, set in Algeria, it is thoroughly Italian in style and has only hints of the exotic musical effects which became popular in France in the wake of the works of Félicien David. The piece reflects the colonial power of France in a conquered Algeria which had become something of an exotic playground for the émigré French.

In 1850 Thomas wrote the Shakespearean potpourri *Le songe d'une nuit d'été*, which has little to do with *A Midsummer Night's Dream*; it includes Falstaff, Elizabeth I and Shakespeare himself in the cast, and has an unusually high proportion of its action devoted to drinking. After becoming drunk in the presence of the disguised queen, Shakespeare is transported to Richmond Park where the queen invokes him to renew his art, at first in a passage of extraordinarily ornate vocalise and then in a passage of melodrama. Apart from signalling the composer's interest in Shakespeare, this *opéra comique* shows Thomas' ability to fuse many of the operatic

styles current in his day, and demonstrates his increasing skill at orchestration, particularly in the entr'actes. The piece was revived at Compiègne in 1994 to mark the opening of the Channel Tunnel.

The following year (1851) the composer was elected to the Académie des Beaux-Arts after the death of Spontini, in preference to Félicien David, Clapisson, Niedermeyer and Berlioz, among others. In the late 1850s Thomas became a professor of composition at the Conservatoire and also had responsibility for its regional branches. From this period dates *Psyché*, which began life as a chamber opera but was first performed as a three-act *opéra comique*; it was expanded to four acts for performance at the Opéra in 1878. *Le carnaval de Venise*, which followed in December 1857, concerns a composer writing a violin concerto and makes artful use of a series of virtuoso variations in the style of Paganini, heard in the opera as the concerto is performed.

After the lukewarm reception of *Le roman d'Elvire* in 1860, Thomas had no new operas performed until *Mignon* in 1866. Barbier, its co-librettist, was commissioned before the composer was decided upon, Meyerbeer being given first refusal followed by Gounod and Reyer. Based on Goethe's novel *Wilhelm Meisters Lehrjahre* and set in the late 18th century, it inevitably invited comparison with Gounod's *Faust*, which similarly reworked Goethe with an increased emphasis on the central female role and a strengthening, if not distortion, of the love themes. Each achieved considerable success both for their composers and for the Opéra-Comique.

Mignon's eponymous heroine is the abandoned daughter of an incestuous liaison. In creating the character of Mignon (the name means 'sweet' and 'tiny') the librettists created a unique type of femme fatale described at one point as 'ni garçon, ni fille, ni femme'. Mignon, who travels with a group of gypsies who exploit her by displaying her talents – such as her famous dance on eggs – was first interpreted by Célestine Galli-Marié, who would later create the role of Carmen. Mignon's character has considerable complexity, as do the styles of music used to portray her. The overture is striking in its almost impressionistic use of flute and harp, and the influential critic Camille Bellaigue referred to 'harmonies à demi-effacées [half-veiled]'. Warm melodies leave no doubt as to Thomas' melodic gift. The character of Philine, an actress, is an imaginative coloratura role building upon similar virtuoso writing in previous operas. Elsewhere delightfully confectioned gypsy music and pastiche 18th-century dances are alternated with sweeping waltzes. Thomas first replaced the spoken dialogue and *mélodrames* of the Opéra-Comique version with recitatives for the London première in 1870; this version has become customary, although the opera has several major variants including a virtuoso showpiece as an alternative opening for Philine to Act 2.

In Act 1 Wilhelm buys Mignon's freedom but falls in love with Philine who takes the assembled company to her castle. In the second act, the company prepares for a performance of *A Midsummer Night's Dream* – Thomas can resist neither self-borrowing nor a reference to his beloved Shakespeare. When Mignon arrives at the castle, jealousy brews between Philine and Mignon, the former addressing Mignon, dressed as a page, in the masculine. Left alone when the couple leave, Mignon has an extended

and effective through-composed soliloquy where she dresses up in Philine's clothes. As the play is performed, and distant applause for Philine playing the role of Titania is heard, smoke and flames engulf the conservatory from which Wilhelm carries Mignon, unconscious.

Lothario, the wandering minstrel who protected Mignon in Act 1, sings her a delicate berceuse with harp accompaniment in Act 3, which is set in Italy. The outcome of the strange sequence of coincidental events which follows initially resulted in Mignon's death. However, the poor reception of this dénouement caused the ending to be reworked the day after the first performance. Thus Mignon realizes her lost childhood identity and is reunited with Lothario – who turns out to be her father – and marries Wilhelm. Furthermore, Marie Cabel, the coloratura who played Philine, was not given the reception to which she was accustomed, and a virtuoso showpiece was substituted for the beginning of Act 2, retained as a variant in some early vocal scores. Altogether one can count four different versions. Mignon's wide palette of emotions ranges from infatuation to wild jealousy, incredulity and a rebirth of love for her lost father. Nowhere in his work does Thomas create a deeper character portrait than in this opera.

Having accrued sufficient successes at the Opéra-Comique, Thomas now felt ready to approach the Opéra, normally open only to those with a proven record. He took some care to ensure that the formula he offered would succeed, both in terms of subject matter – Shakespeare's *Hamlet* was beyond reproach – and in terms of the proposed cast: he rewrote the traditional tenor lead for the baritone Jean-Baptiste Faure, then at the height of his fame. The Swedish soprano Christine Nilsson was to create the role of Ophelia, having recently had considerable success in London in *La traviata*. For her Thomas created a coloratura role, though not such a virtuoso one as that of Philine in *Mignon*, which gave opportunity both for emotionally charged line, and high-register display.

Hamlet was first given in 1868 and is a work of considerable subtlety, however much it was carefully confectioned for its creation and criticized for its misrepresentation of the play. The overture gradually achieves its significance as the opera progresses: the brief version of it heard at the outset recurs at the beginning of the second tableau, vastly expanded, and its opening turns out to be the music which frames the appearance to Hamlet of his father's ghost, a spine-chilling moment in the opera. Another scene of considerable musical ingenuity and dramatic power occurs after the enaction of the poisoning of Gonzago, mirroring that of Hamlet's father. Hamlet snatches Claudius's crown and the chorus's disapproval gradually wells up in an extended ensemble during which Hamlet gets drunk and the music alternates between the courtier's cries of 'Traître' and a frenetic waltz over which the increasingly inebriated Hamlet pitifully sings. The early love duet between Hamlet and Ophelia is a classic, as is Ophelia's later aria, enlivened by the new colour of the saxophone obbligato for which Thomas writes a brilliantly idiomatic part. These love themes are recalled at various moments in the latter part of the opera to evoke former times.

Acts 3 and 4 are set pieces in themselves, the former an extended trio based on the closet scene in the play, in which Hamlet confronts his mother with the ghost. Act 4 ignores Shakespeare's own songs, which

Thomas' librettists considered unsuited, but substitutes an extended Ballade for Ophelia in which her madness and suicide are portrayed by increasing coloratura excursions. A wordless choral version of this, sung by the Danish peasants, concludes the act as she floats away on the river.

There were two distinct endings to the opera, for which Ophelia's cortège forms the background. In the French version, which followed Alexandre Dumas' 1847 translation, a happy ending is enacted as the ghost appears, now visible to everyone; Hamlet kills Claudius and is crowned king. In a version for Covent Garden, Hamlet himself dies. Presumably this was a vain attempt to stave off criticism of the opera's deformation of the original play which was rife in the French press long before its British première at Covent Garden. The critic in the *Revue musicale*, for example, placed the blame more on the libretto, claiming that the 'complacent librettists' had 'created their own Hamlet reduced to rhymes', to which Thomas had merely added a 'glou-glou bachique' ('Bacchic gurgling of liquor pouring from a bottle'), and that he had pandered to the current operatic taste for songs accompanied by the guitar or harp. It was, beside such operas as Massenet's *Le Cid* and Gounod's *Faust* and *Polyeucte*, merely another example of the operatic commercialization of classic sources.

Thomas' orchestration was a matter of considerable discussion. His expansion of the orchestra, in particular his use of the most recently developed brass instruments (such as chromatic trumpets, the bass saxhorn and six-keyed trombones as well as alto and bass saxophones) was highly innovative, as was the way he combined these with conventional instruments and used them as virtuoso obbligatos.

Having considerably enhanced his reputation with the adjacent successes of *Mignon* and *Hamlet* in 1871 Thomas succeeded Auber as director of the Paris Conservatoire. Before taking up the post, however, and although aged nearly 60, he volunteered for service in the Garde Nationale at the outbreak of the Franco-Prussian war. Administrative duties left him little time for composition and of his three final operas only *Françoise de Rimini* achieved even a modicum of success. He took up a nationalistic critical position in later life, expressing his total disinterest in Wagner and defending French music from any invasion of German influence, which he saw as foreign to the Latin spirit of French taste. Thomas' years at the Conservatoire were marked by a series of storms, and several times he appeared to lose his authority. He was a declared enemy of César Franck (a subject which provided material for several notorious cartoonists), but failed to prevent Franck's appointment as a professor at the Conservatoire in 1872; he subsequently organized a boycott of the première of Franck's Symphony some years later, partly on the grounds that he was tainted with Wagnerism, but also probably because of personal jealousy.

After years of neglect, Thomas' work has seen a considerable revival in the last two decades of the 20th century, with major performances, at least of *Mignon* and *Hamlet*, being mounted in France, Great Britain and the USA. In the context of French opera of the late 19th century Thomas was a figure of considerable importance, an imaginative innovator and a master of musical characterization.

Thomas, Arthur Goring

(*b* Ratton Park, Sussex, 20 Nov 1850; *d* London, 20 March 1892). English composer. His parents initially opposed a musical career, but in 1873 he went to Paris to study with Émile Duran for two years. In 1877 he entered the RAM and studied with Sullivan and Prout, twice gaining the Lucas medal for composition. Later he also studied orchestration with Max Bruch. From his early unfinished opera *Don Braggadocio*, he showed a strong inclination towards dramatic music and the theatre, confirmed with a second opera, *The Light of the Harem*, written while at the RAM and in part performed there in 1879. Its success along with performances of his anthem *Out of the Deep* (1878), his concert-scenas (including *Hero and Leander*, 1880) and the romantic cantata *The Sun-Worshippers* (1881) brought his name to prominence. He was commissioned by Carl Rosa to write an opera, and the resulting *Esmeralda*, after Hugo's *Notre-Dame de Paris*, was produced in 1883 to great acclaim. It was later given in German in Cologne, Hamburg and Berlin, and was revived in 1890 in French at Covent Garden before being given again in its original English version by the Royal Carl Rosa Opera Company in 1908. Driven by its success, Rosa commissioned a second opera, *Nadeshda*, which was performed in April 1885 and afterwards, in a German version, at Breslau in 1890. Although it was recognized as a stronger and more robust work, *Esmeralda* nevertheless remained far more enduringly popular. Both works, however, established Thomas at the forefront of British opera.

Thomas's incentive to compose subsequently declined. He wrote the *Suite de ballet* (1887) and several songs, and in the early 1890s was commissioned by Richard D'Oyly Carte for an operetta and from the Leeds Festival for a short choral work. Neither revived his creative interest. Poor health and a series of accidents gave rise to depression and his eventual suicide. A scholarship was established at the RAM in his memory, and his operetta *The Golden Web* was finished by S.P. Waddington and produced in Liverpool and London in 1893. *The Swan and the Skylark*, his cantata for Leeds, was completed and orchestrated from a piano score by Stanford for the Birmingham Festival in 1894.

Thomas's training in France was intensely formative, and he was drawn to the works of Bizet, Ambroise Thomas, Delibes, Gounod and Massenet. This is evident from songs such as *S'il est un charmant gazon*, *Le jeune pâtre* and *Les papillons* which adopt the lyric manner of Gounod, while the charming orchestral miniatures of the *Suite de ballet* and the stylish ballet music of *Esmeralda* betray the influence of Bizet and Delibes. In his operatic works he had to reconcile his flair for poise and elegance to large-scale drama: Randegger's bowdlerized libretto for *Esmeralda*, which deprived Hugo's original story of its intrigue and ardour and replaced the tragic ending with a happy one, was consequently appropriate to Thomas's powers of invention. For numbers such as Esmeralda's 'Swallow song' and Phoebus's aria 'O vision entrancing' he was able to achieve a degree of individuality, and his flexible recitatives were considered advanced for their realism. In the more complex and protracted scenes the pressure on his dramatic abilities invariably gave rise to his weakest music. *Nadeshda* was superior in orchestral colour and thematic material, but the traits of his French mentors remain; moreover, its scale and length far outweighed Thomas's lyrical instincts. In spite of their common flaws, both operas are important for the part they played in Carl Rosa's attempt to establish a

vernacular opera by native British composers in the 1870s and 80s. Furthermore, the polish and refinement of Thomas's work provides a compelling example of French influence in British music at a time when so much indigenous composition was dominated by Germany.

JEREMY DIBBLE

Thomas, Augusta Read

(*b* Glen Cove, NY, 24 April 1964). American composer. She composed prolifically as a child and later studied composition at Northwestern University, Yale and the RAM. Thomas's principal teachers were William Karlins, Alan Stout and Jacob Druckman. She has won numerous awards and fellowships, including a Guggenheim Fellowship in 1989. *Wind Dance* (1989) brought Thomas wide acclaim when it was performed in the New York PO's Horizons '90 series. Several commissions followed, notably from the Cleveland Chamber SO (*Vigil*, 1990) and the National Symphony Orchestra (*Air and Angels*, 1992; *Manifesto*, 1995). Her first full-scale chamber opera *Ligeia* (1991–4) won the International Orpheus Prize. In 1994 she married the composer Bernard Rands. She became professor of composition at the Eastman School of Music in 1995; in 1997 she was appointed composer-in-residence with the Chicago SO. One of the most sought-after American composers, she has fulfilled commissions from Rostropovich (*Chanson*, 1996; *Brass Axis*, 1997), the St Paul Chamber Orchestra (*Passions*, 1998) and the Berlin PO (*Aurora*, 1999). After leaving her publisher, Theodore Presser Co., in 1997, Thomas withdrew most of her prodigious catalogue, leaving a core of only 23 works.

Thomas's output has had two strands: complex, dramatic large-scale works and smaller educational works, all now withdrawn. Her melodies are based on the expansion and contraction of three- or four-note cells, either by adding notes or by altering intervals. Often appearing without substantial accompaniment or counterpoint, these melodies are instead embellished harmonically or are sustained, creating a harmonic canvas over which further melodic material is overlaid. Quintuplets and triplets dominate an often slow, fluid forward momentum. In the later large-scale works, especially *Words of the Sea* (1996), Thomas has introduced additional complexity in texture and orchestration as well as a well-defined rhythmic drive and faster tempos.

STEPHEN FERRE

Thomas, Christian Gottfried

(*b* Wehrsdorf, nr Bautzen, 2 Feb 1748; *d* Leipzig, 12 Sept 1806). German impresario, composer, horn player, writer on music and publisher. He attended the Gymnasium in Bautzen for seven years; in 1770 he began studying law at Leipzig University but within a year turned to music, becoming first horn player for the Grosse Concert-Gesellschaft in 1771. In 1776 he founded a music copying business and manuscript storehouse, producing a large thematic catalogue (rivalling Breitkopf's) that he sold in manuscript. He described this catalogue (of manuscript works available for copying) and his idealistic plans for the storehouse in a series of pamphlets published between 1778 and 1781. From 1782 he sponsored a series of independent concerts in Leipzig, later producing the Gewandhaus concerts, Dilettanten concerts and Stadtmusik, and undertaking concert tours as far as Dresden, Hamburg and Prague. In addition to works by Haydn, Mozart and others, he performed a number of his own compositions. In 1789 he tried unsuccessfully to become C.P.E. Bach's successor as Hamburg city Kantor. His attempts to establish a 'public singing school in the Italian manner' (1790) and a school of composition (1796) were also unsuccessful.

Thomas devoted three pages in his periodical, *Unpartheiische Kritik* (1798), to a description of his own compositions, most of which are lost: 'In my younger years between 1766 and 1770 in the Bautzen Gymnasium I wrote several four-voice choral-arias and motets as "Secundaner"; and several occasional cantatas as "Primaner". In the ensuing years, I wrote two double concertos for Waldhorn … plus several symphonies and "Parthien" for Mr Caffetier Richter's concerts – in return for ready cash'. He mentioned several other vocal pieces written for specific purposes, including test pieces used in seeking various posts such as the one in Hamburg. Six works performed in his own concerts (1789–98) are described in detail.

Thomas also described a seventh, 'unusually large', work which he was then (1798) writing with the intention of directing it himself in 1800 at a jubilee of the 18th century. It was a setting of Psalm cxvii for orchestra, with quadruple *divisi* strings, seven choirs singing in seven languages, 'and what is more with 4-, 8-, 12- and 16-part fugal movements of various kinds, *a cappella*'.

In his role of impresario and propagator of new music, Thomas, as Schering pointed out, played a significant role in the concert life of Leipzig and other cities. More important to music history are his writings, including his periodical, biassed though it may have been, and especially his pamphlets about his copying business and music storehouse, which reveal much about the problems of the dissemination of manuscripts and printed music in the last third of the 18th century. In his *Praktische Beyträge* he first expounded his ambitious plans and delineated his method of combating musical piracy or 'Schleichhandel' – which he defined as the selling of copies or having them printed or engraved without paying the composer – and his scheme for protecting the rights of the composer, consumer and music dealer. In the second chapter he defined his business as follows: 'It is a place where composers of music store their works in manuscript, and, under my supervision and direction, permit copies to be sold both here and, on commission, elsewhere as well'. To protect this relationship he drew up a lengthy contract with his composer clients, providing for: a clean manuscript copy of each work to be corrected by the composer himself and to be stored in the dealer's (Thomas's) musical storehouse; 75% of the price of each copy sold to go to the composer, and 25% plus copying fees to the dealer; each distributed copy to have an engraved title-page bearing the signature and seal of the composer; strict control of all copying rights; the contract to last for the lifetime of the composer and his widow, with works becoming the dealer's property when the composer's orphaned children came of age.

Thomas's *Bekantmachung* and *Kurzgefasster Entwurf* further describe his copying and distribution practices, proposing an ingenious manuscript subscription scheme and developing his grandiose but naive vision of a conservatory – not a music school, but the expansion of his musical storehouse idea – which would serve as a permanent musical depository for all of Europe for centuries to come. The non-thematic first supplement (Leipzig, 1779) to what Thomas called his 'great thematic catalogue' of works in the storehouse lists symphonies, partitas, harpsichord solos, duets, trios, quartets, concertos etc., as well as Italian and German operas in manuscript, but little church music and no printed or engraved works. The 'great thematic catalogue' itself, never printed but distributed in manuscript, is now lost, as are a 'second collection of practical contributions', which Thomas said were published in 1779, and two manuscript items relating to the thematic catalogue.

In 1798 Thomas founded the *Unpartheiische Kritik*, a music periodical which he himself edited, devoted mostly to concerts he had organized in Leipzig and elsewhere. According to Schering, without this journal it would be impossible today to have a clear understanding of the intricate contexts within Leipzig's musical life in the late 18th century. Typical of Thomas's projects, this was short-lived; he chose to begin publishing the journal the

same year that G.C. Härtel, of the publishers Breitkopf & Härtel, began his famous *Allgemeine musikalische Zeitung* in Leipzig. Thomas, though a man of imagination, intellect and energy, was an impractical idealist, an inefficient administrator and a garrulous if amiable braggart. He was apparently undaunted by his string of failures. His writings give a picture of the burgeoning bourgeois musical life of the time, and of the highly competitive business practices in music that were replacing the patronage system as the musician's means of making a livelihood.

BARRY S. BROOK

Thomas, David

(*b* Orpington, Kent, 26 Feb 1943). English bass. He studied at King's College, Cambridge, where he was a choral scholar, and quickly established himself in the Baroque and Classical repertory, initially as an ensemble and oratorio singer. He made his British operatic début in 1981 with Kent Opera, as Pluto in Monteverdi's *Il ballo delle ingrate*, and his American début in 1988 at Los Angeles as the Devil in Stefano Landi's *Sant'Alessio*. Thomas has performed throughout the world with many of the leading period instrument ensembles in opera and choral works, and has made several tours with the soprano Emma Kirkby and the lutenist Anthony Rooley. His numerous recordings include Rameau's *Zaïs* (1979), Purcell's *Dido and Aeneas* (1981 and 1992) and *The Fairy-Queen* (1982), Monteverdi's *Orfeo* (1986) and *Il ritorno d'Ulisse in patria* (1993), and Handel's *Orlando* (1991) and *Almira* (1995), and many Baroque choral works. His singing is distinguished by a strongly projected, uncommonly wide-ranging voice, deployed with minimal vibrato, and a keen sense of characterization.

NICHOLAS ANDERSON

Thomas, David Wynne.

See Wynne, David.

Thomas, Ernst

(*b* Darmstadt, 21 Feb 1916). German administrator and writer on music. He studied the piano with Robert Teichmüller, conducting with Abendroth and Max Hochkofler, theory with Max Ludwig and musicology with Reinhard Oppel at the Leipzig Conservatory (1934–9). He then took up conducting with Clemens Krauss at the Salzburg Mozarteum; at the beginning of the war he held conducting appointments in Freiburg and Görlitz. He was music critic of the *Darmstädter Echo* (1947–56) and music editor of the *Frankfurter allgemeine Zeitung* (1956–62). He served as head of the Internationales Musikinstitut in Darmstadt, where he was also director of the international summer courses in contemporary music (1962–81), editor of the *Neue Zeitschrift für Musik* (1958–78) and organizer of the concert series Musica Viva at Bavarian Radio, Munich (1964–78). He was general editor of Darmstädter Beiträge zur neuen Musik (1962–80) and of Neue Musik in der BRD (1962–71).

Thomas, Isaiah

(*b* Boston, 19 Jan 1749; *d* Worcester, MA, 4 April 1831). American printer and publisher. He was apprenticed to a printer at the age of seven and worked in print shops in Halifax, Nova Scotia, Charleston, South Carolina, and elsewhere. In 1770 he was in Boston publishing the *Massachusetts Spy*, a newspaper strongly opposed to the English government. He fought briefly in the War of Independence, then in 1778 settled in Worcester, where he continued to publish the *Spy*. There he established a business that made him the leading American printer and publisher of his time, with more than 400 titles coming from his press.

Before 1786, when Thomas first expanded his enterprise to include the publication of tune books, American sacred collections were normally printed from engraved copper plates. Thomas imported a fount of movable music type from England and brought out *The Worcester Collection of Sacred Harmony* (Worcester, 1786), printed typographically. The work was a conspicuous success, running to eight editions by 1803. Its repertory was a carefully chosen blend of favourite pieces from English and American composers; this emphasis on familiar music became a model for the most successful American tune books of the next two decades. Considering the *Worcester Collection*'s ample size, its price was low, for typographical printing and a well-established network of agents allowed Thomas to print and sell in quantity. Admitting that he himself was 'unskilled in musick', Thomas recruited knowledgeable musicians to aid him in compiling his work.

Thomas was the first professional printer in America to involve himself energetically in the publication of sacred music. Between 1789 and his retirement in 1802, he published or printed more sacred tune books than any other American, most of them through his partnership with Ebenezer T. Andrews in Boston. The list of compilers whose works he printed includes a few psalmodists associated with the earlier New England style (Belcher, Billings, French, Abraham Wood). Also represented were several who were schooled in a more cosmopolitan, Europeanized idiom (Samuel Babcock, Bartholomew Brown, Amos Bull, William Cooper, Oliver Holden, Samuel Holyoke and Jacob Kimball), and inveterate reformers like John Cole and Hans Gram. Thomas also published the *Massachusetts Magazine*, a literary and political journal that between 1789 and 1792 occasionally carried secular songs, including some by the local composers Gram, Holyoke, Elias Mann and Selby.

RICHARD CRAWFORD/R

Thomas, Jess (Floyd)

(*b* Hot Springs, SD, 4 Aug 1927; *d* San Francisco, 11 Oct 1993). American tenor. After studying psychology at Stanford University, he was encouraged by his singing teacher, Otto Schulman, to pursue an operatic career. He made his début in 1957 at San Francisco and then went to Germany, where he sang at the Karlsruhe Opera for three years. At that time his roles included Tamino, Alfredo, Manrico, Don José, Calaf and Lensky. He soon began to make guest appearances with larger German companies, and in 1961 Wieland Wagner cast him as Parsifal in Bayreuth and Radames in Berlin. He returned to the USA and made his Metropolitan début in 1962 as Walther (the role of his Covent Garden début in 1969). He then began to concentrate on the heavy Wagnerian roles such as Siegfried, which he sang in the Bayreuth centenary *Ring* in 1976 and Tristan, which he sang at the Metropolitan and at Covent Garden. Some listeners have felt that the strain of these challenges robbed his voice of freshness and ease; nevertheless, his intelligence and histrionic credibility remained uncommon assets. Other roles included Samson, Florestan, Bacchus and the Emperor in *Die Frau ohne Schatten*; he also sang Caesar in the première of Barber's *Antony and Cleopatra* for the opening of the new Metropolitan Opera House at Lincoln Center in 1966. He recorded many of his Wagner roles, including Siegfried, Lohengrin and Parsifal (in the notable 1962 recording under Knappertsbusch).

MARTIN BERNHEIMER/R

Thomas, John [Pencerdd Gwalia]

(*b* Bridgend, Glam., 1 March 1826; *d* London,19 March 1913). Welsh harpist and composer. He is said to have played the piccolo at four years of age. He studied the harp under his father and won the triple harp competition in 1838 in an eisteddfod at Abergavenny; two years later he entered the RAM sponsored by Ada, Countess of Lovelace. He studied composition, the piano and the harp under Cipriani Potter, C.J. Read and J.B. Chatterton respectively; in 1871 he succeeded Chatterton as harpist to Queen Victoria. He became an FRAM in 1846 and began to make his mark in London as a harpist of great virtuosity. In 1851 he was playing at the opera, and the following year performed his harp concerto in E♭ at a Philharmonic concert – the only work by a Welsh composer to be presented by the Philharmonic Society during the first hundred years of its

existence. For ten years he toured each winter, playing throughout Europe from Russia to Italy. He was admitted to membership of the Accademia di S Cecilia, Rome, the Società Filarmonica of Florence and the Philharmonic Society, London. He was also a member of the Royal Society of Musicians. He was invested with the bardic title 'Pencerdd Gwalia' at the Aberdare eisteddfod in 1861, and though he lived mostly in London visited Wales frequently, appearing at every major eisteddfod as a performer or adjudicator. In 1862 the first volume of his collection of 49 Welsh airs with Welsh and English texts by John Jones 'Talhaiarn' and Thomas Oliphant was published in London and he gave there the first of a long series of concerts of Welsh music. His cantata *Llywelyn* was performed at the Aberdare eisteddfod in 1863, and *The Bride of Neath Valley* at Chester in 1866. Five years later he founded and conducted the Welsh Choral Union in London and endowed a permanent scholarship at the RAM. In 1882 he was appointed an examiner at the RAM and also professor of harp at the RCM and the GSM. He was a popular lecturer on Welsh national music and wrote on the subject in *Grove1*; he also published 'The Musical Notation of the Ancient Britons' (in *Myvyrian Archaiology*, Denbigh, 2/1870).

OWAIN EDWARDS

Thomas, John Charles

(*b* Meyersdale, VA, 6 Sept 1891; *d* Apple Valley, CA, 13 Dec 1960). American baritone. He studied in Baltimore and, after singing in musical comedy and Gilbert and Sullivan, made his operatic début in 1924 at Washington, DC, as Amonasro. Engaged at La Monnaie, he made his

début there in 1925 as Herod (*Hérodiade*) and sang Amfortas, Hamlet, Escamillo, Zurga, and Orpheus in the première of Milhaud's *Les malheurs d'Orphée* (1926). He made his Covent Garden début in 1928 as Valentin, also singing Amonasro. In 1930 he sang John the Baptist at San Francisco and Tonio in Chicago, where he later sang Falstaff (1940). He made his Metropolitan début in 1934 as Giorgio Germont, and remained with the company until 1943, also singing Rossini's Figaro, Athanaël (*Thaïs*) and Scarpia. In 1943 he returned to San Francisco as Tonio and Rigoletto. His recordings display a voice of great power and intensity.

RICHARD LeSUEUR/ELIZABETH FORBES

Thomas (Sabater), Juan María

(*b* Palma de Mallorca, 7 Dec 1896; *d* Palma, 4 May 1966). Spanish composer and organist. A pupil of Daniel, Mas y Serracant and Huré, he was appointed organist of Palma Cathedral in 1914. With the Capella Classica, which he founded in 1932, he gave concerts throughout the world. He was a close associate of the poet Jiménez and of Falla: he published *Don Manuel de Falla en la isla* (Palma, 1947).

GUY BOURLIGUEUX

Thomas, Kurt (Georg Hugo)

(*b* Tönning, 25 May 1904; *d* Bad Oeynhausen, 31 March 1973). German choral conductor and composer. He studied church music in Leipzig with Straube and Grabner, and composition in Darmstadt with Arnold Mendelssohn. At the age of 21 he was appointed lecturer in theory and composition at the Leipzig Conservatory, and in 1928 took charge of the

choir at the Institute of Church Music in the city. Subsequently he held posts as professor at the Berlin Musikhochschule (from 1934), director of the Musisches Gymnasium in Frankfurt (1939–45), Kantor of the Frankfurt Dreikönigskirche (1945–56), professor at the North West German Music Academy, Detmold (1947–55), and director of the Thomaskantorei and the Thomasschule in Leipzig (1955–61). He then left abruptly for West Germany to become conductor of the Cologne Bach Society concerts and again of the choir in Frankfurt.

Thomas was one of a number of German composers who played a significant role in the renewal of Protestant church music which took place from the mid-1920s. Much of his sacred choral work is based upon Baroque styles, mixing purity of harmonic language with contrapuntal rigour. Likewise, the 17th-century choral cantata provides the model for the secular *Hohes Lied der Arbeit* and the *Olympische Kantate* (the latter composed for the 1936 Olympic Games in Berlin), although the texts of both these works are more clearly related to Nazi ideology. After the war Thomas gave up composing, but continued to enjoy a high reputation as a choir trainer and conductor; his *Lehrbuch der Chorleitung* (Leipzig, 1935–48) has remained a standard textbook. Throughout his life Thomas was deeply committed to the youth music movement, though his enthusiasm for this sometimes made him appear rash and unheeding of the ruling political forces, and after he left Leipzig in the early 1960s he was no longer able to exert much influence upon German musical life.

HANSPETER KRELLMANN/ERIK LEVI

Thomas, Mansel (Treharne)

(*b* Pontygwaith, Rhondda Valley, 12 June 1909; *d* Gilwern, nr Abergavenny, 8 Jan 1986). Welsh composer, conductor and administrator. He won a scholarship in 1925 to the RAM in London, where for five years he studied composition with Benjamin Dale; he received his BMus from Durham University in 1930. He remained in London as a freelance conductor and accompanist, returning to Wales in 1936 to become music assistant in the BBC Welsh Region. There he gained his first extended experience as a conductor with the newly formed BBC Welsh Orchestra, and from 1941 he conducted the BBC Revue Orchestra and Chorus in Bangor. He served in the Royal Army Service Corps (1943–6), mainly in Brussels where he appeared as guest conductor of the Belgian National Orchestra. Following demobilization he was appointed principal conductor of the BBC Welsh Orchestra and was musical director of the Cardiff Municipal Choir (1948–57). In 1950 he became BBC Head of Music in Wales and was influential in increasing the frequency and quality of broadcasts of Welsh music and Welsh artists. He took early retirement in 1965 in order to devote himself to composition. He was elected an honorary fellow of the RAM in 1951 and in 1970 received the OBE; the University of Wales (Aberystwyth) awarded him an honorary professorial fellowship in 1972.

A skilled and sensitive pianist and conductor, Thomas made many broadcasts and recordings from 1946 to 1965, though his conducting talent had been recognized as early as 1934 when he conducted the LSO in his Theme and Variations. His refined craftsmanship as a composer found its most comfortable expression in short forms, especially in his prolific output of vocal and choral music, which is distinguished by a sensitivity to verbal rhythms and by resourceful and imaginative accompaniments. That most of his early compositions were vocal, with Welsh the principal language, reflected the influence of the musical culture of the Welsh valleys. Between 1940 and 1965 he composed mainly for broadcasts and festivals; from this arose arrangements of Welsh folksongs and hymn tunes for a variety of media. After 1965 the voice was again the focal point of his creativity; he was most inclined towards the solo song, yet most of his commissions were for choral works. Much of his music was in a fundamentally diatonic idiom with judicious use of chromaticism, revealing the influence of Dale and his contemporaries. In Thomas's later years a significant stylistic change occurred, notably in the highly dissonant and abstract nature of his songs between 1974 and 1976; the seeds of this are evident in earlier compositions such as *Psalm cxxxv*, the *Gaelic Prayers* and the Piano

Quintet. Thomas regularly appeared on BBC radio and also produced a number of articles on Welsh music.

TERENCE GILMORE-JAMES

Thomas, Michael Tilson [Tomashevsky, Michael]

(*b* Los Angeles, 21 Dec 1944). American conductor, pianist and composer. His paternal grandparents were named Tomashevsky and were legendary in Yiddish theatre. He studied composition and conducting with Ingolf Dahl, the piano with John Crown and the harpsichord with Alice Ehlers at the University of Southern California, graduating in 1967. At 19 he became music director of the Young Musicians Foundation Début Orchestra in Los Angeles, conducting premières of works by Boulez, Copland, Stockhausen and Stravinsky. He served as pianist and conductor for masterclasses by Heifetz and Piatigorsky, attended Bayreuth as a student of Friedelind Wagner in 1966, and in 1967 assisted Boulez at Ojai, California. In 1968 Thomas won the Koussevitzky Prize, and in 1969 was appointed assistant conductor of the Boston SO under William Steinberg. In October of that year he took over from an ailing Steinberg during a concert at New York's Philharmonic Hall. He was appointed associate conductor at Boston in 1970. Thomas was music director of the Buffalo SO (1971–9), led the New York PO Young People's Concerts on CBS Television (1971–4), was principal guest conductor at the Los Angeles PO from 1981 to 1985. He is founder and artistic director of the Florida-based New World SO, which gave its first concert in 1988. In 1988 Thomas became principal conductor of the LSO, a position he held until 1995.

At the LSO he made a number of significant recordings, ranging from Beethoven choral works to Bernstein's *On the Town*, and established an international reputation for innovation and breadth of repertory. In 1990 Thomas and Bernstein co-founded the Pacific Music Festival in Sapporo. Five years later he became music director of the San Francisco SO. Within two seasons he had largely rewritten the musical map of that city,

presenting Ives, Harrison, rare Mahler and unheard Cowell, and summer festivals offering bold programmes of American music, including musicians from the Grateful Dead. He has not been active in opera, but occasionally serves as accompanist to leading singers, and has made recordings of Gershwin piano music and the first recording (with Ralph Grierson) of Stravinsky's own four-hand version of *The Rite of Spring*.

Among the many premières he has conducted are Knussen's Symphony no.3 (1979) and *Flourish with Fireworks* (1988), Colin Matthew's *Quatrains* (1989) and *Machines and Dreams* (1991), Reich's *The Desert Music* (1984) and *The Four Sections* (1987), and Takemitsu's *Quotation of Dream* (1991). Thomas's music-making is shaped by remarkable intelligence and emotional energy. He combines a clear, rhythmic baton technique, a flamboyant platform manner, an easy rapport with audiences (whom he often addresses from the podium) and a gift for programming which balances the traditional and the unexpected. Thomas' *From the Diary of Anne Frank*, for narrator and orchestra, commissioned by UNICEF, had its premier in 1990. Among his other compositions are a number of works for voice and piano. (M.T. Thomas: *Viva voce: Conversations with Edward Seckerson*, London, 1994)

<div align="right">CHARLES BARBER</div>

Thomas, Theodore (Christian Friedrich)

(*b* Esens, East Friesland, 11 Oct 1835; *d* Chicago, 4 Jan 1905). American conductor of German birth. His father was a *Stadtmusikus* in Esens. Thomas started playing the violin when he was two. Five years later he performed for the King of Hanover who offered him a place in the royal household, which he declined. In 1845 the family moved to the USA. Thomas's formal education evidently ceased after his arrival in New York. Nor is there any record of his having studied the violin with a recognized teacher, although he did study harmony and counterpoint in his twenties. He served as a member and leader of many opera, theatre and concert orchestras and was a well-known and esteemed soloist and chamber player. In his early years he played under and was influenced significantly by the conductors Karl Eckert and Louis Jullien. In 1854 he joined the first violin section of the New York Philharmonic Society. A year later he and the pianist William Mason launched a series of monthly matinée chamber concerts at Dodworth Hall in New York; the world première of Brahms's Piano Trio in B op.8 was given at their first concert. The series continued for 14 years, featuring works for string quartet and for piano and strings, and the standard of playing and repertory attracted admiration in Europe and North America.

In 1859 Thomas replaced the German conductor Carl Anschutz for Donizetti's *Lucrezia Borgia* at the New York Academy of Music, following which he was asked to conduct the same composer's *La favorite* at the Academy. Three years later he personally sponsored and conducted his first orchestral concert at Irving Hall in a judiciously mixed programme of light and serious music. Thomas thus evolved a formula to please the

public and yet challenge, educate and uplift it. Daringly for the time, he gave the first American performance of the overture to *Die fliegende Holländer*. Despite such 'modern' tendencies, he was engaged by the conservative Brooklyn Philharmonic Society to share conducting assignments with Theodore Eisfeld for the 1862–3 season. In 1866 Thomas was appointed sole conductor of the society, a post he held until 1891. The Theodore Thomas Orchestra, which took shape in the mid-1860s, was its resident orchestra.

In 1864 Thomas began his Irving Hall Symphonic Soirées, which were distinguished by an ever-increasing sophistication in choice of repertory, comparable to the best orchestral programmes of London, Paris, Vienna and Berlin. The works performed most frequently were by Beethoven, Schumann, Liszt and Wagner, in that order. Thomas began giving lighter summer programmes in 1865, the most notable being those held at the Central Park Gardens in New York from 1868 to 1875. He led 1227 concerts from May to September in these eight years with programmes ranging from potpourris to complete Beethoven symphonies. In 1869 Thomas led his orchestra on the first of many tours over the legendary 'Thomas Highway' of the USA and Canada. The orchestra gave concert series (up to 12 or 14 programmes annually) in cities such as Boston and Chicago until they established their own resident orchestras. It also gave a summer series in Chicago from 1877 until 1890.

Thomas was musical director of the 1876 Philadelphia Centennial Exposition. His orchestra gave concerts almost daily but attendance was poor. At great expense he had commissioned Wagner to write a piece for the national celebration and the composer complied with a banal march. Thomas, as Wagner's principal advocate in the USA, was thoroughly disillusioned. Furthermore, the Centennial concerts were a financial disaster. A man of principle, Thomas met all expenses personally, leaving him in financial straits for the next four years. More successful was the biennial Cincinnati May Festival, which Thomas and a group of local citizens founded in 1873; he remained its musical director until his death. The Cincinnati Music Hall, built at his instigation for the third festival (1878), was his lasting contribution to the city's musical life. It was there that he revived public interest in J.S. Bach and Handel. He conducted the *St Matthew Passion* (the first complete North American performance), the B minor Mass, and typically Victorian performances of *Messiah* and *Israel in Egypt*. In 1878 he accepted the directorship of the new Cincinnati College of Music but soon returned to New York, frustrated with the school's policies. He had envisaged a school committed to teaching only talented students at little or no cost to them; in fact it accepted all applicants who could pay the fees.

Thomas adapted the Cincinnati pattern of choral-orchestral concerts for other cities, the most notable being for New York in 1882. A chorus of 3000 sang to the accompaniment of an orchestra of 300. The audience numbered approximately 8000 at each of the seven concerts in the 7th Regiment Armory. In 1883 his 'Ocean to Ocean' tour included 30 cities, 74 concerts in as many days, and 12 festivals. The next year he conducted major festivals of Wagner's music in concert form in eight leading American and Canadian cities.

In 1877 Thomas was elected conductor of the New York PO, a post he held, excluding his stay in Cincinnati, until 1891. It thrived under his direction. He subordinated his own orchestra to it and finally disbanded the group in 1888 after it completed its summer season at Chicago. Three years earlier he had unwisely accepted the musical leadership of the newly formed American Opera Company. Its policy was to encourage composition of American works and to perform opera in English only, with American singers and no stars. It presented nine works in New York and on tour in its first season in 1886, including works by Wagner and Mozart. Six more operas were added in 1887. The company, however, failed dismally because of poor performances and bad management.

This setback, the rise in prominence of the conductor Anton Seidl, the persistent competition of the Damrosch family, the growing importance of opera at the new Metropolitan Opera House (in which Thomas had no role) and his consuming wish for a full-time permanent orchestra, which the New York PO was not, set the stage for an exciting invitation from Chicago. A group of businessmen there offered to sustain a resident orchestra of Thomas's choosing, similar to that which Boston already had. This pattern of widely based support by the rich was the first of similar schemes for organizing orchestras in many other North American cities. Thomas endured several crises in Chicago: a scandal, for which he was essentially blameless, concerning the use of pianos at the 1893 World's Columbian Exposition; an antagonistic public and press; unwanted but financially necessary tours by the orchestra which taxed severely the energy of the prematurely aging conductor; and the unrequited need for an appropriate Chicago concert hall. In December 1904, a few weeks before his death, the new Orchestra Hall opened as the permanent home of the Chicago SO.

Thomas did more than any other American musician of the 19th century to popularize music of the great European masters. He planted the seed for local symphony orchestras in cities throughout the land and helped the American people gain a greater appreciation of symphonic music. He was a brilliant organizer and an indefatigable worker. He not only directed his orchestra with total autonomy but also managed its business details. He devised ingenious schemes to promote ticket sales, and mapped out special 'pop' and children's programmes, and even concerts for working men. His knowledge and understanding of audiences, as expressed in his programming, was exemplary. He was an undemonstrative, often aloof, conductor, but an admirable disciplinarian who knew his instruments and scores, understood the technical and psychological aspects of orchestral leadership and had the respect of his players. Thomas was admired by those great soloists of Europe who appeared with him. At its height in 1875 the Thomas Orchestra was, by common consent, unsurpassed anywhere, as was the New York PO under his direction ten years later. The popularity of the symphony orchestra in the USA today is due in great part to the work of Thomas.

The Thomas Collection of the Newberry Library, Chicago, has 50 volumes of his programmes, autograph scores of his compositions and transcriptions, his personal library and 631 letters, clippings and photographs. The Felsengarten Collection in Chicago contains over 100 letters, scores, photographs and other memorabilia dealing mainly with the

World's Columbian Exposition and the Cincinnati May Festival. The Cincinnati Historical Society has letters, scrapbooks and other material about Thomas's work in Cincinnati. The New York Public Library has material on the New York PO and American Opera Company. Thomas published in two volumes *A Musical Autobiography* (Chicago, 1905/*R*1964, vol. i only, with an introduction by Leon Stein). Vol. ii reproduces Thomas's concert programmes and lists works he introduced to the USA. Both volumes were edited by G.P. Upton. *Memoirs of Theodore Thomas* (New York, 1911/*R*), by his second wife Rose Fay Thomas, includes personal observations of Thomas and important letters and articles written by and about him.

Thomas Aquinas.

See Aquinas, Thomas.

Thomas de Sancto Juliano

(*fl* mid-13th century). Musical scribeactive in Paris, involved in the transmission of the *Magnus liber* and related collections of mensural polyphony in the generation following Robertus de Sabilone. He is mentioned only by the theorist Anonymous IV (ed. Reckow, 1967, i, 50), who remarked that he was a Parisian who belonged to an earlier generation ('Parisius antiquus'), and whose books did not follow the new styles of mensural notation but were nevertheless well notated according to the older practice ('secundum antiquores', indicating modal notation). He

has been suggested (by Dittmer, *MD*, xi, 9) as the scribe of the St Victor manuscript (*F-Pn* 15139) on grounds of notational style, but this seems unlikely.

For bibliography *see* Organum.

IAN D. BENT/EDWARD H. ROESNER

Thomassin, Louis

(*b* Mirecourt, 1855; *d* Paris, between 1900 and 1910). French bowmaker. After working with Charles N. Bazin in Mirecourt, he went to Paris in 1872 to work for F.N. Voirin. He remained with this shop until about 1890; after Voirin's death (1885) he and Alfred Joseph Lamy continued to work for his widow, producing bows bearing his brand. In 1891 Thomassin opened his own workshop in Paris. His work is very well finished and is mostly modelled after Voirin. Occasionally he produced some interesting late-period Tourte copies, this work being radically different from his normal approach. In both styles the frogs are fitted with plain mother-of-pearl dots and the buttons are banded. Almost all of his bows tend towards lightness in weight, regardless of model.

Claude Thomassin (1870–1942), son and pupil of Louis Thomassin, worked successively for Gustave Bernardel, Caressa and Caressa & Français in Paris, eventually setting up his own shop in 1901. His work is of elegant proportions, much inspired by the Voirin model, and at its best matches the refinement of Voirin's craft. The ferrule is quite rounded at the front and the adjusters are either banded or capped. The sticks are usually round although octagonals are occasionally seen, mostly on viola bows. He produced a fair number of nickel-mounted bows (stamped with his brand), presumably intended for the impecunious student; these are not inferior to his more expensively mounted work. In general his bows, as with most of the Voirin-Lamy school, tend towards lightness in weight.

JAAK LIIVOJA-LORIUS

Thome, Diane

(*b* Pearl River, NY, 25 Jan 1942). American composer and pianist. She studied at the Eastman School (BM in composition and performer's certificate, 1963); the University of Pennsylvania (MA in theory and composition, 1965); and at Princeton (MFA in composition, 1970), where she received the PhD for her dissertation *Toward Structural Characterization of the Timbral Domain*, 1973. Her teachers included Dorothy Taubman, for piano, and Robert Strassburg, Harris, Milhaud,

Boskovich and Babbitt, for composition. In 1963–4 she was pianist for the Israel Dance Theatre, Tel-Aviv. Thome has taught at Princeton and SUNY, Binghamton. In 1977 she was appointed to the University of Washington where she became chair of the composition and theory division in 1995. In her music, which has frequently been written to commission and which is widely performed, she explores the boundaries between live performance and computer-synthesized sounds. *Polyvalence* (1972), for computer and ensemble, was among the earliest computer-synthesized compositions by a woman; *Angels* (1992) has been performed in Chicago and at the Biennale des Arts Electronique in Paris; *Masks of Eternity* (1994) is described in a contemporary review as a 'brilliant display of the possibilities of computer-synthesized sound when put to expressive ends'.

WORKS

(selective list)

Tape and cptr: Polyvalence, cptr, 6 players, 1972; January Variations, cptr-synthesized tape, 1973; Anais, vc, pf, tape, 1976; Sunflower Space, fl, pf, tape, 1978; Levadi, S, tape, 1986; Ringing, Stillness, Pearl Light, pf, tape, 1988; The Ruins of the Heart, S, orch, tape, 1990; Into her Embrace: Musings on Savitri, tape, 1991; The Palaces of Memory, chbr orch, tape, 1993; Masks of Eternity, tape, 1994; Unseen Buds, chorus, tape, 1995; Bright Air/Brilliant Fire, fl, tape, 1996; Unfold Entwine, 1998; Like a Seated Swan, va, tape, 2000

Mixed media: Night Passage (environmental theatre piece), 1973, collab. B. Tromler and J. Vassallo; Angels (virtual reality artwork, N. Stenger), 1992

CATHERINE PARSONS SMITH

Thomé, Francis [François Luc Joseph]

(*b* Port Louis, Mauritius, 18 Oct 1850; *d* Paris, 16 Nov 1909). French composer. He was taken as a child to Paris, where he studied at the Conservatoire with Duprato and Thomas. Soon after leaving the Conservatoire he became well known as a composer of salon pieces and was in demand as a pianist and teacher. His music was particularly successful in the French provinces, and two of his operas were first performed outside Paris.

Although Thomé's music has generally fallen into oblivion, it was formerly much appreciated. Pougin's obituary describes the composer as 'a neat,

refined artist, gifted with an attractive melodic vein … and enriched by solid learning'. Thomé's stage music encompassed various genres, including ballet, pantomime, incidental music (for a wide range of plays) and *bleuettes*.

DAVID CHARLTON

Thomelin [Thomolin], Jacques-Denis

(*b c*1640; *d* Paris, 1693). French organist. He was a member of a family of musicians active over several centuries, most of them as organists. He was

organist of the Paris churches of St André-des-Arts in 1656, St Germain-des-Prés in 1667 and of St Jacques-de-la-Boucherie in 1669. In 1678 he was nominated *organiste du roi*, the highest appointment in the land. Thomelin was clearly one of the most talented organists of his generation; Titon du Tillet (*Le Parnasse françois*, Paris, 1732/*R*) reported that crowds flocked to hear him on feast days. From the same source we learn that Thomelin taught François Couperin (ii), becoming 'a second father' to him following the early death of François's natural father; on his death Thomelin was succeeded at court by his pupil. There is no trace of Thomelin's organ music, if indeed he ever committed any of it to paper, but an unexceptional allemande for harpsichord survives (ed. in L'organiste liturgique, xviii, Paris, 1957). A manuscript *Suplément aux livres de messes et de motets (à l'usage de St Cyr) (F-Pn* Rés. 1680) contains a *Domine, salvum fac regem* by 'Thomelin'; which member of the family is not specified, but it is quite likely to be Jacques-Denis. (P. Hardouin, 'Notes bibliographiques sur quelques organistes parisiens des XVIIe et XVIIIe siècles', *L'Orgue*, lxxxii (1957), 1–8; lxxxiii (1957), 25–35)

EDWARD HIGGINBOTTOM with G.B. SHARP

Thomish, František Václav.

See Tomeš, František Václav.

Thommesen, Olav Anton

(*b* Oslo, 16 May 1946). Norwegian composer. He studied composition at Indiana University, Bloomington with Xenakis and Heiden (1965–9), spent a year at the Warsaw Conservatory on a scholarship and studied composition and sonology at Utrecht University (1971–2). When the Norges Musikkhøgskole in Oslo was established in 1973 he was appointed lecturer, and in 1985 became professor of composition. He has become a prominent composer, and is also a critic with far-reaching ideas which he promotes through his directorship of various boards. He was the driving-force behind the creation of the Norwegian Music Information Centre.

A cosmopolitan composer as a result of having spent much of his childhood and youth abroad, he seeks inspiration from both East and West, and is opposed to compositional systems. His output may seem kaleidoscopic, but there are some distinct patterns, one of which is seen in his largest project *Ett glassperlespiel* ('A Glass Bead Game', 1979–82). Labelled a concert opera of 'neo-rococo bourgeois romanticism', the project is a full-evening programme. It comprises six pieces, which themselves rework very familiar concert works (e.g. *Introduction and Macro-Fantasy on Grieg's Concerto in A minor for Piano and Large Orchestra*, and *Encore on Dies Irae by Verdi, Apotheosis*) in a synthesis of different epochs and styles. Thommesen believes that there must be space for music between the 'souvenir orchestra' and what he sees as the verbal ineptitude of the avant garde. One of the evening's pieces, *Through a Prism*, was awarded a prize by the Nordic Council and at the International Rostrum of Composers in Paris. His dramatic music has also contributed to

his standing, and his *Stabat mater speciosa* has become part of the standard Norwegian repertory.

WORKS

Dramatic: The Hermaphrodite (Gnostic texts), ballet op, 1970, rev. 1980; The Other Image, TV ballet, 1980; Bleikeplassen (T. Vesaas), 1980; The Duchess Dies (chbr op, J. Webster and P. Bronken), 1987; much incid music

Inst: Some Sound, orch, 1971; Up-Down, orch, 1972–3; Barbaresk, orch, 1974, rev. 1977; Ett glassperlespiel [A Glass Bead Game], orch, 1979–82; Through a Prism, vc, org, orch, 1983; From Above, synth solo, orch, 1986; The Great Attractor: Cadenza for Vn and Orch without Vns, 1988; Phantoms of Light, vc, ww, 1990; Vaevet av staengler – a Sym. Song, 1991; Near the Comethead: Orch Drama, 1994; Cassandra (J. Barton), nar, orch, 1996; str qts, wind qnt, pf works, other chbr works

Vocal: A Concert Chamber (textless), 1v, small ens, 1971; The Secret Gospel (Gnostic texts), 1v, small ens, 1973; The Overtone (D.H. Lawrence), 2 vv, small ens, 1978; Stabat mater speciosa, choir, 1977; Gratias agimus (textless), coloratura S, pf, 1982, rev. 1987; Gnostic Fragments: a Musical Reconstruction, Mez, small ens, 1985; … the Eight Authors (Metin al-Tiok), nar, ens, 1994

ARVID O. VOLLSNES

Thomolin, Jacques-Denis.

See Thomelin, Jacques-Denis.

Thompson.

English family of music publishers, printers and string instrument makers. The business was founded in London by Peter Thompson about 1741, when he took over the business of John Young; it was continued after his death (*c*1757) by his widow Ann and son Charles, sometimes under the imprint Thompson & Son. About 1761 they were joined by a second son, Samuel Thompson (*d* Aug 1795), to become Thompson & Sons. Ann left the firm in about 1763, and thereafter it was under the direction of various family members whose names appeared on its imprints: it was under the joint management of Charles and Samuel until about 1776, after which Samuel continued alone for a year; he was then joined by another Ann (whose relationship to the preceding Ann is not known), and these two remained with the firm until Samuel's death, on their own (*c*1777–9), then with Peter (*c*1779–93), with Peter and Henry (*c*1793–4) and finally with

Henry (*c*1794–5). During the several changes of membership after 1792 the imprints frequently give 'Messrs Thompson' or 'Thompsons' Warehouse'. After Samuel's death Ann and Henry managed the firm together until about 1798, after which it continued under the sole ownership of Henry Thompson. About 1805 the business was taken over by Purday & Button (later Button & Whitaker).

The early publications of the firm were mostly of lesser importance and included many tutors for violin, flute, harpsichord and other instruments. From 1751 Thompson published annual collections of *Twenty Four Country Dances*, which were continued throughout the whole period of the firm's existence and also collected into five cumulative volumes of 200 dances each; later the firm initiated a similar series of minuets. In 1764 the Thompsons acquired some plates at the auction of John Cox's stock and reissued a number of works from them. From about 1765, while under the direction of Charles and Samuel, the firm gradually became one of the most important in London. Further advances took place under the direction of Samuel, Ann and Peter, who published yearly catalogues of their newly issued works (*c*1781–90). Many works by Arne, Arnold, Dibdin, Philip Hayes, James Hook, Thomas Linley the elder, F.X. Richter, Samuel Webbe the elder and others appeared with the firm's imprint. A large number of string instruments (predominantly violins) also bear the Thompson label and were probably built by makers in their employ.

Robert Thompson, probably brother of Peter Thompson, had a music shop in London from 1748 until 1785. He was an instrument maker and published a number of single sheet songs.

FRANK KIDSON/WILLIAM C. SMITH/PETER WARD JONES

Thompson, Michael

(*b* London, 4 Jan 1954). English horn player. He studied at the RAM in London with Ifor James, and at the age of 18 was appointed to the BBC Scottish SO as principal horn. In 1975 he returned to London as principal of the Philharmonia, with which he played for ten years before leaving to pursue a solo career. He was appointed professor at the RAM in 1984. Thompson has performed and recorded solo repertory from Haydn and Mozart to such contemporary works as Messiaen's *Des canyons aux étoiles* and Maxwell Davies's *Sea Eagle*, and has given the first performances of works by Michael Berkeley, Anthony Powers, Simon Bainbridge and Benedict Mason. He has also played Baroque and Classical works on period instruments. Leading his own wind quintet, formerly the Barry Tuckwell Quintet, he has recorded the complete quintets of Reicha and Danzi.

OLIVER BROCKWAY

Thompson, Oscar

(*b* Crawfordsville, IN, 10 Oct 1887; *d* New York, 3 July 1945). American critic and writer on music. He was educated at the University of Washington (Seattle), and studied music privately, making several appearances as a singer (about 1912) while following a career in journalism. After army service in World War I he joined the staff of *Musical America* as a critic (1919), later serving as editor (1936–43). He was also music critic of the *New York Evening Post* (1928–34), the *New York Times* (1935) and the *New York Sun* (from 1937 until his death). He instituted a unique course in music criticism at the Curtis Institute in Philadelphia (1928); he also wrote a textbook on the subject, and taught at Columbia University and the New York College of Music. His *Cyclopedia* (1939) is perhaps the best single-volume general dictionary of music in English.

<div align="right">RAMONA H. MATTHEWS</div>

Thompson, (Ira) Randall

(*b* New York, 21 April 1899; *d* Cambridge, MA, 9 July 1984). American composer and educator. He studied at Harvard University (AB 1920, MA 1922), where his teachers included A.T. Davison, Edward Burlingame Hill and Walter Spalding, as well as privately with Ernest Bloch in New York. In 1922, a Prix de Rome enabled him to study in Asolo with Gian Francesco Malipiero, by whom he was much influenced. After three years, he returned to New York. He was appointed organist and lecturer in music at Wellesley College in 1927, a position he left in 1929 to take up a Guggenheim Foundation fellowship. Two years later, he embarked on a three-year investigation of music education commissioned by the Association of American Colleges. His research resulted in an influential report, *College Music* (New York, 1935), which espoused a liberal arts approach to music education, rather than an emphasis on 'manual training' (i.e. lessons and performance). He was later appointed to the visiting committee on music at Harvard, where his findings resulted in a revision of the music curriculum.

In 1937 Thompson resumed an academic career, taking up a professorship at the University of California, Berkeley. In 1939 he was appointed director of the Curtis Institute of Music (where Bernstein was one of his students) and in 1941 he became head of the music division of the School of Fine Arts at the University of Virginia, Charlottesville. He joined the music

department at Princeton University in 1946 and in 1948 was appointed to a position at Harvard (Walter Bigelow Rosen chair, 1951), where he resumed a close association with Davison, who conducted many of his works. He retired from teaching in 1965. His awards included four honorary degrees, membership in the National Institute of Arts and Letters (1938), the Elizabeth Sprague Coolidge Medal for services to chamber music (1941) and the title Cavalier of the Republic of Italy (1959).

From early in his career, Thompson's music was characterized by ingratiating vocal contours, effective sonorities, sensitive text-setting and a strong sense of dramatic structure, qualities that contributed to his music's appeal to performers and audiences alike. He is best known for his choral works, nearly all of which were composed on commission or for a specific occasion, frequently at institutions with which he was associated. Although he set a number of sacred texts, most of his works were intended for concert performance. Choral works such as the Alleluia, *Frostiana*, *The Testament of Freedom* and *The Last Words of David* achieved a popularity unprecedented in the USA. His chamber and orchestral works (the latter championed by Howard Hanson) are imaginative and substantial. The most popular of these is the Symphony no.2; his other symphonies, his two string quartets and the symphonic fantasy *A Trip to Nahant* also enjoyed considerable success. The two principal stage works, *Solomon and Balkis* and *The Nativity*, written for radio and church performance respectively, did not achieve widespread acceptance.

Although Thompson's music is essentially diatonic, some works rely on modal or, in the case of *A Feast of Praise*, quartal harmonies. His unaccompanied works show a strong respect for historical models, especially Renaissance motets, and a fascination with antiphony. He was adept at communicating humour in musical terms, as exemplified in *Rosemary* and especially in *Americana*, which sets texts from the American press. Occasionally his music incorporates folk and jazz elements, or parodies other styles, as in the *Handelian Ode to a Virginian Voyage*.

Thompson has been largely dismissed in academic circles as an amateurs' composer, but this categorization belies the technical challenges present in many of his works. Detractors have cited the popular directness of such works as *Frostiana* and the sentimentality and jingoism of *The Testament of Freedom*, but these are not characteristic of his style in general. Notwithstanding such criticisms, his choral music has been more widely performed than that of any other American composer up to his time; in 1968 the Alleluia was the best-selling choral work in the USA.

WORKS

(selective list)

stage

Solomon and Balkis (op, 1, R. Kipling: *The Butterfly that Stamped*), 1941–2, radio broadcast, New York, CBS, 29 March 1942, staged, Cambridge, MA, 14 April 1942

Thompson, Richard (John)

(*b* Notting Hill Gate, London, 3 April 1949). English folk and rock guitarist, singer, songwriter. As a founding member of Fairport Convention between 1967 and 1970, Thompson played on the band's first five albums. After his initial solo album, *Henry the Human Fly* (Island, 1972), he retreated from concert halls to the folk club circuit where he performed with his wife, the singer Linda Peters. Their first album, *I Want to See the Bright Light Tonight* (Island, 1974), packed with doomy, foreboding songs such as 'Withered and Died' and 'When I Get to the Border', mixed the energy and passion of the new rock and roll era with strong echoes of earlier English popular song.

Following their next album, *Hokey Pokey* (Island, 1975), Thompson became a devotee of the Sufi strand of Islam. His conversion was reflected by the album *Pour Down like Silver* (Island, 1975), followed – after a three year gap – by three further albums by the duo. Their last album together, *Shoot Out the Lights* (Hanniball, 1982), helped to establish Richard Thompson's growing reputation in the USA. He went on to tour and record with his own band, with bass player Danny Thompson, and as part of the experimental band French, Frith, Kaiser, Thompson. Thompson has achieved almost legendary status among both folk and rock audiences, both for his inventive guitar style and sturdy, often melancholy songs, influenced by traditional music, hymns and rock.

ROBIN DENSELOW

Thompson, Shirley J(oy)

(*b* London, 7 Jan 1958). British composer and violinist of Jamaican descent. She attended the University of Liverpool (1976–9) and Goldsmiths College, University of London (1980, 1982–4). In 1985 she was appointed as music advisor to the London Arts Board. From 1987–95 she trained at the National Film and Television School. Since then she has worked as a researcher, director and producer for various television companies, including the BBC and London Weekend Television.

Thompson's style shows an eclecticism, typical of the later 20th century, in which modernism and minimalism, the abstract and the pictorial, the international and the national, the serious and the entertaining, commingle easily. Her wide experience of writing for film and television gives her concert music a sureness of effect and an inventiveness with small, sometimes unconventional ensembles. Her most memorable works to date are perhaps the song cycle *Tapestry*, notable for its melodic beauty and strong Caribbean colouring, and the community opera *A Child of the Jago*, which successfully assimilates features of the stage musical.

OLIVE LEWIN

Thomson, (John Smith) Bryden

(*b* Ayr, 26 July 1928; *d* Dublin, 14 Nov 1991). Scottish conductor. After studying at the Royal Scottish Academy of Music, where he won many prizes, he gained a scholarship in 1954 to study conducting with Schmidt-Isserstedt at the Staatliche Hochschule für Musik, Hamburg, and with Markevitch at the Salzburg Mozarteum. At the age of 30 he took over a large number of concerts when Ian Whyte, founder and principal conductor of the BBC Scottish Orchestra, fell terminally ill. After working in Canada, Scandinavia and South Africa he began a series of successful associations with other BBC regional orchestras. Further guest engagements took him to the USA and Australasia. He became musical director of the Scottish National Orchestra (later Royal Scottish National Orchestra) in 1988.

Thomson was an excellent orchestral trainer. His recordings of the Nielsen and Martinů symphonies underline his ability to achieve clarity of texture and rhythmic precision. He was an exceptionally sympathetic concerto accompanist, as can be heard on his discs of Hummel concertos with Stephen Hough and Rachmaninoff concertos with Howard Shelley. He commissioned a piano concerto from Thomas Wilson and recorded it with David Wilde. But Thomson's major contribution as a conductor was his inexhaustible championship of British symphonic repertory. He made admired recordings of the complete symphonies of Elgar, Bax, Vaughan Williams and Walton, along with many others of their compositions; Thomson himself singled out Walton's Second Symphony as an achievement which gave him special pleasure. John Maxwell Geddes's Symphony no.2, *In Memoriam Bryden Thomson*, was performed shortly after his death.

ALEXANDER R.C. SCOTT

Thomson, César

(*b* Liège, 17/18 March 1857; *d* Bissone, nr Lugano, 21 Aug 1931). Belgian violinist. Revealing remarkable ability at an early age, he entered the Liège Conservatory in 1864 to study with Jacques Dupuis; subsequent teachers included Léonard, Vieuxtemps, Wieniawski and Massart. His travels in Italy

in 1873 led to employment by Baron Derwies at Lugano. Later he toured in Germany and Italy, winning great fame, and in 1879 he became the leader of an orchestra in Berlin. He taught the violin at the Liège Conservatory from 1882 to 1897 and in 1898 succeeded Ysaÿe as professor at the Brussels Conservatory, where he founded a string quartet with Lamoureux, Vanhout and Jacobs. In 1914 he was appointed to the staff of the Paris Conservatoire; he taught at the Ithaca Conservatory, New York, and the Juilliard School of Music from 1924 to 1927. His playing was particularly admired for its technical perfection and expressiveness. He made violin arrangements of works by Corelli, Tartini and Vivaldi, and attempted to revive interest in the music of Paganini.

PATRICK PEIRE

Thomson, George

(*b* Limekilns, Fife, 4 March 1757; *d*Leith, 18 Feb 1851). Scottish amateur folksong editor and publisher. He spent his childhood in Banff, northern Scotland, and then at the age of 17 settled in Edinburgh. In 1780 he took a clerical post with the Board of Trustees for the Encouragement of Art and Manufactures in Scotland for whom he worked until his retirement in 1839. Financially secure, he devoted his spare time to music. He attended the concerts of the influential Edinburgh Musical Society from the early 1780s, playing the violin in the orchestra and singing in the choir but never becoming a full member. He also developed a taste for Scots folksongs in 'classical' arrangements by hearing foreign singers, notably the castrato Tenducci, perform them at the Edinburgh Musical Society's weekly concerts. Folksongs in their unadorned state, such as he must have heard in his childhood, do not seem to have appealed to him.

During the 1780s Thomson decided to publish a prestigious collection of Scottish folksongs arranged for voice and piano trio by the greatest living European composers. This collection was to occupy him until the mid-1840s and to cost him a great deal of his own money, though initial funding was secured from an Edinburgh businessman. Haydn and Pleyel visited London in 1791 and the publisher William Napier signed on Haydn to arrange folksongs (published in 1792 and 1795): Thomson then engaged Pleyel for the same purpose and issued the first part of his *Select Collection of Scottish Airs* in Edinburgh (1793).

In 1797 Pleyel stopped arranging for Thomson, who then turned to Kozeluch (1797–1809), Haydn himself (1799–1804), Beethoven (1803–*c*1820), Weber (briefly in 1825), Hummel (1826–*c*1835), H.R. Bishop (1841) and his fellow Scotsman G.F. Graham (1838–41). Because of the complexity of Thomson's publications it is almost impossible to state exactly how many settings composers wrote, but Beethoven and Haydn produced well over 100 settings each (see the thematic catalogue given in Hopkinson and Oldman, 1940). Thomson's collections received much criticism for the unusual combinations of traditional Scottish, Welsh and

Irish tunes with modern, mostly Viennese, compositional style. There was a particularly stormy relationship with Beethoven, as Thomson insisted that he simplify his settings for the drawing-room market. The folktunes were largely culled from earlier printed collections, only a few being personally collected by Thomson and his correspondents.

Many distinguished Scottish poets, such as Burns, Scott, James Hogg and Joanna Baillie, also worked for Thomson, rewriting the words of the songs at Thomson's insistence to remove their bawdiness and substitute a pathetic sensibility. The collection contained 300 songs in six folio volumes (1793–1841). Six octavo volumes of selections were issued in 1822. But the collection was not an artistic success; it was criticized even in its own time and is now considered not the standard classic that Thomson intended but an historical curiosity.

Other significant publications of his included three volumes of *Welsh Airs* in 1809, 1811 and 1817, and two of *Irish Airs* in 1814 and 1816. In 1817 he commissioned a cantata from Sir Henry Bishop on Burns's poem, *The Jolly Beggars*. From 1803 he made several attempts to get Beethoven to write chamber works incorporating Scots folktunes, but negotiations were unsuccessful because Beethoven asked for too much money.

In 1847 Thomson wrote an amusing and informative account of the Edinburgh Musical Society's activities in the 1780s which was published in Robert Chambers's *Traditions of Edinburgh* (Edinburgh, 1868). A watercolour of Thomson is in the Scottish National Portrait Gallery. Thomson's daughter, Georgina, married the music critic George Hogarth in 1814; their daughter married Charles Dickens in 1836.

DAVID JOHNSON/KIRSTEEN C. McCUE

Thomson, John

(*b* Sprouston, 28 Oct 1805; *d* Edinburgh, 6 May 1841). Scottish composer and musical scholar. The eldest son of Andrew Mitchell Thomson, minister of Sprouston, Perthshire, and later St George's, Edinburgh, he trained first as a solicitor before deciding on a musical career. He met Mendelssohn on the latter's visit to Edinburgh in 1829 and thereafter spent time with the Mendelssohns in Berlin, also travelling to Leipzig and Paris; Mendelssohn praised a trio and some of Thomson's other compositions in a letter of introduction to his family. Thomson was keen to experiment with European forms and styles and studied in Germany during the 1830s, becoming well acquainted with Schumann and Moscheles, among others, and taking lessons from Schnyder von Wartensee. In October 1839 he was appointed first Reid Professor of the Theory of Music at the University of Edinburgh, a position he held for only 18 months due to his early death. In 1840 he married the daughter of John Lee (1779–1859), Principal of the University. He conducted the first 'Reid Concert' there in 1841, supplying the audience with analytical programme notes – an early example of such commentary. While known best for his three stage works – an earlier opera *Vallery*, based on an Arabian theme, was never completed – several of Thomson's early sacred pieces for voices and organ/pianoforte were published in R.A. Smith's volume, *Edinburgh Sacred Harmony* (1829). Many of his songs and piano pieces appeared in *The Harmonicon* and a Glasgow music journal, *British Minstrel*, during the 1830s. While regarded as a 'musician of ability and genius' (Baptie, 188), his treatise on music and most of his compositions remain unpublished.

KIRSTEEN C. McCUE

Thomson, John M(ansfield)

(*b* Blenheim, New Zealand, 10 March 1926; *d* Wellington, 11 Sept 1999). New Zealand musicologist. He studied the piano at the Nelson School of Music, then privately in Wellington and subsequently with Dorothea Vincent in London; he also studied the recorder with Zillah Castle (later with Walter Bergmann in London) and the flute with James Hopkinson. After military service (1944–5) he took the BA in English and history from Victoria University of Wellington (1948). A year later he founded the literary paper *Hilltop*. Following extensive editorial and publishing experience, in 1973 he founded the journal *Early Music*, and was its editor for ten years. Its outstanding visual appeal, combined with scholarly acumen and a flair for communicating, established it as a leading international journal in the field. Thomson returned to New Zealand in 1983 to work on *The Oxford History of New Zealand Music* (1991). He wrote several other books on the country's musical culture and maintained a flow of lively articles and broadcast talks, as well as editing literary and cultural journals. He organized several exhibitions, notably *Musical Images* at the National Library, Wellington, in 1990, to mark 150 years of European settlement. In 1988 the Composers' Association of New Zealand awarded him their citation for outstanding services to New Zealand music, and in 1991 Victoria University of Wellington conferred on him their honorary doctorate. Thomson was an associate of the Stout Research Centre, and in 1996 became a research associate of the music department at the University of Waikato in Hamilton. One of New Zealand's leading musicologists, his publications on the country's musical history set benchmarks of accuracy, style and vitality.

MARTIN LODGE

Thomson, Virgil

(*b* Kansas City, MO, 25 Nov 1896; *d* New York, 30 Sept 1989). American composer and critic. He produced a highly original body of diverse music rooted in American speech rhythms and hymnbook harmony, and controlled by exquisite sensibilities. His collaboration with Gertrude Stein resulted in two extraordinary stage works, and his keen ear, his wit and the elegance of his writing established him as one of the sharpest music critics in the USA.

RICHARD JACKSON

Thomson, Virgil

1. Career.

Thomson learned to play the piano at the age of five and began lessons with local teachers when he was 12. He studied the organ from 1909 until 1917 and again in 1919; from the beginning of this period he also worked as organist in the family church (Calvary Baptist) and other churches in Kansas City. He attended Central High School (1908–13) and a local junior college (1915–17, 1919). During the American involvement in World War I he enlisted in the army and was in a field artillery unit; he was also trained in radio telephony at Columbia University and in aviation at a pilots' ground school in Texas. He was set for embarkation to France when the war ended.

In the autumn of 1919 he entered Harvard University, where he was decisively influenced from the start by three men: the French-trained composer Edward Burlingame Hill, with whom he studied orchestration and modern French music among other subjects; Archibald T. Davison (also French-trained), the conductor of the Harvard Glee Club, for whom he was assistant and accompanist for three years; and S. Foster Damon, a Blake scholar, poet and composer, who introduced him to the works of Satie and to *Tender Buttons*, Gertrude Stein's early collection of writings. Thomson began to compose at Harvard in 1920. In the summer of 1921 the Glee Club toured Europe, with Thomson occasionally conducting, and he stayed on for a year in Paris under a John Knowles Paine Traveling Fellowship. He chose to study the organ at the Ecole Normale with Boulanger, and he also studied counterpoint with her privately. During the year he met Jean Cocteau and Les Six and was introduced to Satie. He composed, and wrote his first published critical work: music reviews for the *Boston Evening Transcript*. Back in the USA he returned to Harvard and was made organist and choirmaster at King's Chapel, Boston. He gave the first American

performance of Satie's *Socrate* with the Harvard Musical Club and graduated from the university in 1923. In New York, with a grant from the Juilliard Graduate School, he studied conducting with Chalmers Clifton and counterpoint with Rosario Scalero.

He returned in the autumn of 1925 to Paris, where he lived, apart from visits to the USA, until 1940. His first composition from this period was the *Sonata da chiesa*, a neo-classical chamber work for five instruments completed in February 1926 and consisting of a Chorale, Tango and Fugue. The conception of the piece – chic, ironic and deliberately outrageous – derived from Stravinsky's recent works. Thomson later called it his 'graduation piece in the dissonant style of the time'; he consulted with Boulanger for the last time while the work was in progress. He also composed four organ pieces based on American Protestant hymns (the *Variations on Sunday School Tunes*) and the *Symphony on a Hymn Tune*, his first symphony.

Thomson met Gertrude Stein in the autumn of 1926, and the two expatriates began to lay plans for an opera that would concern Spanish saints and the Spanish landscape. Meanwhile, Thomson composed settings of two texts by Stein: the song *Preciosilla* and *Capital Capitals*, an unorthodox cantata-like piece for four male voices and piano. (He had set Stein's *Susie Asado* before their meeting.) Stein completed the libretto for the opera, *Four Saints in Three Acts*, in June 1927, and Thomson finished the piano score a year later (it was orchestrated in 1933). The original text was rambling, plotless and hermetic, with no clearcut division into scenes and acts and little indication of which character was uttering at any given moment. Stein's saints, led by Teresa of Avila and Ignatius Loyola, are devoid of any real character; they are preoccupied with asking questions ('How many saints are there in it?', 'How many acts are there in it?'), counting and repeating children's rhymes. The text does contain religious symbolism and private references to events in the writer's life, but these serve only as material for word games and random remarks. Thomson imposed order on the material, eventually deleting about a third of it, and fashioned a work consisting of a prologue and four acts. In the absence of a plot, Thomson's painter friend Maurice Grosser devised a scenario, or series of tableaux and processions, for staging the work. The score consists of elements that were to be characteristic of much of Thomson's subsequent work: simple diatonic harmony (with occasional bichordal clashes), short tunes in Protestant-hymn style, extended parlando and chant passages reminiscent of Anglican liturgy, quotations of familiar airs (e.g. *God Save the King* or *My Country, 'tis of thee*), popular dance rhythms (especially the waltz and the tango) and careful, highly polished prosody. When *Four Saints* received its initial performances in Hartford (fig.2), New York and Chicago (with Stein present), it was widely publicized and became something of a *succès de scandale*. Though it never took a permanent place in the repertory, it is the composer's most famous work.

For a period of about seven years after the opera Thomson worked at expanding his technical facility, especially in writing for string instruments. Almost all of his works featuring strings – the Violin Sonata, the two string quartets, etc. – date from this period. He also composed the Symphony no.2 (adapted from the First Piano Sonata) and a series of 'portraits', the

musical equivalents of Stein's word pictures of the same name. Thomson eventually composed over 100 of these pieces, some of which he orchestrated and used as sections of larger works. None of the works of this period contains allusions to hymn-tune style or traditional material (though Thomson's waltz strain is still prominent); they are concerned, rather, with problems of 'pure' music-making. Thomson returned to the nationalistic vein in earnest, however, with two film scores and a ballet in the later 1930s. For *The Plow that Broke the Plains* and *The River*, widely acclaimed documentary films directed by Pare Lorentz and sponsored by an American government agency, he used cowboy songs, traditional southern spirituals, old popular tunes and, for *The River*, the finale of the *Symphony on a Hymn Tune*. The dance score *Filling Station* was commissioned by Kirstein for Ballet Caravan and was called (by Balanchine) 'the very oldest classic ballet with a specifically native American theme in the extant repertory'. It has waltzes, tangos (one reworked from the *Sonata da chiesa*) and suggestions of a Salvation Army band.

In October 1940 Thomson was appointed music critic of the *New York Herald-Tribune*. During 14 years at this post he established himself as one of the major critical writers of the era. His newspaper pieces – all stylish, bright, deliberately provocative and unshakably opinionated – furnished material for four anthologies: *The Musical Scene*, *The Art of Judging Music*, *Music Right and Left*, and *Music Reviewed, 1940–1954*. At a time when music critics tended to be wordy, make ostentatious displays of their musical knowledge and use technical jargon, Thomson was plain and concise. For example, of *Porgy and Bess* he wrote: 'Its faults are numberless; but its inspiration is authentic, its expressive quotient high'. At a time, too, when critics tended to accept as given the artistic value of works in the standard repertory and to concentrate on performances, Thomson wrote about the quality of the music, usually treating performances secondarily. He clashed with other critics who venerated certain performers; he became famous for his lack of enthusiasm for Toscanini when the conductor was generally regarded as one of the greatest living musicians, and he once characterized Heifetz's repertory as 'silk-underwear music'.

While working as a critic, Thomson also continued to compose, most notably a second opera on a Stein text, *The Mother of us all* (commissioned by the Alice M. Ditson Fund), and the score for another documentary film, *Louisiana Story*, directed by Robert Flaherty. Stein's libretto, begun in 1945 and completed by March 1946 (four months before her death), was less abstract than her *Four Saints*, though still unconventional; it again required a scenario by Maurice Grosser for staging. The theme of the piece is the women's suffrage movement as typified by Susan B. Anthony, and it is played against a tapestry of 19th-century Americana. With its homespun hymn tunes, waltzes and marches, Thomson's setting is similar in many respects to that of *Four Saints*, but he provided a richer palette and moments of greater sentiment and seriousness. The score for *Louisiana Story* is an adroit mixture of folk material and descriptive music cast in formal sections (Pastorale, Chorale, Fugue and Passacaglia). Thomson subsequently fashioned from it two

widely performed suites: *Acadian Songs and Dances* and *Louisiana Story*. The film score itself won the 1948 Pulitzer Prize for music.

Throughout the 1950s and 60s Thomson travelled widely, lecturing at universities and participating in conferences, writing articles, conducting in the USA and Europe (he conducted the first Paris performance of *Four Saints* in 1952), and continuing to compose. His numerous awards included appointment to the Légion d'Honneur (1947), election to the National Institute of Arts and Letters (1948) and to the American Academy of Arts and Letters (1959), the National Book Critics Circle Award for *A Virgil Thomson Reader*, and a Kennedy Center Honor (1983).

Thomson, Virgil

2. Style.

During Thomson's long career as a composer he worked with several different styles. Cage, in his study (with Kathleen Hoover) of Thomson's music, referred to 'the great variety and all but intangible nature of [his] work'. He often took up a style (such as that of Gregorian chant and modal polyphony in the early choral pieces with Latin texts), and then dropped it or blended it with other elements. Baptist hymns were perhaps the major preoccupation, revealed initially in the ambivalent Sunday-school pieces, in which the gentle home-grown source material is disposed in a tortuous patchwork of variations and the organ is treated like a giant calliope. In many later works, however, such as the *Symphony on a Hymn Tune* and the Cello Concerto, the tunes are treated with affection and humour.

Thomson also made prominent use of the popular music of the 19th century, sometimes simply quoting the melodies, sometimes creating his own new settings of them and sometimes, as in *The Mayor La Guardia Waltzes*, using the older genres as models for new composition. He used the waltz in numerous works, including both of his string quartets (somewhat covertly in the first, more openly in the second) and the Double *Glissando* from his Ten Piano Etudes. In such works as *The Squeeze-Box* (from the film score *Louisiana Story*) and the third movement of the Third Piano Sonata, he set the waltz rhythm against a melody that alternates phrases of four beats and three. The tango rhythm appears in the *Sonata da chiesa* and the *Tango Lullaby: a Portrait of Mlle* [Flavie] *Alvarez de Toledo*, ragtime in one of the Ten Etudes, and even the early English song *Drink to me only with thine eyes* in *Tenor Lead (Madrigal)*, another of the Ten Etudes.

Open 4ths, 5ths and octaves are common in Thomson's music, as are fanfare-like flourishes (all three operas begin with rolls on the snare drum, for instance). The harmonic language is often conventionally tonal, as in the second song of *La belle en dormant*, the triumphant C-major ending of *The Plow that Broke the Plains*, the Four Songs to Poems of Thomas Campion, and at least four of the Five Songs from William Blake. But frequently the music is better described simply as adopting a wandering, nonfunctional diatonicism that may come to rest where one expects it to or on a chord that sounds remote. There are diatonic clashes, as in the curious overlapping lines and chords of the *Missa pro defunctis*, and many surprises: at the end of *Guitar and Mandolin*, the last of the Nine Piano Etudes, the pianist is instructed to 'reach into the piano and strike strings

with flat of hand, pedal down', and the Kyrie of the *Missa pro defunctis* begins and ends with a perfect, but seemingly incongruous, 12-note row.

Another kind of diatonic dissonance is also common in Thomson's music: that which is brought about when one element (e.g. a simple and repetitive bass or accompaniment figure) is set against another (e.g. a melody), each proceeding innocently, but persistently, on its own way. Such incidents seem often intended to create a deadpan comic effect, and they invariably upset the tonal equilibrium. Two good examples among many are the *Variations on Sunday School Tunes* and the first song in *La belle en dormant*.

Thomson's curious 'portraits' dabble in a variety of styles: Paul Bowles described a group of them in 1942 as giving 'the impression of having come from nowhere [moving] airily in and out of the focus of consonance like breezes through a pagoda'. A kind of serial technique is used in *A Solemn Music*, which develops from a series of 12 chords, and three 'pictures' for orchestra (*The Seine at Night*, *Wheat Field at Noon*, *Sea Piece with Birds*) are painted in a nostalgic latterday Impressionism.

The greatest influence on Thomson was the music of Satie, and Satie's ideals of clarity, simplicity, irony and humour underlie the diversity of his work. The words used by Thomson to define Satie's aesthetic could be used to describe his own: 'it has eschewed the impressive, the heroic, the oratorical, everything that is aimed at moving mass audiences … it has directed its communication to the individual. It has valued in consequence, quietude, precision, acuteness of auditory observation, gentleness, sincerity, and directness of statement'.

The work which comes closest to drawing together the various stylistic facets into a cohesive and congenial unity is Thomson's third opera, *Lord Byron*. He and his librettist, Jack Larson, worked on the opera for seven years, and it was undoubtedly his most ambitious project. The Thomson wit and playfulness are here, as is the meticulous (if occasionally monotonous) prosody – a hallmark of his vocal writing. Yet there is a seriousness of tone, a comparative richness of texture and a lyrical expansiveness seldom encountered in his earlier works. There are the expected liturgical elements and the use of quotations (*Auld Lang Syne*, for instance, is worked into an impressive septet), but the style, in general, is not greatly dependent on the Baptist hymnbook. Thomson's 'classical' string-writing period is represented in an important ballet sequence (deleted from the score after the opera's première) which uses material from the String Quartet no.2. What finally sets *Lord Byron* apart from Thomson's previous work, however, is its emotional content: the opera rises to moments of real passion. This suggests a new dimension for a composer who frequently demonstrated his ability to entertain but whose expressive voice was always carefully muted.

Thomson, Virgil

Thomson, William

(*b* ?Edinburgh, *c*1684; *d* ?London, after 1752). Scottish singer and folksong collector. His father was Daniel Thomson, one of the king's trumpeters for Scotland. He sang solos as a boy at a Musical Society concert in Edinburgh on St Cecilia's Day 1695. By 1722 he had settled in London, where he gave a benefit concert in February that year, including (according to Burney) a Scottish folksong as an encore.

Thomson published *Orpheus Caledonius, a Collection of the Best Scotch Songs set to Musick* (London, 1725), a lavishly produced volume dedicated to the Princess of Wales, with a subscription list of 300 notable people. It contains 50 Scottish folksongs, most of them taken from Allan Ramsay's *Tea-table Miscellany* (Edinburgh, 1723); the melodic ornaments and the figured bass accompaniments are Thomson's own. Hawkins described Thomson as 'a tradesman' and the collection as 'injudicious and very incorrect'; it is true that some of the song texts are in crude, oral versions and that the figured basses have grammatical mistakes. In 1733 a second edition was issued, expanded to 100 songs, with new, improved harmonizations for the original 50. Thomson was still living in 1753, though his biography is obscure.

Thórarinsson, Jón

(*b* Gilsárteigur farm, eastern Iceland, 13 Sept 1917). Icelandic composer, teacher and writer on music. After early musical training in the village of Seyðisfjörður, he attended college in Akureyri, where some of his first compositions were performed and published. From 1937 to 1944 he studied privately and also at the Reykjavík College of Music with Franz Mixa, Victor Urbancic and Páll Ísólfsson. From 1944 he continued his studies with Hindemith at Yale (MM in composition, 1947). On returning to Iceland he served as musical advisor at the Icelandic State Radio (1947–56) and programme director of the State Television (1968–79). He played a large role in the founding of the Iceland SO and served as both chairman of its board (1950–53) and manager (1956–61). Chairman from 1947 to 1968 of the theory and composition department at the Reykjavík College of Music, he was an influential teacher whose pupils included Jón Nordal, Leifur Thórarinsson and Fjölnir Stefánsson. He has also been an active music critic, and has written biographical accounts of several Icelandic composers.

His music is characterized by clear formal outlines and well-crafted counterpoint. Of his earliest works, the tuneful simplicity of his songs – for example his 1939 settings, *Fuglinn í fjörunni* ('The Bird on the Shore') and *Íslenskt vögguljóð á Hörpu* ('Icelandic Spring Lullaby') – has earned them great popularity, while the Clarinet Sonata (1947) is a highly successful work in a more modern style suggestive of Hindemith's influence. His later works show a diversity of stylistic approaches, including a return to a neo-romantic style in his songs, such as in *Dáið er alt án drauma* ('All has Died without Dreams', 1994), while *Brek* ('Pranks', 1981) is his only foray into serialism.

ÁRNI HEIMIR INGÓLFSSON

Thórarinsson, Leifur

(*b* Reykjavík, 13 Aug 1934; *d* Reykjavík, 24 April 1998). Icelandic composer. He studied the violin and composition (with Jón Thórarinsson) at the Reykjavík College of Music, with Jelinek in Vienna and with Riegger and Schuller in New York (1959–62). For a period in the 1970s he worked in Denmark, and from 1993 he lived for a time in Cyprus. In Iceland he taught at various schools of music (in Akureyri and Ísafjörður as well as Reykjavík), worked as a music critic for Reykjavík newspapers, and presented music programmes for the Icelandic State Broadcasting Service (radio). He also worked as a theatre director and produced examples of incidental music.

His Violin Sonata (1956) was performed at the 1956 ISCM festival in Stockholm, and was particularly praised by Stockhausen. This and other early compositions showed a neo-classical influence, influenced by Prokofiev and Bartók. Serial techniques became dominant in his works of the 1960s, and though his style later became more lyrical, he never entirely abandoned serialism. His unwavering interest in jazz can frequently be detected in some of his works.

THORKELL SIGURBJÖRNSSON

Thorborg, Kerstin

(*b* Venjan, 19 May 1896; *d* Hedemora, Dalarna, 12 April 1970). Swedish mezzo-soprano. She studied at the Swedish Royal Academy, Stockholm, and sang small roles at the Royal Opera in 1923, graduating to principal roles in 1924 as Ortrud. With the company until 1930, she also made appearances elsewhere, notably as Amneris in Göteborg to Flagstad's Aida, in Dresden (Waltraute, 1929) and in Prague. She was engaged at the Städtische Oper, Berlin (1932–5), and the Vienna Staatsoper (1935–8); her roles at Salzburg (1935–7) included Brangäne, Magdalene and Donna Mercedes in *Der Corregidor*. From 1936 to 1939 she made annual appearances at Covent Garden in the Wagner mezzo roles and was greatly acclaimed; Ernest Newman, after her Kundry, described her as 'the greatest Wagnerian actress of the present day'. Also in 1936 she began a Metropolitan Opera career (début as Fricka in *Die Walküre*) which lasted 15 years. Although her rich and ample tones were most admired in Wagner, her repertory also included Gluck's Orpheus, Marina, Ulrica, Strauss's Herodias and Clytemnestra, and Delilah. She was also an accomplished concert artist. Her operatic career is well documented both on commercial discs and off-the-air recordings from the Metropolitan and elsewhere, most significantly her Fricka and Brangäne. Of her concert performances, live recordings of *Das Lied von der Erde* with Walter (1936, Vienna) and the Verdi Requiem with Toscanini (1938, London) represent her grave, involving interpretations at their best.

CARL L. BRUUN/ALAN BLYTH

Thórðarson, Sigurður

(*b* Dýrafjörður, 8 April 1895; *d* Reykjavík, 27 Oct 1968). Icelandic choral conductor and composer. He took singing lessons and learnt the harmonium between 1906 and 1911, and his first compositions date from this period. In 1911 he moved to Reykjavík; there he studied music privately and graduated from the Icelandic Business School, where he also founded a choir. He studied the violin with Hans Sitt in Leipzig (1916–18) and was vice-director of the Icelandic State Broadcasting Service from 1931 to 1966. In 1926 he founded the Reykjavík Male Voice Choir, with which he toured Scandinavia, Germany and North America, also performing elsewhere in Europe, and in Algiers. His choir was active in

disseminating Icelandic music that was at that time unknown outside its native land.

Most of his own works are for solo voice or for choir, his musical language combining features of Romantic music with certain elements derived from the Icelandic cultural tradition. A notable Icelandic patriot, he wrote works such as the cantata *Althingishátíðarkantata* ('Parliamentary Cantata', 1929) and the first Icelandic operetta, *Í álögum* ('Spellbound'). His five cycles of songs include the very popular *Vögguljóð* ('Cradle Song') and *Stjarna stjörnum fegri* ('A Star Most Beautiful').

<div align="right">MAREK PODHAJSKI</div>

Thoresen, Lasse

(*b* Oslo, 18 Oct 1949). Norwegian composer. He received his diploma in composition in 1972 from the Oslo Conservatory, where his teacher was Finn Mortensen. He also studied sonology at Utrecht University, and philosophy and musicology at the University of Oslo. Between 1978 and 1981 the Norwegian Council for Research gave him a grant for his research into sonology. He was appointed professor at the Norwegian Academy of Music in 1988.

He was first influenced by modernist trends and by his studies in electro-acoustic music, but gradually his music has become neo-Romantic, possibly encouraged by his research into auditive analysis. His piano trio *Bird of the Heart* (1982) was extremely well received. In 1985 his Symphonic Concerto for violin and piano was given its première, and the following year his first microtonal work, *Les trois régénerations*, had its première in Paris. Like his later microtonal works, this was inspired both by intervals present in Norwegian folk music and by spectral music, which he had come to know through Murail's work in Paris. A number of Thoresen's works have texts or are inspired by texts relating to his Bahá'i faith. His choral pieces are as scented as their texts, and some of their expression and poetry is brought into his successful orchestral pieces *Carmel Eulogies* (1994, rev. 1996) and *Emergence – Luohti boade* (1997). The majority of his larger works are commissioned by festivals and major orchestras, and he has won many prizes, including Work of the Year (four times), and in 1987 both the Norwegian Music Critics' Award and the Lindeman Prize.

ARVID O. VOLLSNES

Thorette, Pierre

(*b c*1620; *d* Liège, 11 Oct 1684). Flemish musician. He was appointed second succentor at Liège Cathedral on 24 November 1664 and at the same time received a benefice which was replaced by a more important one on 7 December 1668. He was to be responsible for the musical instruction of the *duodeni*. In November 1669 he and the first succentor were involved in a lawsuit against Lambert Pietkin. The cathedral canons admonished Thorette again and again for negligence, and since he did not improve they dismissed him from his post as succentor on 8 April 1672. But he retained his benefice and probably remained as a singer until his death. Auda was mistaken in stating that he was made a canon of Ste Materne. There is a short *Chasse de St Hubert* by him (*B-Lc*) for two violins, two cornetts (or flutes), two corni da caccia, bassoon and continuo (this last replaced in a 19th-century copy by two clarinets). It is based on brief fanfare motifs; the use of alternating sonorities would be pleasing if the piece were not unremittingly in G major.

JOSÉ QUITIN

Thori, Hermogene da [Torrio, Ermogine]

(*b* ?Salerno, ?1555–65; *d* ?Salerno, after 1623). Italian composer and professor of law. As a youth he studied civil, and later canon law, probably at Naples. On 20 February 1582 he dedicated his three-voice *Canzone*

(Naples, 1582) to Horatio Ogeda, baron of Santa Arsiero. Each piece has three sections, usually beginning with triadic motifs or 4ths in sequences arranged in imitative patterns. At some time, probably before 1621, he lectured on civil institutions at Naples University. Before 1 January 1621 he had become a member of the Friars Minor Conventual of St Francis in Salerno; he later published a legal treatise, *De actionibus* (Naples, 1623), dedicated to Lucio Sanseverino, Archbishop of Salerno.

KEITH A. LARSON

Thorne, Francis

(*b* Bay Shore, NY, 23 June 1922). American composer, grandson of the writer Gustav Kobbé. His father was a ragtime pianist and his grandfather a Wagner critic. His music reflects these disparate influences in its jazz rhythms and what the composer described, in homage to Wagner, as its 'sensuous chromaticism'. He studied at Yale University with Hindemith before entering the Navy in 1942. After the war, he pursued a career on Wall Street and later, after Ellington heard him play the piano and arranged an engagement for him at a New York jazz club, as a jazz pianist. From 1959 to 1961 he studied composition in Florence with David Diamond, who encouraged him to incorporate his innate jazz sense into his symphonic compositions. *Elegy for Orchestra* was given its première by Ormandy and the Philadelphia Orchestra in 1964. In 1968 Thorne was admitted into the American Academy and Institute of Arts and Letters. A champion of emerging composers, he has served as director of the Walter W. Naumburg Foundation and the Thorne Music Foundation (1965–74). He founded the American Composers Orchestra in 1977. Among the first composers to write for electric guitar and orchestra (*Sonar plexus*, 1968; *Liebesrock*, 1968–9), a discussion of his works appears in R. Tomaro: *Contemporary Compositional Techniques for the Electric Guitar in United States Concert Music* (diss., New York University, 1994).

ROBERT TOMARO

Thorne, John

(*b c*1519; *d* York, 7 Dec 1573). English composer, poet and church musician. He was appointed organist of York Minster on 24 July 1542, having received payment the previous year as 'organist within the choir'. Following the Injunctions of Archbishop Holgate in 1552, the minster organs were silenced. Thorne's services as organist were therefore no longer required, though as Master of the Choristers he was ordered to 'helpe to singe Divyne service … within the quere of the churche'. He later became Clerk of the Fabric, a position he held for ten years from 1561. He died aged about 54, and was buried in the minster. His inscription, recorded by Drake in 1736, read:

> Here lyeth Thorne, musitian most perfitt in art,
> In logick's lore who did excell, all vice who set apart,
> Whose lief and conversation did all men's love allure,
> And now doth reign above the skyes in joyes most firm and
> pure.
> Who dyed Decemb. 7, 1573.

In view of Morley's high opinion of him (he was cited in *A Plaine and Easie Introduction* along with Redford and Tallis as a composer particularly skilled in ways of breaking plainchant) it is unfortunate that so little of Thorne's music has survived. There is a four-part In Nomine by him (in *GB-Ob*), and the organ score of a motet, *Exultabant sancti*(in *Lbl* Add.29996). The tenor part only is extant (in *DRc*) of a setting of the *Te Deum*; to judge from the predominantly syllabic underlay, the work seems to have been written in accordance with Archbishop Holgate's requirement that every word should be 'playnelie and distinctlie undrestood'. The only composition by Thorne for which a date can be conjectured is the three-part motet *Stella coeli*, included by John Baldwin in his commonplace-book of about 1600 (*Lbl*) and later printed by Hawkins. This motet, probably composed in 1551 as a thanksgiving for deliverance from the plague, is hardly comparable to the best work of Tallis or Redford, but its rhythmic subtlety, ingenious cadential harmonic shifts and assured use of sequence mark it as a work of considerable charm. Three poems by Thorne survive in *Lbl*.

<div align="right">PETER ASTON</div>

Thornton, Edna

(*b* Bradford, 1875; *d* Worthing, 15 July 1964). English contralto. She was a pupil of Charles Santley and made her début in the musical comedy *Ib and Little Christina* at Daly's Theatre, London, in 1899. At Covent Garden she first appeared in 1905, singing with Caruso in *Un ballo in maschera* and *Rigoletto*. She took part in the English première of Franchetti's *Germania* in 1907, and the following year made an impression as Erda in the first *Ring* cycle given in English under Hans Richter. In one performance of *Götterdämmerung* she undertook three roles: First Norn, Waltraute and Flosshilde. Other roles in the pre-war seasons included Brangäne (*Tristan und Isolde*), Geneviève (*Pelléas et Mélisande*) and Giulietta (*Les contes d'Hoffmann*). She sang with the Beecham company at Drury Lane and the Aldwych, and was later a mainstay of the British National Opera Company, singing a wide range of parts including Amneris and Azucena, Delilah and Marfa (*Khovanshchina*). After tours in Canada, Australia and New Zealand with the Quinlan Company in 1924 she retired to teach. 'Regal' was a favourite word of critics to describe her acting and bearing on stage, while records confirm that she had an exceptionally strong, resourceful contralto voice to match.

<div align="right">J.B. STEANE</div>

Thoroughbass.

The Italian and more original term 'basso continuo' has now largely replaced 'thoroughbass' as (1) the English term for the art of accompaniment from a figured bass line, and (2) the name or label for such a bass line when issued as an instrumental part. It is uncertain when the term originated. Early treatises used other terms (e.g. M. Locke: *Melothesia, or Certain General Rules for Playing upon a Continued-Bass*, 1673; i.e. a Restoration equivalent of the French *basse continue*), though John Blow's *Rules for Playing of a Through Bass* (MS, *GB-Lbl* Add.34072) show the 17th-century identity of 'thorough' and 'through' as equivalents of *continuo*. For the instrumental part itself, particularly of the Italianate sonatas, etc, published in London from the end of the 17th century onwards, 'basso', 'per l'organo', 'cimbalo' and other names are as likely as 'thoroughbass'. Like Generalbass, the term came to stand for the science of harmony in general; and like the word Continuo, it probably arose as a description of a bass part present all or most of the time throughout a composition, unlike optional or obbligato parts.

<div align="right">PETER WILLIAMS/DAVID LEDBETTER</div>

Thorpe Davie, Cedric

(*b* London, 30 May 1913; *d* Dalry, 18 Jan 1983). Scottish composer. He studied at the Scottish National Academy of Music (later the Royal Scottish Academy of Music), Glasgow, and at the RAM with Craxton, Thiman and Aubrey Brain; later he was a pupil of Morris, Vaughan Williams and Jacob at the RCM, where he won the Cobbett and Sullivan prizes for composition in 1935. He also studied the piano with Petri in London and composition with Kodály in Budapest and with Kilpinen in Helsinki. Thorpe Davie taught theory and composition at the RSAM (1936–45), and was at the same time organist of Queen's Park High Parish Church, Glasgow. In 1945 he was appointed master of music to St Andrews University, and in 1947 he founded the department of music there, becoming reader (1956) and professor (1973–8). He was also active on behalf of Scottish music as chairman of the music panel of the Scottish Certificate of Education Examination Board (1966–71), chairman of the music committee of the Scottish Arts Council and a member of the Arts Council of Great Britain (1968–73). Dundee University awarded him the LLD in 1969.

Thorpe Davie's Symphony won a prize in a newspaper competition in 1945; the work received several performances in England and briefly entered the Scottish repertory. Although carrying occasional Sibelian overtones (Thorpe Davie met Sibelius while studying in Finland), its firmly rooted tonality and forceful expressiveness raised hopes that Scotland might at last have found a mid-century symphonist, but it was not to be. There was little enough encouragement in Scotland, a situation that did not change until the arrival on the scene of a group of younger composers that included Musgrave, Hamilton and Thomson Wilson. By that time Thorpe Davie's 'cheerful tonality'– as described by the historian John Purser (*Scotland's Music*, Edinburgh, 1992, p.253) – had become unfashionable. Thorpe Davie became discouraged, devoting his creative energies to completing commissions and concentrating on music administration. Nevertheless, in 1948 he became more widely known through his music for the revival of Lyndesay's *Ane Satyre of the Thrie Estatis* at the Edinburgh Festival. For the next year's festival he made arrangements of folk music to accompany Allan Ramsay's *The Gentle Shepherd*. For the 1952 festival he made a setting of the *The Higland Fair*, Joseph Mitchell's ballad opera of 1731. Revived a year later, the work became one of the earliest attempts to broadcast music theatre live on Scottish television. Thorpe Davie also made a setting of the *Beggar's Opera* for performances at St Andrews University. By far his most successful undertaking was his realization of Burns's dramatic cantata *The Jolly Beggars* for the Scottish Festival at Braemar in 1954 and subsequently broadcast, televized and commercially recorded. A great deal of his later music was written for young people or amateurs; such works include the *Diversions on a Tune by Dr Arne*, written for the National Youth Orchestra and first played by them at a Prom under Boult, the choral pieces *The Thistle and the Rose* and *By the River*, the suite *New Town* for the Edinburgh Schools' Orchestra and the *Variations on a Theme of Lully* for the National Youth Brass Band of Scotland. Thorpe Davie published *Musical Structure and Design* (London, 1953).

WORKS

Dramatic: Gammer Gurton's Needle (op, 1, W. Stevenson) 1936, unstaged; several comic operas and operettas, some for children; many scores for the theatre, cinema and broadcasting

Orch: Elegy, 1932; Concert Ov., 1934; Fantasia no.1 on Four Scottish Tunes, 1937; Conc., pf, str, 1943; Sym., C, 1945; The Beggar's Benison, 1947; Variations on a Theme of A.C. Mackenzie, 1949; Festal Ov., 1950; Royal Mile, march, 1952; Diversions on a Tune by Dr Arne, 1953–4; 2 Burns ovs., 1963; Fantasia no.2 on Four Scottish Tunes, 1964; New Town, suite, 1966–7; several works for brass band

Choral: Dirge for Cuthullin (Ossian), chorus, orch, 1935; 3 Anthems, chorus, org, 1937; Ode for St Andrew's Night (M. Lindsay), T, chorus, orch, 1950; many partsongs and folksong arrs.

Vocal: 6 Poems by Violet Jacob, T, pf, 1948; Directions for a Map (cant.), S/T, str qt, 1955–6; many other songs and folksong arrs.

Inst: Pf Trio, c, 1932; Sonatina, vc, pf, 1934; Fantasy-Qt, str, 1935; Sonata, vn, pf, 1939; Sonatina, fl, pf, 1939, rev. 1980

MAURICE LINDSAY

Thorsteinsson, Bjarni

(*b* Melur, Mýrasýsla, 14 Oct 1861; *d* Reykjavík, 2 Aug 1938). Icelandic composer and folksong collector. Apart from early studies in harmony with Jónas Helgason, organist of Reykjavík Cathedral, he was self-taught as a musician. He studied theology at Reykjavík and from 1888 to 1935 was a priest at Siglufjörður. Early in the 1880s he became interested in Icelandic folk music, made study trips to Copenhagen and Stockholm (1899, 1903–4) and edited many collections of folksongs, among which *Íslenzk thjóðlög* (Copenhagen, 1903–6, 2/1974) was influential in establishing a basis for the study of Icelandic national song. His own works, mainly solo and choral songs, also show the influence of Icelandic folk melody, and his writings, published in Icelandic and Scandinavian journals, are important introductions to the subject.

Thrane, Waldemar

(*b* Christiania [now Oslo], 8 Oct 1790; *d* Christiania, 30 Dec 1828). Norwegian composer, violinist and conductor. Thrane came from a musical family whose members were active in the musical life of Christiania. He was trained as a violinist under Henrik Groth in Christiania, under Claus Schall in Copenhagen (1814–15) and under F. Baillot in Paris (1817–18). In Paris he also studied theory and composition with Anton Reicha and F.A. Habeneck. Returning to Christiania in 1818 he became conductor of the orchestras of the Drama Society and the Musical Lyceum; he also worked as a music teacher and established himself as a prominent violin virtuoso, giving recitals in various Norwegian towns and in Stockholm.

His musical output is small. His main works are a Concert Overture (1818) and the first Norwegian opera, the Singspiel *Fjeldeventyret* ('The Mountain Adventure', 1824). He also composed a Finale for large orchestra (1818) and a cantata (1827), both now lost, and several piano pieces and songs. *Fjeldeventyret* is based on a libretto by the Norwegian poet H.A. Bjerregaard. It was first given on 9 February 1825 at the Musical Lyceum and immediately became a great success; it was shortly afterwards given both in Bergen and Trondheim. It has from time to time been taken up by various theatres and is part of the repertory of the Norwegian National Opera. It has a strong appeal for the Norwegians. The story is very simple, as in a folk comedy, and Thrane retained the spoken dialogue. The music conforms more or less to the taste of its time. It contains reminiscences from Mozart and Weber, but is still more in the popular style of the French light operas of the late 18th century. In some sections, however, Thrane shows a musical individuality, particularly in the scenes which are of a folkloristic nature, e.g. in 'Aagots Fjeldsang' ('Aagot's Mountain Song'). This beautiful melody became internationally known through Jenny Lind,

who often performed it at her recitals. It has a strong national flavour, and it includes imitations of Norwegian folktunes, so convincing that later generations have considered the song to be a genuine folk song. Thrane made use of specific intervals and motifs and also rhythmic peculiarities of the instrumental peasant dances. His use of folk music idioms in art music set the model for the next generations of Norwegian composers: this may be regarded as his greatest achievement. (F. Benestad: *Waldemar Thrane: en pionér i norsk musikkliv*, Oslo, 1961)

FINN BENESTAD

Thrash metal.

A term often used in the 1980s to distinguish a faster, heavily distorted kind of Heavy metal from the more melodic and popular styles. Speed metal developed in the San Francisco Bay area as an underground, alternative style of heavy metal around 1981; its main pioneers were Metallica, Megadeth and, in New York, Anthrax. When speed metal bands began incorporating more punk influences, such as a growling vocal style and sarcastic or critical lyrics, the style was called thrash metal, reflecting a thrashing quality of motion in music and dance; other respected practitioners were Testament, Exodus, and Possessed. The New Wave of British Heavy Metal at the turn of the 1980s was an important influence on thrash musicians, but their most important ancestor was the British band Motörhead, which had played for both metal and punk audiences in the 1970s. However, thrash metal's emphasis on instrumental virtuosity – particularly fast guitar solos and the precise ensemble execution of complex song structures – made it distinctly different from punk and hardcore. Thrash bands often used unusual metres, too, as well as sudden tempo and style changes.

A closely related style was death metal, which shared thrash metal's extremely distorted electric guitar and fast riffs but focussed in its lyrics and stage shows on death, religion, and gruesome theatricality. Slayer, from Los Angeles, the Brazilian group Sepultura, and Denmark's Mercyful Fate were among the most successful bands of this type. Thrash, speed, death and other modifiers served during the 1980s to distinguish underground styles from the more popular heavy metal of performers such as Ozzy Osbourne, Van Halen, Mötley Crüe and Def Leppard. In the early 1990s, the popularity of mainstream heavy metal declined, while thrash bands (Metallica in particular) achieved great popularity. This development, along with generic fusions and realignments, made terms such as thrash less often used after that time; the sounds of thrash redefined heavy metal.

ROBERT WALSER

Three Choirs Festival.

An annual event, of six to eight days' duration, substantially but not exclusively choral in character, based in turn in the cathedrals of Gloucester, Worcester and Hereford. Its precise origins are not documented. However, the *Worcester Postman* of 10 July 1713 records a special service at which was performed 'Mr. Purcell's great *Te Deum*, with the Symphonies and instrumental parts, on Violins and Hautboys'. Six years later, in August 1719, the same journal published a notice calling on 'Members of the yearly Musical Assembly of these Parts … by their Subscription in September last at Gloucester … to meet at Worcester on Monday … in order to publick Performance, on the Tuesday and Wednesday following'. In 1920 official recognition was given to the year 1715 as that of the first 'festival', thus making the festival of 1977 the 250th festival in an annual series broken only by two world wars.

The earliest events consisted of Morning Prayer in the cathedral with *Te Deum* and *Jubilate* in orchestral settings and extended anthems on two successive days, and secular concerts in the town in the evenings. In 1724 at Gloucester the practice was initiated of taking up a collection for the widows and orphans of the cathedral choir members and diocesan clergy. Soon this was limited to dependents of clergy for whose special needs and those of their families the charity continues to the present day.

At first only liturgical music and anthems were admitted to the cathedrals. Purcell's *Te Deum* and *Jubilate* in D was staple fare, with the occasional use of Croft's setting in the same key. Later Handel's 'Utrecht' and 'Dettingen' settings took turns with Purcell's. After 1727 one or more of Handel's coronation anthems was in regular use during the rest of the 18th century, frequently supplemented by anthems of Boyce or, less frequently, some other English composer of the period. In the early years oratorios were given at the evening secular concerts, but in 1759 at Hereford a third morning was introduced in the cathedral and devoted to *Messiah*. This was the first stage in a prolonged process of extending the number of cathedral performances and eliminating Morning Prayer. With unimportant exceptions the 18th-century programmes, both in and outside the cathedrals, were dominated by Handel.

The organization rested on an annually chosen 'steward' (from 1755 two stewards, one clerical, the other lay); the stewards, who each bore the inevitable deficit, were increased to six from 1798. The event itself was known as the 'Gloucester [Worcester, Hereford] Music Meeting', the expression 'festival' in the modern sense being unknown, while the term 'Three Choirs' only came into use (and then informally) from about the mid-19th century. The choral body was originally the combined cathedral choirs supplemented by a few local amateurs. By the early 19th century, if not earlier, male singers from choirs in Oxford, London and elsewhere were also used, and beginning in 1772 (following the practice of the Ancient Concerts in London) 'female chorus singers from the North of England' were engaged. Nothing is known of the earliest conductors. In 1737 and 1755 (both years at Worcester), possibly also in other years, William Boyce

conducted, and William Hayes conducted at Gloucester in 1757, 1760 and 1763. The earliest organist of one of the three cathedrals to be recorded as conductor is Richard Clack of Hereford, who first conducted there in 1759. Elias Isaac, organist of Worcester, not only conducted there from 1761 to 1791 but at Gloucester also from 1769 to 1787 and at Hereford in 1777. The practice of having the organist of the 'home' cathedral conduct the festival was established after 1790; from 1934 the other two organists have shared in the conducting, and in more recent times eminent conductors have been engaged for specific concerts.

From the 1830s the music meetings changed considerably in character. In 1834 and 1835 Hereford and Gloucester transferred the cathedral performances from the choir to the nave, and Worcester followed in 1845. There was a consequent enlargement of orchestra, chorus and audience. Beginning in 1840 the number of stewards was progressively increased, leading to the present usage whereby the holders of subscription tickets are termed stewards.

From 1853 the combined cathedral choirs sang Matins daily: at modern festivals the combined choirs sing Evensong. By 1860 liturgical services with orchestra had been reduced to one, and this was relegated to an early hour on the first morning in order to accommodate an additional oratorio. Later it was replaced by the service with chorus and orchestra which has since opened the festival on the Sunday afternoon. However, from 1984 Worcester festivals have commenced with a service of dedication immediately preceding the opening concert on the first Saturday.

By the mid-19th century the prestige of older music meetings had declined in favour of the newly established festivals at Norwich, Birmingham and elsewhere, the term 'Worcester [Gloucester, Hereford] Musical Festival' coming into common use. Moreover, being held in cathedrals, they were increasingly criticized by those who felt that they offended against religious use. This feeling reached a climax in 1875 with the refusal of the dean and chapter of Worcester to allow their church to be used for a festival of the usual kind; and a series of church services without soloists and orchestra was held, derisively called the 'Mock Festival'. Local feeling was strong enough to ensure the resumption of the festivals on their former lines, but a much greater sense of decorum was established.

Along with other festivals the 'Three Choirs' began from the 1860s to encourage choral music by English composers. But, as elsewhere, the list of 19th-century works, composed in a derivative if not moribund idiom, now makes depressing reading. Nevertheless the performance of this body of now forgotten pieces by minor worthies – Cusins, Barnby, Armes, Garrett, Stainer and the like – forms a recognizable facet of festival history.

Among the 19th-century cathedral organists who served as festival conductors only S.S. Wesley (organist of Hereford Cathedral, 1832–5, and of Gloucester Cathedral, 1865–76) was of real distinction, but he was a poor conductor. C.H. Lloyd, who was organist of Gloucester Cathedral from 1876 to 1882, was a cultivated musician if not a good conductor. But little could be done to improve standards of performance so long as the festival chorus, in addition to the cathedral choirs and bodies of local singers, included contingents from places as far afield as Bradford, Leeds and

Huddersfield with only one combined rehearsal. The first festival since the early 18th century to rely entirely on a chorus drawn from the counties of Gloucester, Hereford and Worcester was at Gloucester in 1892 under C. Lee Williams.

In 1871 Wesley introduced Bach's *St Matthew Passion* and in 1893 Hugh Blair (then acting organist at Worcester) conducted the first Three Choirs performance of the Mass in B minor. Whilst *Messiah* held its annual place, Mendelssohn's *Elijah* was performed every year from 1847 to 1930 with but two exceptions. However, Lloyd introduced Brahms (*A German Requiem*) at the Gloucester festival of 1877, and Blair (now cathedral organist) Verdi's Requiem to the Worcester audience of 1896. At this same festival the first performance was given of *The Light of Life*, an oratorio by Elgar who from 1878 had been a member of the festival orchestra. In 1884 he played under the baton of Dvořák, who had been invited to Worcester to conduct his *Stabat mater* and Sixth Symphony. Six years later, in 1890, Elgar himself was to conduct his overture *Froissart*, a festival commission.

The modern history of the festival began in the 1890s following the appointment of three organist-conductors who carried it into the 20th century: G.R. Sinclair (organist of Hereford Cathedral, 1889–1917), Herbert Brewer (Gloucester Cathedral, 1897–1928) and Ivor Atkins (Worcester Cathedral, 1897–1950). These men trained their own choruses and established the practice whereby about half the festival choir is drawn from the 'home' locality and a quarter each from the other two localities. Their programmes were also more adventurous and drew on a less stereotyped repertory. Sinclair was succeeded by P.C. Hull (1918) and Brewer by H.W. Sumsion (1928), and under these five men, up to the outbreak of World War II, the festival enjoyed the most significant period of its history. By the time they came on the scene Parry was already established as a festival composer; *Scenes from Prometheus Unbound* and *Job* were given first performances in 1880 and in 1892 respectively, both at Gloucester, and he continued to figure prominently up to World War I. Between 1910 and 1930 a number of compositions by Walford Davies and Bantock received first performances. Other first performances given at the festival were Vaughan Williams's *Fantasia on a Theme of Thomas Tallis* (1910), *Five Mystical Songs* (1911) and *Magnificat* (1932), Bliss's *A Colour Symphony* (1922), Holst's *Choral Fantasia* (1931), Bax's *The Morning Watch* (1935) and Lennox Berkeley's *Domini est terra* (1938).

The performance at Worcester in 1911 of Bach's *St Matthew Passion*, edited by Atkins and Elgar, initiated a new approach to the work in England. Particularly important in this period were the performances of Elgar's music given under his own direction until his death in 1934. The performance of *The Dream of Gerontius* at Worcester in 1902 did much to help the work recover from its unhappy première in Birmingham in 1900.

After the intermission of the war years the festival was revived at Hereford in 1946 when a committee, representative of the three festival organizations, was set up to advise and assist the host association in the promotion of its festival. This committee in 1956 evolved into the Three Choirs Association, thus strengthening the festival's artistic and financial status.

In 1950 the first performance of *Hymnus Paradisi* by Herbert Howells was given at Gloucester. In the same year, with the retirement of Atkins and Hull, and later in 1967, of Sumsion, direct links with the Elgar tradition were broken. The younger organist-conductors who followed did much to bring the festival into line with modern trends, replanning the week to secure higher standards and more varied concerts, using not only the cathedrals but other city buildings and outlying venues such as Tewkesbury and Pershore Abbeys and Leominster Priory.

While the principal aim of the festival continues to be the promotion and development of the great English choral tradition, the modern festival encompasses in its wide-ranging main and fringe programmes virtually all forms of music (both sacred and secular), poetry, drama and the visual arts. Its encouragement of contemporary British composers is noteworthy; among those whose music has been given first performances at festivals since 1950 are Richard Rodney Bennett, Lennox Berkeley, Gordon Crosse, Peter Maxwell Davies, Gerald Finzi, Peter Racine Fricker, John Joubert, William Mathias, John McCabe and Malcolm Williamson.

Since 1950 the cathedral organists, festival directors and conductors have been David Willcocks (Worcester, 1951, 1954, 1957); Meredith Davies (Hereford, 1952, 1955); Melville Cook (Hereford, 1958, 1961, 1964); Douglas Guest (Worcester, 1960, 1963); Christopher Robinson (Worcester, 1966, 1969, 1972); Richard Lloyd (Hereford, 1967, 1970, 1973); John Sanders (Gloucester, from 1971 to 1992); Donald Hunt (Worcester, from 1975 to 1996); Roy Massey (Hereford, from 1976); and David Briggs (Gloucester, from 1995).

Threnody

(from Gk. *thrēnōdia*: 'lamentation').

A poem, or its musical setting, expressing a strong feeling of grief for the dead; the term has much the same meaning as 'lament'. 'Threnody' has also been used as a title for purely instrumental compositions of an elegiac nature, such as Penderecki's *Threnody for the Victims of Hiroshima* for 52 solo strings (1960). For the tragicomic threnody in the last act of his opera *Albert Herring* (1947) Britten used a structure similar to that of the classical *thrēnos*, which alternated a ritornello for chorus with solo passages.

MALCOLM BOYD

Thrēnos

(Gk.: 'lamentation').

Ancient Greek lament for a dead person, analogous to the Roman Nenia (also, according to Maas, the leader of such a lament). The latinized plural form of the term (*threni*) is used in the title of the biblical book of *Lamentations*; it was so used by Stravinsky in his setting of texts from that book (*Threni*, 1958); it also occurs as the designation of a category of chant sung during Lent in the Mozarabic rite (*see* Mozarabic chant, §4(vii)).

The music of lamentation was intended to praise the deceased and provide a release for the intense emotions of the bereaved; its power in dissipating grief is well attested in ancient culture. Plutarch (*Table-Talk*, 657a) observes that *thrēnoidia* (threnody) and the *epikedeios aulos* move the emotions and cause tears to flow, thus little by little consuming and removing distress; Aristides Quintilianus (*On Music*, ii.4) notes that music was employed in certain 'funeral rites to break off the extreme of passion by means of melody'. Details about the type of music, performers and number of accompanying instruments appear in sources as diverse as the Talmud, Lucian and the Twelve Tables.

In ancient Greece the term *thrēnos* seems to have covered all different types of lament, but it was used particularly for that which accompanied the laying-out (*prothesis*) of the corpse, usually on the day after death. This lament was performed by a leader (*exarchos*) who was interrupted by choral refrains; although friends and relatives participated in the lamentation, it is apparent that mourners (normally women) were also hired to provide music and other services. Plato (*Laws*, vii, 800e) refers to the performance of 'Karian music' over the corpse by hired mourners; Josephus (*Jewish War*, iii.9.5) reports that hired auletes played threnodies during an extended period of mourning after the battle of Jotopata; and Cicero (*Laws*, ii.23.59) observes that the Twelve Tables limited the expense of funerals to 'three veils, a purple tunic and ten auletes'.

The aulos was the normal accompanying instrument and was specially favoured during the *ekphora* (carrying-out); the Karian women, famous as professional mourners, used the aulos during *thrēnoi*. The Sirens are depicted on gravestones and elsewhere, from the 4th century bce, as mourners, tearing their hair, beating their breasts or playing the aulos like human mourners. Laments were also composed as aulos solos (*nomoi thrēnētikoi*) from an early period. Lydian and Mixolydian *harmoniai* were favoured (Plato, *Republic*, iii, 398e–399a).

The distinctions to be drawn between the term *thrēnos* and other words for laments are not always clear. The *epikēdeion* was claimed even in antiquity to have been sung only at a burial (*kēdos*), but may be a simple synonym for *thrēnos*. The terms *goos* and (less commonly) *ialemos* may have referred to less sophisticated and less literary laments than the *thrēnos*. The term *kommos* referred (though perhaps not exclusively) to the literary laments of Attic tragedy. According to Aristotle (*Poetics*, 1452b24–25), the *kommos* was the common lamentation of the chorus and the characters on the stage. The Byzantine treatise *On Tragedy* (4; ed. Browning) considered

it to be one of the five parts of choral song: *parodos*, *stasimon*, *emmeleia*, *kommos* and *exodos*. Examples of the *kommos* can be identified, and these clearly illustrate the highly dramatic effect created by the antiphonal exchange between the actor and the chorus. The *kommos* between the chorus and Xerxes in Aeschylus's *Persians* (1038–76), for example, is elided with the *exodos* and builds up to a tremendous climax through a group of seven strophes and antistrophes and an epode. Beginning with the sixth strophe, specific references are made to the action taking place on stage and in the orchestra.

Besides laments for the dead, Greek tradition included special laments for gods and heroes (e.g. Adonis and Linus), perhaps still reflected in medieval *staurotheotokia* (laments of the Virgin Mary at the cross) and other Byzantine chants such as the *epitaphios thrēnos* (lament for Christ in Holy Week), and laments for the fall of cities. The Hymenaios and the *thrēnos* represent two extremes of music in daily life: one marks the beginning of adult life, the other the end. Because they were both so closely tied to particular individuals and events, it is hardly surprising that so few fragments of these two types survive.

Through-composed

(Ger. *durchkomponiert*).

A term describing a composition with a relatively uninterrupted continuity of musical thought and invention. It is applied in particular in contexts where a more sectionalized structure might be expected, as with a Strophic song

text, an opera divided into numbers or an instrumental piece divided into movements.

In the context of art song, 'through-composed' describes settings in which a repeating verse structure is contradicted by the use of substantially different music for each stanza, unlike most hymns and folksongs, where strophic texts are reinforced by an equivalent repeating musical structure. *Das Wandern*, the opening song of Schubert's *Die schöne Müllerin*, for example, is strophic, with the same music repeated for each text stanza, while *Halt!* (the third song of the cycle) is through-composed, with new music for each stanza. Furthermore, a song cycle as a whole, with its potential for the complex organization of constituent songs, may, unlike a collection of independent songs, be thought of as a larger-scale example of through-composition.

The term 'through-composed' is also applied to other repertories. Both the verse and the music of most medieval and Renaissance courtly songs, for example, use conventional repeating patterns such as those of the *formes fixes*, but the unusual continuous structure of *O rosa bella* (attributed to Dunstaple) stands out from this tradition as an example of through-composition. The polyphonic mass cycle may also arguably be seen as a large-scale form dependent on the principle of through-composition.

The term is sometimes also applied to instrumental music. Haydn's Symphony no.45 ('Farewell'), for example, can be considered through-composed because cross-connections between the movements foster a sense of continuity throughout the work. The symphonic poem of the 19th and 20th centuries, however, in which a number of themes may be developed or 'transformed' throughout the work, presents more obvious opportunities for through-composition than the multi-movement symphony.

Operas whose librettos are set to music throughout may be seen as more through-composed than those, such as German Singspiele or French *tragédies lyriques*, that contain spoken dialogue or dance. Wagner's music dramas, with their large-scale continuous structures and leitmotivic cross-references, may be seen as archetypal examples of through-composition in opera.

Thuille, Ludwig (Wilhelm Andrae Maria)

(*b* Bozen [now Bolzano], 30 Nov 1861; *d* Munich, 5 Feb 1907). Austrian composerof Savoyard ancestry. He received his first musical instruction from his father, an amateur musician. After his parents' death, he went in 1872 to live with his step-uncle in Kremsmünster, where he served as a chorister in the Benedictine abbey, studied the violin, piano and organ, and

received a good secondary education. In 1876 the generous widow of the conductor and composer Matthäus Nagiller adopted him and took him to Innsbruck. She provided for his general education, his expenses, and for his theory, piano and organ studies with Joseph Pembauer, who in 1879 commended his brilliant student to Joseph Rheinberger at the Königliche Musikschule in Munich. There he also continued to study the piano (under Karl Bärmann), graduating with honours in 1882. As a composition student Thuille was musically conservative, an ardent admirer of Viennese Classicism and firmly steered by Rheinberger's academicism. However, a decisive change suddenly occurred in his style through his association with Alexander Ritter, a forceful figure who converted him and his boyhood friend Richard Strauss into rich orchestral colourists in the late Romantic vein. Ritter diverted Thuille's attention to opera of Wagnerian proportions and encouraged the young composer to cultivate bold harmonic ideas.

After a year as private music tutor to the household of Baron Theodor von Dreyfus, in 1883 Thuille received an invitation to teach at the Königliche Musikschule (later the Akademie der Tonkunst) as well as a composition stipend from the Frankfurt Mozart-Stiftung. He soon began to win acclaim as a chamber pianist, accompanist and composer. In 1888 he was appointed professor in Munich and three years later conductor of the Munich Liederhort, an esteemed male choral society. By the turn of the century Thuille had become a leading figure in the city's musical life; as a professor of theory and composition at the Akademie der Tonkunst, he exerted a strong and healthy influence: Ernest Bloch, Walter Courvoisier, Walter Braunfels and Hermann Abendroth were among his many well-known students. The large circle of pupils and composers trained by Thuille was known as the Munich School. Thuille received the 'Kgl Ludwigs-Medaille für Kunst und Wissenschaft' in 1902 and other honours subsequently.

Thuille's distinction as a composer rests partly on his cultivation of chamber music at a time when many of his contemporaries were ignoring the genre. His early Sextet op.6 (1891), a rewarding vehicle for piano and wind ensemble with its expert instrumental balance and sweeping lyricism, was an immediate success; still more individual and intense is his mature Piano Quintet op.20 (1901). Unlike many of his contemporaries, he composed operas on fantastical subjects; although his first, *Theuerdank* (1893–5) using a text by Ritter, was unsuccessful, his second, *Lobetanz* (1896), was heard from Riga to Vienna and in New York. It is a mixture of melodrama, music drama and comedy, expertly composed in spite of a weak libretto by O.J. Bierbaum, and it led to another collaboration on a fairy-tale text, *Gugeline*, again with fresh lyrical music but burdened by an even worse libretto. A judicious moderation marks Thuille's style and distinguishes it from the music of his more famous contemporaries. Although his use of harmony was often adventurous, Thuille's innate conservatism restrained him from attempting the extreme experiments of Reger, and in his imaginative, sometimes radiant orchestration he avoided the radical innovations of Mahler. Nor was he attracted by the symphonic poem, as were Strauss, von Schillings and other members of the Munich School; the most appealing traits of his music are its structural clarity and ingratiating melodic invention.

Thuille's *Harmonielehre* (1907), written jointly with Rudolf Louis, remained a standard work long after his death. The textbook is in two parts, the first devoted to diatonic and the other to chromatic and enharmonic harmony, and considers chords not merely in the conventional vertical harmonic sense but also as horizontal contrapuntal textures.

WORKS

(selective list)

printed works published in Leipzig unless otherwise stated

stage

Theuerdank (Oper, 3, W. Ehm [A. Ritter], after H. von Schmid), 1893–5, Munich, 12 March 1897

Lobetanz (Bühnenspiel, 3, O.J. Bierbaum), 1896, Karlsruhe, 6 Feb 1898 (Berlin, 1897)

Gugeline (Bühnenspiel, 5, Bierbaum), 1898–1900, Bremen, March 1901 (Mainz, 1900)

Die Tanzhexe (Melodram mit Tanz, Bierbaum), 1900, Stuttgart, 1909

Allegorisches Festspiel (J. von Schmaedel), composed 1906

Der Heiligenschein (dramatische Legende, 3, E.L. von Wolzogen), Munich, 1910 [Act 1 sketched by Thuille, orchd W. Courvoisier]

vocal

Unacc. male chorus: 12 collections, incl. Weihnacht im Walde (F. Schanz), op.14 (Zürich, 1899); 3 Soldantenlieder (from *Des Knaben Wunderhorn*), op.35 (Zürich, 1906)

Other unacc. chorus: Russischer Vespergesang, 6 mixed vv (1893); Abendlied, 3 female vv (Bierbaum) (Zürich, 1900); Osterlied (A. Boettcher), 3 female/children's vv, in C. Huber: Liederbuch, ii (1904)

Choral with insts: Fridolin (R. Kathan, after F. Schiller), Burleske, soloists, male chorus, orch, 1893; Traumsommernacht (Bierbaum), 4 female vv, vn, harp/pf, op.25 (1902); 3 Gesänge (J. Eichendorff), 3 female vv solo/chorus, pf, op.31 (1904); Rosenlied (Anna Ritter), 3 female vv, pf, op.29 (1904)

1v, pf: 90 songs (52 pubd)

instrumental

Orch: Frühlingsouvertüre, A, 1880; Pf Conc., D, 1881–2; Sym, F, perf.1886; Romantische Ouvertüre, op.16 (1899) [ov. to Theurerdank: seestage]; Symphonischer Festmarsch, op.38 (1907) [from Allegorisches Festspiel: see stage]

Chbr: Sonata, d, vn, pf, op.1 (1880); Qnt, g, pf, str qt, 1880; 2 str qts: G, 1881, F, 1883; Trio, E♭, vn, va, pf, 1885 (1989); Sextet, B♭, fl, ob, cl, hn, bn, pf, op.6 (1891); 13 Fugues, str qt, 1897; Qnt, E♭, pf, str qt, op.20 (1901); Sonata, d, vc, pf, op.22 (Strasbourg, 1902); Sonata, e, vn, pf, op.30 (Strasbourg, 1904); Allegro giusto, vn, pf, op.39 (1916)

Pf solo: 3 Klavierstücke, op.3 (1883); 3 Klavierstücke, op.33 (1905): 3 Klavierstücke op.34 (1905); 2 Klavierstücke, op.37 (1906)

Thümmler, David Gotthilf

(*b* Zwickau, 14 Sept 1801; *d* Zwickau, 25 Aug 1847). German organ builder. After employment under E.F. Walcker in Ludwigsburg, Aloys Mooser (Fribourg) and Bernhard Dreymann (Mainz), he became in 1833 a citizen of his native Zwickau. His craftsmanship follows in the tradition of Andreas and Gottfried Silbermann, but also shows originality. The façades are beautiful and impressive. The departments (with compasses ranging up to f''') are well-endowed with overtones and independent of each other; a characteristic of his carefully planned specifications is that the Cornett is usually on the upper manual. On the magnificent Tettau organ (1840–41) the 8' Flauto traverso and quadruple Cornett are capable on their own of filling the church with resonance. Choice materials and careful construction guarantee the high quality of Thümmler's organs, whose tone unites strength and silvery clarity with charm and a warmth of timbre. Important contemporary evaluations, as well as the surviving notable instruments near Glauchau (Schönberg, 1838; Tettau, 1840–41; Remse, 1844) and one in Bad Brambach, Vogtland (1846; two manuals and pedal, 20 speaking stops, manual and pedal couplers), testify to Thümmler's position among the major craftsmen of the 19th century.

WALTER HÜTTEL

Thumoth [Thumont], Burk [Burke of Thomond]

(*fl* 1739–50). Irish music editor, composer and instrumentalist. The earliest known references to him occur in Dublin newspapers in 1739 and 1740, when he appeared as a soloist playing concertos on the trumpet and the flute. He also performed in England as a flautist, appearing for instance at Ruckholt House, Leyton, on 14 May 1744.

About 1745–50 he issued two books which provide one of the earliest printed sources of Irish traditional airs. The first consisted of 12 Scots and 12 Irish airs, the second of 12 English and 12 Irish airs. Both books, which contain 'Variations, set for the German Flute, Violin or Harpsichord', were published for John Simpson of London, reprinted *c*1765, and re-engraved and published in one volume about 1785 by S., A. & P. Thompson of London under the title *Forty-eight English, Irish and Scotch airs*. Thumoth's only other known publication is *Six Solos for a German Flute, Violin or*

Harpsichord, the First Three composed by Mr Burk Thumoth, the Three Last by Sigr. Canaby (London, *c*1746).

<div align="right">BRIAN BOYDELL</div>

Thump.

A little-used 17th-century term for a primitive left-hand pizzicato, limited to open strings (see J. Playford: *Musick's Recreation on the Viol Lyra-way*, London, 1669, and T. Ford: *Musicke of Sundrie Kindes*, London, 1607, where the last piece has the alternative title 'Mr Richard Martin's Thump'; the term is explained on sig.K2*v* and the thump is to be executed with the first or second finger of the left hand).

Thumrī

(Hin. *thumrā*: 'diminutive', *thumak*: 'jerky or graceful gait').

In North India, either a type of vocal composition and the style in which such compositions are performed (*see* India, §III, 5(i) and (iii)(c)), or a style of *kathak* dance (*see* India, §IX). In the 18th century the term denoted a melody-type (*rāg*), but by the early 19th century it had become a type of song in 'lively measure' (N.A. Willard: *Treatise on the Music of Hindustan*, Calcutta, 1834). It was performed by courtesan singers and dancers. The development of the dance style is associated with the court of Wajid Ali Shah of Lucknow (1847–56). Texts, in the Braj dialect of Hindi, were mainly secular and often erotic. In the early 20th century this type of *thumrī*, known as *bandiś thumrī*, was superseded by the slow-tempo *bol banao thumrī*, which gives scope for improvisation on the musical and textual materials of the composition. This genre was developed by male classical vocalists, and by female vocalists moving away from the courtesan milieu into that of classical concert-music. Texts dealing with Krishna and Rādhā, in which romantic or erotic implications can be interpreted in a devotional light, replaced earlier explicit eroticism. *Thumrī* singers avoid the melodic and rhythmic development and technical virtuosity of *khayāl* and *dhrupad* in favour of direct expression of the romantic (*śrngār ras*) sentiments of the text, enhanced by delicate ornamentation. While some singers (usually female) specialise in *thumrī*, it is also often heard as a lighter encore to a programme of *khayāl*, and it may be rendered instrumentally on the *sitār*, *sarod* and other instruments. The lighter *rāgs* (in most cases close to folk melody-types) and specific *tāls* (*see* India, §III, 4(iv)) are employed for *thumrī*.

<div align="right">RICHARD WIDDESS</div>

Thunder machine, thunder sheet

(Fr. *machine à tonnerre*; Ger. *Donnerblech*, *Donnermaschine*).

An instrument for special effects used to produce an imitation (or evocation) of thunder (all types are classified as idiophones). One form is a revolving drum partly filled with balls of hard material: a modification of the 'bronteron' used in theatres for thunder behind the scenes. In the bronteron, either pebbles were poured into a large metal vessel, or bags filled with stones were flung against a metal surface, or lead balls were dropped on a sheet of leather. A further effective imitation was produced by rolling a heavy stone or ball of lead down a slatted ramp. Today it is customary to use recorded sound effects or a thunder sheet, a large metal sheet which is suspended and shaken. The thunder machine or sheet is requested in many orchestral scores, notably in Strauss's *Eine Alpensinfonie* (1911–15) and in Havergal Brian's *Gothic Symphony* (1919–27) and Tenth Symphony (1953–4). In *First Construction* (1939) John Cage scored for five graduated thunder sheets. Henze's *Voices* (1973) includes three thunder sheets.

JAMES BLADES/JAMES HOLLAND

Thunemann, Klaus

(*b* Magdeburg, 19 April 1937). German bassoonist and teacher. Originally intending to become a pianist, he did not take up the bassoon until the age of 18. He studied in Magdeburg and later in Berlin, graduating from the West Berlin Musikhochschule in 1961. From 1962 to 1978 he was principal bassoon in the NDR SO in Hamburg. Since that time he has established himself as the foremost teacher of his instrument in Germany where, as professor in Hanover from 1978 and at the Hanns Eisler Musikhochschule, Berlin, since 1996, his class has achieved an international reputation. As soloist he has enjoyed a distinguished career both on the concert platform and in the recording studio. For many years the oboist Heinz Holliger has been his chamber music partner. He has given masterclasses in Japan, the USA and elsewhere. Thunemann published a thoughtful article on the general health aspects of playing the bassoon in *Medizinische Probleme bei Instrumentalisten: Ursachen und Prävention*, edited by Christoph Wagner (Laaber, 1995).

WILLIAM WATERHOUSE

Thuren, Hjalmar

(*b* Copenhagen, 10 Sept 1873; *d* Copenhagen, 13 Jan 1912). Danish folklorist. After taking the state examination in theology (1898) he worked as a schoolteacher until 1905. His main area of research was the folk music of the Faeroe Islands, particularly their dance-song; in 1902 he collected material for over 200 recordings there. He also analysed Inuit song from recordings made by William Thalbitzer in east Greenland. Illness prevented him from completing his work on medieval Danish ballads, which remains unpublished. His writings are notable for their originality and thoroughness, and include the following (all published in Copenhagen): *Dans og kvaddigtning paa Faer øerne* (1901); *Folkesangen paa Faer øerne* (1908); *Vore sanglege: danske studier* (1908); *The Eskimo Music*

(with W. Thalbitzer, 1911); *Melodies from East Greenland* (1914); and *Faerøske melodier til danske kaempeviser* (1923, ed. H. Grüner Nielsen).

Thuringus [Thüring], Joachim

(*b* Fürstenberg, Mecklenburg, late 16th century). German theorist. He referred to himself as 'S. S. Theol. et Lib. Art. Studiosus et P[oeta] L[aureatus] C[aesareus]'. In 1622 he published in Berlin *Nucleus musicus de modis seu tonis, ex optimus … musicorum abstrusioribus scriptus*, which he revised and expanded as *Opusculum bipartitum de primordiis musicis* (Berlin, 1624, 2/1625). It is the latter treatise which establishes him as a significant contributor to German music theory in the 17th century.

The *Opusculum* consists of two major parts, 'De tonis sive modis' and 'De compondendi regulis'. Thuringus provided a list of the authorities from which he obtained much of his material. Most of them were German; they include Alsted, Burmeister, Calvisius, Henning Dedekind, Eichmann, Heinrich Faber, Galliculus, Glarean, Eucharius Hoffmann, Listenius, Nucius, Rhau and the composers Josquin and Senfl. As Feldmann has shown, much of the volume comes from the treatise by Nucius, *Musices poeticae … praeceptiones* (Neisse, 1613), as well as from Burmeister's *Musica poetica* (Rostock, 1603); Feldmann also proved that sections of the treatise rely heavily on the works of Glarean, Hoffmann and Eichmann. But despite its derivative nature the *Opusculum* is an important document, especially for its presentation of the new German concept of *musica poetica*. Thuringus gave definitions of many of the most significant musical figures and apparently helped to transmit the German interest in musical rhetoric to later generations, including J.G. Walther.

GEORGE J. BUELOW

Thurinomarus [Thurnmaier, John; Thurnmayer, Jean].

See Aventinus, Johannes.

Thurmond, John

(*b c*1690; bur. London, 31 Jan 1754). English dancer, dancing-master and choreographer. He is sometimes confused with his father, the actor John Thurmond (*d* 1727). He was first billed as dancing at the Drury Lane Theatre in 1710, and in 1718 he became the company's dancing-master. He remained there (except for a short period when he danced at Goodman's Fields) until his retirement from the stage in 1737. He danced regularly throughout his career and is best known for the pantomimes with which he proved himself a worthy rival to John Rich. These began with *The Dumb Farce* and *A Duke and No Duke* (both 1719; composers unknown). Thurmond was responsible for the dances in the phenomenally successful pantomime *Harlequin Doctor Faustus* (1723), which was followed by *Harlequin Sheppard* (1724), *Apollo and Daphne* (1725) and *The Miser, or Wagner and Abericock* (1726, revised and given as *Harlequin's Triumph* in 1727). Henry Carey seems to have provided the music for many of these works.

MOIRA GOFF

Thurn und Taxis.

German aristocratic family of patrons of music. They lived in the Low Countries, Frankfurt and especially in Regensburg (from 1748). Carl Alexander (prince, 1773–97) was the composer of a sinfonia and keyboard music, now in *D-Rtt*, where the Thurn und Taxis Hofkapelle and Hoftheater library are preserved.

Thursby, Emma (Cecilia)

(*b* Williamsburg [now in Brooklyn], NY, 21 Feb 1845; *d* New York, 4 July 1931). American soprano. Her earliest engagements were solo appearances at various churches in Manhattan and Brooklyn. She studied at various times with Julius Meyer, Achille Errani, Francesco Lamperti and Sangiovanni, but her most important teacher was Erminie Rudersdorff. Thursby's engagements through 1878 included appearances with Theodore Thomas and his orchestra, a long tour with Patrick S. Gilmore and his band, and oratorio performances (notably with Leopold Damrosch as conductor). Under Maurice Strakosch's management, she had a brief but phenomenally successful European career between 1878 and 1882. Thursby was praised by critics for her pure voice and sensitive interpretations and was compared favourably with Jenny Lind and Christine Nilsson. Contemporary accounts mention her flawless coloratura technique, her avoidance of scooping, and the evenness of her instrument throughout its unusually large range.

After her return to the USA, Thursby maintained a vigorous concert schedule. Although she knew many operatic roles and included arias in her programmes, she refused to appear in dramatic productions, maintaining that solo recitals gave her the greatest satisfaction. After her last recital in Chicago, December 1895, she devoted herself to teaching (her most famous student was Geraldine Farrar) and was eventually appointed professor at the Institute of Musical Art in New York, where she taught from 1905 to 1911. Her papers are preserved in the library of the New York Historical Society.

Thurston, Frederick (John)

(*b* Lichfield, 21 Sept 1901; *d* London, 12 Dec 1953). English clarinettist. He was taught by his father from the age of seven, and won an open scholarship to the RCM, where he was a pupil of Charles Draper. During the 1920s he played in the Royal Philharmonic and Royal Opera House orchestras, and in the BBC Wireless Orchestra. In 1930 he became principal clarinet of the new BBC SO, in which he played with great distinction until 1946. He then left to concentrate on chamber music. He gave the first performances of many new works, including Bax's Sonata, Bliss's Clarinet Quintet (which he recorded with its original performers, the Griller Quartet) and Finzi's Concerto. He was the dedicatee of Malcolm Arnold's Concerto no.1, Iain Hamilton's *Three Nocturnes*, Howells's Sonata, Ireland's Fantasy-Sonata, Gordon Jacob's Quintet, Maconchy's Concertino and Rawsthorne's Concerto. His tone, which like his teacher's was without vibrato, was admired for its firmness and clarity. He was also an influential teacher, and taught at the RCM from 1930 to 1953. His pupils included Thea King, whom he married.

ROBERT PHILIP/PAMELA WESTON

Thyard, Pontus de.

See Tyard, Pontus de.

Thybo, Leif

(*b* Holstedbro, 12 June 1922). Danish composer and organist. He entered the Royal Danish Conservatory in Copenhagen in 1940, and studied theory with Høffding, instrumentation with Schierbeck and organ with Emilius Bangert; earlier studies in theory had been with Holmboe. In 1944 he was examined in theory, the history of music and the organ, and in 1945 took the music teachers' examination. He then occupied several important posts as an organist, and was employed as a teacher at the Institute of Musicology, Copenhagen University, and the Royal Danish Conservatory, where he was professor between 1965 and 1990. He has been a member of the board of Det Unge Tonekunstnerselskab (1948–56), the board of Dansk Komponistforening (1964–72) and the board of the Danish section of the International Schütz Society.

His contribution to organ music has been significant. Not only has he written many important works for the instrument (including *Liber organi*, 1968, and *Concert II 'St Andrew's'*, 1957), but he has also cooperated with Danish organ builders, particularly Frobenius, on the development of technical improvements, and has written textbooks on organ playing and has been a concert organist in Denmark and abroad. Thybo has nevertheless composed substantially for other instruments and genres. His early works were inspired by composers such as Hindemith and Bartók, later by Britten and Stravinsky. He undertook an organ transcription of Stravinsky's *Dumbarton Oaks* in 1952, which laid the basis for his investigation of the very specific possibilities of the modern organ. The strongly constructive modernism and electrophonics of the postwar period has, however, been alien to him. He instead holds onto thematic work, often using an intuitive and entirely personal composition process, which constantly takes him further towards re-evaluation, pure cultivation and refinement of the material; this is summarized in the textbook *Alternative satstekniske studier: Improvisation og komposition for orgel* (1999). As a religious man, Thybo finds inspiration partly in the Christian musical tradition and partly on a broad level through the history of music and literature. He has written works to texts by Shakespeare, Baudelaire and Rilke, and has written choral arrangements and variation works, including on 'Sumer is icumen in' (for organ, 1985).

ERIK H.A. JAKOBSEN

Thysius [Thijs], Johan

(*b* Amsterdam, 13–21 Aug 1621; *d* Leiden, bur. 8 Oct 1653). Dutch lawyer. His father was Anthony Thijs, a merchant in Amsterdam. Thysius enrolled at the University of Leiden on 13 August 1635 and read philology and law. Between 1646 and 1648 he travelled in France and England to further his studies. Returning to Leiden he registered again on 27 August 1648 and graduated in law on 21 August 1652.

He owned an important library and founded the Bibliotheca Thysiana. In it is preserved a manuscript lutebook in French seven-line tablature. Though several scholars have suggested more hands, the volume was probably compiled by the Amsterdam minister Adrian Joriszoon Smout (*b* Rotterdam, *c*1580; *d* Rotterdam, Feb 1646), as a reference 'Johan Thijs wt d' Auctie van Smoutius' in the manuscript suggests, from his student time in Leiden (1595–1601) into at least the 1620s. With some 452 pieces, mostly for solo lute, it is the richest Dutch collection of lute music and one

which shows the international aspect of musical taste in the Netherlands at that time. The manuscript contains intabulations of Dutch, English, French and Italian songs, Reformation psalms, motets and some 164 dances, mainly French, English, Italian and Dutch in origin, as well as six fantasias, including one by Francesco da Milano. Claude Le Jeune, Claude Goudimel, Orlande de Lassus, Peter Philips and Jan Pieterszoon Sweelinck may be singled out among the composers of the songs on which the lute intabulations are based, and John Dowland, Robert Jones and Thomas Robinson are among the composers of the dances. A few pieces come from collections by E. Adriaensen published in Antwerp in 1584 and 1592. Interestingly, many of the numerous English song and dance tunes are also found in the Fitzwilliam Virginal Book. The pavan by 'Signor Thysio' in Rude's *Flores musicae*, ii (Heidelberg, 1600) is not by Johan Thysius, as Eitner supposed.

HANS RADKE

Tibaldi, Giovanni Battista

(*b* Modena, 2nd half of 17th century; *d*?Rome, after 1736). Italian violinist and composer. He worked for Cardinal Ottoboni from 1695 to 1737, and for Cardinal Pamphili from 1700 to 1710. In 1701 he was in the service of prince Urbano Barberini of Palestrina, and between 1708 and 1718 he received a fixed wage as a 'cammeriere' for Ruspoli. A member of the Congregazione di S Cecilia from 22 September 1707, he was *guardiano degli strumentisti* in 1708 and *guardiano dei maestri di cappella* in 1726. He participated in numerous musical performances in Rome; from 1708 to 1718 he took part in the celebrations for the design of the Accademia del Disegno di S Luca. A caricature of him by Pier Leone Ghezzi, dated 1 January 1720, reports: 'Tibaldi the violin player, who in Arcangelo Corelli's time cut a fine figure, but is no longer called on to perform, because he plays in the old style' (*I-Rvat*).

Two collections of trio sonatas by Tibaldi survive, both printed in Rome (in 1701 and 1704 respectively) and reprinted in London. A sinfonia was printed in 1701 with a serenata for three voices by G.A. Costa, and in Amsterdam, about 1717, a *svago o capriccio di otto battute a l'imitationo*

del Corelli was printed with Tommaso Albinoni's sonatas for solo violin. Some of Tibaldi's sonatas appear alongside the works of other Italian composers, including Corelli and Vivaldi, in *The Complet Tutor to the Violin* (London, 1727) and *Medulla musicae*, also printed in London about 1727.

ANGELA LEPORE

Tibaldi, Giuseppe (Luigi)

(*b* Bologna, 22 Jan 1729; *d c*1790). Italian tenor and composer. He studied singing with Domenico Zanardi and composition with Martini (his counterpoint exercises are in *I-Bl*). In 1747 he was admitted to the Accademia Filarmonica as a singer and in 1750 as a composer; he served as *principe* in 1759, 1777 and 1783. In 1751 he succeeded Giuseppe Alberti as *maestro di cappella* at S Giovanni in Monte of Bologna, but after a few years decided to devote himself entirely to a career as an operatic tenor, becoming one of the few leading opera singers who had a disciplined training in counterpoint. He sang in the most important European opera houses, taking leading roles in the premières of Gluck's *Alceste* (Vienna, 1767) and Mozart's *Ascanio in Alba* (Milan, 1771). His 19 letters to Martini (in *I-Bc*) written between 1750 and 1775, are a valuable source of information about Italian opera at the time. His few extant compositions (in *I-Bc*, one in *Bsp*) are sacred pieces dating from the time of his study with Martini, except for a later set of *Duetti notturni* for two sopranos and continuo (in *I-Bsp*).

His son, Ferdinando Tibaldi (*c*1750–1785), was also a singer and composer.

HOWARD BROFSKY

Tibbett [Tibbet], Lawrence

(*b* Bakersfield, CA, 16 Nov 1896; *d* New York, 15 July 1960). American baritone. After beginning his career as an actor and as a singer in church and light operas, he studied with Joseph Dupuy and Basil Ruysdael in Los Angeles and with Frank La Forge and Ignaz Zitomirsky in New York, which led to his Metropolitan début as Lewicki in *Boris Godunov* (1923). A week

later he sang Valentin in *Faust*, but recognition did not come until 1925 when he sang Ford in *Falstaff*, eclipsing Antonio Scotti in the title role; he eventually succeeded Scotti in the leading Italian roles and remained a principal with the company for 27 seasons, noted, in his prime, for his legato and vivid acting. He sang in the premières of Taylor's *The King's Henchman* (1927) and *Peter Ibbetson* (1931), Gruenberg's *The Emperor Jones* (1933), Hanson's *Merry Mount* (1934) and Seymour's *In the Pasha's Garden* (1935). He also took part in the first Metropolitan performances of *Jonny spielt auf*, *Peter Grimes*, Hageman's *Caponsacchi*, *Simon Boccanegra* and *Khovanshchina* (in which he made his last Metropolitan appearance in 1950, as Ivan). He also sang in San Francisco, Chicago, Paris, Vienna and Prague, and at Covent Garden created the title role in Goossens's *Don Juan de Mañara* (1937). His dark, pliant voice and matinée-idol appearance made him popular in films as well as light opera, and he was a significant force in early American radio. In 1950 he appeared on Broadway in *The Barrier*, and his last stage role was in the musical comedy *Fanny* (1956). He is perhaps best represented by his *Otello* recordings, which reveal him as an Iago of sly wit, his ample fervour in the 'Credo' counterbalanced by a silken *pianissimo* in 'Era la notte'. He also sang Germont in the live 1935 Metropolitan recording of *La traviata* with Rosa Ponselle. He published an autobiography, *The Glory Road* (Brattleboro, VT, 1933/*R*).

MARTIN BERNHEIMER/R

Tibbits, George (Richard)

(*b* Boulder, Western Australia, 7 Nov 1933). Australian composer. He studied architecture at the University of Melbourne, where he became senior lecturer in urban studies and architectural history. Unusually among Australian composers, he has no professional musical connections and works in deliberate isolation from the country's intense musical politics. The early influences on his music included Indonesian music, Perle, Babbitt and Cage; then, in the late 1950s, he produced 'brutalist' music based on urban life. By the early 1960s he had rejected this aesthetic for lyricism, and in 1965, while in England on an extensive town-planning project, he took an interest in European rock and pop groups. In later works he has turned to parody and collage of antique models. His music in general is notable for irony, intellectual humour and an avoidance of pretension.

THÉRÈSE RADIC

Tibetan music.

The Tibetan cultural area spans five different countries along the Himalayan mountain range. There are 4·5 million Tibetans within the People's Republic of China in an area that includes the Tibet Autonomous Region (TAR); former central Tibet, or Utsang; and former eastern Tibet, or Kham and Amdo, which are now autonomous prefectures or districts in the provinces of Quinghai, Gansu, Sichuan and Yunnan. There are Tibetan communities also in Ladakh, Sikkim, Assam, Zanskar, Lahul and at Dharamsala in India, in northern Nepal and Bhutan, and in Baltistan in Pakistan (fig.1). Despite different geographical, historical and political circumstances, Tibetans in this cultural area share many characteristics, including music, language and the Mahayana Buddhist and Bon religions.

Tibetan music

I. Background, history and research

The history and musics of the Tibetan cultural area have always been intertwined. From the 7th to 12th centuries, Indian influence became strong as Mahayana Buddhism and Tantrism entered Tibet and co-existed with the indigenous Bon religion. Tibet was a dominant military power in Inner Asia in the 8th century, during the period of the early kings (7th–10th

century). In the 13th century the country came under Mongol influence, although it was never completely conquered. Chingghis Khan campaigned against the northern Tibetans (Tanguts) in 1206, and in 1226–7 his grandson, the Mongol Yüan dynasty emperor Khubilai Khan, settled Tibet's tributary status by recognizing 'Phags-pa, leader of the *sa-skya–pa* Buddhist school, as its religious and secular authority. During the Ming dynasty (1368–1644) different Tibetan factions made alliances with both Mongol confederations and the Chinese. The re-establishment of close relations between Tibetans and Mongols during the 16th century is evidenced by the power of the Mongol prince Altan Khan to create and bestow the title of third Dalai Lama (applied retrospectively to his two predecessors) upon the religious leader of the reformist Buddhist *dge-lugs-pa* school. From 1644 to 1911 overlordship over Tibet continued under the Manchus; when the Qing dynasty fell in 1911 the 13th Dalai Lama tried to gain recognition for Tibet's independence.

Following the Chinese invasion of Tibet in 1950 and the armed uprising in 1959, the 14th Dalai Lama fled into exile in Dharamsala, northern India. Since then, a diaspora of over 150,000 Tibetan refugees has settled in India, Nepal and Western countries. From 1966, with the onset of the Cultural Revolution, Tibetan religious practices and cultural customs were banned, and Marxist-Leninist ideology and structures imposed. Although the Cultural Revolution ended in 1976, repression continued. At the beginning of the 1980s, the communists made ideological concessions on religious practices and the traditional cultures of 'minorities', which were followed by a time of relative liberalization. Demographic pressure from the Chinese heightened at the beginning of the 1990s, and religious repression recommenced in 1996.

Research on Tibetan music has been affected by these political events. Prior to the 1960s various musics were collected and studied by Westerners, for instance by A.H. Francke in 1905 (folksongs), Roerich in 1942 (dramas) and G. Tucci in 1949 (epics). Field research in Tibet became impossible after the 1960s, and Western scholars have had to rely on other methods. Tibetan refugees have been used to provide data from which to construct a model of pre-1950 Tibetan society, and the Tibetan-speaking peoples of the southern Himalaya have provided primary materials for comparative analysis. Research topics have included Buddhist music, notation and the masked dance-drama, social and cultural contexts of performance, ritual characteristics and history.

During the liberalization period of the 1980s, music studies in Tibet were undertaken by the Han Chinese and some Tibetans. For ideological reasons, these have concentrated on the music of folk performers. Since 1990, interest in the contemporary situation in the TAR has grown. Within China, a project called *Zhongguo minzu minjian yinyue jicheng* [Anthology of Folk Music of the Chinese Peoples] began in the 1980s to document the traditional music and dance of every province (*see* China, §IV), including Tibetan genres in the TAR, Gansu, Qinghai, Yunnan and Sichuan provinces. The anthology focusses on compilation and systemization; historical and social analyses are based on Chinese political orthodoxy. Since the end of the 1990s, a limited number of Western researchers have had access to Tibet (e.g. I. Collinge, M. Schrempf, I. Henrion-Dourcy),

scholars who hold radically different theoretical and methodological perspectives from Chinese and Tibetan scholars in the People's Republic of China.

Representations of Tibetan music arouse the same passionate debates among ethnomusicologists as the area's political and legal status, history and ethnicity provoke on the international stage. This article brings together a range of differently-orientated specialists. Mirroring the foci of research, a division has been made between the monastic music and dance of Bon and the four Buddhist schools – *rnying-ma-pa*, *bka'-brgyud-pa*, *sa-skya-pa* – and *dge-lugs-pa*, and traditional musics and dance, although the latter may also be deeply infused with religious beliefs and ritual.

II. Monastic music

1. Liturgical chant and music.

(i) Bon.

Bon refers to the pre-Buddhist system of beliefs and practices prevalent in Tibet until about the 8th century and to the textually-based doctrine that began to emerge from the 11th century onwards. Its followers, the Bonpo, are found especially in Kham (Sichuan) and south-western Tibet, with some communities in India and Nepal. Bon has incorporated many ideas from different periods of Tibetan history, resembling Buddhism in its monastic organization, doctrine and liturgical practices. However, it retains distinct literary, historical, mythological and cultural identities.

Rituals vary between and within these lineages. Ritual activity is associated with liturgical texts and includes chant, recitation, instrumental music and dance. Liturgical texts are essentially metric and are delivered as *recto-tono* recitation; in various formulae for intonation (*skad*), which can be adapted to the metrics of the text; and using chant (*dbyangs* or *gyer*). Most texts are recited and are usually preceded by a short chant. The longer *dbyangs* or *gyer* are offered to protective deities and are used for propitiating the important deities Phur-ba and Khro-bo. Unlike in Buddhist schools, no neumatic notation is used. However, chant is organized into components similar to neums, which are named and allow for clear identification of single and compound units.

The most characteristic instrument of Bon is the flat bell, *gshang* (fig.2). It is used to punctuate the drum formulae that link the various sections of a ceremony. Drums (*rnga*) and cymbals (*rol-mo*) are required for the performance of any ceremony. The smaller version of the Bonpo flat bell is known as *sil-snyan*; the Buddhist instrument of the same name is known as *sil-chol*. These may be accompanied with various patterns at specified points by long trumpets (*dung-chen*), long reed aerophones (*rgya-gling*)

and sometimes short trumpets with a receding bell (*ko-yo*) and conch-shell trumpets (*dung-dkar*).

(ii) Buddhist schools.

There are four main Tibetan Buddhist schools: 'the old ones' or *rnying-ma-pa*, so called because of their attachment to the oldest texts transmitted from India; 'those of the oral tradition', the *bka'-brgyud-pa*, who have divided into numerous branches over the course of centuries; 'those of Sa-skya', the *sa-skya-pa*, called after their main monastery in central Tibet; and the reformed school of the 'virtuous', the *dge-lugs-pa*, who have stood foremost on the political scene since the 15th century and from among whom the Dalai Lama is chosen.

The development of monastic life was encouraged by these schools as well as the reformed Bon, and it is estimated that before 1959 several thousand monasteries were active in Tibet, some of which served as universities and hosted thousands of monks. Lengthy theoretical studies were undertaken in these monasteries, and the liturgical calendar, which was extremely dense, included substantial musical performances. After the near destruction of monastic traditions in the 1960s and 70s, calendrical and other rituals are once again being held, at least partially, in Tibet and in the eastern provinces of Amdo and Kham. Contemporary monastic institutions in India, Nepal and Bhutan have maintained the programmes of traditional studies and the liturgical calendar. They are responsible for performing complex rituals for the benefit and protection of the faithful.

The dates of the celebrations vary according to the religious school or even the different monasteries that have developed from the same 'mother-monastery'. However, services in honour of Târa and Mahakala are performed daily and there are regular weekly and monthly rituals, for example, the *tshes-bcu* ritual in honour of Padmasambhava, which is held on the 10th day of each month in *rnying-ma-pa* monasteries. One of the most solemn rituals – the *dgu-gtor* – is held during the final days of the final month of the Tibetan calendar. It can last for more than one week (from the 23rd to 30th day of the 12th month in the *rnying-ma-pa* monastery of Zhe-chen in Bodnath) and is the occasion of a considerable display of music and ritual dances.

The musical sections of various celebrations depend to a great extent on oral tradition but also refer to manuals of notations compiled by past precentors (see §4 below). They make great use of vocal chorus and imply the intervention of numerous musical instruments (see §3 below). The texts of the rituals are usually in verse and have been elaborated by various scholars after canonical texts or spiritual visions. They are enunciated in various ways. *Recto-tono* recitative ('*don-pa*), sometimes performed at an extremely rapid tempo, is used for the repetitions of mantras deriving from Indian tradition. They represent in sound the Buddhas and tutelary (*yi-dam*) or protective (*chos-skyong*) deities invoked during the rituals. Psalmody is used with simple melodic formulae, often called *rta* (lit. 'horse', but here meaning [musical] 'mount' or tune), which correspond to one or two lines of seven or nine syllables or, more rarely, to four-line stanzas. These formulae are sometimes repeated with a progressive rise in pitch from stanza to stanza until the end of the text. The 21 stanzas of praise to the

21 Taras are a well-known example of this musical practice of 'systematic rise'. A slow and solemn way of chanting, called *dbyangs* (lit. 'vowel'), involves placing meaningless syllables (*tshig-lhad*) between the syllables that make up the text. They are chanted around a fundamental sound with its timbre modified or ornamented according to procedures peculiar to each tradition and varying from one monastery to another. Depending on the solemnity of the ritual, the *dbyangs* may be either 'short' (less elaborate) or 'long' (more elaborate). Some, particularly in *rnying-ma-pa* and *bka'-brgyud-pa* traditions, have evocative titles such as 'growl of the tigress', 'big summer drum' (which evokes thunder) and 'eddying lake waters'. It was to preserve the memory of these *dbyangs* that the neumatic notations from the *dbangs-yig* were devised (see §4 below).

In his short *Musical Treatise* (*Rol-mo'i bstan-bcos*), which has been quoted continuously since the 13th century, the 'Great scholar of Sa-skya [monastery]', Sa-skya Pandita, describes the qualities of the chant that will be 'pleasant to hear' (*snyan-pa*), with sweetness, a relaxed character and clarity of enunciation. The chorus of monks, following the *dbu-mdzad* (precentor), do their best to obtain such a result, but the ideal remains difficult to achieve in practice, partly due to the differing ages of the monks and novices.

Among the *dge-lugs-pa*, particularly in the Tantric colleges of Rgyud-stod and Rgyud-smad, the monks cultivate an extremely low register and use what is considered to be 'the Tantra voice' (*rgyud-skad*) or, more colloquially, 'the *mdzo* voice' (the *mdzo* being a cross between a yak and a cow), described in the West as biphonic chant. Each singer emits a deep fundamental tone, simultaneously producing a distinct harmonic or partial of that fundamental (*see* Overtone-singing).

Side by side with these ritual forms of chanting, a prominent place is given to didactic chants (*mgur*), which are widely used by religious scholars and mystics to pass on their teaching to their disciples or to the Buddhist faithful in general. The most famous ones are attributed to the poet and saint Mi-la ras-pa, who lived in the 11th–12th centuries. Most of the great Tibetan mystics have composed and still compose such *mgur* chants, which have been (and are being) carefully collected by their disciples. The texts are mostly in lines of seven syllables, and they are sung to melodies that are close to those of the popular repertory.

Tibetan music, §II: Monastic music

2. 'Cham.

The Tantric masked dance-dramas known as *'cham* are spectacular ritual and social events in ethnic Tibetan areas. They date back to the establishment of monastic communities of both the Bonpo and Buddhists in Tibet and are a syncretistic ritual form that includes Tibetan, Indian and Chinese cultural elements. There are various types of dances, some of them particular to certain monastic schools. *'Cham* is distinct from the ritual dances known as *gar* (see §III, 2 below), in that it is publicly performed by mostly masked monks in the courtyard of a monastery for the spiritual benefit of its lay community. In *'cham* the monk-dancers (fig.3) are considered to embody temporarily the deities (fig.4) or enlightened persons whom they portray. A *'cham* dance is a religious act variously believed to

expose the participants to the sacred power (*byin-rlabs*) of the deities present, to generate faith and to yield religious merit.

'Cham are usually performed as part of larger ritual cycles on significant dates in the lunar calendar. They consititute the culminating events of festivals, such as the expulsion rites conducted at the end of the Tibetan year, or celebrations of the lives of famous Tantric masters and popular saints such as Mi-la ras-pa (1040–1123), in which the dances have a more narrative or didactic character. A ritually important set of unmasked dance figures are the 'black hats' (*zhwa-nag*), named after their symbolic black headgear. More secular human characters contribute entertaining interludes.

'Cham performances are accompanied by a monastic ensemble that sits beside the dance area (*'cham-ra*). Ritual instruments such as *rnga* (drums), *sbug-chal* and *sil-snyan* (cymbals) provide the beat (*rdung*) for the dance steps. *Rgya-gling* (oboes) and *dung-chen* (long trumpets) contribute melodic passages (fig.5). A separate pair of oboe players welcomes the dancers into the dance area with invocational music. The dancers emerge through the main entrance of the temple, which serves as a preparatory room (*'cham-khang*), and begin to circle around the dance area. This may be marked out with concentric circles and auspicious symbols.

'Cham dances usually consist of three phases. Initially, the monks meditate inside the temple on the highest tutelary deity (*yi-dam*) invoked, such as rDo-rje phur-pa, and transform themselves into the various deities of his mandala, some of whom later appear in the dance. Next, *'cham* itself is performed, the dancers re-enact the major actions of the rites, especially the sacrificial killing (*bsgral-ba*) of an effigy (Sanskrit *linga*) symbolizing obstructive or evil forces, and an exorcistic rite (*gtor-rgyab*) is performed outside the monastery. The concluding phase occurs in the temple, where the participating monks are ritually divested of their roles.

Biographical sources often record that *'cham* originate in the dreams or meditative experiences of famous Bon and Buddhist lamas. The revealed choreography and iconography of new dances may be recorded in dance manuals (*'cham-yig*) or passed on by oral tradition through a lineage of lamas who are dance masters (*'cham-dpon*). While no written history of *'cham* and its many different forms exists, it is apparent that the monastic dance traditions and styles of different Tibetan religious schools have influenced one another. Although the monasteries tend individually to determine the protective deities, historical narratives and personages, certain prominent deities occur in many *'cham* forms, including powerful protective goddesses such as dPal-ldan lha-mo in Buddhist dances or Srid-pa'i rgyal-mo in those of the Bonpo, and gShin-rje, 'Lord of Death', with his stag-headed minions.

Apart from their ritual function, *'cham* have also been adapted as tourist spectacles for foreign audiences, both in Chinese-controlled areas and in exile. Touring *'cham* troupes also perform adaptations of the dances in Western concert halls and museums as displays of Tibetan cultural identity, with a political and economic agenda.

Tibetan music, §II: Monastic music

3. Instruments.

Monastic rituals employ a range of musical instruments, consisting of idiophones (bells, various kinds of cymbals, wooden semantrons), membranophones (small hourglass drums with whipping clappers, large double-headed frame drums), and aerophones (long and short trumpets, conches and oboes). The Tibetans themselves distinguish between instruments made to resound (*'khrol-ba*), instruments played by striking (*brdung-ba*) and instruments played by blowing (*'bud-pa*).

Instruments made to 'resound' by shaking them include the small handbell, *dril-bu* (Sanskrit: *ghantā*), whose proportions and decoration are defined in canonical treatises. It is held in the left hand and represents 'wisdom' (*shes*); it forms a pair with the ritual *rdo-rje* sceptre (Sanskrit *vajra*), held in the right hand and representing the 'skilful methods' (*thabs*) necessary to attain enlightenment. The *rdo-rje* and *dril-bu* derive from Indian traditions and feature prominently in the iconography associated with many Buddhas, divinities and religious masters.

The small *damaru* hourglass drum may have its body made of two half-skulls with the tops set end to end, known as a *thod rnga*, but it is more usually made of wood or plastic. Its two skins are struck alternately by the impact of pellets (fig.6). A special kind of *damaru* is known by the Tibetan term *cang-te'u*. Large cymbals with a small central boss, known as *sil-snyan*, are played with a horizontal movement; their crystalline sound is considered as proper for the offering of sound and in the worship of peaceful (*zhi-ba*) deities. The flat bell *gshang*, used by the Bonpo, corresponds to the Buddhust *dril-bu*.

Instruments sounded by striking include the big, double-headed frame drum known as the *rgna*. It is found in different sizes and two forms: the 'offering drum' (*mchod-rnga*), suspended from a wooden stand and struck vigorously with a pair of straight sticks; and the 'hand drum' (*lag-rnga*), so called because of its handle, held in the left hand and struck with a cross-shaped stick (fig.7). Many legends tell the story of its origin. The large cymbals with a voluminous central boss, called *sbug-chal* or *rol-mo* and clashed with a vertical movement, are also considered 'struck'. Their loud sound makes them suitable for the worship of terrifying deities (*drag-po*), and in *dge-lugs-pa* and *rnging-ma-pa* monasteries the chant-master uses them for guiding the other performers. Small *ting-shags* cymbals, whose resonance is very specific, are rarely used in communal rituals. The wooden *gandi* semantron, the length and proportions of which are defined in scriptures translated from Sanskrit, was formerly used to summon the monks for various activities but today is employed only to call them to the communal ceremony of the confession of sins held once or twice a month. In other circumstances it has been replaced by a gong (*mkhar-rnga*).

Instruments played by blowing are prominent in ritual music and are always played as pairs of identical instruments. Conches are known as *dung-dkar* (Sanskrit: *śankha*), and are a symbol of the proclamation to the world of Buddhist law. They summon the community to certain ceremonies, and their sound mingles with that of the *sil-snyan* and *mchod-rnga* in music played to accompany offerings. The task of blowing them is often entrusted to young novices. Trumpets 'of the legs of men' (*mi rus-pa'i rkang-gling*),

made from human femurs, are often replaced by metal substitutes with bells in a variety of shapes. On these are played short phrases that have names (when the instrument is mentioned in the text of a hymn or as part of the instrumental ensemble) referring to the number of times the player takes a breath, for instance 'breathing three times' (*gsum-'bud*), 'breathing five times' (*lnga-'bud*).

The telescopic metal trumpets known as *dung chen* or *rag-dung* are of different lengths, from about 1·70 metres to 3 metres or more (see fig.5). They are played in association with drums, cymbals, the bell and the *damaru*, during processions and in the interludes marking the different parts of a ritual. The repertories of different monasteries generally comprise a dozen pieces, known by descriptive names and associated with particular deities or rituals.

The shrill sounding oboes known as *rgya-gling* (fig.8) consist of a wooden pipe with seven equidistant finger-holes, a metal mouthpiece and a richly ornamented metal bell. They are played using a circular breathing technique that allows the performer to play continuously for over half an hour. The composition of pieces for *rgya-gling*, within a range that never goes beyond the octave, is based on the linking of melodic formulae indefinitely repeated and varied.

Although Tibetan iconography has included a kind of lute as an attribute of dByangs-can-ma (the Tibetan equivalent of the Indian goddess of speech and music, Sarasvatī) and to Yul-'khor-srung (the Tibetan form of Dhrtarāstra, king of the celestial musicians and guardian of the region of the east), no chordophones are played in the ritual music of Tibetan Buddhism.

Tibetan music, §II: Monastic music

4. Notations.

Tibetan notations, which have graphic conventions peculiar to different traditions, and to different monasteries within the same tradition, are principally concerned with the performance of chant during rituals. The term *dbyangs* ('vowel') is generally used to designate these chants, which are characterized by the introduction of meaningless syllables (*tshig-lhad*) between significant syllables (*tshig-rdzogs*) of the text. *dByangs* centre on a single note taken as a point of reference, its pitch and timbre being imperceptibly modified by various ornamental procedures, a process described by Ellingson (1979) as 'tone contour melody'.

These various types of notations and the commentaries accompanying them cannot be used in practice without the aid of oral tradition, of which the precentors (*dbu-mdzad*) are the repositories. They are aids to memory, giving no precise information about the pitch or duration of the sounds performed.

(i) Voice.

Notations for the voice (*dbyangs-Yig*, 'writing of *dbyangs* chants') are preserved in manuscripts and mainly reserved for the use of precentors; they are read from left to right. The beginning of the text to be chanted

(written in *dbu-can* or *dbu-med* script) is given along with the meaningless syllables (*tshig-lhad*) to be introduced between the syllables of the text. These may be in an invariable phonetic form (*ya/a*), or in a phonetic form that varies according to the nature of the preceding syllable, which they reproduce like an echo. Indications relating to the playing of the drum or cymbals accompanying the chant are marked. Neumatic signs in the form of curves placed above the syllables may be elucidated by commentaries in small characters placed between the lines of the text and the notation signs.

Figs.9–11 are taken from different traditions and show increasing complexity. Those of the *sa-skya-pa* school are the most straightforward, giving the text and the meaningless syllables, with small empty circles (*rnga-thig*) just above to indicate drum-beats. The undulating signs (*sbrul-shad*) placed vertically or obliquely above or below certain syllables define the movement of the drumstick before striking the drumskin.

Fig.9 shows the first line of a chant in praise of Mahakala, a protective deity of Tibetan Buddhism. The textual syllables, here numbered [1] to [7], were written in red ink, and the additional syllables (*tshig-lhad*) in black.

In fig.10 (from the *karma bka'-brgyud-pa* monastery, Dpal spungs) the same text is accorded a more elaborate notation. This notation has curves of a neumatic character and indicates the various 'modifications' to be made to each syllable – in respect to vocal timbre (changes in the supporting vowel sounds), attack, the introduction of various ornaments (single, double or triple *'gyur*) or the requisite dynamics, indicated by a thickening of the line – as well as indicating the drum-beats to be performed at the beginning of each neumatic sign.

Fig.11 shows a line of notation from the *dge-lugs-pa* tradition on three levels, consisting of regular curves surrounding the syllables of the text and the additional syllables (*tshig-lhad*). The upper and middle levels contain the words of the text, while the lower level is reserved for the *tshig-lhad*. Each syllable is surmounted by a small empty circle denoting the striking of the cymbals. Finally, the caesura after the first three syllables and before the last syllable of each nine-syllable line is indicated by a sign resembling a stylized lotus (encircled in the figure).

(ii) Drum and cymbals.

Various instructions for the playing of these instruments occur in manuals of vocal notations, often specifying the number of beats to be struck before or after a chant, for example 'three beats' (*gsum-brdung*) or 'nine beats' (*dgu-brdung*). This basic count may be modified by the addition of onomatopoeic effects (*ber*, *sbram*, *thang*) or extra beats, shown by the syllable *byas*, various types of 'responses', etc. Some monasteries collected the rhythmic formulae in specific manuals called either *rnga-grangs* ('count of the drum') or *rol-tshig* ('words of the cymbals').

In fig.12 the rhythmic formulae are classified according to the rituals in which they occur. Each beat is shown as a full circle, which may be small, medium-sized or large, depending on its intensity. These circles are surmounted by figures indicating the order of the strokes or their

arrangement within a formula. The undulating lines above indicate a tremolo for cymbals. In many cases the notations are complemented by a text or mantra, its syllables corresponding to a beat struck on the drum and/or cymbals.

(iii) Aerophones.

Notations that seem to be derived from vocal notations are used in some monasteries for playing conches (*dung-dkar*), short trumpets made of bone or metal (*rkang-gling*) or long telescopic metal trumpets (*dung-chen*/*rag-dung*). They differ from tradition to tradition. The most elaborate are for *dung-chen*, based on three sounds: a low (*'dor*), middle (*rgyang*/*skad*) and high sound (*tir*/*ti*/*nhi*).

Fig.13 illustrates the notation of two pieces for *dung-chen*. The first consists of a combination of two neumatic formulae. The notation begins with a *rgyang* played in a particular manner (*'or*) and continues with a *rgyang* held for some time (*rgyang-ring*), depicted by a rising curve swelling at the centre to indicate intensification of the dynamic and followed by a *rgyang* repeated more briefly (*rgyang-thung*). The *tir*, which follows directly, is depicted as a thin, descending line, before the repeat of a long *rgyang*. The central part of the next 'formula' is shown by a series of nine triangles with the syllable *ha* underneath, indicating a violent, broken sound.

The second, shorter piece is associated with the 'summoning' (*'gugs*) of the protective deities and is characterized by the use of a middle sound played very loud (*rtsags*) and a *tir* also played loudly, before a return to several middle sounds interspersed with sudden breaks (*rbad-bcad*), marked by maximum thickening of the line.

There are few notations for *rgya-gling* (oboes). Some are based on fingering, correspond to the playing holes; others, from the *dge-lugs-pa* monastery of rNam-rgyal-grwa-tshang (Ellingson, 1986), are syllabic.

Tibetan music

III. Traditional music

Tibetan music, §III: Traditional music

1. Folk music.

(i) Styles, melodies and folklorization.

Unlike the monastic tradition, Tibetan folk music is mainly vocal, with little independent instrumental music. Dances are invariably associated with singing, but not all songs are danced to. Rough distinctions can be made between the styles of central Tibet, Kham and Amdo, and more significantly between (semi-)nomadic, agricultural and pre-1959 'cosmopolitan' urban contexts such as Lhasa. However, these distinctions

fail to cover adequately what has evaded any indigenous systemization until recently. Research have largely focussed on central Tibet, with few references to peripheral regions such as Ladakh and Bhutan; compliations initiated in China since the 1980s have thrown light on local traditions in Kham and Amdo.

Traditional music is deeply infused with religion and, to some extent, with literature; the most famous Tibetan poetry evokes musical terminology. Traditional music has drawn on folktales as much as literary sources and, in turn, has inspired popular songs. For example, the 9th-century Dunhuang texts reproduce versified 'songs' (*glu* and *mgur-ma*) attributed to sovereigns and officials; the celebrated yogi Mi-la ras-pa (1040–1123) is held to be the author of 'songs' of religious experience (*mgur-'bum*); and the sixth Dalai Lama (*c*1710) is credited with composing famous 'love songs' (*mgul-glu*). A literary and Buddhist background is evident in the songs' morality and metaphors, but they also draw on oral traditions.

Traditional music, though mainly vocal, is sometimes accompanied by a *gling-bu* (flute) among peasants and nomads. Songs implying dance steps often use chordophones: the *sgra-snyan* (lute), most popular in western and central Tibet, and the *pi-wang* (fiddle), favoured in Kham. Songs are generally strophic, sometimes with refrains. The verses usually contain four lines, although this may vary between two and eight, and lyrics may be improvised with regional variations. The texture is normally monophonic, either solo singers or unison chorus. Antiphony is frequent, sometimes responsorial between soloists and/or groups. Heterophonic elements appear in overlapping antiphony.

Melodies tend to be melismatic with initial ascending, terminal descending and intermediate glides. Proficiency in ornamentation is considered the most important vocal skill. All regional song styles have their own ornamentations, mainly modulations of guttural sounds: *'gyur-khug*, *mgrin-khug* (central Tibet), *'gugs* (Amdo), *ngag-'gyur* (Kham) etc. The pastoral melodies are more ornate, have a wide compass (9th to a 12th), a tense vocal quality and rhythmic freedom. Agricultural songs reflect work rhythms and have a smaller compass, a relaxed vocal quality and little ornamentation. Urban songs have a more literary background and formal style, with more varied thematic material. Specialized vocal techniques also include the rhythmical narrations of *'bras-dkar* ('white rice', denoting auspiciousness), who perambulated at New Year giving good luck greetings to, and collecting donations from households, and the chanted recitations of the wandering *bla-ma*, who told edifying stories such as the biographies of saints and narratives of *lha-mo* theatrical plays (see §5 below)

Chinese policy has attempted to folklorize traditional Tibetan genres. State-supported troupes for the performing arts offer theatricalized versions of traditional music on stage, with elaborate costumes, modified voice timbres and metres, and Chinese and Western instruments accompany songs traditionally performed unaccompanied. Such troupes have a greater impact in Lhasa than in rural Tibet, where traditional singing and dancing has been highly resistant to state influence. A greater long-term effect may arise from the intense exposure, since the late 1980s, given to modern

Chinese and foreign popular styles, through television and cassettes. The Tibetan Institute of Performing Arts (in Dharamsala) has been set up to document and preserve the traditions of Tibet but has not managed to avoid folklorization. Before 1959 there was no notation for Tibetan traditional music; Chinese numerical transcription has become the standard method of notation, used both in Tibet and by Tibetans in exile.

(ii) Song genres.

The generic term for songs and dances is *glu-gar*. The recently forged terms *dmangs-glu* and *dmangs-gzhas* indicate 'popular songs', and the combined *glu-gzhas* is generic for 'songs'. The Tibetan differentiation between *glu* and *gzhas* is not clear. *Gzhas* tends to be more popular among the peasants of central Tibet and parts of Kham, whereas *glu* is more often used in western Tibet, Kham and Amdo, and among nomads. *Gzhas* can be danced to, whereas *glu* are entirely vocal. *Gzhas* tend to be rhythmical, with a fixed stanza structure (four hexasyllabic lines is the most common) and an emphasis on conveying the text (except *la-gzhas*, love songs from Amdo and Kham, and *gzhas-chen*, from central Tibet, which are closer to *glu*). *Glu* tend to be more melismatic, with an emphasis on ornate melody (except *glu-shags*, responsorial criticizing songs, and *gtsang-glu*, the songs from Tsang, which are closer to *gzhas*).

Glu represent a large category of songs of various lengths, for example *'brog-glu* (nomads' songs), *la-glu* (courting songs), *khram-glu* (robbers' songs) and *glu-chu* (friendship songs). In rural Amdo and Kham, *glu* is often applied to songs that mark stages in major festivals, often with religious content, such as those for the beginning of a celebration (*'go-glu*) and those recalling cosmology and history (*chags-glu*), as well as praises (*bstod-glu*) and lamentations (*smreng-glu*).

Kha-mtshar are light, humorous songs. *Tshig-kyag* (central and western Tibet), *glu-shags*, *la-kha* (Amdo) and *la-glu* are all repartee songs, a common and ancient feature of Tibetan singing. They metaphorically tease, criticize or verbally outwit an opponent. In Amdo, when the competition becomes too intense, someone will rise from the audience to sing a *bar-byol* or *bar-zhugs-pa'i glu*, which provides a quietening interlude.

La-gzhas (pronounced *layi*), by far the most popular regional songs of Amdo, are love songs between young people. Etiquette necessitates that they hide from their relatives, monks or elders, hence their name, 'songs for (hiding behind) the mountain pass'. *La-glu* is the term used among nomads and in parts of Kham, where they are sometimes called *(dga'-)gzhas*. Wedding songs appear at all phases of the nuptial ceremonies, sometimes involving specialist singers.

Work songs (now known as *las-gzhas*) are most popular in central Tibet but are also found in Amdo (where they are known as *ba-lo*). They accompany the agricultural cycle from ploughing to harvest and all the herding activities of the nomads (*glu*), as well as log-carrying, house-building and carpet-making. The tune and rhythm is determined by the nature of the job and the physical movements associated with it. *Ar-gzhas* (roof-smoothing songs) are sung in antiphonal lines with parlando elements.

Khrom-'gyur-gzhas were, until the 1950s, satirical street songs of Lhasa. They were an accepted anonymous way of lampooning prominent officials. *sTod-gzhas*, 'songs from western Tibet' (ex.1), have spread all over central Tibet and, recently, Amdo. The songs are accompanied by a *sgra-snyan* (lute) and a lively dance and are either performed solo or by a few performers. There are two main styles: the more jovial is from the Sakya area and the more reserved from Ngamring; the first has gained great popularity in Lhasa (see §3 below). *mNga'-ris sgra-snyan rdung-len*, songs from Amdo on the *stod-gzhas* model, have become very popular in Tibet since the 1980s. They are accompanied by the *sgra-snyan* (lute) and the mandolin. There are various other widespread singing customs: drinking songs, which have different tunes in each region; *mda'-gzhas*, the 'arrow songs' for archery competitions in Kongpo; *mo-gzhas* (Tsang) and *mgur-mo* (Kham), 'divination songs', often about love between young people; and children's songs (*byis-pa'i glu* in central Tibet, *shayi* in Amdo).

Songs have survived under the Chinese communists by going under cover or by adapting their lyrics to suit the new regime. Some standardization has taken place: complex and locally restricted arts have disappeared (e.g. *ral-pa* performances, *gzhas-chen* and *rbad*), whereas *sgra-snyan zhabs-bro* songs have now become the most dynamic popular tradition in central Tibet.

(iii) Song-and-dance.

Song-and-dance styles, linked to ceremonies and gatherings, vanished with the abolition in the late 1950s of the traditional religious context of celebrations. They were revived in the early 1980s in a somewhat impoverished form, in which sequences were abbreviated and costumes and songs had been lost. Some styles found their way in to the new official celebrations (*bro*, *sgor-gzhas*). Song-and-dance genres accompany important celebrations such as New Year, weddings, *'ong-bskor* (a field circumambulation in summer) and religious festivals. They are ceremonial, generally involving an introduction that confers good wishes, slow and fast sections, both divided into prescribed sequences, and an auspicious conclusion. They often present offerings and prayers to local gods and buddhas. Participants, both men and women, may number in the hundreds. Most songs are antiphonal and unaccompanied but may be punctuated by a stamping dance.

sGor-gzhas in central Tibet and *bro* in Kham are immensely popular dances performed in a circle, sometimes in concentric circles. *Gral-gzhas* are performed in a straight line. *Bro* has characteristic large movements with long sleeves, and songs are performed in a high and loud voice. *Gling-bro* refers to the epic hero Gesar. There are sometimes competitions between villages (*bro-brdung* in Kham, *sgor-gzhas* in central Tibet) that can last for a whole night. *Khams-gzhas* is a generic term, known to all Khampas as referring to the round dances performed in Kham accompanied by the *pi-wang* fiddle, with softer demeanour and less formal lyrics than *bro*. The most famous are the *'Ba'-gzhas*, from Bathang, whence the style originated. It also includes part of the *ral-pa* repertory, a complex performing tradition in which wandering, often family-based performers paid homage to Mi-la ras-pa. Accompanied by long-handled

drums, cymbals and bells, these performers executed spectacular spins, contortions and acrobatics (fig.14). They also performed popular songs on the *Khams-gzhas* model.

Gzhas-chen ('great songs') belong to a small group of songs believed to have been composed in the 7th century. They were performed as a ceremonial welcome for important guests, as well as for the arrival of the bride during a wedding. Men danced in armour, and women wore splendid jewellery. The performance was highly structured, with many sections and historical allusions. Related to this genre are the *rgya(l)-gzhas* of Tingri region, the *bro-chen* of Dechen (Kham) and possibly the *gar-shon* of Ruthog and Pureng (Ngari), although they are the only ones to use kettle drums and *sur-na*.

Songs-and-dances with military connotations included the *ljags-rkyang* and *rbad* of central Tibet, which stimulated heroism before the battle and honoured the protectors after victory. *rBad*, responsorial songs danced in armour, were included in *'ong-bskor* festivals and weddings. The still performed *jiare* of Drukchu and Thepo (in Amdo) involves the same general features and contains many epic stories. *Bro(-pa) gzhas(-ma)*, believed to have originated at the court of Trisong Detsen in the 8th century, are popular in Lhokha and Shigatse. In these, men dance while beating drums attached to their waists, and women sing. Dances of Amdo include *ldings-zlos* (pronounced '*dodi*'), a female ritual of Drukchu and Thepo, and *gar*, or *rtsed-rigs* (Labrang, Rebgong), which includes allusions to animals, for the solemn opening of a major festival.

Tibetan music, §III: Traditional music

2. 'Gar'.

Tibetan court music and dance (*gar*, 'dance') is performed by a troupe of dancing boys (*gar phrug-pa*) formerly maintained at the Dalai Lama's court. The accompanying ensemble (*gar-pa*) of paired kettledrums (*lda-man* or *brda-ma*) and oboes (*surna or bsu-rna*) also provided instrumental pieces for a wider range of ceremonial functions, connecting the tradition with the broader distribution of drum-and-reed ensembles throughout the Tibetan cultural area.

The core repertory comprises 'male dances' (*pho-gar*) and 'female dances' (*mo-gar*), supplemented by other dances including a sword dance (*dri-gar*) and those imitating certain animals or birds (e.g. the peacock dance, *rma-bya gar*). Except for the sword dance, which was performed by adult males, all were performed exclusively by the *gar phrug-pa* at court ceremonies for the Dalai Lama. These took place in the Assembly Hall of the Potala Palace on the first two days of the New Year (*lo-gsar*), at the great 'procession of the offerings of the assembly' (*tshogs-mchod ser-bang*) in honour of the fifth Dalai Lama, during the summer *zho-ston* festival held in the Norbulingka Palace, and at enthronements of Dalai Lamas and Regents.

Purely instrumental pieces were played by the *gar-pa* musicians when the Dalai Lama appeared in public ceremonies and spectacles, for example at the Jokhang temple during the Great Prayer Festival (*smon-lam*) and at the death anniversaries of past Dalai Lamas. Processional pieces (*phebs-rnga*,

'drumming for the [auspicious] descent') were played whenever the Dalai Lama embarked on an official journey. Variants were played when riding on horseback.

The main instrumental ensemble typically consisted of up to four each of *lda-man* pairs and *surna*, occasionally with the addition of a ten-piece gong-chime (*mkhar-rnga bcu-pa*). In less formal, indoor settings some *gar* pieces could be performed in the 'soft style' ('*jam-rol*), on a flute (*gling-bu*) and single pair of *lda-man*. Alternatively, *gar* tunes (*gar-glu*), including some dance-tunes, were sung by the *gar phrug-pa* as praise-songs (ex.2a). In such cases the loud drums and reeds were replaced by an ensemble of chordophones including the *sgra-snyan*, *rgyud-mang* and *pi-wang* (all common with the *nang-ma* ensemble), as well as two lutes that are now obsolete. These were the *tam-bu-ra* (apparently similar to the Mongolian *khiil khuur*, but plucked) and *ghan-chag* or *ga-ndza* (a bowed lute resembling the Central Asian *ghidjak*).

With the exception of similar ensembles maintained at some of Tibet's leading monasteries – notably Tashilhunpo (Zhaxiluenbo), the seat of the Panchen Lama – the *gar-pa* were almost exclusively maintained by the Dalai Lama's government in Lhasa as a guild, called *gar-pa'i skyid-sdug*, comprising about 70–80 members. The head of the organization (*gar-dpon*) had the status of a government official and was in charge of intense training and discipline. New recruits were selected from the provinces, as demand dictated, according to age, appearance and social class.

Gar pieces open with a non-metrical prelude (*sngon-'gro'i rag*, ex.2b) played by a solo *surna* (or *gling bu*, in the 'soft style'), freely accompanied by a single pair of *lda-man* with characteristic pulsating rhythms. The ensuing 'song' (*gar-glu*, ex.2c), whether sung or rendered instrumentally by the ensemble, is one of a number of set tunes, with the occasional addition of instrumental interludes ('*gyur-kha*). The *gar glu* melodies are strophic and bi-thematic, and the hexa- or heptatonic themes have long, often unequal phrases sustained in an even dynamic. When played loudly on the *surna*, a continuous line is maintained by staggered (rather than circular) breathing, in a heterophonic style with glides, trills and variations in vibrato speed and width. Throughout, the resonant drum-beats of the *ldaman* provide slowly-measured cadential patterns.

The origins of *gar* are uncertain. It is popularly believed to have evolved during the reign of Songtsen Gampo (620–49 ce), though the present instrumentation suggests a date no earlier than the Yuan period (1271–1368). Recent research suggests that *gar* is associated, though not exclusively, with the South Asian Naqqārakhāna. An important Tibetan treatise attributed to Sangye Gyatso (1688), Regent to the fifth Dalai Lama, attests that *gar* was introduced in the 17th century to central Tibet from Ladakh. Ladakh maintained a court ensemble of *lda-man* and *surna* for official ceremonies. The similarity of the instruments, contexts and musical forms with those found in *gar* suggests that Ladakh may have played a key role in the development of *gar* from earlier Middle Eastern traditions.

Gar began to decline even before the Chinese invasion. A form of syllabic notation (contained in the 1688 treatise), which seems to have been uniquely associated with *gar*, had already been forgotten when

performances ceased after the Dalai Lama's flight to India in 1959. In exile, official *gar* performances were revived in the 1980s in the service of the Dalai Lama's government and as part of programmes presented by its cultural organization, the Tibetan Institute of Performing Arts. Political reforms in Tibet led to a controlled revival under the guidance of Pa-sangs Don-grub Gar-dpon (*b* 1918), the last *gar-dpon* to have served a ruling Dalai Lama in Tibet itself.

Tibetan music, §III: Traditional music

3. Nang-ma.

Nang-ma has been termed by some observers 'the classical music of Tibet'. It was an essential background for the festivities of officials and noble families of old Lhasa, whence it spread to the city of Shigatse. Wealthy sponsors could invite amateur or professional musicians to perform. Performances involved singing, dancing, playing instruments or, for some lute players, doing all three at the same time. In the 1920s and 30s, the style expanded. Dance-songs from western Tibet (*stod-gzhas*, pronounced and sometimes transliterated *'töshe'*), and a few from central Tibet, were absorbed into the instrumental mould of Lhasa *nang-ma* music. Some *stod-gzhas* had already spread to Lhasa, but had not been influenced by genres in Lhasa. These new songs came to be known as 'Lhasa *töshe*'; '*nang-ma stod-gzhas*' referred to the performance style which alternated both types of song. It became the capital's most popular form of song-and-dance, and it has recently come back into favour.

The origins of *nang-ma* are unclear. Most Tibetan scholars usually place them in areas to the west of Tibet, as with *gar* and *stod-gzhas*, the name deriving from the Kashmiri *naghma*, meaning 'song'. Muslim musicians from Baltistan, Kashmir and Central Asia did play an important role in Lhasa. However, instruments such as the *yang-chin* (hammer-dulcimer), the *ho-chin* and the *dal-chin* (fiddles) are borrowed and/or derived from China, though the melodic patterns appear to be predominantly Tibetan. The musical structures are reminiscent of those of the *gar-glu* but have different melodies. The Lhasa minister Doring Pandita (rDo-ring bsTan-'dzin dPal-'byor) is said to have brought a *yangqin* from China in 1793 and to have established an instrumental ensemble by putting it together with the lute, flute and fiddle. He also introduced the Chinese *gongche* notation system (Tib. *kung-khre'i phu'u*), which was used until the 1950s.

The *nang-ma'i skyid-sdug* ('the *nang ma* group of mutual support through good and bad times') was the largest and most famous society performing *nang-ma* (and Lhasa *töshe*) in Lhasa, coming into prominence at the beginning of the 20th century. It performed for a few government functions, such as official autumn picnics (fig.15) and the Saga Dawa celebration held at the Lukhang, where it played on a boat in the middle of the lake. During the bathing festival, the society performed the *sa-gzhi las-mo*, a fixed set of *nang-ma* songs performed with special dances and costumes. The group comprised about 60 members, both men and women, including several aristocratic and merchant members and a few Muslim performers of Ladakhi, Kashmiri and Hui origins. Only 12 were full-time professionals who acquired great popularity, for example Rabsel Abdul Rehman, Bhayi Wali and bSod-nams sKyid-'dzoms. a-jo rNam-rgyal was the society's last

teacher and most famous member, who renewed the genre by creating Lhasa *töshe*. The society was disbanded after his death in 1942.

In contemporary Tibet there are about 48 *nang-ma* songs and 53 Lhasa *töshe*. The verses are generally in the standard *gzhas* metre of four six-syllable lines, with repetition of refrains after two lines in *töshe*. Subjects include greetings, good wishes, love and social life, as well as praises for buddhas, monasteries or one's birthplace. Some *nang-ma* songs are borrowed from the sixth Dalai Lama's 'love songs' (*A-ma-le-ho*, *Bya la bya*) or from the *tshig-kyag* songs (*rGya-gar shar*, *'Dzoms-pa rnam-gsum*). Famous *töshe* include *Jo-lags bKra-shis*, *sGam-pa la-mo* and *Zla-ba'i gZhon-nu*.

The composition of the accompanying instrumental ensemble is flexible and relies on the personnel available, usually having about six people. It may consist of two *sgra-snyan* (plucked lutes) and two *pi-wang* or *ho-chin* (fiddles), big and small, tuned to an octave; also a *'phred-gling* (side-blown flute) and a *yang-chin* (Chin. *yangqin*: 'hammer-dulcimer'). Additional bells, *ting-shags* and *'gyer-kha*, give a rhythmic pulse. All instruments play the same melodic line, which is the singer's melody, and the instruments follow the voice. Heterophony only comes from ornamentation, octave transposition and sometimes an ostinato provided by the lute. The *nang-ma* scale is mainly heptatonic. The prelude of *töshe* songs is pentatonic and the main part is usually hexatonic, sometimes pentatonic. After a prelude, which is different for *nang-ma* and *töshe*, there are two sections: a slow section for the song (called *dal-gzhas* for *nang-ma*, *rgyang-gzhas* for *töshe*) and a fast section for the dance (*mgyogs-gzhas* for *nang-ma*, *'khrugs-gzhas* or *khyug-gzhas* for *töshe*). The last section includes a song in *töshe* but not in *nang-ma*. Pieces conclude with a lively dance. However, the tripartition – prelude, song, dance – is flexible, and sometimes there is a concluding slow section, or there is no fast or slow section. A *töshe* generally ends with a standard coda. Unlike *nang-ma*, the melody in *töshe* is the same in both sections. In addition to the standard prelude (and coda for *töshe*), song sections are linked by an instrumental interlude that gives the singer a rest. This is a *'jog*, or 'vocal resting place'. It can appear inside a song (*bar-'jog*) or between the slow and fast sections (*mjug-'jog*). It takes the singer's last note, known as *ma-sgra* ('root sound'), and ornaments and extends this as a temporary tonic.

Banned during the 1960s and 70s because of its association with the Tibetan ruling classes, *nang-ma* and *töshe* music was revived at the beginning of the 1980s. The songs performed by government troupes display Chinese vocal and instrumental influence. However, some people have tried to revive the style from personal experience, in particular the influential bSod-nams Dar-rgyas Zhol-khang. In Tibet and in exile, *nang-ma* has shifted from a Lhasa-based privileged music to become an emblem of the elegance of Tibetan secular music. However, the traditional repertory has shrunk from 100 to about 15 songs. Since 1997, Lhasa has seen a new and very popular form of revival, the '*nang-ma* houses', a Tibetan version of the karaoke bars in which people from the audience sing and dance traditional *nang-ma* and *töshe* on a stage.

Tibetan music, §III: Traditional music

4. The Gesar epic.

A variety of epic narratives (*sgrung*) may have been performed in earlier times, but the one full-scale narrative now performed is the epic of Gesar (or Kesar) of Ling (*gLing Ge-sar*). The epic includes the story of Gesar's miraculous birth (in response to an appeal to the gods by the people of Ling, oppressed by demonic forces); his childhood and youth; the horse-race by which he wins the throne of Lingh and his first wife, Drukmo (*'Brug-mo*); and a series of episodes (more or less indefinitely extendable) in which Gesar encounters and defeats various human or demonic adversaries, in almost all cases the rulers of states surrounding Ling. The historical Kingdom of Ling was a small state in east Tibet, and the epic is important in east and north-east Tibet (Kham, Amdo). It is also found, however, in the far west (Ladakh, Baltistan). Many places throughout Tibet are associated with characters or events in the story. Gesar is an important figure in Tibetan folk religion and is associated above all with nomadic-pastoralists.

In traditional performance the solo bard (*sgrung-mkhan*), usually male, alternates between prose narrative and songs sung by the various characters in the story. The prose narrative is recited in heightened speech with exaggerated tonal inflections, also used for a variety of other traditional genres. The songs, each introduced by a mantra (usually *om mani padme hum hrih*), are sung to a small repertory of melodies that correspond to different characters, character-types or activities. While each singer has his own melodies, many of these tunes are widely known. Some singers use a large number of melodies, but many respected singers use relatively few. The emphasis is on the text; the short melody covers two (sometimes three or four) lines of text and is repeated until the end of the song is reached. The verse-form of the epic will fit any tune. The texts begin with an invocation to the character's patron deities and an announcement of the place and the character's identity. The body of the song frequently takes the form of prediction, divination, command or the boasting of a warrior.

The most respected singers of the Gesar epic are 'inspired' bards (*'babs-sgrung*) who are thought to be chosen by the gods while young through a shamanic-style illness, after which they are trained by a sympathetic lama. They learn the stories through visionary techniques and are sometimes thought to remember them from past lives, in which they took part in the story. When they perform, the epic is described as 'descending' on them. This may be represented in performance by the bard's hat, a symbolic device referring to the hat worn by Gesar himself.

Previously bards would travel, singing for a few days in each village, unless they attracted the patronage of a wealthy Gesar enthusiast and secured longer-term employment. In east Tibet especially, many wealthy families traced their descent from characters in the epic and were happy to employ a visiting bard. After the epic began to be written down (the oldest texts are from the 18th century) some of these families built up large manuscript collections of popular episodes. Not all, or even most, of the travelling epic bards were 'inspired'; others learnt the stories through listening to older bards or from manuscripts. 'Inspired bards' were regarded as the most

authoritative, however, and manuscript versions are often based on their performances.

The narrative may be understood in terms of the power of the Buddhist teachings and deities. Gesar and the other characters linked to high Buddhist patron deities inevitably win, however, employing all kinds of trickery and deceit in order to succeed, often exploiting the weaknesses (arrogance, pride, self-conceit) of their enemies. This provides a revealing glimpse into Tibetan folk religion, in which Buddhist deities are as much a source of magical power as guides to enlightenment. Gesar's enemies are either demons or adherents of the Bonpo and other 'heretical' (*mu-stegs-pa*) traditions, and consequently they must be converted or destroyed in order to establish the realm of the Buddhist Dharma.

In the late 19th century, a group of mainly *rnying-ma-pa* lamas of the *ris-med* movement, of whom the most prominent was *Mi-pham Rin-po-che* (1846–1914), developed an interest in Gesar, creating rituals in which he and other epic characters are treated as Tantric deities. This has continued until the present day, and some religious communities perform major rituals, *'cham* and other dance traditions using Gesar and other characters from the epic. *Mi-pham* and his colleagues were responsible for the first printed version of the epic, and other lamas have written episodes intended primarily as vehicles for Buddhist teachings. Not all lamas view the epic positively, however, and its performance was traditionally forbidden at the major Central Tibetan monastery of Drepung (*'Bras-spungs*), whose protective deity is sometimes described as antagonistic to Gesar.

The epic was suppressed along with other elements of traditional culture during the Cultural Revolution, but on the whole has been viewed positively by the Chinese authorities. A national campaign to preserve and record the epic was started in the 1980s. In recent years many manuscript episodes have been printed in Tibetan both in Tibet and among refugees, along with some transcriptions of performances by contemporary bards. The epic has been used as a basis for plays and a TV series (on Qinghai TV), and there have been experiments in performing the songs with instrumental accompaniment, but so far none of these has achieved much popularity in comparison with the traditional performance mode. Professional performances are relatively rare these days, but many Tibetans, especially from Kham or Amdo, know some tunes and sing parts of the epic for pleasure, alone or with friends.

Tibetan music, §III: Traditional music

5. Lha-mo.

(A-lce) lha-mo is often translated as 'Tibetan opera' but is better described as 'Tibetan musical theatre'. It depicts Buddhist concepts such as Karma, renunciation and compassion, but it is a secular art form, distinct from the ritual monastic dances (*'cham*). There is a clear division between the numerous amateur troupes of Tibet (reconstituted in the 1980s after a 19-year ban) and members of the professional Tibetan Institute of the Performing Arts, who perform *lha-mo* in a relatively traditional way, and the professional troupes within the Tibet Autonomous Region, who play an abbreviated and reformed style of *lha-mo*. The most famous of these is the

Bod-ljongs Lha-mo tshogs-pa (more commonly called by the Chinese Zangju tuan), the TAR Opera Troupe of Lhasa.

A-lce lha-mo ('elder sister, female celestial'), from the name of a character in the prologue, originated in central Tibet. It may have been drawn from sources such as the ceremonial spectacles of the Tibetan imperial period (7th–9th century), local songs and dances and Indian Buddhist drama. However, the founding of a specific theatre tradition in Tibet is ascribed to the 15th-century yogi and scholar Thang-stong rGyal-po. During the reign of the fifth Dalai Lama (17th century) the *bkra-shis zhol-pa* style was created, still performed today and sometimes called 'white mask *lha-mo*', from the colour of the main character's mask in the prologue. It is considered a precursor of the 'blue mask *lha-mo*' style, which has more eleborate stories and melodies and which developed into the *lha-mo* style of today (fig.16). The Zho-ston ('yoghurt festival'), established in the 17th century, celebrated the end of the monastic summer retreat. This became a major theatrical festival organized in Lhasa by and for the Tibetan government. Twelve troupes of performers from central Tibet were required to leave their fields and travel to Lhasa to perform for the Dalai Lama's court. The sKyor-mo-lung group, whose traditions are perpetuated by both the Tibetan Institute of Performing Arts and the Zangju tuan, was the only professional one, with famous performers such as A-lce Dvangs-bzang, mig-dmar rGyal-mtshan and Nor-bu Tshe-ring. By maintaining strict control over the quality of performances, the institution of the Zho-ston greatly encouraged *lha-mo* and inspired the lamas of Amdo and Kham, studying in Lhasa, to found troupes when they returned home.

All the troupes of these regions were of monastic origin. *Lha-mo* was widely performed in Kham only from the beginning of the 20th century and was greatly influenced by local *'cham* performances and traditional music. In Amdo, where the performance style is the most remote from that of central Tibet, the theatrical tradition is very recent (since the 1940s). It is called *rnam-thar* and uses new stories, local music and dialect. The southern region of Mon (rTa-wang) also has a distinctive *lha-mo* tradition dating from the end of the 19th century.

The written form of a narrative is called *rnam-thar* ('spiritual biography'), a term generally reserved for a high lama's spiritual path. Each troupe adapts the text into a *'khrab-gzhung*, a libretto separating dialogues, narrated and sung episodes. The plays number only eight, although there may have been four or five more stories in the past, and they invariably bear as a title the name of the hero or heroine. The stories are either adaptations of Indian tales (*Dri-med Kun-ldan, gZugs-kyi Nyi-ma, 'Gro-ba bZang-mo, Chos-rgyal Nor-bzang, Padma 'od-'bar* and possibly *gCung-po Don-yod Don-grub*) or local legends (*sNang-sa 'od-'bum*) and historical events (*rGya-bza' Bal-bza'*). During the Cultural Revolution only one Beijing-model opera was performed in Tibetan: *lGang-bzhu dmar-po* ('The Red Lantern'). Since the 1980s many new librettos that diverge from the traditional lines have been compiled in the professional work units in Tibet. In exile, the new plays have remained closer to *a-lce lha-mo*.

Tibetan musical theatre contains ritual elements, chiefly in the prologue and the finale. Performed during the harvesting season, it is linked with the

propitiation of local gods in order to ensure prosperity. It can also be performed in the winter season for money. Traditionally it is performed outdoors, under an awning in a monastery courtyard or on a village threshing ground, surrounded by spectators. One play lasts the entire day, sometimes two or three days. *Lha-mo* was traditionally sponsored by wealthy people, monasteries or the Tibetan government for Zho-ston; it is now funded by local administrations in Tibet. Troupes comprise 10–20 actors, mainly agricultural workers and sometimes including a few women, who were banned from the stage during the pre-1959 Zho-ston. Before the 1950s, actors in Kham and Amdo were mainly monks. This was rare in central Tibet, but one monastic troupe did acquire great fame, the *rMe-ru spro-gseng* of Lhasa, which acted out satirical imitations of officials. Some masks are used, either flat ones worn on the forehead or full masks to represent gods and demons; make-up is rare and costumes bright. Professional government troupes within China perform on a stage inside a theatre, rather than outdoors. The plays are shortened to three hours and are revised along political lines or are new. These use modern instrumental music and ballet dances; the actors do not wear masks, and they use facial expressions inspired by the operas of the Cultural Revolution.

A *lha-mo* performance consists of three sections: *'don*, *gzhung* and *bkra-shis*. The standard prologue purifies (by the *rngon-pa*, hunter-fishermen) and consecrates (by the *rgya-lu*, princes) the stage and calls on female celestials (*lha-mo* or *rigs-lnga*) to sing and dance. Offerings and prayers are made to the image of Thang-stong rGyal-po, erected on the altar on the stage. The second section is the drama itself, overseen by a performance master who narrates the plot and regulates the length of the performance by summarizing or expanding scenes. In the last section the actors sing valedictory praises and wishes for prosperity, while the sponsors offer ceremonial scarves and restitution.

The main part of the play alternates narration, songs, dance and *srub-'jug*, comic interludes with improvisation and mime. Scenes are cut with stylized dances sometimes accompanied by songs – either slow (*dal-'khrab*) or fast (*mgyogs-'khrab*). The instrumental music, restricted to a drum (*rnga*) and a pair of cymbals (*sbub*), provides the pulse for either the prelude or interlude dance motives. In Kham, monastic instruments such as *dung-chen* (long trumpet) and *bsu-sna/surna* (oboe) are also used. In Amdo, a large instrumental ensemble is used, with *yang-chin* (hammer-dulcimer), *pi-wang* (spike fiddle) and *gling-bu* (flute).

Narration (*kha-bshad*), both in metred verse and ordinary speech, is given by the teacher of the troupe in a parlando *recto-tono* style. Fast and rhythmic, this chant ends with a vigorous shout, the cue for the actor to enter the stage and/or start singing. The *lha-mo* songs, called *rnam-thar*, are the most spectacular musical features of the performance. These are alternate monologues interspersed with dances, in verses generally composed of two lines of nine syllables. In Kham and Amdo they are closer to local songs, but in central Tibet they are uttered in a unique and tense gutteral style. They have initial upward and terminal downward glides, in free rhythm and metre with a register of about an octave. The melody line is ornamented with glottalizations (*mgrin-khug*). This throat vibration varies regionally and according to the status of the character portrayed; for

instance, slow and detached vibrations represent a king. The antiphonal chorus is performed by everyone on the stage, giving rise to heterophony between the singer and the chorus and within the chorus itself.

The main character sings only one melody throughout the play, in two styles designated by their length: *rta-ring*, long melody, and *rta-thung*, short melody. *Rta-ring* is the most ornate, sung in a solemn context, whereas *rta-thung* is easier to sing and gives the singer a rest. These personal melodies cannot be borrowed by other characters or used in other plays, though there are also melancholy (*skyo-glu*) and common tunes (*dkyus-gdangs*) that can be sung by anyone in the right context. Recent innovations include tunes mixed with traditional songs (*gzhas-ma rnam-thar*) and inverted tunes (*gdangs-log*). Composers associated with government troupes within China have now broken the restriction of singing only one *rnam-thar*, and tunes are mixed with those from different characters and different plays. The most striking feature of their modernization of *lha-mo* is the accompanying orchestra comprising Tibetan, Chinese and Western instruments.

Tibetan music, §III: Traditional music

6. Instruments.

Except for drums and cymbals, traditional music uses different instruments from those used in monastic music, and different instruments are used in different areas. As traditional music is chiefly vocal, instruments mostly accompany singing and dancing. Apart from instrumental versions of *nang-ma* or traditional songs, and the long preludes for *gar* and *Khams-gzhas*, purely instrumental music is rare.

(i) Idiophones.

Sbub-chal are loud brass cymbals (used in *ache lha-mo*), and *sil-snyan* are small cymbals (used in *ral-pa*). *Ting-shags* are a pair of small cymbals linked by a lace of leather. The *(g)shang* is a large flattened bell with an internal tongue (used for *ral-pa*). Rows of bells fixed on to a strap are called *'gyer-kha* (used in *nang-ma*), and *chu-ril* comprises four rows of bells decreasing in size (used in *dodi*).

(ii) Membranophones.

The *rnga* is a double-headed frame drum and may be large (*rnga-chen*) or small (*rnga-chung*). It either has a long handle held in the left hand (used in *A-lce lha-mo* and *ral-pa*), or is fixed on to the dancer's waist as in *bro*, Central Tibet. In the *klu-rol* festival of Rebgong (Amdo), a single-sided metal-framed drum, *rnga*, with calf skin and a short handle is used. *brDa-ma* (or *lda-man*) are kettledrums akin to the Indian *tabla*, mounted on a metal (in *gar*) or wooden frame (in the *gar-shon* of Ngari).

(iii) Aerophones.

Gling-bu (flutes) are either end-blown (*gzhung-gling*) or side-blown (*phred-gling*). They are made of bamboo, apricot-wood, sandalwood, eagle or vulture bone (*dung-rus gling-bu*), or, rarely, of copper (*zangs-gling*) for the vertical wide-mouthed flute used in parts of Amdo. Archaeological finds also show ocarina-type clay flutes (*rdza-gling*). Flutes may be single or

double, and all have seven finger-holes. They are used in most traditional musics. The *bsu-sna* or *sur-na* are oboes made of wood. They are very similar to the *rgya-gling* monastic oboe, but they have a different sound and are not played with circular breathing. They have seven holes in the front and a thumb hole on the back. They are used in *gar*, *gar-shon* of Ngari, and traditional music of the Himalayan borderland regions such as Ladakh, its neighbouring regions and Sikkim. The jew's harp *kha-wang* (Amdo, Kham) or *gugzi* (nomads of Ngari) is a slit bamboo plate held in the mouth, vibrated with the voice and a piece of string; sometimes jews harps are also made of brass or iron).

(iv) Chordophones.

The small spike fiddle called *pi-wang* in traditional contexts, and *ho-chin* in *nang-ma* music, is related to the Chinese Huqin. Either tenor (*ho-chin*) or bass (*dal-chin*), it has a long wooden neck and a cylindrical sound box often made of wood, bamboo or yak horn. The back is open and the front of the sound box is covered by sheep skin (*pi-wang*) or python skin (*ho-chin*). The two strings, often tuned a 5th apart, have a horse-hair bow, shorter than its Chinese counterpart, running between them. Fingering techniques are different from those used in China. A few instruments have two double strings. The three-string spike fiddle, *ghan-chag*, of Kashmiri type with an external bow and silk strings, is used in *gar-glu*.

The plucked lute *sgra-snyan*, 'pleasant sound', found in traditional music throughout the Himalayas, is called *rgod-po* in parts of western Tibet and *mNga'-ris sgra-snyan* in Amdo. It has a long unfretted neck and is played with a plectrum. In central Tibet there are various sizes, usually a big and a small one. The three double strings are tuned to *B–B–e–e–a–a* in Tingri or *B–B–e–e–A–A* in Lhasa. The instrument has three or five strings in Nepal, seven strings in Bhutan. It is made of peach wood, rarely sandalwood, apart from the lower part of the sound box, which is covered by goat- or python skin. Traditionally strings were made of horse-hair or silk; today they are made of nylon. The *tambura*, a lute plucked with the fingers instead of a plectrum, is used in *gar-glu*. The necks of both the *pi-wang* and *sgra-snyan* end in carved animal-heads (horse, dragon, eagle, sea monster), which may allude to the shamanic symbolism of the steed carrying the consciousness to another experiential realm.

The *yang-chin*, from the Chinese *yangqin* ('foreign zither'), is a hammered dulcimer. Sometimes called by the Tibetan *rgyud-mang(s)*, 'many strings', it has a wooden trapezoidal box resonator and 25 strings that pass over movable bridges. It is played with two soft-headed sticks and is used in *nang-ma*.

The origin of Tibetan chordophones is difficult to assess. Literary sources mention these three types of Tibetan instrumments, but terminological confusion makes it difficult to ascertain exactly what they were like. Influences on the *sgra-snyan* might have reached Tibet through India or Central Asia and those on the *pi-wang* through Central or Inner Asia and/or China. The hammered dulcimer may have originated in Europe or the Middle East around the 15th century and spread eastwards to Tibet, probably via China.

IV. Contemporary pop music.

Tibetan contemporary pop music first appeared in the early 1980s, primarily from singers who belonged to official Performing Arts work units, such as TAR or Lhasa song-and-dance troupes (*bod-ljongs glu-gar tshogs-pa* and *lha-sa glu-gar tshogs-pa*), for example Chamba Tsering. Pop music was influenced by two major sources: the music of Tibetan artists outside of Tibet (living in India or Nepal), whose songs were remixed and recorded, usually with different words; and Western music refashioned by Chinese artists, including contemporary pop and rock music and Italian opera.

The first singer to become popular all over Tibet was Dadron. Her first album came out in 1990 before she moved to the USA in 1994. Soon after Dadron made her appearance, a new generation of young singers who had not been members of any official troupe emerged; of these about ten performers or bands have become well known. Most are self-taught, non-professional performers, and their cassettes are usually privately produced, (sometimes homemade) recordings with non-official distribution. Despite the obvious influence of Dadron, each performer has his or her own form of expression in various vocal and musical styles, from 'mellow slow' to 'medium hard-rock' and different traditional sounds.

Contemporary Tibetan pop music is closely connected to traditional folk music. The musicians come from many parts of 'ethnic' Tibet: Karma comes from central Tibet, Yadong from Kham and Jamyangkyi from Amdo. Folk melodies from the artists' home regions have undoubtedly inspired them, and most of the singers have performed traditional songs at some point in their careers (some starting as traditional singers), either with traditional instrumentation or in remixed rock versions.

Though many performers rarely compose their own songs, they can usually choose the composers and lyricists with whom they work. The lyrics often deal with traditional subject-matter, describing Tibetan life or retelling cultural classics such as the Gesar epic or the love song *ma-skye a-ma'i*, written in the 18th century by the sixth Dalai Lama.

In 1997 *nang-ma-khang*, sometimes called Tibetan karaoke, appeared in Tibet. A *nang-ma-khang* is a bar decorated in Tibetan style where pop singers, traditional singers and musicians, both working independently or from official work units, perform music ranging from traditional (*nang-ma*, *stod-gzhas*, *lha-mo*) to contemporary pieces, including Indian and Western rock and pop.

Tibia.

Ancient Roman wind instrument (an Aerophone). It is occasionally referred to as a *fistula* (Lat.: 'pipe'). In construction and function it is substantially the same as the Greek Aulos; the existing differences resulted from the divergent histories of the two nations. The tibia played a very prominent role in Etruscan life, appearing with conical bell-extensions on the pipes to

increase the volume. Professional players performed during the lying-in-state, sacrificial rites and magic lamentations for the dead, and a tibia would often lead the dance in banquet scenes, accompany a boxing match, follow the hunt or even accompany the scourging of slaves. The instrument formed an essential ingredient in marriage ceremonies. It was equally important to the early Romans. Ovid's verses, which relate that 'the tibia sang in the temples, it sang in the games, it sang at mournful funeral rites', are corroborated by the abundant iconographic evidence showing it being played in precisely those circumstances (see illustration) and also in wedding processions, at formal meals and as an accompaniment to manual work.

Roman tibia players (*tibicines*) were organized during the republic in the guild-like *collegium tibicinum romanorum*. Plutarch listed the *tibicines* as the first of the trade groups organized by the ancient Roman king Numa. There is an element of myth about this, but nevertheless it affirms the long-standing importance of the tibia, as does the legend of the tibia players' strike, told by both Ovid and Livy. In 309 bce the tibia players were discontented because certain of their privileges had been curtailed – in Livy's version, their ancient custom of eating in the Temple of Jupiter – and they therefore went into voluntary exile at Tibur. The Senate, distressed that the sacred rites might be unaccompanied by tibia playing, managed to get the players drunk, load them into a cart and return them to Rome before they had recovered full consciousness. Their former privileges were restored, and in addition the tibicines were permitted once a year to go about the city in full regalia playing their instruments; this was the origin of the mid-June festival called the *Quinquatrus minores*.

In 204 bce, during the second Punic War, the orgiastic cult of the Asiatic Magna Mater Cybele was introduced at Rome. Festivals lasting several days were held each year to commemorate the dedication of her temple on the Aventine. The cult image of the goddess was carried to the music of cymbala, tympana and cornua. A particular variation of the tibia, the 'Phrygian aulos', was associated with the cult, a type in which one of the two pipes was longer than the other and terminated in an abrupt hook-like semicircle. (For illustration *see* Aulos, fig.2.) The Romans referred to it as the *tibia berecyntia* after a Phrygian mountain, sacred to Cybele. It was also played during the orgiastic dances of the priests in the temples. The instrument was prominent in Roman literature and iconography and appeared also in the cult of Dionysus and in the theatre.

Its theatrical use again followed Etruscan precedent. By the time of Plautus (*c*254–185 bce), *tibicines* performed a prelude at the beginning of the play, accompanied the sung portions (*cantica*) and certain spoken verse passages, providing also music between the acts and accompaniments for dance interludes. *Tibicines* from the slave classes were commissioned to compose the music for Plautus's *Stichus* and for the six surviving comedies of Terence (*c*190–159 bce).

During the later republic and early empire members of the municipal Roman *collegium tibicinum* were freedmen, whereas the trumpeters of the state religion held the rank of priest. With the conquest of Macedonia in 167 bce and the destruction of Corinth in 146 bce Greek actors and

musicians had flooded to Italy, and guilds of 'Dionysiac artists' provided all the personnel needed for staging public festivals. This increase in theatrical activity, with which went an improved social status for actors and players, induced even emperors to compete with professional musicians. So the tibia gained the loftiest patrons and devotees.

Apart from its religious use, the tibia of imperial times seems to have been played mostly in the theatre, where a prominent figure was the *scabillarius*, a kind of theatrical music director who played the tibia while beating time with his foot on the Scabellum. Meanwhile the tibia was developed in size and technical capacity like other Roman instruments: one illustration of tibia shows pipes over a metre in length. Only one factor limited its role in comparison with the Greek aulos: the general richness and variety of Roman wind instruments, such as the tuba (*see* Tuba (ii)), Cornu and Lituus with their obvious suitability for military and ceremonial functions, and the remarkable Hydraulis.

Since the Greek aulos had ethical connotations, it is important to question whether the Roman tibia had them also. There seems almost to have been a reversal of the Greek ideas. In republican Rome the memory of the ancient and honourable history of the tibia gave it a quasi-sacred status whereas the Kithara was looked upon by the conservative and agrarian Romans as a symbol of Greek refinement and luxury, recently imported along with the other spoils of war from the sacking of Corinth in 146 bce. However, in time, the Greek string instruments came to be generally accepted; Horace put it thus: 'And you, the tortoise [chelys lyra], at one time neither welcome nor much heard, are now cherished in the temples and at the tables of the rich'. Roman authors even went as far as echoing the Greek preference for the lyre to the aulos: Horace called the sound of the lyre Dorian and the sound of the tibia barbaric. But this was a literary conceit rather than a description of contemporary attitudes. Just as Greek ethical ideas were firmly rooted in actual Greek experience, so the central position the tibia occupied in Roman musical history prevented the development of any seriously negative ethical ideas concerning it.

It should be noted that Tinctoris (*De inventione et usu musicae*, *c*1486) used the term *tibia* to refer to a shawm.

Tiburce, François.

See Tiburtius van Brussel.

Tiburtino, Giuliano [Giuliano Bonaugurio da Tivoli]

(*b c*1510; *d* Rome, 16 Dec 1569). Italian instrumentalist and composer. He belonged to a family of professional men and landowners in Tivoli. In 1532 he was recruited by Guidobaldo della Rovere, then Prince of Urbino, to perform in a play in Pesaro. Having acquired a reputation as an accomplished player of the violone, as Silvestro Ganassi pointed out, Tiburtino entered papal service; in 1545 he was listed as a 'musico' at the court of Paul III. By 1552 he had taken clerical orders and in 1564 he was still in the papal employ.

Two volumes containing music by Tiburtino were printed by Scotto in Venice in 1549. *Musica diversa a 3 voci* is a collection including a *Missa de Beata Virgine*, 11 motets (nearly all on Marian texts) and a dozen madrigals. Tiburtino's choice of three-voice texture for the whole of this somewhat unusual mixture of genres suggests that the pieces might be paraphrased reworkings of well-known compositions. Awkward spots in the counterpoint and the melodic angularity of the middle voice would seem to betray the hand of an arranger, and not a highly skilled one at that. For the sacred pieces no proof of this has yet been found. Among the madrigals (all written *a note nere* in the fashion of the 1540s), however, there are several confirmed instances of paraphrase; an example is *Quand'io pens'al martire*, a fussy but rather literal reworking of Arcadelt's madrigal of the same name.

To the second 1549 print, *Fantasie et recerchari a 3 voci*, Tiburtino contributed a fantasia and 12 ricercares, textless but described as 'suitable for singing or playing on any sort of instrument'. The volume also contains a few madrigals by Willaert, Rore and others, as well as a group of ricercares by Willaert. Willaert's ricercares were reprinted several times in *Fantasie, Recercari Contrapunti* (Venice, 1551, 3/1593), a collection similar in title to the 1549 print but omitting Tiburtino's pieces.

Tiburtino's ricercares are unlike those of Willaert and are closer in style and technique to the glosas and fantasias of Mudarra, Valderrábano and Pisador than to any Italian ricercares. All are based on hexachord themes, at least several of which are derived from well-known works such as Josquin masses and are monothematic, making use of rhythmic transformation, transposition and a variety of contrapuntal combinations of

the theme. In general they show a more skilful hand at work than do Tiburtino's vocal works.

JAMES HAAR

Tiburtius van Brussel [Bruxellensis] [Berghe, Frans van den]

(*b* Brussels, *c*1605; *d* Lier, 5 Feb 1669). Flemish composer. Frans van den Berghe was his baptismal name; he is sometimes erroneously referred to as François Tiburce. He was admitted to the Capuchin order in Bruges in 1625 and was ordained priest some time after 1629. In 1660–61 he became father superior of the monastery at Hasselt. He died of the plague while tending victims of it at Lier. According to Miraeus he is the anonymous composer of the melodies for two sacred songbooks, the texts of which were written by two other Capuchins. The first, by Lucas van Mechelen, comprises *Den bliiden requiem* (1631), *Het cloosterken* (1639) and *Den droeven alleluia* (1674), all three being reprinted together in 1688–9. Music is found only in *Den bliiden requiem* of 1631, with a treble and bass for each text; in the 1688 reprint this music is contained in a separate volume. Moreover, as was usual at the time, each text was furnished with indications for one or more tunes from the widely known Dutch, French, Italian and Latin repertory of song and dance melodies. Both methods were also used in the other songbook, *De gheestelycke tortel-duyve* (1648) by Gabriël van Antwerpen.

WORKS

GODELIEVE SPIESSENS

Tichatschek, Joseph (Aloys) [Ticháček, Josef]

(*b* Ober-Weckelsdorf [now Teplice, nr Broumov], 11 July 1807; *d* Blasewitz, nr Dresden, 18 Jan 1886). Bohemian tenor. He had his first music lessons from his father Václav Ticháček, and sang in the choir at the Broumov Gymnasium. In 1827 he was sent to study medicine in Vienna, where he had singing lessons from Giuseppe Ciccimarra, and in 1830 he joined the chorus of the Kärntnertortheater. He soon progressed to comprimario parts, and made his début as a principal in Graz in 1837. He sang in Vienna that year, and also made his Dresden début on 11 August 1837 in the title role of Auber's *Gustavus III*; the following year he was appointed to the Dresden Hofoper. With Wilhelmine Schröder-Devrient, from whose friendship and advice he greatly benefited, and the baritone Anton Mitterwurzer, Tichatschek helped the Dresden Opera set new standards of singing. In 1841 he sang at the Drury Lane Theatre (as Adolar, Tamino and Robert le diable), as well as in Manchester and Liverpool. He was pensioned in 1861 but continued to make appearances until 1870, his voice being remarkably well preserved. His repertory included the principal tenor parts of *Idomeneo*, *Die Zauberflöte*, *Fernand Cortez*, *I Capuleti*, *La muette de Portici* and *La dame blanche.* His range included lyric tenor and *Spieltenor* parts, but he was also the prototype of the Wagner *Heldentenor*, creating the title roles of *Rienzi* (20 October 1842; see illustration) and *Tannhäuser* (19 October 1845).

All opinions agree on the beauty and brilliance of Tichatschek's voice. Cincerus praised his range of expression, even production, intonation and enunciation, although he had reservations about his coloratura. In 1840 Otto Nicolai called him the greatest German tenor, and Cornelius was deeply moved by his Lohengrin in 1867 (although King Ludwig II of Bavaria was in the same year distressed by his unromantic appearance in the part). Berlioz described him in the role of Rienzi as 'brilliant and irresistible … elegant, impassioned, heroic, his fine voice and great lustrous eyes marvellously effective'. Liszt thought he would be ideal for the role of Cellini and, in a letter to Wagner dated 20 February 1849, described him as 'an admirable artist and a charming comrade and friend'. Wagner, while also liking Tichatschek and admiring his singing ('a brisk and lively nature, a glorious voice and great musical talent'), found him childish and unable to portray 'the dark, gloomy, demonic strain in Rienzi's character'. Tichatschek's simple devotion to his voice, his appearance and his costumes were exclusive of any fuller dramatic perception, and he horrified Wagner at the première of *Tannhäuser* by addressing his outburst in praise of Venus with great passion to Elisabeth.

JOHN WARRACK

Tick, Jacobus.

Composer and choirmaster active in the southern Netherlands, possibly related to Henricus Tik.

Tie.

In Western notation a curved line between two notes of the same pitch indicating that they form a single note with their combined values. It is used to connect notes separated by a bar-line, and first appeared thus in the *Recerchari, motetti, canzoni* of Marco Antonio Cavazzoni (1523 – a notable publication in many respects; *see also* Leger line). The tie also facilitates the notation of values that cannot be written as a single note, such as seven quavers (which may be written as minim tied to dotted crotchet) or five crotchets (which may be written as dotted minim tied to minim). Ties were used in early figured basses to show the durations of the different harmonies to be sounded over a held bass note. Bebung was indicated in

clavichord music by a tie with dots below; and Beethoven's late piano sonatas contain several examples of repeated notes joined by a tie which demand gentle reiteration, as in the Adagio of the Sonata in B♭ op.106.

<div align="right">RICHARD RASTALL</div>

Tieck, (Johann) Ludwig

(*b* Berlin, 31 May 1773; *d* Berlin, 28 April 1853). German poet, dramatist, translator and editor. He received his early education in Berlin, where he developed a close friendship with the writer W.H. Wackenroder. After briefly pursuing theological studies at the universities of Halle and Göttingen (1792–3), he made his reputation as a writer of prose fiction with a series of *Bildungsromane* including *Peter Leberecht* (1795), *William Lovell* (1795–6) and *Franz Sternbalds Wanderungen* (1798). His interest in German folk and fairy tales led to the publication, in 1797, of three volumes of *Volksmärchen*, many of which later appeared in *Phantasus* (1812–17), a collection of stories linked by disquisitions on literature. He commemorated Wackenroder's death in 1798 with *Phantasien über die Kunst für Freunde der Kunst* (1799), a volume of his essays to which Tieck appended four chapters, all on musical topics: 'Unmusikalische Toleranz', 'Die Farben', 'Die Töne' and 'Symphonien'. At the same time he joined the circle of young Romantics gathered around the Schlegel brothers and Novalis in Jena. After periods of travel in Italy (1805–6) and England (1817), he settled in Dresden in 1819, and six years later accepted a post as dramatic advisor to the Dresden Theatre. Celebrated for his spirited readings of plays and lyric poetry, Tieck was appointed reader to King Friedrich Wilhelm IV of Prussia in 1841. Although he continued to write imaginative prose during his later years in Dresden, Potsdam and Berlin, he devoted himself increasingly to editorial projects, including the preparation of his own collected works and those of Heinrich von Kleist.

Tieck's long career brought him into contact with many leading musicians of the day. He had a long association with J.F. Reichardt, for whom he wrote a Singspiel text, *Das Ungeheuer und der verzauberte Wald* (1798), which, however, the composer did not set. Their subsequent collaboration on the Romantic opera *Sakontala* was cut short by Reichardt's death in 1814. Tieck was also well acquainted with Spohr and Weber (the latter often attended his dramatic readings in Dresden), and came into regular contact with Mendelssohn during his years in Berlin. He oversaw the 1841 and 1843 productions of Sophocles' *Antigone* and Shakespeare's *A Midsummer Night's Dream* for which Mendelssohn provided choruses and incidental music, although neither was a wholehearted supporter of the other's efforts. Not surprisingly, music plays a significant role in Tieck's literary works. *Musikalische Leiden und Freuden* includes detailed discussions of vocal techniques, prescriptions for a German operatic style grounded in folksong, lively accounts of the contemporary operatic scene and a plea for fidelity to the scores of his favourite composers, Mozart and Gluck. More important still is the outlook on musical aesthetics articulated in his contributions to *Phantasien über die Kunst*. In 'Symphonien', he describes instrumental music as 'independent and free, subject only to its own laws', and capable of 'fantasizing easily but without purpose'. Thus

Tieck's view at once draws on the Kantian notion of free or independent beauty and prefigures the theory of absolute music later espoused by E.T.A. Hoffmann.

Tieck's literary ouput in turn served as a source for several generations of German composers. His lyric poetry was set by figures ranging from Reichardt, Zelter, C. Kreutzer, L. Berger, Weber, Schubert and Spohr, to R. Franz, F. Hensel, C. Loewe, Mendelssohn, A. Dietrich, Hauptmann and even Hindemith. Brahms's *Magelone Romanzen* op.33 count among the most accomplished responses to Tieck's verse. The libretto of Spohr's *Pietro von Abano* (1827) was based on Tieck's novella of the same name, and Schumann's *Genoveva* (1847–9) not only drew on a tragedy by C.F. Hebbel but also on Tieck's *Leben und Tod der heiligen Genoveva*. His poetic works provided a modest but notable stimulus to musical creativity.

JOHN DAVERIO

Tieferlegung

(Ger.).

See Register transfer.

Tieffenbrucker [Dieffopruchar, Dieffoprukhar, Duiffoprugcar, Thiphobrucar, Fraburgadi].

German family of string instrument makers. They originated in the small village of Tieffenbruck, near Rosshaupten in Bavaria, in the region of Füssen. The family split into two branches, one of which settled in Lyons and soon became naturalized French, specializing in viols and other bowed instruments. The larger branch emigrated to Italy and became established principally in Venice and Padua, making mainly lutes. Tangled family relationships make a satisfactory reconstruction of the family tree impossible: some Tieffenbruckers might have shared only the place of origin, not a close family relationship.

Ulrich [Odorico, Rigo] Tieffenbrucker (i) (*d* before 1560), probably the earliest and one of the least-known members of the family, is said to have worked in Venice and Bologna. Toffolo and Cervelli attribute to him a lute inventoried in 1759 in The Hague, which bore the label 'Ulrich Duiffoprugar Lutario A. 1521'. His children established the Venetian branch of the family.

Gaspar Tieffenbrucker [Duiffoprugcar] the elder (*b* Tieffenbruck, 1514; *d* ?Lyons, 1571), probably a close relative or even a son of Ulrich, was the most famous member of the French branch of the family; his name appears on labels in a number of French variants, of which 'Duiffoprugcar' is perhaps the most common. He settled in Lyons in 1533 and acquired French nationality in 1558. In 1564 his house and workshop were demolished to make way for the building of fortifications for the city and he was unable to get any compensation, a blow from which he never fully recovered. There is an engraved portrait of him by Woeiriot dated 1565 (see illustration). His eldest son, Gaspar Tieffenbrucker (ii) (*fl* late 16th century), moved to Paris on the death of his father; he married the sister of the Parisian instrument maker Jacques Delamotte, and his workshop was established in the rue Pot-de-Feu in 1582. Johann [Jean] Tieffenbrucker (*fl* late 16th century), another son of Gaspar (i), took over the business on his father's death and seems to have remained in Lyons until at least 1585, when he had settled the outstanding debts.

The other principal members of the family were all of the Italian branch. The sons of Ulrich (i) were Magno Tieffenbrucker [Dieffoprukhar, Dieffopruchar] (i) (*d* 1560), Ulrich [Odorico, Rigo] Tieffenbrucker (ii) (*d* *c*1573) and Jacob Tieffenbrucker [Jacomo] (*d* after 1573). Not much is known about Jacob: he was apparently working in Genoa around 1564, but Venetian documents mention a 'Jacomo di Rigo lauter' in the late 1560s. Ulrich (ii) is described as 'lute maker' in a 1567 Venetian document, but he might have given up his craft, since by 1573 he is called simply 'a merchant'. Magno (i) married in 1529 and had three sons, Magno (ii) (*d* 1576/7), Moisé [Moyses] (*d* 1581) and Abraam (*d* after 1575). After their father's death Magno (ii) and Moisé took over the shop, which had been willed to their mother. Abraam (the black sheep of the family) left in 1561: in 1568, heavily in debt to his brothers, he agreed to a settlement that cut him out of the family business. In 1575 Abraam was accused of heresy by the Inquisition. At the time witnesses stated that he travelled regularly to 'French lands', carrying several hundred ducats' worth of lutes: this might indicate that the French and Italian branches kept in contact. Magno (ii) and Moisé parted their ways amicably in 1571, setting up separate shops. Moisé retained the family shop (at the sign of the 'Black Eagle'), and remained in the family house with his mother. The only son of the three brothers known to have survived into adulthood was Paolo (Paulin), son of Magno (ii), who rented a fairly expensive house with a workshop attached, from 1577 to 1591. Another Magno (iii) worked in Venice from 1589 to 1629: in the past he has been confused with Magno the younger. This third Magno called himself 'son of Rigo' and thus he might have been a cousin of Magno (ii). An Archlute by Magno (iii), now in the Kunsthistorisches Museum, Vienna, has been extensively copied in modern times.

Other members of the family include Leonardo the elder (*fl* early 16th century), who lived and worked in Padua; Leonardo the younger (*fl* late

16th century), probably the son of Leonardo the elder, who also worked in Padua before moving to Venice in about 1590 and who is said by Baron (1727) to have been the teacher of Michael Hartung; Johann Tieffenbrucker, who was apparently working in Venice in 1592; and Michael (*d c*1585) who is mentioned as a lute maker in the Rosshaupten archives in 1554 and 1573.

Wendelin Tieffenbrucker has created many problems for biographers, in part because of the appearance of his name in different forms, including 'Wendelio Venere'. Instruments with his name bear dates spanning an unusually long period, from 1551 to 1611, and have fuelled speculations that this name might have been shared by several members of the family. Archival discoveries by Peter Király (1994) have shown conclusively that 'Venere' was simply a nickname, and that three lute makers of the family, all working in Padua, produced lutes using this name on the label. Wendelin was a son of one of the Leonardos (probably the elder), and he signed his last lute in 1587: after 1591 the labels bearing his name were altered to remove the patronymic, and by this date Wendelin – who had been at least 50 years old in 1576 – had probably passed away. His activity was continued in the 1590s by his nephew, Christoforo Heberle [Eberle] (*b c*1546; *d* before 1621), whose son Wendelin Heberle (1576–1643) took over the lute maker shop and the nickname of his great-uncle. Such a continuous use of nicknames through several generations of a family was not at all uncommon in the Renaissance. The initials 'WE', found on some instruments, and the source of considerable speculation in the past, are likely to refer to 'Wendelin Eberle'. Paduan documents also record the death of a lute maker by the name of 'Giorgio Venere' in 1624, at the age of 34. He might be a member of the same family.

A Jachomo Tieffenbrucker seems to have worked in Milan in the 17th century. Moises Tieffenbrucker is known to have worked in Venice in the 18th century, and was apparently the last maker to bear the family name.

Several instruments by members of the family survive in many of the major instrument collections in Europe and North America, most dating from the late 16th century or early 17th. The list includes lutes, archlutes, theorbos and chitarroni, some with later modifications. Many of those instruments, especially those attributable to Magno (ii), are of the highest quality and must have been commissioned by wealthy patrons. An example of Magno's craftsmanship is the lute now in the Castello Sforzesco in Milan, made of ivory and ebony and richly decorated, that was commissioned by the Duke of Mantua.

IAN HARWOOD/GIULIO ONGARO

Tielke [Tielcke], Joachim

(*b* Königsberg [now Kaliningrad], 14 Oct 1641; *d* Hamburg, 19 Sept 1719). German string instrument maker. He possibly studied with Gottfried Tielke (i) (*b* 1639; *d c*1688), who may have been his elder brother, in Italy in 1662. When he was about 25, he moved to Hamburg, where in 1667 he married a daughter of the instrument maker Christoffer Fleischer (*fl c*1622–*c*48). The only source of information on Tielke's life is a congratulatory work compiled by his friends on the occasion of his golden wedding (it survives in a modern copy, before *c*1939, *D-Hkm*). It is clear that he was well known in Hamburg musical circles, since he and his wife were godparents to the children of several musicians. His eldest son, Gottfried Tielke (ii) (1668–after 1719) was a prominent viol player and a member of the Hofkapelle at Kassel (1700–20).

Tielke's instruments were much sought after by royalty and nobility in his lifetime. A surprisingly large number survive, nearly 100 in all: various kinds of lutes, guitars, citterns, violins and especially viols. His versatility is rare in makers of his time; his instruments are very fine musically and often lavishly decorated with bas-relief, carving and intarsia, the designs derived from engravings (by artists such as Niklaus Manuel Deutsch, Adrian Muntinck and Bernard Picart, see illustration), 16th- and 17th-century emblem books and contemporary embroidery patterns.For further illustration *see* Cithrinchen and Guitar, fig.8.

Tieme, Clemens.

See Thieme, Clemens.

Tiensuu, Jukka (Santeri)

(*b* Helsinki, 30 Aug 1948). Finnish composer and keyboard player. He studied the piano and the harpsichord at the Sibelius Academy in Helsinki and won the Maj Lind national piano competition in 1972. In the same year he gained diplomas in composition and piano after composition studies with Heininen. He continued to study composition in Freiburg, where his teachers were Ferneyhough and Klaus Huber. He also studied electronic music, the harpsichord, conducting and Baroque music. He has taught at the Sibelius Academy and at IRCAM in Paris. He returned to Finland in 1977, since when he has been active as a performer, teacher and festival organizer. He was artistic director of the Helsinki Biennale festival of contemporary music in 1981, its first year, and in 1983. In 1981 he also founded the contemporary music festival during the Viitasaari (central Finland) Time of Music, whose artistic director he was until 1987. His wife, who was one of his composition pupils, is the composer Anneli Arho.

As a composer Tiensuu has from the beginning been orientated towards the avant garde. His attention has focussed, especially in his early work, on tone colour and harmony, his point of departure being analysis of the sound spectrum and the properties of an instrument's upper harmonic series. Even in his earliest compositions he made use of microtones (e.g. in the *Largo* for strings, 1971); in notation he abandoned the use of conventional bar-lines and adapted various space/time notations. *M* for harpsichord, strings and percussion (1980) is one of the best examples of Tiensuu's use of a microtone technique. In this work the harpsichord is tuned to an untempered scale using sequences of pure major thirds and fifths. The work's timbral properties, in addition, recall electronic music rather than traditional music for strings. As in many of his other works, here he surrenders to a certain randomness, giving the performer an opportunity to improvise in a Baroque manner. He makes a particularly deep bow towards 17th-century harpsichord and lute composers in his *Prélude non-mesuré* for piano (1976). It applies the principles of their free-rhythm preludes; in the first and last of its 12 sections only pitches are given, leaving all other parameters for the performer to decide.

Tiensuu has said, 'I do not compose out of a composer's duty to enlarge the repertoire. In our time every emerging work must have its own special reason for emerging'. This point of view has led him, particularly in his work of the 1970s and 1980s, to aim at beginning each new composition afresh, free from a particular stylistic standpoint. From the latter half of the 1980s onwards, however, he has been more stylistically consistent than before. With his style evening out somewhat, modernist severity has relented on occasion and, at the same time, his output has decreased, largely due to a much more demanding schedule as a harpsichordist. One noteworthy aspect of his artistic image is his interest in the less well-known of the

Baroque repertory as well as in present-day modernism. In this he appears to be striving consciously for a kind of timelessness.

Puro (1989) for clarinet and orchestra is a turning-point in his orchestral music. His earlier emphasis on thinking in blocks of sound, as in *MXPZKL* (1977, revised 1985), gives way to an evenly flowing texture. The title *Puro* can be read as either the Finnish for 'brook' or the Italian for 'pure'; the work's orchestral sound is crystalline, its tone playful. The orchestral works *Halo* (1994) and *Alma I* (1995, with tape) return to the sound-world of *Puro*: in *Alma I* especially, the echo effects between woodwind and violins are a direct sequel to *Puro*'s 'flow'. The most successful of Tiensuu's chamber music of the 1990s has been *Arsenic and Old Lace* (1990) for harpsichord tuned in microtones and string quartet.

WORKS

OSMO TAPIO RÄIHÄLÄ

Tiento

(Sp.: 'touch'; Port. *tento*).

A term derived from the Spanish verb *tentar* ('to try out', 'to attempt', 'to test'), and applied exclusively to instrumental music from the mid-15th century onwards, first in the Iberian peninsula and then in Latin America. Until the mid-16th century tientos were played on various instruments (ensembles, plucked strings, keyboard); from the end of the 16th century they were written chiefly for keyboard instruments, particularly the organ. 20th-century composers revived the form, writing tientos for ensembles or orchestras. The plural, tientos, also designates a flamenco genre for solo guitar.

Alfonso de Palencia provided the first documented example of the practice of 'trying out' (*tentar*) a keyboard, string or wind instrument (*Batalla campal entre perros y lobos*, *c*1550): this piece, now lost, served as prelude to another work. The earliest tientos to have survived independently are the 13 for solo vihuela in Luys Milán's *El maestro* (1536). They do not differ in formal respects from his *fantasías* but introduce certain characteristic technical and expressive devices (*dedillo*, *dos dedos*) and contrasting tempos (*tañer de gala*) designed to enable the performer or pupil to try out the vihuela ('tentar la vihuela'). These features were new in European composition, but the tiento's improvisatory nature and free form link it to the Italian Tastar de corde or Ricercare. After Milán, no other work was given the title 'tiento' or 'tento', but the introduction of technical features remained a function of many vihuela *fantasías* (see Fantasia).

Alonso Mudarra (*Tres libros de musica e cifra para vihuela*, 1546) and Miguel de Fuenllana (*Orphenica lyra*, 1554) both composed a series of eight tientos for vihuela in each of the ecclesiastical modes. These are short homophonic compositions (not exceeding 68 semibreves) that serve as preludes to the following suite of pieces. They also have a didactic aspect, providing a practical realization of the theoretical parameters of each mode. Works of this type no doubt continued to be performed, but without being written down. They thus constituted an 'underground' genre in transmission, of which a postlude from the end of the 16th century (*Ramillete de flores*, 1593) is possible evidence. The last piece in Mudarra's volume is a tiento for harp and organ.

By the time of the appearance of Juan Bermudo's theoretical treatise *Declaración* (1555) and Luis Venegas de Henestrosa's *Libro de cifra nueva* (1557), the term seems to have lost its earlier significance as a preliminary or introductory piece: Venegas used the term synonymously with *fantasía*. Keyboard instruments, particularly the organ, were now preferred to the vihuela, harp or ensembles, according to archival evidence. The tiento adopted the polyphonic 'motet style', which is also seen in the fantasia and the ricercare, (the terms were interchangeable at this period), and made free use of fugal entries and imitative counterpoint. Apart from two impressive tientos by Pere Vila (whose *Libro de tientos* is lost), one by Pedro Soto, three by F.F. Palero, some anonymous pieces, and ricercares and tientos by Julio Segni (three taken from *Musica nova*, 1540), the main body of tientos in Venegas's collection are contributed by 'Antonio', the blind court organist Antonio de Cabezón, who perhaps carried the tiento to its highest level of inspiration. Cabezón composed 29 tientos, 12 of which

were published by his son Hernando in *Obras de música para tecla, arpa, y vihuela* (1578). Their range is impressive, and makes difficult any clear cut definition of the form. They combine the rigour of imitative writing with the freedom offered by diminution devices (*glosa*, *llano* and *glosada*), and are some of Cabezón's finest works; all have the expressiveness and intensity characteristic of his music. His melodic motifs are often inspired by Gregorian chant and are sometimes used as a cantus firmus so that the pieces can be performed during the liturgy. They may be defined as 'modal organ' tientos or even as 'psalmodic' tientos, and make clear use of compositional techniques such as troping. The same imitative structure and modal organization are found in the *tentos* of the Portuguese composers Antonio Carreira, Heliodoro de Paiva and, at the beginning of the 17th century, Manuel Rodrigues Coelho, who took the *tento* to its peak in the 24 examples in his *Flores de musica* (1620).

The tiento for organ, which continued to use parody technique, flourished until the early 18th century, modified and enriched by various practical and stylistic developments. The creation of the organ *de medio registro* at the time of Cabezón's death prompted the *tientos de medio registro*, showcases for instrumental virtuosity, by composers including Francisco de Peraza, Francisco Correa de Arauxo (1626), Sebastián Aguilera de Heredia (1627) and Pablo Bruna. Correa de Arauxo's *Libro de tientos y discursos de música práctica* (1626) for organ includes 62 tientos, graded by mode and difficulty. Apart from its didactic function, the tiento here serves as a vehicle of great affective power: phrases are still imitated between parts in the manner of the traditional tiento, but the mood is increasingly disturbed by sudden changes of timbre and improvisatory effects, in addition to the use of dissonance and ornamentation.

Similarly, the appearance around 1660 of the expressive *órgano de ecos* led to the appearance of tientos by Miguel Lopéz, Andrés Lorente and Antonio Martín y Coll that explored the new dynamic contrasts. These instrumental innovations, and the introduction of trumpet stops such as the *trompetería horizontal*, were combined with harmonic developments to give rise to the *tiento de falsas* that explored false relations (parallel with the *durezze* works that appeared in Italy), by composers from Aguilera de Heredia to J.B.J. Cabanilles. Cabanilles exploited fully the resources of the instrument and the new methods of writing; maintaining a balance between old and new styles, his tientos crowned the evolution of a form that had many ramifications. In his *Tiento de batalla*, for example, imitative phrases serve as illustrations of the rival trumpet-calls of conflicting factions (vividly portrayed by brash trumpet stops: the purely tactile quality of the tiento ('trying out the instrument') is seen raised to its highest degree.

In the first half of the 18th century tientos were written chiefly by Mediterranean composers (Llusa, Clausells), who moved away from the modal organ tiento, developing tonal and formal structures that tended towards the prelude and fugue. Thereafter, the tiento, like other early genres, did not attract composers until the second third of the 20th century. Examples are found in works by Rodolfo and Cristobal Halffter, Maurice Ohana and Manuel Castillo.

BEN RIDLER/LOUIS JAMBOU

Tierce (i)

(Fr.).

An obsolete name for the interval of a Third; it survives only as the technical name for the partial of a church bell that lies a 3rd above the fundamental (*see* Bell (i), §2).

L.S. LLOYD

Tierce (ii).

An open metal Organ stop that sounds two octaves and a major 3rd above the note played, thus corresponding to the 5th harmonic partial of that note.

Tierce coulé

(Fr.).

A type of ornament. *See* Ornaments, §§7 and 9.

Tierce de Picardie [Picardy 3rd].

The raised third degree of the tonic chord, when it is used for the ending of a movement or composition in a minor mode in order to give the ending a greater sense of finality. The term was introduced by Rousseau in his *Dictionnaire de musique* (1767); its etymology is unknown. It was commonly used in the 16th century and throughout the Baroque era and was regarded by some writers as standard. In the Classical period it was used much less frequently, though an analogy may be drawn with the practice of ending a minor-key work with a short section in the parallel major, found for example in the string quartets of Haydn (op.64 no.2, op.74 no.3 and op.76 no.2) and Beethoven (opp.95 and 132).

JULIAN RUSHTON

Tierce flute.

Flute a minor 3rd above the normal flute. *See* Flute, §II, 3(ii).

Tierney, Harry (Austin)

(*b* Perth Amboy, NJ, 21 May 1890; *d* New York, 22 March 1965). American songwriter and pianist. He studied at the Virgil School of Music, New York, and in 1911–13 toured the USA as a concert pianist. In 1915 he was in London as a staff pianist and composer for the music publisher Francis, Day & Hunter, and returned to the USA the following year in the same position for Remick. From 1913 to 1930 he wrote songs for revues and musical comedies, including *The Passing Show of 1916*, *Irene* (1919, with the songs 'Castle of Dreams', based on Chopin's 'Minute Waltz', and 'Alice Blue Gown'), *The Broadway Whirl* (1921), *Up She Goes* (1922), *Kid Boots* (1923), and four editions of Ziegfeld's *Follies* (1916–24, including the spelling song 'M-i-s-s-i-s-s-i-p-p-i', 1916). *Rio Rita* (1927, with 'Ranger's Song') was one of the first musicals to be adapted to film (1929). From 1930 to the early 1940s he wrote songs for Hollywood; his waltz songs in particular suited the graceful and sophisticated style of musical comedy and early films. Some of his music manuscripts are in the Library of Congress.

DEANE L. ROOT

Tiersot, (Jean-Baptiste Elisée) Julien

(*b* Bourg-en-Bresse, 5 July 1857; *d* Paris, 10 Aug 1936). French musicologist and folklorist. In 1876 he entered the Paris Conservatoire, where he became a pupil of Savard for harmony and Massenet for composition, and also studied the organ with Franck and music history with Bourgault-Ducoudray. He was appointed assistant to the Conservatoire librarian in 1883. Two years later he competed for the Bodin Prize of the Académie des Beaux-Arts with his *Histoire de la chanson populaire en France;* this work, which was published in 1889, brought him a commission from the government to collect folksongs in Savoy and the Dauphiné. The result was published in 1903 as *Chansons populaires recueillies dans les Alpes françaises.* With Charles Bordes, he supported the efforts of the Schola Cantorum to bring old music before a wider public, and he founded the Concerts Historiques du Cercle St Simon. He also contributed to the revival of interest in Berlioz and to the promotion of contemporary Scandinavian, Russian and Czech music in France. In 1909 he succeeded Weckerlin as head of the Conservatoire library, a position he held until 1921; he was also president of the Société Française de Musicologie. He edited the letters of Bach, Rameau, Mozart and Berlioz and a collection of *Lettres de musiciens écrites en français.* His own writings include books on French Revolutionary music, on music in the comedies of Molière and on Rousseau, but his chief importance rests in his work as a folklorist. Besides the French Alpine volume, parts of his collection of songs from Bresse and French Canada were also published, and his ten-volume *Mélodies populaires des provinces de France* has remained a classic.

SIMONE WALLON

Tiessen, Heinz

(*b* Königsberg, 10 April 1887; *d* Berlin, 29 Nov 1971). German composer, teacher and critic. After a period of study with Erwin Kroll in Königsberg, Tiessen studied composition (P. Rüfer) and theory (Wilhelm Klatte) at the Stern Conservatory in Berlin. He worked as a music critic for the *Allgemeine Musikzeitung* from 1911 until 1917, when Richard Strauss helped him obtain a position as co-répétiteur at the Königliche (later Staatliche) Oper in Berlin. After World War I Tiessen played a central role in Berlin's musical life as Kapellmeister and composer at the Volksbühne, co-director of the Melos-Gesellschaft with Jarnach (after 1923), co-founder of the German division of the ISCM (in which he was active from 1922 to 1933), and conductor of the Junger Chor (1924–33), among other activities. In 1930 he became professor of theory and composition at the Hochschule für Musik in Berlin. After the National Socialists came to power in 1933 he had to step down from most of his official positions. During this time he composed little, yet retained his post at the Hochschule and conducted the Berliner Singe-Gemeinschaft. After the war Tiessen was director of the Berlin (formerly Stern) Conservatory (1946–9) and later taught again as a profesor of composition at the Hochschule (1949–55). In 1955 he was made director of the music division of the West Berlin Akademie der Künste. His pupils included Erdmann, Vogel and Celibidache. He was decorated with several awards, among them the Federal Cross of Merit (1953) and the Berliner Kunstpreis (1957).

Strauss had a powerful influence on Tiessen's early works, particularly on his monumental symphony *Stirb und Werde*, which Scherchen and others performed throughout the 1920s. His lieder of this period demonstrate his allegiance to Schoenberg's atonal works and to the Expressionist movement – he was the first to apply the term Expressionist to music. And yet, in spite of his experimental stance, expressively exaggerated melodies and sometimes asymmetrical rhythms, he never abandoned tonality. His work closest to atonal muisc is the set of Six Piano Pieces op.37, which Erdmann performed to enthusiastic critics in Madrid in 1923. Tiessen was also well known for his incidental music, for example for Max Reinhardt's staging of *Hamlet* (1920), and he began composing film music early in his career (*Die 5 Frankfurter*, 1922). His lifelong devotion to the sounds of nature and birdcalls is revealed in two popular early works, the *Natur-Trilogie* op.18 for piano and the *Amsel-Septett* op.20. After World War II he stopped composing almost completely.

WORKS

(selective list)

for complete list see Schlösser, 1979

Stage: Salambo, ballet, op.34, 1923; Der Kirschkern (incid music, O. Hesse), 1919–34

TAMARA LEVITZ

Tietjen, Heinz

(*b* Tangier, 24 June 1881; *d* Baden-Baden, 30 Nov 1967). German Intendant, director and conductor. He was born of Anglo-German parents and after a brief career in business he worked as conductor and director at Trier in 1904, becoming Intendant in 1907. He held similar posts in Saarbrücken (1921), Breslau (1922) and Berlin (1925), where at the Städtische Oper he had a notable partnership with Bruno Walter. Both men favoured modestly innovatory stagings of an essentially mainstream repertory centred on Mozart, Wagner and Strauss. In 1927 Tietjen was appointed director of all the Prussian state theatres, including those at Hanover, Kassel, Wiesbaden and the Staatsoper and Kroll Oper, Berlin.

In 1931 Tietjen was invited by Siegfried Wagner's widow, Winifred, to become artistic director of the Bayreuth Festival – the first holder of that position not to be a member of the Wagner family. He brought to Bayreuth many leading singers from Berlin, the conductor Wilhelm Furtwängler and the designer Emil Preetorius. He also continued a policy of conservative revolution; by 1943 he had mounted new productions of every work in the hitherto rather moribund festival repertory, departing markedly from the received traditionalism of Cosima's stagings. Here also Tietjen resumed his conducting career with performances of *Lohengrin* and the *Ring*; recordings reveal a lighter, swifter approach to the music dramas than that of many contemporaries.

After the war Tietjen was recalled to his old post at the Berlin Städtische Oper (1948–54), where his work of rebuilding a company helped launch the career of the young Hungarian conductor Ferenc Fricsay and secured the reputation of the composer Werner Egk. Tietjen's last permanent post was in Hamburg (1956–9); in his last year there he was invited back to Bayreuth by Wieland Wagner to conduct performances of *Lohengrin*.

Tietjen's multi-faceted career owed much to his diplomatic gift for self-promotion and lack of rigorous political scruples. His work as a director was hardly in the vanguard of contemporary European staging, but his choice of design collaborators (notably Preetorius) often gave an imaginative stimulus to his own conventional epic stagings. The wide range of his activities set a precedent for contemporary German Intendanten, whose role could no longer remain purely administrative.

MIKE ASHMAN

Tietjens [Titiens], Therese (Carolina Johanna Alexandra)

(*b* Hamburg, 17 July 1831; *d* London, 3 Oct 1877). German soprano. She studied in Hamburg and Vienna, making her début at Altona in 1849 as Donizetti's Lucrezia Borgia, a role with which she was to be closely associated throughout her career. In 1850 she was engaged at Frankfurt, where she sang Louise in the first performance of Lortzing's *Die Opernprobe* (1851). After appearances at Brno and Vienna, she made her London début at Her Majesty's Theatre in 1858 as Valentine in *Les Huguenots,* and then sang in London every year until her death. At Drury Lane she sang Elena in *Les vêpres siciliennes* (1859), at the Lyceum Theatre Amelia in *Un ballo in maschera* (1861), and at Her Majesty's Marguerite in *Faust* (1863), Mrs Ford in *Die lustigen Weiber von Windsor* and the title role of Gounod's *Mireille* (both 1864), Medea in Cherubini's *Médée* (1865) and Leonora in *La forza del destino* (1867), all first London performances. Her extensive repertory also included Iphigenia in Gluck's *Iphigénie en Tauride*, Mozart's Countess, Donna Anna, Constanze and Pamina, Leonore in *Fidelio*, Weber's Agathe and Reiza, Semiramide, Anna Bolena, Norma, Elvira in *Ernani*, Giselda in *I Lombardi*, Leonora in *Il trovatore*, Meyerbeer's Alice and Fidès, and Wagner's Ortrud.

She sang in Paris (1863) and at the Teatro S Carlo, Naples (1862–3, 1868–9), and made her Covent Garden début on 24 October 1868 as Lucrezia Borgia. In 1875, after laying the foundation stone of Mapleson's ill-fated Grand National Opera House on the Victoria Embankment, she made a tour of the USA. She also travelled extensively with Mapleson's company in Great Britain and sang in oratorio at all the important English cathedral festivals. Her final appearance, at Her Majesty's on 19 May 1877, was appropriately in *Lucrezia Borgia*. Although in great pain from the cancer of which she was soon to die, she completed the performance, but then fainted and had to be carried from the stage.

Though ungainly in appearance, Tietjens was a magnificently dramatic artist, with a powerful but flexible voice that could overcome any technical difficulty. The authority of her stage presence and of her singing in such roles as Norma, Medea, Donna Anna, Lucrezia or Leonore (*Fidelio*) made her the true successor to Pasta, Malibran and Grisi, though she was also willing to undertake minor parts, such as Queen Gertrude in Thomas' *Hamlet*, or to appear in operas of artistic merit but with small chance of success, such as Cherubini's *Les deux journées.*

Tietz, Anton Ferdinand.

See Titz, Anton Ferdinand.

Tīfāshī [Ahmad ibn Yūsuf], al-

(*b* Qafsa, Tunisia, 1184; *d* ?Cairo, 1253). Arab scholar. He studied first in Tunisia and then in Egypt. He travelled in Syria and eventually settled in Cairo. The little of his voluminous output that survives testifies to his wide-ranging interests. In addition to erotic subject-matter it includes an important and well-known gemmological treatise, *Azhār al-afkār fī jawāhir al-ahjār* ('Flowering thoughts on gem-stones'). His other major extant work, part 41 of a huge encyclopedia, *Fasl al-khitāb fī madārik al-hawāss al-khams li-ulī al-albāb* ('Eloquent disquisition on the perception of the five senses'), is concerned with music. Literary rather than scientific in orientation, it concentrates on history, anecdote and human behaviour and preserves a number of song texts. It is of particular interest for its inclusion of a section on dance, a subject rarely discussed elsewhere, for its succinct but broadly convincing historical account of musical developments in Muslim Spain and North Africa, and for the light it sheds on some of the features differentiating the western and eastern Islamic art-music traditions in the 13th century. Given his background, al-Tīfāshī was familiar with both, and was able not only to point to modal and formal distinctions but also to attempt a characterization of differences in melodic style, that of Spain being deemed the most complex and difficult.

Tigranian, Armen Tigrani

(*b* Aleksandropol [now Gyumri], 14/26 Dec 1879; *d* Tbilisi, 10 Feb 1950.) Armenian composer, choirmaster and teacher. His early artistic character was strongly influenced by his home environment in an area steeped in the traditions of folk craft and of the *ashugh*, or *gusan*, the Armenian folk minstrels. In 1894 he moved to Tbilisi, where he studied music at the Gymnasium, playing the flute, and then at the music college (1898–1902) as a pupil of Klenovsky (theory); he took lessons in harmony and composition with Ekmalian. After returning to Armenia he worked as a school music teacher and choirmaster, played in public, staged his own

dramatized arrangements of national songs, and wrote songs on Armenian poetic texts. His first opera, *Anush*, after a well known poem by Tumanian, was performed with success in amateur workshops in various Transcaucasian towns in 1912. The following year he settled in Tbilisi, where he was a manager of the Tbilisi Armenian Music Society. He became a member of the board of Hayartun, the Armenian arts organization (1921–32) and later on he visited Yerevan periodically. He was made an Honoured Representative Artist of Armenia (1935) and Georgia (1936). *Anush* was republished in the 1930s and revived in Yerevan. With this work Tigranian provided the foundations for an Armenian national operatic style. The lyrical, everyday nature of the drama concerning the love of Anush and Saro – who perish as a result of social prejudice – is matched in Tigranian's music, which achieves its national qualities by approaching folksong intonation (even though there is only one direct quotation), and by using folksong forms (*ashugh* improvisations, ceremonial and wedding songs *Hambartsum yayla, Jan-gyulum* and others). The use of the chorus, important in *Anush*, was developed further in *David-Bek*, a heroic piece concerning the Armenians' struggle against Persian invaders in the 18th century; but the folklike melody remained, and here Tigranian employed more quotations, notably from the song *I ninjmaned arkayakan* by the celebrated *ashugh* Baghtasar Dpir. The various nationalities presented in the opera – Russians, Georgians and Persians – are characterized by material approaching their respective folk music. On the large scale, *David-Bek* is organized along symphonic lines, which links it with Spendiaryan's *Almast*. After the composer's death the opera was orchestrated by Khojia-Eynatov. Before *David-Bek* Tigranian had completed *Leyli yev Mejnun* ('Leyli and Mejnun'), a folk drama with songs, dances and instrumental interludes based on the oriental legend, as well as the opera *Kyor Ogli* of which only one act was completed.

SVETLANA SARKISYAN

Tigranian, Nikoghayos Fadeyi

(*b* Aleksandropol [now Gyumri], 19/31 Aug 1856; *d* Yerevan, 17 Feb 1951). Armenian composer, ethnomusicologist and pianist. Blind from the age of nine, he was educated at the Vienna Institute for the Blind under W. Schenner (1873–80), where he studied the piano and compositional theory. After his return to Aleksandropol, a town rich in folk culture, he embarked on a career as a composer and ethnomusicologist. He completed his studies in 1893 at the St Petersburg Conservatory under Rimsky-Korsakov and Solov'yov, and then returned to Armenia to collect Armenian, Azerbaijani, Georgian, Kurdish and Persian folksongs. In 1914 he visited St Petersburg, Vienna, Berlin and other cities, lecturing and playing his own compositions. He organized a school for the blind in Aleksandropol in 1922 and taught music there. He was made a People's Artist of Armenia in 1933; his works were published in Yerevan and St Petersburg.

Tigranian was the first to translate into orchestral terms the peasant music of the Caucasus and near east. His major contribution as a folk music collector was in the notation and arrangement for various instruments of the *mugam* (a vocal-instrumental rhapsodic genre) and the exposition of its characteristic features; many composers, among them Glière, Ippolitov-Ivanov and Spendiarian, have drawn on Tigranian's work in this field. His compositional work grew from his contact with the *ashughs* (folk minstrels) and *sazandars* (singers accompanying themselves on the *saz*), and in particular with the *t'ar* player Melik-Aghamalov. The results bear witness to his profound understanding of folk music; particularly important are the piano arrangements, which delicately underline the individuality of the song or dance. His harmonizations were based on folk modes, and he was able to use the facilities of pedal, ornamentation or rhythm to imitate peasant instruments. At times he used principles of variation development and cyclical unification of several dances. Among his best piano arrangements are *Kyandrbaz*, *Vard koshiks*, *Shavali*, *Duz par* and *Findjhan*; the vocal pieces include *Lusnakn gisher* and *Tun ari.*

SVETLANA SARKISYAN

Tigrini, Orazio

(*b* ?Arezzo, *c*1535; *d* Arezzo, 15 Oct 1591). Italian theorist and composer. In 1560 he was *maestro di canto* at Pieve di S Maria, Arezzo, and in 1562 he moved to the cathedral there, holding various positions in one or other of these churches during the next few years. In 1571 he moved to Orvieto Cathedral, where he remained until he finally returned to Arezzo Cathedral in 1587 in the double position of *maestro di canto* and *di cappella,* which he held until his death.

Tigrini's most important contribution to music is a practical composition manual, *Il compendio della musica nel quale si tratta dell'arte del contrapunto*. Dedicated to Zarlino, whom he called the 'father and beginning of our age of music', it is based primarily on the third and fourth books of Zarlino's *Le istitutioni armoniche* (1558). Zarlino's approval of the *Compendio* is implied in his gracious reply to Tigrini's dedication printed at the beginning of it. Tigrini cited other treatises; much of the material in the *Compendio* comes from Vicentino's *L'antica musica* (1555), and can therefore be considered a summary and extension of the teachings of Willaert. Tigrini's manual is a good introduction to the works of Zarlino and Vicentino, who presented much of their practical material in a discursive and rather disorganized manner; Tigrini extracted the essential details, presenting them in an orderly way. He showed how such different elements as modes, fugues and cadences are interrelated and in some cases he clarified ambiguities: Zarlino discussed cadence types only for two voices, using terms and defining forms and functions that are sometimes hard to understand or find in compositions for several voices; Tigrini explained that most of these were used only in duos (then becoming rare), and gave examples of cadences in music for three to six voices. Tigrini's small amount of extant music shows expert writing in a strict style. His madrigals for six voices, in particular, show contrapuntal mastery but little evidence of the new trends in text expression seen in the work of his more progressive contemporaries.

IMOGENE HORSLEY

Tihanyi, László

(*b* Budapest, 21 March 1956). Hungarian composer and conductor. He studied composition with Sugár (1974–9) and conducting with Kórodi (1977–82) at the Liszt Academy of Music, becoming a senior lecturer there in 1979. In 1985 he founded Ensemble Intermodulation, which specializes in performing 20th-century music. Tihanyi's style is influenced by the compositions of Messiaen and Eötvös and the acoustic experiments of Ecole Spectrale. Interrelation between distinct sections often replaces dramatic processes in the structure of his works, many of which are for chamber ensemble. The often abstract musical material is determined by a pitch series or derived from overtones; his music's polished surface attests a fine sense for timbre and instrumentation. Tihanyi's music is often linked with the past: *Irrlichtspiel*, *Nachtszene* and *Winterszenen* were inspired by Schubert's *Winterreise*, while *L'épitaphe du soldat* responds to Stravinsky's *Histoire du soldat*. A spiritual rather than imitative relationship binds these works to their precursors. An interest in astronomy has inspired works such as *Krios*, *Nereida* and *Triton*. Further information is given in M. Hollós: *Az életmű fele* ('Half of the oeuvre', Budapest, 1997), 122–8.

PÉTER HALÁSZ

Tijardović, Ivo

(*b* Split, 18 Sept 1895; *d* Zagreb, 19 March 1976). Croatian composer. He studied music in Split and Vienna and graduated from the Zagreb drama school in 1922. He then worked as conductor and stage designer at the Split Municipal Theatre (1922–9) before joining the music department of the Edison Bell Penkala recording company in Zagreb (1929–33). Returning to Split, he worked as director-conductor of the opera and as stage manager at the Municipal Theatre (1933–41); he was later stage manager of the National Theatre in Zagreb (1945–9). As a composer Tijardović was primarily drawn to the musical stage; within this field, his best works are those in the lighter genres. Of his operettas, *Mala Floramye* ('Little Floramye', 1926) and *Splitski akvarel* ('A Watercolour of Split', 1928), both written to his own libretti, have had enormous successes and have remained in the operetta repertory. In these works he succeeded in conveying the local colour of Split, also including in the score the then popular international dances, and showed his gift for dramatic development and effective ensembles. His musical style is traditional, with an attractive Mediterranean melodiousness enriched with folk elements.

KORALJKA KOS

Tik [Thick], Henricus

(*fl* mid-15th century). ?English composer. All that is known of him is the attribution, in the above form, of a three-voice mass cycle in Lucca (*I-La* 238). His name heads the untroped Kyrie (the mass survives imperfectly, with the Agnus Dei incomplete). All five movements are unified by a head-motif, mensural scheme, and differently elaborated forms of (presumably) the same tenor cantus firmus, which is unidentified. The rate of tenor movement is assimilated to that of the upper voices.

The name could be a corruption of an English word such as Thick. This might permit an identification with Fich, one of the composers named in Hothby's *Dialogus in arte musica* (ed. A. Seay, CSM, x, 1964, p.65) in a garbled list with a strong English weighting, including at least two other composers represented in the Lucca manuscript. He is also mentioned in a Spanish treatise of 1480 and may have lived in Bruges for some time (Strohm).

Strohm speculated on a possible relationship with Jacobus Tick (*fl* 1434–68), succentor at St Jacob in Bruges in 1463, recorded as composer in the 1460s and as choirmaster at St Pieter in Leiden (Wegman); additional information about Jacobus, to whom no surviving works are attributed, is given in Strohm (2/1990, note to pp.57 and 123).

MARGARET BENT

Tikopia.

See Melanesia, §IV, 3(iii).

Tikotsky, Yevgeny Karlovich [Tsikotsky, Yawhen Karlavich]

(*b* St Petersburg, 14/26 Dec 1893; *d* Minsk, 23 Nov 1970). Belarusian composer of Polish origin. His systematic music education was limited to private studies of the piano and theory with Volkova-Bonch-Bruyevich in St Petersburg (1912–14); in composition he was largely self-taught. He began to compose at the age of 14 (a symphony and some operas on Russian literary subjects), consulting with his friend the composer Deshevov. At his father's insistence he entered the St Petersburg Psychoneurological Institute in 1911, leaving in 1914 without completing the course to study in the physics and mathematics department of St Petersburg University. After war service (1915–24) he found himself in Bobruysk, where he taught in a music school (1927–34), and where his first contacts with Belorussian folk music stimulated more intensive creative activity. His earliest major works included the First Symphony (1924–7) on themes from revolutionary and Belorussian songs (one of the first Belorussian symphonies) and music for stage productions in Minsk. This work necessitated his removal to Minsk, where he taught at the music school (1934–41) and worked as a staff composer for Belorussian radio. During this period he wrote one of the first Belorussian operas, *Mikhas' Podgornïy* (1939). The patriotic opera *Alesya* was staged in Minsk in 1944 shortly after the liberation of the town from the fascists. Evacuated during the war to Ufa and Gor'kiy, he was subsequently artistic director of the Belorussian State PO (1944–5, 1953–7) and chairman of the board of the Composers' Union (1952–63). His honours included the Order of the Red Banner of Labour (1940, 1949), the Order of Lenin (1944), the titles People's Artist of the Belorussian SSR (1953) and of the USSR (1955), and the Badge of Honour (1963). Together with Churkin, Madaw and Turenkaw, Tikotsky was a founder of Belorussian art music. He made wide use of the folk music of the region, treating it entirely in a 19th-century manner. His pioneering cultivation of the symphony and the opera was of particular importance in the development of music in Belorussia.

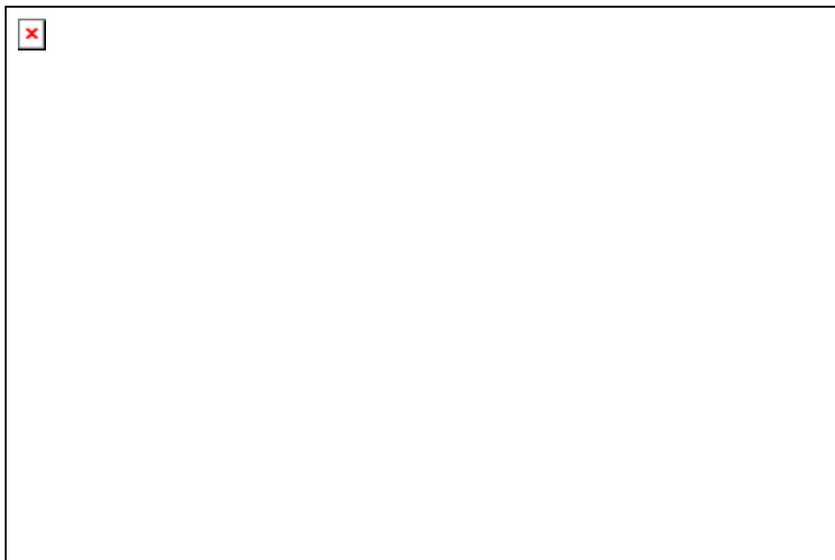
Tilincã

(*telincã*).

A large flute of Romania and Moldova. It consists of a metal or wooden tube between 60 and 80 cm long which has no finger-holes. Two types are known: *tilincã cu dop*, which is provided with a stopper called *dop*, making it a duct flute, and the *tilincã fãrã dop*, which is open at both ends and has a bevelled rim called *rost*. The player holds the *tilincã* obliquely and obtains a large number of notes from the harmonic series by varying breath pressure and opening or closing the distal end with the forefinger. The *tilincã* produces three kinds of higher harmonics: when the end of the tube is open; when the end of the tube is closed with the forefingers; and when the end of the tube is partially closed with the forefinger (ex.1). The complete scale of sounds encompasses the totality of these harmonics set in an ever ascending order of pitch. The first sound produced by closing the end of the tube with the forefinger is very difficult to obtain. While the instrument is rare it is still encountered in northern Transylvania, Bukovina and northern Moldova. In 1949, Mihai Lăcătus, a gifted peasant from Bukovina who could still play the *tilincã*, became such a sensation that playing of the instrument was revived.


Tilkin, Félix.

Till, Johann Christian

(*b* 1762; *d* 1844). American composer. *See* Moravians, music of the, §3.

Tillière [Tillier, Thillière], Joseph Bonaventure

(*b* before 1750; *d* after 1790). Cellist and composer, active in France. He was a pupil of Berteau (as were Duport and Janson) and in 1760 played in the orchestra of Prince Conti. In 1770 he was a member of the Académie Royale de Musique and performed in the Paris Opéra orchestra. Tillière's *Méthode pour le violoncelle*, unlike the earlier cello tutor of Corrette, treats the cello mainly as a solo instrument. Beginning with scales, exercises for crossing strings, and fingerings of major and minor 3rds (extensions), he progressed to difficult technical problems: double stopping, holding a position, and the use of the thumb, which, he said, is often found in solo playing to facilitate difficult passages. He included rules for proper bowing and articulation ('il faut employer l'archet et faire sentir la 1re de chaque mesure'), being one of the first cellists to identify and explain reversed bowing procedures for batterie and *brisure* (notes on non-adjacent strings necessitating a jump of the bow) bowing patterns.

His sonatas are melodic in style and make full use of the cello's technical resources, employing double stopping, thumb position, the use of the upper register, arpeggios and string-crossings. Virtuoso figuration appears especially in the minuets with variations, and several sonatas have brief written-out cadenzas. Throughout he exploited the possibilities of resonance and contrasting tone colours of strings stopped in a high or low register and in combination with open strings.

WORKS

all published in Paris

Airs et 6 sonatas, vc (1760); 6 sonates, vc (1770); Recueil d'ariettes, menuettes, 2 vc (1773); Recueil d'airs d'opéra-comique, 2 vc (1774); 4 sonates, vc, op.5 (n.d.); 6 duos, 2 vc (1777); 6 sonates, vc, b (1782), also incl. in later edns of *Méthode*; 3 duos, op.8 (n.d.); Conc., vc, 2 vn, va, b (1788)

MARY CYR/VALERIE WALDEN

Tillis, Frederick Charles

(*b* Galveston, TX, 5 Jan 1930). American composer and music educator. As a youth he studied and played the trumpet and saxophone in local jazz ensembles and was particularly influenced by the music of Benny Carter. He later studied music at Wiley College in Marshall, Texas (BA 1949), at the University of Iowa (MA 1952, PhD 1963) with Philip Bezanson among others, and at North Texas State University (1959–60), where his teachers included Samuel Adler. From 1952 to 1956 he worked as a band director in the US Air Force. He taught at Wiley College (1956–64), Grambling State University (1964–7), Kentucky State University (1967–70) and the University of Massachusetts, Amherst (1977–97).

Tillis, an African American, matured as a composer during the 1960s Civil Rights movement and deliberately adopted a compositional style that combined elements of jazz and black music idioms with serial techniques. His output includes art songs, choral music, orchestral works and chamber music, as well as jazz compositions and music for mixed media. Among his best known works are *Freedom* for chorus (1968), *Ring Shout Concerto* for percussion and orchestra (1974), the Concerto for Trio Pro Viva and Chamber Orchestra (1980), the Concerto for Piano and Jazz Orchestra (1980) and a series of 18 Spiritual Fantasies for various combinations of instruments (1980–98). He is the author of the textbook *Jazz Theory and Improvisation* (New York, 1978).

JOSEPHINE WRIGHT

Tillyard, H(enry) J(ulius) W(etenhall)

(*b* Cambridge, 18 Nov 1881; *d* Saffron Walden, 2 Jan 1968). English scholar of Byzantine music. After studying at Gonville and Caius College, Cambridge (1900–04), he went to Athens in 1904 and stayed for three years at the British School of Archaeology, studying the modern phase (Chrysantine system) of Greek Church music under J.T. Sakellarides. His interest in the earlier phases of Byzantine music was aroused when he met Hugo Gaisser, and in 1907 he went to Mt Athos to study chant and the old manuscripts in its monasteries. He taught Greek at Edinburgh (1908–17), and held posts successively as professor of classics in Johannesburg (1919–21), professor of Russian in Birmingham (1921–6), professor of Greek in Cardiff (1926–44) and lecturer in classics in Grahamstown, South Africa (1946–9). In the periods 1909–12 and 1922–50 he travelled extensively (to Athens, Moscow, Mt Athos, Mt Sinai, Patmos, Constantinople, Grottaferrata and Leningrad) to study Byzantine mansucripts. In 1931, with Carsten Høeg and Egon Wellesz, he founded Monumenta Musicae Byzantinae. The collaboration between these three musicologists was inspiring not only for themselves but also for future Byzantine studies and scholars.

Because of his knowledge of modern as well as old Byzantine music Tillyard's ideas and theories about the problems in that field have remained valid to an unusual degree. As early as 1911 he stressed the importance of studying the music in the eastern church to determine its influence on Russian, Gregorian and other systems. To an extent rare for a single scholar he examined all periods of Byzantine music in some depth to prove the connection between them (from the 11th century to the 20th). As a result, he detected a basic continuity of the medieval system of neumatic notation in the centuries after the fall of Constantinople in 1453. He also refuted modern Greek theories (e.g. of Konstantine Psachos), asserting that the melodies used in the Greek Church have never changed, only the

methods of notation. He made transcriptions from all the periods, starting in 1911 with the modern Chrysantine notation. In 1925 he found the connection between the signatures which indicated the starting-note of a melody, and the mode in which this melody has to be sung, making it possible at last to transcribe the repertory of hymns between 1175 and 1450 (Middle Byzantine notation). He was one of the first to bring some order into the seemingly chaotic development of Byzantine notation before 1170. For notations before Middle Byzantine he invented the names 'Coislin' and 'Chartres', now used by all scholars.

NANNA SCHIØDT

Tilmant, Alexandre.

French cellist, brother of Théophile Tilmant.

Tilmant, Théophile (Alexandre)

(*b* Valenciennes, 8 July 1799; *d* Asnières, nr Paris, 7 May 1878.) French conductor and violinist. After studying the violin with Rodolphe Kreutzer at the Paris Conservatoire (winning the *premier prix* in 1819), he played in the orchestras of the Théâtre Italien and the Opéra (from 1825) and in various chamber groups, but rarely performed as a soloist. He was deputy conductor of the Société des Concerts du Conservatoire from its establishment in 1828 until 1860, and deputy conductor (1834–8) and chief conductor (1838–49) at the Théâtre Italien. With his brother Alexandre Tilmant (*b* Valenciennes, 14 Oct 1808; *d* Paris, 13 June 1880), a cellist in the orchestras of the Théâtre Italien and later the Opéra, he presented in the 1830s chamber music concerts whose programmes included works of contemporaries as well as Haydn, Mozart and Beethoven. He also supported contemporary French composers as co-conductor of the Concert

des Amateurs in the 1820s and conductor of the Gymnase Musical (1835) and the Cercle Musical des Amateurs (intermittently from the late 1830s to 1870). As conductor of the Opéra-Comique (1849–68) he directed the premières of Thomas' *Le songe d'une nuit d'été* and *Mignon*, and Meyerbeer's *L'étoile du nord.* He was conductor of the Concerts du Conservatoire from 1860 (officially 1861) until 1863. His conducting was praised for its verve, precision, control, sensitivity in accompanying singers and conscientiousness.

Tilmouth, Michael

(*b* Grimsby, Lincs., 30 Nov 1930). English musicologist. He was a scholar at Christ's College, Cambridge, studying under Dart, John Stevens and Orr (1951–8; BA 1954); he took the doctorate in 1960 with a dissertation on English chamber music in the 17th and 18th centuries. He has published a number of useful editions of this music, including (among lesser-known works) two suites by John Banister the younger and a trio sonata by Sherard. He was appointed assistant lecturer at Glasgow University (1959), lecturer (1962) and Tovey Professor of Music at the University of Edinburgh (1971). From 1968 to 1976 he edited the *RMA Research Chronicle,* and in 1975 became a director of Scottish Opera. His research, largely confined to English music, shows a meticulous approach to source material, and his writing is marked by its clarity and directness.

DAVID SCOTT

Tilney, Colin (Graham)

(*b* London, 31 Oct 1933). English harpsichordist. After studying the piano as a child, he read modern languages and music at King's College, Cambridge. While at Cambridge he studied the harpsichord with Mary Potts (1956–8), and later had lessons with Leonhardt in Amsterdam. From the early 1960s he has been active as a soloist and ensemble performer in Britain and on the Continent. He made his first appearances in the USA in 1971. Tilney's repertory is wide, embracing music of the principal European schools from the 16th century to the 18th, with particular emphasis on English music, and many contemporary works. His recordings include *Parthenia*, the complete keyboard works of Locke, Bach's *Das wohltemperirte Clavier* harpsichord works by Frescobaldi and the suites of Purcell and Handel. He is especially concerned with playing music on the most appropriate keyboard instrument, and has made use of a great variety of harpsichords, clavichords and early pianos, both historical instruments and modern replicas, in his concerts and recordings. Tilney has commissioned harpsichord works from Elisabeth Lutyens, Priaulx Rainier, Robert Keeley and several Canadian composers. He has edited the harpsichord music of Antoine Forqueray, and since 1979 has taught at the Royal Conservatory of Music in Toronto and at the University of Toronto. His writings include *The Art of the Unmeasured Prelude* (London, 1991).

HOWARD SCHOTT

Tilson Thomas, Michael

Timaru, Valentin

(*b* Sibiu, 16 Oct 1940). Romanian composer. He studied with Toduță at the Cluj Academy for three years then with Vieru at the Bucharest Academy, graduating in 1960. Under Toduță's supervision, Timaru gained the doctorate in musical stylistics with a thesis on Enescu's symphonic techniques. His compositional output is strongly associated with his work as a teacher of harmony, form and composition at the Cluj Academy. Although he uses a compositional vocabulary drawn from the natural harmonic spectrum, he remains committed to traditional techniques. Carrying on the legacy of Toduță, Timaru suggests Transylvanian folk music through the abstraction of its most characteristic elements. Further information is given in C. Glodeanu-Para: *'Liturghia Sf. Ioan Gură de Aur'*, *Muzica*, new ser., vii/3 (1996), 34–41.

OCTAVIAN COSMA

Timbales [tymbales].

Generally adopted name for a pair of single-headed, cylindrical drums. They are primarily associated with the Latin American dance band, where they are usually teamed with one or two cowbells; the player's rhythmic patterns also involve hitting the outside of the drum shell (they must thus be classified as both membranophones and idiophones). The metal shells have a depth of about 18 cm and a diameter of between, usually, 33 and 36 cm, though instruments as small in diameter as 20 cm and as large as 38 cm may be found. While timbales were usually used in the late 20th century as unpitched percussion instruments, their screw-tensioned heads, invariably of plastic, produce definable notes that have been employed by composers. Malcolm Lipkin's *Interplay* (1975) for recorder, harpsichord, bass viol and percussion uses six timbales tuned to *G*, *B*♭, *B*, *c*, *d*♭ and *e*♭ instead of timpani. In French terminology, 'timbale' signifies kettledrum, *see* Drum and 'timbales' (or occasionally 'tymbales') Timpani; 'timbale mécanique' refers to a kettledrum with pedal-operated tuning (*see* Timpani, §1; details of Adolphe Sax's *timbales chromatiques* (1857) are given in §5).

JAMES BLADES/JAMES HOLLAND

Timballo

(It.).

See under Organ stop (*Pauke*).

Timbre (i)

(Lat.: *tonus*).

A term describing the tonal quality of a sound; a clarinet and an oboe sounding the same note at the same loudness are said to produce different timbres. Timbre is a more complex attribute than pitch or loudness, which can each be represented by a one-dimensional scale (high–low for pitch,

loud–soft for loudness); the perception of timbre is a synthesis of several factors, and in computer-generated music considerable effort has been devoted to the creation and exploration of multi-dimensional timbral spaces. The frequency spectrum of a sound, and in particular the ways in which different partials grow in amplitude during the starting transient, are of great importance in determining the timbre. *See also* Sound, §6.

MURRAY CAMPBELL

Timbre (ii).

A term of late 18th-century French origin widely applied by scholars of folklore and by musicologists to pre-existing *opéra comique* songs, vaudeville tunes, parody songs and 16th- and 17th-century chansons, and in a special sense to medieval monophony. A feature common to the later classes of French popular song was the adaptation of new words by the librettist or songwriter to well-known vocal or instrumental melodies; the 'timbre' was the melody's label, or identification tag. It was a brief form of words, sometimes taken from the refrain or first couplet of the original poem, sometimes of more obscure origin (e.g. 'La Pandoure'); for dance or other instrumental tunes the timbre gave the dance type together with the composer or work of origin (e.g. 'Musette de M. Blaise'). The timbre was printed above the new text. During the 16th century these borrowed tunes were nearly always prefaced with the phrase 'Chanson sur le chant:'; later, this was replaced by a simpler form, 'Air:'. The term is closely associated with the large anthologies of airs, chansons and vaudeville songs edited during the early part of the 19th century by such collectors as Pierre Capelle, *La clé du caveau* (Paris, 1807), Joseph Doche, *Musette du vaudeville* (Paris, *c*1822), Pierre Béranger, *Musique des chansons* (Paris, 1834) and others. The *airs* in these collections were arranged alphabetically according to the names of the 'timbres'. J.-J. Rousseau (*Dictionnaire de musique*, 1768) did not use the term in his definitions of 'air', 'chanson', 'parodie', 'vaudeville' etc.; nor did Pierre Nougaret in his extensive discussion of the vaudeville in *De l'art du théâtre* (Paris, 1769). A few years later, Pierre Laujon, apparently one of the earliest commentators to introduce the term, in *Les à propos de société* (Paris, 1776, vol.i, p.vii) carefully provided the reader with a succinct explanation of its meaning in a footnote: 'L'on appelle *Timbre,* en style de Chansonnier, le Refrain, ou le Vers qui sert à rappeller l'Air d'une Chanson'. The most popular vaudevilles were frequently given new words. Later poets and parodists would generally retain a catchy refrain, and thus often the timbre, which remained in circulation. But a particularly successful new set of words in a new theatre-piece sometimes gave rise to a fresh timbre referring to an old tune, without displacing the original timbre entirely. For the connoisseur of vaudeville singing, Capelle listed both the 'timbres originaux' or 'timbres primitifs' and these newer 'faux timbres'. In his essay on the *opéra comique,* La Laurencie carefully distinguished between the timbre (i.e. the name of a vaudeville tune) and the melody itself *(fredon)*, with its inherent psychological and motivic features. (*See also* Air).

'Timbre' is sometimes used, particularly by French scholars, to characterize standard melodic themes, phrases or neumatic formulae in medieval

monophony that recur in different musical compositions and which are underlaid with different words. The general compositional techniques of direct borrowing, adaptation, and reorganization of textual and melodic fragments into new pieces during the Middle Ages are well known under such terms as 'Centonization', 'contrafactum', 'migrating melismas' etc. The precise use of 'timbre', however, is closely linked with the Misset-Aubry edition of the proses of Adam of St Victor (d 1146), based on a mid-13th-century gradual and troper (*F-Pn* lat. 14452). Aubry, obviously adapting the folklorist's meaning of 'timbre' to an earlier corpus of music, identified and catalogued 183 'timbre adamiens', or recurring melodic phrases, among the 45 proses ascribed to Adam by Misset. Further, he hypothesized that these structurally simple timbres were derived from a body of popular medieval tunes ('les timbres populaires') now largely lost. Later, Spanke substantially revised Aubry's 'Catalogue des timbres' on the basis of a study by Franz Wellner, who ascribed 53 proses to Adam, and challenged Aubry's speculative theory regarding the secular origin of these phrases.

'Timbre' is also used by medievalists in other analytical contexts. Suñol (1925) used the term 'timbres grégoriens' to describe stereotype melodic and rhythmic groups of notes or stock neumatic formulae that often occur in certain classes of plainchant melodies. Chailley considered it highly probable that melodic phrases in the *versus* and *chansons de geste* found in early St Martial sources, which he labelled 'timbres', were influenced by pre-existing models. Hourlier used the term in his study of the Office antiphon to describe the adaptation of primitive melodic phrases into liturgical compositions of a much later date.

Time.

(1) A synonym or shorthand for musical metre, as in '6/8 time'.

(2) A general term to designate the rhythmic acuity of a performer or ensemble, as in 'playing in time'.

(3) The essential medium for music and musical performance, a non-spatial continuum of past, present and future in which music exists and is understood. Music requires no material substance, nor can one circumscribe any set of sounds as inherently musical (and others as inherently non-musical), but all music must occur in time. Consequently, music makes us vividly aware of the duration and succession of events and our sense of change and continuity. For this reason, philosophers concerned with the nature of time, as well as psychologists interested in human memory and consciousness, often turn to music and musical examples to illustrate their observations and arguments.

Music also reflects the temporal sensibilities of its cultural milieu. In the Middle Ages the expansive polyphony of the Notre Dame school can be considered a musical portrayal of Boethian notions of eternity and timelessness. In the Age of Reason, with its emphasis on taxonomy and order, the propriety of musical succession and continuity was a source of aesthetic satisfaction and wit, as in Haydn's use of orderly disorder, wherein he begins a piece with an ending gesture. In music of the 20th century we find explorations of discontinuity, non-linearity, fragmentation and chaos. The musics of non-Western cultures, most notably those of Indonesia and the Indian subcontinent, may also display a temporal organization that is in part a reflection of different concepts of time (but it is important not to project Western notions of temporality on to the music of non-Western cultures).

The limitations of our musical-temporal capacities reflect our limitations as temporally bound creatures. Music may at times strive to exceed our temporal grasp, from the expansive hypermetres of Bruckner to the rapid rhythmic complexities of Nancarrow's player-piano pieces, but our experience of it is a reminder of what we can and cannot hear, and hence of what we can and cannot know with respect to time.

Time signature.

In Western notation a sign or signs placed at the beginning of a composition, after the clef and any key signature, or in the course of a composition. It indicates the Metre of the piece or a change in metre for a part of the piece. In modern usage two figures are usually given, one above the other: the lower indicates the unit of measurement, relative to the semibreve; the upper indicates the number of units in each bar. Thus a signature of 3/2 indicates that there are three minims ('half-notes') in each bar; a signature 9/8 indicates that there are nine quavers ('eighth-notes') in each bar.

Some signatures are survivors of the system of proportions and mensuration signs (*see* Notation, §III, 3(vii), 4(iii): is used for 4/4 and for 2/2 (also called *alla breve*). is a relic of the medieval *tempus imperfectum cum prolatione minore*, a mensuration where each long contained two breves

and each breve contained two semibreves. The sign is now used to indicate quick duple time, the beat falling on the minim rather than the crotchet. In medieval terms the *tactus* in time fell on the semibreve; in time it fell on the breve. A diminution of note values in the ratio 2:1 was thus indicated by the introduction of the signature, so that any note was subsequently worth only half its previous value. In the Middle Ages, as in modern usage, it occasionally obviated the need to write such notes as the *fusa* and *semifusa* (the modern semi- and demisemiquaver).

RICHARD RASTALL

Timiş, Vasile

(*b* Sighetu Marmaţiei, 20 Aug 1922). Romanian composer. He began his studies with Nicolae Oancea and Leon Mendelsohn at the Lyra Conservatory in Bucharest (1940–42), but was forced to interrupt them because of the restrictions against Jews at the time. Timiş completed his studies with Leon Klepper (composition), Silvestri (conducting) and Rogalski (orchestration) at the Bucharest Conservatory (1951–6). He was choral director of the Artists' Workshop in Bucharest (1945–52), music consultant at the Electrecord record company (1954–8), he then a symphonic conductor (1958–74); in 1977 he became a teacher at the Popular School of Arts. In his compositions Timiş combines neo-romantic and post-impressionistic elements with a melodic vitality. He is committed to the principle of organic thematic growth. In his chamber works he often demonstrates polymodal, polyrhythmic and aleatory elements. Further details are given in V. Cosma: *Muzicieni români* (Bucharest, 1970).

OCTAVIAN COSMA

Timişoara

(Hung. Temesvár).

Town in western Romania. The town passed from Hungarian rule (14th century) to Turkish (1552) and finally Austrian rule (1716). It was ceded to Romania in 1920. As early as the 11th century there was a Byzantine monastery at nearby Cenad. In 1757 an organ was built in Timişoara Cathedral, signed by Johann Hencke; the organ concerts given there for

centuries were renowned throughout central Europe. For several years from 1790 the Kunz opera company gave operas and Singspiele by Salieri, Paisiello, Cimarosa, Dittersdorf and Mozart. In 1813 the première of *Fausts Leben und Thaten* by Joseph Strauss (1793–1866) was given. In the mid-19th century there were productions of operas by Rossini, Bellini, Verdi and Wagner, some within two years of their world premières. The Philharmonische Verein in Temesvár was founded in 1871; early conductors were Heinrich Weidt and Martin Novácek and in 1898–9 Bruno Walter. Liszt and Johann Strauss gave concerts in 1846–7; performers appearing between 1870 and 1910 included David Popper, Pablo de Sarasate, Henryk Wieniawski, Johannes Brahms, Joseph Joachim, Leopold Auer, František Ondříček, Jan Kubelík and Béla Bartók, as well as the Romanian musicians Gheorghe Dima, Doru Popovici and George Enescu. The town's conservatory was founded in 1906; its teachers and graduates helped to form the Amicii Muzicii association (1920) and a choir (1920–32). In 1947 the orchestra became the Banatul State PO. Soloists appearing in Timişoara during this period included Pablo Casals, Eugène Ysaÿe, Jacques Thibaud, Fritz Kreisler, Annie Fischer, Gregor Piatigorsky, Artur Rubinstein, Carlo Zecchi, Bronisław Huberman and Enescu. Conductors of the Banatul PO have been George Pavel, Mircea Popa, Nicolae Boboc, Alexandru Şumski, Remus Georgescu, Paul Popescu and Petru Oschanitzky. The academic choir was founded in 1951 and became a state institution in 1955; its conductors have been Mircea Hoinic, Ion Românu, Diodor Nicoară and Iosif Todea. Soloists appearing with the Philharmonic have included Bashkirov, Katchen, Kerer, Gitlis, Menuhin, Kremer, Spivakov, Josef Suk, Sádlo and Shafran; guest conductors have included K.H. Adler, Benzi, Fistoulari, Kondrashin, Wislocki and Zecchi. The orchestra has toured in Austria, Bulgaria, Switzerland, France, Germany, Greece, Italy, the Netherlands, Spain and the former Yugoslavian countries. The Timişoara Opera de Stat was founded in 1946. The town holds two international music festivals: Timişoara Muzicală (since 1969) and Musica Sacra (since 1996).

VIOREL COSMA

Timm, Henry Christian

(*b* Hamburg, 11 July 1811; *d* Hoboken, NJ, 5 Sept 1892). American pianist, organist and conductor of German birth. After studying with A.G. Methfessel and Jacob Schmitt he emigrated to New York in 1835, making his début at the Park Theatre as a pianist on 19 July 1836. An extremely versatile musician, he doubled as chorus master and horn player in the American première of C.E. Horn's opera *The Pilgrim of Love* at the newly reopened National Theatre (12 October 1840). During the first season of

the New York Philharmonic Society (1842–3) he doubled as trombone player and pianist, and at the inaugural concert (7 December 1842) conducted operatic scenes from Mozart, Beethoven, Rossini and Weber. While president of the Society (1848–63) he firmly set its tone as a servant of German music, receiving his best review as piano soloist (20 November 1852) in a Hummel Concerto. 'Always reliable, and always equal to the emergency', he remained active as a performer in New York and as a church organist until 1882. Although an organist chiefly in Unitarian churches, Timm's most ambitious works were masses. A scrapbook relating to Timm's activities between 1846 and 1875 is in the New York Public Library.

ROBERT STEVENSON

Timmer [Timer].

Austrian family of musicians. They were active in Vienna mainly in the first half of the 18th century. Five or six of the seven sons of Mathias Timmer (*b c*1662; *d* 15 Sept 1742), *regens chori* at St Dorothea and afterwards at the Stephansdom, were trained as musicians: (1) Joseph; Franz Joseph (*b c*1697; *d* 17 Nov 1731); Joseph Carl (*b* 1698; *d* 19 Nov 1785); (2) Leopold; (3) Joseph Ferdinand; and perhaps Anton (*b* 1706; *d* 8 Nov 1764). The frequency of the name Joseph has caused confusion and misattributions; the situation is further complicated because some of Mathias Timmer's grandchildren also became musicians. The Gesellschaft der Musikfreunde in Vienna owns a collection of violin variations by the Timmers in which each variation is composed by a different member of the family, the theme probably being by Leopold. The three musically most important members of the family are discussed below.

(1) Joseph Timmer
(2) Leopold Timmer
(3) Joseph Ferdinand Timmer

EVA BADURA-SKODA

Timmer

(1) Joseph Timmer

(*b* Vienna, 1696; *d* Vienna, 27 Aug 1750). Composer, violinist and tenor. He may have been a choirboy at the Stephansdom and as such a pupil of J.M. Zächer or J.J. Fux before he became a *Hofscholar,* serving also as violinist. In 1719 he became a tenor in the court chapel on the recommendation of Fux, who later described him as 'not only a skilful singer but also a good violinist', and until 1720 he also sang tenor in the

chapel of the dowager Empress Wilhelmine Amalien. At the most splendid opera production of the century, the performance of Fux's *Costanza e Fortezza* in 1725 on the coronation of Charles VI in Prague, he sang a tenor part to great applause (according to Holzhauser's *Krönungsnachrichten*, Prague, *c*1726, p.318). Some violin concertos attributed to (3) Joseph Ferdinand Timmer may be by him. The strong Italian influence characteristic of Viennese music of this period dictated the form of his concertos, but their texture and melodic conception show more local traits. When Joseph Haydn was a choirboy at the Stephansdom during the 1740s he heard and probably met Joseph Timmer who was one of the court musicians obliged to participate in cathedral performances.

Timmer

(2) Leopold Timmer

(*b* Vienna, 1701; *d* Vienna, 21 Oct 1757). Composer, brother of (1) Joseph Timmer. Nothing is known about his teachers or his apprenticeship years. In 1738, when he married, the court documents describe him as valet and director of the chamber music of Duke Franz Stephan of Lorraine (husband of Archduchess, later Empress, Maria Theresa). His surviving output consists mainly of chamber and orchestral music. He composed in a less virtuoso style than his brothers and is the most conservative of them. Nevertheless his compositions, though of variable quality, are by no means less appealing. His melodic invention shows a pleasing natural flow and his part-writing reveals a solid training in counterpoint.

Timmer

(3) Joseph Ferdinand Timmer

(*b* Vienna, 1708; *d* Vienna, 11 June 1771). Composer and singer, brother of (1) Joseph Timmer. He became a member of the court chapel in 1728 as tenor, but at such a low salary that he exchanged this position in 1729 for that of royal valet. He later served Duke Franz Stephan of Lorraine in this capacity. Though he may have participated in performances arranged by his brother (2) Leopold Timmer, he was probably much less active as a musician and succeeded in making an official career, later becoming castellan in Castle Belvedere. His compositions are rather unattractive. Although he was the best-known member of the family, his music lacks the melodic charm and the other good qualities of (2) Leopold Timmer's works.

WORKS

mostly ascribed 'Timmer'; some may be by (1) Joseph

Timotheus

(*b* Miletus, *c*450 bce; *d c*360 bce). Greek composer and singer to the kithara. He represented the more extreme manifestations of the 'new music' that dominated the final decades of the 5th century bce and the succeeding period in Greece. The *Suda* credits him with 19 musical *nomoi*, 36 preludes, 18 dithyrambs, 21 hymns, and other works. Some Greek musicographers considered his works to be rather crude and daring violations of the tradition of the Nomos, but his *Persians* (more than 200 lines of which survive in a nearly contemporary papyrus fragment, *PBerol* 9875; Campbell, frag.791) nevertheless won the competition at the Athenian games, probably some time between 420 and 416 bce. Moreover, according to Satyrus's *Life of Euripides*, the prelude to this *nomos* was written by Euripides himself, who championed Timotheus against his opponents. Timotheus's *Persians* affords a clear view of the literary style and character of the later *nomos*, providing an account of the battle of Salamis, with vivid description, word play and stunning onomatopoeia. Towards the end of the *nomos* (*Persians*, 230–31; Campbell, frag.791), Timotheus claims to have introduced the use of 11 strings or notes on the kithara. The contemporary evidence of the poet Pherecrates (in Pseudo-Plutarch, *On Music*, 1141f–1142a) suggests that Timotheus's dithyrambic compositions, designed for accompanied chorus, were instrumentally conceived and forced the male voice as much as a 4th above its normal upper limit. Pseudo-Plutarch observes that Timotheus's earliest *nomoi* make use of dactylic hexameter – albeit with a mixture of the style of the dithyramb – in order to avoid violating the tradition. Later, however, Timotheus's style became coarse, novel, popular and commercial (*On Music*, 1132e, 1135d). His later *nomoi* also appear to have lacked any stable basis of modality – a radical departure from tradition. As for solo writing, the considerable surviving portions of his *nomoi* make clear that the text had become subservient to a florid, amorphous melodic line. Traces of the same process are discernible at times in the lyrics of Euripides, a close associate of the composer.

The innovations of Timotheus came under sharp attack both in Athens and in Sparta. Pausanias (*Description of Greece*, iii.12.10) states that the Spartans objected to Timotheus's addition of four strings to the traditional seven and that they hung his harp in the meeting house of the Assembly to express their disapproval (cf Nicomachus, *Excerpts*, 4: ed. Jan, 274; Plutarch, *Ancient Customs of the Spartans*, 238c–d; Athenaeus, xiv, 636e–f). These innovations are also the subject of a supposed Spartan decree reproduced by Boethius in his *De institutione musica* (i.1; the authenticity of the decree has, however, been questioned). Boethius states that when Timotheus added a string to those already established and thereby made his music more capricious, the Spartans expelled him. Although the precise number of strings added to the kithara varies from source to source, the point remains the same: Timotheus abandoned the simplicity and grandeur of the ancient style in favour of complexity and virtuosity.

On the one hand, Timotheus saw himself as a champion of tradition (*Persians*, 202–21; Campbell, frag.791), but he could also boast of his innovations, as in a fragment preserved by Athenaeus (iii, 122c–d=Campbell, frag.796): 'I sing not the old songs, for my new songs are better; a young Zeus reigns, and Cronus's rule was long ago; away with the ancient Muse!' In either case, there can be little question that Timotheus's reputation for dramatic vividness and daring innovation was fully justified.

WARREN ANDERSON/THOMAS J. MATHIESEN

Timpán, tiompán.

Timpán is the Middle Irish term (Middle English *timpe*) for what was most likely a species of lyre (*see* Crwth and Rotte (ii)). The Latin word 'tympanum', usually referring to a drum in continental Latin, was used in certain contexts by medieval insular writers, e.g. Osbern (*fl* 1090) in his biography of St Dunstan, and Gerald of Wales in his *Topographia Hibernie* (*c*1187), to denote a string instrument. 'Tiompan' is used in modern Irish, but only in a general sense to refer to any musical instrument.

A music instrument called *timpán* is mentioned in Irish literature between the 8th century and the 17th. It is generally described as having a body of willow (sometimes ornamented with metal) and three metal strings of which one, according to some references, functioned as a melody string, and the others as a drone. In its early period at least, it was plucked with a long fingernail or plectrum. This is evident from a gloss in a Brehon Law Tract in which it is stipulated that a *timpán* player who suffered the loss of a nail as the result of a blow was entitled to a 'wing-nail' or quill plectrum in compensation. At some later stage this instrument was also played with a bow, according to references from 11th-century literary sources (for a full list of references, see Buckley, 1977).

The sound of a *timpán* has been described as sweet-stringed, light, pure and melancholy. It was played by both travelling and resident musicians and was used on occasion to accompany performances of epic and praise poetry at the Irish courts, a timpán-player sometimes substituting for the higher-status player of a *crot(t)* or *cruit(t)*. The *timpán* was also played by women in their separate quarters while engaged in needlework or during their leisure time. Eight performers and two individual patrons are named in annalistic references encompassing of the early 13th century to the late 15th. The decline of the *timpán* (like that of the Irish harp (i)) seems to have coincided with increasing anglicization of Ireland in the 16th century and also, as elsewhere in Europe, with the rise in popularity of the fiddle.

The problem of clearly identifying the *timpán* is hampered by a lack of surviving material evidence or systematic technical descriptions. A *cruit* was an instrument used by professional court musicians with the most senior status: in its earlier period the term referred to a lyre, and subsequently to a harp (the Latin term *cithara* and the Anglo-Saxon *hearpe* also had this dual meaning; *see* Harp, §I). Because a *timpán* player was second in rank to a *cruit* player, and because of its small size and number of strings, it is likely that at an earlier stage in its history the *timpán* was a particular type of small lyre, rather than necessarily being distinct from the *cruit* in a strict organological sense.

The clearly identifiable lyres depicted on early 10th-century Irish high crosses and 12th-century ecclesiastical metalwork (and in a number of north British manuscripts and stone carvings of the 8th–10th centuries) seem to represent varieties of insular models observed from practice (Buckley, 1991). Most are shown as relatively large instruments with apparently six strings, consistent with material evidence from 6th- and 7th-century England, Scandinavia, Germany and Viking settlements in Russia (*see* Rotte (ii)), as well as with continental literary accounts of the use of a six-stringed lyre (*cithara*) to accompany chant singers in rehearsal (Huglo, 1986, p.141). However, a three-stringed lyre in the hands of a cleric on the

12th-century metal Shrine of the Stowe Missal (Buckley, 1990, fig.XIV) is at least suggestive of the existence of a smaller sibling.

It is not possible to say precisely how and over what period harps began to replace lyres as the dominant court instrument in medieval Europe. Frame harps appear to have been established at least by 1000 ce, though iconographic evidence suggests that the process may have begun considerably earlier than that (Buckley, 1991, pp.174–7, 192; *see also* Harp, §V, 1(i)). How and when the terminology was adapted to changing circumstances remains a matter for speculation, and may well not have been consistent. Nor is it possible to establish whether the development of the bow was adopted by all *timpán* players or whether plucked instruments continued in use. Two pieces of evidence do link the bow with 11th- and 12th-century Ireland, in addition to the literary references mentioned above. An early 11th-century bow was excavated from one of the sites of a Viking settlement in Dublin. Although it is not possible to establish the type of instrument on which it was used, it appears to have been manufactured locally, and is the oldest bow so far found in Europe (Buckley, 1987 and 1988). A 12th-century carving of a figure bowing a six-stringed lyre survives in a church wall at Lough Currane, Co. Kerry (Buckley, 1990, fig.XV).

Timpani

(It.; Fr. *timbales*; Ger. *Pauken*).

European kettledrums (*see* Drum, §I, 2(i)). The timpani are the most important percussion instruments of the orchestra, mainly because they are capable of producing notes of definite pitch and so can take part in the harmony of a composition. They are tuned precisely, each to a given note, according to the composer's directions in the score, and these notes may be altered as required during the performance of a work (typically for a change of key), by tightening or slackening the drumhead by means of screws or other mechanisms.

JAMES BLADES (1–4)/EDMUND A. BOWLES (1–5)

Timpani

1. Construction.

Each drum consists of a large bowl-shaped resonating chamber or shell, usually of copper (sometimes fibreglass), with a drumhead of calfskin or plastic covering the open top. The drumhead is mounted (lapped) on a hoop, over which is fitted a metal ring, or counter-hoop, which serves, on many types of timpani, as a means of tightening or slackening the drumhead.

Timpani are divided into two distinct types: 'hand-screw' drums (fig.1) and 'machine' drums. Three types of the latter have withstood the test of time: lever- or crank-operated, with a single master screw (fig.2); rotating, in which the entire kettle turns on a threaded screw (fig.3); and pedal-tuned drums (fig.4). In all three the counter-hoop is lowered or raised in a single operation. Handscrew drums (which are supported either on a quadropod stand or on three adjustable legs, which project through sockets at the base of the shell and can be retracted inside the drum when not in use) have threaded bolts, each with its own T-shaped handle, fitted around the counter-hoop. These engage with brackets on the shell. The counter-hoop conveys pressure to the wooden 'flesh hoop' on which the drumhead is mounted. The screws are turned one or, more usually, two at a time, the latter preferably on opposing sides of the instrument in order to apply pressure on the drumhead as evenly as possible. In no instance is correct tuning obtained by a given number of turns on the handles, or a prescribed 'travel' of the foot-pedal; the amount of pressure is variable, and is governed by the condition and thickness of the drumhead, the size of the kettle and, in the case of skin, by atmospheric conditions.

The main factors determining the pitch of a drum are the diameter of the bowl and the tension of the head. The depth and contour of the bowl, which may vary considerably from maker to maker, also influence the sound. The acoustics of vibrating membranes and shells or bowls has been a subject of considerable discussion and remains controversial. However, there is general agreement that the bowl of the kettledrum magnifies certain of the overtones in the harmonic series, rendering the note musical, and that a shallow bowl tends to clarify the principal note of the drum, while a deep one increases the resonance and emphasizes the lower harmonics. The deeper the bowl, however, the greater the tendency for the pitch of the note to flatten on impact (*see* Acoustics, §V, 1). Most modern makers prescribe that the bowl should be as deep as one half of its diameter. Some bowls are semicircular, others parabolic or with sloping ('cambered') sides. No final formula for timpani has yet been agreed upon, and a wide range of types is still encountered. Tonal differences are compensated for

in part by the performer, who can, for example, adjust the striking position to suit the depth of the bowl: reasonably close to the rim for a deeper bowl, and a little nearer the centre for a shallower one. While the sound produced by drums with an inner device for tuning is arguably inferior, there is no appreciable loss of tone in those modern machine timpani with well-engineered outer mechanisms and bowl suspension.

To avoid the necessity of playing a wide range of notes on each timpanum (i.e. to avoid too taut or too slack a drumhead) and to confine each instrument to its ideal compass (middle register), a minimum of three drums is required for orchestral purposes. The diameters of the once popular so-called 'symphonic set of three' hand-screw drums are approximately 74 cm, 66 cm and 61 cm, covering a compass of an octave and a major 3rd: *E♭* to *B♭*; *G* to *d*; *c* to *g*. Modern pedal timpani range from 81·5 cm to 51 cm, giving a musical range from *D* to *b♭*. The diameters of a standard pair of timpani are 71 cm and 63·5 cm, covering a range of over an octave. It is not unusual for a timpanist to supplement a standard pair of machine drums with a larger and a smaller hand-screw drum. However, a late 20th-century symphony orchestra may have a set of five or more pedal timpani to accomodate any musical requirements, such as unusually high or low notes or two or more timpanists playing at the same time.

A further important factor governing the tone quality of a kettledrum is the material, texture and condition of the drumhead. Until the introduction (*c*1950) of the plastic head – made of a form of polyethylene terephthalate – timpani heads were usually of goat- or calfskin. The best quality skins are those prepared from the hides of young animals in prime condition when slaughtered. Thereafter the hide is skilfully treated to preserve the skin during the process of unhairing, after which it is strengthened by immersion in a lime solution and stretched on a wooden frame, the 'spine' orientated vertically. It is then scraped by hand or equalized by machinery to a thickness of from 0·125 to 0·175 mm (fig.5). To mount a vellum on the wooden flesh hoop, it must first be soaked in cold water until pliable and then lapped completely around the hoop. The lapped head is placed on the bowl and the counter-hoop adjusted to draw the head slightly down over the rim, giving it a 'collar' to compensate for shrinkage in the head as it dries out, thus ensuring the lower notes.

Opinions remain divided regarding the relative tonal qualities of the calfskin and plastic heads. Traditionalists argue that the notes produced by beating natural skin are truer and more 'musical'. All, however, agree that under extreme atmospheric conditions the synthetic material is preferable. Animal skin is particularly susceptible to humidity, a moisture-laden atmosphere causing the membrane to expand and consequently to produce flatter notes. Indeed, on a damp night high notes may be unobtainable, for the tension required to reach them may cause the skin to split. Conversely, a cold, dry atmosphere may cause the skin to shrink so much that high notes are sharp and low notes cannot be reached because there is no slack. Because of these problems many players using natural skins install heating or moisture-carrying units, fitted inside at the bottom of the kettles. Plastic heads have a different tone quality, with less resonance and elasticity; notes produced on them have a faster decay and more sound, or noise, at low frequencies, thus producing uneven dynamics.

2. Technique.

Timpani are played with a pair of drumsticks varying in design and texture according to the work being played, the instructions of the composer and the choice of the performer. To meet the demands of the modern era, a timpanist is equipped with a variety of mallets ranging from those with large ends of soft felt to those with small ends of wood (fig.6). Increasingly, with the use of plastic heads and the penchant for greater volume of sound, players use harder sticks to increase the necessary 'bounce'. The length and thickness of the shaft, which is of hickory or similar straight-grained wood, bamboo or cane, varies according to the player's choice and to national tradition; German players, for example, favouring bamboo over the metal or hardwood perferred by Americans. The heads of the mallets vary in shape from elliptical to pear-shaped, and in size, weight and texture, depending on the tone desired. The beating end of a normal timpani mallet consists of an inner core of hard felt, cork or soft wood, which is covered with either one or two layers of white piano-damper felt sliced into discs of varying thickness (the thicker the softer); the discs are formed into a small bag closed up with drawn threads and fitting the core exactly. The mallets are held identically in each hand, with the shaft nearly parallel with the drumhead and gripped firmly between the tip of the thumb and the index finger, the precise distance from the end of the shaft being governed by the length and weight of the mallet. In normal playing, the third and fourth fingers, which are clear of the shaft, act as a cushion. In 'finger rolls', used for soft passages, these fingers help to produce the 'bounce'. In England and the USA especially, the mallets are usually gripped between the thumb and the first joint of the index finger, the thumb positioned on top, while on the Continent, particularly in Germany, the second joint of the index finger is used and the thumb positioned to the side.

In timpani playing alternate beating is the general rule. This is particularly applicable to the roll, which consists of a succession of single strokes of equal power. The speed of the roll is related in part to the tension on the drumhead, a greater speed being required to keep the head vibrating when tensioned to a high note. Conversely, a slower roll is used on large drums with more slack to avoid a 'belting' sound. In orchestral performance a pair of timpani is placed side by side, the playing areas adjacent, while three or more drums are placed in an arc. The height and tilt of the drums are adjusted to suit the performer. The majority of Dutch, German, central European and Russian timpanists position the large drum(s) to the right. This tradition may go back to cavalry drums: the mounted cavalry drummer counterbalanced the combined weight of the ceremonial sword worn at his left and the smaller drum by placing the larger and heavier instrument on his right. Most American, British, Italian and French players position the large drum(s) to the left, following the layout of keyboard instruments. Today, with the almost universal use of pedal timpani, the instruments are usually played from a seated position, especially when tuning during a piece is required.

The essentials of an orchestral timpanist are an accurate sense of pitch, an unerring sense of rhythm, a fluent technique, including the ability to produce a fine tone, and the ability to count during extensive periods of rest

or when changing pitch. The first requirement in the tuning of a kettledrum is the immediate recognition of the true pitch of the nominal or principal note of the drum. This note is one octave above the fundamental. Certain upper harmonics tend to register more strongly than the principal note until the ear is accustomed to the pitch of the drum, particularly in view of the possibility of confusing pitch with tone, the brighter tone on the drumhead being mistaken for sharpness in pitch, while the duller-sounding places may be considered flat. In the initial tuning of a hand-tuned drum the opposite pairs of handles are turned simultaneously in succession to ensure that the pressure is applied to the drumhead as evenly as possible. The head is then 'trued': the pitch corrected by turning each handle individually. In the case of machine drums, once the head has been 'trued' all successive retunings raising or lowering the counter-hoop can be accomplished by merely turning the lever or adjusting the pedal. The pitch of the drum is tested by flipping the drumhead at the playing spot with the fleshy end of the middle finger, with a light touch of the mallet, or by gently tapping it with a fingernail.

Tuning timpani in the silence of an empty concert hall, or while the orchestra is tuning up, is one thing; but changing the pitch of several drums while the orchestra is playing in a foreign key is far more difficult and challenging. Being able to 'hear' the proper notes in one's head thus becomes essential, as does a sense of relative pitch – the ability to ascertain precisely the interval between the 'old' and the 'new' note. Tuning in this situation is helped by a knowledge of when another instrument in the orchestra will be playing the desired note; indeed, a timpanist often adds such cues to his or her part. Although the modern timpanist is obliged to cope with considerably more changes of pitch than were earlier players, the tuning gauges fitted to pedal timpani (controlled by the 'travel' of the pedal or the movement of the counter-hoop) allow rapid retuning to be accomplished with relative ease. In some cases, as when the timpanist must play and tune at the same time, he or she must rely on these pitch indicators almost exclusively.

To produce the best possible tone the mallet must be immediately withdrawn from the drum after the blow has been delivered. The drumhead is occasionally struck at varying distances from the rim, near the rim for a particularly soft tone, towards the centre for a 'thick' tone – the least resonant sound being produced towards the centre. A drum with a skin head will have a 'playing spot' where the sound is most resonant. In a crescendo roll the player may commence near the rim of the drum, and with the increasing rise and fall of the sticks move them towards the 'playing spot', reversing the procedure in the case of a diminuendo roll. The careful player will ensure that the best register of each drum is used for the more important or solo passages, the positioning of such notes often requiring rapid changes on pedal-tuned timpani.

The foundation of timpani technique is a fluent hand-to-hand performance, the drums wherever possible being played with strokes from alternate hands. The double beat on the left or right hand is used only when necessary, perhaps to avoid a difficult crossover beat. In rapid tempo certain crossover beats are not practicable: there is the possibility of the mallets fouling each other (or the rim), or the danger of the drum being

struck away from the correct playing spot. In the case of a crossover beat at a fast speed between two drums some distance apart the impetus of the movement may result in an unintended *sforzando.* It is in such circumstances that the timpanist uses a double stroke, often in the form of a 'paradiddle', the first two beats being struck by alternate sticks and the last two by one alone. To prevent notes ringing on beyond their time value and where the composer calls for *sec* effects, the vibrations are checked by a process known as 'damping'. In damping, the drumhead is touched lightly with the flattened second, third and fourth fingers (the mallet being held between the thumb and forefinger). Where the speed of a series of short notes renders this method of damping impracticable, a small piece of felt is placed on the drumhead. The practice of damping or 'muting' the kettledrum is frequently met in orchestral scores. It is indicated by the words *coperti* (It.), *couvertes* or *voilé* (Fr.), or *Dämpfer* (Ger.). *Naturale* (or *scoperti*) is used when the muted effect is to cease. Composers utilize this effect for clarifying certain passages, or to obtain a funereal effect, a tradition of long standing. In contrast to the 'shortening' or deadening of certain notes, two drums may occasionally be tuned to the same note and struck simultaneously to provide greater sonority and brilliance. Similarly, the striking of one drum with both mallets simultaneously is equally rare but effective. The latter is indicated by giving the note two tails.

Timpani

3. To *c*1600.

The invention of the kettledrum goes back to remotest antiquity. Kettle-shaped hollow tree trunks, tortoise-shells, and clay bowls covered with hide were among the musical instruments of ancient cultures. What may be evidence of the early use of a kettledrum (shaped like a goblet) comes from a Mesopotamian plaque of the early 2nd millennium bce (fig.7), but it has also been suggested that this instrument (*lilis*) may have a metal head – and thus is a Bronze drum (*see* Mesopotamia). A table of instructions found in Uruk (Erech) and dating from about 300 bce provides directions for making a *lilis*; at that time it was a large bowl-shaped instrument with either a head or a cover made from the skin of a bull. By the time of the New Kingdom in Egypt (1550–1070 bce) small kettledrums and vase-shaped drums had appeared, possibly imitations of Sumerian instruments, and probably made of clay, wood or metal. The instrument was struck with the hands and was played, like most other Egyptian musical instruments of the time, by women. Plutarch (*c*50–*c*120 ce) mentioned an instrument called the *rhoptron*, which was used by the Parthians as a war drum; it made a sound like thunder mixed with the bellowing of beasts (*Life of Crassus*). The *rhoptron* (also known as the *tumpanon*) was made of hollowed out pine or fir with a single mouth covered with oxhide (*see* Greece, §I, 5(i)(e)). Early references suggest that the early kettledrum was used mainly as a ritualistic or ceremonial instrument, for signalling (rallying troops, for example), or to supply the rhythmic underpinning for dancing: there is no evidence that the drums were tuned to specific notes.

Use of a pair of kettledrums of different sizes (one presumably giving a higher tone than the other) appeared early on in African, Indian, Persian, Islamic and Mongolian cultures. Nakers (small, thong-tightened kettledrums) were adopted in Europe for martial music in consort with

trumpets during the 13th-century crusades. Epic poems such as the *Chanson de Roland* (*c*1130) mention these drums, associated above all with the raucous long trumpet (*buisine*, or *cor sarrazinois*) of the Muslim armies. Large-sized kettledrums, hemispherical or egg-shaped, measuring approximately 60 cm and 50 cm in diameter and played mounted on camel or horse by Muslims (especially the Ottoman Turks) and Mongols (*see* fig.8), had reached the West by the 15th century, and inspired the European use of cavalry kettledrums. In the earliest known report, mounted kettledrums were seen in the magnificent entourage of a Hungarian envoy to France in 1457. The size and sound of these instruments prompted a Father Benoît to say that he had never before seen such drums 'like large cauldrons … carried on horseback'. Virdung (*Musica getutscht*, 1511) wrote disapprovingly of the big army kettledrums of copper, which he called *tympana*, likening them to 'rumbling barrels'. A century later, Praetorius (*Syntagma musicum*, ii) called them 'great rattletraps', probably on account of their indistinct tone. It was primarily by way of princely courts in German-speaking lands that kettledrums spread throughout Europe. Following Eastern custom, they were paired with trumpets – usually six trumpets to a pair of drums – and soon appropriated as a symbol of rank and power. The nobility made the possession of timpani an exclusive prerogative, restricted to emperors, kings, dukes, electors and others of high rank. By the 16th century timpani were found in the elite military regiments as well as at the principal courts throughout Europe. Christoph Demartius alludes to them in his *Tympanum militaire, Ungarische Heerdrummel und Feldgeschrey* 1600). Mounted kettledrums attracted the interest of Henry VIII, who ordered the purchase of a number of Viennese kettledrums 'in the Hungarian Fashion' and the hire of skilled performers. In the Holy Roman Empire various imperial decrees led in 1623 to the establishment of the Imperial Guild of Trumpeters and Kettledrummers. As a member of this guild, the timpanist held officer's rank, kept himself apart from ordinary musicians and was sworn to guard the secrets of his art. Very large kettledrums mounted on a carriage were known in England towards the close of the 17th century; notable instruments of this type include the kettledrums in 'Marlborough's train of 1702' (the great kettledrums of the artillery, *see* fig.9), and those in the Rotunda Museum, Woolwich, London (101 cm and 96 cm). Numerous paintings of battle scenes depict a pair of military kettledrums off to the side; such instruments were highly prized as military trophies.

During the 16th and 17th centuries the timpani evolved from a field instrument – used for parades and outdoor ceremonies and on manoeuvres, and providing an improvised rhythmic music based on the lowest trumpet voice – to a supplemental instrument in the orchestra. Improvisation and conspicuous display gave way over time to more formalized playing, ultimately from written music, for banquets, grand balls and other events of state. Drafted only as required, these instruments (often together with trumpets) were loaned out for other large-scale performances, such as operas, oratorios, *Te Deum*s, and festive liturgical services, especially at the imperial court in Vienna.

The earliest illustrations indicate various systems of laced and tensioned heads, similar to the bracing of nakers and the larger Arabic kettledrums. This method of applying pressure to the head was still being used in the

16th century; Mersenne (*Harmonie universelle*) depicted laced kettledrums as late as 1636–7 (fig.10*a*). However, screw-tensioning was adopted in Germany as early as the start of the 16th century (fig.10*b*).

For several centuries the construction of the timpani remained virtually unchanged except for a gradual increase in size. Timpani of this sort are shown in Hans Burgkmair's *Der Weisskunig* (*c*1514–18) and in the illustrations (by Burgkmair and others) for *Maximilian's Triumphal Procession* (*c*1516–18). Henceforth, there are numerous representations of kettledrums with threaded tuning bolts, or 'side screws', distributed around the rim in varying numbers and used to apply pressure directly to a flesh hoop or indirectly by means of a metal counter-hoop (fig.11). Tuning was accomplished by fitting a separate key over the square heads of the bolts and turning them one by one in succession. A few illustrations show screws with a ring at the top, through which a short rod was inserted and then twisted. In any case, tuning was a laborious and time-consuming process. The diameters of the kettles varied. Arbeau (*Orchesographie*) referred to a width of 30" (76 cm), while both Virdung and Mersenne gave measurements equivalent to 60–63 cm. The *Heerpauken* illustrated by Praetorius in his *Syntagma musicum* are smaller – 52 cm and 44·5 cm. Contemporary examples found in museums in Berlin, Budapest, Copenhagen, Frankfurt, New York, Nuremberg and Washington, DC, vary in diameter from approximately 64 cm to 58 cm.

The mallets used on early kettledrums were fashioned from ivory or wood and came in various lengths and styles with round, oval or curved ends. Mallets intended for the cavalry drummer had straps for securing to the wrists, helpful with the flamboyant style of playing then in vogue, as well as grooves around the shank to provide a better grip. Without exception, the countless illustrations depict a standard grip with all fingers being used, never the snare drum position with the palm turned upwards. The musicianship demanded of a mounted drummer included a sound knowledge of the repertory of beating patterns – learnt through long apprenticeship – as well as a good sense of rhythm and the ability to follow the trumpeters in their music. Display was an important part of the timpanist's art, and he was expected to create impressive patterns with his arms while playing. Lacking concrete evidence, it is assumed that these early drums functioned much as their Near Eastern prototypes, the large and small ones each producing a different, if indistinct, pitch to aid rhythmic clarity. Later, tuning in 4ths – a plan derived from trumpet technique – became the general rule. Precise tuning became necessary when the timpani began to participate in 'composed' ensemble music.

Timpani

4. From *c*1600 to 1800.

From the beginning of the 17th century onwards one finds a growing number of references to kettledrums being used in a variety of contexts. For example, the stage directions of English masques, such as Jonson's *The Golden Age Restored* (1616) cite the instrument. The earliest known written part (a brief extract) is an *Auffzüge für 2 Clarinde* [*und*] *Heerpaucken* (*c*1650) by Nikolaus Hasse. Two works by Malachias Siebenhaar consisting of sacred vocal music with instrumental

accompaniment, *Des Kirchen Jesu Christi köstlicher Seelen Schmuck* (1661) and *Suaviloquium Dei Sionis mysticum* (1667), call for *Heerpaucken*. Both outdoor carousel and indoor polychoral liturgical music came to include parts for one or two pairs of timpani: for example, Schmelzer's *Arie per il balletto a cavallo* (1667) for the court of Emperor Leopold I in Vienna; and the so-called *Salzburger Festmesse*, thought to have been written about 1682 by Heinrich Biber, includes among its 53 parts two antiphonal wind bands, each with a pair of drums – surely one of the first examples of music for four timpani. The true introduction of the timpani into the orchestra took place around 1670. Lully made full and interesting use of them in his operas, beginning with *Thésée* (1675); the drums were tuned in 4ths with the dominant below the tonic. The Moravian composer Vejvanovský scored for kettledrums (*tamburini*) in two serenades (XIV/98, 1680; XIV/45, 1691). In XIV/98 they are tuned in 5ths, with the dominant (*g*) above the tonic (*c*), a tuning employed also by Schmelzer and others because of the higher compass of the smaller cavalry timpani then in use. By the close of the 17th century kettledrums were firmly established as orchestral instruments, their improvisatory role restricted to ceremonial field music. Marc-Antoine Charpentier's *Te Deum* (*c*1690) contains a majestic timpani part. Purcell gave them what is considered their first solo passage in the Symphony to Act 4 of his opera *The Fairy Queen* (1692). He also included the timpani in the Ode for St Cecilia's Day (1692) and *The Indian Queen* (1695).

In the first decades of the 18th century numerous festive and ceremonial compositions including timpani were written for the French court: for example, Lalande's *Symphonies pour les soupez du roy* and Mouret's Suite no.1 (*c*1729). Fux's opera *Costanza e Fortezza* (1723), written for the Austrian imperial court, called for two players, each with two drums. Pictorial evidence demonstrates that timpani were widely used in both sacred and secular music. Their tuning was generally restricted to the trumpeter's keys of D and C, and they were tuned in 4ths: in the former to *A* and *d*, in the latter to *G* and *c*. In rare instances they were tuned in the key of G, the dominant above the tonic; Bach wrote for this tuning in several cantatas. In the cantata *Lobe den Herrn* (formerly attributed to J.S. Bach as bwv143), in the key of B♭, the unknown composer called for drums with the dominant (*F*) below the tonic, reaching the very limit of the larger drum's compass. While Bach usually employed the timpani to support the brass or full choir, on several rare occasions he gave them a solo part: the secular cantatas *Vereinigte Zwietracht der wechselnden Saiten* (1726) and *Tönet ihr Pauken!* (1733). The opening solo from the latter was borrowed for the Christmas Oratorio (1734–5), where the timpani herald the choir's motif of rejoicing. Kettledrums are used to dramatic advantage in the B Minor Mass (*c*1747–9). In several instances Bach indicated the use of a roll, but even without such an indication custom dictated that cadential whole notes were to be executed in this way.

Boyce, Handel and Telemann followed the same tradition in their use of timpani: the parts were chiefly rhythmical, the instruments generally played in consort with trumpets as well as in major choral sections, and there were no changes of pitch during a work. Handel adhered rigidly to the interval of a 4th between a pair of drums; the only exception is *Il Parnasso in festa* (1734) in which he used drums tuned to *G* and *D* in the key of B♭. He was

especially fond of 'double tonguing' (e.g. a series of semiquavers *d'–d'–A'–A, d'–d'–A'–A* – the term is borrowed from the trumpeter's art); it is found for instance in *Semele* (1744) and the Ode to St Cecilia ('The double, double, double beat of the thundering drum', in 'The Trumpet's loud clangour').

Similar florid writing occurs in the overture to the *Music for the Royal Fireworks*, where Handel prescribes 'Tymp 3 per parte', and the 'Hallelujah chorus' of *Messiah*. For his oratorios Handel constantly requested (and was granted) the use of the huge artillery train drums, also known as the Tower Drums. These instruments, which are said to have been destroyed in a fire in 1841, are thought to have measured 96·5 cm and 76 cm. Drums of this size would have been played an octave lower than written.

After the middle of the 18th century a number of compositions introduced decided advances in the use of orchestral timpani. Francesco Barsanti called for a pair of drums tuned to three different keys in successive movements of his Concerto Grosso (1743). Christoph Graupner's Sinfonietta (1749) features six timpani, in *F*, *G*, *A*, *B♭*, *c* and *d*, while J.M. Molter's Sinfonia no.99 (*c*1750) uses five, tuned *F*, *G*, *A*, *B♭* and *c*. The most soloistic of these works is a Sinfonia for eight obbligato timpani and orchestra (?*c*1785), formerly attributed to Hertel but now thought to be by Johann Carl Fischer in which the drums span an octave from *G* to *g* and there is a daunting virtuoso cadenza. These, however, were considered showpieces and did not enter the standard concert repertory. Uncommon tunings are found in works by Salieri, whose treatment of the timpani could well have influenced his pupil Beethoven. In his overture to *La secchia rapita* (1772) Salieri wrote for three drums; in *La grotta di Trofonio* (1785) he called for two, unusually tuned a diminished 5th apart (C and G♭), and in *Tarare* (1787) for two a minor 3rd apart. Further unusual tunings are found in F.L. Gassmann's opera *Issipile* (1758), where a small drum in *a* is used, and in Sacchini's opera *Oedipe à Colone* (1786), which is scored for four drums tuned *B♭*, *F*, *b♭*, *f* (an early use of octaves). J.F. Reichardt's 'Battle' Symphony (1781) calls for drums in *E* (a first), *G*, *B* and *c*; his *Cantus lugubris in obitum Friderici Magni* (1786) features stepwise tuning in *G*, *A♭*, *c*, *d♭* and *d*. Georg Druschetzky wrote several concertos, including some with six and eight timpani, as well as a concert piece for violin and orchestra ('Ungarica', 1799) with seven.

Haydn, an occasional timpanist himself, graced many of his symphonies and choral works with finely written and innovative parts for the timpani. The solo roll (on *e♭*) which opens Symphony no.103 (1795) was an effect new to the orchestra and gave the work its name: *Paukenwirbel*, or 'Drum Roll'. In the *Missa in tempore belli*, or 'Paukenmesse' (1796) there is a wonderfully dramatic solo, while in *The Creation* (1796–8) there are seven changes of tuning. Symphony no.94 (1791) may possibly contain the first authenticated change of pitch within a movement (in the fourth movement, from *G* to *A* and back). In Symphony no.102 (1794) he prescribed covered kettledrums ('con sordini') with muted trumpets, an effect used earlier by Mozart and termed 'coperti' in *Idomeneo* (1781) and *Die Zauberflöte* (1791). (This effect was, and is still, applied to military kettledrums.)

Mozart, too, made superb use of the timpani, particularly in his operas, where they always serve to underline and enhance the dramatic impact. With only one exception he confined the tuning of the drums (a pair) to the interval of a 4th, with the tonic in its usual position above the dominant. This interval is so consistently observed that the timpani are omitted from works in the keys of G and A, where, because of the compass of the drums, the interval of a 5th with the dominant above the tonic would be necessary. A notable exception is his Divertimento (1776) for two flutes, six trumpets and four timpani tuned *G*, *A*, *c* and *d*, written for the *Reitschule* in Vienna.

Timpani

5. From 1800.

Beethoven liberated the timpani from their purely rhythmic function, in which they were wedded to the trumpets, as well as from the conventional tuning in 4ths and 5ths. He not only made use of other, more unusual, intervals, but occasionally called for dramatic solo passages or chords (used by J.-P.-G. Martini in *Sapho*, 1794). In *Fidelio* (1805) he employed a pair a diminished 5th apart (*A* and *e♭*) in the dungeon scene for truly chilling effect. In the Scherzo of the Seventh Symphony (1811–12) the drums are a minor 6th apart (*A* and *f*), and in the Eighth (1812) and Ninth Symphonies (1822–4) they are tuned in octaves (*F* and *f*). The final cadence of the Leonore Overture no.3 features a solo roll, a true innovation as the drums carry the harmony. The four solo notes that open the Violin Concerto (1806) provide an example of Beethoven's pioneering writing for the timpani, in which the sound of the drums becomes part of the orchestral texture; the repeated rhythmic figures during the transition from Scherzo to Finale in the Fifth Symphony (1807–8) and accompanying the piano solo during the Finale of the 'Emperor' Concerto (1809) are further examples. While the composer remained conservative in calling for only two drums, he chose with consummate care the particular drum to be used at any given moment. He was equally careful in the manner by which he indicated the true roll: always with the tremolo sign. Where Beethoven wrote a note with its stem struck through three times (frequently used today to denote a roll) he intended, like other composers of the period, that the demisemiquavers be strictly observed. Neither Beethoven nor his predecessors specified the particular type of mallet, although at that time leather- or wool-covered mallets were coming into use alongside the traditional wooden ones. Dalayrac, in *Lina, ou Le mystère* (1807) seems to have been the first operatic composer to call for *baguettes garnies* in a score; he was followed by Spontini in *Fernand Cortez* two years later.

By the end of the 18th century conventional tunings on the standard pair of timpani seemed unduly restrictive. Operas, with their frequent changes of key, presented a special problem. Shortly before the turn of the century a French maker of military band instruments, Rolles, invented the 'T' handle to replace the system of square-topped tensioning bolts turned with a separate key; the new handles, with one to each bolt, allowed somewhat more rapid tuning. However, the range and the number of notes available at any one time was still limited. While some 19th-century composers, such as Schubert, Rossini, Donizetti and Adam, let dissonances stand or eliminated the drums when the notes did not fit the harmony, others

reacted against these limitations and began to incorporate changes of pitch during a piece or movement and often to add other notes as well, both of which required a third drum. Vogler, in *Samori* (1804), and his student Weber, in the revised overture to *Peter Schmoll* (1807) and the overture *Der Beherrscher der Geister* (1811) were among the earliest to call for three drums. Other composers followed: Auber in *La muette de Portici* (1828), Lachner in his Third Symphony (1834) and Halévy in *Charles VI* (1843). Four timpanists, each playing a pair of drums, were called for in Reicha's *Die Harmonie der Sphären* (before 1826), and in Meyerbeer's *Robert le diable* (1831) four drums were given a melodic solo. Chelard's *Die Hermansschlacht* (1835) also required four timpani. Spohr, in *Des Heilands letzte Stunden* (1834–5), used two players, each executing rolls variously on three drums, to depict the moment of crucifixion. In the third movement of his *Historische Sinfonie* (no.6, 1840) he wrote for an orchestra of Beethoven's time, but added a third drum to the previous pair. By the 1830s there was a general call for more timpani. Berlioz observed that composers had 'long complained' of the limitations of the timpani and he took note of the 'audacious innovation' of three drums newly installed at the Paris Opéra by its timpanist, Charles Poussard. Fétis (1836) and Kastner (1937) suggested the addition of a third or even a fourth drum to the orchestra to free the composer from such restraints. In England Thomas Chipp used three drums in playing with his various London orchestras. (However, the practice continued of transposing an octave down for high notes above a drum's normal compass and an octave up for very low notes, especially when only a pair of instruments was available.) Around this time other European orchestras began acquiring three and even four timpani, all machine drums capable of rapid tuning. The instruments now came in varying sizes, with French and English drums larger than German ones. Berlioz deplored those in the Berlin orchestra, considering that they produced an insufficient volume of sound, while Mendelssohn complained about the booming sound of those at the Paris Conservatoire.

During the early 19th century new types of mallet became available. As the loud, brittle sound produced by hard mallets was now often considered inappropriate for orchestral music, an additional pair covered with softer material such as chamois, flannel (introduced *c*1800) or, later, hat felt was introduced. During the 1820s sponge-headed mallets appeared; they are thought to have first been used by Jean Schneitzhoeffer, timpanist at the Paris Opéra. They soon became the preferred vehicle for producing a more blended sound, especially for rolls. Berlioz called for their 'velvety' sound in *Huit scènes de Faust* (1828–9), *Symphonie fantastique* (1830) and *Harold en Italie* (1834); he introduced them to German orchestras during his tour as conductor (1842), and they were popularized there by the Leipzig timpanist Ernst Pfundt. Kastner (1845) wrote that three types of mallet were 'indispensible': wooden-ended for dry and loud passages; leather- or cloth-covered for ordinary playing; and sponge-headed for a soft sound. By the 1840s piano felt began to be used for timpani mallets. This material, first applied to piano hammers by J.H. Pape in 1826, was much thicker and more refined than hat felt and came in sheets that could be sliced to any thickness. Felt mallets were soon being used by Poussard at the Opéra and by other French timpanists. Carl Gollmick in Frankfurt acquired a pair as did Pfundt in Leipzig. English orchestras retained wooden mallets for

several more decades (it was the loud, thudding, bass-drum-like sound produced by these mallets that the visiting Mendelssohn so objected to), and Victor de Pontigny claimed to have introduced felt mallets there in the 1860s.

Berlioz, among his other innovations in orchestration, began to utilize the timpani's possibilities of dramatic effect. He was tremendously impressed with the orchestral effects in Meyerbeer's *Robert le diable* and *Les Huguenots* (1836), the latter including a roll for two timpanists. In his *Grand traité d'instrumentation* he argued that two players, each with a pair of drums, could provide a wider selection of notes and greater flexibility than had been previously available: while one timpanist was playing, the other could be re-tuning, or both could play together, sometimes with extra percussionists to produce chords. In the manuscript of his *Grande messe des morts* (1837) he called for 32 drums played by 20 timpanists, but he compromised in the printed score, reducing his demands to 16 drums and ten players. Berlioz was the first symphonic composer to call for both sponge- and wooden-headed mallets in a single work: they are used for, respectively, the rumble of thunder (played by four timpanists) and the March to the Scaffold in *Symphonie fantastique*.

Around the middle of the century skins changed also, from the thick, unyielding *Kalkfell*, favouring the overtones over the fundamental, to the thinner, translucent *Glasfell*, chemically treated to create a more refined, focussed and 'pure' sound. With more refined, thinner heads and with mallets covered with a variety of materials, the timpani had, by mid-century, become less dry, percussive and invariably loud, and more responsive to dynamic changes in the music.

During the 19th century numerous inventors in almost every country, often working hand-in-hand with mechanics, locksmiths and metalworkers, developed mechanisms for rapidly changing the pitch of a drum. Some of the new 'machine drums' had tuning mechanisms on the exterior, like an armature, while others contained a device inside the kettle. The most successful were tuned either by means of a single master-screw or lever, by rotating the kettle, or by using the foot to manipulate a gear wheel or pedal device. In 1812 Gerhard Cramer, court timpanist in Munich, invented the first tuning device with lever and crown gears: the movement of the lever was transferred through an axle and crown gear to a central screw, which raised and lowered (by means of an armature) the hoop on which the skin was lapped. Johann Stumpff of Amsterdam introduced a rotary-tuned kettledrum (patented 1821), on which tension on the head was varied by rotating the bowl. The most significant of these early efforts was a machine drum operated by a hand-controlled screw crank connected to a rocker arm that raised or lowered an armature attached by rods to the counter-hoop, thus altering the head's tension (*see* fig.2). Designed by Johann Einbigler in 1836, it was the prototype for many later designs and attracted the favourable attention of several composers, including Mendelssohn (*AMZ*, xxxviii (1836), 495–6). Cornelius Ward of London patented two different mechanisms in 1837. The first used a cable, pulleys and turnbuckles activated by a handle projecting from inside the kettle (fig.12). The second (and far superior) mechanism employed pairs of racked (toothed) levers, or bars. By turning a notched pinion between

them, corresponding motion was transferred to the rim, tightening or relaxing the head. Ward's new machine drums were first tried out in 1836–7 at Covent Garden and in the Philharmonic concerts and gained the attention of Wagner, then conducting in Dresden. About 1840 August Knocke, a Munich gunsmith, brought out a drum with an elaborate gear train that raised or lowered the head. The player tuned by using one foot to turn a notched wheel. In spite of their rather cumbersome mechanism, Knocke's drums were adopted by a number of German orchestras; one pair was used for rehearsals by the Staatsoper in Munich until 1963.

There were also less successful tuning devices. The Parisian instrument-maker Darche invented (before 1845) a drum involving several pedals operating on a series of internal concentric rings, each reducing in succession the head's circumference when pressed up against it, and thus raising the pitch. Carlo Boracchi, timpanist at La Scala, invented a mechanism consisting of a lever at the base of the drum which, when pushed to the right or left, turned a central screw raising or lowering the head (1842). For Adolphe Sax's *timbales chromatiques* (patented 1857), the normal bowl was replaced by a shallow frame to which the head was mounted. Henry Distin (London, 1856), Max Puschmann (Chemnitz, 1880) and George Potter (Aldershot, 1884) developed machine drums with exterior rod tensioning; Köhler & Sons (London, 1862) and Louis Jena (Reudnitz, nr Leipzig, 1877) used interior levers and screws or cams. None of these inventions stood the test of time: technical shortcomings or materials lacking the necessary tensile strength caused them all to be superseded.

The final stage in the evolution of machine drums was reached with the so-called 'Dresden' model of Carl Pittrich (1881), which had a foot-operated pedal tuning device (*Stimmvorrichtung*) that could either be attached to a drum of the Einbigler type or incorporated into a new instrument during manufacture. The device was made of strong steel and used mechanical couplings to convert the semicircular motion of the foot pedal into the motion of a base plate, to which struts leading to the counter-hoop were attached (fig.13). Accuracy was aided by a tuning gauge. This mechanism was far more reliable, rapid and powerful than other types, enabling the timpanist to tune precisely, even while playing, and offering composers additional freedom in writing for the instrument. Pittrich's genius extended to marketing: since his new mechanism could be installed on existing drums, older lever-operated timpani could be converted rather than discarded. The way was led by Otto Lange, timpanist in the Dresden court orchestra, who had pedals attached to his pair of drums as soon as they become available. The Leipzig Gewandhaus Orchestra acquired a pair of new timpani with this mechanism in the mid-1880s, and in time such instruments were adopted by virtually every major orchestra in Europe.

In Germany writing for the timpani was influenced by both the availability of three or four drums in the orchestra and the innovation of machine (or rapid) tuning. Mendelssohn tried out the Einbigler lever timpani in Frankfurt, and a set of three was acquired for the Leipzig Gewandhaus Orchestra during his tenure as conductor (his timpanist there was the excellent Pfundt). Mendelssohn's *St Paul* (1836) required three drums. In the final version of *Die erste Walpurgisnacht* (1843), written after the Leipzig

orchestra acquired the Einbigler machine drums, he added notes demanding rapid tuning: in *Elijah* (1846) he included several changes of pitch that had to be made in a few seconds. Schumann was also influenced by Pfundt, a cousin by marriage, and on his advice wrote for three timpani instead of two in his First Symphony (1841). His Symphony no.4 (1841, rev. 1851) calls for several changes of pitch during the first movement: *A* and *d* to *A♭* and *d♯* to *B* and *e* and back to *A* and *d*. In *Genoveva* (1847–8) re-tunings must be accomplished rapidly, in under one minute each. Liszt called for four drums in his symphonic poem *Festklänge* (1853), as well as in the last movement of his *Faust-Symphonie* (1854–7), in which at one point the drums are tuned stepwise to *B♭*, *B*, *c* and *c♯*. Wagner used two players, each with a pair of instruments throughout the *Ring* (1869–76), adding richness to the score by often having both timpanists, with their four available notes, playing together or having one re-tune while the other was playing. His masterly solo rhythmic passages underlined the emotional content of the scores.

In his use of percussion, Mahler followed in the footsteps of Berlioz and Wagner. His symphonies usually require two timpanists, each with three drums, and the parts are often melodic rather than merely rhythmic. For the First Symphony (1884–8) he appears to have had machine drums in mind, but without the easily tuned pedal mechanism: during a roll on low *F* in the first movement he directed that a second percussionist lower the drum to *E*. However, in discussing an upcoming performance of his Symphony no.7 (1904–5) in 1908, Mahler wrote that 'the timpanist must have very good pedal-tuned drums'. The Rondo burleska of his Ninth Symphony (1908–9) contains a rapidly descending scale-wise pattern on one drum; the succession of pitches is: *f*, *A*, *e*, *A*, *d*, *A*, *c*, *A*. Strauss, a master of atmospheric and dramatic orchestration, raised demands on the player to a new level. He took for granted the availability of four pedal drums, and often required the performer to tune while playing, count measures in changing time signatures and watch the conductor all at the same time. His innovations commenced with *Till Eulenspiegel* (1894–5) and peaked in his operas *Salome* (1905) and *Elektra* (1909), the former including descending and ascending scales and passages of semiquavers so rapid that the composer asked for the drums to be 'rearranged' so that the player could alternately strike the two closest instruments followed by the two outside ones. In Salome's dance, Strauss indicated which notes could be omitted if pedal timpani were unavailable.

Russian composers also made full use of timpani, often writing very high notes. Glinka's *Ruslan and Lyudmila* (1837–42) includes an effective solo for three drums (*A*, *d* and *g* – the third an unusually high note). Rimsky-Korsakov also used a drum tuned to *g*, in his *Russian Easter Festival Overture* (1888), while in his opera-ballet *Mlada* (1889–90) he called for two timpanists, each with three drums, as well as a third player with a piccolo timpano (approximately 46 cm) tuned to *d'*. Tchaikovsky consistently scored for three drums, often with unusual tunings; he occasionally called for four timpani, as in the Polonaise and Waltz in *Yevgeny Onegin* (1877–8). Stravinsky, who wrote very complex, rhythmically demanding parts for the instrument, required two drummers plus an occasional third in *The Rite of Spring* (1911–13). At one point five

drums, including one tuned to *b*, are struck simultaneously. In *Renard* (1915–16), he called for a glissando.

Mechanical developments during the 20th century took place mainly in the USA, where few of the heavy 'Dresden' pedal drums were available. Timpanists there often had to supply their own instruments, and consequently, portability and quick assembly were prerequisites. In 1911–13 W.F. Ludwig and his brother-in-law, R.C. Danly, designed the first American pedal timpani, with a hydraulic foot pump that operated an expandable rubber tube that pressed up against the skin and a calibrated pressure gauge for tuning. However, the tendency of the tube to burst under pressure prompted them to abandon this approach, and in 1917–20 they designed an improved model that relied on flexible cables and a self-locking clutch-and-pawl mechanism. Sets of three (76 cm, 71 cm and 64 cm) were purchased by the Chicago SO, the Detroit SO and the Philadelphia Orchestra. Ludwig's pioneering efforts culminated in the 'balanced action' mechanism (1923–5), which utilized a compression spring to hold the pedal in place, and a rod linkage inside the kettle tied to the tuning screws. Cecil Strupe, factory superintendent of the Leedy Drum Company, introduced a ratchet and pawl clutch for locking the pedal in place (patented 1923). The copper bowls of Leedy's drums were formed in a hydraulic press rather than hammered over wooden molds. Such timpani were exported to Britian during the 1920s and served as the model for the first English machine drums, manufactured by the Premier Drum Company.

In Europe a unique type of lever timpani was invented in the early 1900s by Hans Schnellar, timpanist of the Vienna PO. He produced several models, all based upon a screw operating on an eccentric (rocker-arm) to raise or lower an armature connected to the hoop. The unique shape of Schnellar's instruments (the kettles were all the same depth, whatever their diameter) gave them a unique, 'tubby' sound. In the 1980s Günter Ringer of Berlin has produced an updated model of the 'Dresden' pedal timpani featuring a 'cambered' shape, hand-hammered copper kettles and improved pedal mechanism (fig.14). At the end of the 20th century these instruments were being used in major orchestras throughout the world; in the USA they were being manufactured by Ludwig Industries.

By the early 20th century pedal timpani were in use in virtually all major orchestras, except in Britain, where the pair of 'Dresden' timpani acquired by Sir Henry Wood in 1905 remained the only ones until 1930. Composers soon began to exploit further the instruments. Among the earliest and clearest examples of the use of pedal timpani are the chromatic runs in d'Indy's Second Symphony (1902–3) and *Jour d'été à la montagne* (1905), where the composer, a former timpanist, specified *timbales chromatiques*. Credit for the earliest use of a glissando may well be due to Walford Davies, who, in his *Conversations* for piano and orchestra (1914) included this effect as well as chromatic passages. Carl Nielsen's Fourth Symphony (1914–16) includes a passage for two timpanists, playing a minor 3rd apart and rising chromatically from *F* and *A* to *d* and *f* respectively. Bartók employed the glissando frequently, for example in his *Cantata profana* (1930), *Music for Strings, Percussion and Celesta* (1936), and the Sonata for two pianos and percussion (1937) as well as in his *Concerto for Orchestra* (1943–5). Roy Harris's Symphony no.7 (1952) and Panufnik's

Sinfonia sacra (1963) call for glissandos; in the latter a solo descending from *e* to *E* and, later, rising back up again is played by wooden mallets. Numerous composers favoured two timpani parts of two or three drums each: Wolf-Ferrari's *La vita nuova* (1901), Loeffler's *La mort de Tintagiles* (1900), Delius's *Song of the High Hills* (1911–12), Sibelius's *The Oceanides* (1914) and Holst's *The Planets* (1914–16). Requests for chords and for extremely high notes requiring piccolo timpani became increasingly common. Milhaud, for example, used *d'* and *f♯'* in *La création du monde* (1923) and Ravel's *L'enfant et les sortilèges* (1920–25) calls for a *d'*. Slavic composers, Janáček in particular, were fond of these sonorities. His *Sinfonietta* (1926) uses small timpani tuned to *g♯*, *a♯* and *b♭*. Ives, Copland, Piston, Schuman and Hartmann also favoured high drums tuned to *g* or *a*. Large timpani tuned to low notes were not new: Wagner had required an *E* in *Parsifal* (1882) and Mahler a *D* in his Second Symphony (1888–94). Strauss wrote for three low drums in *Die Frau ohne Schatten* (1914–17), where the 'Keikobad' motif at one point is played by timpani in *E♭*, *F♯* and *A♭*. English composers favoured the deep, resonant quality of big drums; they are used, for example, in Elgar's *Sea Pictures* (1897–9), Vaughan Williams's *Sea Symphony* (1903–9) and Britten's *Peter Grimes* (1944–5). Elsewhere, Casella's *Italia* (1909), Busoni's *Rondò arlecchinesco* (1915) and Hartmann's Seventh Symphony (1959) call for a low drum tuned to *E*, while Berg's *Wozzeck* (1917–22) uses timpani in *C* and *D*. In rare cases *timpani bassi* are requested. Stokowski, in his arrangement of Bach's *Komm, süsser Tod*, wrote a drum in *C* and in the *Toccata and Fugue* for one in *D* (a 90 cm drum was made especially for the Philadelphia Orchestra by Ludwig). Harsányi's Suite pour orchestre (1927) even required the note *B'*.

Composers also began to call for unusual tone colours and special effects. Elgar, in his 'Enigma' *Variations* (1898–9) had asked for a roll played with side-drum sticks, although it became the custom, with his approval, to perform this tremolo with two coins. Stanford's *Songs of the Fleet* (1910) required a fingertip roll, and Holst's *The Perfect Fool* (1918–22) called for alternating a felt and wooden mallet. The *Te Deum* movement of Havergal Brian's 'Gothic' Symphony (1919–27) requires two players and six drums in the orchestra plus an additional four timpanists, each with three drums, to accompany the four spatially separated brass choirs. Ottmar Gerster's *Capricietto* (1932) for four timpani and orchestra requires superb technique and considerable virtuosity. The timpani have a prominent role in Poulenc's Concerto for organ, strings and timpani (1938), and in Martin's Concerto for seven wind instruments, timpani, percussion and strings (1949). Henze's Symphony no.3 (1949–50) has an extremely complex timpani part, while Britten's *Nocturne* for tenor solo, seven obbligato instruments and string orchestra (1958) has ascending and descending chromatic passages between *E* and *g♯*, planned carefully so that each drum restarts on the note on which it had been halted previously. Bliss, in his *Meditations on a Theme of John Blow* (1955) asked that a cymbal be placed on one drumhead and struck with a glockenspiel mallet, while in Britten's *Death in Venice* (1973) the drums are hit with a bundle of twigs. Challenging parts for the timpani are found in Tippett's First Symphony (1944–5) and *King Priam* (1962), Copland's Third Symphony (1944–6) and Carter's *Concerto for Orchestra* (1968–9). Works for unaccompanied timpani include Daniel

Jones's Sonata for three unaccompanied kettledrums (1947), Carter's *Eight Pieces for Four Timpani/Recitative and Improvisation* (1950–66), Ridout's Sonatina for timpani (1967) and Graham Whettam's Suite for four timpani (1982). Concertos for timpani and orchestra include Donatoni's *Concertino* for strings, brass and timpani (1952), with effects such as hitting the centre of the drumhead, Werner Thärichen's (1954), demanding consummate performing skill, Harold Farberman's (1962) and William Kraft's (1983), notable for its four-note chords and the unusual sonority created by playing with the hands while wearing leather driving gloves with felt or moleskin patches glued to their fingertips.

Timpani

6. Performing practice.

Before the advent of written parts in the mid-17th century, the kettledrummer always performed *ad lib*, his music based upon the lowest trumpet part of the military ensemble of trumpets and drums. Kettledrummers developed a repertory of stock formulae that were elaborations of basic note patterns; these were used for field and ceremonial music, occasionally in other genres. Best known by their German term *Schlagmanieren*, they ranged from quaver, semiquaver and demisemiquaver figures to special rolls and crossover beatings. They were embellishments in that they were selected from a repertory of formulae, but improvisations in that the experienced performer was left much to his own judgment concerning what to use and when. Both Eisel (1738) and Altenburg (1795), the latter writing after the high piont of this practice, but before it had disappeared, outlined the basic formulae (14 or so) which an apprentice drummer had to perfect and commit to memory. With the development of the orchestra, the acceptance of timpani into it and the advent of written parts for them, a new, orchestral, style of playing emerged; as composers incorporated many of these patterns into their scores it became less necessary for orchestral performers to play *ad lib*. Numerous *Schlagmanieren* are to be found embedded in the music of Bach and Handel. But although the practice of improvising *Schlagmanieren* seems to have died out in France by the mid-19th century (Kastner reported in 1845 that Poussard, timpanist at the Paris Opéra, did not recognize any of them), it remained alive elsewhere, even in the orchestra. According to Carlo Boracchi, timpanist at La Scala, Milan, many of these stock formulae were still being used in Italy in 1845. It was in Germany above all that such elaborations continued; Pfundt wrote (1849) that he employed many of them, as well as varieties of rolls and beating patterns, in playing the music of Meyerbeer and Rossini, for example. However, in 1862 Fechner claimed that 'today timpanists employ only a few of these, simply playing the music the way it is written'.

Until the 19th century mallets were gripped firmly between the thumb and the other four fingers, which were wrapped around it. However, in order to provide more of a recoil (far superior for rolls) and thus a clearer tone, the mallet came to be held between the thumb and the second joint of the index finger, the principal movement coming from the wrist rather than the forearm. In Germany especially the thumb was turned inwards, providing more power and a faster roll. At first, timpani were hit at or near the centre of the head. But the loud, dull thuds proved inappropriate for indoor

orchestral playing, which required a precise, well-modulated tone. Haydn, while surely not the first to have objected to the former sound, has been credited with having demonstrated to the conductor George Smart in 1794 how to hold the mallets and strike the drum (obliquely rather than straight on and, probably, nearer to the rim) to create a 'bounce' and thus a better sound. With hard mallets, dynamics were controlled by the amount of pressure and the distance from the rim (softer passages were played very close to the edge). To add volume to a series of *forte* notes the timpanist hit the drum with both mallets, one striking about 7–10 cm closer to the centre, for greater resonance. These techniques were never notated, but were mentioned in contemporary manuals.

By the late 20th century the method of holding the mallets had changed, especially in the UK and North America. In those places the mallets are usually held between the thumb and the first, rather than the second, joint of the index finger, with the thumb on top of the mallet rather than facing inwards, as on the Continent. It has been argued that 'flicking' the mallet with the tip of the finger produces a more instantaneous 'bounce' and therefore a clearer tone. However, this thumb position places the wrist in an awkward position for rapid flexing up and down, and most modern timpanists who have adopted it cannot alternate their strokes as quickly as those using the so-called 'continental' method.

Before the 20th century there were several types of rolls. In the so-called simple roll the drum was struck with the right and left mallets in rapid alteration. For the double roll the first stroke of each beat was played on the drum tuned to the tonic, with succeeding strokes played on the drum tuned to the dominant or subdominant, the pattern repeating itself until the final, accented stroke on the tonic. By the 1840s this technique had been modified so that one mallet rolled on the tonic drum while the other passed back and forth quickly between the two instruments. For the equally impressive 'bolt of lightning' roll, a fist stroke on the tonic drum was followed by a continuous roll on the other, ending with a final stroke on the tonic again. During the first half of the 19th century rolls were often played using the side-drum technique: two strokes with one mallet followed by two of the other (r, r, l, l, r, r etc.). By the 1840s both methods existed side by side; Pfundt claimed that the alternating method was superior in tone quality, but noted that in long rolls with changing dynamics it was quite acceptable to rest one hand in soft passages by playing with a single mallet using the rebound, or repeated stroke, technique. He further advised using the rebound technique to eliminate cross-beating, as when playing triplets involving two strokes on one drum followed by one stroke on the other. By the time Fechner wrote his treatise on kettledrums (1862) the side-drum method had all but disappeared, due in part to the general use of sponge-headed mallets providing more 'bounce' and capable of faster rolls.

Cadences, particularly final ones, had always provided the timpanist with an opportunity for playing loud rolls and for conspicuous display. This was especially true during the Baroque, when the mounted kettledrummer was expected to end with a flourish, demonstrating his elegance and skill. In describing just such a procedure, Speer (1697) printed what amounts to a virtual cadenza for the instrument, adding that the drummer should execute a long roll until the trumpeters had played their final note, after which he

should perform improvised figures on both drums, concluding with a strong final stroke on the tonic. During the 18th century these solo flourishes disappeared except in field music, but a vestige of the practice remained: the timpanist always rolled the final note of a cadence and ended with a loud single stroke. When a drum part concluded with a crotchet or a minim, with nothing more in the measure although the rest of the orchestra continued to the end, the timpanist filled up the measure with notes coinciding with the rhythm or else with a roll. The speed of the roll (as opposed to the rhythmically articulated tremolo) was governed by both the duration of the note (the longer the faster) and by the musical context: the more spirited, lively and heroic the music, the faster the roll, and conversely, the slower or more stately, the slower the roll.

The exploitation of various tone colours and effects characterizes the use of the timpani in much modern music: for example, glissando passages, stepwise progressions, hitting a drum in the centre, using a different type of mallet in each hand, or playing with wire brushes or coins. There seems to have been a fundamental shift, particularly in North America, away from the concept of the timpani as an ensemble instrument, supporting or underpinning the music, towards the idea that the timpani is essentially a solo instrument. Indeed, many timpanists add notes to their parts at will, ignoring earlier performing practices. Whereas before the middle of the century the timpani blended into the orchestral texture (a fact made abundantly clear in early recordings), by the end of the century the instruments sounded more forward, louder and more 'percussive'. There has also been a corresponding change away from the larger and softer mallets to smaller, harder ones, in part to achieve a proper rebound on the more resistant plastic heads, in part to match the generally louder dynamic level. In short, earlier practice was more unobtrusive, whereas that of the end of the century was more conspicuous. It is almost as if the timpani have come full circle, and are again considered a virtuoso and display instrument, as they were some 300 years ago.

Tinazzoli, Agostino

(*b* Bologna, 2nd half of the 17th century; *d* S Angelo in Vado, Pesaro, 10 Feb 1725). Italian composer and organist. He was an organist in Ferrara around 1690 and then went to Rome, where he was imprisoned for a time in the Castel Sant'Angelo for an unspecified offence. While there, he is said to have written a cantata, *In carcere penoso privo* (in *D-Bsb*, *Mbs*, *I-Nc*), scratching it on the wall of his cell with a piece of charcoal. On his release he returned to his native Emilia-Romagna, but then moved to the Marches, where he was a *maestro di cappella* and opera director in Recanati in 1720 and at the Teatro del Sole in Pesaro, 1721–2. He did not write any operas of his own, but composed numbers for insertion in those of others. A set of *Sonate e capricci per l'organo* (Rome, 1690), often listed among his works, may be incorrectly attributed.

WORKS

Sacred: Il sacrificio di Gefte (orat), 1718; Mass, 4vv, 2 vn, bc, *A-Wn*; 4 requiem movts; Dixit Dominus, 4vv, 2 vn, va, bc, *D-Mbs*

Other vocal: madrigals, cant., 1–2vv, bc, *Bsb*, *Mbs*, *GB-Lbl*, *I-Bc*, *Nc*; inserted nos. in ops: Orlandi's Antigona, Venice, 1718; Orlandini's La costanza trionfante, Recanati, 1720; Gasparini's Il Sesostri, re d'egitto, Recanati, 1720; Orlandini's Lucio Papirio, Pesaro, 1721; C.F. Pollarolo's La Ginevra, Pesaro, 1721; Orlandini's L'amor tirannico, Pesaro, 1722; Orlandi's Nino, Rome, 1722

Inst: 13 sonatas, hpd, org, *D-MÜs*; Sonata da camera, hpd, org, *I-Bc*

Doubtful: Sonate e capricci, org (Rome, 1690)

MILTON SUTTER

Tinctoris, Johannes [Le Taintenier, Jehan]

(*b* Braine-l'Alleud, nr Nivelles, *c*1435; *d* before 12 Oct 1511). Franco-Flemish theorist and composer. He was one of the most profound and influential writers on music of his day, as well as a capable composer and performer.

RONALD WOODLEY

Tinctoris, Johannes

1. Life.

Tinctoris's earliest musical education was probably at one of the *maîtrises* close to his home town, such as Cambrai, Soignies or Nivelles. His father Martin was probably the Martin le Taintenier who was municipal magistrate of Braine-l'Alleud in 1456. Tinctoris was employed at Cambrai Cathedral for four months in about 1460 as *petit vicaire*, in which position he would have had personal contact with (and perhaps tuition from) Du Fay. Around 1460–62 he became succentor at Orléans Cathedral, and by September 1462 he had matriculated as student in the German nation at the University of Orléans. He was already entitled 'magister', though nothing is known of any previous university studies. He became procurator of the German nation at Orléans in 1463. At Orléans he acquired the higher qualification of licentiate in canon and civil law. At some point, probably in the later 1460s, according to his *De inventione*, he was in charge of the choirboys at Chartres Cathedral.

In the early 1470s Tinctoris travelled to Naples to enter the service of King Ferrante I as singer-chaplain, legal adviser and court tutor in the theory and practice of music. (Besides singing, he played bowed string instruments enthusiastically.) Almost all his writings and compositions date from his two decades in Naples. Throughout this time he was involved with the highest intellectual levels of Italian humanism; in 1478–80 he was particularly close to and influential upon Franchinus Gaffurius. He briefly visited Ferrara from 7 to 11 May 1479 at the expense of the Este court. His status at the Neapolitan court was high, and in October 1487 he was sent to northern Europe to recruit new singers for the chapel, bearing letters of introduction to Charles VIII of France and the Emperor Maximilian; he probably visited Bruges and Liège on this expedition. On 24 October 1490 he supplicated for the title and privileges of doctor of canon and civil law, apparently with success.

Tinctoris was possibly appointed *archicapellanus* to Ferrante in the early 1490s, but he probably quitted his formal position in Naples shortly thereafter. He may have been in Rome in 1492 for the enthronement of Pope Alexander VI, shortly after which he wrote both the words and music of a celebratory motet, *Gaude Roma vetus*, whose text only has survived. He possibly visited the court of his erstwhile pupil Beatrice of Aragon, the widowed queen of Hungary, in Buda about 1493. It seems from his letter to Joanmarco Cinico that Tinctoris revisited the Naples area in about 1495–6. Very little else is known of the last 20 years of Tinctoris's life. He had been

a non-resident canon of Ste Gertrude, Nivelles, since about 1488, and he held another benefice, worth about 100 ducats, at the parish church of S Giorgio Maggiore 'ad mercatum veterem' in Naples, which he resigned in Rome on 11 June 1502. He may have returned to his homeland in his last years; his Nivelles benefice passed to Peter de Coninck on his death in 1511. The best depiction of him is the illuminated frontispiece to the Valencia copy of his treatises, which shows him reading at a desk (see illustration).

Tinctoris, Johannes

2. Writings.

12 Latin treatises by Tinctoris survive in whole or part. They demonstrate not only his intellectual and pedagogical mastery of notational and music-theoretical principles, but also his close attention to the work of a wide range of contemporary composers, most prominently Busnoys and Ockeghem. Although in the *Proportionale* he acknowledged a debt to the example of earlier English musicians, especially Dunstaple, he was primarily motivated by a zealous enthusiasm for the French and Franco-Flemish music of his own generation. He was the first significant theorist to offer a precise and comprehensive critique of his contemporaries' music and of their notational and contrapuntal idiosyncrasies.

Tinctoris's earliest treatise, perhaps compiled before his move to Naples, was a now lost *Speculum musices*, whose contents were probably revised and redistributed among his surviving writings. Most of the extant treatises are undated, but were written in the first few years of his employment at Ferrante's court. Their order of completion is evident from references in later treatises to ones that had already been written. They were not composed according to a strict didactic progression, but the three principal manuscripts present them in a more rational order. These are a probable authorial holograph in Brussels, which contains all the surviving treatises except for *De inventione*, and two sumptuous copies made for the Neapolitan court – the one in Valencia about 1485–8, when Tinctoris was in Naples; the one in Bologna in the 1490s, after his departure – which further lack the *Complexus effectuum* and the *Diffinitorium*.

Tinctoris's smaller treatises, mostly written by 1475, offer a meticulous introduction to the elements of musical pitch (*Expositio manus*, *c*1472–3) and rhythmic notation. Even on these elementary topics, Tinctoris operated at a level of detail and nuance seldom found in music theory of any period. His *Proportionale musices* was probably the second in the pre-1475 series; it is one of the most comprehensive treatments of mensuration and proportion from the period, showing a broad and penetrating critique of contemporary usage, though frustrating in omitting some basic information. Many of its specially composed musical examples seem to give an indication of how rhythmically elaborate extemporization (vocal as well as instrumental) may have been practised.

Two substantial pedagogical treatises were written a little after the first wave of writings. The *Liber de natura et proprietate tonorum*, completed 6 November 1476, is a clear and thorough exposition of the modal system, showing a reliance on the theory of Marchetto da Padova. Tinctoris stated that he had undertaken the treatise for the sake of polyphonic music, but

his single brief chapter devoted to the understanding of polyphony in modal terms is not wholly satisfactory. The dedication jointly to Ockeghem and Busnoys was in response to the disquiet caused by Tinctoris's criticism of them in his *Proportionale*, but he was careful not to cede any intellectual ground. The most extensive of the surviving treatises is the *Liber de arte contrapuncti*, dated 11 October 1477. This work provides Tinctoris's main exposition of intervals, consonance and dissonance, and their usage in both simple and figured counterpoint. He made some provocative distinctions between composed polyphony (*res facta*) and extemporized counterpoint *super librum*. The treatise ends with a discussion of the importance of *varietas* in good composition. The three larger treatises are particularly valuable for their copious examples drawn from works by Tinctoris's contemporaries, which have sometimes led to the identification of music that survives without ascription in the sources.

Only two treatises were printed during Tinctoris's lifetime. The *Terminorum musicae diffinitorium*, a glossary of musical terms, was originally compiled before 1475. As an early example of the genre it holds considerable interest; by and large it summarizes material covered in more detail in the other writings, though some of the wording suggests ways in which the author's thought evolved. The glossary was printed, with a few revisions, in Treviso about 1495. It is not known whether Tinctoris had anything to do with the publication.

In the early 1480s Tinctoris embarked on his most ambitious piece of writing, *De inventione et usu musice*, a large-scale treatment of the origins and evolution of music, its theological and metaphysical roots and ramifications, and a broad survey of vocal and instrumental practice. Embedded within this was an augmented revision of another early treatise, the *Complexus effectuum musices*, a courtly sourcebook of literary and historical quotations on the effects – physical, emotional and spiritual – of music on human beings and their relationship with God and the universe. The complete version of *De inventione*, in five books of perhaps some 100 chapters, has not survived, but its size was comparable with the rest of Tinctoris's theoretical work put together, and there is evidence that the Valencia manuscript may have been one of a pair, a lost volume containing this treatise alone. What has survived is a single printed copy of extracts from the work, probably dating from about 1481–3. A different selection of otherwise unknown chapters survives in a Cambrai manuscript. This epitome includes an abridgement of the enlarged *Complexus*, and its accurate retention of book and chapter identification enables the scope of the original treatise to be estimated.

According to Trithemius, Tinctoris was also notable for his epistolary writings, but only two of these survive: a brief note to the composer Johannes de Stokem in Buda, and what is effectively a short humanistic tract on the follies of worldly success, expressing a disaffection with courtly life that was probably more than simply rhetorical. (It was addressed to the Neapolitan court scribe Joanmarco Cinico, who probably copied Tinctoris's Italian translation of the constitutions of the Order of the Golden Fleece, made on Ferrante's election to the order in May 1473.)

Tinctoris's reputation was high throughout Europe during his lifetime. The impact of his thinking on contemporaries and succeeding generations, however, was mostly indirect, through his influence on Gaffurius; it would undoubtedly have been greater if more of his writings had, like Gaffurius's, been committed to print. Later writers' citations of Tinctoris mostly refer to his printed *Diffinitorium*. But the correspondence (*c*1520–40) of the circle around Giovanni Spataro in northern Italy shows that the manuscript tradition of music theory was still very lively, and that Tinctoris's work remained highly regarded after his death and was eagerly discussed. German theorists maintained an interest in his writings into the mid-16th century.

Tinctoris, Johannes

3. Music.

Tinctoris was also an accomplished composer, demonstrating a stylistic kinship with Busnoys and Ockeghem that corroborates the rhetoric of his treatises. His surviving output is small; the pattern of sources suggests that he wrote nothing of consequence before his move to Naples, with the possible exception of his rondeau *Vostre regart*.

His most impressive work is the four-voice 'L'homme armé' mass, possibly composed in the early 1480s. Its use of trope texts in the Kyrie, Sanctus and Osanna suggests a possible influence from the anonymous Naples cycle of six 'L'homme armé' masses (probably composed in Burgundy about 1476). Tinctoris's other four-voice mass lacks the Kyrie and Agnus, and has a foreshortened Credo text; it survives uniquely in a Milanese choirbook compiled by Gaffurius, so it may date from the period of their acquaintance in the late 1470s. The two three-voice masses seem in some ways to be conceived as a complementary pairing, the first in a very unusual configuration of low clefs, the second in high clefs. No pre-existing material is apparent in either mass. The unique source of the low-pitch mass bears a Latin inscription to Ferrante, so it surely dates from the period of Tinctoris's Neapolitan service. All four masses show a strong and confident compositional hand, with clearly articulated but nuanced motivic relationships, often characterized by closely imitative head-motifs initiating movements and secondary head-motifs relating their subdivisions. Tinctoris's melodic fluency and contrapuntal technique are of a high order, only slightly less individual than those of his most distinguished contemporaries.

Other surviving sacred works include a fine, probably quite late setting of the Lamentations; some details of dissonance treatment reveal contrapuntal criteria that go beyond those of the *Liber de arte contrapuncti*. The two brief Marian motets appear in the Mellon Chansonnier, which was almost certainly compiled in the mid-1470s by Tinctoris himself as a wedding gift to Princess Beatrice; *Virgo Dei throno digna* subsequently became quite widely disseminated. Tinctoris's other extant works include a widely copied though generally textless song *Helas* (ascribed in one source to Compère), a brief three-voice *O invida Fortuna*, and a four-voice setting based on Morton's *Le souvenir de vous*. There are also a number of short but mensurally and rhythmically interesting pieces, mainly in two voices, usually untexted and in some cases duplicating examples given in the

treatises. These seem to function only partly as abstract contrapuntal exercises, and may more fruitfully be seen as notated approximations of extemporized vocal and instrumental practice. Of more clearly didactic intent is *Difficiles alios delectat pangere cantus*, a work from the 1470s, which contains numerous complex mensural, proportional and other notational features that were commented upon at length by the marginal annotator of its source and further discussed in the correspondence of the Spataro circle some 50 years later.

Tindley, Charles Albert

(*b* Berlin, MD, 7 July 1851/59; *d* Philadelphia, 26 July 1933). American composer of gospel songs. He worked as a janitor at the Bainbridge Street Methodist Church, Philadelphia, while preparing for the Methodist ministry at the Brandywine Institute and through correspondence with the Boston Theological Seminary. In 1885 he passed the ministerial examination and began a series of pastorates in New Jersey, Maryland, and Delaware, and in 1902 became pastor of the Bainbridge Street Church. A very popular preacher, he frequently made nationwide tours and was awarded the degree of Doctor of Divinity by Bennett College, North Carolina.

Tindley began composing gospel songs as early as 1901 (*I'll overcome someday* and *What are they doing in heaven*) and continued to publish works that captured the musical interest of the black religious community until 1926. His compositions draw on the chorus–refrain tradition of black spirituals and are characterized by memorable melodies couched in simple harmony. Among his more than 50 compositions that remain popular are *We'll understand it better by and by* (1905), *Stand by me* (1905), *Here am I, send me* (1911), *Leave it there* (1916) and *Let Jesus fix it for you* (1923).

Tinel, Edgar (Pierre Joseph)

(*b* Sinaai, East Flanders, 27 March 1854; *d* Brussels, 28 Oct 1912). Belgian composer and pianist. After studies at the Brussels Conservatory with Brassin (piano) and Gevaert (composition), he began a career as a virtuoso, but soon abandoned this for composition. In 1877 his cantata *Klokke Roeland* won him the Belgian Prix de Rome, and in 1881 he succeeded Lemmens as director of the Mechelen Instituut voor Kerkmuziek. He devoted himself to a study of old church music, and his ideas gave rise to Pius X's *Motu proprio*. He became professor of counterpoint and fugue at the Brussels Conservatory (1896) and its director (1908). He was elected to the Belgian Royal Academy in 1902. His liturgical music is in the Palestrina style, but this technique conflicted with Tinel's lyrical and mystical temperament, and he had much greater success in his two concert settings of the *Te Deum*, the oratorio and the religious dramas. These works indicate his total admiration for Bach, but the orchestration, dominated by the strings, is Romantic. Tinel's piano pieces and songs recall Schumann, Mendelssohn and Brahms; the *Bunte Blätter* for piano are particularly spontaneous and touching, and his songs to melancholic texts have a most moving sincerity expressed through unexpected modulations (e.g. the *Adventlieder*). He published *Le chant grégorien* (Mechelen, 1890).

HENRI VANHULST

Tini.

Italian family of printers. They were active in Milan from at least 1572. The brothers Francesco and Simone Tini were the first to print music, beginning in 1583 with a volume of works by Maddalena Casulana. Simone was dead before the end of 1584, as the company signed itself 'Francesco e eredi di Simone Tini' between 1584 and 1590. Francesco apparently died in 1590 or 1591, although the firm continued to publish. Donà believes that Michele Tini, who had signed books in 1590, was the heir to the firm. Between 1598 and 1603 the 'eredi di Simone Tini' published with G.F. Besozzi, and from 1603 to 1612 with Filippo Lomazzo, to whom the business then passed. Their output represents the extent to which popular music was in demand in Milan, including editions of Anerio (1590), Belli (1586), Dentice (1593), Andrea Gabrieli (1588, 1590), Lassus (1590), Palestrina (1587, 1593) and Orfeo Vecchi (1586, 1588, 1596). A Pietro Tini, probably a brother of Francesco and Simone, published a few works in 1584–6.

STANLEY BOORMAN

Tinódi, Sebestyén ['Lantos']

(*b c*1505–10; *d* Sárvár, late Jan 1556). Hungarian poet, composer and bard. Early in his life he spent some time at Szigetvár, and later he was at Nagyszombat (now Trnava), Kassa (now Košice) and Kolozsvár (now Cluj-Napoca). He seems to have been an itinerant musician for much of his life; at the time of his death he was employed at Tamás Nádasdy's court at Sárvár. 23 songs by Tinódi survive in his *Cronica* (Kolozsvár, 1554/*R*). His poetry is mostly either narrative (historical or biblical) or satirical, and the longer epics refer to the contemporary wars against the Turks. The texts were designed for musical performance and come to life only when sung to his clearly constructed melodies; these have obvious national characteristics, though they were probably not based on folk models. Their rhythmic range is limited, following one of three or four basic patterns. The songs were very influential, becoming (both in practice and by reputation) the seeds from which Hungarian folk music grew, and as a result they appear in hymn books as late as the 19th century.

Tin Pan Alley.

Nickname for the popular songwriting and sheet-music publishing industry centred in New York from the 1890s to the 1950s. By association it came to be applied to the general type of song purveyed by the industry both in America and then Europe up until the rise of the singer-songwriter in the mid-1960s. Suggesting the tinny sound of the overworked upright pianos used by song pluggers in publishers' salerooms, the term is said to have been coined by Monroe H. Rosenfeld, composer of such songs as *Those wedding bells shall not ring out* (1896), *Take back your gold* (1897) and *She was happy till she met you* (1899). Founding firms of Tin Pan Alley included H. Witmark & Sons (the largest company), T.B. Harms & Co., Hawley, Haviland & Co., Joseph W. Stern & Co., Feist & Frankenthaler and F.A. Mills. Originally at East 14th Street and around Union Square, the location of the 'alley' shifted with music publishers to around West 28th Street in the 1890s, the period when the term itself became common. Tin Pan Alley's equivalent centre in London was Denmark Street, off Tottenham Court Road. The centre of activity shifted in New York between the World Wars to Broadway, around 50th Street, and particularly became associated with the Brill Building, with such songwriters as Gerry Goffin and Carole King at Aldon Music, Leiber and Stoller, and Jeff Barry and Ellie Greenwich at Trio Music.

H. WILEY HITCHCOCK/R

Tinsley, Pauline (Cecilia)

(*b* Wigan, 23 Nov 1928). English soprano. She studied in Manchester at the Northern School of Music and in London, making her début in 1961 as Desdemona (Rossini's *Otello*) at St Pancras Town Hall, where she also sang Amalia (*I masnadieri*), Elvira (*Ernani*), Gulnara (*Il corsaro*) and Irene (*Rienzi*). For the WNO (1962–72) her roles included Elsa, Lady Macbeth, Abigail, Aida and Turandot. At Sadler's Wells and the ENO (1963–74) she sang Gilda, the Queen of Night, Fiordiligi, Countess Almaviva, Leonora (*La forza del destino*), Leonore (*Fidelio*, both versions) and Elizabeth (*Maria Stuarda*). At Santa Fe she sang Anne Boleyn (1971) and Senta. She made her Covent Garden début in 1965 as the Overseer (*Elektra*), returning as Amelia (*Ballo in maschera*), Santuzza, Mother Marie (*Dialogues des carmélites*) and Lady Billows, which she also sang at Glyndebourne. Returning to the WNO (1975–81) Tinsley sang the Kostelnička, Strauss's Electra, the Dyer's Wife and Tosca. She created Candace (Paulus's *The Village Singer*, 1979, St Louis). Later roles included Isolde, Ortrud, Kundry, Brünnhilde (*Die Walküre*), the Witch (*Königskinder*), Fata Morgana for Opera North, Mother/Witch (*Hänsel und Gretel*) and Kabanicha (*Kát'a Kabanová*) for the ENO. She was an idiosyncratic actress with a voice of great stamina and penetration. (E. Forbes: 'Pauline Tinsley', *Opera*, xxxiii, 1982, 258–67)

ALAN BLYTH

Tintner, Georg

(*b* Vienna, 22 May 1917; *d* Halifax, NS, 2 Oct 1999). Australian conductor of Austrian birth. In 1927 he joined the Vienna Boys' Choir, with which he had his first opportunities to conduct. Later he studied composition with Joseph Marx and conducting with Weingartner at the Vienna Music Academy. In 1938 he was conductor of the Vienna Volksoper, before emigrating to Auckland, where he was conductor of the Auckland String Players, 1945–54. When the National Opera of New South Wales toured New Zealand he conducted for them, and in 1954 he went to Australia with the National Opera, which he conducted until 1963 and again from 1973 to 1976. Later he became resident conductor of the Elizabethan Trust Opera Company (now Australian Opera), and he pioneered television opera in Australia. Tintner's work also included periods as musical director of the New Zealand Opera and Ballet Company and resident conductor of the Cape Town Municipal Orchestra; in Britain he appeared with Sadler's Wells Opera (1968–70), the LSO and the London Mozart Players. In 1987 Tintner moved to Canada to become conductor of the Nova Scotia SO. He had a large operatic and symphonic repertory, and specialized in the symphonies of Bruckner, all of which he recorded with marked success in the last years of his life. In these he showed his vast experience in the interpretation of the composer's extended structures.

Tintorer, Pedro

(*b* Palma de Mallorca, 1814; *d* Barcelona, 1891). Spanish pianist composer and teacher. He studied with Vilanova in Barcelona before entering the Madrid Conservatory in 1832, where he studied with Ramon Carnicer and Pedro Albéniz. In 1834 he studied with Pierre Zimmerman in Paris, and in 1836 he moved to Lyon where he studied for a year with Liszt. In Lyon Tintorer reportedly taught the piano for 16 hours a day. He later returned to Barcelona to become professor of piano at the Conservatorio Superior del Liceo.

Tintorer composed sacred music, symphonies, chamber music and a great deal of salon music for the piano, typical of which are *Suspiros de un trovador*, *Conversación y vals* and *Flor de España*. the latter work is a grand salon waltz with thunderous octaves, an extended crescendo 'à la Rossini', effective right-hand figurations over a descending bass pattern, and a syncopated right-hand melody reminiscent of Chopin's Waltz in A♭ op.42. Tintorer was also noted as a teacher, and wrote didactic works including *Douze grandes études de mécanisme et de style*, *Curso completo de piano* and *Gimnasia diaria del pianista*.

LINTON POWELL

Tin whistle [whistle, pennywhistle, flageolet, Irish whistle].

A popular form of Duct flute, inexpensive and easy to play, which is mostly used for traditional music. It has six finger-holes; the mouthpiece either has an inset wooden block or is made entirely of plastic. It has a compass of two octaves and three notes. It is usually made in the key of D, but whistles in other keys are also produced. It is essentially a diatonic instrument, although accidentals may be obtained by partially covering the finger-holes. The name 'tin whistle' is largely a misnomer. The Clarke Pennywhistle and 'Sweetone' are the only types actually made of tinplate. In the late 1970s the Shaw Co. (who originally made bagpipes) began making copies of the Clarke Pennywhistle using nickel silver instead of tinplate. Both the Clarke and Shaw instruments have wooden blocks and conical bores. Several other makes are available but all have cylindrical bores, made in a variety of other materials and with plastic mouthpieces. Some of these are erroneously called pennywhistles or tin whistles, but most are called whistles or flageolets. The conical types have a robust tone as well as the bite and responsiveness called 'chiff' by organ builders. The conical shape of the bore gives a flute-like quality, especially in the lower octave. Cylindrical instruments have a lighter, relatively clear tone.

The whistle's popularity owes much to its use in Irish traditional music. Irish players have incorporated traditional pipers' ornaments (cuts, rolls etc.) into their playing to give it its characteristic style. A recent low whistle, pitched in D, has a particularly warm tonal quality, which is especially effective for playing slow airs. Whistle playing has been taken up in France, Germany, Italy, Hungary, the Netherlands, Spain, Australia, Hong Kong and the USA by those who enjoy Irish music. The Clarke Co. exports instruments to all those countries. Its popularity in the USA is probably due to the influx of Irish emigrants during and after the potato famine; Clarke Pennywhistles were being sold in Ireland in the 19th century and would certainly have been taken by emigrants to the USA. The whistle has also been adopted in parts of Africa, especially by players of *kwela* music (*see* Kwela).

For bibliography *see* Pennywhistle.

NORMAN DANNATT

Tiomkin, Dimitri

(*b* Kremenchuk, Ukraine, 10 May 1894; *d* London, 11 Nov 1979). American composer and pianist of Ukrainian birth. He studied at the St Petersburg Conservatory under Blumenfeld and Glazunov and later in Berlin under Petri, Zadora and Busoni. He made his début as a concert pianist in Berlin after World War I and gave the European première of Gershwin's Concerto in F at the Paris Opéra in 1928. In 1929 he accompanied his first wife (the choreographer Albertina Rasch) to Hollywood where the success of his music for *Lost Horizon* led to a busy career as a film composer. During World War II he worked mainly on war documentaries, but in 1952 won great renown with his song-based score for *High Noon*. When he left Hollywood (1968) to settle in London he had worked on approximately 140 films, and been nominated 23 times for Academy Awards for both original scoring and songs: he won Best Score for *The High and Mighty* (1954), *The Old Man and the Sea* (1958), and *High Noon* for which he also won Best Song. His last major project was *Tchaikovsky*, for which he acted as both general musical director and executive producer.

Tiomkin took up composition late in life: he was over 40 when his film career began in earnest and he was nearing 60 when his mature style crystallized. His scoring style reflects the spirit and colour of 19th- and 20th-century Russian and French concert hall music. It also sustains the common emphasis in 1940s' film scoring on melodic writing, but incorporates a more rhythmic, energetic and compact style during the 1950s. Similarly his orchestration evolves from string-dominated textures to a more colourful and varied orchestral palette, including use of solo voice and wordless chorus. He scored films from a range of genres, particularly the western (*Duel in the Sun*, *Giant*, *The Alamo*), the thriller (Hitchcock's *Strangers on a Train*, 1951, *I Confess*, 1953, and *Dial M for Murder*, 1954), adventure (*The Guns of Navarone*, 1961, *55 Days at Peking*, 1963), fantasy (*Lost Horizon*, 1937), and science fiction (*The Thing*, 1951). He also wrote a number of songs for films which reflected his aptitude for using

song as a narrative device, including 'Do not forsake me oh my darlin', from *High Noon*, and 'The Green Leaves of Summer' from *The Alamo*.

Tiomkin's approach favoured instinctive emotional engagement with the drama, rather than intellectual interpretation of the narrative. For example, the use of the ballad theme-song for *Gunfight at the OK Corral* (1957) evokes the chorus in Greek tragedy, responding to the highly charged atmosphere of the film. He preferred to become involved in the production process from the earliest stage possible, but he was also aware of the influence of the musical expectations of the audience, shown by his use of common musical and instrumental codes in scores such as *Red River* (1948).

WORKS

(selective list)

all film scores; director in parentheses

Lost Horizon (F. Capra), 1937; The Great Waltz (J. Duvivier), 1938 [after J. Strauss II]; Spawn of the North (H. Hathaway), 1938; Mr Smith Goes to Washington (Capra), 1939; The Moon and Sixpence (A. Lewin), 1942; Shadow of a Doubt (A. Hitchcock), 1942; Dillinger (M. Nosseck), 1945; Duel in the Sun (K. Vidor), 1946; It's a Wonderful Life (Capra), 1947; The Long Night (A. Litvak), 1947 [after Beethoven]; Red River (H. Hawks), 1948; Champion (M. Robson), 1949; Portrait of Jennie (W. Dieterle), 1949 [after Debussy]

Tiple.

The Spanish word for 'treble' or 'soprano', often applied to specific instruments. (1) A small guitar of Spain, Colombia, Guatemala, Puerto Rico and Venezuela. In Spain the *tiple* (also known as *timple* or *guitarillo*) has fewer strings than the *guitarra*, and is strummed. The Colombian Andean *tiple* is slightly smaller than the guitar, with twelve strings grouped in four courses of triple metal strings tuned to the same pitches as the four upper strings of the guitar, but with the middle string of the three lowest courses tuned an octave lower. According to Davidson the *timple* found today in Spain and the Canary Islands was possibly a precursor of the early Colombian *tiple*: the Canary Islands instrument has four or five strings, and the early Colombian *tiple* had four single gut strings. As early as the late 1600s the *tiple* was considered distinct from the guitar and seen as a part of the process of creolization: in Colombia it is considered as creole as the mestizo population itself. In Guatemala the *tiple* (possibly in this case a five-string instrument) is sometimes included in the *zarabanda* (string ensemble). In Puerto Rico it is a small instrument of the same general type as the *cuatro*, with four or five single strings: there is no standard tuning, as many as 16 different ones being generally accepted. In Venezuela the *tiple* has five double or triple courses; it is strummed to accompany songs. Typically made out of pine, cedar or walnut, it is played in various line-ups and in different ways in each country, most commonly *rasguedo* (strummed). In Colombia syncopated, percussive chordal accompaniment is preferred, fusing a timbric, drum aesthetic with that of strings. (H.C. Davidson: *Diccionario folklórico de Colombia: música, instrumentos y danzas*, Bogotá, 1970). *See also* Guitar, §7.

(2) The treble shawm of the Catalonian *cobla* ensemble, with a normal range of *d'* to *g'''* (*see* Shawm, §5). A. Baines: 'Shawms of the Sardana Coblas', *CSJ*, v, 1952, pp.9–16; H. Besseler: 'Katalanischer Cobla und Alta-Tanzkapelle', *IMSCR* IV: *Basle 1949*, 59–68)

JOHN M. SCHECHTER

Tipo, Maria (Luisa)

(*b* Naples, 23 Dec 1931). Italian pianist. The daughter of the pianist Ersilla Cavallo, she had her first lessons with her mother and made her public début at the age of three. After completing her studies with Casella and Agosti she won the Geneva International Piano Competition in 1949, but her international career first took wing when Artur Rubinstein heard her play at the Queen Elisabeth of Belgium International Competition of 1952, in which she took third prize. After establishing a high reputation in Europe and the USA, where she toured annually for 12 years, she reduced her concert commitments in order to devote more time to teaching, first at the Bolzano Conservatory, and later at those of Florence and Geneva. While excelling in the mainstream piano repertory Tipo has made a special point of championing Italian keyboard music. In 1988 she was elected a member of the Accademia di Cecilia in Rome. Her playing is characterized by grace and a keen sense of proportion, rendering her an elegant interpreter of Mozart, Clementi (whose complete sonatas she was the first to record) and Scarlatti.

JEREMY SIEPMANN

Tippe, William.

A Fellow of Corpus Christi College, Cambridge, between 1408 and 1414, possibly identifiable with the English composer W. Typp.

Tippett, Sir Michael (Kemp)

(*b* London, 2 Jan 1905; *d* London, 8 Jan 1998). English composer. His importance lies not only in his revitalizing contribution to the genres of symphony, concerto, opera, string quartet and sonata, but also in his awareness – displayed in his writings as well as his compositional practice – of the complexities of the modern condition and the artist's role in relation to this. One result of his longevity was an engagement with the radically different social and cultural climates across the century, particularly reflected in a dramatic, modernist change of style in the 1960s. In his first period the salvage and regeneration of materials and aesthetic conceptions from the past – most particularly elements of the English Renaissance and Baroque, and Beethoven – was central. But even in his works of the 1960s and after, such a process continued, only now with music of his own times. After reaching a peak of stylistic experimentation in the earlier 1970s, Tippett's style began to look back to the lyricism and diatonicism of the earlier works. While these features with which he purged the extremes of the intervening period, may not have marked as decisive a style change as that around 1960, they nevertheless provide evidence for the emergence of a late period towards the end of the 1980s. Tippett's individualism sets him in a tradition extending back to early 19th-century Romanticism; but it also derives from equivocations that both define and qualify his English temperament. While his creative attitude displays an indigenous

empiricism, it is nevertheless informed by a developed intellectual sensibility and an openness to other cultural traditions. Notable among the latter are black American popular styles and genres such as jazz, blues, and even rap. References to these are not made with any specious intention of stylistic fusion, but are usually the musical expression of an unfulfilled longing for social inclusion. This tendency is also symptomatic of an important – and classically antinomic – desire in Tippett's thinking for a degree of critical distance from the European consciousness in which it is nonetheless fundamentally steeped.

DAVID CLARKE

Tippett, Sir Michael

1. Life.

The roots of Tippett's ambivalence towards orthodoxy lie in the middle-class liberalism of his family background (for a fuller account of his life see Kemp, 1984, and Tippett, 1991). His father was an entrepreneur yet also a free-thinker, his mother a suffragette; in their very different ways they offered vital stimuli in his early childhood years spent in rural Suffolk. At the age of nine he entered the British public school system, which offered him further intellectual stimulus and scope for rebellion, manifested not least in his overt profession of agnosticism. When, following financial setbacks, his parents moved to the Continent after World War I, he and his brother regularly undertook unescorted journeys across Europe to visit them during school holidays. This helped to instil a spirit of independence and a taste for travel which was to remain unabated.

Tippett began to learn the piano as a child, but it was as a pupil at Stamford Grammar School, Lincolnshire, that he decided in earnest that he wanted to be a composer. He entered the RCM in April 1923, and studied composition with Charles Wood and C.H. Kitson (more profitably from the former than the latter) and conducting with Boult and Sargent. His early student works demonstrate just how long the road would be to becoming a professional composer, and, remarkably, to what extent his eventual attainment of that goal was the result of sheer hard work and application rather than 'innate' ability. But he was prepared for a long apprenticeship, and his student years in London were equally important for offering a formative range of new musical experiences and personal relationships. Alongside various gay romances he established lasting and important friendships with both men and women during this period, most notably David Ayerst, Francesca Allinson and Evelyn Maude.

After leaving the RCM in December 1928, Tippett relocated to Oxted, Surrey, where he based himself until 1951. There he consolidated his position as director of the local amateur music-making community, exploring repertory of interest to him as a composer (including the English

madrigal school) and mounting several operatic productions. After presenting a concert of his own music in April 1930, he concluded that he needed further tuition, and returned to the RCM for a further two years, principally to study counterpoint with R.O. Morris.

Tippett's cultivation of a compositional technique was contemporaneous with the emergence of a left-wing consciousness promoted by his direct involvement with parts of society hit by the economic depression. This included his musical participation in the North Yorkshire work-camps in 1933 and 1934, and his acceptance of an invitation to form and conduct the South London Orchestra, drawn from unemployed professional musicians. (He and the orchestra were seconded by Alan Bush for a grand Pageant of Labour in 1934.) At the persuasion of his cousin, Phyllis Kemp, Tippett joined the British Communist party in 1935, but, as a Trotskyist antithetical to the Stalinist line of his branch, he left within a few months.

His political agenda was soon to be subsumed within a personal one. Having already embraced the more individualistic stance of pacifism in 1935 (prompted by a reaction against the violent revolutionary conclusions of his own agit-prop play *War Ramp* presented that year), he subsequently began to be overtaken by emotional uncertainties evident from a journal be began to keep in 1937. The break-up during the following year of a relationship he had had since 1932 with the painter Wilfred Franks was the catalyst for a major personal crisis in which his homosexuality loomed large. Already familiar with the psychology of Jung, Tippett turned for a while to the Jungian psychoanalyst John Layard, before going on to analyse his own dreams between January and August 1939. The process led him to an acceptance of the implications of his creative drives, sexual orientation and personal emotional needs, and their priorities in relation to one another: not only that composing needed to be first among these, but also that the not entirely resolved contradictions of his sexuality could feed rather than inhibit his creativity. Implicit in all this was, perhaps, the fact that he had by now composed works of sufficient merit – the initial versions would eventually be his first published pieces – that such decisions were demanded and justifiable. From this point onwards his preoccupations with social questions would be assumed within the more abstract framework of high art. The first example was the oratorio *A Child of our Time*, begun days after he concluded his dream therapy and coincident with the outbreak of World War II.

During the war Tippett's pacifism was put to the test. In 1943 he was duly sentenced to three months' imprisonment for his uncompromising stance as a conscientious objector. On release he resumed his role as music director of Morley College, London, to which he had been appointed in 1940, and in which he would continue until 1951. By now his reputation as a composer was growing, and he began to move increasingly within artistic circles at home and on the Continent, finding a publisher, Schott, and becoming acquainted with the likes of Walton, Edith Sitwell, Stephen Spender, Sacher, Britten and Pears. In the late 1940s and 50s he gave numerous talks on BBC radio, many of which were subsequently published alongside other essays (Tippett, 1974; 1980; 1995). Within these diverse writings, it is possible to discern a coherent aesthetic standpoint which underpins the composer's mature output. Briefly put, Tippett holds that art's

role in post-Enlightenment culture is to offer a corrective to society's spiritually injurious domination by mass technology. Art, he suggests, can articulate areas of human experience, unapproachable through scientific rationality, by presenting 'images' of the inner world of the psyche. It is a view which has strongly Jungian overtones (Clarke, 1996).

The 1950s saw an increasing number of nationally and internationally prominent performances of Tippett's music, though it required a younger generation of performers in subsequent decades to master the technical and interpretative challenges of his highly idiosyncratic style. In 1965 he was invited to be a guest at the Aspen Summer school in Colorado. This was to be the first of many visits to America, a country to which he expressed a strong attachment and in which many performances of his music (some of them world premières) have been given. His personal life at this time was also not without further incident, including a long-term, but turbulent relationship with Karl Hawker between 1957 and 1974. In the mid-1960s he began a liaison with Meirion Bowen, who entered the official foreground of his life after the demise of the relationship with Hawker. Bowen was to become especially influential from that point onwards, mediating between the composer (who moved to rural Wiltshire in 1970) and the outside world, and co-ordinating many of the international tours and public engagements that came with his rise to prominence. Eventually Bowen's role as amanuensis would extend to making arrangements of Tippett's music and collaborating with him over new performing versions of certain works. In 1996 the composer, now in his 90s and in less robust health, moved to Isleworth, Middlesex, where he could be closer to friends and carers. He died in 1998 having remained creatively active until the last few years of his life.

Tippett's final attainment of international status was endorsed by many areas of the establishment, initial accusations of obscurity generally long since retracted. He was the subject of festivals, documentaries, conferences and books; he received state honours and honorary degrees, and made appearances in the popular media; and after the death of Britten he was adopted as the doyen of British music. Alongside this public acclaim, critical opinion has remained divided over his later works, though on the basis of little detailed study. Whether the accolades may in some way have impacted on his final works is a matter still open to question.

Tippett, Sir Michael

2. Earlier works.

Tippett composed for approximately 15 years before producing the first works of what became his official, published output, though it would be wrong to construe this period as a seamless development towards maturity. The pieces stem from a number of situations and include undergraduate works, occasional pieces (such the ballad opera *Robin Hood*, written for the 1934 Boosbeck work-camp) and more abstract instrumental works in such genres as string quartet and symphony. They demonstrate an equally diverse array of stylistic resources, from popular tunes and folklike melodies to more classical materials. Nonetheless, from the late 1920s onwards characteristics that would be formative for his early mature style become discernible, most notably an incipient English

Romanticism, based on diatonic and modal melodies and the juxtaposition of distantly related triadic sonorities, for example in the C minor Piano Sonata (*c*1928) and the string quartets in F major (1928, rev. 1930) and F minor (1929).

These traits appear in more assimilated form within Tippett's first published works. In particular the slow movements of the Sonata no.1 for piano (1936–7, rev. 1942, 1954) and the Concerto for Double String Orchestra (1938–9) adopt melodies whose contours are modelled on folksongs of the British Isles. That of the Double Concerto (ex.1) draws its intervallic profile from the pentatonic collection E–F⬚–A–B–D, or transposed fragments of it. The set in its various transpositions confers a unifying tendency on the work as a whole, symptomatic of a symphonic conception, and of the influence of a figure who would play a large part throughout Tippett's creative life – Beethoven. His influence is further manifested in the dynamism of the sonata-form principles of the concerto's outer movements; and in the slow movement's fugato modelled on the slow movement of Beethoven's String Quartet in F minor, op.95, which acts as a counter-statement to the initial folklike theme (compare exx.1*a* and 1*b*).

The late-Beethovenian fugue and, in particular, the 'Beethoven allegro' assumed archetypal status for Tippett in his first period – not just as technical resources (which he devoted much of his apprenticeship to mastering), but for what they represented aesthetically: autonomous goal-orientated forms concerned with the statement, elaboration and fulfilment of ideas in sound; and forms of expression that affirm human subjectivity itself. Much of Tippett's distinctiveness resides in the interaction of these deeply held (and ultimately Austro-Germanic) principles with musical materials drawn from English traditions. If the Double Concerto is an impressive synthesis in this respect, the first three string quartets (1934–5, rev. 1943; 1941–2; 1945–6) and the Symphony no.1 (1944–5) experiment further. All explore the potential of fugue (reflecting a preoccupation with counterpoint that would be lifelong), while in the quartets the number of movements and placing – or indeed, in the case of the Third Quartet, presence – of a sonata form movement within the overall scheme also becomes an issue. The first movement of the First Symphony amplifies the Double Concerto's convergence of sonata form and contrapuntal and rhythmic textures of the 17th-century instrumental fantasia, while its slow movement adopts ground bass principles drawn from Purcell – a further formative figure, whose music Tippett had explored with the choir of Morley College and would subsequently edit in collaboration with Walter Bergmann.

But it is Tippett's treatment of rhythm that is the most pervasive agent in the renewal of historical material and forms. The roots of this highly original aspect of his earlier style lie in the madrigalists' treatment of English prosody (Kemp, 1978–9; 1984, pp.97–117): the opening of Byrd's madrigal *Though Amaryllis Dance in Green* (ex.2*a*) is a case in point following the natural accentuation of the text and changing mensuration from two-beat to three-beat units in the second bar. The legacy of such features can be seen in the rhythmic treatment of the second thematic group of the Concerto for Double String Orchestra (ex.2*b*), where the initial underlying crotchet pulse is supplanted by that of a dotted crotchet in the second and

third bars. The finale of the earlier String Quartet no.1 exhibits a more extended application of this same device in conjunction with Tippett's fugal practice.

Within the fugue subject itself (ex.3) the length of the beat changes constantly, and the shifting groupings formed by the individual motifs offer no guarantee of coincidence with the equally unpredictably placed barlines. The effect is a kind of developing variation, in which subsequent versions of a motif or phrase might contract or expand its forebear or reverse its pattern of accentuation. The complexities of this are compounded when several such lines are presented contrapuntally; indeed it is a feature of this kind of texture that vertical harmonic alignment of parts is a virtual irrelevance. Tonal features may be extracted, such as the emphasis on the dominant of A in ex.3 at three different registers (bars 1, 11 and 18). But these are articulated entirely in melodic terms; and when several rhythmically conflicting layers are superimposed such tonal elements can rarely be aligned. Thus tonality results from the complex surface of the music rather than being the generator of that surface, an associated presence rather than a driving force.

Alongside Tippett's instrumental music was a commitment no less strong to the human voice. Together with several attractive minor choral works, the solo cantata *Boyhood's End* (1943) and the song cycle *The Heart's Assurance* (1950–51) are significant contributions to the tradition of English song. They encapsulate a lyricism essential to his music, however much he subsequently problematized it. Much as he was drawn to the voice for its sensuousness, it was also a vehicle for words and hence ideas: all his mature operas and major works for voices and orchestra make big artistic statements. The catalyst for *A Child of our Time* (1939–41) was the shooting of a German official by the Polish Jewish dissident Herschel Grynspan in 1938, which became the Nazis' pretext for the Jewish pogrom in November of that year. These historical events become transmuted in the oratorio into a reflective commentary on the universal theme of the individual's fate under the forces of social oppression. Tippett heeded the advice of T.S. Eliot – both here and in many succeeding works with text – to devise his own libretto, given that any specifically poetic content would (in Susanne Langer's phrase) be 'swallowed' by the music. It is open to question as to whether he satisfactorily resolved the compositional problem set by the stylistic contradictions of, on the one hand, references to the Baroque genres of oratorio and passion, and, on the other, the use of negro spirituals for their collectively understood emotional and social resonances. But the work undoubtedly achieves its aim of simplicity and directness of communication. Indeed it was to be a keystone of his professional reputation, and to date remains one of his most frequently performed pieces.

The words of the oratorio's closing ensemble, 'I would know my shadow and my light, So shall I at last be whole', have become canonical in commentary on Tippett. Inspired by Jungian themes of self-knowledge and the recognition and balancing of opposites, this statement crystallizes an ethic, and aesthetic, central to his world-view, and one which underlies all his text-based works. Wholeness – often portrayed as a dream – is the foundation of that profoundly humanist vision. Thus, in *The Midsummer*

Marriage (1946–52) the obstacle to the nuptials of the main protagonists, Mark and Jenifer, is the refusal of each to acknowledge and accept in themselves what they see as exaggerated and unacceptable traits in the other: in one the sensual and intuitive; in the other the mental and rational. Accordingly, each must attain completion by confronting and assimilating their repressed 'other'. The symbolic imagery used to dramatize this marriage of opposites drew accusation of obscurity at the opera's première; but the work's comic devices and musical lucidity have ultimately been persuasive. Like so much of Tippett's music, *The Midsummer Marriage* represents a synthesis of disparate elements. Its use of mythological imagery and espousal of a classical Greek theatrical model have Wagnerian connotations; the use of set-piece arias as a medium for the enjoyment of singing itself (for example, Mark's Act 1 aria, ex.4) invokes the Italian operatic practice of Verdi and Puccini; the interaction of the 'real world' and the 'marvellous' recalls Shakespeare, while the significant presence of dance points to the English masque.

Although it is all too possible to overstate the diatonicism of Tippett's earlier works – the dissonance and melodic angularity of the opening movement of the revised First String Quartet, and chromaticism of the slow movement of the Second immediately qualify such a view – it is still undeniable that *The Midsummer Marriage*'s effulgent, affirmative sound world is inescapably bound up with its tonal language. That this usage is one of reinvigoration rather than reaction can be seen for instance in ex.4. While motions such as the modulation to the dominant, D major, in bars 6–8 employ traditionally functional triadic resources and principles of voice-leading, other elements are less conventional. For example, the significance of the move towards F major after fig.27a is not that of a modulation; that is, it does not bear a simple linear connection to the preceding G (or even D) major. Rather, the tonal centres of this second phrase are more significant as contrasts in colour, most palpably in the different harmonizations of the solo tenor's top A. Typical of Tippett's first period, individual harmonies engage in a constant tension between 'grammatical' function and emancipation as sound, the latter tendency being especially evident here in the vertical accumulation of perfect fifths in the first four bars of each strophe.

The years of work required to produce the opera brought all the strands of Tippett's creative endeavours into a sustained and concentrated centre. From this there issued a number of pieces which built on its technical accomplishment and lyrical idiom. The first movement of the Piano Concerto (1953–5), for example, is remarkable for its melodically generated expansiveness, though if this is a homage to Beethoven's Fourth Piano Concerto, the tonic key of A♭ major also has resonances with his Piano Sonata op.110. The high level of melodic ornament found in the concerto is typical too of other works of the period, such as *The Heart's Assurance* and the *Fantasia Concertante on a Theme of Corelli* (1953). The *alla pastorale* section of the latter is one of Tippett's most rapturous episodes of instrumental writing and its designation invokes an English tradition which clearly still held some currency for the composer. However, the abrupt, neo-classical compression displayed in the Symphony no.2 (1956–7) is portentous of a significant reconsideration of stylistic premises that would accompany his next dramatic work. Moreover, its treatment of

formal problems – on the one hand a re-galvanising of the sonata allegro in the first movement, and on the other a deconstruction of it through the juxtaposition of unrelated episodes in the finale – heralded a radical reappraisal of assumptions regarding musical unity and continuity which would be paramount in futute instrumental works.

3. 1958–76.

Tippett's second opera, *King Priam* (1958–61), marks the major watershed in his career. The swerve to tragedy after the comedy of *The Midsummer Marriage* is indicative of a change of mood, outlook and technical substance that would dominate an entire style-period. The stripping down of the libretto (whose principal source was Homer's *Iliad*) to only those scenes that were dramatically essential demanded that the expansive lyricism of his earlier music be supplanted by conditions in which 'everything … is designed to enforce clarity, concision, speed, powerful declamation and even deliberate abruptness of transitions' (Tippett, 1961, p.63). The orchestra, too, no longer regarded as a homogeneous (and essentially 19th-century) medium, is fragmented into an array of small ensembles. While Tippett has suggested that the radical changes arose from the particular demands of the opera itself – Greek tragedy under the influence of Brechtian epic theatre – this altered stance towards musical material was to have lasting effect. Almost every work after *King Priam* follows its tendency to eschew extended developmental periods and to construct its linear sequence instead through the juxtaposition of ideas, as a 'mosaic of musical gestures' (Tippett, 1980, p.225).

The causes of Tippett's decisive negation of his earlier compositional practice, especially of his hard-won mastery of Beethovenian developmental techniques, are not transparent. External social conditions of the time – nuclear armament and the Cold War – may indeed have been a factor, but only if understood in conjunction with the inner processes of his creative development. Perhaps having sensed that the diatonic lyricism that had overflowed from *The Midsummer Marriage* could be taken no further, he reinvented himself stylistically, and so made it possible to address new areas of experience relevant to a profoundly altered postwar social climate. No less than previously, however, his style would be forged by appropriating, re-evaluating and recycling musical materials from the past – only now the past was the modernism of the first part of the century, most notably Stravinsky, whose influence was already palpable in the Second Symphony.

The assimilation of Stravinsky's attitude to orchestral balance and technique of formal intercutting is apparent throughout *King Priam*. Ex.5 illustrates the moment in Act 1, scene ii (fig.101), in which Priam encounters (but does not yet consciously recognize) his second son, Paris, whom he had ordered to have killed as a baby. The instantaneous – almost cinematic – shift of subject from Priam to Paris in the first bar of the example is articulated by the division of orchestral forces and the abrupt switch of pitch collections. Yet while the vertical conflation of tonic, dominant and subdominant triads of E♭ in the initial, defining sonority of Paris's music could be seen as a further Stravinskian touch, the disposition

behind it – to intensify the expressive potential of tonal resources rather than interpose an ironizing distance – is entirely Tippett's. Such complex, triadically derived harmony is typical of his kind of 'higher consonance' (Whittall, 1982, p.5), which simultaneously resists and embraces tonality. But equally crucial is the sensuousness of the harmony, heightened by the attention paid to instrumental timbre. Thus in ex.5 the impregnation of string sound by harp and piano, and together with the extremes of register, transforms the diatonic aggregate into a moment of sensory excess.

The concomitants of Tippett's newly modernist language were simultaneously a broader representation of human experience and a challenge from within to his earlier humanism. War, violence, sex, homoeroticism, and social and interpersonal alienation now featured much more overtly in dramatic works or works with text; and the increased dissonance and atonality prevalent in *King Priam* reached its most astringent in the succeeding opera, *The Knot Garden* (1966–9). Yet even here, and in his next stage work, *The Ice Break* (1973–6), he was still able to present a possibility, however fragile and contingent, for reconciliation between individuals and between social groups.

If the tenor of this period is the struggle to wrest some glimpse of spiritual emancipation from conditions often inimical to it, Tippett also dealt with the search within human experience itself for what transcends it. *The Vision of Saint Augustine* (1963–5), for solo baritone, chorus and orchestra, emerged from his fascination with Augustine of Hippo (354–430), whose intense reflections on the nature of time led to a momentary vision of eternity, as recounted in the *Confessions*. However, Tippett is less concerned with a superficial portrayal of timelessness, than with the subjective inner struggle to apprehend it. The work's authenticity lies in its quest for a secular metaphysics through its trope on the sacred, and this is underwritten entirely by his newly forged idiom. What in *King Priam* was a mosaic of dramatically motivated gestures, here becomes a complex progress through a matrix of formal units, articulated by an intricate scheme of tempo changes. The flux of psychological states in Augustine's ascent to the visionary moment so conveyed, is amplified by the chorus who sing additional fragments of text triggered by the words of the soloist, like associations in the memory. These features are illustrated in ex.6, which also shows (at fig.57) how dissonance functions not in opposition to consonance but as a domain beyond it, as an expression of the intensity of desire for the transcendental.

In the 1960s Tippett began to pursue the implications for instrumental composition inherent in the new technical devices established in *King Priam*. This phase is characterized by a return to the same compositional problem: how to level a critique at the developmental principles of the symphony and sonata, while maintaining their sense of purpose and drive. Although the first fruits of this enterprise betray a sometimes uneasy relationship between the demands of form and content, this can also be a source of originality and interest. The array of discontinuous, starkly differentiated gestures that is the Piano Sonata no.2 (1962) engenders a dynamic that lies between drama and caprice: individual gestures appear at times to derive neither from adjacent material nor from any rationale of larger-scale formal design. If, by contrast, the greater cohesion between

contrasting elements in the *Praeludium* for brass, bells and percussion (1962) is under-exploited in an essentially strophic formal scheme, this is offset by an exhilarating celebration of the physicality of sound that prefigures works to come in the next decade. The first movement of the Concerto for Orchestra (1962–3) in its turn presents a remarkably sustained exposition of nine (three times three) fully-formed musical statements for different instrumental combinations, followed by a pseudo-development which superimposes them, Ivesian fashion, in ever-changing permutations. A degree of indeterminacy may be attached to Tippett's rationale as to which layer is superimposed upon which.

It is with the Symphony no.3 (1970–72) that Tippett finds a true convergence of musical material, formal processes and aesthetic intentions. Here he simultaneously embraces the symphonic archetype and rejects its conventional premises of construction. Four sections emulate a traditional movement scheme and subvert it by bonding into polarized pairs to yield a large-scale bipartite structure. At every level it is the notion of charged opposition, rather than unity-in-diversity, that brings musical materials into association. The first 'movement', for example, grows from a systematic alternation between ideas which constrain forward momentum (labelled 'Arrest') and those which promote it (labelled 'Movement'), shown in ex.7. Their superimposition in a culminating 'jam session' serves as much to emphasize the extent of their incompatibility as to demonstrate the possibility of their co-existence. And the logic of such purely musical thinking translates into conceptual thought in the finale, where Tippett stages a parodic attack on the celebration of human brotherhood found in Beethoven's Ninth Symphony. Like Beethoven, he introduces a text (here sung by solo soprano), only his own words proceed from a later historical standpoint that encompasses the *Ode to Joy* and Auschwitz. In a confrontation with Beethoven that would have been unthinkable in his first period, Tippett ironizes the vision of the Ninth Symphony to a point of almost complete negation; but then, remarkably, 'dares the grave passage' from the nadir of his portrayal of humanity's inhumanity to the possibility of renewed affirmation ('What though the dream crack/We shall remake it'). This journey is made credible only by the tension created by a continued negative presence within the affirmative musical tendencies, as distilled in the closing alternation between harsh brass and more palatable string chords. The significance of the Third Symphony thus lies in its achievement of a new equilibrium in the struggle between modernism and humanism that had up until then marked Tippett's post-*Priam* works.

The generally rebarbative language of the symphony is characteristic of the sound world of Tippett's music between the 1960s and mid-1970s. Ex.7 reveals a typical conflict between features that make for structural order and others which negate it. For example, the purity of the quartal structure in the symphony's first chord is soured by the tritone between E and A♭; just as the E's claim as a referential pitch centre is challenged by the E♭ – a semitonal conflict intensified in the two chords of the third bar. In the ensuing 'Movement' music the veiling of the whole-tone scale beginning on E by the sustained E♭–F dyad reflects a tendency of Tippett's later works to use modal forms of pitch organization while disguising their source. The connections potentially forged by similarities of pitch manipulation between

the two musics (including their common polarization of E and E♭) are equally disguised – dislocated indeed – by the abrupt switch of pace and instrumentation.

The symphony is typical in that while such structural resources are in themselves identifiable and bear the stamp of a kind of dialectical thinking, their implementation is tempered by a large measure of intuition. Although a number of Tippett's pieces contain evidence of conscious planning – e.g. formal proportional schemes, palindrome techniques and logical patterns of transposition – his composition process was always essentially empirical. Materials are more often than not considered and handled on the basis of their appearance, rather than through systematic manipulation of any abstract formal properties. Thus, for example, while the 'night sky music' in the first part of the Third Symphony bears a distant resemblance to the pointillism of 1960s Boulez which originally triggered the work's conception, Tippett is interested not in the objective serial procedures that might have generated such sounds, but in their actual manifestation as subjective, expressive sensation.

The use of blues in the Symphony's finale as a foil to the *Ode to Joy* exemplifies a wider concern in Tippett's thinking to represent the individual's alienation from the social collective through reference to popular musical forms (especially black American ones) within host European genres. This tendency goes back at least as far as *A Child of our Time*, but is more strongly developed in Tippett's second period, especially in such dramatic works as *The Knot Garden* and *The Ice Break* where alienation is at a peak (and expressions of reconciliation correspondingly more tentative).

Tippett, Sir Michael

4. After 1976.

In the later 1970s, after the completion of *The Ice Break*, Tippett's music began to take new directions. It is difficult to say, however, whether this amounts to a new style-period. On the one hand works written after this point variously continue tendencies endemic to the post-*Priam* period. On the other there are shifts of ground which while less seismic than that of *King Priam* could be seen as markers of a late style. It has been argued that one such is the adoption of composite single-movement form by trilogy of related works: the Symphony no.4 (1976–7), String Quartet no.4 (1977–8) and the Triple Concerto for violin, viola, cello and orchestra (1978–9). Following precedents by Liszt, Schoenberg and Sibelius, and already prefigured in his own Third Piano Sonata, Tippett erodes here the boundaries between individual movements of large-scale forms, so that they function more as sections within an unbroken whole. Combined with a tendency towards a cyclic treatment of large-scale form, this device serves to 'generate metaphors of comprehensiveness' (Kemp, 1984, p.478), the extra-musical implications of which are also characteristic of this later stage of Tippett's output.

The Fourth Symphony is identifiable as a 'birth-to-death' piece not only from the composer's own remarks, but by its periodic inclusion of breathing sounds – a device which has provoked criticism, yet makes possible a chilling representation of mortality in a final exhalation that also functions

as the symphony's closing gesture. Progress through life is mirrored in the progress of musical ideas, and in one sense the symphony revisits the central compositional problem of the first movement of the Concerto for Orchestra: how to reconcile the momentum of a potentially open-ended series of episodes with the circumscribing tendencies of the sonata. Successive ideas are connected often more by continuing or reinstating the kinetic momentum of their forebears than through membership of functional formal categories, such as first and second subject groups. Against a background of near-continuous exposition, developmental links with earlier material are implied more by similarity of timbre and shape than through thematic elaboration. Recurring gestures such as the rising sonorous figure for the six horns quoted in ex.8 become decisive, serving as externally imposed moments of reorientation which check the accumulation of musical invention and create major points of articulation in the formal structure.

The treatment of recapitulation is, or rather should have been, an equally extrinsic matter. In both the Fourth Symphony and the Triple Concerto the respective 'birth' motif that brings each work into being is reiterated near the end, to signify, perhaps, a return to origins, a closing of a circle. However, whereas at the end of earlier works such as the Second Symphony and Second Piano Sonata such recapitulatory passages remain brief, here Tippett follows them with arguably too much of the expository material. While the signal of return has an important large-scale rhetorical function, to re-tread the path of the exposition seems to lack inner formal necessity. By contrast, the String Quartet no.4 takes a more elliptical stance towards the cyclic principle, introducing new material throughout its final section. The closing figure certainly recalls the eerie sounds of the quartet's opening, just as the penultimate rhapsodic motion bears a family resemblance to the final part (fig.74ff) of the 'slow movement'; but their significance lies equally in their dissimilarity from what has preceded, in their blurring of closing and opening, and thus in their resistance to the abstract demands of form.

While the works of the later 1970s are concerned in their various ways with comprehensive narratives of the human condition, *The Mask of Time* (1980–82), for solo voices, chorus and orchestra, considers such questions on a cosmic scale. As Tippett's preface declares, the work 'deals with those fundamental matters that bear upon man, his relationship with Time, his place in the world as we know it and in the mysterious universe at large'. These pretensions yield a 95-minute work in two parts, the first a kind of homespun creation myth, the second to do with the individual in history, threatened by the darker products of the age of reason. Woven into this is an explicit concern with the transcendental, with finding some basis for affirmation despite (or because of) the fragility of collective belief systems within Western culture. The libretto is assembled from literary (and not so literary) fragments. Following suit, and despite the immensity of the work's aspirations, the music eschews large-scale architectonics, relying principally on the immediacy and associative power of individual images. The retrospective references to and quotations from Tippett's own output (a process begun in the Triple Concerto and continued in the Fourth Piano Sonata and beyond) enhances this allusive potential, and could be understood as another trait of stylistic 'lateness'. It suggests too that Tippett

has imputed a significance to his work as a whole beyond that of any individual piece. The recurrence of certain musical images (such as those sung to the words 'sound', 'resounding' and 'space') makes for both unity and discontinuity: as in the Fourth Symphony (ex.8) these gestures appear to break in from some external domain, here used as a metaphor for the transcendent. The apotheosis of such moments in the stunning close points to an attempt to retrieve a discourse of the sublime for the late 20th century. If this suggests a backward glance at Romanticism, so too do the various techniques of irony employed throughout as a counterbalance.

The Mask of Time was meant as a summative artistic statement, yet the next decade proved Tippett's creativity had not diminished. Among other things this included an unanticipated fifth opera, *New Year* (1986–8). In its interplay of *verismo* and the marvellous – videotape and computers, magic fountains and space/time travel all find their place – it draws the principal dramatic conceit of *The Midsummer Marriage*, along with its message of renewal and rebirth, into his late stylistic world. However, while this might signal a rapprochement with his earlier style-period, there is no question of a synthesis. Although the hallmarks of the final works are a re-burgeoning of lyricism, a re-admission of diatonicism, and a move towards structural simplification, these features are mediated by a further, and eventual dominant tendency. That tendency is one of heterogeneity of materials married to a heteronomy of structure – that is to say, a structure governed by more than one law, a resistance to any single overarching principle of organization. Thus relatively transparent diatonic material co-exists with other more complex elements within schemes of simple juxtaposition that leave differences unresolved.

These conditions are especially apparent in Tippett's last major work, *The Rose Lake*, 'a song without words for orchestra' (1991–3), whose formal principle is the alternation of episodes of nakedly tonal orchestral song with passages in which other musical parameters or means of pitch organization predominate (ex.9). But this new order is in fact traceable to the Triple Concerto. The 'pure' F major of that work's slow movement is not dislodged by subsequent tonal deviations or textural accretions, and its associated species of melody is distinct from a more atonal lyricism found elsewhere in the piece, and reminiscent of (in one case quoting from) the Fourth String Quartet. It is this resistance to assimilation that explains such an appearance as the swung percussion interlude following the slow movement of the Triple Concerto. A different kind of heterogeneity obtains in *Byzantium* for soprano and orchestra (1989–90). Here Tippett's response to the 'crystalline intensity' of Yeats's eponymous poem is to find a different musical image for its every turn and nuance. The pay-off for the resulting dismemberment of the text (a fulfilment of his own prophecy on the fate of poems set to music; Tippett, 1960, repr. 1989) is a score whose opulent, ever-shifting sound world captures the emotion and sensation, if not the formal complexity, of Yeats's vision.

The final simplification of musical language carries its own message. The move away from dense textures, complex polyrhythms and cross-tension between note-groupings, barlines and metre may in part be attributable to the need of a composer approaching 90 to mitigate the strenuousness of his labour. But these tendencies, emerging in the last phase of an output

which has previously fully embraced 'bitter furies of complexity' (Yeats again), have the force of a palpable absence or refusal – as in the slow movement of the String Quartet no.5 (1990–91) where a singing violin melody soars over silent lower parts, and as in the ingenuous immediacy of *The Rose Lake's* diatonic lyricism. If this is, perhaps, a music which claims a momentary exemption from modernist prohibitions and complex argument, it is also an intensely personal affirmation of a humanism that will not be extinguished.

Tippett, Sir Michael

WORKS

stage

The Village Opera (ballad op, 3) [realization with added music of orig. version by C. Johnson, 1729], vv, 9 insts, 1927–8, unpubd

Don Juan (incid music, J.E. Flecker), 1930, lost

Robin Hood (folksong op, 2, Tippett, D. Ayerst, R. Pennyman), vv, 5 insts, 1934, collab. Ayerst, Pennyman, unpubd

Robert of Sicily (play for children, C. Fry, after R. Browning), children's choruses, 5 insts, 1938, unpubd

Seven at One Stroke (play for children, Fry), children's choruses, 6 insts, 1939, unpubd

The Midsummer Marriage (op, 3, Tippett), 1946–52; cond. J. Pritchard, LCG, 27 Jan 1955

King Priam (op, 3, Tippett), 1958–61; cond. Pritchard, Coventry, Belgrade, 29 May 1962

The Tempest (incid music, W. Shakespeare), London, Old Vic, 29 May 1962

The Knot Garden (op, 3, Tippett), 1966–9; cond. C. Davis, LCG, 2 Dec 1970

The Ice Break (op, 3, Tippett), 1973–6; cond. Davis, LCG, 7 July 1977

New Year (op, 3, Tippett), 1986–8; cond. J. DeMain, Houston, Grand Opera, 27 Oct 1989

choral

The Undying Fire (H.G. Wells), Bar, chorus, orch, c1927, unpubd

Psalm in C (The Gateway) (Fry), chorus, orch, 1930, unpubd

Miners (J. Wogan), chorus, pf, c1935, unpubd

A Song of Liberty (W. Blake), chorus, orch, 1937, unpubd

A Child of our Time (orat, Tippett), S, A, T, B, chorus, orch, 1939–41; J. Cross, M. McArthur, P. Pears, R. Lloyd, London Region Civil Defence Choir, Morley College Choir, LPO, cond. W. Goehr, London, Adelphi Theatre, 19 March 1944

Two Madrigals, SATB, 1942: The Source (E. Thomas), The Windhover (G.M. Hopkins), Morley College Choir, cond. W. Bergmann, London, Morley College, 17 July 1943

Plebs angelica (motet), SSAATTBB, 1943–4; Fleet Street Choir, cond. T.B. Lawrence, Canterbury Cathedral, 16 Sept 1944

The Weeping Babe (motet, E. Sitwell), S, SATB, 1944; BBC Singers, cond. L. Woodgate, BBC, 24 Dec 1944

Dance, Clarion Air (madrigal, Fry), SSATB, 1952; Golden Age Singers, Cambridge University Madrigal Society, cond. B. Ord, London, Royal Festival Hall, 1 June 1953

Bonny at Morn (arr. of Northumbrian folksong), unison, 3 rec. 1956

Four Songs from the British Isles, SATB, 1956: Early One Morning, Poortith Cauld, Lilliburlero, Gwenllian; London Bach Group, cond. J. Minchinton, Abbaye de

Royaumont, 6 July 1958

Crown of the Year (cant., Fry), SSA, 2 rec/2 fl, ob, cl, cornet/tpt, perc, handbells, pf, str qt, 1958; Badminton School Choir, cond. Tippett, Badminton School, 25 July 1958

Five Negro Spirituals (trad.), SATB, 1958 [arr. from A Child of our Time]

Lullaby (W.B. Yeats), 6 solo vv/A, SSTTB, 1959; Deller Consort, London, Victoria and Albert Museum, 31 Jan 1960

Music (P.B. Shelley), unison, str, pf ad lib, 1960; East Sussex and West Kent Choral Festival Combined Choirs, cond. T. Harvey, Tunbridge Wells, Assembly Hall, 26 April 1960

Wadhurst (Unto the Hills) (hymn tune, J. Campbell), 1960

Magnificat and Nunc dimittis, SATB, org, 1961; St John's College Chapel Choir, cond. G. Guest, Cambridge, 13 March 1962

The Vision of St Augustine (St Augustine, Bible), Bar, chorus, orch, 1963–5; D. Fischer-Dieskau, BBC Chorus, BBC SO, cond. Tippett, Royal Festival Hall, 19 Jan 1966

The Shires Suite (various), chorus, orch, 1965–70; Schola Cantorum of Oxford, Leicestershire Schools SO, cond. Tippett, Cheltenham, Town Hall, 8 July 1970 (1st complete perf.)

The Mask of Time (Tippett and others), S, Mez, T, Bar, chorus, orch, 1980–82; F. Robinson, Y. Minton, R. Tear, J. Cheek, Tanglewood Festival Chorus, Boston SO, cond. C. Davis, Boston, Symphony Hall, 5 April 1984

orchestral

Concerto, D, chbr orch, 1928–30, lost

Symphonic Movement, *c*1930–31, unpubd

Symphony, B♭, 1933, rev. 1934, unpubd

Concerto for Double String Orchestra, 1938–9; South London Orch, cond. Tippett, Morley College, 21 April 1940

Fantasia on a Theme of Handel, pf, orch, 1939–41; P. Sellick, LSO, cond. Goehr, London, Wigmore Hall, 7 March 1942

Symphony no.1, 1944–5; Liverpool PO, cond. M. Sargent, Liverpool, Philharmonic Hall, 10 Nov 1945

Little Music, str, 1946; Jacques Orch, cond. R. Jacques, Wigmore Hall, 9 Nov 1946

Ritual Dances from The Midsummer Marriage, chorus ad lib, orch; Basler Kammerorchester, cond. P. Sacher, Basle, Musiksaal, 13 Feb 1953

Suite, D (Suite for the Birthday of Prince Charles), 1948; BBC SO, cond. A. Boult, BBC, 15 Nov 1948

Fantasia concertante on a Theme of Corelli, str, 1953; BBC SO, cond. Tippett, Edinburgh, Usher Hall, 29 Aug 1953

Divertimento on Sellinger's Round, chbr orch, 1953–4; Collegium Musicum Zürich, cond. Sacher, Zürich, Tonhalle, 5 Nov 1954

Piano Concerto, 1953–5; L. Kentner, CBSO, cond. R. Schwarz, Birmingham, Town Hall, 30 Oct 1956

Symphony no.2, 1956–7; BBC SO, cond. Boult, Royal Festival Hall, 5 Feb 1958

Praeludium, brass, bells, perc, 1962; BBC SO, cond. A. Dorati, Royal Festival Hall, 14 Nov 1962

Concerto for Orchestra, 1962–3; LSO, cond. Davis, Usher Hall, 28 Aug 1963

Braint, 1966; BBC Training Orch, cond. Boult, Swansea, Brangwyn Hall, 11 Jan 1967 [final variation in Severn Bridge Variations, collab. Arnold, Hoddinott, Maw, Jones, Williams]

Symphony no.3, S, orch, 1970–72; H. Harper, LSO, cond. Davis, Royal Festival

Hall, 22 June 1972

Symphony no.4, 1976–7; Chicago SO, cond. G. Solti, Chicago, Orchestra Hall, 6 Oct 1977

Triple Concerto, vn, va, vc, orch, 1978–9; G. Pauk, N. Imai, R. Kirshbaum, LSO, cond. Davis, London, Royal Albert Hall, 21 Aug 1980

Water out of Sunlight, str, 1988; Academy of St Martin-in-the-Fields, cond. N. Marriner, London, Royal Festival Hall, 15 June 1988 [arr. M. Bowen from String Quartet no.4]

Byzantium (Yeats), S, orch, 1989–90; F. Robinson, Chicago SO, cond. Solti, Chicago, Orchestral Hall, 11 April 1991

New Year Suite, orch, 1989; San Francisco SO, cond. M. Tang, San Francisco, Flint Center, 10 Jan 1990

The Rose Lake, orch, 1991–3; LSO, cond. Davis, London, Barbican, 19 Feb 1995

Triumph, concert band, 1992 [arr. from movt 6 of The Mask of Time]

The Shires Suite, orch, 1995; Northern Junior PO, cond. N. Cleobury, Newcastle, City Hall, 31 July 1995 [arr. M. Bowen from version with chorus]

A synonym for Tonguing.

Tirana (i) (Albanian: Tiranë).

Capital of Albania. An Italian touring company, the Carro di Tespi Lirico, first brought staged opera to Albania in the 1940s (*Rigoletto*, *La traviata*, *Tosca* and *La bohème* in 1942–3). The earliest step towards a systematic organization and development of music and dance was the founding, formalized in 1950, of the Filarmonia Shqiptare (Albanian Philharmonia), embracing the Tirana RSO (later the Albanian Radio and Television SO), the State Chorus, a ballet company and a number of opera singers. The organization had in fact been active earlier, with *Dasma Shqiptare* ('Albanian Wedding'), a 'musical tableau' in a prologue and three scenes by Konstandin Trako (1919–86), given at the stadium in 1947. The earliest opera production with an Albanian cast was Darghomïzhsky's *Rusalka*, given by the newly founded Teatri i Operës dhe i Baletit (Theatre of Opera and Ballet; TOB) in 1953.

The first indoor performances of the Albanian Philharmonia were given at the Teatri Kombëtar Dramatik (National Theatre for Drama), formerly a cinema, with some 500 seats. With Smetana's *The Bartered Bride* (1956) the company transferred to the conservatory theatre, constructed by the Italians, with excellent acoustics and 560 seats. Finally, with Vangjo Nova's opera *Heroina* ('The Heroine', 1967), it settled in the modern theatre (cap. 865) of the Palace of Culture in Skanderbeg Square. Before 1991 two opera or ballet performances were usually given weekly, from September to May or June; the theatre was also used for concerts and recitals. Ticket prices are low as the enterprise is state-funded. The early achievements of the Albanian Philharmonia and the TOB owed much to native pioneers of opera in Albania.

The work of the TOB is almost equally divided between opera and ballet. From 1966 a change of cultural policy encouraged national creativity while disallowing the presentation of foreign works. Only after the fall of the Communist regime in 1991 did the TOB begin to perform the international opera and ballet repertory. The company also presents orchestral, choral and chamber concerts. The TOB's extensive archive embraces all the events held at the Tirana Palace of Culture and the greater part of Albania's musical life.

In addition to a conservatory students' orchestra giving occasional concerts, two orchestras survived in Tirana after 1991: the Albanian Radio and Television SO under its conductors Ferdinand Deda, Jetmir Barbullushi and Petrika Afezolli; and the orchestra of the TOB under Rifat Teqja and Bujar Llapaj. There are also two string ensembles, Virtuoset e Tiranës, which has toured abroad under the violinist Zhani Ciko, and Nënë Tereza. Mixed chamber ensembles in Tirana incude ASMUS, Spectroom and the Emerson Bassoon Quartet, named after the British bassoonist and music publisher June Emerson, who promotes Albanian music. In 1993 Suzanna Turku, director of the TOB choir, founded Pax Dei, a 20-strong mixed chorus which has toured in Germany and Greece.

A number of new festivals have been inaugurated in Tirana since 1991. Mbrëmje e Muzikës së re Shqiptare (Evenings of New Albanian Music) was founded in 1992 by the composer Feim Ibrahimi and later taken over by the

composer Aleksandër Peçi as Ditë (Days) e Muzikës së re Shqiptare. Entirely devoted to new Albanian music, it takes place every year in May. The composer Sokol Shupo, founder and president of the Albanian Section of the ISCM (1991), is also the founder and director of the festival Ditët Ndërkombëtare të Muzikës se Re të Dhomës (International Days for New Chamber Music, 1994), consisting of between ten and 12 concerts, each dedicated to the music of a particular country. In 1998 it was renamed Vjeshta e Tiranës (Tirana Autumn) and included a mini-festival devoted to the works of Xenakis. Festival i Romancës Shqiptare 'Tonin Harapi' (Albanian Song Festival 'Tonin Harapi'), featuring works by Albanian composers for solo voice and piano, was founded in 1994 and takes place each December. Festivali i Interpretimit të Muzikës Bashkëkohore 'Nikolla Zoraqi' (Festival of the Interpretation of Contemporary Music Nikolla Zoraqi) was also founded in 1994, and was repeated in 1997 and 1998. Some works are composed especially for this festival, and participants are obliged to perform an Albanian work from the 1990s. Finally, a festival of children's song, Feïm Ibrahimi, was held for the first time in June 1998.

The main establishments of musical education in Tirana are the conservatory, founded in 1962, and the Jordan Misja secondary music school. In addition to the Palace of Culture and the concert hall of the conservatory, the city has a number of halls where concerts are given. These include the Lidhja e Shkrimtarëve hall, used for chamber music and recitals, the Odeoni Koncertor or Qendra Ndërkombëtar i Kulturës (International Cultural Centre), the Pallati i Kongreseve (Congress Palace), with a capacity of about 2000, and a small recital hall at the Rogner Europapark hotel.

GEORGE LEOTSAKOS

Tirana (ii)

(Sp.).

A dance-song, probably of Andalusian origin, which between 1780 and 1790 enjoyed a great vogue in Spain as the finale to the popular *tonadillas*. It is usually in 6/8 time with syncopated rhythm, and the tempo is faster than that of the *seguidilla*, which until then was the preferred final number. The verse form of the *tirana* in the *tonadillas* consists ordinarily of four lines of eight syllables with a varying *estribillo* (refrain). It was danced by a couple, the woman waving her apron and the man his hat or handkerchief. Though later banned because of increasing licentiousness, it persisted into the late 19th century. The famous *Tirana del trípili* (ex.1), attributed to Blas de Laserna, became known throughout 19th-century Europe after Mercadante used the theme in the overture to his opera *I due Figaro* (1835). Granados also used parts of the refrain melody as the two main themes for the first movement of his piano suite *Goyescas* (1912–14).

Tirimo, Martino

(*b* Larnaca, 19 Dec 1942). Greek Cypriot pianist. He studied at the RAM in London with Franz Reizenstein, at the Vienna Music Academy and with Gordon Green. After making his London début in 1965, he won international competitions in Munich (1971) and Geneva (1972), subsequently appearing with many of the world's leading orchestras. In 1975, at the Queen Elizabeth Hall, London, he performed the complete Schubert sonatas, repeating this cycle ten years later at the Wigmore Hall. In 1985 he also performed the five Beethoven concertos in Dresden, and in 1986 with the Dresden PO at the Royal Festival Hall, conducting from the keyboard on each occasion. His extensive recordings include the complete piano music of Debussy, concertos by Rachmaninoff, Brahms and Chopin, the Tippett Piano Concerto with the composer conducting and the complete Schubert sonatas, of which he has published an Urtext edition, completing the composer's unfinished movements.

BRYCE MORRISON

Tyrmand, Ėta (Ėdzi) Mayseyewna

(*b* Warsaw, 23 Feb 1917). Belarusian composer. She completed her studies at the teaching and choral faculty of the Warsaw Higher School (1938) where she also studied the piano. After the occupation of Warsaw in 1939 she fled to Minsk and entered the conservatory there. During the war years she worked as an accompanist for the Kyrgyz Theatre of Opera and Ballet in Frunze, and later graduated from the National Conservatory, Minsk, in the piano class of G.I. Shershevsky (1949) and the composition class of A.V. Bahatïrow (1952). In 1949 she began teaching the piano and ran a class for accompanists at the Belarusian State Academy of Music. Her music is emotionally vivid, dynamic and virtuoso in style. Such works as the piano concertos, sonatas, suites and toccatas are characterized by decorativeness and textural detail, as well as an improvisatory manner and free form. The use of chromatic tonality, a reliance on the Belarusian song style and a tendency towards ornamentation inspired by the sounds of the natural world all give distinctiveness, harmonic freshness and a concertante brilliance to her works for violin and piano and for cimbalom and piano (in which she comes close to the traditions of Bartók and Szymanowski). Her vocal works are vividly expressive and national in character. The lively speech-like intonation and the picturesque cast of her instrumental pieces and songs about children (to poems by V. Shumilin and Vladimir Levin) are ingenious.

Tischer, Johann Nikolaus

(*b* Böhlen, 1707; *d* Schmalkalden, 3 May 1774). German composer and instrumentalist. This extraordinarily versatile musician studied the organ with Johann Balthasar Rauche in Böhlen (1719) and piano with Johann Graf in Halberstadt (1722), and the violin, viola d'amore and composition with Schweitzelberg in Arnstadt and again Graf in Rudolstadt. He was also proficient on the oboe: after travels to Erfurt, Brunswick, Hamburg, Berlin and Dresden he finally obtained employment in 1728 as regimental oboist and violinist to Duke August Wilhelm of Brunswick. In 1731 he moved to Schmalkalden as town organist, shortly thereafter also becoming Konzertmeister at the court of Saxe-Coburg-Meiningen. Declining health curtailed his activities after 1765 and in 1768 his pupil J.G. Vierling was appointed to assist him, eventually becoming his successor.

In his youth Tischer's compositional activities centred on church music; after 1732 he divided his efforts between keyboard and orchestral music. Particularly well represented in his output are pedagogical collections for young pianists and concertos for the piano, violin and oboe, instruments on which he himself excelled. Although his keyboard works were much published and appreciated during his lifetime, modern scholars have generally dismissed his works as shallow and of little consequence.

WORKS

published in Nuremberg unless otherwise stated

Edition:*Johann Nikolaus Tischer: Opera omnia per clavicembalo*, ed. L. Cerutti (Padua, 1995)

Kbd: Anmuthige Clavier-Früchte, i–ii, bestehend in 6 kleinen Suiten (?*c*1740); Divertissement musical, 9 suites, opp.1–3 (*c*1743–52); Das vergnügte Ohr und der erquickte Geist in 6 Galanterie-Parthien (1748); Wehklagendes Kyrie und frohlockendes Halleluja, oder Harmonische Herzens-Belustigung, 2 concs. LILIAN P. PRUETT

Tischglocke

(Ger.).

See Handbell.

Tischhauser, Franz

(*b* Berne, 28 March 1921). Swiss composer. He studied at the Zürich Conservatory, where his teachers included Paul Müller-Zürich (composition) and Rudolf Wittelsbach (piano). From 1951 to 1983 he worked at Radiostudio Zürich, serving as head of the music department from 1971. He was awarded the city of Zürich music prize in 1988. An outsider even on the Swiss musical scene, his relatively small compositional output retains the framework of classical tonality. From 1989 he has focused on revising, publishing and making new arrangements of his works.

Tischhauser aspires to an approachable melodic style that he calls the '(*Über-*) *Lebenselixier der Musik*'. When he uses 12-note rows, note-clusters or noise effects, it is usually in parody (as in *Eve's Meditation* when all 12 notes of the chromatic scale accompany the words 'a product of reasoning and statistics'). Unusual timbres are used to depict non-musical sounds or to help paint character types. A musical story-teller, Tischhauser takes his material from widely varied sources, including literature, science and everyday life. Many works, such as *Antiphonarium profanum*, *Mattinata* and *Dr Bircher und Rossini*, feature pairs of contrasting characters. In *Beschallung der Stadt Kalau* he self-mockingly personifies the two extremes of his own compositional ethos by a horn quartet ('on the ivory tower') and a woodwind octet ('on the commonplace').

THOMAS MEYER

Tischler, Hans

(*b* Vienna, 18 Jan 1915). American musicologist of Austrian birth. He was a piano pupil of Paul Wittgenstein at the Vienna Conservatory and studied composition and conducting at the Vienna Music Academy. Turning to musicology, he received the PhD in 1937 from the University of Vienna, where his teachers included Nowak, Orel, Wellesz, Lach and Haas. In America he studied with Schrade and Hindemith at Yale, receiving the PhD there in 1942. He was professor and chair of the music department at West Virginia Wesleyan College (1945–7) and associate professor at Roosevelt University in Chicago (1947–65). In 1950 he founded the Chicago chapter of the ISCM, which he directed until 1965. He was appointed professor of musicology at Indiana University in 1965 and he was a guest lecturer at the

University of Chicago (1956–7), Tel-Aviv University (1972) and Bar Ilan University (1986). He retired in 1985.

Tischler has written widely on the function and performance of 12th- and 13th-century polyphony and on Mahler. His other interests include Mozart's piano concertos and the works of Hindemith. His harmony textbook is noted for its thorough treatment of modulation and chromatic alteration.

PAULA MORGAN

Tisdale, William

(*fl* 16th century). English composer. No firm biographical details are known, but he seems to have been connected with the Tregian family (he dedicated a 'Pavana Chromatica' to 'Mrs. Katherin Tregian'). This and four other pieces are in the Fitzwilliam Virginal Book (*GB-Cfm*, ed. J.A. Fuller-Maitland and W. Barclay-Squire, 1899/*R*), where his surname appears as 'Tisdall'; a further two are in *Cfm* Mus.782 ('Tisdale Virginal Book').

Since the last two named are in a somewhat different style from the first five it may be that two different composers are involved. The scribe of the keyboard music in the Fitzwilliam Book (which originally belonged to Bull) may have been Tisdale himself. It is not known if either composer (if there were two) is to be identified with either of the two William Tisdales living in London at this time, of whom one died in 1603 and the other in 1605. For editions of the complete works of William Tisdale and Tisdale's Virginal Book see EKM, xiv, xxiv (1958–66).

JOHN CALDWELL

Tisdale Virginal Book

(*GB-Cfm* 52.d.25). *See* Sources of keyboard music to 1660, §2(vi).

Tishchenko, Boris Ivanovich

(*b* Leningrad, 23 March 1939). Russian composer. He showed a gift and fascination for music since early childhood; his serious studies commenced at the age of 14. He studied composition at the Music College attached to the Leningrad Conservatory with Galina Ustvol'skaya (1954–7), and then at the conservatory itself with Vadim Salmanov, Viktor Voloshinov and Orest Yevlakhov (1957–62). He later took a postgraduate course under Shostakovich (1962–5). As a pianist (he studied with V.L. Mikhelis and then with A.D. Logovinsky) he has appeared both as a soloist and ensemble player. He has taught since 1965 (since 1986 as professor) at the St Petersburg Conservatory, and is a laureate of the Glinka State Prize of Russia (1978), and a People's Artist of Russia (1987).

Tishchenko is an outstanding representative of the generation which appeared during the 1960s and which invigorated Russian musical life. His industriousness has rewarded him with a leading place in Russian music. As distinct from many of his colleagues, Tishchenko has remained in Russia and with a striking determination remains loyal to the principles which he once adopted, regardless of changes in political regimes and artistic trends. Contemporary music, literature and other forms of art attract his keen interest, as does folk art (which he has recorded and studied during ethnographic expeditions), the Japanese gagaku, the music of Tibet, the works of Monteverdi and Mahler, and much else besides. Tishchenko makes use of these varied influences in a very personal manner. He sets down his own rules for expressing his ideas, and all the elements of language and structure in his music are characterized by

individuality and form a harmonious artistic system. Even in his early works (the Piano Concerto, the First Violin Concerto, the First Symphony, the Second Piano Sonata, and *Grustnïye pesni* ('Sad Songs')) Tishchenko revealed the general features of his individuality which have remained largely unchanged. He is drawn towards serious ethical problems, to the artistic study of life and the human soul, and believes in the ability of art to express objectively the natural laws of the world's existence. 'Real music', he believes, 'always gives the impression that it came into the world of its own accord… It had to appear' (Volkov). His sharply etched musical themes often arise from one sound or from the most simple turns of phrase. Intense development, which produces highly charged emotional tension throughout the entire composition, is usually achieved by the sprouting of new shoots from the initial thematic material. Furthermore, the essential idea of a theme often undergoes a transformation to its antithesis; there is a confrontation between peace and destruction, prosperity and suffering, the beautiful and the monstrous, the divine and the diabolical, and the confrontation is resolved differently each time. Tishchenko feels hostility, on the one hand, towards rhythmic and structural four-squareness and literal repetition (when reiterating both small-scale and large-scale structures he generally employs variation technique), and on the other hand, towards flabby and eroded forms; inspiration, intuition, the tendency towards improvisation in his creative process go hand in hand with mathematical calculation. Although an adherent of linear writing and polyphony, he is, nonetheless, responsive to vertical considerations, and to fresh and beautiful harmonies and the logic which links them. Characteristic of him is free tonal thinking. 'I am pleased', wrote Shostakovich, 'that Tishchenko is anti-dogmatic in his work: he is not the "prisoner" of chromaticism, diatonicism, or dodecaphony, but he freely uses those means which are very necessary to him in each given instance' (Volkov, p.18).

Tishchenko is the most important symphonist in Russia after Shostakovich who uses fully-fledged sonata forms and symphonic conceptions. His first symphony is written for full orchestra, but the third symphony is written for chamber forces, the instruments being presented one by one ('I love all his works', wrote Shostakovich, 'but I would like to single out his Symphony no.3 which draws one by the richness of its emotions, by its clarity of thought, and by its structural logic', Volkov, p.18). Alongside them stands the Fourth Symphony, a huge work lasting for more than an hour and a half and requiring an orchestra of 145 players, the Fifth, written as a reminiscence of Shostakovich and his music, and the Seventh. Tishchenko has also written a vocal symphony – the second, entitled 'Marina' – for choir and set to poems by Marina Tsvetayeva, composed at a time when the publication of her verses was still banned in the USSR. His Sixth Symphony employs two solo female voices and sets poems by 20th-century Russian poets. Furthermore, Tishchenko had been a friend of Josef Brodsky since the days of their youth, and was the first to set his poetry to music, in his *Rozhdestvenskiy romans* ('Christmas Romance'); the melodic material of this work was suggested by hearing Brodsky's expressive reading of his verses.

All Tishchenko's instrumental concertos can be called concerto-symphonies or concerto-dramas. The virtuosic complexity of the solo parts

stems from the composer's discovery of the widest and previously unknown possibilities of the instruments (as in the Harp Concerto, the Second Violin Concerto, and the Concerto for flute, piano and orchestra). The First Cello Concerto – for cello, 17 woodwind instruments, percussion and harmonium – was written for Mstislav Rostropovich and was first performed by him; notable for the concentration with which the dramatic ideas are embodied, the work was awarded first prize at a composing competition in Prague in 1966. Shostakovich, who loved this concerto, re-orchestrated it, using forces which included strings, and this version is also played alongside the composer's original scoring. The Concerto for clarinet and piano trio stands on the dividing line between symphonic and chamber music.

Tishchenko's ample contribution towards instrumental and chamber music includes ten piano sonatas, five string quartets and two sonatas each for unaccompanied violin and cello. No less extensive and rich in artistic revelations is his vocal output – the song cycles *Belïy aist* ('The White Stork'), *Chertyozh* ('A Devilish Sketch'), the *Tri pesni na stikhi Marinï Tsvetayevoy* ('Three Songs to Verses by Marina Tsvetayeva') and two works to the words of Ovsey Driz all confirm the composer's gift for unexpected and persuasive settings. Among the works for voice and orchestra *Rekviyem* ('Requiem') is especially important. The work sets words by Anna Akhmatova, and was written at a time when her narrative poem 'Rekviyem', which mourns the victims of Stalinism, was forbidden by the authorities. Tishchenko's setting, where the ideas embodied in the words were transferred to a time beyond history, waited more than 20 years for its première in the Great Hall of the Leningrad State Philharmonia. After this event the performance of his music in this hall was banned for seven years.

Tishchenko's work for the theatre is represented first and foremost by his ballet *Yaroslavna*, based on themes from the masterpiece of old Russian literature *Slovo o polku Igoreve* ('The Lay of Igor''s Campaign'). As distinct from Borodin's opera *Prince Igor*, where the same subject is interpreted in a lyrical and epic manner, Tishchenko treats it as a tragedy. The première in 1974 was a major event in the Russian theatrical world. Earlier, in 1964, Leonid Yakobson's production of Tishchenko's one-act ballet *Dvenadtsat'* ('The Twelve') after Aleksandr Blok's narrative poem, had also been of importance. A trio of productions based on Korney Chukovsky's fairy tales in verse (the ballet *Mukha-tsokotukha* ('The Clicking Fly'), the opera *Kradyenoye solntse* ('The Stolen Sun'), and the operetta *Tarakanishche* ('The Cockroach')) show yet another facet of the composer's character – his wit. But his humour is rather black, and these funny fairy tales for children turn into sinister dramas not intended for children at all. Tishchenko has conscientiously written numerous scores for theatrical productions and for films; the high artistic merit of this music has made it possible to present it in concert versions (the symphony *Khronika blokadï* ('A Chronicle of the Blockade') and the suites *Tsirk* ('The Circus'), *Zhavoronok* ('The Lark'), and *Sobach'ye serdtse* ('Heart of a Dog'), all after novellas by Bulgakov).

Tishchenko has also edited and orchestrated a number of works by other composers, and, endowed with a literary gift, is the author of numerous

articles, essays, reminiscences and commentaries. During the years that he has taught at the conservatoire, a large number of composers have passed through his class, and such is their success it has become possible to speak of a 'Boris Tishchenko School'.

WORKS

stage

Dvenadtsat' [The Twelve] (ballet, 1, scenario by L. Yakobson, after A. Blok), op.25, 1963, St Petersburg, Kirov, 31 Dec 1964

Children's Trilogy (after fairy tales by K. Chukovsky), 1968: Kradenoye solntse [The Stolen Sun] (op, 1, M. Byalik, Z. Korogodsky and Tishchenko), op.40; Mukha-tsokotukha [The Clicking Fly] (ballet, 1, choreog. K. Rassadin), op.39, Choreographic Miniatures Theatre, 25 May 1979; Tarakanishche [The Cockroach] (operetta, 1, Korogodsky), op.41

Yaroslavna/Zatmeniye [Yaroslavna/The Eclipse] (ballet, 3, O. Vinogradov, after *Slovu o polku Igoreve* [The Lay of Igor''s Campaign], choreog. Vinogradov), op.58, 1974, Leningrad, Malïy, 30 June 1974

other works

11 syms.: Frantsuzskaya simfoniya (after A. France: *Crainquebille*), op.12, 1958, rev. as op.116, 1993; no.1, op.20, 1961; no.2 'Marina' (M. Tsvetayeva), op.28, mixed chorus, orch, 1964; no.3, op.36, 1966; Pushkin's symphony, op.38, 1967, rev. 1998; Sinfonia robusta, op.46, 1970; no.4, op.61, 1974; no.5, op.67, 1976; Khronika blokadï [A Chronicle of the Blockade], op.92, 1984; no.6 (A. Akhmatova, V. Levinzon, O Mandel'shtam, A. Nayman and Tsvetayeva), op.105, S, C, orch, 1988; no.7, op.119, 1994

Other orch: Vn Conc. no.1, op.9, 1958, rev. as op.29, 1964; Pf Conc., op.21, 1962; Danaida (after Rodin's sculpture), op.24, 1963, rev. 1994; Oktavï [Octaves], op.26, 1963; Vc Conc. no.1, op.23, 1963, reorchd by Shostakovich, 1969; Palekh, op.34, 1965 [after film score]; Vc Conc. no.2, op.44/1, 48 vc, 12 db, perc, 1969, reorchd as op.44/2, 24 vn, 12 va, 12 vc, 12 db, perc, 1978; Conc., fl, pf, str, op.54, 1972; Tsirk [The Circus], suite, op.55, 1973 [after incid music, Tot, kotorïy poluchayet poshchyochinï]; Zhavoronok [The Lark], suite, op.62, 1974 [after incid music]; Hp Conc., op.69, 1977; 7 pozïvnïkh 'Olimpiada – 80' [7 Call-Signs 'Olympic Games – 80'], op.70, 1977; Vn Conc. no.2 'Skripichnaya simfoniya' [Violin Sym.], op.84, 1981; Prelude, E, op.87, 1983; Sobach'ye serdtse [Heart of a Dog] (after M. Bulgakov), op.104, 1988 [after incid music]

Choral: Ėnergiya (fugue, after Law of the Conservation of Energy), op.14b, chorus, 1959; Lenin zhiv [Lenin is Alive] (cant., V. Mayakovsky: *Komsomol'skaya* [The Komsomol Organisation]), op.15, mixed chorus, orch, 1959; Svadebnaya [Wedding Song] (trad. Cossack), op.16b, female chorus, 1959; Yuefu (ancient Chinese Yuefu), op.14, 4 choruses, 1959

Other vocal: Belïy aist [The White Stork] (O. Shestinsky), song cycle, op.10, 1v, pf, 1958; Grustnïye pesni [Sad Songs] (P.B. Shelley and others), song cycle, op.22, S, pf, 1962; Suzdal': pesni i naigrïshi [Suzdal: Songs and Folk Tunes], suite, op.30, S, T, chbr ens, 1964 [after film score]; Rekviyem (Akhmatova), op.35, S, T, orch,

1966; 3 pesni [3 Songs] (Tsvetayeva), op.48, 1v, pf, 1970; Chetïre [Four] (S. Marshak), children's song, 1v, pf, 1971; Doroga [The Road] (O. Driz), song cycle, op.57, 1v, pf, 1973, rev. 1996; Stuzha [Hard Frost] (trad., V. Tendryakov), op.60, Mez, orch, 1974 [after incid music, Sovet da lyubov']; Bratu [To my Brother] (M.Yu. Lermontov: *Zaveshchaniye* [Testament]), op.98, S, fl, hp, 1986; Zaveshchaniye (N. Zabolotsky), op.96, S, hp, org, 1986; Sad muzïki [The Garden of Music] (A. Kushner), cant., op.101, S, Mez, Bar, vn, vc, pf, 1987; Khelomskiye mudretsï [Khelom Sages] (Driz), op.112, S, B, vn, pf, 1991; Chertyozh [A Devilish Sketch] (Mayakovsky and others), song cycle, op.120, 1v, pf, 1995

Chbr: Rondo, op.2, vn, pf, 1956; Prelude and Fugue, op.7, str qt/str orch, 1957; Str Qt no.1, op.8, 1957; Str Qt no.2, op.13, 1959; Kaprichchio, op.31, vn, pf, 1965; Severnïye ėtyudï [Northern Studies], suite, ens, op.42, 1968 [after film score]; 2 p'yesï [2 Pieces], xyl, vib, pf, op.45/1, 2, 1970; Str Qt no.3, op.47, 1970; Tainstvennïye soplemenniki: kanon v protivodvizhenii [Mysterious Fellow Tribesmen: A Canon in Contrary Motion], op.45/3, perc, stop-watch, c1970; 2 starinnïkh tantsa [2 Old-Fashioned Dances], op.62b, vn, pf, 1975; Andante espressivo, op.71b, va/vc, hp, 1978; Str Qt no.4, op.77, 1980; Str Qt no.5, op.90, 1984; Pf Qnt, op.93, 1985; Conc., op.109, cl, pf trio, 1990; Fantaziya, op.118, vn, pf, 1994; Syuita 'Portretï' [Portraits], op.122/2, pf duet, 1996

10 pf sonatas: no.1, op.3, 1957, rev. as op.121, 1995; no.10, op.4, 1957, rev. as op.124, 1997; no.2, op.17, 1960; no.3, op.32, 1965; no.4, op.53, 1972; no.5, op.56, 1973; no.6, op.64, 1975; no.7, op.85, pf, bells, 1982; no.8, op.99, 1986; no.9, op.114, 1992

Tisné, Antoine

(*b* Lourdes, 29 Nov 1932). French composer. He studied composition at the Paris Conservatoire with Milhaud, Rivier and Jolivet, winning prizes in harmony, counterpoint and fugue, as well as the Prix de Rome (1962). In 1968 he became principal music inspector for the Ministry of Cultural Affairs. He largely resisted the serial revolution, although several of his works involve 12-note procedures, such as *Cosmogonies* (1967). He introduced aleatory elements in, for example, *Solars vortices* (1971) and

Astres aux reliefs d'or (1981). Tisné's musical language, although basically atonal, conserves romantic gestures in the Violin Concerto (1969) and *Elégie pour une aube* (1972). This lyricism is balanced by the chordal clusters of *Célébration* (1975) and *Bocéphal* (1982). Quarter-tones are employed in, for example, *Espaces irradiés* (1978). His eclectic technique underlies a belief in lyrical and emotional expression: music must respond to human experience and the spiritual dimension in the cosmos. Many of Tisné's subjects concern astronomy, including *Pulsars éclatés* (1971) and *Ozma* (1970); others, his fascination with light: *Luminescences* (1970) and *Ombres de feu* (1988). His exploitation of strings and wind captures an other-worldly quality and his fascination with the ancient civilizations of Egypt, Mesopotamia and Greece is evident in *Stances minoennes* (1963) and *Osiriaques* (1973). His frequent collaboration with the poet David Niemann has resulted in operas and musical reflections on texts, such as *Bocéphal. Episodes New-Yorkais* (1985) is a powerful meditation on Cendrar's poem.

BARBARA L. KELLY

Titelouze, Jehan

(*b* St Omer, 1562–3; *d* Rouen, 24 Oct 1633). French organist and composer. He was the first significant composer of organ music in France. His exact date of birth is unknown, but 1562 or 1563 can be assumed from his partial retirement in 1623 at the age of 60. His family were bourgeoisie whose first arrival in St Omer can be traced back to 1497–8. Gastoué's theory that the name was originally 'Title-House' and was of noble Anglo-Irish origin is now discredited; a more likely etymology is 'de Toulouse'.

There is no exact information concerning Titelouze's education, musical or academic, though both seem to have been completed at St Omer by 1585, by which time he had entered the priesthood and had played as substitute organist at the cathedral. That same year he moved to Rouen, an important centre of organ development, where his first position was that of organist at St Jean. In 1588 he succeeded François Josseline as organist of the cathedral, since he was markedly superior to the other candidates in improvisational skills. He held this post for the rest of his life. He became a French citizen in 1604 (St Omer then being in the Spanish Netherlands), and in 1610 he was named canon by the cathedral chapter, receiving benefices that further supplemented his already increasing income; evidently he was greatly valued by his superiors. Like Bach he was noted as an expert consultant on organ construction. Records of his collaboration in installing or renovating important organs extend from 1588 to 1623, not only in Rouen but as far afield as Eu, Amiens and Poitiers. He was often associated with the notable organ builder Crespin Carlier, who improved the Rouen Cathedral organ for him in 1601.

Titelouze was also a writer. As a poet he won awards from a Rouen literary society, the Académie des Palinods, in 1613 and 1630, gaining the title of 'Prince des Palinods' in the latter year; his two prizewinning poems were reprinted by Vanmackelberg (1965). Several intimate glimpses of the composer are afforded by seven surviving letters that he wrote to Mersenne between 1622 and 1633, evidence of an apparently extensive correspondence: we learn of his trips to Paris, his musical acquaintances, his academic affiliations and the frequent illnesses of his later years. Especially notable in these letters is his lively interest in current musical questions touching on theory, history and performance: the ethoi and structures of the ancient and modern modes, tuning systems and interval

ratios, the nature of sound and explanations for unusual acoustic phenomena, compositional procedures and novelties in notation, and vocal practices and text-setting. His views were largely elicited by questions posed by Mersenne, who subsequently cited them in several of his printed works. Of interest also is the prefatory matter to Titelouze's organ publications, where he discussed recent advances in organ construction as well as various aspects of both theory and performing practice, seeking to instruct the organist in the role of his music in the service and in the method of performing it.

The organ volumes comprise versets based on plainsong and designed to be played in alternation with the choir during the Catholic service. The 12 plainsong hymns in *Hymnes de l'Eglise* are divided into either three or four versets, possibly depending upon the number of strophes commonly used in French churches. The versets are of two basic types: those using the hymn as a cantus firmus, and those paraphrasing it in fugal style. All the cantus firmus versets use the hymn melody in plain notes without embellishment or paraphrase. A majority (including all the first versets) place it in the bass, but some distribute its phrases in migrant fashion among all voices. The accompanying parts provide florid counterpoint, often containing brief flurries of imitation and in rare cases imitative anticipations of the cantus firmus. Three of the cantus firmus versets employ canon in two accompanying voices against the chant. The fugal movements are similar in construction to the 16th-century motet, presenting in paraphrase all or most of the phrases of the hymn in successive points of imitation so arranged as to overlap and form a continuous polyphonic texture. Two of these versets contain sustained notes as pedal points.

Le Magnificat presents eight cycles of versets, one for each of the eight tones. Individual versets are as a rule briefer than those of the hymns and were intended to be less demanding technically. Each cycle contains seven versets, the odd-numbered verses of the canticle plus an additional setting of 'Deposuit potentes'; according to the composer, the seven-verset structure made the cycles usable for the Benedictus. The construction is relatively uniform: each verset is fugal, with two main points of imitation, of which the first concludes on the mediant cadence of the tone. Titelouze indicated that one could abbreviate any verset during the service by substituting here the cadence on the final. Most of the fugue subjects consist of paraphrases of the corresponding *Magnificat* chant, and Titelouze shows considerable ingenuity in varying this melodic material: each cycle may be viewed as a kind of set of variations.

Titelouze is a transitional figure in the development of a distinctive organ literature for the French Baroque. His music maintains the late Renaissance ideal for contrapuntal writing, modal organization, and consistent use of four-part texture that is characteristic of the small amount of organ music (as well as the contemporary liturgical vocal music) that survives from early 17th-century France. The prefaces to his collections make clear that his publications were intended to be both functional and pedagogical, serving performers who lacked the skills for free improvisation during the service, especially in *alternatim* practice. His style has been described as conservative, and even severe, seemingly reflecting 'the

austerity which dominated the implementation of Tridentine reforms in certain institutions and areas of France' at the time (Van Wye). But there is also evidence in his music of a more progressive outlook: passages that are strikingly chromatic (particularly in settings of the *Magnificat*), dissonance that is treated more boldly than in music of the previous century (especially as regards the interval of the 4th, which he believed should be considered a consonance), and passages in florid semiquaver movement. If to these are added his recommendation that ornamentation (although not indicated) be applied in performance, his occasional use of three-part (trio) and interlude writing, his consistent indication of metrical signs, and his preference for the use of intabulation (much like the modern keyboard score) in the printing of organ music, then Titelouze's works can be said to project novelties that were to become important features of the later French Baroque organ school.

ALMONTE HOWELL/ALBERT COHEN

Titl, Anton Emil

(*b* Pernštýn, Moravia, 2 Oct 1809; *d* Vienna, 21 Jan 1882). Bohemian conductor and composer. He studied with Gottfried Rieger in Brno, where he played in the theatre orchestra. After a short time in Olomouc he moved in 1833 to Prague, where he was Kapellmeister to the band of the 28th infantry regiment (1835–40) and wrote military and dance music. He then settled in Vienna as Kapellmeister of the Theater in der Josefstadt (1840–49), for which he wrote operas, Singspiele and incidental music. From 1850 to 1870 he was Kapellmeister of the Hofburgtheater, writing overtures and incidental music.

Titl was a prolific composer and wrote about 300 works, 50 of which were overtures. In the 1830s, under the influence of Rieger, he wrote church music, including a *Missa solemnis* for the enthronement of the Archbishop of Olomouc in 1832 and two other masses which were widely performed in Moravia. His marches, polkas and quadrilles were popular in their day (for example the *Wastl-Polka*, written for a Singspiel); his songs show the influence of German lieder. Czech national traits appear only in his works based on Czech folksongs, the best-known of which was the *Ouvertura dle slovanských nápěvů* (Overture on Slavonic Melodies), given in 1850 at the first Czech theatre performance in Vienna.

Titon, Jeff Todd

(*b* Jersey City, NJ, 8 Dec 1943). American ethnomusicologist. He took the BA at Amherst College in 1965, and completed the MA in American studies in 1967, the MA in English in 1970, and the PhD in American studies in 1971 all at Minnesota University. He taught at Tufts University as assistant (1971–7) and associate professor of English and he became an associate professor of music in 1977. In 1986 he was appointed professor of music at Brown University. He has also served as editor of *Ethnomusicology*, 1990–95. His background in American and English studies together with his experience as an instrumental performer led him to become one of the first ethnomusicologists to produce detailed studies of improvised rhetorical traditions, such as those of blues musicians and Christian preachers in the south-eastern USA. *Worlds of Music*, which he edited and co-authored, is currently the most widely-used textbook for introductory world music courses.

<div align="right">JAMES COWDERY</div>

Titon du Tillet, Evrard

(*b* Paris, 16 Jan 1677; *d* Paris, 26 Nov 1762). French man of letters. He made his way at court as the *mâitre d'hôtel* to the Duchess of Burgundy. After her death in 1712 he sought the favour of Louis XIV and then Louis XV by drawing up plans for a monument in Paris: an 18-metre 'Parnasse François', surmounted by a statue of Apollo and surrounded by statues and medallions of the most distinguished poets and musicians of the Louis XIV era with the names of still others inscribed on scrolls. He devoted much of his time to the promotion of this *grand projet*, commissioning in 1708 a scale model in bronze sculpted by Louis Garnier, painted and engraved interpretations and medallions together with a series of supporting literature that he wrote himself. The first volume to appear was the *Description du Parnasse François* (1727), which included seven biographical entries on musicians that he rewrote for the greatly augmented 1732 volume, *Le Parnasse François*. In 1743 he produced a supplement that included a further nine musicians, including François Couperin (ii), who had died in the interim. As late as 1755, when a second supplement appeared (with entries for a dozen more musicians, including André Campra and L.-N. Clérambault), Titon du Tillet was still hoping to erect the monument. A final volume, a new *Description du Parnasse François*, containing only the most recent accounts and verses written about Titon du Tillet and the monument, appeared in 1760.

Although Titon's scheme ultimately came to nothing, he is important for the anecdotes he published in *Le Parnasse François*, which form the basis for many of our impressions of musicians of the era. His coverage of musicians varies from a few lines to several pages. For some, he appears to have drawn almost exclusively on personal knowledge. Lacking printed sources for many of his contemporaries, he sought the assistance of relatives and friends, so gaining access to unpublished music in the hands of the relatives of M.-A. Charpentier, Marais, Louis Marchand, Nicolas Bernier and others; he contemplated publishing this music in a series of 'Concerts du Parnasse', but it too came to nothing. Throughout the Parnassian volumes, Titon du Tillet expressed his own views (for example, making clear his enjoyment of Italian music while venerating Lully as 'le Prince des Musiciens') and at every turn bewailed the ill-fortune of his primary objective.

GEOFFREY NORRIS

Titov

(1) Aleksey Nikolayevich Titov

(*b* St Petersburg, 12/23 July 1769; *d* St Petersburg, 8/20 Nov 1827). Composer and violinist. He served as an officer in the cavalry, achieving the rank of major-general; he was also a fine amateur musician, and his home in St Petersburg became an important cultural centre where he entertained many of the leading literary figures of the day. His collaborators, drawn from this circle, included Aleksandr Yakovlevich Knyazhnin (1771–1829), son of the eminent playwright Yakov Borisovich Knyazhnin. For the most part he composed for the stage, in an italianate style modelled on Mozart. More than a dozen of his operas are extant, but he is known particularly for his trilogy of peasant life: *Yam, ili Pochtovaya stantsiya* ('Yam, or The Post Station', 1805), *Posidelki, ili Prodolzheniye Yama* ('The Winter Party, or The Sequel to Yam', 1808) and *Devichnik, ili Filatkina svad'ba* ('The Wedding Eve Party, or Filatkin's Wedding', 1809). These operas display certain national characteristics both in subject matter and in the use and imitation of folk melodies; *The Wedding Eve Party* contains a wedding chorus in which the composer attempted to recreate Russian folk polyphony. Besides opera, Titov wrote incidental music and ballets.

Titov

(2) Sergey Nikolayevich Titov

(*b* St Petersburg, 1770; *d* 24 March/5 April 1825). Composer, violinist and cellist, brother of (1) Aleksey Nikolayevich Titov. He was a major-general in the army, and as a composer is known chiefly for his stage works: the opera *Krest'yane, ili Vstrecha nezvanïkh* ('The Peasants, or The Party for the Uninvited', 1813), to a libretto by Aleksandr Shakhovskoy, and the one-act ballet *Novïy Verter* ('The New Werther'), based on Goethe's *Die Leiden des jungen Werthers*. The ballet was choreographed by Walberg and produced in St Petersburg in 1799 (extracts published in IRMO, ii (1969), 5). (Yu. Slonimsky: 'Ballet *Novïy Verter* S. Titova', *Uchonïye zapiski*, ii, ed. Institut teatra, muzïki i kinematografii (Leningrad, 1958), 415)

Titov

(3) Nikolay Sergeyevich Titov

(*b* ?St Petersburg,1798; *d* Moscow, 1843). Composer, son of (2) Sergey Nikolayevich Titov. He served in the army, holding a commission in the Semyonovskiy Regiment. His songs display gifts for lyrical melody and inventive harmonies as well as imaginative use of the piano in accompaniments. His best-known song, *Talisman*, is often wrongly attributed to his cousin (4) Nikolay Alekseyevich Titov.

WORKS

Songs: Proshchay, svobodnaya stikhiya [Farewell, Free Element] (A.S. Pushkin); pubd in IRMO, ii (1969), 342: Fontanu Bakhchisarayskogo dvortsa [To the Fountain of the Palace of Bakhchisaray] (Pushkin); Chto v imeni tebe moyom [What Need

have You of my Name] (Pushkin); Ya perezhil svoi zhelan'ya [I have Suffered Longings] (Pushkin); Talisman (Pushkin), 1829; Razluka–Ozhidaniye–Vozvrashcheniye [Parting–Waiting–Return] (Ye. Baratïnsky), 1834
Titov

(4) Nikolay Alekseyevich Titov

(*b* St Petersburg, 28 April/10 May 1800; *d* St Petersburg, 10/22 Dec 1875). Composer, son of (1) Aleksey Nikolayevich Titov. He ignored his father's advice to have a musical training, and in 1817 took up a military post which he occupied until his retirement in 1867. However, he taught himself music and composed his first song (to a French text) in 1819; as he did not transcribe it, the first surviving song is *Sosna* ('The Pine', 1820), to a poem by M.A. Ofrosimov. He composed about 60 songs in a light, simple style, and gained the nickname 'the father of Russian song'. In the 1830s he met Glinka and Dargomïzhsky, whose advice served to improve his compositional technique. Nikolay Alekseyevich Titov is frequently confused with his cousin (3) Nikolay Sergeyevich Titov, but it can be established that he composed several more settings of Ofrosimov's poetry, as well as songs to poems by Zhukovsky, Dmitriyev, Lermontov and Pushkin. He also composed military marches and some piano music.

WORKS

Vocal: *c*60 songs, incl. Ptichka [The Little Bird] (A.S. Pushkin), 1831; Mechta [The Dream] (M.A. Ofrosimov); pubd in IRMO, ii (1969), 329: Sosna [The Pine] (Ofrosimov), 1820; Sharf goluboy [The Blue Scarf] (M.A. Markov), 1830; Kovarnïy drug [Treacherous Friend] (Ofrosimov), 1831; K Morfeyu [To Morpheus] (Pushkin), 1833; Vetka [The Branch] (I.P. Myatlev), 1834

Titov

(5) Mikhail Alekseyevich Titov

(*b* St Petersburg, 24 Aug/5 Sept 1804; *d* 21 Nov/3 Dec 1853). Composer, son of (1) Aleksey Nikolayevich Titov. He resigned his commission in the Preobrazhenskiy Regiment in 1830 and went to live at Pavlovsk. He is known for a number of songs, including *Akh, v mire ya odin* ('Ah I am Alone in the World'), *Ozhidaniye* ('Expectation') and *Skazhi, zachem* ('Tell me Why'). (A. Rozanov: *Muzïkal'nïy Pavlovsk* [Music in Pavlovsk] (Leningrad, 1978))

Titov, Vasily Polikarpovich

(*c*1650–*c*1715). Russian composer. He was one of the tsar's 'singing clerks' and the most gifted and prolific of the group of composers who practised the polychoral style initiated in Russia by Dilets'ky. He was most widely known in his own day by his three-part settings (1680) of the complete Psalter versified by Simeon Polotsky, a distinguished churchman, man of letters and tutor to the children of Tsar Aleksey Mikhailovich. Titov and Polotsky also collaborated in a *Mesyatseslov* ('Almanac') of devout verses, equally naive poetically and musically. Titov's *Mnogaya leta*, a

prayer for the tsar's longevity, was sung in church right down to the Revolution.

GERALD ABRAHAM

Tits [Tietz], Mykhailo Dmytrovych

(*b* St Petersburg, 24 Feb/8 March 1898; *d* Khar'kiv, 10 Oct 1978). Ukrainian composer, pianist and teacher. He graduated from the Khar'kiv Musical Institute in 1924, where his teachers were Bogatirov (composition) and Lutsenko (piano), and also studied in Moscow with Myaskovsky and Zhilyayev. He taught at the Khar'kiv Institute, which later became a conservatory, for most of his life (from 1920, 1943–71 as chair of the theory and composition department); his students include Kolodub and Zhukh. Although Tits composed in most genres including opera (he collaborated with Meytus and Rybalchenko on *Perekop* and *Haidamaky*), he was at his best in chamber-instrumental works, especially for piano. He was not a miniaturist and favoured monothematic sonata-allegro structures which he invested with harmonic vitality, ingenious modulations and complex rhythmic relationships (Sonata no.2, op.5). His predilection for clear and logical formal designs gave great fluency to his contrapuntal writings (String Quartet no.3, op.43). In addition to being a composer, Tits was an outstanding theorist, writing four books, two of which were published.

HANS JANCIK/R

Titz [Tetz].

German family of organ builders. Heinrich Titz (*d* 4 May 1759), Wilhelm Titz (*d* 19 Nov 1775) and Wilhelm's son Johannes Henricus Titz (*b* Korschenbroich, 3 March 1745; *d* Grefrath, 11 Jan 1826) worked mainly in the Lower Rhine region (Neuss, Viersen), particularly in the Kempen-Krefeld district (Brüggen, Ürdem, St Hubert), but they also worked in Belgium (Munsterbilsen) and the Netherlands (Osch). Their organs followed the characteristic Baroque style of the Lower Rhine, represented by such builders as J.E. Teschemacher, J.C. and J.G. Kleine and C. Roetzel. Their basic stop list consisted of an 8' Hohlpfeife, 4' Oktave, 4' Hohlflöte, 2' Superoktave, Sesquialtera II, Cornett III, Mixtur III and 8' Trompete, sometimes supplemented by 16' Bordun, 8' Prinzipal, 22/3' Nasard, Zimbel II and 8' Vox humana. String, harmonic and undulating stops were later introduced. The organ at Brüggen still contains some of Heinrich Titz's pipework.

HANS KLOTZ

Titz [Tietz, Dietz, Dietzsch], Anton [August] Ferdinand

(*b* Nuremberg, *c*1742; *d* St Petersburg, 25 Dec 1810/6 Jan 1811). German violinist and composer, active in Russia. He was orphaned at an early age and was taught painting in Nuremberg by Johann C. and Barbara R. Dietzsch, his uncle and aunt. By the age of 16 he was a violinist at St

Sebaldus's church there. After an unhappy love affair a few years later he went to Vienna, where he played in the opera orchestra and may have studied with Haydn. In 1771 he became a member of the Hofkapelle in St Petersburg; Catherine the Great paid him the highest salary of any of her court musicians. He also taught at the theatre school, gave the future Tsar Aleksandr I violin lessons, directed a court chamber orchestra (which included the clarinettist Joseph Beer and other outstanding musicians), and performed publicly, for instance in 1782, but most of his performances were at court, as a violinist and viola d'amore player. Later in life he suffered a mental disorder that sometimes prevented him from working, but he was encouraged and protected by Senator A.G. Teplov, a St Petersburg amateur musician. He dedicated three string quartets to Teplov and three more to Aleksandr I.

Titz was particularly admired for his sensitive playing of adagio passages, but by the time Spohr met him in St Petersburg in 1803 his technical assurance had gone. His compositions are mainly chamber works in the Viennese Classical style; his string quartets strive for a large dramatic compass and the three upper parts have considerable independence. He also wrote some small vocal works (now lost), including *Le pigeon bleu et noir gémit*, a romance that was popular in Russian salons until the mid-19th century. He has often been confused with the Dresden violinist Ludwig Tietz.

WORKS

Str qts: 6 quatuors, op.1 (Vienna, *c*1781–9, Paris, n.d.); 3 quatuors (Bonn, *c*1802, Leipzig, n.d.); 6, *A-Wn*; 3 pubd in St Petersburg, cited in Mooser

San Francisco theatre, open from 1879 to 1906 during which period it moved three times. *See* San Francisco, §1.

Tixier, Guillaume.

Musician active at Lyons in 1575, possibly identifiable with Guillaume Tessier.

Tjader, Cal[len Radcliffe], [jr]

(*b* St Louis, 16 July 1925; *d* Manila, Philippines, 5 May 1982). American vibraphone player, percussionist, bandleader, composer and arranger of Swedish descent. Based in San Francisco's Bay Area throughout his career, he began as a jazz player, playing the drums with the Dave Brubeck Trio (1949–51). In 1953 he joined George Shearing's jazz quintet as a vibraphone player and percussionist, and the following year left to form his own jazz ensemble with such players as pianist Vince Guaraldi. His virtuosity and infallible sense of phrasing marked him as the greatest jazz vibraphone player since Lionel Hampton. He turned to Latin jazz in the late 1950s, working with percussionists such as Mongo Santamaría, Armando Peraza and Willie Bobo. Tjader became the most famous non-Latino Latin jazz musician and bandleader of the 1950s and 60s, with such hits as *Soul Sauce* and *Mamblues* in addition to memorable versions of Dizzy Gillespie's *Cubano Chant* and *Tin Tin Deo*. In 1966 he joined Eddie Palmieri to record the album *El sonido nuevo* (Verve, 1966) and also *Bamboléate*. He continued performing and recording until his death in 1982. Notably, famed Chicano percussionist Poncho Sánchez began performing with Tjader (1975–82) and continued the Tjader legacy with his own group through the 1980s and 90s.

LISE WAXER

Tjarmedi [Carmedi], Entjar [Encar]

(*b* Bandung, 11 Feb 1924; *d* Bandung, 22 Sept 1995). Sundanese musician and composer. Before Indonesian independence, he worked at Dutch- and Japanese-sponsored radio stations. After independence, along with his wife, Imik Suwarsih (*b* 1930), one of the first radio star *pasindén* (female singer with *gamelan saléndro*), he revived and presented a variety of Sundanese traditional genres in radio format, including *gamelan degung*, *ketuk tilu* (dance genre, see Indonesia, §V, 1(viii)(a)), *celempungan* (small ensemble named after obsolete bamboo zither, see Indonesia, §V, 1(ii)(d)) and *kliningan* (performance of *gamelan saléndro* pieces for listening). He is best known for his work with *gamelan degung*, originally a musical ensemble for aristocrats which virtually disappeared during the Japanese occupation. Beginning in 1956, he led regular *degung* broadcasts from Radio Republik Indonesia (RRI) Bandung which put the sound of *degung* into the ears of all Sundanese listeners. Under his guidance *degung*

metamorphosed from an obsolete, aristocratic genre into an icon of Sundanese identity and a flexible medium for modern Sundanese 'classical' and 'popular' music. His own group, Lingkung Seni Parahyangan, recorded records and cassettes for Lokananta, Ira Record and Asmara in the 1970s. Between 1971 and 1983 he taught at the government-sponsored performing arts institutes Konservatori Karawitan (KOKAR, now Sekolah Menengah Karawitan Indonesia (SMKI)) and Akademi Seni Tari Indonesia (ASTI, now Sekolah Tinggi Seni Indonesia (STSI)). He also published books of notation for *degung* pieces, which included his compositions that have entered the standard repertory, namely *Pajajaran*, *Lengser Midang*, *Lambang Parahyangan*, *Pulo Sari* and *Purbasaka*.

HENRY SPILLER

Tjeknavorian, Loris Haykasi

(*b* Burujird, Iran, 13 Oct 1937). Armenian composer and conductor. He began his musical studies in Tehran and composed from the age of ten. He studied the violin and composition at the Vienna Music Academy (1954–61) and took composition lessons with Orff at the Salzburg Mozarteum (1963–4), finishing his studies at the University of Michigan in 1965. He headed the department of music at Moorhead State University, Minnesota (1967–70), and later wrote his Third Symphony on the occasion of the centenary of its foundation in 1985. He also taught harmony at the Tehran Conservatory (1959–60 and 1970–4); at the same time he studied Iranian and Armenian folk music and wrote traditional Armenian church music, in particular *sharakan*. He lived in Britain for a decade (1975–85), where besides composing and conducting London orchestras he founded the Institute of Armenian Music. At this time he appeared as a conductor in Iran, Israel, Japan, the Soviet Union and the USA. He then lived in New York (1986–8) before being appointed principal conductor and artistic director of the Armenian PO (1989–). He is an honorary professor at the Yerevan Conservatory and has been awarded state prizes for his services to Armenian culture, which include his organization of the first international festival and symposium on Armenian music in London in 1978 and the direction of international festivals in Yerevan (1991–6).

As with many Armenian composers born outside of the country, Tjeknavorian's work is rooted in Armenian folk and church music. His symphonies, concertos and choral works are saturated with quotations. His most important sources are Orthodox psalms and hymns from the 5th to

the 14th centuries. The sacred choral works which are based on these employ syllabic chant and jubilations on vowel sounds, and a free combination of recitative and sung composition within the stylistic framework of traditional church music. In his early works (*Dances fantastiques*, the early concertos) and chamber music (*Armenian Bagatelles*, *Ararat Suite*) he handles elements of traditional dance music in styles reminiscent of Aram Khachaturian. Rhythmic contrasts are enhanced by brilliant orchestration and polyphonic stylistic differentiation. His works based on early Persian folk stories, such as the opera *Rostam and Sohrab* and the ballet *Simorgh* have won recognition in Iran.

WORKS

(selective list)

Stage: Dances fantastiques (ballet, 1, Tjeknavorian), op.2, 1958, Interlochen, MI, Music Academy, 1968; Rostam and Sohrab (op, 2, after Ferdowsi: *Shāhnāmeh*), 1965, unstaged, rev. 1982, concert perf. <div align="right">SVETLANA SARKISYAN</div>

Tobani, Theodore Moses [Moses, Theodore; Moses-Tobani, Theodore]

(*b* Hamburg, 2 May 1855; *d* New York, 12 Dec 1933). American composer and arranger of German birth. He began violin lessons when he was three, and by five was performing on horseback in a circus. His family moved to the USA in 1865, but soon returned to Europe to further his musical education in Hamburg, Berlin, and with Ferdinand David in Leipzig. The family emigrated to the USA in 1871, and Theodore worked in theatres in Philadelphia. He moved to New York in 1875 and played in theatres and orchestras, becoming a naturalized citizen in 1876. He was described as a modest, unassuming man with a genial temperament, and in later life was a successful real-estate agent.

He began an association with the publishing firm of Carl Fischer in 1882. Over the next 40 years he composed more than 500 works, some under the pseudonyms Florence Reed or Andrew Herman, and made more than 4500 arrangements. In the 1890s he began adding Tobani to his name, first with a hyphen, then legally changing his name, resulting in his compositions being published and reprinted under all three forms of his name. As one of Fischer's major house composers and arrangers, he arranged contemporary orchestral standards for piano and theatre or chamber orchestra, transcribed the same works for band and made many fantasias, potpourris and medleys of opera, operetta and Broadway melodies and popular folksongs. He also made arrangements for violin solos (with piano), trombone, cello, cornet and other instruments. His *Hearts and Flowers*, a work that epitomizes the sentimentality of the popular song at the turn of the century and sold millions of copies, was arranged and published for numerous instrumental combinations including two mandolins and piano. Capturing the spirit of popular band and theatre concerts, he wrote many characteristic pieces, marches, waltzes, polkas, lancers and other fashionable dance forms. Many of his band arrangements are still played at traditional band concerts.

RAOUL F. CAMUS

Tobias, Rudolf

(*b* Käina, Hiiumaa Island, 29 May 1873; *d* Berlin, 29 Oct 1918). Estonian composer and organist. A graduate of the St Petersburg Conservatory, where he studied with Louis Homilius (organ) and Nikolay Rimsky-Korsakov (composition), he worked as an organist and choral conductor in St Petersburg and Tartu, and taught music theory at the Königliche Akademische Hochschule für Musik, Berlin (1912–18). Central to his compositional output are a number of large works for chorus and orchestra; these move beyond the limits of nationalism and touch upon philosophical subjects. Although the oratorio *Des Jona Sendung* fell into oblivion after its first performance in Leipzig (1909), it received successful performances in Estonia and other European countries when it was restored by Estonian pianist and musicologist Vardo Rumessen in 1989. Tobias's early compositions, such as the overture *Julius Caesar* (1896), are classical in style. Several later works are more experimental; *Sest Ilmaneitsist ilusast* ('The Beautiful Maiden Ilmaneitsi', 1911) displays impressionistic

tendencies, while a number of solo piano works can be considered expressionistic.

WORKS

Vocal: Johannes Damaskusest [St John of Damascus] (cant.), solo vv, male vv, mixed chorus, orch, 1897; Kalevipoja unenägu [Kalevipoeg's Dream], melodrama, spkr, orch, 1907; Des Jona Sendung (orat), solo vv, children's chorus, mixed chorus, org, orch, 1909 [restored by V. Rumessen]; Sest Ilmaneitsist ilusast [The Beautiful Maiden Ilmaneitsi], ballade, S, orch, 1911; Kalevipoja epiloog [The Epilogue of Kalevipoeg], melodrama, spkr, orch (1912); c30 choral works; c10 solo songs

MART HUMAL

Toccata

(It., from *toccare*: 'to touch').

A piece intended primarily as a display of manual dexterity, often free in form and almost always for a solo keyboard instrument. The toccata principle is found in many works not so called, and a large number of pieces labelled 'toccata' incorporate other more rigorous styles (such as fugue) or forms (such as sonata form). In the 16th and 17th centuries the term was sometimes applied to fanfare-like pieces (e.g. the opening fanfare of Monteverdi's *Orfeo*, 1607), but the origin of this usage and its relationship to the current one are obscure. (For the putative connection with the Shakespearean 'tucket', *see* Tuck, tucket).

1. The Renaissance.

Freely composed keyboard music, independent of the dance, of cantus firmi or of any vocal model, first appeared in certain 15th-century German manuscripts, such as the tablature of Adam Ileborgh and the Buxheimer Orgelbuch. Here sequences of chords alternate with somewhat aimless scale passages, and the usual title is 'praeludium' or 'preambulum'. The style was continued in the early 16th century, in the tablatures of Kotter, Kleber and others (*see* Prelude). At the same time a rhapsodic form known as the ricercare appeared in Italy, at first in collections of lute music and then in the *Recerchari, motetti, canzoni* (1523) for keyboard of M.A. Cavazzoni. The two ricercares in his collection serve as introductions to transcriptions of motets and are long, somewhat rambling pieces. But by 1543, when his son Girolamo Cavazzoni's first collection of keyboard pieces appeared, the term 'ricercare' had been transferred to a piece of

fugal character (*see* Ricercare). The early lute publications also included the term Tastar de corde (i.e. a testing of the strings; *see also* Tiento), usually referring to a more strictly chordal type of piece. The Spanish equivalent, 'tañer', was used in a more general sense, as in Tomás de Santa Maria's *Libro llamado Arte de tañer fantasia* (1565), where it simply means the art of playing fantasias.

The earliest appearance in print of the word 'toccata' is found in G.A. Casteliono's *Intabolatura de leuto de diversi autori* (1536), from which the terms 'tastar de corde' and 'recercare' had disappeared. One of the three pieces here entitled 'Tochata' is by Francesco da Milano. The earliest printed keyboard toccatas are those of Sperindio Bertoldo (1591), but more significant are those in the first volume of Diruta's *Il transilvano* (1593), including toccatas by Diruta himself, Claudio Merulo, Andrea and Giovanni Gabrieli, Luzzaschi, Antonio Romanini, Paolo Quagliati, Vincenzo Bellavere and Gioseffo Guami; other important collections are the *Intonationi d'organo* of the Gabrielis (1593), containing four toccatas by Andrea Gabrieli, Merulo's two volumes of *Toccate d'intavolatura d'organo* (1598 and 1604) and Annibale Padovano's *Toccate et ricercari d'organo* (1604). Most of these works are in a predominantly chordal style in which either hand may perform brilliant runs against chords in the other. Merulo was the most ambitious of these composers, and his rhythmic figuration begins to approach the nervous intensity of Frescobaldi's. His toccatas are more sectional, too, fugal and chordal passages alternating with brilliant passage-work. Toccatas were also composed by Banchieri, Mayone, Trabaci and others.

2. Early and middle Baroque: Italy, south Germany, Austria.

With Frescobaldi a new era was inaugurated; by the time his first book of toccatas appeared (in 1615) the contrasts had become more violent, the passage-work more rhythmically complex. The 12th toccata in that book is an essay in chromaticism with little in the way of passage-work. The second book (1627) includes two lengthy toccatas for the Elevation, two that may be performed over long pedal notes, a toccata 'di durezze e ligature' (no.8, featuring suspended dissonances; see illustration), and, as the 12th work, Arcadelt's madrigal *Ancidetemi pur* arranged for keyboard with toccata-like figuration. The effect of rhythmic discontinuity is most pronounced in the ninth toccata, in which the use of complex rhythmic proportions led the composer to remark 'the end is not reached without fatigue'. There are also short introductory and Elevation toccatas in his *Fiori musicali* (1635): the former served as a substitute for the introit of the Mass, a function confirmed in a number of contemporary sources.

The legacy of Frescobaldi lasted until the end of the century in Italy. Michelangelo Rossi's toccatas are, if anything, even more extravagant than Frescobaldi's, especially harmonically. Bernardo Pasquini wrote a large number of pieces entitled variously 'toccata', 'tastata', 'sonata' and, in one instance, 'preludio'; their keyboard figuration is more varied than that in Rossi's toccatas, but there is greater continuity, and the later Baroque style is foreshadowed. As in one of Rossi's toccatas, there is occasionally a completely contrasted section in triple time. Another Italian mid-Baroque composer of toccatas was Domenico Zipoli.

One of the first south German composers to cultivate the toccata was H.L. Hassler, who had studied with Andrea Gabrieli in Venice. Frescobaldi's style of toccata was transmitted to Austria by Froberger; his 24 or so toccatas are even more sectional than Frescobaldi's but at the same time have greater continuity within each section. They contain some fugato, and to a certain extent Froberger transferred to them the principle of the variation canzona or capriccio. A typical one consists of a fairly lengthy rhapsodic introduction, a fugato, a second fugato based on a rhythmic transformation of the material of the first, and a shorter free passage to conclude; but the scheme was not set in stone, and there is considerable variety among the pieces.

The rhapsodic element in Froberger's style was passed on to the French through transcriptions of some of his toccatas, resulting in the typical French unmeasured prelude (*see* Prélude non mesuré); but the French did not adopt the title 'toccata' at this period. The Austrian and south German tradition, continued by such composers as Kerll and S.A. Scherer, culminated in the work of Georg Muffat, whose *Apparatus musico-organisticus* (1690) is a landmark in the history of organ music; its 12 toccatas are extravagant but controlled, divided into several contrasting sections but totally unified in style. The pedals are obbligato, but their simple parts consist of little more than held notes at unison pitch; occasionally they are required to double or fill in a manual bass line (pedal writing was to develop no further in Roman Catholic countries for another 150 years). Something of Muffat's grandeur appears in the rather shorter toccatas of Johann Speth's *Ars magna consoni et dissoni* (1693). Johann Pachelbel's toccatas are single-section works consisting of florid passage-work over held pedal notes; those of Muffat's son Gottlieb are merely short introductory movements to a series of liturgical suites that consist otherwise of fugues and are arranged according to key. The works of harpsichord composers such as J.J. Fux and J.C.F. Fischer, though they include toccata-like movements, do not use the title.

3. Early and middle Baroque: northern Europe.

In the Netherlands the toccata was developed by Sweelinck before it had been transformed by Frescobaldi. Indeed his toccatas lack even the modest degree of rhythmic freedom implied by the style of Merulo, and his immediate models were no doubt the toccatas of Andrea and Giovanni Gabrieli. A few melodic similarities between his toccatas and Merulo's have been detected, but the chief characteristic of Sweelinck's is their rhythmic regularity.

Of all the forms bequeathed by Sweelinck to his north European successors, the toccata was the least important. There is a single toccata by his contemporary Peeter Cornet, who was at the Roman Catholic court of Brussels. The toccatas surviving in manuscript by Samuel Scheidt are not of great interest, and Heinrich Scheidemann wrote only two (the Germans were more concerned with the chorale and the fugue). More significant is the single toccata of Delphin Strungk (*D-Lr* KN209), a large work exploiting contrast between the two manuals and showing the beginnings of a development pursued in the toccatas of Weckmann, Reincken and finally Buxtehude; its chief elements are the increasing

stylistic distinction between the organ and the harpsichord toccata, the former cultivating the tonal possibilities of the organ and using the pedals in the elaborate manner of the north German organists, and the increasing use of fugue. With Buxtehude the toccata became a large-scale work in which rhapsodic and fugal sections alternated, the whole composition being unified in style and to a certain extent in thematic substance. This mirrors the development reached independently by Froberger, and it is not unlikely that Buxtehude was influenced by it, the more so, perhaps, after the publication of Froberger's toccatas in 1693. In Buxtehude and his contemporaries, however, works of this kind may also be called 'praeludium' or 'preambulum' in the sources.

4. Late Baroque.

In Italy Alessandro Scarlatti's toccatas were a radically new departure. They are for harpsichord and may be in as many as six or seven contrasting sections, incorporating such elements as fugue, recitative and variations: for example, no.7 (of *Primo e secondo libro di toccate*, 1723) ends with 29 variations on the folia. Scarlatti influenced Handel's keyboard style, but Handel wrote no toccatas so called. Scarlatti's influence is also to be seen in a few of J.S. Bach's works, such as the Chromatic Fantasia and Fugue, but Bach's harpsichord toccatas are large-scale works of individual design, incorporating at least one and sometimes two fugal movements. Rhapsodic figuration is subordinated to passages in regular rhythm, and these are tightly knit works in spite of their imposing designs. In the first movement of the E minor Partita the form consists of introductory toccata material, an extended fugue, and a return of the first section.

Bach's organ toccatas are either works in which the toccata and fugal elements are closely linked, as with Buxtehude (e.g. the Toccata, often called Toccata and Fugue, in D minor bwv565 and the Toccata in C bwv564, which incorporates an introduction, adagio and fugue); or they are large independent movements in strict rhythm preceding a fugue (e.g. the 'Dorian' Toccata and Fugue bwv538 or the Toccata and Fugue in F bwv540). The justification for the title here is the largely continuous semiquaver movement, by means of which the tension is built up; this was to become a cardinal feature of the modern toccata, the rhapsodic and fugal elements being almost entirely abandoned.

5. 19th and 20th centuries.

The toccata was hardly used in the Classical period, and since then its use has been considerably limited as a result of its somewhat indefinable character. Its characteristics of display are found in such forms as the exercise and study, while its rhythmic and formal freedom are embodied in the capriccio and rhapsody. Its one more or less stable characteristic, that of continuous movement in short note values, is shared with the *moto perpetuo* as well as with numerous works and movements that have no special title. Among classical movements that in later times might well have borne the title are the finales of Beethoven's sonatas in A♭ op.26 and F op.54.

The title 'toccata' was occasionally used by 18th-century Italian composers. There is a famous one by Muzio Clementi (published with a sonata as

op.11, 1784), which he played at his competition with Mozart before the Emperor Joseph II in 1781; it has rapid 3rds in the right hand. In 1820 F.G. Pollini brought out his *Trentadue esercizi in forma di toccata*, fundamentally exercises in piano touch. Schumann's magnificent Toccata in C op.7 probably owes more in form and spirit to the Beethoven finales mentioned above than to these Italian examples. It is in sonata form with a fairly short exposition and a lengthy development section, all in the context of a technically demanding *moto perpetuo*.

The title was adopted by some French organists of the late 19th century and early 20th for the brilliant finales of their organ symphonies; those by Widor and Vierne are well known. The style is also found in movements entitled 'sortie' or 'final'. The curious little piece that Berlioz composed for the reed organ in 1845 is a toccata in name only.

On the whole the piano has inspired more interesting examples of the toccata in the 20th century. The form was revived by Debussy in his suite *Pour le piano* and by Ravel in *Le tombeau de Couperin*. In both cases the object was to provide a quasi-archaic element, though an anachronistic one; both pieces are finales in their respective suites and both are in 2/4 time with continuous semiquaver movement. The type is a cross between the Schumann example and the organists' toccata. On the whole the Debussy work is the more inventive and varied of the two, though Ravel's, with its gradually approached climax, has the subtler form. There is also the fine Toccata op.11 by Prokofiev (1912). The toccata has not been much cultivated by English composers, but a striking example is the first movement of Vaughan Williams's Concerto for piano and orchestra (1933; revised for two pianos and orchestra, 1946). The massive and difficult piano writing and the largely continuous semiquaver movement, neither of them characteristic of the composer, justify the title.

JOHN CALDWELL

Tocchi, Gian Luca

(*b* Perugia, 10 Jan 1901; *d* Rome, 1992). Italian composer. Although now totally neglected, Tocchi gained a reputation in the 1930s in two musical genres: symphonic poems in the manner of Respighi, an obligatory genre for almost all young Italian composers of the period, such as *Il destino*, *Record* (a musical celebration of the world water speed record achieved by the Italian Francesco Agello), *Film* and *Luna Park*; a series of curious pieces for voice and small ensemble entitled *Canti di Strapaese*, a homage to the contemporary Italian literary movement promoted by Maccari and Longanesi, with the goal of reappraising Italian folklore in open opposition to cosmopolitan culture. These latter remarkable folk miniatures, a lively mixture of counting games, lullabies, *strambotti*, cradle-songs and dance-songs, show Tocchi at his best, expressing himself now with ironic, amused wit, now with heartfelt simplicity. A clever blend of echoes of folklore and Impressionism, not far from the Poulenc, characterizes other successful works, such as the many pieces for children's choir and the delightful triptych *Canzone, notturno e ballo*. The latter draws the magical timbres, which recall Debussy's late work for the same ensemble, into a Mediterranean context.

ROBERTO COGNAZZO

Toch, Ernst

(*b* Vienna, 7 Dec 1887; *d* Santa Monica, CA, 1 Oct 1964). Austrian composer, pianist and teacher, naturalized American from 1940. He began to compose at an early age and in 1905, shortly after he had commenced studies at the Vienna Conservatory, his Sixth Quartet op.12 was given its first performance by the celebrated Rosé Quartet in the Vienna Musikverein. It was received with general acclaim and Toch turned his attention fully to music. On receiving the Mozart Prize in 1909, Toch moved to Frankfurt to study composition with Iwan Knorr and piano with Willy

Rehberg at the Hoch Conservatory. He joined the staff of the Mannheim Hochschule für Musik in 1913. After serving with the Austrian army in the southern Tirol throughout World War I, he returned to Mannheim where he taught and composed for another ten years. His experiences in the war left a mark on him, and his first composition after it, the Ninth String Quartet op.26 (1919), signals a new stylistic direction. Where the prewar works, for all their originality, are audibly indebted to Brahms, the Ninth Quartet is more radical, employing an extended tonality and an uncompromising emphasis on the linear dimension. It and the works that followed earned Toch a prominent place in the musical avant garde. His music was regularly heard at the Donaueschingen festivals from 1922 onwards and his *Drei Originalstücke für das Welte-Mignon klavier* were commissioned for the 1926 festival. His *Fuge aus der Geographie* for speaking chorus (1930) was a contribution to the contemporary cause of *Gebrauchsmusik*, and his chamber-ensemble score for the Paramount film *Die Kinderfabrik* (1928) to that of film music.

The two short operas *Die Prinzessin auf der Erbse* op.43 (1927) and *Egon und Emilie* op.46 (1928) were not only examples of contemporary *Zeitoper* but also way-stations in the composer's search for a libretto for a full-length opera. The search occupied him intensively during the 1920s and was documented in an interesting correspondence between him and his publishers at the time, Ludwig and Willy Strecker. The outcome, in 1930, was *Der Fächer* op.51, an opera-capriccio in three acts with text by Ferdinand Lion.

The 1920s were a highly successful decade for Toch: other major works of this period include his Concerto for Cello and Chamber Orchestra op.35 (1925) and the *Bunte Suite* op.48 (1928). The former work was notable for securing Toch a ten-year contract with the publishers Schott, which allowed him from then on to compose without depending on teaching for a living. The Piano Concerto op.38 took him in 1932 to America for the first time, where he toured playing the solo part with great success. Hitler's seizure of power in 1933 put an abrupt halt to Toch's creative career for a time, as it made him feel compelled to leave Germany. He was in Florence attending the Maggio Musicale, an official representative of his country with Richard Strauss, when he decided to flee. From Paris he sent his wife a telegram in a pre-arranged code: 'I have my pencil'. But like so many other refugees, he could not stay long in Paris, where there was no work for him. He moved on to London, where the intervention of Berthold Viertel and Elisabeth Bergner gave him the chance to work for the cinema. He wrote the music for *Catherine the Great* (dir. P. Czinner, 1934) and for two further films in the same year: *Little Friend* (dir. B. Viertel) and *The Private Life of Don Juan* (dir. A. Korda). An invitation from Alvin Johnson to the New School for Social Research – the 'University in Exile', as it was called by the many emigrants it sheltered – took Toch to New York in 1935. During the voyage across the Atlantic he composed one of his most popular works, *Big Ben, a variation fantasy on the Westminster chimes*, in commemoration of his time in London. In 1936 commissions from the film industry in Hollywood took him to California, which became his long-term home in exile. He approached the work for the studios with optimism at first, hoping to combine his ideas about opera and the spread and popularization of avant-garde music with the means of modern sound-films,

but he was soon disillusioned by the reality of Hollywood, which made it impossible for him to put his ideals into practice. Although he wrote 16 film scores altogether and gained three Academy Award nominations – for *Peter Ibbetsen* (dir. H. Hathaway, 1935), *Ladies in Retirement* (dir. C. Vidor, 1941) and *Address Unknown* (dir. W. Cameron, 1944) – his success could not console him for the difficulty he had in finding an audience in America for his serious music, which was far more important to him. He was too modern for the American public, but he had become too old-fashioned in European terms to be able to build from a position of exile on the great successes of the pre-war years. Attempts to recover a foothold in Europe failed, and in the last phase of his career Toch concentrated on his teaching at the University of Southern California and on the composition of symphonies. He wrote seven of these, between 1950 and 1964, in a traditional, largely late-Romantic style that harks back to his beginnings. A series of guest lectures at Harvard led to his most important book, *The Shaping Forces in Music* (New York, 1948/*R*). Toch always thought of himself as a universalist, in music and in philosophy, aligned and in harmony with a tradition that he did not disown but wanted to help evolve.

ANJA OECHSLER

Tocotín

(from Náhuatl).

A 17th-century villancico emulating Aztec song-dance. The surviving texts
are either completely in the Náhuatl language of the Aztecs or in Spanish
with the frequent insertion of Náhuatl words and phrases. Three well-
known *tocotines* by the Mexican poet Sor Juana Inés de la Cruz survive,
unfortunately without music. The 18th-century Jesuit historian Francisco
Javier Clavijero wrote that the Amerindian dance was of pre-Hispanic
origins, but was of such propriety that priests permitted it to be danced in
churches. The name of the dance derives from a series of syllables which
denoted drum rhythms and dance steps, and it may be presumed that its
performance would have included the use of the *huéhuetl* and *teponaztli*,
the two drums associated with the tradition (*see* Mexico, §II, 1).

Toczyska, Stefania

(*b* Grudziądz, 19 Feb 1943). Polish mezzo-soprano. She studied at the Gdańsk Conservatory and made her début with the Baltic State Opera, as Carmen, in 1973. After winning prizes in several vocal competitions she embarked on an international career, singing Amneris in Basle in 1977 and making her Vienna Staatsoper début as Preziosilla (*La forza del destino*) the following year. Toczyska has appeared in most of the world's leading opera houses, in such roles as Laura Adorno (*La Gioconda*), with which she made her San Francisco début in 1985, Marfa in *Khovanshchina* (the role of her Metropolitan début, 1987), Pauline (*The Queen of Spades*), Rosina, Carmen, Azucena and Amneris, which she sang at Covent Garden in 1983 and 1984. She is also admired as a concert singer (notably in Verdi's Requiem, which she has recorded), and performs a wide range of Polish music, from Chopin to Penderecki. Although not always perfectly steady, her voice is ample and highly expressive, as can be heard on her vivid recordings of Vanya (*A Life for the Tsar*) and Pauline.

BARBARA CHMARA-ŻACZKIEWICZ

Toda, Kunio [Morikuni]

(*b* Tokyo, 11 Aug 1915). Japanese composer. He graduated in law from Tokyo University in 1938 and then went as a diplomat to Germany, where he attended lectures on music at the University of Heidelberg. A year later he was sent to Moscow and there attended the Tchaikovsky centenary festival. Returning to Tokyo in 1941, he became a composition pupil of Saburō Moroi. In 1944 he was posted to Indo-China; he was in Saigon at the end of the war and remained there as a captive for three years, during which time he came across Leibowitz's *Schönberg et son école* and began what was probably the first 12-note piece by a Japanese. The work, a prelude and fugue, was never finished, but Toda took Leibowitz's book back with him to Tokyo in 1948 and so introduced 12-note serialism to Japan. He joined the Shinseikai, a group formed by Shibata and Irino, both of whom read Leibowitz and soon became the leading Japanese exponents of serialism. Toda himself was rather slow in adopting the technique; his opera *Akemi* (1956) is 12-note only in part, but in 1957 he produced a wholly 12-note composition in sonata form, the Violin Sonata. Another successful example of his combination of serial procedure with conventional form is the *Gassō kyōsōkyoku* of 1967. He pursued his diplomatic career until 1964, when he retired to give his attention to composition. He was appointed to the Tōhō Gakuen School of Music (made a college in 1961) in 1955 and became a professor there (1964–76), then at the Senzoku Gakuen College (1977–88). In addition, he has promoted and written on modern music, particularly Russian, and translated books by Jadassohn, Duhamel, Piston and others. With Irino he was a chief organizer of the Amis de la Musique de 20ème Siècle from 1967, and he has also served as acting secretary-general of the Japanese National Committee of the International Music Council and as a jury

member for the music competition sponsored by the Mainichi press and Japanese radio.

MASAKATA KANAZAWA

Todesca

(It., from *tedesco*: 'German').

A 16th-century genre of polyphonic song that satirizes Germans attempting to speak Italian. Mispronounced words, garbled syntax and verbs rendered as infinitives are standard features in the texts (e.g. 'Mi folere star contente'). The earliest todescas form a substantial category in sources of Florentine carnival songs or Canti carnascialeschi, especially *I-Fn* Magl.XIX.121 and Banco Rari 230 (facs. in RMF, iv, 1986). Stock characters are German lancers and bakers, whose descriptions of their trades and ability to play instruments are merely pretexts for boasting about sexual prowess.

Later todescas describe the lancer's notorious addiction to the bottle (*Trince got è malvasie*, RISM 1566[5] and Le Jeune's *Trink Trink Trink pon pokras*, 1608) or his habit of serenading courtesans with ribald word-play, such as *cazze*/*cacce* in Azzaiolo's *Bernardo non può stare* (1559[19]) and Lassus's *Matona mia cara* (1581). Bavarian courtiers were evidently amused by the parodies of their countrymen offered by Lassus (*Mi me chiamere Mistre Righe*) and Bottegari (*Mi stare pone totesche*). Vecchi's *Selva di varia ricreatione* (1590), dedicated to Jakob and Johann Fugger, contains a madrigal 'a diversi linguaggi' in which a bass impersonates the German (as in other madrigal comedies). The names 'todesca' and 'todeschina' were also applied to dance types, including allemandes, and Gastoldi's balletto *Viva, viva Bacc'ogn-hor* is aptly subtitled 'Il Todesco'.

DONNA G. CARDAMONE

Todeschi [Tedeschi, Tedescho], Simplicio

(*b* Verona, *c*1600; *fl* 1618–37). Italian composer. In 1618 he must have been attending the Scuola degli Accoliti at Verona since he contributed three motets for three voices and organ to *Lilia sacra* (RISM 1618[5]), a collection of works by eight pupils at the school. In 1637, and possibly before, he was *maestro di cappella* of S Giorgio Maggiore, Verona. The dedication of his *Amorose vaghezze a tre voci concertate* (Venice, 1627) described this as his third published volume of compositions; the preceding two are lost. A further volume, *Sacri concerti a due voci* op.4, is known only from a reprint (Venice, 1637). Three motets for two voices and continuo appear in a collection of vocal works printed in Antwerp in 1639.

Todeschini, Francesco

(*fl* Mantua, 1650). Italian composer and instrumentalist. He was young and employed as a performer on the violin and violone by Carlo II, Duke of Mantua, when he published his only known music, *Correnti, gagliarde, balletti, et arie* op.1 (Venice, 1650), which is basically for a four-part string ensemble. It contains 43 compositions, including four capriccios, two for solo violin and two for solo bass with optional violin.

IAIN FENLON

Todi, Jacopone da.

See Jacopone da Todi.

Todi [née de Aguiar], Luísa [Luíza] (Rosa)

(*b* Setúbal, 9 Jan 1753; *d* Lisbon,1 Oct 1833). Portuguese mezzo-soprano. She started as an actress in 1767 or 1768 at the Bairro Alto theatre in Lisbon, where her father was a copyist. In 1769 she married the Italian Francesco Saverio Todi (*d* 1803), leader of the theatre orchestra, and during the next two years she appeared there as a singer in Scolari's *Il viaggiatore ridicolo* and two other comic operas. In 1773 she sang in Perez's *Il Demofoonte* in Oporto and in 1775–8 she was engaged for comic opera at the King's Theatre in London, making her first appearance in Paisiello's *Le due contesse*. Her international fame was established at the Concert Spirituel, Paris, in 1778 and confirmed by her change to serious parts; in the following years she gave concert tours in several French cities and sang in Switzerland, Italy, Austria and Germany. She was back in Paris in 1783, where she was involved in a famous rivalry with Gertrud Mara. In 1784 she joined a brilliant company at St Petersburg headed by Sarti, in whose *Armida e Rinaldo* and *Castore e Polluce* she sang with

enormous success in 1786. She made her last Russian appearance at Moscow in 1787 in the *festa teatrale Pollinia*, with music probably by her husband to her own libretto. She sang in Berlin, Mainz and Hanover, and again at the Concert Spirituel in Paris, 1788–9, and at the Teatro S Samuele, Venice, 1790–91, where the season was declared 'anno Todi'. In 1791–2 she appeared in Padua, Bergamo, Prague, Turin and Parma, then sang at the Madrid Opera (1792–3 and 1794–5, including comic roles) and at Lisbon in the oratorio *La preghiera esaudita* by Giovanni Cavi at the Real Casa Pia and in Leal Moreira's *Il natale augusto* at the house of Anselmo José da Cruz Sobral (at this time women were forbidden to appear on the stage in Lisbon). Her last major engagement was at S Carlo, Naples, 1797–9, but in January 1801 she appeared at the S João theatre, Oporto. In March 1809, while trying to escape the French army, which had invaded Portugal, she lost most of her possessions in the river Douro. Around 1811 she returned to Lisbon, and two years later she became blind. According to Choron and Fayolle, Todi's voice was 'large, noble, sonore, intéressante', with an extensive lower register. She was best known for her sensibility and ability to evoke tears in pathetic roles, but also acquired considerable skill in the bravura style.

ROBERT STEVENSON/MANUEL CARLOS DE BRITO

Todini, Michele

(bap. Saluzzo, Piedmont, 24 May 1616; *d* Rome, 3 May 1690). Italian inventor, maker and player of musical instruments. He moved to Rome around 1636, and from 1650 to 1652 he was known as *guardiano degli strumentisti* for the Congregazione di Santa Cecilia (a very prestigious post, which later was held by musicians such as Carlo Mannelli, Arcangelo Corelli and Giovanni Lulier). He was a trombone player and organist with the Musici del Campidoglio, for whom he was *decano* from at least 1676 to 1684. He also played various kinds of bowed instruments in numerous public performances, and claimed to have built and introduced the 'contrabasso di viola' to Rome about 1646. He died in Rome and not in France, as was erroneously reported by J.-B. de La Borde. He had no children, and thus, contrary to earlier hypotheses, could not have been the father of Pietro Todini, a harpsichord-maker mentioned in 1675.

Todini is best known for the famous 'Galleria armonica', which he began to assemble in 1650 in his home near the Pantheon (via dell'Arco della Ciambella). According to his own description it was divided between two rooms. In the first room seven instruments (harpsichord, three types of spinet, organ, violin and *lira ad arco*) could be made to sound, alone or in

various combinations, by means of a single controlling keyboard; this is depicted in Kircher's *Phonurgia nova*, although, according to Todini, in a completely fanciful manner. The second room housed wooden statues of Galatea and Polyphemus, the latter represented in the act of playing a 'sordellina, or musetta' whose mechanisms were activated by a harpsichord keyboard; the group was magnificently decorated with mythological imagery and in great part gilded.

After 1690 the Galleria armonica was transferred to the palace of the Verospi marquises (now the Palazzo del Credito Italiano), in the via del Corso. Bonanni describes it in its new setting, where it continued to attract many visitors. However, Burney reported that by 1770 it had already fallen into neglect. The machine was broken up and sold in 1796, the Verospi family having died out; only the Galatea and Polyphemus group is known after that time; it remained in Rome in disuse until at least 1859. Having been acquired by the Viscount of Sartriges, the French ambassador to the Holy See, it was then moved to Paris. Since 1889 it has belonged to the Metropolitan Museum, New York.

PATRIZIO BARBIERI

Todino, Cesare.

See Tudino, Cesare.

Todt, Johann Christoph [Giovanni Christoforo]

(*fl* late 18th century). German composer. During 1783 and 1784 he was a valet and chamber musician for Count Vollrath of Löwenstein-Wertheim, as is evident from the headings of his manuscript compositions in the Landesbibliothek, Schwerin. These include six harpsichord concertos, a Concertino for two horns and string orchestra, and six sonatas for harpsichord with obbligato violin. The harpsichord concertos, particularly in their solo parts, show much attractive detail and melodic writing amid more conventional passages, and would be of unusual interest if it could be shown that Todt was unfamiliar with Mozart's concertos. No record remains of his many other manuscript works mentioned by Forkel, Gerber and Breitkopf (Brook), including several manuscript concertos for cello, flute and horn; Todt also wrote sonatas for harpsichord, violin and cello (including three published in Mannheim as op.1), a keyboard duet and pieces allegedly published in Leipzig collections.

DIETER HÄRTWIG

Toduță, Sigismund

(*b* Simeria, 17/30 May 1908; *d* Cluj, 3 July 1991). Romanian composer, musicologist and teacher. At the Dima Conservatory, Cluj (1926–30, pedagogical section, 1930–35, composition department), he studied harmony and counterpoint with M. Negrea and the piano with E. Fotino-Negru; he continued his studies at the Accademia di S Cecilia (1936–8) as a pupil of Pizzetti (composition) and Casella (piano), and took a doctorate in musicology at the Pontificio Istituto di Musica Sacra, Rome, with a study of manuscripts by G.F. Anerio (1938). In 1946 he was appointed teacher of theory, harmony and composition at the Cluj Conservatory, of which he was rector from 1962 until 1965 and from where he retired in 1973. As mentor to a gifted group of young composers, Toduță established Cluj as Romania's second musical centre; he was made managing director of the Cluj State PO in 1971, and has been a principal supporter of the Cluj Autumn Festival. The distinctive features of his music are a nobility of feeling together with deep folk resonances, skilful use of Renaissance and Baroque polyphonic forms, quasi-vocal themes and virtuoso orchestration. Such early works as the orchestral *Eglogă* (1933) are much indebted to

impressionism and to Franckian cyclic form, but Toduță's period in Rome caused him to turn to polyphony and ancient forms and so to a neoclassicism evident in, for example, the Symphonic Variations, the piano Passacaglia and the Concerto for Orchestra. His individual style, however, was formed only after a thorough investigation of the modal and rhythmic characteristics of Romanian folk music, an investigation that led to an original modal technique remarkable for its synthesis of the heterophony, harmonic pedals and asymmetric rhythms of folk music with characteristics of Byzantine and Gregorian chant and the conventions of European art music. Peasant laments, lullabies and carols reappear in his choral pieces and symphonies, the two- and three-note harmonies of folk music are employed in the neoclassical forms of the *Cinci colinde* ('Five Carols') and *Poemul secerişului* ('Harvest Poem'), and Toduță developed Enescu's technique of imitating the timbre of shepherd panpipes for *doina* melodies that suggest the Romanian pastoral landscape. There is also in Toduță's work an inclination towards the monumental and dramatic, as in the *Balada steagului* ('Ballad to the Standard'), the opera-oratorio *Meşterul-Manole* ('Master-Builder Manole') and the Symphonies nos.3–5; an assured handling of chromaticism is demonstrated in the chamber music, in the Fifth Symphony and in the oratorio *Miorița* ('The Ewe Lamb').

His musicological works on J.S. Bach focus on morphological and stylistic analysis and have thrown new light on that composer's creative process.

VIOREL COSMA

Toebosch, Louis

(*b* Maastricht, 18 March 1916). Dutch composer, organist and conductor. He studied at the Utrecht School of Church Music, at the Maastricht Muzieklyceum with Hermans (orchestral conducting) and at the Liège Conservatoire with Hens (organ). While organist and choirmaster of the church of the Sacrament, Breda (1940–65), he made many recital tours. He was also conductor of the Tilburg SO (1946–52), with which he performed numerous Dutch works. In 1951 he won the Haarlem International Competition for Organ Improvisation, and in 1953 he founded the Orlando di Lasso Chamber Choir. He taught organ and theory at the Maastricht and Tilburg conservatories (1946–65) and from 1965 to 1974 he was director of the Brabant Conservatory. He has since concentrated on his work as organist and composer. Honoured with several prizes, in 1965 he was made a knight of the Order of St Gregory.

ROBERT MÜNSTER

Toeschi

(1) Alessandro Toeschi [Toesca]

(*b* ?Rome, before 1700; *d* Mannheim, bur. 15 Oct 1758). Violinist and composer. He was actually named Toesca, and was descended from an old Italian noble family of Saorgio in the county of Nice. His father Giovanni Battista Toesca was chamberlain to the Duke of Gravina, Prince Orsini, in Rome. Alessandro toured England and Germany and was employed from 1719 to 1724 as court musician in the service of the Landgrave Ernst Ludwig of Hesse in Darmstadt. On 2 January 1725 he was engaged as *second maître des concerts* at the Württemberg court at Stuttgart. His first wife, the court singer Giovanna Toeschi, died on 26 July 1726; before 1730 he married again, his second wife being Octavia de Saint Pierre (possibly an aunt of the singer Dorothea Wendling). Soon after the death of Duke Eberhard Ludwig on 12 March 1737, he left Stuttgart. From 1742 at the latest he was Konzertmeister, and from about 1750 director of instrumental church music, at the Palatine court in Mannheim. Of his works, which were influenced by Vivaldi, a concerto for two violins, strings and continuo and a sonata for violin and continuo survive (*D-Dl*). The ballet to C.P. Grua's opera *Meride* (Mannheim, 17 January 1742) and a *Sonata a violino o cimbalo*, published by G.F. Andreae in Frankfurt, are lost. Besides his sons he had a daughter, Barbara Margaretha Sidonia Toeschi (*b* Ludwigsburg, 16 July 1733; *d* after 1763), a dancer at Mannheim who married the cellist Innozenz Danzi and was the mother of the composer Franz Danzi and the soprano Franziska Lebrun.

Toeschi

(2) Carl Joseph Toeschi

(*b* Ludwigsburg, bap. 11 Nov 1731; *d* Munich, 12 April 1788). Composer and violinist, son of (1) Alessandro Toeschi by his second marriage. A pupil of Johann Stamitz and Anton Fils, he soon became a good concert violinist, and from 1752 was a member of the Mannheim court orchestra. In 1759 he became Konzertmeister and in 1774 music director of the electoral cabinet. During these years he directed performances of opera and ballet and frequently travelled to Paris, where from 1760 most of his instrumental works appeared in print, and where until 1783 his works were frequently performed at the Concert Spirituel. In 1778 he chose to follow the Elector Carl Theodor to Munich, as did most of the Mannheim orchestra. His French wife Susanna (née Nayer), in Gerber's estimation an outstanding singer, was a member of the Munich court opera until 1802.

As the composer of more than 66 symphonies, about 30 ballets and numerous chamber works, Toeschi is one of the foremost representatives of the second generation of the Mannheim school. His style was based primarily on the works of Stamitz and Fils, but also on Italian models such as Pergolesi and Jommelli. After unconvincing early attempts in a severe Baroque-like style, and other superficial efforts in the manner of Fils, in the 1760s he was able to develop a personal style which, through the influence of the French *opéra comique*, was distinguished by singable melodies and clarity of form and instrumentation. His symphonies of this period are noteworthy for their frequent passages of imitation and for their fusion of single-motif and dualistic sonata form principles. By 1770 he was regarded in Paris, along with Cannabich, as one of the leading German symphonists; many striking characteristics of Mozart's Paris Symphony (k297/300*a*) resemble Toeschi's symphonic style of the 1770s, of which the Symphony in D (published 1773; in Riemann, 1902: thematic catalogue, D major, no.11) is a particularly good example. He was no less highly regarded as a composer of ballets, to which his style was particularly well suited. With his *quatuors dialogués* (1762–6) Toeschi also played an important role in the differentiation of instrumental roles in chamber music, and his flute compositions, praised by his contemporary Junker as 'epoch-making', are among the earliest works for this instrument to depart from Baroque style.

Toeschi

(3) Johann (Baptist) [Maria] Christoph Toeschi [Toesca de Castellamonte; von Toeska]

(*b* Stuttgart, bap. 1 Oct 1735; *d* Munich, 3 March 1800). Violinist and composer, son of (1) Alessandro Toeschi. He was a pupil of Johann Stamitz and Christian Cannabich, and was active from 1755 as a violinist and from 1758 was also director of the ballet at the Mannheim court. He was appointed Konzertmeister in 1774, and in 1778 followed the court to Munich. There in 1793 he was made music director, and from 1798 he served briefly as principal director of the court chapel. In the same year he and his family had their application for hereditary Italian nobility approved, with permission also to use the title 'de Castellamonte' acquired by his great-uncle Carlo Filippo Toesca (1660–1726). Toeschi's output was similar to that of his elder brother. He wrote instrumental music, at least four ballets and a melodrama *Dirmel und Laura* (Munich, 1784); all are lost except a published set of six trio sonatas (Paris, 1768) and three works for the viola d'amore (*F-Pn*, *D-Bsb*, *A-Wn*), an instrument he is also known to have played. A sonata for viola d'amore and continuo, ed. D. Newlin and K. Stumpf, was published in Vienna in 1963.

(4) Karl Theodor Toeschi [Toesca de Castellamonte; Ritter Toesca von Castellamonte]

(*b* Mannheim, 7 April 1768; *d* Munich, 10 Oct 1843). Composer, son of (3) Johann Christoph Toeschi. He was in the service of the Munich court from 1780 to 1789, when owing to poor health he was suspended with continued payment of his salary. In 1801 he was appointed Bavarian chamber composer. Compared with his contemporaries Carl Cannabich, Franz Danzi and Ferdinand Fränzl, he is of only minor importance despite his attractive ideas and distinctive feeling for sonority. He was deficient chiefly in the capacity to master larger forms.

Tof

(Heb.).

Ancient Jewish drum. *See* Biblical instruments, §3(xi).

Tofts, Catherine

(*b c*1685; *d* Venice, 1756). English soprano. The first English prima donna, she appeared in subscription concerts in the winter of 1703–4. Rivalry between her and Margherita de L'Epine was fostered by their supporters (respectively Whigs and Tories) and at Drury Lane on 5 February her maid hissed and threw oranges at L'Epine. Mrs Tofts played the title roles in the first English operas in the Italian style, Thomas Clayton's *Arsinoe* (1705) and Giovanni Bononcini's *Camilla* (1706). She was the Queen in Clayton's *Rosamond* and then, still singing in English, had leading parts in the mixed language productions which followed the introduction of the castratos. Colley Cibber admired the 'Beauty of her fine proportion'd Figure, and exquisitely sweet, silver Tone of her Voice'. She was proud and mercenary, involved in opera house intrigues and demands for more money and more elaborate costumes. In March 1709 she was charging a guinea a kiss to gentlemen at a party at the Duke of Somerset's residence, and on 26 May the *Tatler* wrote of 'the Distresses of the unfortunate Camilla, who has had the ill luck to break before her Voice'. She left England for the Continent in summer 1711, and by the following April she was reported as much applauded 'for her fine Singing' at fashionable assemblies in Venice. She married a wealthy British resident there, Joseph Smith, who was to become a noted book collector and connoisseur.

<div align="right">OLIVE BALDWIN, THELMA WILSON</div>

Togni, Camillo

(*b* Gussago, nr Brescia, 18 Oct 1922; *d* 28 Nov 1993). Italian composer. Born into a family of independent means, he was able to pursue his cultural interests without undue regard to the pressures of musical fashion. He began to study the piano when he was seven years old, and composition when he was 14, first with Franco Margola at Brescia and then, from 1939 to 1943, with Alfredo Casella at Rome and Siena. He also pursued further piano studies with Casella and, on his advice, continued them with Giovanni Anfossi in Milan (1941–3), and with Michelangeli in Brescia (1943–50). He took his piano diploma at the Parma Conservatory in 1946, and occasionally performed in public throughout his career. With an academic background in the humanities, he studied musical aesthetics with Luigi Rognoni at the University of Milan (1942–7), and graduated in 1948 from the University of Padua with a thesis on the musical aesthetics of Croce. Rognoni also had an important role in his development as a composer: in 1939, Togni had produced a substantial cello sonata in the Italian neo-classical manner. But even at this stage, more radical influences were at work upon him. In the previous year he had been introduced by Michelangeli to the piano music of Schoenberg (opp.19 and 25); the impact was immediate, and fired in him a passionate interest in the Expressionist tradition that was to endure throughout his career. By 1940, he was making Schoenberg's 'cellular' thinking his own (in the *Prima serenata* for piano) and studying methods of serial composition. Throughout the disruptive years of World War II, he found support for this isolated venture from Rognoni, who made available to him a number of Schoenberg's scores. What was initially a cautious engagement gained momentum, reaching a first fruition in the typically dark-hued *Variazioni* (1945–6) for piano and orchestra. With this he made his compositional debut at the first postwar Venice Festival of Contemporary Music in 1946, in a concert directed by Bruno Maderna that was dedicated to the 'young Italian school'.

Togni's role as a pathfinder for Italian serialism was confirmed in 1949 when, with Maderna and Dallapiccola, he spoke at the first International Dodecaphonic Congress, organized by Riccardo Malipiero in Milan. It was a role much amplified during the early 1950s by his yearly involvement in the Darmstadt summer schools. In 1950, his *Fantasia per pianoforte* (1944) was performed there in his absence; but in 1951 Togni attended, speaking at the second International Dodecaphonic Congress that was held there

that year. There was a further motive for Togni's presence: Schoenberg himself was scheduled to teach, but increasing frailty prevented him from making the trans-Atlantic journey. Compensation for this disappointment was provided by Hermann Scherchen's first performance, eleven days before Schoenberg's death, of the *Dance around the Golden Calf* from *Moses und Aron*; for Togni, this was a seminal experience. Togni himself attracted critical approbation with the 'tense drama' and 'ascetic sonorities' of his *Tre studi per 'Morts sans sépulture' di J.P. Sartre* (1951).

Though *Ricerca* (1953), a further Sartre setting, failed to find favour with the jury of the 1954 Festival of 20th-Century Music in Rome, the performance that Togni and Severino Gazelloni gave of the Flute Sonata op.35 (1953) at Darmstadt in 1954 drew much praise. In consequence, he was one of ten composers commissioned that year by the city of Darmstadt to celebrate the tenth convening of the summer courses in 1955. He responded with *Helian di Trakl*, op.39 (1955). This first musical encounter with the poetry of Trakl was seminal. Trakl's poetry was to remain at the heart of his creative world thereafter. He continued to participate in Darmstadt until 1957 when aleatoricism first began to figure in the summer school's concerns, a method which could not be more alien to Togni's meticulous sensibility. Although his *Tre capricci* op.38 for piano again commanded attention – and initiated a series running through to the *Sesto capriccio* of 1991 – his concerns and those of the summer courses were drawing apart. He was not to return until invited back in 1990 (along with Cage and Xenakis, two other elder statesmen from Darmstadt's past). Thereafter, he pursued a solitary but unswerving path, faithful both to painstaking serial workmanship and to the Expressionist aesthetic. Unpersuaded by the musical fashions of the 1960s and 70s, he viewed Expressionism's defiance of the assault upon subjectivity by mass society as unfinished business and as urgent now as ever. To keep its cutting edge, the cry of pain or revolt had, however, to be transmuted beyond the merely visceral by subjection to the most fastidious serial discipline, as in the further Trakl setting, *Gesang zur Nacht* (1962). Only at first glance were the much admired settings of Charles d'Orléans, *Rondeaux per dieci* (1963–4), a deflection from that path. D'Orléans's poems are an exquisitely artificial rendering of the same brooding discomfort: the work of transmutation has already begun within the text. Their patient honing down of musical detail to a crystalline, but expressively potent logic, was continued in darker hue (but without radical stylistic change) as Togni returned to Trakl for the *Sei notturni* of 1965. But already he was engaged upon preparatory sketches for his long-meditated Trakl operatic trilogy, of which the first part, *Blaubart*, was at last written from 1972 to 1975. The disturbing second part, *Barrabas*, took shape between 1981 and 1985. The third part, *Maria Magdalena*, remained unwritten at his death. Each is an erotic exorcism in which musical material is submitted to the extreme serial rigour of derivation from a single series. *Barrabas* is also a concise and drastic confrontation between Christian ascesis and pagan delight in the senses. It was not intended to conclude Togni's artistic career but fittingly summates it.

WORKS

(selective list)

vocal

Op trilogy: Blaubart (1, G. Trakl), pt 1, 1972–5, Venice, La Fenice, 14 Dec 1977; Barrabas (1, Trakl), pt 2, 1981–5 [Maria Magdalena, pt 3 never written]

Choral: Fantasia, op.8, 4vv, pf, 1938; Missa brevis, op.19b, 3vv, 1943–4; Coro di T.S. Eliot, op.33, chorus, orch, op.34, unacc., 1951–3; 3 Pieces (Vaillant), chorus, orch, 1972

Solo vocal: LXIII lirica di Cesareo, op.1, S, pf, 1936; 8 Pieces (G. Apollinaire), op.12, B, 6 insts, 1940–41; Canto di Pentecoste (Lat.), op.17, B, org, 1943; Preludio, canzone e finale (Lat.), op.16, B, org, 1943; Magnificat, op.24, S, org, 1944; Ps cxxvii, op.30, S, Mez, B, str trio, 1949; 3 studi (J.-P. Sartre: *Morts sans sépulture*), op.31, 1v, pf, 1951; Ricerca (Sartre), op.36, Bar, 5 insts, 1953; Helian di Trakl, op.39, S, pf, 1955, arr. S, chbr orch, 1961; Gesang zur Nacht (Trakl), Mez, chbr orch, 1962; Rondeaux per 10 (C. d'Orléans), S, 9 insts, 1963–4; Préludes et rondeaux (d'Orléans), S, hpd, 1964; 6 notturni (Trakl), C, cl, vn, 2 pf, 1965; 3 duetti (M.G. Barelli, anon., G. Schoenberg Kolisch), S, fl, 1977–80; La guirlande de Blois (J. Robertet, d'Orléans, F. Villon), S, pf, 1978; Lyrisches Intermezzo, C, T, Bar, orch, 1985; Les feuilles amères (P.J. Toulet), S, 1989

GERHARD KUBIK (1–2, 4), AMAGBENYÕ KOFI DANHIN (3)

Togo

1. Ethnic groups and languages.

Like neighbouring Ghana and Benin, Togo can be divided linguistically into two parts: north and south. The southern part is densely populated by people speaking Kwa languages, including Ewe and Fon (Fõ), whereas the north is populated by speakers of Voltaic languages. In the central area of Togo, overlapping with neighbouring peoples in Ghana and Benin, there are 14 ethnic groups speaking so-called Togo-remnant languages: Basilia (Basila), Lelemi, Logba (Lukpa), Adele, Likpe, Santrokofi, Akpafu-Lolobi, Avatime, Nyangbo-Tafi, Bowili, Ahlo (Igo), Kposo (Akposo), Kebu (Akebou) and Animere. Some of these languages are spoken by less than 10,000 people, and little is known about their musical cultures.

Togo

2. Main musical traditions.

(i) Northern Togo.

Music of the Tem people of Atakora, the mountainous area of northern Togo, was researched in 1984 by Artur Simon, who recorded several musical groups at Koumondê, about 8 km south of Bafilo (Simon in Kubik and others, 1989, pp.166–7). According to sociologist Jean-Claude Barbier, Simon's collaborator, musical groups among the Tem are active at ceremonial community events, such as the 'termination of mourning' (ibid., 166). Tem musical groups operate also for processions and dances.

The various groups and their musical repertories are identified by the names of the prominent musical instruments they use. Thus, two important ensemble formations are called *só* (*so*) and *fwisi*. *Só* refers to a pair of

drums with cord-and-peg tensions similar to the *atokpani* of the southern Ewe and *atumpan* in Ghana. These drums are used in conjunction with three *agandra* side-blown trumpets (sing. *degandɛrɛ*). The ensemble also includes a cylindrical double-headed snare drum called *kamu*, which is clearly inspired by the Hausa-FulBe (Fulɓe) *ganga* type, and a Guinea-style double-flanged iron bell. Clearly, the instrumental composition of such an ensemble demonstrates the diverse influences to which Tem musical culture was exposed; from the powerful states of southern Ghana, notably the Asante empire, to the age-old trading contacts with the savanna and Sahelian zone of West Africa's hinterland. These contacts brought Islam to northern Togo, Hausa-style clothing and also several musical instruments from Islamicized West African cultures, such as the Hausa-style two-string *lawa* (lute) played by professional musicians (ibid., 167).

In *fwisi* music, three notched flutes (each called *fwisi*) are combined with single-headed, goblet-shaped *sio* (*siɔ*) drums, *kamu* drums, and the *agbogbo* double-bell (ibid., 166–7). The names for the flutes and the bell are clearly onomatopoeic. Tem singing also demonstrates heterogeneous influences. Simon describes their vocal style as choral phrases in parallel 3rds with movement between two neighbouring steps; the elder's part, however, shows the influence of Hausa and more generally, Islamic vocal patterns.

The Lamba (Lama) are another Togo people living in the north. Itinerant Lamba musicians often reach southern Togo, taking along a two-string plucked lute. This instrument has horizontal pegs and is plucked using the thumb and the index finger.

Music of the Kabyè was researched by Raymond Verdier and Anne-Marie de Lavilléon during the 1960s and 70s (*Musique Kabiye, Togo*). The Kabyè are a long-settled population of agriculturalists who live in mountainous areas that also provide refuge from invaders and slave traders. In the absence of powerful chiefs, social cohesion is guaranteed through an age-grade hierarchical organization. It is not surprising therefore that most musical activities are linked either to agricultural cycles or to functions determined by age-grade membership and rites of passage, such as *efala*, which marks the completion of the earliest stage of male initiation.

Some Kabyè instrumental traditions might represent survivals of older West African savanna cultures, such as the *picancala* (lithophone) consisting of four to five basalt stones arranged in a circle, played by a young man with two stone balls. This instrument is associated with the announcement of the end of the rainy season in mid-November and the millet harvest festival in December; it is not played at other times. Lithophones have been recorded elsewhere in the West African savanna (Kubik and others, 1989, pp.19–20). Other Kabyè instrumental devices with probable ancient West African history include a four-note leg xylophone of dried palmyra wood and the use of millstones by women for the dual purpose of grinding millet and accompanying their songs with timbre-rhythmic patterns. The Kabyè also have remarkable aerophones: clay *felah* (whistles) played by boys and bamboo *nyefe* (flutes) that are closed and tuned with small amounts of water and used only by women.

The Kabyè have not been totally isolated, and their absorption of traits from other cultures can be demonstrated in music by the presence of a mouth-resonated musical bow whose 'string' of palmyra bark is stopped with a small stick and struck with two slender sticks, indicating cultural exchanges with the Guinea Coast cultures. The absorption of foreign cultures is also demonstrated by the presence of *donga* hourglass drums whose tension can be modified to produce speech-tone patterns. They are similar in construction to Hausa and Yoruba models and are characteristically struck with a curved stick. This is clear evidence for ancient Nupe-Yoruba and Hausa contacts with the Kabyè, in spite of the filters through which these influences passed.

(ii) Southern Togo.

The music of Ewe- and Fon-speaking communities in southern Togo cannot be separated from that of their ethnic kin in neighbouring countries, Ghana and Benin, although separation by colonial borders endured long enough to promote divergence.

In contrast to Smend's recordings of 1905, Ewe music, at least around the capital, Lomé, shows little evidence of elaborate multi-part singing. More than half of the population of Togo can speak Ewe and has absorbed certain Ewe cultural influences. In Togo, as in Ghana, Ewe music demonstrates a predominance of percussion. Most Ewe drums are single-headed and have the so-called cord-and-peg tension (fig.1), a marker of many drums of the West African coast (see also H. Wieschhoff, 1933 for a distribution map).

Another characteristic instrument shared by the Ewe with many of their neighbours is the Guinea-type double-bell. Flange-welded single bells among the Ewe are called *gakokwe* in the dialect spoken in Lomé (*gankogui* in Ghana), while double bells are called *gakpãvi* (*gakpãi*) in Ewe and Fon.

According to Hubert Kponton (1905–82), an eminent personality in Ewe music and history, the word *gakokwe* is composed of *ga* (metal) and the onomatopoeic syllables *ko ko ko*, which represent the sounds of the bell when struck; -*e* is the final 'crying out', one could also say *gakoko*. The double-bell *gakpãui* consists of a smaller and a bigger bell welded together. This gives the appearance of a mother carrying a child on her back. Hence comes the name: *ga* (metal), *kpã* (carry on one's back), *vi* or *i* (child). Making these balls requires training and knowledge in local iron metallurgy (Kubik and others, 1989, p.144).

Much Ewe music is based on asymmetrical, single-pitch rhythmic patterns that serve to orientate time. These patterns are usually struck on the single-note bell and form the backbone of a percussion ensemble. The best known is the 12-pulse 'standard' pattern (see analysis in A.M. Jones, 1959).

Ewe musical culture shares a richness in idiophones, membranophones and some aerophones with the Fon, but exhibits an absence of string instruments. Linguistically, the Fon belong to the same Kwa family of the Niger-Congo languages as the Ewe and others. In music there are,

however, notable differences. The Ewe tend towards heptatonic scaler patterns and in some western areas towards elaborate forms of multi-part singing. Fon music, according to the survey A.D. Kofi and G. Kubik carried out in 1970 in the East-Mono river area, is pentatonic throughout. This pentatonic style demonstrates affinities with 'pre-Islamic' expressions of the Oyo (Oyo) style of Yoruba singing as it survives in some Yoruba story songs. While Yoruba music in the area of the former kingdom of Oyo in Nigeria has been influenced since the 19th century by an Islamic-Arab singing style and the adoption of musical instruments from northern Nigerian cultures, certain Fon musics in Togo have escaped these influences, thereby preserving traits that were once part of a common Fon-Yoruba musical culture. The Fon empire (*see* Benin) obtained its independence from the Oyo kingdom of the Yoruba before the latter was subjected to the Islamic 'wave' of cultural influences.

Since Archibald Dalzel's account of 1793, Fon music has always changed along with the succession of kings ruling the Fon empire. It is believed, for example, that *kpãligã* (praise-songs to the accompaniment of the double-bell) and various military music ensembles were introduced during the reign of Akaba (*c*1685–1708). Much Fon music has been connected with *vodu*, the old religion of the Fon people. Various cults with musical aspects are devoted to *vodu* (transcendental beings), such as *x bioso* (god of thunder and lightning) or *sakpata* (god of smallpox) (Kubik, 1994). *Vodu* ceremonies are conducted by a *vodusi*, such as the famous Kenu Elimo of the village of Sada Gbonjenji (Gbonj nji), who held the rank of an *houn* (ŋ) *bonõ* (chief of all *vodusi*) and played the big gourd rattle called *azõgo*. The instruments used in *vodu* cults normally include a set of drums of different sizes made with cord-and-peg tension called *ohoun* (o ŋ), single- and double-bells (*ogã*), as well as rattles. To become a *vodusi* one undergoes lengthy initiation ceremonies and stays in the *huxoe* ('house of the *vodusi*') for three months in seclusion. A *vodusi* is identified by certain tattoo marks on the forehead. He or she assumes a distinguished role in the society, living separately from other people.

Togo

3. Fon traditional dances.

(i) Cyngume.

Also called *acyá*, *cyngume* (*cyiŋgum*) is a dance that occupies an important place in Fon traditional culture. The dance originated in Dahomey (now Benin). The dance is performed in villages to commemorate a deceased person (see description in Kubik-Kofi and others, 1989, pp.140–41). *Cyngume* is performed in a circle, with all the men and women standing; the songs are sung with hand-clapping.

When someone dies, *cyngume* is danced through the night until dawn. During the funeral wake, the songs are ones of consolation, sadness and lamentation. Widows play a important role in the tradition, joining the dance for a few moments in a ceremonial capacity before withdrawing, crossing their arms and lowering their heads while continuing their weeping.

The principal musical instruments used in *cyngume* include a large *ógò* (gourd) played between the performer's legs by striking it with a leather,

which is made from antelope skin. Also played are *tohoun* (tɔŋ), two halved gourds placed in pails of water and struck with sticks, *afafa* (moulded animal skin), two double-bells, gourd rattles and the 'Dahomeyan' flute, *aflekungkwe* (*aflekuŋkwe*).

On the 21st day after the burial, the *yemexi* (yɛmɛi) ceremony takes place after the date of the main funeral or end of the period of mourning has been agreed upon. At the funeral wake, the widow(s) perform the grand and important *zofi* ceremony in which they assemble with the aid of other women, lighting a large fire with a piece of wood taken from the house of the deceased. One or two chickens are slaughtered, and maize is ground on a stone plate. These activities are accompanied by singing in high voices. In these songs, all married women in the mourning family are individually insulted. After this ceremony, *cyngume* is then danced until dawn.

(ii) Toba.

The *toba* (tɔba) is a traditional dance performed by boys and girls; it is a dance of rejoicing. When celebrating a birthday a *toba* group may be invited. Similarly, if a member of a *toba* group has recently married, the *toba* group may be invited to provide entertainment at the home of the newlyweds.

Toba is often organized in a public place in the village after a good harvest or the successful sale or purchase of cotton. *Toba* can also be danced by moonlight and at important funerals that mark the end of a period of mourning.

The typical instrumentarium for *toba* consists of *ógò*, an *ógã* double bell, an *atukpen* (empty soda bottle), a *gidigbo* lamellophone, a *kpehoun* drum, two small, differently pitched drums and an *aflekungkwe*.

(iii) Kpehoun.

Kpehoun (kpeɛŋ) is a traditional sacred dance that is used to close funeral ceremonies when the period of mourning ends. It differs from *cyngume*, which is danced when older people die. *Kpehoun* is also the term for the drums used to perform the *kpehoun* dance. These drums are kept in a corner of the chief's house where no one is allowed to touch them. *Kpehoun* is danced while walking from one deceased person's house to another. The *kpehoun* are played in front of the house (fig.2), before entering the house and continuing for approximately another 15 minutes. Songs are selected for each occasion. Young people never take part in this dance, yet they are free to watch and observe from a distance the older men and women dance. After the dance, the drums are returned to their hiding place.

(iv) Agbaja.

The Bé people are an autochthonous people from the town of Lomé and surrounding area who perform the *agbaja* dance as an important traditional ceremony on the same day as they bury a body. If the Bé determine that the conditions of the death were normal, then they dance *agbaja* before raising the body. If someone has died from an illness related to an

inflammation of the stomach or feet, or by an accident such as burning, then no dance music is played. *Agbaja* dances are usually performed by associations that function as clubs for traditional dancing. These associations also function as indemnity groups, mutual aid societies that assist members when they have lost a parent of close relation.

When a tribal chief, regent or prince dies, the Bé dance a special *agbaja* called *tahounga* (*tahunga*), in which young women wear strings of pearls around their necks and hips. In addition to the traditional dances, fanfares and hymns are played and sung at festivities.

Togo

4. Research.

Anthropological, linguistic and ethnomusicological research in Togo began soon after the arrival of the German colonial administration (1884–1918). The earliest recordings made in Togo were by Lieutenant Smend (1905). Among other items, Smend recorded a lament sung by two Ewe-speaking men in parallel 3rds and 5ths at the mission station near Palimé (wax cylinder no.77, Togo xv, 18, Department of Ethnomusicology, Museum für Völkerkunde, Berlin; also published by K. Wachsmann on the re-issue of Hornbostel's original Demonstration Collection; Wachsmann, 1963). It is one of the earliest known sound recordings that demonstrates the presence of multipart harmonic singing within a heptatonic tonal system along the Guinea Coast. Lieutenant Smend also provided the earliest recorded testimony of the so-called talking *atupani* drums (cf. his detailed description accompanying wax cylinders 4–9, Department of Ethnomusicology, Museum für Völkerkunde, Berlin; part of the text has been reproduced in Kubik and others, 1989, p.35).

Toguchi, Kōsaku

(*b* Wakayama, 9 Dec 1927). Japanese musicologist. He studied political economics at Tokyo University, graduating in 1953. In 1957 he won a scholarship from the Italian government to study European music history and went to Milan to study with Guglielmo Barblan and Federico Mompellio. Returning home, he was appointed professor at Seijo University in 1964. He has also lectured at Tokyo University, Tohoku University, Osaka University and the Tokyo National University of Fine Arts and Music. He was committee chairman of the Kanto Chapter of the Musicological Society of Japan, 1985–7. His musicological interests include Italian music, particularly of the Trecento, and Baroque opera. He has also translated many works from Japanese into Italian, and has translated Romain Rolland's *Les origines du théâtre lyrique moderne* (1965), Grout's *A History of Western Music* (Tokyo, 1969–71), its new edition with Palisca (Tokyo, 1998–9) and many opera libretti into Japanese.

Tokumaru, Yosihiko [Yoshihiko]

(*b* Tokyo, 5 Dec 1936). Japanese musicologist. He studied with Yosio Nomura and Shigeo Kishibe at Tokyo University (BA 1960; MA 1963). He taught at Kunitachi College of Music (1963–72) and in 1972 became associate professor at Ochanomizu University, rising to professor in 1982. In 1979 he went to Canada to teach at the University of Montreal for two years and received the PhD from Laval University in 1981 with a dissertation on the melodic aspects of *shamisen* music. He has regularly taught at UCLA since 1987. From 1974 to 1988 he collaborated with Fumio Koizumi and Osamu Yamaguti an international exchange project, 'Asian Traditional Performing Arts'. In 1992 his book, *Minzoku-ongakugaku*, won the Tanabe Prize, awarded by the Society for Research in Asiatic Music. As an editor of *The Garland Encyclopedia of World Music* he was responsible for the music of East Asia. He was co-editor of the Japanese editions of *Larousse de la musique* (1989) and of *The New Grove* (1993–5).

MASAKATA KANAZAWA

Tokyo.

City in Japan. It has been the national capital since 1868; it was previously known as Edo. It is now the most important musical centre in the country. While the western cities of Osaka and Kyoto have a long tradition of native art music, it was only after 1600 that the musical tradition known as the Edo style emerged in contrast to the Kamigata style of Kyoto and Osaka. Several types of vocal music with *shamisen* accompaniment, e.g. *nagauta* or *tokiwazu*, belong to the Edo tradition. The distinction is still often found; in Tokyo the Yamada school of *koto* music (as opposed to the Ikuta school of west Japan) and Kinko school of *shakuhachi* playing (as opposed to the Tozan school) are more popular. At the Meiji Restoration in 1868 Tokyo became the principal centre for promoting Western music, and since then most Japanese composers and performers have preferred to work in Tokyo; their activities have greatly increased since 1945.

The Gagakuryō (the Imperial Music Bureau, now officially the music department of the imperial household), established in 701, is in the Imperial Palace, and preserves the tradition of *gagaku*, the court music. Many *nō* schools, which originally flourished in Kyoto, also have their centres in Tokyo now, together with their private theatres, e.g. Kanze Nō Theatre (Kanze school), Kita Nō Theatre (Kita school) and Suidōbashi Nō Theatre (primarily Hōshō school), while the National Nō Theatre, built in 1989, is sponsored by the government. Kabuki-za (inaugurated in 1889) is the most important theatre for *kabuki*. The National Theatre of Japan (built in 1966; fig.1) presents all kinds of drama and music in the purely Japanese tradition, including *kabuki*. There are about 20 concert halls with a capacity of more than 1500. Of them, the Tōkyō Bunka Kaikan (Tokyo Metropolitan

Festival Hall, built in 1961) and the NHK Hall (1973) were for a time the more important and have also served as temporary opera houses. After 1980, however, a number of excellent halls were built, many with concert organs; notable are Suntory Hall (1986; fig.2), with a Rieger organ, Orchard Hall (1989), Tōkyō Geijutsu Gekijō (Tokyo Arts Theatre), with a Garnier organ (1990) and Sumida Triphony Hall (1997), with a Jehmlich organ. Also in 1997, the first opera house in Tokyo, Shin Kokuritsu Gekijō (New National Theatre), was inaugurated, together with the neighbouring Tokyo Opera City building which houses the Takemitsu Memorial Concert Hall. In addition there are about 25 smaller halls, of which the more important are Iino Hall (1960), Ishibashi Memorial Hall (1974), Casals Hall (1987), Tsuda Hall (1988), Hamarikyū Asahi Hall (1992) and Kioi Hall (1995).

The nine major orchestras in Tokyo are the Japan Philharmonic SO (founded in 1956), the NHK SO (originally the New SO, founded in 1926; it became the Japan SO in 1942 and was renamed in 1951 when it became the orchestra of the national broadcasting system), the Tokyo Metropolitan SO (founded in 1965), the Tokyo PO (originally the Central SO, founded in 1940; it became the Tokyo SO in 1941 and was renamed in 1948), the Tokyo SO (originally Tōhō SO, founded in 1946 and renamed in 1951), the Yomiuri Nippon SO (founded in 1962), the Shinsei Nippon Orchestra (1969), the New Japan SO (1972) and the Tokyo City PO (1975). There are numerous choral groups, the more important being the Tokyo Philharmonic Chorus, the Tokyo Hōsō Gasshōdan, the Nippon Gasshōdan and the Nippon Josei Gasshōdan. The Fujiwara Opera, the Niki Kai and the Nihon Opera Kyokai (the Japan Opera Society) are the three major opera groups, but none of them has its own theatre.

The government-sponsored Arts Festival (founded in 1946) is held every autumn and includes many music programmes. In 1962, the Japanese Society for Contemporary Music began to sponsor a twice-yearly exhibition of contemporary music, and the Goethe Institute in Tokyo began sponsoring the Japanisch-Deutsches Festival für Neue Musik in 1967. The Festival for Contemporary Music (founded in 1957 by the Institute of 20th Century Music) is often held in Tokyo. The NHK, the national broadcasting system, has extensive music programmes and an electronic music studio, one of the earliest in the world (completed in 1954 and opened in 1955). The Tōkyō no Natsu Ongakusai (Tokyo Summer Music Festival) has been held each year in July since 1985.

The Tokyo Music School (founded in 1887) became the Tōkyō Geijutsu Daigaku (officially the Tokyo National University of Fine Arts and Music, but sometimes known as the Tokyo University of Arts) in 1949. Kunitachi Ongaku Daigaku (Kunitachi College of Music, founded as a conservatory in 1926, a college since 1950), has the best music library in Japan, as well as a good collection of musical instruments. Ueno Gakuen College (founded in 1952, a college since 1958) has an archive specializing in traditional Japanese music, particularly *gagaku* and *shōmyō* (Buddhist chant). Other major music schools are Musashino Ongaku Daigaku (Musashino Music College, founded in 1929, a college since 1949), Tōhō Gakuen College of Music (founded in 1955, a college since 1961) and Tokyo College of Music (founded as Tōyō School of Music in 1907, a junior college since 1954 and a college since 1988). The private Nanki Music Library which owns the

Cummings Collection is temporarily closed, but copies of all its materials are available at the library of Kunitachi College of Music. The Nihon Kindai Ongaku-kan (Documentation Centre of Modern Japanese Music) has a fine collection, especially of Japanese music after 1868, including autograph manuscripts and other original materials by Kōsaku Yamada, Osamu Shimizu and others. Several important musicological organizations have their headquarters in Tokyo, including the Society for Research in Asiatic Music (founded in 1936) and the Musicological Society of Japan (founded in 1952), which specializes in Western music.

MASAKATA KANAZAWA

Tokyo String Quartet.

Japanese string quartet. Founded in New York in 1969, its original members studied at the Tōhō Gakuen College in Tokyo with Hideo Saito before going to the Juilliard School of Music to work with Robert Mann. They were Koichiro Harada (*b* Fukuoka, 29 April 1945), first violin; Yoshiko Nakura (Nakura Okada after her marriage; *b* Nigata, 7 Sept 1945), second violin; Kazuhide Isomura (*b* Toyohashi, 27 Dec 1945), viola; and Sadao Harada (*b* Tokyo, 4 Jan 1944), formerly principal cello with the Tokyo SO (1966–7). In 1974 Nakura was replaced by Kikuei Ikeda (*b* Yokosuka, 31 Aug 1947), and in 1981 Harada was replaced by Peter Oundjian (*b* Toronto, 21 Dec 1955), who had studied at the Juilliard School with Ivan Galamian and Dorothy DeLay.

In 1970 the quartet won several international awards, and from that time has performed about 100 concerts annually, including appearances with the Chamber Music Society of Lincoln Center and at the Mostly Mozart Festival, the Metropolitan Museum of Art and the Library of Congress; it has also toured extensively outside the USA. In 1977 the ensemble became the resident quartet at Yale University, and its members were appointed artists-in-residence at the University of Cincinnati College-Conservatory of Music in 1987. In 1996 Oundjian was replaced by Mikhail Kopelman (*b* Uzhgorod, Ukraine, 18 March 1947). During Oundjian's tenure the Tokyo String Quartet style was marked by a flawless sense of ensemble, stylistic attentiveness and unfailing technical control. From 1974 to 1988 it performed on a set of Amati instruments (on loan from the Corcoran Gallery). In 1995 they began performing on the 'Paganini Strads' (on loan from the Nippon Music Foundation), dating from 1680 and 1727 (the violins), 1731 (the viola) and 1737 (the cello). Among the ensemble's many recordings are award-winning discs of quartets by Haydn and Brahms. They have also recorded the complete quartets of Beethoven, Bartók and Janáček. Benjamin Lees, Tōru Takemitsu and Marc Neikrug, among others, have written works for them.

JAMES CHUTE

Tolar, Joannes Baptista.

See Dolar, Joannes Baptista.

Tolbecque.

Belgian family of musicians, active in France.

(1) Jean-Baptiste-Joseph Tolbecque
(2) Auguste-Joseph Tolbecque
(3) Charles-Joseph Tolbecque
(4) Auguste Tolbecque

ELISABETH BERNARD

Tolbecque

(1) Jean-Baptiste-Joseph Tolbecque

(*b* Hanzinne, Namur, 17 April 1797; *d* Paris, ?23 Oct 1869). Conductor, composer and violinist. He studied the violin (with Kreutzer) and counterpoint and fugue (with Reicha) at the Paris Conservatoire. He played in the orchestra of the Théâtre Italien from 1820 to 1825, and then conducted the orchestra at the Tivoli gardens in Paris; he later organized court dances for Louis Philippe. He was a founder-member of the Société des Concerts du Conservatoire, in which he played the viola. His dance compositions were in great demand; they included quadrilles, galops, polkas and waltzes, often based on popular operatic themes, and written for various instrumental combinations. He collaborated with Gilbert and Guiraud on an *opéra comique*, *Charles V et Duguesclin*, 1827, and with Edouard Deldevez on a ballet, *Vert-Vert*, performed at the Opéra in 1851. His elder brother, Isidore-Joseph Tolbecque (*b* Hanzinne, 17 April 1794; *d* Vichy, Allier, 10 May 1871), was a conductor and composer of dance music.

Tolbecque

(2) Auguste-Joseph Tolbecque

(*b* Hanzinne, 28 Feb 1801; *d* Paris, 27 May 1869). Violinist, brother of (1) Jean-Baptiste-Joseph Tolbecque. He studied with Kreutzer at the Paris Conservatoire, winning the *premier prix* in 1821. From 1824 to 1831 he played in the Opéra orchestra; he was an original member of the Société des Concerts du Conservatoire, in which he sometimes appeared as a soloist. Later he played at Her Majesty's Theatre in London.

Tolbecque

(3) Charles-Joseph Tolbecque

(*b* Paris, 27 May 1806; *d* Paris, 29 Dec 1835). Violinist, conductor and composer, brother of (1) Jean-Baptiste-Joseph Tolbecque. He won the violin *premier prix* at the Paris Conservatoire in 1823 while studying with Kreutzer, and later joined the Société des Concerts du Conservatoire. He was appointed conductor at the Théâtre des Variétés in 1830, and composed songs and incidental music for productions there.

(4) Auguste Tolbecque

(*b* Paris, 30 March 1830; *d* Niort, Deux Sèvres, 8 March 1919). Cellist, composer and instrument maker, son of (2) Auguste-Joseph Tolbecque. He studied with Vaslin (cello) and Reber (harmony) at the Paris Conservatoire, winning the cello *premier prix* in 1849. He played in the orchestra of the Grand Théâtre of Marseilles and taught at the conservatory there from 1865 to 1871, then returned to Paris and performed with the Société des Concerts du Conservatoire, the Maurin Quartet and the Lamoureux Quartet; he also played the gamba. He left Paris for Niort, having studied instrument making with Victor Rambaux, and established a workshop in which he restored old instruments and made copies of medieval ones. His large instrument collection was purchased by the Belgian government for the Brussels Conservatory in 1879; a second collection and a fine library were dispersed in 1922. Tolbecque also attempted to revive the componium, a mechanical instrument designed to improvise upon a given theme. He composed an *opéra comique*, *Après la valse* (performed at Niort in 1894), and numerous works for the cello, including an exercise book, *La gymnastique du violoncelle* (Paris, 1875). He edited *Monde musical* and wrote useful books on early instruments. His son, Jean Tolbecque (*b* Niort, 7 Oct 1857; *d* ?Paris, 1890), won the cello *premier prix* at the Paris Conservatoire in 1873 while studying with Alexandre Chevillard and later played in the orchestra of the Opéra-Comique.

Toldrá, Eduardo

(*b* Villanueva y Geltrú, 7 April 1895; *d* Barcelona, 31 May 1962). Catalan violinist, composer and conductor. After early lessons from his father he studied the violin and composition at the Escuela Municipal de Música in Barcelona, and began his career there as an orchestral player. His solo début was at the Ateneo, Barcelona, in 1912, the year he formed the Quartet Renaixement with himself as first violin. He remained a member until 1921, when he became professor of the violin at the Barcelona Escuela Municipal de Música. His conducting début was in 1916 and, as well as continuing to appear as a violinist, he conducted regular concerts from 1924 to 1935 with the mainly amateur Orquesta Estudios Sinfonicos

in Barcelona. On the formation of the Orquesta Municipal de Barcelona he was appointed its conductor in 1944; he gave it a firm professional basis, and became a frequent guest conductor with other Spanish orchestras and in France and Portugal.

Toldrá wrote a large number of songs, instrumental music including *Seis sonetos* for violin and piano, a quartet *Vistas al mar*, orchestral and piano music and more than 30 *sardanas* for the *cobla*, the ensemble for Catalan folkdances. He responded most readily to poetry, and his favoured poets were the Barcelona 'city poets' writing in the Catalan language. Instrumental works such as the *Seis sonetos* and the quartet are prefaced by such texts. Harmonically his music is rooted in the era of Grieg and Granados, but his distinctive and very beautiful melodic writing frequently derives shapes and patterns from Catalan folk music. The sound of the *sardana* is often present in his music but there is nothing rustic about it. Like the poetry which inspired it, it most often reflects the urban world of Barcelona.

RICHARD PAINE

Tole, Vasil S.

(*b* Përmet, 22 Nov 1963). Albanian composer, ethnomusicologist and administrator. After early musical training in Përmet and Korça, he studied at the Tirana Conservatory (1984–7), where his teachers included Gaqi, Kushta, Lara, Simoni and Shupo. Between 1988 and 1991 he worked in Përmet as music director at the Naïm Frashëri palace of culture and as artistic director of the Elrena Gjika ensemble. He was appointed to teach ethnomusicology and composition at the Tirana Conservatory (now the music faculty of the Academy of Arts) in 1991. In 1993 he founded the New Albanian Music association and in 1997 the Ton de Leeuw International Competition for New Music in Tirana. After receiving his doctorate in ethnomusicology in 1994, he undertook further composition studies with Hufschmidt at the Folkwang Hochschule, Essen (1994–5), followed by

postdoctoral studies at Athens University (1996). In 1997 he was appointed director of the Theatre of Opera and Ballet, Tirana, and of the State Ensemble of Folk Songs and Dances. He resigned in June 1999.

Tole belongs to the last generation of composers who started their career through the May Concerts festival (disbanded in 1990). Distinct features of his approach to composition include broad gestures, rhythmic vivacity and dazzling timbres. Early works, such as *Kontrast* (1989) and the Concerto for Orchestra (1990), hover between post-Romanticism and neo-classicism, using folk themes and percussive rhythmic ostinati as a starting point for harmonic and timbral explorations of a kind considered daring in Albania in the 1980s. After 1991, when socialism and its musical institutions collapsed, Tole shifted pragmatically to chamber music, writing atonal works which are marked by intensely contrasted dynamics and moods, juxtapositions of register and an acute sensitivity to timbre. Of these compositions, *Epitaf dhe britmë* ('Epitaph and Primal Scream', 1992–3) and *Pheromones* (1993) rank among the finest Albanian works of this period.

GEORGE LEOTSAKOS

Toledo, Josefino 'Chino' (Javier)

(*b* Manila, 6 March 1959). Filipino composer and conductor. A child prodigy on percussion, he toured abroad with the *Pangkat Kawayan*, a folk bamboo instrumental group founded and led by his father Victor. He studied at the University of the Philippines College of Music (BM 1979), the Paris Conservatoire (1983–5) and the Cleveland Institute (MMus 1986). Among his teachers were Ramón P. Santos, Claude Ballif, John Rinehart and Donald Erb. His early prize-winning works *Ug-og* (1979) and *Barasyon* (1980) demonstrate his predilection for dense textures and sound layering, a feature which becomes increasingly prominent in *Ug-nay* (1984), *2nd Ug-og* (1986) and *Ub-oy* (1986). His later pieces often express contemporary social and political issues, such as *For Edwin Thumboo* (1986) and *Trenodya Ke Lean* (1990), an orchestral elegy for the anti-Marcos activist Lean Alejandro, killed in 1987. His works have been described as raw and powerful, fusing contemporary Western language and a South-east Asian aesthetic. The youngest principal conductor of the Manila SO, he has been a regular guest conductor of the Philippine PO. As chair of the composition department of the University of the Philippines, Toledo has provided leadership and inspiration to many younger composers.

WORKS

(selective list)

Dramatic: Pilipino Komiks (ballet), 1993; Pasyon at Buhay (op, 1), 1995
Orch: Barasyon, 1980; Ug-nay, 1984; Kah-non, 1987; Sigaw, chbr orch, 1997
Chbr: Ug-og, str ens, 1979; 2nd Ug-og, wind, perc, 1986; Ub-oy, ob, tape, 1986; Trenodya ke Lean at sa iba pang pinaslang, pinapaslang, at papaslangin pa para sa dahilang walang kadahilanan, various inst ens, 1988–90; Hininga, nose fl, Western fls, 1997
Vocal: Kulambo: For Edwin Thumboo and All of us who Suffer through English in Asia, S, ob, cl, vib, vc, 1986; Isang kayumangging puntod, orch, chorus, 1986; Auit, vv, gui, 2 perc, 1997

Tollett, George.

English musician, possibly the composer of instrumental music usually ascribed to Thomas Tollett, a member of the same family.

Tollett [Tawlett, Tollit], Thomas

(*b* ?Dublin; *d* ?London, ?Aug 1696). Irish composer and instrumentalist. Four members of the Tollett family, Thomas, John, George and Charles, served as city musicians in Dublin between 1669 and 1688. Thomas moved to London in time to write a suite for Thomas D'Urfey's play *Love for Money, or The Boarding School*, produced at Drury Lane in, probably, January 1691. He subsequently wrote music for five more plays produced at Drury Lane, and after the breakup of the United Company in winter 1694–5 he wrote a suite for Thomas Dilke's *The Lover's Luck* (December 1695), produced by Thomas Betterton's company at Lincoln's Inn Fields. His wind band piece *The Queen's Farewell* was probably written for the funeral of Queen Mary on 5 March 1695. In the same month he was sworn in as a member of the Private Musick in March 1695, and received Robert Carr's place in January 1696. He died shortly before 2 September 1696, when John Eccles was given his place. Hawkins wrote that 'a daughter of his was a dancer at Goodman's-fields playhouse about the year 1728, when that theatre was first opened'. It is not known how he was related to the Charles Tollett listed as a member of the Private Musick between 1713–14 and 1717, or the Charles Tollett listed as a Dublin city musician in 1717.

Thomas was a reasonably competent follower of Purcell, though his music is unenterprising, and he confined himself to theatre suites, dance music and dance songs. It is not certain that all the pieces attributed to 'Mr Tollett' are by Thomas: three three-part airs and a ground in D for violin and bass are ascribed to George (*GB-Och* Mus.1183), as is the popular F major ground in a single-sheet edition (*c*1720).

Tollio, Giovanni.

See Tollius, Joannes.

Tollis [Tolis] de la Roca, Matheo

(*b* ?Italy, *c*1710; *d* Mexico City, 18 Nov 1780). Composer and harpsichordist active in Mexico, presumably of Italian birth. He was perhaps the same Matheo de la Roca whose mythological *dramma armónica La Casandra* had been successfully produced at the Madrid Coliseo de la Cruz in October 1737 (with an entirely female cast), and who became an organist at the Real Capilla in 1741. Tollis de la Roca arrived at Mexico City on 16 January 1756, leaving his wife behind in Spain. At the insistence of his patroness, the Marquesa de las Amarillas (wife of the viceroy), the cathedral authorities forwent the usual examination and on 4 March of the same year added him to the staff as a 'harpsichordist and composer', even though the harpsichord (*clave*) was admitted by the canons themselves to be useful only in accompanying the *Miserere* on Wednesday of Holy Week.

On 24 September 1757, news having reached Mexico City that his wife was dead, the cathedral authorities named him assistant *maestro de capilla*

and deputy organist at 500 pesos annually. His chief virtue, however, was still conceded to be his harpsichord playing. The following 9 June he was appointed master of the boys and commended for having composed several commissioned works quickly. On 23 June 1758 he was named 'master of polyphony', Ignacio Jerusalem continuing as cathedral *maestro*. When a new viceroy arrived in early 1761, and Tollis lost his patroness, several members of the cathedral chapter united in trying to oust him; but the death of Juan de Velasco, former chief organist, left a vacancy that on 11 September 1761 Tollis was named to fill.

On Jerusalem's death in 1769 the chapter considered trying to lure Antonio Ripa from Spain, then acknowledged as the best composer in the peninsula, but decided on 7 July 1770 to content themselves with Tollis as interim *maestro* at a salary of 800 pesos plus 200 for his teaching in the choir school. Six years later he still continued as interim appointee. On 14 January 1778 the chapter berated him for his slothful composing and discussed dismissing him in favour of Cayetano Echevarría, proposed to them by Fray Martín de Cruzelaegui as the leading available composer then resident in Mexico.

Among Tollis's virtues lauded by the canons now and then (in addition to his consummate keyboard technique) was his reorganization of the cathedral music archive. His surviving works in the cathedral archive include at least four orchestral masses and 14 other orchestrally accompanied liturgical works. According to Gregorio Panseco, a violinist from Spain who led the Mexico City Cathedral orchestra in 1761, Tollis plagiarized parts of both his 1756 mass written for his patroness and his 1759 requiem for Queen María Barbara.

WORKS

all in Mexico City Cathedral Archive

Masses: 5vv, insts, 1756; Requiem, 8vv, insts, 1759; 4vv, insts, 1770; 5vv, insts, 1771

Other liturgical works, vv, insts: Hodie nobis, 1757; Beata viscera Maria, 1758; Hodie nobis de coelo, 1758; Sancta et ymmaculata virginitas, 1758; Libera me, 1759; Quem vidistis, 1759; Quae est ista; O magnum misterium, 1768; Surge et accipe, 1771; Transite ad me omnes, 1771; Esuriente terra Aegipti clamavit, 1773; Beatam me dicent omnes, 1775; Posui adiutorium, 1776; Verbum caro, 1777

Tollit, Thomas.

See Tollett, Thomas.

Tollius, Joannes [Tollio, Giovanni; Toll, Jan van]

(*b* Amersfoort, *c*1550; *d* ?Copenhagen, after 1603). Dutch composer. It must be assumed that he was locally trained as a musician before he was appointed, while still relatively young, *musices moderator* of the Onze-Lieve-Vrouwekerk in his home town. At the time of the Calvinist Reformation in Amersfoort (1578) he left for Italy. Once there he held several posts of varying importance; he also caused some difficulties, due partly to his seemingly untempered nature and partly to his religious unorthodoxy. From 1583 he was *maestro di cappella* at Rieti Cathedral and then at Assisi Cathedral, in both cases for a short time; from 1588 to 1601 he served as a singer in the episcopal chapel in Padua. Shortly before 1585 he had joined the Franciscan order, but was dismissed; a little later he was accepted back into the order. In 1589 he was accused of heresy and the Bishop of Assisi was instrumental in his reconciliation with the church. Three books of motets with a clearly liturgical function were published in Venice in 1590 and 1591.

Tollius seems to have been unhappy with his life in Catholic Italy. During the 1590s he re-established or at least strengthened contacts with the Protestant north: the *Liber primus motectorum* was dedicated to his former Amersfoort musicians and his *Madrigali* (published, along with a further volume of motets, in Calvinist Heidelberg) to the Collegium musicum in Amsterdam. He left Italy for Denmark in 1601 to work in the chapel of the Lutheran King Christian IV and served there until 1603. No information is known about his later life, except that his estate was settled in Copenhagen by his Dutch relatives in 1629, suggesting that he died in Copenhagen, but perhaps substantially later than 1603.

Tollius's music, all published in the 1590s, uses the contemporary polyphonic idiom, with frequent use of homophony, among other declamatory effects, and madrigalian elements of style. Monteverdi paraphrased Tollius's setting of Petrarch's sonnet *Zefiro torna* in his sixth book of madrigals. Seiffert (1901) and Noske (1958) emphasized the unusual details of Tollius's compositions, such as his use of unprepared dissonances, parallel 5ths and octaves used for expressive effect, augmented 6th chords and so on, but it is probably too strong a claim to view him as an early Baroque composer; rather he belongs with the many composers who are not in the first rank, but were nevertheless progressive, capable and interesting composers of his time.

RUDOLF A. RASCH

Tolman, Henry

(*b* Boston, 15 Jan 1821; *d* Cohasset, MA, 20 Nov 1888). American music publisher and partner in the firm of Russell & Tolman.

Tolstoy, Count Aleksey Konstantinovich

(*b* St Petersburg, 24 Aug/5 Sept 1817; *d* Krasnïy Rog, Chernihov district, 28 Sept/10 Oct 1875). Russian poet, dramatist and novelist. A second cousin of Lev Tolstoy and a friend of Liszt, he published his first work in 1841 and devoted his life almost entirely to literature. His novel *Prince Serebryany* (1862) and his dramatic trilogy, *The Death of Ivan the Terrible* (1866), *Tsar Fyodor* (1868) and *Tsar Boris* (1870), had an immense success and were translated into most European languages. His lyric poetry was set to music by many Russian composers. A brilliant writer of comic and satirical verse, he invented, together with his cousins A.M. and V.M. Zhemchuzhnikov, the ridiculous literary figure Kozma Prutkov, whose myth lives on and whose 'works' are still popular.

Despite his success, Tolstoy pleased neither conservatives nor radicals. He was not a committed writer, but pursued his belief in pure art and idealism when the prevailing fashion was for the real and concrete. This made many critics before the Revolution – and especially after – look at him askance.

WORKS SET TO MUSIC

Ioann Damaskin [John of Damascus] (1859): cant. op.1 by I. S. Taneyev, 1884

Don Juan (1862): incid music op.54 by E. Nápravnik, 1891

APRIL FITZLYON

Tolstoy, Dmitry Alekseyevich

(*b* Berlin, 20 Jan 1923). Russian composer. He is the son of the poet Nataliya Krandiyevskaya-Tolstaya (whose poems he set in the song cycle *Doroga* ('The Road') of 1982), and the writer Aleksey Nikolayevich Tolstoy (from whom he took the subject of his opera *Russkiy kharakter* ('The Russian Character') and the ballet *Aelita*). He studied composition at the Leningrad Conservatory with Steinberg and Ryazanov, and completed postgraduate studies under Arapov and Shostakovich. In 1967 he started teaching, becoming a senior lecturer in 1977 and a professor of the Leningrad Conservatory in 1984. His creative work centres on musical theatre (6 operas and 2 ballets) in which he turned to subjects drawn from the Russian and Soviet classics, and his musical language – especially in terms of its inherent drama – relies on Russian traditions. His small-scale vocal works bear witness to his attraction to Russian poetry (Akhmatova, Blok, Gumilyov, Lermontov, Pushkin, Tyutchev, Voloshin and Zabolotsky); his interest in writing for children is apparent in the *Skazki Andersena* ('Andersen's Fairytales') for piano and various vocal works. His music has been performed in Germany and the USA in addition to numerous hearings in Russia. In his memoirs *Dlya chego vsyo éto bïlo* ('What was all this for?') the composer gave us a vivid picture of life among the Soviet intelligentsia from the 1930s to the 1980s.

WORKS

(selective list)

Stage: Maskerad [Masquerade] (op, after M. Lermontov), 1954–6, Perm', 1957;

Povest' ob odnoy lyubvi [A Story About One Love Affair] (after B. Lavrenyov: *Sorok pervïy* [Forty-One]), 1960, Perm', 1960; Nuncha (ballet, after M. Gor'ky), 1963–4, perf. 1964; Aelita (ballet, A.N. Tolstoy), 1967, Donetsk, 1967; Russkiy kharakter (after A.N. Tolstoy), 1966, St Petersburg, 1967; Granatovïy braslet [The Garnet Bracelet] (A. MARINA GALUSHKO

Tolstoy, Lev [Leo] Nikolayevich

(*b* Yasnaya Polyana, 9 Sept 1828; *d* Astapovo, 20 Nov 1910). Russian novelist, dramatist, philosopher and social critic. He was a fair amateur pianist, and, though he had no serious musical training, music played an important part in his emotional and intellectual life and figures prominently in many of his novels. Some music moved Tolstoy profoundly and even had a powerful physical effect on him. Partly, no doubt, for these subjective reasons, he believed music to be a 'terrible power' for good or, more often, evil, making men act against their wills and destroying their moral judgment. This idea finds its most extreme expression in his novel *Kraytserova sonata* ('The Kreutzer Sonata', 1889). His attempts to formulate a philosophy of art, including music, reached their most finished form in *Chto takoye iskusstvo?* ('What is Art?', 1898), a polemical work in which ethics and aesthetics are mingled and which was designed to challenge accepted ideas. It was partly censored in Russia but appeared unabridged in Aylmer Maude's English translation, which Tolstoy wished to be considered the only authorized text.

Tolstoy defined all art as 'a human activity, whereby man consciously, by means of certain external signs, transmits to others feelings he has experienced, and makes others experience them too'. He further believed that true art should be immediately comprehensible to everyone, including those with no training in it. He favoured realism and was bitterly opposed to

aestheticism; he denied the importance of beauty or technique in art; he was opposed to the combination of two or more arts, considering music, for example, in no need of words to make it more explicit. He therefore disliked songs. *What is Art?* represents Tolstoy the moralist and social critic rather than the man and artist; his attacks in it on Beethoven's later works, for example, must be weighed against very different comments in his diaries, letters and novels. This dichotomy between Tolstoy's emotions and intellectual ideas makes many of his pronouncements on music seem contradictory or inconsistent. Although Tolstoy knew many Russian musicians personally – he was briefly acquainted with Tchaikovsky and knew Taneyev and Stasov well – he did not greatly appreciate Russian music; the 'pure' folksongs he urged on Tchaikovsky were in fact a very corrupt edition. In view of his dislike of opera (except for *Don Giovanni* and *Der Freischütz*) it is ironic that so many operas have been based on his novels.

Tolstoy's eldest son, Sergey Lvovich (*b* Yasnaya Polyana, 28 June 1863; *d* Moscow, 23 Dec 1947), became a professional musician, composer and collector of songs. He worked at the State Institute for Music Research (GIMN) in Moscow from 1921 to 1932.

WORKS SET TO MUSIC

Voyna i mir [War and Peace] (1865–9): Moscow Reduced to Ashes, op by Aël, 1914; Sym. no.5 by B. Arnič, 1941; op by Prokofiev, 1941–3; cant. by Durey, 1949; incid music by C. Parker; film music by N. Rota, 1956; film music by V.A. Ovchinnikov, 1967

Anna Karenina (1875–7): op by Sassano, Naples, 1905; unfinished op by Janáček, 1907; op by Granelli, St Petersburg, 1912; op by E. Malherbe, 1914, unperf.; op by Hubay, Budapest, 1915; op by Robbiani, Rome, 1924; op by Goldbach, 1930; film music by C. Lambert, 1947; ballet by R. Shchedrin, 1972

APRIL FITZLYON

Tolveno, Arricha del.

See Hollaender (2).

Tomadini, Jacopo

(*b* Cividale del Friuli, 24 Aug 1820; *d* Cividale del Friuli, 21 Jan 1883). Italian composer. From a poor family, he studied music in the local church school with G.B. Candotti (1809–76), organist and *maestro di cappella* of Cividale Cathedral. In 1846 he took holy orders, but continued his musical activities, helping Candotti as organist. Eventually he succeeded him in his church duties and also became director of the local museum and library. Throughout his life he was offered church posts in many Italian cities, including Milan and Venice, but he preferred to live in Cividale, where in 1877 he became a canon and *maestro di cappella* at the cathedral. He was made honorary *maestro di cappella* of the Congregazione Pontificia and of the Accademia di S Cecilia in Rome.

Esteemed as both a composer (the 'Palestrina of the 19th century') and a reformer of church music, Tomadini produced over 500 sacred compositions and was admired and befriended by Liszt. He associated himself with F.X. Witt and others in the Caecilian movement; in 1877 with Guerrino Amelli and others, he founded the periodical *Musica Sacra*, and in 1880 the Associazione Nazionale di S Cecilia in Milan (Primo Congresso Nazionale di Musica Sacra). The essence of his contribution to reform was a compromise between the classical traditions of sacred choral music and operatic forms of his own day. His cantata *La risurrezione del Cristo* (1864) won a prize in Florence; the style is in the best Classical tradition, rich in fugue and 18th-century counterpoint. The text, by Vincenzo Meini, is an Italian paraphrase of the sequence *Victimae paschali*. His other works include 9 masses and 151 motets, as well as graduals, psalms and other liturgical works. In his *Il dialogo sulla tonalità antica* (MS, *I-CF*), constructed in the form of a dialogue between teacher (Tomadini) and pupil (Vittorio Franz), he brought together all his research on ancient music and modal

theory. In 1921 an inventory of Tomadini's compositions was made by Valentino Liva and placed in the archives of Cividale Cathedral.

MARVIN TARTAK/CARLIDA STEFFAN

Tomás (Bouffartigue), Guillermo M.

(*b* Cienfuegos, Cuba, 10 Oct 1868; *d* Havana, 30 Oct 1933). Cuban composer and conductor. During the years immediately following the political independence of Cuba (1898), a period of transition and facile salon piano music, he composed solid, non-nationalistic symphonic works heavily influenced by Wagner and d'Indy. In 1899 he created the Havana Municipal Band, patterned after that of the Garde Républicaine (Paris). In 1910 he founded the Havana Symphony Orchestra (reorganized in 1922 under Gonzalo Roig). With these ensembles he played in Havana for the first time music by Wagner, Richard Strauss, Dukas, Debussy, Mahler, Falla and Max Reger. In 1911 he established the Félix Alpízar Municipal Conservatory of Music, Havana. In some of his minor works (for example, the piano dances *Piña, mamey, zapote*; *Esbozos de mi tierra*) he explored Cuban 'white' peasant rhythms and melodic formulae.

AURELIO DE LA VEGA

Tomášek, Václav Jan Křtitel [Tomaschek, Wenzel Johann]

(*b* Skuteč, 17 April 1774; *d* Prague, 3 April 1850). Bohemian composer and teacher. He was the dominant musical figure in Prague during the first half of the 19th century. His influence was spread throughout Europe by his many students (Voříšek, Kittl, Dreyschock, Hanslick and Würfel) and through his many widely distributed songs and his piano music. Steeped in Mozartian classicism, he was the centre of the Mozart cult that prevailed in Prague throughout the early years of the 19th century.

Tomášek, Václav Jan Křtitel

1. Life.

Tomášek was the youngest child of an impoverished cloth merchant. His musical education was supported by scholarships, the financial aid of his elder brother and by his own musical skills. When he was nine he was sent to Chrudim to attend elementary school, where he studied the violin and singing with the cantor P.J. Wolf. At 13 he became a scholarship student at the minorite monastery in Iglav (Jihlava), where he sang alto in the choir and received further musical instruction from Donat Schuberth. In 1790 he moved to Prague, where he lived for the rest of his life. In Prague he attended the Gymnasium in the Malá Strana district and later (1794–9) studied mathematics, history, aesthetics, philosophy and law at Charles University. In 1790 he attended a performance of Mozart's *Don Giovanni*, an event that captured his imagination and determined his fundamental musical sensibility for life.

Largely self-taught in music, Tomášek pursued his studies in his spare time, practising the piano (Türk's *Clavierschule*) and steeping himself in the major theoretical treatises available (Marpurg, Kirnberger, Mattheson, Löhlein and Türk). During his university years, he began to compose keyboard dances and songs and to appear as a pianist in the salons of the upper middle class; in this context he also began to teach, rapidly developing a reputation as a formidable pedagogue.

After his university studies, Tomášek embarked upon a career as a pianist and piano teacher and as a composer. In 1801 he met and studied with G.J. Vogler and with Forkel, through whom he developed a thorough knowledge of musical theory and his love of Bach. His first major success as a composer was a setting of G.A. Bürger's ballad *Lenore*, the popularity of which encouraged him to turn to larger instrumental works in Classical forms. Through the success of *Lenore* he was appointed (in 1806) family music tutor and composer to Count Georg Buquoy, a position he held for 18 years. His duties were light, allowing him much time for composition and travel. He went to Dresden and Graz, and to Vienna, where he met Haydn

(1808) and Beethoven (1814); he later described these meetings in detail in his memoirs. The years in the count's service were the most important in his compositional life, the period when he produced the majority of the piano eclogues, rhapsodies and songs on which his reputation as a composer largely rests.

In 1822 Tomášek moved into a spacious house in the Malá Strana district of Prague, where he lived for the remainder of his life. In 1824, on his marriage to Wilhelmina Ebert (sister of the poet Karl Egon Ebert), he left the service of Count Buquoy to start his own music school. He attracted students such as Kittl, Mechura, Dreyschock and Hanslick. The precipitous failure of his marriage about 1826 caused Tomášek to withdraw into himself for several years. After the death of his wife in 1836, however, he began to re-enter the musical life of Prague. During the 1830s and 40s his Monday evening salon concerts became important events: the context for the performance of his own music, performances by his eminent students and for animated discussions about music, literature and the arts. In these years he became the figurehead of musical life in Prague, visited by Clara Schumann, Wagner, Berlioz, Paganini and Ole Bull.

During Tomášek's later years his circle of associates included the publisher Alois Klar, R. Glaser (editor of the journal *Ost und West*), the historian František Palacký, and the poets K.V. Hansgrig and Václav Hanka, all members of the 'Old Czech' faction in Prague who attempted to reconcile an emerging Czech nationalism with the prevalent German-Bohemian culture. Encouraged by Glaser (his brother-in-law), Tomášek became a correspondent for *Ost und West* and reported extensively on his travels throughout Bohemia and Germany. With similar support from Klar (editor of the Prague annual periodical *Libussa*), Tomášek published his memoirs in six instalments between 1845 and 1850. He remained musically active to the end of his life, teaching students until a few days before his death in 1850.

Most of the descriptions of Tomášek stem from his later years; they confirm his reputation as a difficult man. He was described as 'a stout, large figure of a man, who strutted about with a magisterial air, pleased with himself, not very friendly, fixing other people with a proud stare, shouting at them, tearing them to pieces with his sarcasm, yet at bottom an upright and honest man.' Hanslick referred to him as the 'Dalai Lama or musical Pope of Prague.' Despite these personal limitations, Tomášek was a commanding presence in Prague, especially as a teacher. Intellectually and musically attuned to the era of the Enlightenment, he was essentially a Biedermeier figure, devoted to the idea of education as morally self-improving and to a disciplined, classically orientated view of music. His music is essentially post-Classical in idiom, but with touches of a romantic, lyrical sensibility, especially in the short piano pieces and songs.

Tomášek, Václav Jan Křtitel

2. Works.

Although Tomášek's starting-point was the music of Mozart, his works are redolent of a slightly later era. The three symphonies, dating from 1801–7, are clearly post-Classical in idiom. The piano sonatas are from the same period, and resemble those of Hummel in figuration, melodic style and

concern for virtuoso gestures. The piano miniatures (including 42 eclogues, 15 rhapsodies and 3 dithyrambs) were composed between 1807 and 1823 and in common with 18th-century practice were normally published in groups of six. The eclogues are ternary in form and, in essence, are a poeticized extension of the independent Classical minuet and trio. The rhapsodies are more vigorous in character but nevertheless differ only slightly in style, harmonic idiom and form from the eclogues. The six *Allegri capricciosi* are more virtuoso, with rapid scales and bravura passage-work similar to the *brillante* manner of Hummel and Moscheles.

The piano miniatures are clearly the most important of the piano works, both in number and musical quality. Writing in 1846 Tomášek gave the following explanation for how he came to write them:

For some time I encountered an inexplicable indifference towards the piano sonata and the symphony. Endless variations were used to compensate pianists for the lack of [good] piano sonatas and the equally innumerable overtures were used to compensate orchestras for the lack of symphonies. This levelling off in musical taste forced me to take refuge in poetics and to try to render different poetic forms in music …. My first attempt consisted of six eclogues for piano …. These tone poems are a type of pastorale, but they differ sufficiently in terms of melody, harmony and rhythm from the older type of pastorale that I should say a few words to clarify their form and manner of performance. I imagined shepherds who live a simple life that, like all humans, are subject to fate. The attempt to render in music their moods during the different phases of their lives was the task I set myself. … The eclogues demand a simple but very comfortable flow, as if to place the listener is an idyllic setting.As Tomášek's account suggests, his eclogues were written in response to his idealization of antiquity and constitute an attempt to recapture in a contemporary musical language the simple, yet universal, feelings and moods common to humanity. In this, Tomášek was part of a larger Romantic Hellenism characteristic of the early 19th century. In musical terms, the eclogues and rhapsodies display a florid, instrumentally conceived lyricism that is elaborated through ornamentation and variation. In most of them, a central mood is maintained throughout a complete section by flowing figurations and repeated rhythmic motifs. Although occasionally there are modal inflections and striking harmonic colourings, their harmonic idiom is relatively conservative for the period, the sense of the pastoral being frequently evoked through the use of a drone 5th and folklike melodies.

In their tendency towards musical poeticizing and in their systematic working out of a central generating musical figure (often involving triplets), Tomášek's piano miniatures frequently evoke an incipient Romantic mood. Although cited by Kahl (1921) as an important influence on Schubert's impromptus and *Moments musicaux*, Tomášek's piano miniatures breathe a different musical air from Schubert's short piano works and are better seen as a separate line of development within the emerging Romantic piano piece, one that was continued by his students Voříšek and Kittl. Neither exceptionally difficult nor intensely felt, Tomášek's eclogues and rhapsodies represent the earliest phase in the development of the true Romantic piano character-piece. They were ultimately more significant as teaching pieces than as concert works. Their popularity as pedagogical

material continued into the second half of the 19th century, evidenced by the collection of ten eclogues published by Augener during the 1870s.

Tomášek was more successful as a composer of songs. The majority (about 70%) were written to German texts and include settings of Klopstock, Gellert, Hölty, Bürger, Schiller, and, notably, Goethe. The early songs are unpretentious and reveal a talent for simple ingratiating melodies. The larger songs, mostly ballads (Bürger's *Lenore* and Schiller's *Die Erwartung*), are multi-section works similar to those of J.R. Zumsteeg and C.F. Zelter in musical idiom. The most important songs in artistic terms are the 41 settings of Goethe poems (34 for solo voice), composed for the most part, like Schubert's, during 1815. The entire collection was first published privately, in nine small books, as opp.53–61. In 1822 and 1823 Tomášek met Goethe at the spas at Eger (now Cheb) and Marienbad (Mariánské Lazně), where he had the opportunity to play several of his Goethe songs for the great poet. Goethe seems to have admired Tomášek's settings, chiefly for their simple, attractive melodies and for their clear, non-representational approach to the text.

Tomášek's Goethe songs are for the most part relatively short – between two and four pages in length – and exhibit a variety of forms and styles. The most common type is the strophic song in a stylized folklike idiom. In their approach to melody, they range considerably, from direct imitations of Mozart (*Heidenröslein*, *An Linna*, *Mailied*) to broad hymn-like melodies similar to Beethoven (*Näthe des Geliebten*, *Mignons Lied* I). Some songs are more intensely felt and project an incipient romanticism (*Schäfers Klagelied*, *Der Fischer*). The most distinctive are the humorous ones and the minor-key songs, especially those that contain Romantic colourings in harmony and imaginative piano figurations. Tomášek seems to have responded most strongly to poems with pastoral images, especially those of a melancholy cast. His best songs achieve a melodic intensity that approaches Schumann. What is ultimately missing, however, is the imagination, so striking in Schubert, that finds a fresh musical solution to the setting of each poem. In his songs, as in his piano music, Tomášek developed certain musical idioms – particular melodic and harmonic patterns, accompanimental figurations, and formal and structural models – that he was content to repeat with slight variations. His later songs, from the 1830s, are much like those from 1815 and even in their time were seen as conservative.

Tomášek's first songs to Czech texts date from 1813 and, according to his memoirs, were composed 'so as not to forget my mother tongue entirely'. Many were composed to verses by Václav Hanka, and were probably inspired by the success of contemporary Czech songs by Vitásek and Doležálek and by his personal friendship with Hanka. A satisfactory declamation of the Czech language in music did not come easily to Tomášek, so that his Czech songs are generally less artistically satisfactory than his German songs. Despite their Czech texts, there is little to suggest a specifically Czech musical idiom. Tomášek's best songs to Czech texts are the *Starožitně písne* ('Ancient Songs') op.82, from 1835, settings from the Kŕalové Dvůr, the forged manuscript of ancient poems compiled by Hanka and others. Whatever their weaknesses, Tomášek's

Czech songs are an important milestone in the gradual evolution of a song literature in the Czech language.

Although Tomášek was considerably interested in theatrical matters, he wrote only one opera, *Seraphine*, which was not well received at its first performance in 1811. In his later years, he composed settings of excerpts from Schiller (*Maria Stuart* and *Die Piccolomini* from the *Wallenstein* trilogy). Tomášek also wrote several large works for voices and orchestra, notably a Requiem in C minor (1820) and a Coronation Mass for the accession of Ferdinand of Austria (1836). Despite its date of composition, the Coronation Mass is anchored firmly in the idiom of Mozart's Requiem, with a strong figured-bass foundation and choral fugues composed in a historical style.

Tomášek's memoirs constitute an important portrait of musical life in early 19th-century Europe. Based upon his diary, now lost, they chronicle his life from his youth to the time of his marriage in early 1824. They show him to be a shrewd observer of the passing musical scene in Prague and contain personal evaluations of many contemporary musicians (Spohr, Weber, Steibelt, Wölfl, Vogler, Forkel, J.L. Dussek, B.H. Romberg and Preindl). A significant portion of the memoirs recalls Tomášek's extended trip to Vienna at the time of the famous Congress of Vienna (1815). He describes in vivid details the balls, concerts, plays and various ceremonial events that surrounded the Congress. The memoirs also retell in detail his visit to Haydn as a very old man and his visits to Beethoven. They reveal Tomášek to be an astute observer of people and their foibles and contain sometimes unorthodox views about the music of Beethoven and Mozart, and the new Romanticism of the 1830s, music with which he had little sympathy. Highly opinionated, often sarcastic and projecting a sense of his own importance, Tomášek's memoirs also reveal him to be deeply concerned about all things artistic and intellectual: a man of courage and idealism, unflinching in his pursuit of truth in music and in life.

Tomášek, Václav Jan Křtitel

WORKS

most MSS in CZ-Pnm

Tomasi, Biagio

(*b* Comacchio, nr Ferrara, *c*1585; *d* Massafiscaglia, nr Ferrara, 1640). Italian composer and organist. He was born in poverty and was educated at the expense of his local community. He then became a pupil of Girolamo Belli at Argenta. He returned to Comacchio in 1609 to become cathedral organist and to study theology; he later took holy orders. He eventually became a canon and director of music at the collegiate church of Massafiscaglia in the same area. His two volumes of madrigals with basso continuo show originality of melody and an expressive style. The same features are present in his church music, three volumes of motets in the

modern concertato style, which include some very fine early examples of the solo motet (e.g. the chromatically inflected *Versa est in luctum* of 1615). His duets have extended passages for solo voices, and sometimes triple-time sections are used as refrains: his concern was as much for rounded forms as for well-developed melodies. Six of the motets in his 1615 collection are by his brother Antonio Francesco Tomasi.

WORKS

all except anthologies published in Venice

Il primo libro de sacri fiori, 1–4vv, bc (1611)
Il primo libro di madrigali, 5vv, bc (1611)
Corsica … il secondo libro di madrigali, 5–6vv, bc, de' quali parte si potrà cantare con l'istromento e senza (1611)
40 concerti: il secondo libro de sacri fiori, 1–6, 8vv, bc, op.4 (1615)
Motecta, 2–4vv … una cum Litaniis B.M.V., 4vv, bc, op.6 (1635)
5 motets in 1616^2, 1627^1, 1627^2

JEROME ROCHE

Tomasi, Giovanni Battista

(*fl c*1656–92). Italian composer and organist. He served the Duke of Mantua as 'organista di camera et aiutante d'onore' for 23 years from about 1656. On 2 October 1679 he was appointed *maestro di cappella* of the court. According to the libretto of *Il martirio di S Agata* he was *maestro di cappella* of S Andrea, Mantua, in 1681; on 23 September 1685 he received a pension of 60 scudi from the court, and in 1686 was still at S Andrea. (*AllacciD*; *BertolottiM*; *EitnerQ*; *RicordiE*; *SchmidlD*; *SchmidlDS*)

WORKS

lost unless otherwise stated

operas

Il gran Costanzo (A. Lanzoni), Mantua, 1670, pubd lib in *I-Bc*
Sesto Tarquinio (C. Badoaro), Venice, 1678–9, pubd lib in *US-Wc*

oratorios

La penitenza (Badoaro), Mantua, 1680
La croce di Gesù Cristo (Badoaro), Mantua, 1681
Il martirio di S Agata, Mantua, 1681 [see also below]
La fortezza e la pietà, ossia Ferdinando ed Isabella Regina di Castiglia con l'assedio di Granada, Padua, 1684
L'invenzione del santissimo sangue, Padua, 1686

Cant., S, bc, *D-Mbs*

THOMAS WALKER

Tomasi, Henri

(*b* Marseilles, 17 Aug 1901; *d* Paris, 13 Jan 1971). French composer and conductor of Corsican descent. A pupil of Gaubert and others at the Paris Conservatoire, he won the Prix de Rome in 1927 and the Grand Prix de la Musique Française in 1952. During the 1930s he was one of the founders, alongside Prokofiev, Poulenc, Milhaud and Honegger, of the contemporary music group 'Triton'. He divided his career equally between composing and conducting, and he conducted at many opera houses throughout the world. As a prolific composer, his orchestral music is important, especially the concertos he wrote for solo instruments and orchestra. However, he was attracted above all to the theatre, and it was two of his operas, *L'Atlantide* and *Miguel Mañara*, that established his reputation. *Miguel Mañara* tells of a mystical Don Juan who has renounced debauchery. The composer's own origins are reflected in *Sampiero Corso*, which deals with the oppression of Corsica by the Genoese in the 16th century. In *Ulysse*, Ulysses is demystified, returning amid ordinary sailors. Tomasi's postwar works reflect a disillusionment with mankind; *L'éloge de la folie*, which he described as a cross between opera and ballet, includes references to Nazism and napalm. Tomasi also composed several ballets, and several of his orchestral works were adapted for dance. Before his death he had been working on an operatic version of *Hamlet*.

His music is intensely direct in feeling, occasionally dissonant and highly coloured; he absorbed influences from his French contemporaries while retaining an individual voice.

WORKS

stage

L'Atlantide, 1951 (drame lyrique et choréographique, 4, F. Didelot, after P. Benoît), Mulhouse, Municipal, 26 Feb 1954, vs (Paris, 1959)

RICHARD LANGHAM SMITH

Tomasini.

Italian and Austrian family of composers and musicians.

(1) Alois Luigi Tomasini
(2) Anton (Edmund) Tomasini
(3) Alois (Basil Nikolaus) [Luigi] Tomasini

GÜNTER THOMAS

Tomasini

(1) Alois Luigi Tomasini

(*b* Pesaro, 22 June 1741; *d* Eisenstadt, 25 April 1808). Violinist and composer. He was engaged in 1757 as a manservant by Prince Paul Anton Esterházy, who had become acquainted with him on a journey to Italy. In 1759 he was sent to Venice for further musical training but was soon ordered to return to Vienna. It is uncertain whether he was a pupil of Leopold Mozart in Salzburg (as has been assumed from the latter's letter of 21 June 1763), and it can only be presumed that he later received composition lessons from Haydn. In summer 1761, when Haydn was appointed assistant Kapellmeister, Tomasini was already first violinist in the Esterházy Hofkapelle, and later he was awarded the title Konzertmeister, a post he held until his death. In 1767 he was in the retinue of Prince Nicolaus (I) Esterházy on a journey to Paris. When the Vienna Tonkünstler-Societät, of which Tomasini had been a member since its inception, gave the première of Haydn's oratorio *Il ritorno di Tobia* on 2 April 1775, Tomasini played a violin concerto in the interval between the two parts. He was first violinist of a string quartet that played at the Vienna Hofburg at Christmas 1781. In 1783 he intended to join the orchestra of Duke Ferenc Széchényi in Sopron, but the orchestra was disbanded; when the Esterházy Hofkapelle was itself disbanded in 1790, he was granted a pension. In 1792 he played for the coronation of Emperor Franz II in Frankfurt. Soon afterwards he was again in service as Konzertmeister in the Esterházy Kapelle, and in a petition dated December 1801 to Prince Nicolaus (II) Esterházy he mentioned that 'for several years' he had had to 'forgo his habitual winter journeys which had always provided a good supplement to his income'; this reference is one of very few which seem to attest to regular concert tours. In 1802 he became director of the Esterházy chamber music. By his first wife, Josepha Vogl (*d* 1793), he had 12 children, four of whom became musicians, including Josepha (1773–1846) and Elisabeth (1788–1824), both singers at the Esterházy court from 1807 to 1810. In 1799 he married 26-year-old Barbara Feichtinger from Bratislava, by whom he had had a son two years before.

Most of Tomasini's string quartets are three-movement works in the style of the early Viennese divertimento quartet, with elements of Italian opera overture. The three quartets op.8, probably his most important works, show a considerable change of approach. All in four movements, they are more individual in style, but also mirror Haydn's influence in their more complex motivic work and textural interplay and in their greater seriousness of character.

Other works: 2 vn concs., G, *A-Wgm*, A, S; Vn Conc., F, advertised by Traeg, 1799; 3 syms., E♭, B♭, C, advertised by Breitkopf, 1776–7 [no.2 by ?Pleyel]; Salve regina, F, *A-Ee*

Tomasini

(2) Anton (Edmund) Tomasini

(*b* Eisenstadt, 17 Feb 1775; *d* Eisenstadt, 12 June 1824). Violinist and viola player, son of (1) Alois Luigi Tomasini. He was taught by his father and in 1796 became a member of the Esterházy Kapelle. He married Thekla von Spielmann, the daughter of a colonel, in 1803. In 1805 he became deputy director, and in 1818 principal director, of the orchestra.

Tomasini

(3) Alois (Basil Nikolaus) [Luigi] Tomasini

(*b* Esterháza, 10 July 1779; *d* Neustrelitz, 19 Feb 1858). Violinist and composer, son of (1) Alois Luigi Tomasini. He studied under his father, gave concerts while still a child and was accepted into the Esterházy Kapelle in 1793 or 1796. Haydn described him as having 'rare genius'. In 1808 he married the singer Sophie Croll (1785–1847), a pupil of Vincenzo Righini, who had been in the service of the Duke of Mecklenburg-Strelitz and then for 13 months at the Esterházy court. After the marriage Tomasini returned with her to Neustrelitz, where he eventually became Konzertmeister, a position in which his son Carlo (1813–80) succeeded him. His daughter Friederike (1810–86) was a singer who made her début at the court theatre and later, after completing her training in Munich, was engaged there until 1848. In 1836 she married the actor Carl August Görner.

Tomàs i Parès, Joan [Tomás Parés, Juan]

(*b* Barcelona, 6 April 1896; *d* Barcelona, 7 Nov 1967). Catalan choral director, composer and folklorist. From the age of 11 he studied solfège with Lluís Millet, the piano with María R. Canals and Juan Battista Pellicer and composition with Antonio Nicolau and Enrique Morera at the Barcelona Municipal School of Music. In 1908 Millet gave him a place in the children's section of Orfeó Català, and later he joined the main chorus, becoming one of its deputy directors in 1946. In the same year he joined the newly founded Instituto Español de Musicología under Anglès. As a prominent choral director he conducted such choirs as the Chor Infantil Mossèn Cinto, la Escuela Coral de Tarrasa, Parroquia de S Paciano and Orfeó Lluis Millet; he taught music and was organist at the Colegio de S Ignacio de los PP Jesuítas de Sarriá and for the student group Pere Vila. In the early 1950s he became director of the schola cantorum of the Barcelona Seminary. His main area of research was Spanish folk music; having participated in many field trips throughout Catalonia, Castile and León, he began to prepare a systematic study of regional Spanish cancioneros, which is fundamental to the study of Spanish traditional folk music. His compositions include several choral works, including *Pastoral*, a Christmas drama, two masses, arrangements of folk and popular songs, and numerous songs for voice and piano.

ISRAEL J. KATZ

Tómasson, Haukur

(*b* Reykjavík, 9 Jan 1960). Icelandic composer. He began piano studies in 1976 and studied composition with Thorkell Sigurbjörnsson and Atli Heimir Sveinsson at the Reykjavík College of Music. From 1983–6 he studied at the Cologne Conservatory with Joachim Blume and later with Ton de Leeuw at the Sweelinck Conservatory (1986–7) and at the University of California, San Diego, with Ferneyhough and Roger Reynolds. After completing his master's degree in 1990 he returned to Iceland, where he joined the faculty of the Reykjavík College of Music. In 1993 his composition *Strati* won first prize in a competition held by the Icelandic State Radio. He received the Bröste Optimism Prize in 1996, and the Icelandic Music Award in 1998 for *Guðrún's Fourth Song*.

Tómasson is widely recognized as one of the most promising composers of his generation. His compositions are often characterized by bright, colourful timbres and display a highly structured, personal style. During his years of study in Amsterdam he used numbers of the Fibonacci series to organize durations, intervals and formal proportions (*Octette*, *Eco del passato*). His later works (*Spírall*, *Strati*, *Afsprengi*) are examples of the composer's 'spiral technique', the chaconne-like development of an underlying chord progression. In the late 1990s he also began using Icelandic folk material as a basis for his compositions (*Stemma*, *Langur skuggi*). Although he mainly composes instrumental works, the chamber opera *Fjórði söngur Guðrúnar* ('Gudrun's Fourth Song') is one of his largest and most important

scores, consisting of 12 numbers for voices and chamber ensemble separated by spoken dialogue.

WORKS

Op: Fjóði söngur Guðrúnar [Guðrún's Fourth Song] (op, Poetic Edda), 1996

Orch: Hvörf [Mutations], cl, chbr orch, 1988; Afsprengi [Offspring], 1990; Strati, 1993; Árhringur [Annual Ring], 1994; Conc., vn, chbr orch, 1997; Fl Conc., 1997; Stemma [Rhyme], 1997; Storka [Magma], 1998

Chbr: 7 miniatures, cl, pf, 1985; Octette, fl, cl, sax, hn, vn, va, pf, perc, 1987; Eco del passato, fl, hpd, 1988; Quartett II, cl, vn, vc, pf, 1989; Atrennur að einingu [Attempted Convergence], ww qnt, 1991; Spírall [Spiral], ens, 1992; Trio animato, cl, vc, db, 1993; Pf Trio, vn, vc, pf, 1997; Mannamót [Gathering], str septet, 1997; Kópía [Copy], fl, hn, va, gui, accdn, hpd, db, 1999; Langur skuggi [Long Shadow], str septet, 1999

ÁRNI HEIMIR INGÓLFSSON

Tómasson, Jónas

(*b* Ísafjörður, 21 Nov 1946). Icelandic flautist and composer. He studied the flute and composition with Sigurbjörnsson at the Reykjavík College of Music, graduating in 1969. After studying with Ton de Leeuw in Amsterdam, he took a teaching appointment at the Ísafjörður School of Music, and has been based in north-west Iceland since 1978.

His earliest works tended to be slow-moving, almost static, with an introspective quality resulting from their elusive ideas and free structures; his recent works are more expansive and dramatic. He has composed more than 20 sonatas for different instruments and instrumental combinations, often determined by the musicians available in the community, and his output includes series of works entitled cantata, concerto, notturno and ballet, though with a personal interpretation of the genre and instrumental forces.

WORKS

(selective list)

Leikleikur [Play Play], orch, 1972; Sinfónía nr. 1.73, va, small orch, 1973; Sonata VIII, pf, 1973; Kantata II, v, a fl, b cl, hn, vc, 1973; Another Sym., 1973; Ellefu hugleiðingar um landnám [11 Meditations on Settlement], orch, 1974; Vn Conc., 1974; Orgia, orch, 1975; Kantata IV – Mansöngvar [Love Songs], choir, chbr ens, 1981; Vetrartré [Winter Trees], vn, 1983; Midi, 2 pf, orch, 1985; Lúkasaróratória, solo vv, chorus, orch, 1992; Missa tibi laus, choir, Baroque orch, 1996; Dýrð Krists [The Glory of Christ], 7 movts, org, 1996

Tombak [dombak].

Goblet drum of Iran, known since the early 19th century. It is commonly known as *zarb* ('beat'). It is used in entertainment music, in some folk traditions (e.g. those of Lorestan) and in art music. The drum is made from a single block of walnut or mulberry wood, turned and hollowed out (see illustration). It is 40 to 45 cm in height and 20 to 28 cm in diameter. It was used originally as an accompanying instrument, but its technique was considerably developed by the virtuoso Hossein Tehrani (1911–76), who extended the range of beating methods and sonorities and exploited its potential as a solo instrument. Iranian gymnasiums (*zūrkhāne*: 'house of force') use an earthenware *tombak*, about 70 cm in diameter, to provide a rhythmic background for exercises. Its powerful tone and beating technique distinguish it from its classical counterpart. The *tombak* can be likened to the Afghan *zirbaghali* used in folk music; this is made of pottery or wood and is rounder in shape. Playing techniques differ somewhat.

Tombé

(Fr.).

A type of appoggiatura. *See* Ornaments, §7.

Tombeau

(Fr.: 'tomb', 'tombstone').

An instrumental piece or group of pieces, in the character of a lament, commemorating the death of some person, usually real but occasionally imaginary. The term was originally a literary one; in the 16th and early 17th centuries it was applied in France to short poems, or to collections of poems by several authors, commemorating the death of such people of distinction as François I and Marguerite of Navarre, or great poets like Ronsard. It was adopted about the middle of the 17th century by musicians: French music of that time was indebted to literature in many ways. It appeared first in a *tombeau* by Ennemond Gaultier for the lutenist Mesangeau (*d* 1638), and there are a number of examples for lute by various members of the Gaultier family, most of which follow the tradition of the earlier Déploration in which musicians often commemorated their teachers or other notable musicians.

The lute *tombeau* reached its peak in the 1680s, with numerous fine examples by Jacques Gallot and Charles Mouton, who were in turn commemorated in lute *tombeaux* by Robert de Visée. It usually took the form of an allemande *grave*, or sometimes a pavane. Many include a motif of four descending notes, a metaphor for grief given influential expression by John Dowland in his *Lachrimae* (1604). These genres offered many suitable expressive characteristics: the *suspirans* figure (a three-note upbeat), dotted rhythms, particularly in repeated notes, and slow-moving harmonies in the minor mode whose gravity is heightened by a tendency to settle on pedal points. Later examples also tend to use chromatic progressions related to the *lamento* bass. The few courante *tombeaux* exploit the same rhythmic features in triple metre.

From the lute the *tombeau* spread to other instrumental repertories. Froberger's *tombeau* for the lutenist Charles Fleury (Blancrocher) (*d* 1652) brought a new dimension of expressivity to the harpsichord. It uses such lute mannerisms as low *sans chanterelle* tessitura and the campanella effect, but also more extrovert Italian features such as the *tirata*, the dramatic *sospiro* and the fall. Froberger explored this compelling blend of idioms in a number of pieces (entitled 'Lamento', 'Lamentation' or 'Plainte') which, though conventionally notated, are marked to be played 'lentement avec discretion'. Their richly decorated style and strange, poignant modulations demand a freedom of performance akin to that of the Prélude non mesuré. Of three harpsichord *tombeaux* by French composers, two are highly original pieces in the major mode. Louis Couperin's *tombeau* for Fleury is in the manner of a funeral oration, characteristically ranging from the dramatic *récit* of the viol to the sensitive *style brisé* of the lute, and appears to have some rhetorical programme. A contemporary programme for a *tombeau*-like piece is described in Mary Burwell's lute tutor for Gaultier's allemande *The Loss of the Golden Rose Lute*. D'Anglebert's *tombeau* for Chambonnières (1689) is cast as a Gaillarde, an unusual genre in this repertory and one to which he contributed several very expressive examples. Its triple metre adds an extra degree of sophistication to the figurative language of the pavane.

Bass viol *tombeaux* carry programmatic and rhetorical elements yet further. Sainte-Colombe's *tombeau Les regrets*, from the *Concerts* for two viols (*F-Pn*; written in the 1680s), is in a series of short sections entitled 'Les regrets', 'Qarillon', 'Apel de Charon', 'Les pleurs', 'Joye des Elizées', 'Les Elizées'. This structure foreshadows that of François Couperin (ii)'s *Apothéoses* for Corelli (1724) and Lully (1725). The *tombeaux* of Marin Marais are the most original and expressive examples for viol. Using the manner of the *fantaisie*, they progress from imitative openings to powerfully rhetorical *récits*, and include a great variety of special instrumental effects. The *tombeau* for Sainte-Colombe (1701) exploits a number of plaintive technical effects, culminating in a long series of specially bowed chords over a descending chromatic bass. The two last contributions to this tradition are Marais's *tombeau* for his son (1725) and Charles Dollé's *tombeau* for Marais himself (1737).

Leclair's C minor Violin Sonata op.5 no.6 (1734) acquired the nickname 'Le tombeau' during his lifetime, and was performed at his funeral (1764) in an orchestral arrangement by his pupil G.-P. Dupont. Later in the 18th century

the term appeared only rarely, for example in Lemière's *Le tombeau de Mirabeau le patriote* (*c*1791); it was hardly used by composers outside the French orbit. Its features nonetheless remained into the 19th century in genres associated with the expression of grief, such as the symphonic funeral march.

A further use of the term *tombeau* is for a type of scene in late 17th- and 18th-century French opera. The earliest example is the 'Tombeau de Climène' (now lost) in Cambert's *Les peines et les plaisirs de l'amour* (1672) in which Apollo laments at the tomb of Climène. Similar scenes feature the appearance of oracles or spirits of the departed (*oracles* or *ombres*; for example in Cesti's *La Dori*, 1657, and Lully's *Amadis*, 1684). They are marked by low-pitch scoring, recurring rhythmic motifs and monotones in voice and accompaniment, and contributed to the development of accompanied recitative. Lully used what was for him the highly coloured key of C minor; later composers more often used F minor or B♭ minor. The frisson of the supernatural may be heightened by features of the instrumental *tombeau* such as dramatic *tirate* and dissonant leaps, as in the Symphonie that introduces the words 'Operuit montes umbra ejus' in François Couperin (ii)'s *Quatre versets d'un motet chanté à Versailles* (1703). Features of the *oracle* scene remained in later 18th-century opera (including Mozart's *Idomeneo*, 1781), and a late example is found in the third act of Tchaikovsky's *The Queen of Spades* (1890).

Some 20th-century French composers, concerned with their musical past and wishing to establish a stronger identity for French music, revived the term. Ravel's *Tombeau de Couperin* (1914–17) was followed by pieces similarly commemorating composers of the French classical period, by Georges Migot (*tombeaux* for Dufaut and Grigny) and Dupré (a *tombeau* for Titelouze). The *Tombeau de Debussy* (1920) was a collection of pieces to which Dukas, Roussel, Malipiero, Goossens, Bartók, Schmitt, Stravinsky, Ravel, Falla and Satie all contributed. It revived the concept of the 16th-century literary *tombeau* of collective authorship, as did similar works commemorating Jules Ecorcheville (1916), Ronsard (1924) and Paul Dukas (1935). Boulez's setting of Mallarmé's *tombeau* for Verlaine in *Pli selon pli* (1957–62) expresses the idea of a tombstone in block-like sonorities.

Tomek, Otto

(*b* Vienna, 10 Feb 1928). Austrian music critic and administrator. He studied musicology with Erich Schenk at the University of Vienna and the piano with Joseph Langer at the Vienna Municipal Conservatory; he took the doctorate at Vienna in 1953 with a dissertation on *Das Strukturphänomen des verkappten Satzes a tre in der Musik des 16. und 17. Jahrhunderts* (extracts in *SMw*, xxvii, 1966, 18–71). From 1953 to 1957 he was contemporary music adviser for Universal Edition, Vienna, and until 1971 head of contemporary music and deputy head of the music division of WDR, Cologne (for which he made numerous broadcasts); he was programme coordinator of the concert series 'Musik der Zeit' which gave many world premières, including works by Stockhausen, Boulez, Nono and Penderecki. From 1971 to 1977 he was director of music programmes at SWF, Baden-Baden, then head of the music department at SDR, Stuttgart. He has also been programme coordinator of the Donaueschingen Festival, co-editor of the *Neue Zeitschrift für Musik* (1967–78) and editor of the SWF publication *Teilton*. From 1977 to 1989 he was one of the leading artistic directors of the Schwetzingen Festival. He retired from his positions in Stuttgart and Schwetzingen in 1989. He is a founding member (1990) of the Karlsruhe Musikhochschule's new Institut Lernradio, an institution designed to train music journalists to work in radio broadcasting.

Tomeoni

(1) Pellegrino Tomeoni

(*b* Lucca, 21 Feb 1721; *d* Lucca, ?1816). Organist and composer. According to his son Florido (*Méthode*), he studied in Naples. His return to Lucca is documented in 1748 by his participation in the music for the feast of S Croce as a tenor and his involvement in the opera season at the Teatro Pubblico. Subsequently he held a series of posts as *maestro di cappella* in or near the city: from 15 February 1750 to 20 September 1778 at the collegiate church in Camaiore, from 14 March 1779 at Lucca's seminary and diaconal church of S Michele in Foro, and from 4 July 1785 until his death at the collegiate church in Pietrasanta. He is known to have composed the recitatives and some arias for the production of *Zenobia* (a pasticcio on a libretto by Metastasio, with Caterina Gabrielli in the title role) at the Teatro Pubblico in 1761, where he was employed, at least on an occasional basis, as *maestro al cembalo*. He also contributed three works (music now lost) to Lucca's *funzioni delle Tasche*, a three-day local festival held every 30 months to elect the city's government. Most of his works, however, were for the church, as his duties required. More than 30 years after his death, his sacred music was still performed in Lucca. His short treatise on thoroughbass was considered highly laudable for the 'clarity and facility of the scholarship'.

WORKS

operas

all performed at Tasche in Lucca; music lost

Dione siracusano, Tasche 1750 (15 Dec)

Il Narsete, generale di Giustiniano imperatore, Tasche 1770 (10 Dec)

Marzio Coriolano, Tasche 1773 (14 June)

16 psalms, other church music: all *PAc*

Toccatas, org, *VRNs*

theoretical works

Regole pratiche per accompagnare il basso continuo, esposte in dialoghi per facilitare il possesso alla principiante gioventù (Florence, 1795)

Tomeoni

(2) Florido Tomeoni

(*b* Camaiore, nr Lucca, 3 Feb 1755; *d* Paris, ?Aug 1820). Singing teacher, composer and publisher, son of (1) Pellegrino Tomeoni. He is said to have learnt music from his father. In 1767–73 he sang soprano, and in 1774 tenor, in the choir of the festival of S Croce at S Martino. In 1775 he contributed an opera to the *Tasche* festivities, and then, after completing studies at one of the Naples conservatories, he settled in Paris in 1783 as a teacher of singing and harmony. He also established a music shop and publishing house (which eventually passed into the hands of Mme Duhan, and finally became the firm of Schonenberger), from which he issued his own compositions as well as theoretical works. The last of these, the *Théorie de la musique vocale* (1799), as well as being a vocal method, belatedly continued the Gluck-Piccinni controversy about French as opposed to Italian music. Unsurprisingly, his judgment was in favour of the Italian. According to Degrada the influence of Piccinni and Sacchini may be seen in his compositions.

Tomeoni

(3) Irene Tomeoni [Tomeoni Dutillieu]

(*b* 1763; *d* Vienna, 12 Oct 1830). Soprano, possibly daughter of (1) Pellegrino Tomeoni, and hence sister of (2) Florido Tomeoni. One of her earliest public performances was in Genoa in 1781. She was married to the French composer Pierre Dutillieu, whom she met in Florence in about 1781. In 1787 she went to Naples and sang there almost exclusively during the next three years in comic operas by Cimarosa, P.A. Guglielmi, Anfossi, Sarti and others. In spring 1791 she succeeded Adriana Ferrarese as *prima buffa* of the Italian opera troupe in Vienna, making her début as Dorinda in Guglielmi's *La bella pescatrice* (a role she had created in Naples in 1789). She sang in Vienna throughout most of the following decade and a half, specializing in sentimental and cheerful heroines and creating, among others, the roles of Carolina in Cimarosa's *Il matrimonio segreto* (1792) and Mrs Ford in Salieri's *Falstaff* (1799). In 1796–7 she returned to Naples for an engagement at the Fiorentini; after her husband's death in 1798 she also toured in Germany (1809–10). The couple were financially secure, for at her death she left a villa at Penzig, outside Vienna (where, according to Schmidl, she had briefly operated her own theatre in 1807), and two houses in the city, as well as 2169 florins.

Tomeoni was not a singer of outstanding virtuosity. In writing for her, composers avoided coloratura and rarely exceeded an octave in range. She was noted for the simplicity of her singing, her ingenuous charm and her playfulness.

Tomeoni

(4) Erminia Tomeoni

(*b* Paris, after 1783; *d* after 1845). Singer and pianist, daughter of (2) Florido Tomeoni (not the wife of Dutillieu, as is sometimes claimed). She studied voice and keyboard at the Paris Conservatoire and, after singing and teaching piano in Paris, toured to Brussels and other cities. While performing in Florence in 1844 she received a contract from Mexico City, for which she embarked from Genoa in 1845. According to legend her ship was wrecked on the way there, and she, with other members of the company, drifted in an open boat for 17 days before coming ashore somewhere on the American coast.

(5) Nicola Felice Tomeoni

(*b* late 18th century; *d* Lucca, 17 July 1830). Priest and master cantor, whose relationship to the family is uncertain. He was Cappellano Benefiziato in Lucca Cathedral from 17 April 1800 until his death from apoplexy and was known for his ability in singing plainsong. He was also a man of letters and published several short books.

Fétis's account of (1) Pellegrino's life is so much at variance with present knowledge that it is tempting to hypothesize the existence of a second son, also named Pellegrino (*b* Lucca, 1759; *d* ?Florence, after 1800). This Pellegrino would have studied in Florence with the composer and sometime priest Roberto (later Luigi) Braccini, perhaps a student of Padre Martini, and would then have continued to live in Florence, supporting himself by teaching singing and accompaniment. However, no evidence for his existence has yet been found.

Tomeš [Thomish, Tomich, Tomick, Tomisch], František [François, Francesco] Václav [Flosculus, Floskulus]

(*b* Úpice, Bohemia, bap. 12 Oct 1759; *d* Prague, 6 April 1801). Czech instrumentalist and composer. According to a report by V. Kneer written about 1796 for Dlabač's *Künstler-Lexikon*, he studied the viola d'amore and other instruments at the Breslau foundation of the Hospitallers of St John of God, and after joining the order under the name Flosculus studied pharmacy at the University of Vienna, later serving as an apothecary at the order's monasteries. Apparently Tomeš also studied in Vienna with Haydn, who mentioned a pupil 'Tomisch' to his biographer Dies. In Haydn's first London notebook a 'Tomich' is listed as being active in London in 1792; in the previous year Tomeš's historical ballet *Orpheus and Eurydice* was performed in London at the King's Theatre (remarkably, Haydn's opera on the same subject, *L'anima del filosofo*, also written in 1791 for the theatre, was not staged during the composer's lifetime).

Tomeš's duets and trios, written in a belated *galant* style with occasional song- or dance-like themes of Haydnesque character, are in fact easy keyboard sonatas; the violin part is modest and the cello merely doubles the keyboard bass. The printed editions of op.1 bear a dedication to Haydn, under whose name they were later published. According to Dlabač, Tomeš was an outstanding performer on the viola d'amore.

MILAN POŠTOLKA/MICHAELA FREEMANOVÁ

Tomescu, Vasile (Damian)

(*b* Răduleşti, Ilfov district, 1 June 1929). Romanian musicologist. He studied at the Bucharest Royal Academy of Music (1948–53) with Zeno Vancea and Ion Dumitrescu, and took the doctorate in musicology with Chailley at the Sorbonne in 1970 with a dissertation on the history of musical relations between France and Romania. As editor (1953–64) and editor-in-chief (1964–89) of the Bucharest journal *Muzica*, editor of *Studii muzicologie* (1956–8), secretary of the Romanian Composers' Union (1963–89) and through his numerous writings, he has greatly stimulated contemporary Romanian musical life. He has written several monographs on Romanian composers (in which he analyses their contribution to Romanian culture) and has edited the works of Alfonso Castaldi, Paul Constantinescu and George Breazul. He has contributed to major music encyclopedias and read papers at several international conferences.

Tomich [Tomick, Tomisch], František Václav.

See Tomeš, František Václav.

Tomita, Isao

(*b* Tokyo, 22 April 1932). Japanese composer. From 1948 he studied composition privately with Kishio Hirao and Kojirō Kofune, and in 1951 entered Keio University, Tokyo, to continue his studies in fine arts and aesthetics. After winning the 1952 Asahi Newspaper Concours for *Fusha*, a theme song composed for the Japanese National Choral Association, he was hired as a staff composer for NHK Radio; a year before graduating from Keio in 1955, he was appointed director of Morinaga Angel Time, a programme for Radio Tokyo. He became well known in Japan for his music for NHK TV dramas.

While researching an echo machine in 1971 he invented *yuragi* (oscillating vibration), a technique that changed his musical direction and career towards electronic music. In 1974 he made his name internationally with his first recording of electronically-rendered classical compositions, *Snowflakes Are Dancing: the Newest Sound of Debussy*. Over the next decade he consistently produced best-selling recordings for RCA Records, including *Mussorgsky: Pictures at an Exhibition* (1975), *Firebird* (1976),

Holst: The Planets (1977), *Daphnis et Chloe* (1980) and *Grand Canyon Suite* (1981). In 1983 he began to concentrate on creating live performance events he calls 'Tomita Sound Clouds'. In Linz, Austria, in 1984 he participated in the multi-media spectacular show *Mind of the Universe*; similar events followed in Japan, Australia and the USA. *Hansel und Gretel* (1990) is an indoor sound cloud opera; *Genji monogatari* (1998) is a symphony using a combination of acoustic and electronic sounds.

Tomita's compositions often conceal symbolic meanings within a lyrical, popular style; his work with sound clouds, stereophonic and surround sound originates from his experiments in transforming electronic sounds to represent the natural sounds of daily life. His recordings have won several Grammy, Billboard and Japan Recording awards. He has written numerous theme songs for radio and television and for sports and live events; he has produced music for many films.

Tomkins

(1) Thomas Tomkins

(*b* St Davids, Pembrokeshire, 1572; *d* Martin Hussingtree, Worcs., bur. 9 June 1656). He was the son of Thomas Tomkins, who was a vicar-choral of St Davids Cathedral at least as early as 12 July 1571, and became organist and master of the choristers there in 1577. The younger Thomas was the last of three children born to his first wife, Margaret Pore; (2) John Tomkins, (3) Giles Tomkins and (4) Robert Tomkins were the product of his second marriage to Anne Hargest. In 1594 the family moved to Gloucester, where the elder Tomkins had become a minor canon; in 1610 he was appointed precentor, a post he occupied until 1625, two years before his death.

WORKS
Tomkins: (1) Thomas Tomkins

1. Life.

Little is known of Tomkins's early musical education. Presumably he gained his knowledge of the rudiments as a treble at St Davids. At some stage before he was appointed organist of Worcester Cathedral in 1596, he had evidently studied with Byrd, as witnessed by the dedication of his madrigal *Too much I once lamented* from the *Songs of 3.4.5. & 6. Parts*

(1622) to 'my ancient, & much reverenced Master, William Byrd'. The 1607 citation of his Oxford BMus degree notes that he had been '14 years student in music'; this would place the beginning of his formal instruction in 1593. Tomkins's investigation of music theory must have been significantly enhanced by the publication of Thomas Morley's *A Plaine and Easie Introduction to Practicall Musicke* (1597); he worked through Morley's treatise carefully, making a number of marginal annotations in his copy. Clearly he had made some impact in the capital by the turn of the century, since Morley included the madrigal *The fauns and satyrs tripping* in *The Triumphes of Oriana* (1601) alongside the work of more established court composers; he may well have become attached to the court in some capacity shortly thereafter, dividing his time, as did a number of his contemporaries, between a cathedral post (at Worcester) and the occasional demands of the Chapel Royal. Many of his anthems must have been written during the first decade or so of the 17th century, and it is possible that he was supplying material both for local consumption in Worcester and for the Chapel Royal. The anthem *Know ye not* was clearly intended for the funeral of Prince Henry in 1612.

The Cheque Book of the Chapel Royal contains no entry relating to Tomkins's actual appointment as a Gentleman in Ordinary, though he had been elected by 29 June 1620, when his signature appears in connection with a vestry meeting. In 1621 he succeeded Edmund Hooper as an organist of the Chapel Royal, where his colleagues included Orlando Gibbons (senior organist) and Nathaniel Giles (master of the choristers). Both men were dedicatees of madrigals the following year in Tomkins's *Songs*, each of which bears a specific dedication, allowing us to form quite a detailed impression of the composer's social circle. This included, in addition to Gibbons and Giles, the composers John Coprario, John Danyel, William Heyther (soon to become the first professor of music at Oxford) and William Byrd, the poet Phineas Fletcher and the anthologist Thomas Myriell, in whose manuscript collection *Tristitiae remedium* (1616) Tomkins's best-known anthem, *When David heard*, is to be found. Following Gibbons's early death in 1625, Tomkins presumably became senior organist (though this is not specifically recorded) and was responsible, along with Giles, Heyther and John Stevens, for Charles I's coronation music. In 1628 he was the victim of an administrative error by the then Bishop of Bath and Wells, who had drawn up a document appointing Tomkins 'Composer in Ordinary of the king's musick' in succession to Alfonso Ferrabosco (ii) at a salary of £40 a year; this was hastily revoked when it was discovered that the position had previously been promised to Alfonso Ferrabosco (iii).

From about 1630 Tomkins's appearances at the Chapel Royal probably became less frequent. In January 1642 his wife Alice Hassard, whom he had married in 1597, died, and thereafter he seems to have become increasingly involved in cathedral affairs at Worcester, perhaps as a source of solace. In 1646 Worcester surrendered to the parliamentary forces and cathedral services were effectively discontinued, though Tomkins continued to reside in the cathedral close until 1654, when he retired to live with his son Nathaniel in the nearby village of Martin Hussingtree. The church registers there state that 'Mr Thomas Tomkins, organist of the King's Chapel and of the Cathedral Church of Worcester, was buried the

9th day of June, 1656'. This rather matter-of-fact epitaph perhaps reflects contemporary estimation of the composer: worthy, but not especially outstanding or original. It is perhaps significant that, while 17th-century portraits of Bull and Gibbons survive in the Oxford music faculty, there is none of Tomkins.

Tomkins: (1) Thomas Tomkins

2. Works.

Of Tomkins's five complete services in *Musica Deo sacra*, the first and second are straightforward Short settings for full chorus, rather in the manner of Tallis's 'Dorian' Service. The third, contained also in the Batten Organbook (formerly in St Michael's College, Tenbury), is by far the most extensive, rivalling in its complexity the Great Service of Byrd, and written probably for the Chapel Royal. It is a verse setting, incorporating sections for a wide variety of solo vocal combinations of three, four, five and six parts alternating with the full choir, which divides on occasion into as many as ten polyphonic parts. Especially noteworthy is the skilful handling of the intractable *Te Deum* text. Its broad paragraphs are marked out by strong cadences, and within these sections Tomkins keeps the musical interest alive by means of a variety of techniques and textures (essential if such a long text without obvious opportunities for textual or musical rhyme is not to become diffuse). The *Magnificat* and *Nunc dimittis* – still regularly heard in celebrations of choral Evensong – are on a more intimate scale. In the *Magnificat*, for instance, the six solo voices are rarely heard together, but interact in smaller groupings, subtly shifting between darker and lighter colour effects according to the demands of the text. Tomkins's fourth and fifth services (likewise verse settings) survive only in *Musica Deo sacra*; no manuscript copies are known, perhaps indicating that they were not widely circulated. Each one bears passing resemblance to Byrd's second service, especially at the openings of the *Magnificat* and *Nunc dimittis*. The two other sets of evening canticles survive in manuscript, but too incompletely for reliable restoration.

Tomkins's anthem texts come mainly from the book of *Psalms*; other sources include the Old Testament, *Revelation*, collects, and the Communion and burial Services in the Book of Common Prayer. His word-setting is neither too bland nor too dramatic, proving generally appropriate both in sense and accentuation. (The underlay in *Musica Deo sacra* is frequently unreliable; had Tomkins lived to see his works through the press he would surely have taken care to correct anthems such as *Thou healest the broken in heart*, in which the underlay is very poor indeed.) A point for which Tomkins has been criticized is the degree of word-repetition in the anthems, particularly in final sections. He undoubtedly had a genuine aptitude for writing climactic perorations, which frequently attain a very high musical level, as in *He that hath pity on the poor*. Sometimes, though, the sheer virtuosity of the text-setting leads to structural miscalculations. In *Lord, enter not into judgment*, for example, the natural division of the text conflicts with Tomkins's musical treatment, for whereas the text itself ('Lord, enter not into judgment with thy servant; for in thy sight shall no man living be justified') clearly divides into two, the music is in three sections, the third of which is a climactic peroration on 'be justified', upsetting both the sense of the text and the overall proportions.

Full anthems, such as *Arise, O Lord, into thy resting place* and *Great and marvellous are thy works*, display a sure feeling for tonal design. Some commentators have noted an overuse of sequential repetition; nevertheless, in such works as *Great and marvellous are thy works* the device is employed to purposeful effect. While Tomkins's anthems rely strongly on imitation between the voice parts, musical expression is never sacrificed to mere technical virtuosity. Even in *Turn thou us*, a canon 4 in 1, the thematic, rhythmic and textural variety together define a structure that unfolds quite independently of the contrapuntal device. Possibly the most famous of Tomkins's anthems is *When David heard*, a five-part piece found in the 1622 *Songs*, as well as in *Musica Deo sacra* and two 17th-century manuscript sources. Among the many fine passages in this passionate setting of King David's lament from 2 *Samuel* xviii33 is the imitation beginning at 'would God I had died for thee', in the second part of which Tomkins progressively expands the opening interval through a minor 3rd to a perfect 4th, culminating in a minor 6th. The five-part *Domine tu eruisti animam* appears in *Musica Deo sacra* with Latin and English texts ('Why art thou so full of heaviness'). The Latin fits the music more convincingly than the English, which may therefore have been a later contrafactum, making this piece Tomkins's only surviving Latin motet. The occasion for which it was written is not known. Contrafacta are not unknown elsewhere in Tomkins's sacred music. The five-part *Holy, holy, holy* in *Musica Deo sacra* is a contrafactum of *See, see, the shepheards queene* in the 1622 *Songs*, while the madrigalian idiom of his three-part *O Lord, how glorious are thy works* and *The hills stand about Jerusalem* suggests that these anthems may also be contrafacta of secular works now lost.

Roughly half of the anthems are in verse form. All except *Rejoice, rejoice* begin in the usual way with a solo entry, continuing with full and solo sections in alternation. Within this simple framework Tomkins introduces considerable variety of scoring and structure. While *Behold, I bring you* contains just two sections, for 'meane' and ten-part chorus (ex.1), *Turn thou us* has no fewer than 14 solo and full sections. *O Lord, let me know mine end* is one of the verse anthems that evidently enjoyed wide circulation in their day, to judge from the ten surviving manuscript sources for it, in addition to that in *Musica Deo sacra*; others, such as *O that the salvation were given*, are known only from that posthumous publication.

The madrigals in Tomkins's 1622 *Songs* reveal, for the most part, his conservative streak. Published at a time when the vogue for the English madrigal was in decline, these pieces lack the freshness of expression found earlier in the work of Morley, Wilby and Weelkes, and display no evidence of an awareness of contemporary Italian techniques. The three-part works are remarkably unadventurous in harmony and, stripped of their words, would serve well as contrapuntal exercises (as, indeed, would the three-part anthems). In the four-part *Weepe no more, thou sorry boy* Tomkins injects some appropriate contrasts of mood at the line 'laughs and weeps', engineered by the juxtaposition of chord progressions whose roots are separated by a 3rd (ex.2a); in its second part, *Yet againe, as soon revived*, the flux of emotions at 'turn thy tears to weeping joy' is suggested by harmonic sequence in the music (ex.2b). Seven of the ten five-part madrigals are effectively balletts, with fa-la refrains, including *Too much I once lamented*, dedicated to Tomkins's 'ancient, & much reverenced

Master', Byrd. Tomkins's six-part madrigals are notable for their flexibility of vocal scoring. Their fluid textures display a remarkable sophistication in the handling of three- and four-part polyphony within the six-voice framework, as illustrated by *It is my wel-beloveds voice*, in which scarcely two consecutive bars employ identical vocal combinations. *Woe is me*, dedicated to his half-brother John, is remarkable for its dark sonorities and predominantly low register, aptly reflecting, in its telling use of the minor mode and grating semitonal dissonances, the sober words of Psalm cxx, 'Woe is me! that I am constrained to dwell with Mesech; and to have my habitation among the tents of Kedar'. In *Musicke devine*, written for Dr William Heather, the association of words and notes is equally close, and Tomkins loses no opportunity for appropriate musical representation of such phrases as 'Music divine, proceeding from above … in this her heavenly harmony, where tuneful concords sweetly do agree'. The first of these, for instance, is suggested not merely by the octave leap on 'proceeding from above', but also in the sequential ascents in the alto, second tenor and bass parts, climbing from G major through the sharper regions of E and A.

Tomkins was in the habit of dating his compositions, and all but a handful of his 70-odd keyboard pieces are contained in an autograph (*F-Pc*) compiled during the last decade of his life. Others, such as the well-known Pavan (MB, v, no.56, surviving also in versions for consort) and *Worcester brawls*, are present in early 17th-century manuscripts such as the Fitzwilliam Virginal Book. The keyboard works include fugal forms (offertory, verse, voluntary, fancy), plainsong settings (*Clarifica me Pater*, *In Nomine*, *Miserere*) variations, hexachord fantasias, grounds and the established dances (pavan, galliard). Tomkins excelled in all these types. In some respects he appears to have modelled his keyboard pieces on those of Byrd, particularly as regards the densely contrapuntal design of his pavan and galliard strains and their tendency towards thematic interrelationships between successive strains. Like Byrd, he composed settings of the *Clarifica me Pater* plainsong (one of only seven that survive in the entire corpus of English virginal music), the odd hexachord, *Ut, mi, re* and variations on *Fortune my foe*. In all such cases he avoids bland duplication of Byrd's formal procedures (which he must have recognized from first-hand knowledge of the pieces concerned), devising novel structures without departing from the 'serious' idiom of his teacher. In the plainsong setting *Clarifica me Pater*, for instance, Tomkins's imitative opening is modelled on that of Byrd's second setting (MB, xxviii, no.48), but with significant alterations to the temporal placement of successive thematic entries; likewise, in Tomkins's variations on the song *Fortune my foe* his overall approach is indebted to that of Byrd's own setting (MB, xxvii, no.6), but the handling of passage-work and texture produces a more definite articulation of the mid-point half-cadence than Byrd had sought in his variations, leading to quite a different kind of piece. The function of this corpus of keyboard pieces is unclear. None of the plainsong settings can have had any liturgical function by the 1640s and 50s, of course, and they were presumably composed as 'demonstration' pieces for his own satisfaction (or for didactic use). Perhaps the initial stimulus came from close study of similar works by Redford, Preston and others found in an important 16th-century manuscript (*GB-Lbl* Add.29996) once owned by Tomkins (see illustration).

One detects an air of resignation in much of Tomkins's late keyboard work, especially, perhaps, in the *Sad Pavan: for these distracted times*, dated 14 February 1649, a memorial to the recently executed Charles I. The carefully crafted fugal pieces and the dances are the most successful, and thoroughly deserve the description 'excellent for the matter' that Tomkins himself accorded certain keyboard works by Byrd in the index to his autograph manuscript. Elsewhere the quality of keyboard passage-work is, at times, routine, too frequently resorting to unimaginative scalic patterns. While Tomkins clearly knew Bull's keyboard works (described in the same Tomkins autograph as 'excellent for the hand'), he did not satisfactorily absorb the virtuoso keyboard idiom. One can readily agree with Stephen Tuttle's assessment of Tomkins's keyboard works: 'With the death of Thomas Tomkins in 1656 the school of English virginalists comes to a close … Tomkins, the last of the school, returns at the end of his life to the style of his master [Byrd], the first, and perhaps the greatest, of the virginalists' (MB, v, p.xiii).

Tomkins's output of consort music – a total of 35 pieces – is small by comparison with that of his contemporaries Coprario, Ferrabosco (iii), Ward and Jenkins. It apparently circulated in only a handful of manuscripts principally associated with the region around Gloucester and Worcester. This suggests that this aspect of Tomkins's work was intended only for domestic entertainment among his immediate circle within the cathedral close at Worcester; his friends there included Humphrey and John Withy, both of whom are named in one manuscript source of the five-part pavans (*GB-Ob*). A curious feature of Tomkins's consort repertory is the paucity of four-part pieces; only three items survive, of which two (*Ut, re, mi* and a pavan) are arrangements of pieces originally for keyboard and five-part consort respectively. The pavan's earliest source is Thomas Simpson's *Opusculum neuwer Pavanen, Galliarden* (Frankfurt, 1610), but it also survives in several English and Continental versions for keyboard (one is in the Anders von Düben tablature, *S-Uu*). Perhaps its popularity was in part due to its final section, in which the falling chromatic motive, an emblem of lamenting common to early 17th-century English pieces in a variety of genres, is prominently announced throughout the polyphonic texture (ex.3). The three-part pieces comprise two *In Nomines*, one of which presents the cantus firmus in a trochaic pattern in the bass, and 15 fantasias for a variety of scorings. One of these (MB, lix, no.12) is a canon 3 in 1 which weaves its way somewhat drily around the complete chromatic compass. Two others (ibid., nos.5 and 9) incorporate triple-time sections perhaps suggested by the three-part fantasias of Gibbons, to which Tomkins's pieces show occasional thematic resemblances. The five-part music consists entirely of pavans (including some incomplete ones), while the six-part output, containing arguably Tomkins's best consort music, offers a pavan–galliard pair and four fantasias conceived on a majestic scale, comparing favourably with similar consorts by Byrd and Gibbons.

Tomkins

(2) John Tomkins

(*b* St Davids, 1586; *d* London, 27 Sept 1638). Half-brother of (1) Thomas Tomkins. He was appointed organist of King's College, Cambridge, in 1606 having previously been a scholar of the college; he took the MusB in 1608. In 1619 he moved to London as organist of St Paul's and in 1625 was appointed a Gentleman Extraordinary of the Chapel Royal. In July 1627 he was sworn in as a Gentleman in Ordinary of the chapel and, together with his brother (3) Giles Tomkins, was acting as joint organist of the chapel on the state visit to Scotland in 1633. A tablet in the north aisle of the old St Paul's Cathedral recorded his death. To judge from his surviving works, John was a conservative composer, very much in the manner of his more illustrious half-brother. References to John, as 'Thomalin', occur in the poetry of Phineas Fletcher, his near-contemporary at King's College. William Lawes's elegy on his death was printed in 1648[4].

WORKS

Cantate Domino, motet, 7vv, *Lbl*; Gloucester, psalm tune, 1633[1]

O thrice blessed, madrigal, 5vv, *Lbl*; John come kiss me now, kbd, *Lbl*

Tomkins

(3) Giles Tomkins

(*b* St Davids, after 1587; *d* Salisbury, 1668, before 30 Nov). Brother of (2) John Tomkins. He became organist of King's College, Cambridge, in 1624, and in 1629 of Salisbury Cathedral, after a long dispute upon which the king himself had been asked to pronounce. In April 1630 he was appointed Musician for the Virginals in the King's Musick, and in 1633 he went as organist with the Chapel Royal on the Scottish visit. In 1641 he was listed as a musician for the lutes, viols and voices, and took up these appointments again after the Restoration. A warrant for livery issued on St Andrew's Day 1668 notes that Giles was dead by that date. The words of two verse anthems by him, *Hear my crying, O God* and *In thee, O Lord, have I put my trust* are in the 1630 Chapel Royal anthem book (*GB-Ob*); the music of the latter (incomplete) is in the library of St John's College, Oxford.

Tomkins

(4) Robert Tomkins

(*fl* 1628–41). Brother of (2) John Tomkins. He succeeded Robert Kindersley as a musician for the consort. In subsequent entries in the Lord Chamberlain's accounts he is described as a viol player, and in a list dated 1641 he is grouped with the musicians for the lutes, viols and voices (as is his brother (3) Giles Tomkins). He may have died during the Commonwealth, since at the Restoration in 1660 his place had been taken

by Henry Hawes. The words of all his extant anthems are in the Chapel Royal wordbook of anthems (1630). Two full and six verse anthems remain (no music survives except where stated): *Blessed be the Lord God* and *O Lord, grant the king a long life*; *Hear me, O God* (incomplete), *Hear, O Lord, and have mercy*, *Like as the hart* (incomplete), *O God, when thou wentest forth*, *O let me hear thy loving kindness* and *Thou art fairer than the children of men* (incomplete).

Tomkins

(5) Nathaniel Tomkins

(*b* Worcester, 1599; *d* Martin Hussingtree, 20 Oct 1681). Son of (1) Thomas Tomkins and Alice Hassard. He studied at Balliol College, Oxford, where he took the degree of BD in 1629. On 15 May that year he was appointed canon of Worcester Cathedral, evidently at the behest of the future Archbishop William Laud, for whom he had acted as an agent against the then Bishop of Lincoln, John Williams. In his *Memorial* (1693) of Williams, John Hacket claimed that 'Mr N.T., a musician and a Divine – one that could make better music upon an organ than upon a text … had leave to use the whole [of Williams's] house, to go into the bishop's bedchamber, or study … [he] transcribed some letters which he found and sent them to an enemy [Laud]' (Vining, 1992). He probably edited his late father's *Musica Deo sacra* (1668), of which he was inspecting proof sheets as early as 1665. Nothing of Nathaniel Tomkins's own music survives.

Tomkison, Thomas

(*d* London, before 23 Dec 1853). English piano maker. He worked in Dean Street, London, from December 1798 to June 1851, and married Mary Dolling at St Anne's, Soho, on 28 June 1800. Although stamped with a serial number, his pianos were rarely dated. An early square piano with double action and 12 'additional notes' striking up through a hole at the back of the soundboard has a round cartouche on the nameboard marked 'Thos Tomkison Grand and Square PIANO FORTE Maker Dean Street, SOHO'. It has the number 1796 to the left of the keyboard. It rests on a trestle and has a pedal mechanism, the tuning-pins being on the right. As with later square pianos, this instrument has two fretwork panels in the nameboard, but no fretwork at the back right-hand corner inside.

By the time the serial numbers in his square pianos reached 2223, the instruments were marked 'Thomas Tomkison Dean Street Soho MAKER to his Royal Highness the Prince Regent'. No.5401 is marked 'Maker to His Majesty', and may therefore be dated after 1820. Square pianos from this period usually had six turned legs and a slim matching pedal. Eventually, after he had built more than 7000 instruments, he began to brace his pianos and constructed them with heavier cases, four legs and a compass of six octaves. By the time he had built 9000 instruments Tomkison had designed a strong metal plate for reinforcement.

His surviving grand pianos are particularly fine. They have their own serial number sequence and the majority have a compass of six octaves. A remarkable example is now in the Colt Clavier Collection, Bethersden, Kent. This instrument (serial no.1329) seems to have been made for the Brighton Pavilion; inside there is an inscription in Indian ink 'For the King, December 21st 1821', and a Nash painting shows it in one of the rooms of the Pavilion. Another rosewood grand piano is housed at the Bethnal Green Museum, London. Upright pianos by Tomkison are rare but a five-and-a-half-octave one (no.235) is in the Brussels Conservatory collection.

<div align="right">MARGARET CRANMER</div>

Tomlinson, Ernest

(*b* Rawtenstall, 19 Sept 1924). English composer. He was a choirboy at Manchester Cathedral (1933–9), and from 1941 studied composition at Manchester University along with the organ, clarinet and piano at the RMCM. RAF service as a wireless mechanic from 1943 to 1946 interrupted his studies, and he finally graduated in 1947. He moved to London and obtained posts as an organist in a Mayfair church and as a copyist, and then in 1949 as a staff-arranger for the music publisher Arcadia and Mills.

Tomlinson's first compositions, from his early teens, were mainly choral pieces and songs, but from 1949 his melodic gift and colourful scoring made it natural to turn to light orchestral music, with a continuing output of suites and single items extensively broadcast. In 1955, following a BBC commission to write the music for a radio play, 'The Story of Cinderella', he decided to give up arranging and earn his living through composition. As a light music composer he displays the heritage of Coates more than any contemporary, although using to a greater extent fresh and invigorating folk and popular melodies. His years in popular arranging resulted in the prize-winning *Sinfonia '62* and other symphonic jazz works.

He has conducted many orchestras, notably his Northern Concert Orchestra, and latterly choirs. A council member of the Composers Guild of Great Britain and its chairman in 1964, he was for 29 years a director of PRS. In 1984 he founded the Library of Light Orchestral Music, and has contributed a substantial essay on light music as the foreword to P.L. Scowcroft: *British Light Music: a Personal Gallery of Twentieth Century Composers* (London, 1997).

PHILIP L. SCOWCROFT

Tomlinson, Gary A(lfred)

(*b* West Point, NY, 4 Dec 1951). American musicologist. He studied at Dartmouth College (BA 1973) and undertook graduate work at the University of California, Berkeley (MA 1975), taking the doctorate there in 1979 with a dissertation on the humanist heritage of early opera. He began his teaching career at the University of Pennsylvania in 1979, becoming chair of the music department in 1986 and professor of music and comparative literature in 1989. He has also held visiting appointments at Duke, Princeton and Florida State Universities and the Folger Shakespeare Library. Tomlinson specializes in late-Renaissance music (especially that of Italy), opera, music and New World colonialism, and cultural and historiographic theory. In his writings he has moved from the origins of opera through the works of Monteverdi to the operas of Verdi. He has also prepared the seven-volume facsimile edition, *Italian Secular Song 1606–1636* (New York, 1986–7). Tomlinson was one of the first musicologists to be named a MacArthur Fellow (1988–93).

PAULA MORGAN

Tomlinson, John

(*b* Oswaldtwistle, Lancs., 22 Sept 1946). English bass. After studying at Manchester, he began his career with Glyndebourne Touring Opera as Colline in 1972, and as Leporello and Seneca for Kent Opera. He joined the ENO in 1975 and sang a large repertory including Talbot (*Maria Stuarda*), King Mark, Fasolt, Pogner, Bluebeard, Gounod's Méphistophélès (to arresting effect in Ian Judge's staging), Baron Ochs (a subtle, detailed portrayal in Jonathan Miller's production) and Fiesco. He made his Covent Garden début in 1979 as Colline, and has subsequently sung there Figaro, Leporello, Timur and, unforgettably, the Green Knight in the première of Birtwistle's *Gawain* (1991; see illustration), which he also recorded. Other successes at Covent Garden include astonishingly vivid portrayals of Claggart and King Fisher, Hans Sachs and Wotan, both vocally imposing (if occasionally strained) and acted with tremendous panache. For Opera North he was praised as Boris Godunov, Attila and Philip II. At Bayreuth he was a massively powerful, anguished Wotan in Harry Kupfer's controversial staging (recorded on disc and video). Tomlinson has also appeared in his Wagner roles at the Berlin Staatsoper and at Munich. He is a noted oratorio singer, particularly in Handel. His other recordings include *Messiah*, the title role in *Hercules*, Don Alfonso, Titurel and Bartók's Bluebeard and *Cantata profana*. The individuality and authority of his acting is never in doubt: it is supported by a magnificently resonant voice, used unflinchingly if not always with complete control.

<div align="right">ALAN BLYTH</div>

Tomlinson, Kellom [Kenelm]

(*b* ?1693; *d* ?1754). English dancing-master and choreographer. He was apprenticed to the London dancing-master Thomas Caverley (*c*1648–1745) from 1707 to about 1714, and he studied theatrical dance with René Cherrier (*fl* 1699–1708). Between 1708 and 1721 he compiled a manuscript notebook (*NZ-Wt*), which includes an early notation of Caverley's *Slow Minuitt* and six theatre dances of his own (five with music by Jean Baptiste Loeillet (i) and one with music by Tomlinson himself), three of which were designed as an entr'acte for a production of *The Island Princess* (Lincoln's Inn Fields, 1716) and later revived with additions as *An Entertainment of Dancing for the Stage* (1721). Six more of Tomlinson's dances, set to music by himself, Loeillet and Babell, were published annually between 1715 and 1720 (and as a collection in 1720) and survive as engraved notations. In 1718 Tomlinson broke his links with the music publisher John Walsh and started to produce and sell his own works independently. By 1728 he had completed the text of his treatise *The Art of Dancing* (published in two volumes, London, 1735, 2/1744; repr. 1970 with *Six Dances*, 1720); illustrated with fine engravings, it includes valuable discussion of the execution and timing of dance steps and describes the steps and etiquette of the formal ballroom minuet. An engraving of Tomlinson, by F. Merellon la Cave after a painting by Van Bleeck, was issued in 1754.

Tommasini, Vincenzo

(*b* Rome, 17 Sept 1878; *d* Rome, 23 Dec 1950). Italian composer. He studied the violin, the piano and composition at the Liceo di S Cecilia, Rome, and classical philology at Rome University. He then went to Berlin, where he produced a critical edition of Xenophon's *Peri hippikēs* (Berlin, 1902) and attended Bruch's class at the Hochschule für Musik. His sympathies, however, soon gravitated towards the French tradition: in 1907 he wrote the first important Italian article on Debussy. His wealth enabled him to travel widely on both sides of the Atlantic and, though based in

Rome throughout the latter part of his life, he became notorious for his elusiveness. Nominally associated with Casella's Società Italiana di Musica Moderna (1917–19), he took little active part in the musical battles of the time; nor did he make much effort to push his music before the public – thus failing, even in Italy, to win the attention he deserved.

Tommasini's first important works date, significantly, from shortly after his Debussy article: already in the F major Quartet he was transforming Debussian techniques in a personal way, with chromatically side-slipping lines and a soft, wistful poetry of his own. Among his first mature compositions the orchestral diptych *Chiari di luna* remains, in its reticent way, one of the best Italian examples of post-Debussian impressionism, harmony and orchestration achieving a hypersensitive refinement. While his own music of 1916–18 is less distinguished, the success of his arrangements of Domenico Scarlatti sonatas for the ballet *Le donne di buon umore*, toured internationally by the Ballets Russes, prompted its impresario Diaghilev to use 18th-century sources again in his ballet *Pulcinella*, for which Stravinsky adapted music by Pergolesi and others. Tommasini's interest in music of the remoter past surfaced again, three years later, in the beautiful orchestral poem *Il beato regno*, based on Gregorian melodies. Here the chromaticisms of Tommasini's earlier works are less pervasive, temporarily yielding to a luminous diatonicism with many streams of parallel 5ths. Again the subtly evocative orchestration is an outstanding feature, as is the case also in *Paesaggi toscani*, which weaves folk melodies into a sophisticated musical fabric not quite in keeping with their nature.

Tommasini's compositions from 1926 onwards often show neo-classical tendencies, paralleling (albeit in more subdued terms) those in Casella's music of the period. In none of these pieces did he quite recapture the spontaneity of *Chiari di luna* or *Il beato regno*, and it is perhaps significant that he came nearest to doing so in unguarded moments when he reverted to his earlier impressionism, for example in the languid, plaintive outer sections of the third ('Valzer lento') of the *Quattro pezzi* for orchestra. Even his more formalized pages, however, usually retain melodic and harmonic characteristics from his earlier period, which give the music a personal stamp. Although the music of Tommasini's last years shows no fundamental change in approach, the symphonic study *La tempesta* is unwontedly fierce in some of its dissonances, while the opera *Il tenore sconfitto* reveals a flair for ironic comedy, such as had been only partly developed in the early, rather Wolf-Ferrarian *Uguale fortuna*.

WORKS

(selective list)

stage

Ops: Medea (3, Tommasini), 1902–4, Trieste, Verdi, 8 April 1906, unpubd; Amore di terra lontana (Tommasini), 1907–8, unperf., unpubd; Uguale fortuna (scherzo lirico, 1, Tommasini, after F. de Nion), 1911, Rome, Costanzi, 20 Feb 1913; Dielja (G. Denis), 1930s, unperf., unpubd; Il tenore sconfitto, ovvero La presunzione punita (1, V. Brancati), Rome, Eliseo, 24 Oct 1950

Ballets: Le donne di buon umore (after C. Goldoni), 1916, Rome, 1917, suite, 1920

[orchestration of D. Scarlatti: sonatas]; Le diable s'amuse, 1936, New York, 1939 [on motifs by Paganini]; Tiepolesco (E. Prampolini, Alanova), Naples, 1945

JOHN C.G. WATERHOUSE/R

Tomowa-Sintow, Anna

(*b* Stara Zagora, 22 Sept 1941). Bulgarian soprano. Her mother was an opera chorus singer and she was involved in opera from an early age as Butterfly's child. Her studies were at the Sofia Conservatory with Gyorgy Zlatew-Tscherkin; she then sang small roles at Leipzig, where she made her main début as Abigaille in 1967. She built her repertory mainly on Italian roles, and in 1972 became a member of the Berlin Staatsoper. The next year she was engaged at Salzburg for the première of Orff's *De temporum fine comoedia* under Karajan, who helped promote her international career and developed her Mozart and Strauss repertory. She made her American début at San Francisco as Donna Anna in 1974, and played the same role at the Metropolitan in 1978, following débuts at Covent Garden as Fiordiligi (1975) and at the Vienna Staatsoper as Countess Almaviva (1977); she returned to Covent Garden in 1990 as Yaroslavna (*Prince Igor*). Her beautifully moulded spinto soprano with its creamy tone has also been heard to advantage in roles such as the Empress (*Die Frau ohne Schatten*) and Countess Madeleine in *Capriccio*; she is also a splendid, forceful Tosca. Tomowa-Sintow's many distinguished opera recordings include Donna Anna, Countess Almaviva, the Marschallin and Elsa, all under Karajan, Ariadne under Levine and Heliane in Korngold's *Das Wunder der Heliane*. She is also an admired concert singer and has recorded (with Karajan) such works as Beethoven's Ninth Symphony and *Missa solemnis* and Brahms's *German Requiem*.

NOËL GOODWIN

Tomter, Lars Anders

(*b* Furnes, Hamar, 30 Nov 1959). Norwegian viola player. He started learning the piano at five and at eight went to Michael Oustad for violin lessons. At the Norges Musikkhøgskole in Oslo and the State Academy of Music he studied the violin and viola from the age of 12 with Leif Jorgenson and made his Oslo début at 17, playing both instruments in the same programme, including the première of Johan Kvandal's Elegy and Capriccio for solo viola. From 1977 to 1980 he studied at the Berne Conservatory with Max Rostal. He then returned to Oslo and at 22 decided in favour of the viola. He was awarded a special prize at the 1984 Budapest competition for his performance of the Bartók Concerto and in 1986 won the Maurice Vieux Competition in Lille. He spent two years working with Sándor Végh in Salzburg and in 1987–8 toured the USA and Germany with Iona Brown and the Norwegian Chamber Orchestra, of which he is principal viola. His partnership with Brown in Mozart's Sinfonia concertante has become celebrated and has now been recorded. Tomter is a powerful player and a considerable virtuoso with a fine, flexible tone. His repertory takes in works by Schnittke, Braein, Murail, Jolas, Denisov, Henze, Yun, Plagge, Thommesen, Martin and Penderecki. Egil Hovland has written a piece for him. He and the pianist Leif Ove Andsnes run a chamber music festival at Risør in southern Norway and are joined in a piano quartet by Arve Tellefsen and Truls Mørk. In 1999 they brought some

of the Risør programmes to the Wigmore Hall in London. Tomter also conducts the Risør Festival Strings and frequently appears in concert with the pianist Håvard Gimse. He is a professor at the Norges Musikkhøgskole and has prepared his own editions of such works as Paganini's Sonata. His recordings include the Brahms sonatas (with Andsnes), Britten's *Lachrymae* and the Walton Viola Concerto. He plays a 1590 viola by Gasparo da Salò thought to be in better condition than any other example of the Brescian master's work.

TULLY POTTER

Tom-tom.

A name loosely applied in the West to certain African, Eastern and Amerindian drums, but now generally applied to the cylindrical rod-tensioned drums with wooden shells used in Western jazz and pop bands. In the Hornbostel and Sachs system they are classified as membranophones. Tom-toms are essential to the modern jazz drummer, who uses them in sets of three or more. They may be single- or double-headed and are graduated in size from 25 to 46 cm in diameter. The heads, which are mounted on a hoop, are of plastic, less commonly of calfskin. The drums are normally mounted on stands or frames adjustable for height and angle. In jazz and pop side-drum sticks are used, the tom-toms usually being combined with snare drum, cymbals and foot-pedal bass drum (*see* Drum kit).

There are several other types. The Chinese tom-tom is a convex-shelled drum with a thick vellum head nailed on, often decorated with Chinese characters, dragons, etc. Drums range in depth from 12 cm to as much as 90 cm; the head diameter is usually between 25 and 45 cm. The Chinese tom-tom was used in early drum sets and is the forerunner of the modern Western instrument. It has a distinctive sound, rather 'darker' or 'flatter' than that of the later instrument. Concert toms are single-headed drums developed for concert work, usually used in a set of eight; the heads range from 15 to 41 cm in diameter. They are easily transported, as the six smaller drums can be packed into the two largest. Ranges of one or two chromatic octaves have also been made. They have been largely superseded by the more easily tuned Roto-toms, which resemble tunable drum heads: the counter-hoop of each drum (seven sizes are available with head sizes ranging from 15 to 46 cm) is connected by a light frame to a central spindle, and pitch is raised by turning the drumhead clockwise and flattened by turning it anticlockwise. Wood tom-toms have heads of wood (in the Hornbostel and Sachs system they are classified as idiophones). Kolberg makes four sizes, ranging from 25 to 30 cm in diameter. As there is a drum-shell resonator, the sound is darker and less 'sharp' than that of a woodblock.

Tom-toms have appeared regularly in orchestral and chamber music: Cage used 12 in *She is Asleep* (1943); Britten called for three tom-toms, four

Chinese tom-toms and a roto-tom tuned to *c'* in *Death in Venice* (1973); Tippett used two octaves of roto-toms tuned *c–c''* in *Byzantium* (1990); Henze used six tom-toms in *Appassionatamente* (1993–4); and Birtwistle called for seven conventional tom-toms, seven high tom-toms and four very low ones in *The Mask of Orpheus* (1973–84).

JAMES BLADES/JAMES HOLLAND

Ton (i)

(Ger.; pl. *Töne*).

A term used in medieval and Renaissance German literature to describe a verse form together with its melody. The verse form includes the entire metrical and poetic scheme of the stanza. Several poems could be, and were, written to the same *Ton*, particularly from the 14th century onwards. Among the Meistersinger it was common practice to write poems on a received *Ton*, usually by another Meister: Hans Sachs (1494–1576), perhaps the most famous of the Meistersinger, wrote 4286 Meisterlieder in only about 275 *Töne*, of which he composed 13 himself.

This is more clearly illustrated by reference to the example of Klingsor's *Schwarzer Ton*. Ex.1 shows the four surviving complete versions of the melody and their dates (for facsimiles of three of the versions *see* Sources, MS, §III, 5, figs.26, 27, 28). In spite of the enormous chronological distance between the three manuscripts, the four versions agree melodically in many details: all the versions evidently derive from the same melodic scheme, and the differences may be explained by the influence of oral transmission as well as by changes of melodic style over the centuries.

The metrical scheme and the rhyme scheme of the *Ton* are inseparable from the melody. They may be illustrated as in Table 1. These remained practically unchanged through all the centuries in which the *Schwarzer Ton* was used. The musical structure also remained unchanged, characterized by the repeat of the entire *Stollen* melody (*A*) at the end of the *Abgesang* (the so-called third *Stollen*).

The *Schwarzer Ton* has an uncommonly long and interesting history. Its melody and poetic form arose around 1235. In the course of the 13th century it became the *Ton* for a whole series of strophic poems belonging to the large complex of the *Wartburgkrieg* (which was also the basic material for Wagner's *Tannhäuser*). About 1283–90 the anonymous epic *Lohengrin* was written with 767 stanzas in the *Schwarzer Ton*. At the same time the *Spruchdichter* Boppe used the *Ton* for several parodistic *Spruch*-stanzas. Numerous Meisterlieder from the 15th century on the most varied topics survive in this same *Ton*. (Wachinger lists those up to about 1520.) The *Ton* was still known and popular in the 16th and 17th centuries: Hans Sachs wrote no fewer than 22 poems on it between 1537 and 1556. The last known reference is in the records of the Nuremberg Meistersinger guild in 1639 when the *Ton* was already some 400 years old. However, Wagenseil included it as one of the *Töne* still in use at Nuremberg in 1697; and only with the gradual end of Meistergesang in the 18th century was the *Schwarzer Ton* finally forgotten.

Frequently used *Töne* received names by which they could be cited. Normally these names were taken from the content or from the beginning of the poem for which the *Ton* was originally created, or that of the best-known poem in that *Ton*. From the 15th century the name of the *Ton* was usually given at the heading of the poem, e.g. 'In dem Ton: Ich stund an einem Morgen' (after the opening of a song surviving in many 16th-century sources), or 'In des Berners Weise' (using a *Ton* belonging originally to an epic poem on Dietrich von Bern). With the Meistersinger it was normal for the name of the *Ton* to be accompanied by the name of its composer: 'Walther von der Vogelweide, Feiner Ton'; 'Heinrich Frauenlob, Langer Ton'; 'Regenbogen, Grauer Ton'; 'Hans Sachs, Rosenton'; 'Ambrosius Metzger, Veneris Lustgartenweis'.

The use of the word 'Ton' in this sense goes back to the 11th century, but it fell into oblivion in the 18th century and was brought back into use in the philological and musicological literature of the 19th century. Middle High German 'dôn' (or *tôn*) in this sense is derived from the Latin *tonus*. (Other meanings of the word have other etymologies.) In this sense, too, the term 'Weise' (or *wîse*) was synonymous with *Ton*.

The concept of *Ton* as a stanza form together with all its appurtenances arises largely from the importance of the stanza in medieval German poetry. Here it played a greater role than in more recent literature. The following were written in stanzas: (1) many epics, and in particular almost all the heroic epics surviving in written form since the beginning of the 13th century – long poems that tell primarily of events at the time of the migration of the nations (*Nibelungenlied*; *Kudrun*; the many epics about the deeds of Dietrich von Bern) together with other epic poems (Wolfram von Eschenbach's *Titurel*, Albrecht's *Jüngerer Titurel*, *Lohengrin*, *Salman und Morolf*); (2) lengthy didactic poems (*Tirol und Fridebrant*, *Winsbecke*, Hadamar von Laber's *Die Jagd*); (3) all kinds of lyric, including Minnesang, *Sprüche*, Meistergesang, sacred songs, folksongs, political songs, convivial songs etc. It seems that long poems written in rhyming couplets were spoken but strophic poems could always be spoken or sung.

See also Bar form and Meistergesang.

HORST BRUNNER

Ton (ii)

(Fr.).

(1) Tone (i).

(2) Pitch; hence also Pitchpipe.

(3) Fret.

(4) Key (i).

(5) Crook (*ton de rechange*).

Toná

(Sp.).

An Andalusian or Gypsy corruption of Tonada. It is considered by some to be one of the oldest forms of *cante hondo* (*see* Flamenco).

Tonada

(Sp.: 'song'; diminutive *tonadilla*; Port. *toada*).

A general term for any Spanish tune or melody. In the 17th century *tonada*, *tono* (*see* Tono (i)) and *sonada* were frequently used to refer to a variety of short secular or sacred songs for solo voice, as distinct from the Villancico, although *tonos* and *tonadas* for two or even more voices became fashionable during the 17th and 18th centuries.

In Chile and Argentina the *tonada* is a love song, which may be sung either as a solo or as a duet in parallel 3rds; *tonadas* are usually in the major mode, often modulating to the dominant or to a key a minor 3rd away. Stanzas are usually set off from each other by guitar interludes.

Tonadilla

(Sp., diminutive of *tonada*: 'song').

An intermezzo sung between the acts of a play or (more rarely) an opera or *auto sacramental* (*see* Auto) in 18th-century and early 19th-century Spanish theatre. The name was used originally for a strophic song usually preceding a dance, which is why the theatrical *tonadilla* is sometimes referred to as a *tonadilla escénica*. The genre developed from about 1750 in Madrid, where it became a customary part of the miscellaneous fare in the playhouses, along with dances, songs and the main entertainment. The first *tonadilla* was once thought to have been written in 1757 by the Catalan composer Luis Misón, who was then active in Madrid, but Subirá showed that Antonio Guerrero had included *tonadillas* in many of his plays a few years earlier. His early *tonadillas* include *Los señores fingidos* and *Los náufragos*.

The *tonadilla*, which dealt mainly with lower-class characters (peasants, innkeepers, gypsies, barbers etc.), soon found popular acceptance, first in Madrid and then elsewhere in Spain and in Latin America, and developed into a kind of short comic opera akin to the Neapolitan intermezzo. Some *tonadillas* were for one singer only, others for two, three, four or more; a *tonadilla* with more than four characters was sometimes called a *tonadilla general*. The most complex example ever performed seems to have been Jacinto Valledor's *La plaza de palacio de Barcelona* (1774), which required 12 singers and was performed, as the printed libretto informs us, on King Charles III's nameday (4 November) in Barcelona's Teatro de la S Cruz (see illustration). Some *tonadillas* required a chorus, but such works were not common.

Subirá described the earliest type, from about 1751–7, as usually a short piece which, like the Sainete or Entremés, served to separate the acts of a play. It reached its maturity between 1771 and 1790, when it developed a kinship to Italian opera, with the Catalan Pablo Esteve y Grimau and the Navarrese Blas de Laserna as its most distinguished composers. During the following years (1791–1810) it suffered a kind of hypertrophy, becoming longer and more complicated. A contest announced by the Spanish government in the *Gaceta de Madrid* in 1791 was for a *tonadilla* for one to four characters with a length of between 10 and 22 minutes. Leandro Fernández de Moratín, a well-known playwright and sometime theatrical censor, frowned on the *tonadilla* of this period as 'cheap and low'. In the years between 1810 and 1850 the *tonadilla* slowly declined; a few remained in the repertory for a time, often with an admixture of well-known numbers from other pieces, but the Romantic theatre found no place for them.

The spirit of Spanish music is evident in the *tonadilla* above all in its melodies and rhythms (specifically those of the fandango, folía, jota, *seguidilla*, *tirana* and other Spanish dances) and in the use of some typically Spanish instruments such as the guitar and castanets. Italian influence is present too in the musical style, the aria form, the titles of set numbers ('quartetto', 'arietta' etc.) and even in Italian texts or subjects concerning Italian music or life. The song, or aria, usually to be found at the beginning has a simple binary form (*AA'*) or the typical aria form *ABA*; the two sections of the *AA'* type were often separated by a few spoken lines. A chorus, if present, would sometimes sing a refrain once or twice at the end

of a number. In the mature *tonadilla* the first aria was usually introduced by a ritornello, sometimes entitled 'introducción', 'preludio' or even 'obertura'.

Up to 1760 most *tonadillas* had only three numbers, the middle one consisting of *coplas* (verses) which told the story, but in the 1760s it became customary to have four sections, the second and fourth being normally *seguidillas*, with the *coplas* placed third. However, no regular pattern was established, and several different numbers could be included under cover of a single one; for instance, a *seguidilla* could include other popular dances such as the jota or (more likely) the *tirana*. The verses sung with a *seguidilla* were usually repeated many times, making it an item of some length. Some of the musical numbers might be preceded by recitative, as in Italian opera.

Despite Subirá's efforts to establish the genre as an important part of Spain's musical past, the *tonadilla* repertory remains today largely unexplored and unperformed.

ROGER ALIER

Tonal answer.

In Fugue, an Answer that does not reproduce exactly all the intervals found in the subject. In particular, because a literal transposition of the dominant note a 5th higher or a 4th lower yields the supertonic note, composers often choose instead to answer the dominant note with the tonic note in order to avoid tonal movement into the key of the dominant and its

dominant. Although the technique of tonal answer was commonly employed in Renaissance and Baroque composition, there was no agreed-upon terminology to describe it until well into the 18th century, when it was often called *fuga del tuono* or tonal fugue.

PAUL WALKER

Tonality

(Fr. *tonalité*; Ger. *Tonalität*).

A term first used by Choron in 1810 to describe the arrangement of the dominant and subdominant above and below the tonic and thus to differentiate the harmonic organization of modern music (*tonalité moderne*) from that of earlier music (*tonalité antique*). One of the main conceptual categories in Western musical thought, the term most often refers to the orientation of melodies and harmonies towards a referential (or tonic) pitch class. In the broadest possible sense, however, it refers to systematic arrangements of pitch phenomena and relations between them.

BRIAN HYER

Tonality

1. Usage.

A number of musical and discursive factors have contributed to a profusion of definitions for the term. There has been indecision about what musical domain the term covers: whether it applies to both Western and non-Western music, or whether, within Western musical traditions, it should be restricted to the harmonic organization of music from the so-called common practice (1600–1910) or should include all music that evinces a basic difference between consonance and dissonance. There have also been some basic theoretical disagreements about whether its constituent musical elements are melodies or harmonies: however narrow the definition, the domain of tonal music is so enormous, diverse and complex that one can choose almost any combination of musical phenomena and theoretical principles as a basis for discussion. In addition to these musical problems, discursive difficulties have arisen from the conceptual languages used to describe tonal phenomena, theoretical vocabularies that vary dramatically according to the aesthetic and epistemological commitments of the writer. A further complication (and recurrent tension) has to do with whether the term refers to the objective properties of the music – its fixed, internal structure – or the cognitive experience of listeners, whether tonality is inherent in the music or constitutes what one recent author has described as 'a form of consciousness'.

It is nevertheless possible to sort uses of the term into two basic categories, corresponding to its noun and adjective forms, and while its

noun forms suggest a greater degree of abstraction and therefore tend to be more controversial, in practice the two forms often converge:

(a) As an adjective, the term is often used to describe the systematic organization of pitch phenomena in both Western and non-Western music. Tonal music in this sense includes music based on, among other theoretical structures, the eight ecclesiastical modes of medieval and Renaissance liturgical music, the *sléndro* and *pélog* collections of Indonesian gamelan music, the modal nuclei of Arabic *maqām*, the scalar peregrinations of Indian *rāga*, the constellation of tonic, dominant and subdominant harmonies in the theories of Rameau, the paired major and minor scales in the theories of Gottfried Weber, or the 144 basic transformations of the 12-note row (Perle thus refers to his complexes of interrelated row forms as 'twelve-tone tonalities': *Twelve-Tone Tonality*, D1977).

(b) As a noun, then, the term is sometimes used as an equivalent for what Rousseau called a *sistême musicale*, a rational and self-contained arrangement of musical phenomena: accordingly, Sainsbury, who had Choron translated into English in 1825, rendered the first occurrence of *tonalité* as a 'system of modes' before matching it with the neologism 'tonality'. While tonality *qua* system constitutes a theoretical (and thus imaginative) abstraction from actual music, it is often hypostatized in musicological discourse, converted from a theoretical structure into a musical reality. In this sense, it is understood as a Platonic form or prediscursive musical essence that suffuses music with intelligible sense, which exists before its concrete embodiment in music, and can thus be theorized and discussed apart from actual musical contexts.

(c) Within Western musical traditions, 'tonal' is often used in contrast with 'modal' and 'atonal', the implication being that tonal music is discontinuous as a form of cultural expression from modal music (before 1600) on the one hand and atonal music (after 1910) on the other.

(d) At the same time, music historians sometimes describe pre-modern music as being tonal on the grounds of *(a)* above. Here it is assumed that important historical continuities underlie music before and after the emergence of musical modernism around 1600, and that the crucial difference between *tonalité ancienne* and *tonalité moderne* is one of emphasis rather than kind. In this sense, tonality is a generic term that refers to music based on the eight modes of the Western church as well as the major–minor complexes of common-practice music, repertories that share common melodic gestures and cadential formulae, coordinate successions of intervals or harmonies with conditions of dissonance and consonance, and evince a basic textural stratification into a treble melodic voice over a supporting bass line with inner voices that fill out harmonic sonorities.

(e) Tonal phenomena are musical phenomena (harmonies such as the tonic, dominant and subdominant, cadential formulae, harmonic progressions, melodic gestures, formal categories) arranged or understood in relation to a referential tonic, which imbues the music – in the case of C major – with 'C-ness'.

(f) In a psychophysical sense, tonal phenomena are musical phenomena perceived or preinterpreted in terms of the categories of tonal theories. Here the basic idea is that listeners tend to hear a given pitch as, for instance, an A above middle C, an augmented 4th above E♭, the minor 3rd in an F♯ minor triad, a dominant in relation to D, or 2̂ (where the caret designates a scale degree) in G major rather than a mere acoustical frequency, in this case 440 Hz.

(g) As a noun, the term is sometimes used, trivially, as a synonym for 'key'. E minor and A♭ major are thus said to be two different 'tonalities'. While Choron derived *tonalité* from *ton*, the French word for key, the concept reaches further than the pitch-class content of a particular major or minor scale to describe the relations governing them, relations responsible for the orientation of the music toward the referential tonic. Tonality in this sense means 'keyness'.

(h) Perhaps the most common use of the term, then, in either its noun or adjective forms, is to designate the arrangement of musical phenomena around a referential tonic in European music from about 1600 to about 1910. However this arrangement is conceptualized. Musicians agree that there are two basic modal genera, major and minor, with different but analogous musical and expressive properties. It gives rise, moreover, to abstract relations that control melodic motion and harmonic succession over long expanses of musical time. In its power to form musical goals and regulate the progress of the music towards these moments of arrival, tonality has become, in Western culture, the principal musical means with which to manage expectation and structure desire. It is thus understood to be essential to modern Western music: it determines the coordination of harmony with melody, metre with phrasing, and texture with register, thus encompassing – within its historical domain – the whole of music.

Tonality

2. Rhetoric.

F.-J. Fétis, who popularized the notion in the 1830s and 40s, defined tonality in the *Traité complet de la théorie et de la pratique de l'harmonie* (1844) as the sum total 'collection of necessary relations, both successive and simultaneous, between the notes of the scale'. He imagined these relations as forces of musical 'attraction'. In particular, the 'minor 5th' between 4 and 7 formed an 'appellative consonance' in which both notes summon (*appeler*) their notes of resolution. 4, that is, strives toward 3, while 7 strives toward 1: if 4 and 7 were both notes of 'attraction' within the scale, 3 and 1 were notes of 'repose'. Fétis, who characterized each degree of the scale in terms of relative attraction and repose, was uncertain about whether these melodic tendencies preceded the scale or arose from it, but it is clear that *tonalité* and the scale were inseparable, the scale being its material form. These inherent melodic tendencies, which he regarded as 'les lois de tonalité', were charged with harmonic implications: while 4 and 7 belong to the 'natural' harmony of the dominant 7th, 3 and 1 belong to the tonic, the chord of resolution. 4 and 7 thus operate like needles on a musical compass to orientate the listener towards the tonic within a given scalar environment.

For Fétis, the dominant 7th was the crucial musical element in *tonalité moderne*, the 'birth' of which he registered in a Monteverdi madrigal, *Stracciami pur il core*, from Book 3 of 1592 (*Equisse de l'histoire de l'harmonie*, 1840). While the historical and musical validity of the claim is arguable, the time and place he gives for the origin of modern tonality – around 1600, in the music of Monteverdi – has become firm musicological lore. Fétis, however, mishandled his discussion of the madrigal: the dominant 7th in question does not in fact resolve to the tonic over a change in bass. He later made the same claim, however, about another madrigal, *Cruda Amarilli*, this time more persuasively. His comments on *Cruda Amarilli* (Book 5, 1605) in the *Traité complet* resuscitate the terms of an earlier polemic over dissonance treatment in this madrigal between Artusi and G.C. Monteverdi, of which Fétis was well aware. He notes that an unprepared dominant 7th occurs above G in bar 13 of ex.1 and cadences to a tonic above C on the downbeat of bar 14: because it is unprepared, the dominant 7th in bar 13 is heard as vertical (and therefore autonomous) harmony rather than a collection of simultaneous intervals. Here the dominant 7th derives its intense attraction for the tonic from the presence of 4 (F in the *canto*) and 7 (B in the *tenore*), which move to 3 and 1 on the downbeat of the next bar. Yet for Fétis, the dominant 7th has no real tonal significance *per se* but rather forms a mere pretext for bringing 4 and 7 together. He regards the dominant as the most common harmonic support for the appellative minor 5th, not as an essential degree within the scale.

Though Fétis claimed that the idea of *tonalité* came to him as a revelation under a tree in the Bois de Boulogne on a warm spring afternoon in 1831, he borrowed most of its basic tenets – not to mention the term itself – from earlier writers. In fact, both the word and concept had circulated in Paris for over two decades before Fétis embraced it in the 1830s: Castil-Blaze included a definition for *tonalité* in his *Dictionnaire de musique moderne* (1821), and it also occurs in Geslin's *Cours d'Harmonie* (1826) and Jelpensberger's *L'harmonie au commencement du 19e siècle* (1830). It now appears that the first author to use the term was Choron, who coined it in the *Sommaire de l'histoire de la musique* (1810) to describe the constellation of tonic, dominant and subdominant harmonies familiar to musicians since Rameau. Moreover, Choron claims that Monteverdi invented the dominant 7th around 1590, was the first composer to introduce it without preparation, and was the first composer to use the 'minor 5th' as a consonance: 'and so tonal harmony came to be'. Fétis's debt to Choron thus extends to include the notion of appellative consonance, the distinction between *tonalité ancienne* and *tonalité moderne* and the claim that Monteverdi invented the dominant 7th.

Fétis was at a loss to account for the 'mysterious' forces of attraction that operate within the scale other than to insist that these appellative tendencies were 'purement métaphysique', an expression he borrowed from Momigny. If nowadays appeals to metaphysics tend to fall on deaf ears, Fétis was nevertheless broaching a crucial issue: most if not all tonal theories recognize that tonal phenomena are not static and motionless, but rather possess (or seem to possess) dynamic qualities that, however crucial to musical experience, resist causal explanation and are better understood in cultural terms. These qualities occasion intricate aggregates of metaphors and verbal images, some of which compare these relations of

musical attraction to forces of nature: for Rameau, the attraction of the dominant to the tonic was gravitational in nature, a metaphor he elaborated to discuss relations between harmonies, and the motions of these harmonies towards the cadential goal in general. At the same time, these forces of attraction have often been translated into animistic language, which attributes intelligence and intention to tonal phenomena: to regard the scale degree below the tonic as the *note sensible*, for instance, is to ascribe sentience to it. Cowell thus defined tonality as 'a musical homing instinct' ('New Terms for New Music', *MM*, v/4, 1927–8, 22–3), while Schoenberg imagined relations of melodic attraction in tonal music in terms of 'the instinctual lives of tones'. Rameau seemed to suggest that this instinct was sometimes sexual: on occasion, he personifies the tonic as the object of musical desire, the musical being 'to whom all our wishes tend' (*Génération harmonique*, 1737). For d'Alembert, in contrast, this musical desire was olfactory in nature: the 'sourness of the dominant', he wrote, 'desires the sweetness of the tonic' (*Elémens de musique théorique et pratique suivant les principes de M. Rameau*, 1752).

If the dominant desires resolution to the tonic, the tonic then assumes a passive role in relation to the dominant, which in this sense governs, or dominates the tonic. Schoenberg (in *Harmonielehre*, 1911) contended that this view of the tonic was erroneous, insisting that the tonic controls the dominant, not vice versa. Schoenberg, that is, inverted the relation between them and opposed an active tonic to a passive dominant, a notion implicit in a number of earlier writers. In *Die Lehre von den Tonempfindungen* (1863), Helmholtz describes the tonic as the main note (*Hauptton*), with dominion or control (*Herrschaft*) over all the others. Political images of this sort abound: to describe relations between harmonies in terms of dominance and subordinance, as Rameau did, is to conceive them in terms of relations between persons, that is, in terms of social power. Sometimes these metaphors are extended to become entire musical societies: Schoenberg, for instance, imagined the tonic as a sovereign who rules over the other harmonies and the dominant as his vassal, going before his liege to announce and prepare for his arrival, an idea he embroidered at considerable length. Momigny, in contrast, had earlier imagined the tonic as a queen: the tonic is 'the purpose of all purposes, the end of all ends', for 'it is to her that the sceptre of the musical empire is entrusted' (*Encyclopédie méthodique*, 1818). Perhaps the most elaborate of these social simulacra, however, is one of the earliest. In *Grundregeln zur Tonordnung insgemein* (1755), Riepel compares the six diatonic harmonies in C major to the social and economic organization of a rural farm, where C major was the bailiff or master (*Meyer*), G major the overseer (*Oberknecht*), A minor the head maid (*Obermagd*), F major the day labourer (*Taglöhner*), E minor the chamber maid (*Untermagd*) and D minor the errand girl (*Unterläufferin*). He separates the six diatonic harmonies in C major into two hierarchical orders, one masculine and agricultural (major harmonies), the other feminine and domestic (minor harmonies), both operating under the watchful supervision of the master. Momigny (ibid.) described the seven notes of the major and minor scales in this sense as a 'hiérarchie naturelle' under the 'autorité' of the tonic, whereas Schenker later wrote of a more egalitarian 'stable community of tones' (*Harmonielehre*, 1906). Hence the peculiar insistence in tonal theories of the 18th and 19th centuries on laws and principles: for Fétis,

tonalité was 'le principe regulateur des rapports'. These musical laws were meant both to regulate musical phenomena and constrain compositional practice. Despite the intended comparisons with natural laws, then, these 'Gesetze der Tonalität' were social in basis: there is in fact a strong correlation between tonal theories and conservative ideologies.

In the discursive rhetoric of tonal theories, the tonic tends to be framed in images of presence and plenitude. Marpurg (in his translation of d'Alembert) was the first writer to describe the tonic as a musical 'home' (*Systematische Einleitung in die musikalische Setzkunst nach den Lehrsätzen des Herrn Rameau*, 1757), an image that has remained in circulation ever since. Perhaps the most resilient metaphor for the tonic, however, has been that of a musical 'centre'. Helmholtz, building on Rameau's gravitational rhetoric, would later describe the tonic as the centre (*Schwerpunkt*) of a tonal mass (*Tonmasse*). As a centre, the tonic forms a geometrical *punctum* in a spatial arrangement of harmonies: in one of the more ingenious metaphors for the harmonic organization of tonal music, Tovey compared tonality in music to linear perspective in painting, where the tonic forms a musical 'vanishing point', the focal centre of an abstract configuration of musical relations (see 'Musical Form and Matter', 1934, in *The Main Stream of Music*, 1949). Such spatial intuitions are crucial to the tonal imagination: when Momigny likens the arrangement of scale degrees around the tonic to the orbits of planets around the sun (*Cours complet d'harmonie*, 1806), he equates the tonic with the gravitational centre of the solar system but also conceptualizes the entire arrangement as a series of concentric circles. Here the premise is that one can abstract relations between harmonies from music and plot them as distances between points in two or more dimensions. This urge to spatialize musical phenomena has its immediate origins in registral intuitions of above and below: for Rameau, the dominant lies a perfect 5th above the tonic, the subdominant a perfect 5th below, and in this sense we can imagine the tonic as a centre, equidistant between the two dominants. In actual musical contexts, however, the tonic forms a conclusion, not a centre – it arrives at the ends of phrases, formal sections and entire pieces. Even the idea that the dominant lies a perfect 5th above the tonic is true only in an abstract sense, since in actual practice the dominant fundamental often lies a perfect 4th below the tonic rather than a perfect 5th above it.

In most tonal theories, relations between harmonies are woven together to form a mental grid, an abstract representation Fétis describes as the 'basis for all music', that which underlies tonal music and renders its intelligible. The notion that the tonic occupies a referential or locus position on an abstract 'net' of harmonic relations, for instance, is crucial to the intuition that some harmonies are more distant from the tonic than others. Schoenberg thus speaks of 'remote regions' within larger musical geographies: for Schoenberg, the musical universe divides into spatial enclosures – territories – of harmonies (*Structural Functions of Harmony*, 1954). Implicit here is the idea that tonality constitutes a material substance that has a certain extension in space and time. The discursive reliance of tonal theories on images of containers in particular is remarkable: musicians often speak of music being 'in' C major as if C major were a receptacle with an interior volume that somehow contains and gives shape to the music within it. In this sense, tonal music comes to have a diatonic

inside and chromatic outside, often understood in terms of an opposition between the rational and irrational, or between the domestic and foreign. Histories of 19th-century music are often narrated in terms of progressive initiatives to absorb and incorporate more and more chromaticism into the diatonic confines of the key. Schoenberg's term for the enlarged harmonic resources of late Romantic music was 'expanded tonality', a description that attributes an almost Cartesian *res extensa* to music.

Tonality

3. Theory.

While both Choron and Fétis drew on the same basic theoretical resources, there are subtle but crucial differences between their accounts of *tonalité*. In contrast to Choron, who emphasizes relations between harmonies, Fétis places more stress on the order and position of pitches within a scale. This difference in emphasis corresponds to the two main historical traditions of theoretical conceptualization about tonal music: the function theories of Rameau and Riemann on the one hand and the scale-degree theories of Gottfried Weber and Schenker on the other. All tonal theories can be understood in terms of one tradition or the other, or (as with Fétis) a hybrid of both. Two basic traits common to both discursive traditions are, first, the notion that tonal music has an ideational content, where harmonies refer either to a tonic (in *Funktiontheorien*) or to a scale (in *Stufentheorien*), both of which are understood to underlie the music and render it intelligible; and second, the use of a metalanguage – whether discursive labels such as 'dominant' or 'subdominant', or cyphers such as roman numerals – to express the referential orientation of these harmonies.

In *Génération harmonique* (1737), Rameau conceived relations between harmonies in terms of cadences. In the imperfect cadence, ex.2*a*, the fundamental bass (or B.F., for *basse fondamentale*) ascends a perfect 5th from the subdominant to the tonic. In the perfect cadence, ex.2*b*, the fundamental bass descends a perfect 5th from the dominant to tonic. As a constellation, these three harmonies (the tonic, dominant and subdominant) comprise what Rameau called the 'mode'. His theories differ from older traditions of *modalité* in their emphasis on the harmonic dimension of music: *tonalité* for Rameau – if one can use the expression – was more harmonic than melodic in nature. A crucial factor in this musical system was the addition of dissonances to the dominant and subdominant: Rameau added a major 6th (D in ex.2*a*) to the subdominant, a minor 7th (F in ex.2*b*) to the dominant, both of which resolve to the same note (in this case E) above the tonic – the note of resolution determines whether the mode is major (as in ex.2) or minor. These dissonances accord the tonic, dominant and subdominant distinctive harmonic identities and characteristic musical behaviours: the added dissonances itensify the pressure on the dominant and subdominant to move to the tonic. Rameau often describes these harmonic relations in quasi-Newtonian language: the tonic, that is, exerts a gravitational pull on the dominant and subdominant, an invisible force that binds these three harmonies together.

Rameau was concerned, then, both with the identities of harmonies (as tonics, dominants or subdominants) and their succession: he coordinates harmonic succession with consonance and dissonance, tension and

resolution. For some writers, the notion that harmonies are not mere adjacencies, but that one moves to the next, constitutes the defining trait of tonality. In his influential *Untersuchungen über die Entstehung des harmonischen Tonalität* (1966), Dahlhaus extends this concern for succession from harmonies to intervals and thus locates the historical origins of tonality in the music of Josquin and his contemporaries.

If function theories begin with the prior assertion of a referential tonic, scale-degree theories use the major (or minor) scale as their referential point of departure. Although adumbrated in the theories of Kirnberger, Vogler and Koch, it was Weber who gave them their definitive form in the *Versuch einer geordneten Theorie der Tonsetzkunst zum Selbstunterricht* (3/1832) and who was responsible for their tremendous pedagogical success: scale-degree theories remain the dominant conceptual language for tonal music in Europe and North America. Weber uses the pitch classes of the major and minor scale to construct diatonic triads and seventh chords on the melodic degrees of each scale: ex.3*a* tabulates the possibilities for major, ex.3*b* for minor. He then uses roman numerals to number these *Stufen* from one to seven, where large roman numerals designate major triads, small roman numerals designate minor triads, and degree signs designate diminished harmonies. Weber assigns these roman numerals to actual harmonies on the basis of pitch-class content: a succession of harmonies coheres (makes musical sense) when each chord can be traced back via the mechanism of chord inversion to the same major or minor scale. A recurrent source of vexation in scale-degree theories is *Mehrdeutigkeit*, or multiple meaning. Harmonies assume roman numerals on the basis of pitch-class content rather than musical behaviour (as in function theories), there are no hard and fast criteria to determine which major or minor scale a particular harmonic configuration refers to: a C major triad, for instance, can be heard as I in C major, IV in G major, V in F major or VI in E minor – one must take contextual factors into account in order to narrow down the possibilities to a single roman numeral.

In both discursive traditions, tonal theories tend to concentrate on harmonic matter to the virtual exclusion of all other musical phenomena: register, texture, instrumentation, dynamics etc. feature only to the extent that these parameters articulate or bring out relations between harmonies. Yet this separation of harmonic from other musical considerations is artificial. Metre in particular is crucial to the subordination of dissonant harmonies to consonant ones: Rameau understood that the clear and unambiguous assertion of a tonic depended on the 'mésure'. While most theorists tend to concentrate on harmonic and sometimes melodic considerations, tonality is perhaps best conceptualized as a *tertium quid* that integrates melody, harmony and metre into a single nexus.

An important historical development in function theories occurred around 1850 with the formal integration of mediants into the aggregate of tonic, dominant and subdominant harmonies. Though common in earlier theories, mediants did not become the locus of intense theoretical concern until a number of writers began to use them as functional alternatives to roman numerals. In *Die Natur der Harmonik und der Metrik* (1853), Hauptmann represented the harmonic infrastructure of C major as F–a–C–e–G–b–D, where large letters designate dominant-related perfect 5ths and small

letters their mediant major (or minor) 3rds. In this arrangement of intervals and pitch classes, each string of three consecutive letters forms a diatonic triad: the tonic C–e–G, dominant G–b–D, and subdominant F–a–C, of course, but also the mediant e–G–b and submediant a–C–e. In this case, E minor mediates between the tonic and dominant above, while A minor mediates between the tonic and subdominant below; the submediant is a mediant below the tonic. This further differentiation of dominant-related harmonies into mediants enabled functional theories to account for secondary triads (for which scale-degree theories could assign roman numerals), but also to account for the harmonic practice of Romantic music, which began to privilege '3rd relations' over the opposed tonics and dominants of Classical harmonic practice. Hostinský, whose own harmonic theories are otherwise unremembered, gave these '3rd relations' their most complete expression representation in the illustration below, from his *Die Lehre von den musikalischen Klängen* (1879). In this sonorous grid of interwoven harmonic consonances, horizontal strands of perfect 5ths criss-cross with diagonal strands of major 3rds (upper left to lower right) and minor 3rds (lower left to upper right). While similar grids were common before Hostinský, he was the first to integrate major 3rds and minor 3rds in the same diagram, thus giving them equal prominence.

It was Riemann who coined the term 'function' in *Vereinfachte Harmonielehre* (1893) to describe relations between the dominant and subdominant harmonies and the referential tonic: he borrowed the word from mathematics, where it was used to designate the correlation of two variables, an 'argument' and a 'value'. In contrast to scale-degree theories, function theories are concerned more with harmonic identities than with chord progressions. For Riemann, more than one chord could represent a given tonal function: a D-minor triad, for instance, can be heard as the subdominant parallel ('Sp') in C major by virtue of the interval (the major 3rd F–A) it maintains in common with the subdominant F major ('S'). D minor and F major are in this sense two possible triadic values for the same subdominant function. Riemann recognized three basic harmonic transformations (or *Verwandtschaften*) on a given tonic, dominant or subdominant function: the *Variante*, which correlates major and minor triads having the same ground note (C major/C minor); the *Parallele*, which correlates major and minor triads a minor 3rd apart (C major/A minor); and the *Leittonwechsel*, which correlates major and minor triads a major 3rd apart (C major/E minor). When applied to the tonic, dominant and subdominant in C major, the result is ex.4, in which the three main tonal functions overlap: A minor, for instance, can be heard either as the tonic parallel ('Tp') or the subdominant *Leittonwechsel* ('S') depending on which function, T or S, controls the immediate musical context.

Riemann, who identified the *Dominante* with the perfect 5th, the *Leittonwechsel* with the major 3rd, and the *Parallel* with the minor 3rd, thus recognized ex.4 as a powerful realization of his harmonic theories and reproduced the diagram (without attribution) in his own 'Ideen zu einer "Lehre von den Tonvorstellungen"' (*JbMP 1914–15*, 1–26). There he uses his three prime functional transformations to reconstruct the diagram as a multidimensional musical terrain in which each letter represents the ground note of a *Variante*-related major or minor triad: in this torus of harmonic consonances, the horizontals represent dominant-related perfect 5ths,

which intersect with diagonals of *Parralele*-related minor 3rds and *Leittonwechsel*-related major 3rds. Like Hostinský, Hauptmann, and most other theorists in the functional tradition, Riemann advocated the use of just intonation, which accounts for the lines above and below the pitch letters in the diagram. When examined through the filters of equal temperament (to which there was no real alternative in contemporaneous musical practice) and enharmonic equivalence, the diagram expresses a musical universe saturated with major and minor triads on all twelve semitones. Even though Riemann restricted their application to the music of Bach and Beethoven, his harmonic theories constitute a remarkable expression of the chromatic tonal relations in late Romantic music.

Scale-degree theories accounted for chromaticism by means of what Schenker called mixture (*Mischung*), which refers to contexts in which the music gains access to or borrows harmonies from the parallel major or minor. In order to increase the harmonic resources of C major, for instance, one can replace A minor (or VI) with A♭ major (or ♭VI), borrowed from the parallel minor. In *Harmonielehre* (1906), Schenker goes on to describe how, in the music of late Romanticism, major and minor fuse together: he combines the notes of both the major and minor scale into a single chromatic scale and then places, as in ex.5, major and minor triads (via mixture) on each degree. Similarly, Schoenberg heard late Romantic music in terms of 'a transition from 12 major and 12 minor tonalities (*Tonarten*) to 12 chromatic ones', a historical transition 'fully completed in the music of Wagner' (*Harmonielehre*, 1911).

Tonality

4. Practice.

(i) Renaissance to Baroque.

Historians do not agree on how and when the transition from Renaissance modal polyphony to the harmonic tonality of the Baroque occurred. Powers ('Is Mode Real?: Pietro Aron, the Octenary System, and Polyphony', *Basler Jb für historische Musikpraxis*, xvi, 1992, 9–52) has even argued that modality and tonality co-exist as musical properties on separate epistemological planes, in which case it is meaningless to imagine a transition from one to the other – modality and tonality in this sense are no longer competing or mutually exclusive means of musical organization. Even within the terms of this argument, however, we can register a reduction in musical practice from eight or more modes in Cinquecento music to a mere two in music of the Seicento. In historical retrospect, this reduction occurs as a gradual emergence of a paired *cantus durus* and *cantus mollis* from the labyrinthine complications of Renaissance modal theories, a transition completed in *Das neu-eröffnete Orchestre* (1713), where Mattheson lists alternative major (*dur*) and minor (*moll*) modes for all 12 semitones within the chromatic octave. In the music of Mattheson's contemporaries, however, mutations of earlier modal procedures continue to exist alongside newer means of tonal organization, but also in conjunction with numerous hybrid practices: there are a large number of Bach chorales, for instance, that accord modal melodies *dur* or *moll* harmonizations. (*See* Mode, §III, 5.)

There is, however, a consensus that the emergence of a newer major–minor modal ethos coincided with a radical simplification of musical texture that involved the stratification and sedimentation of the dense, interwoven imitation of late Renaissance music into harmonic sonorities above a basso continuo. A crucial effect of this transformation was to isolate and draw attention to chords as discrete musical entities: from now on, Western music would be heard as successions of harmonies rather than collections of simultaneous intervals. In both theory and practice, the harmonic triad – a musical structure in which the fundamental unifies the intervals above and lends its pitch class to the entire configuration – became the basic perceptual element of tonal music. The final, mediant 3rd and dominant 5th – the three constituents of the *trias harmonica* – were used not only as normative sonorities but also to determine medial cadences: the harmonic triad thus took precedence over the distribution of semitones within the modal octave as a means of giving structure to the pitch domain. It is in this context that the *clausula formalis* of earlier music was reinterpreted as the dominant-to-tonic cadence. In ex.6, the bass G – the dominant fundamental – is the one note capable of forming consonances with both D and the subsemitonum B in the penultimate bar: the dominant-to-tonic cadence, in other words, arises from the melodic exigencies of the voice-leading. In the newer harmonic orientation of German Baroque music it becomes a rhetorical device, a conventional gesture used to punctuate mosaic-like successions of phrases and ritornellos.

The preoccupation with the moment-to-moment resolution of dissonance in Rameau's theories mirrors the sensuous harmonic sonorities and episodic nature of French Baroque music. These dissonances urge the fundamental bass forward, but gravitational momentum in this music nevertheless tends to be local in significance, directed toward an immediate cadential goal. It is an improvisational, accompanimental harmonic practice, one that responds to the expressive needs of the moment: rapid transitions from one tonic to the next – Rameau was inclined to hear any triad without a dissonance as a tonic – organize the music into additive series of modulations connected together by chains of dominants in which tonal coherence has more to do with the dramatic action on stage (or the *sentiment* of a poetic image) than an abstract musical design.

(ii) The Classical period.

Harmonies in Classical music, like those in Baroque music, tend to be clear and unambiguous in their references to the tonic, whether a chord or a scale degree. Whole passages and even entire pieces can be heard as large-scale harmonic progressions in which the music assumes a sense of almost inevitable momentum and progress towards a distant harmonic goal, which can be perceived well in advance of its arrival. Pieces are thus sometimes said to develop from within, out of certain tensions inherent in the musical material. These tonal tensions constitute a musical logic analogous to that of premise (antecedent) and conclusion (consequent), allowing listeners to predict both the immediate course of events and the modulations that articulate the larger musical argument. In this sense the harmonic organization of Classical music may even be understood (after Fichte and Hegel) as a dialectic in which the dominant opposes (or even negates) the tonic: the dominant and tonic, that is, enter into a rational,

contrastive musical logic homologous with other oppositions between dissonance and consonance, tension and resolution etc. In sonata form, the reprise in particular constitutes a moment of synthesis in which music heard earlier in the dominant recurs in the tonic and thus assumes an altogether different musical significance. In this sense, the tensions that underlie tonal music form what has been described as the musical equivalent of reason. (R.R. Subotnik: 'Tonality, Autonomy, and Competence in Post-Classical Music', *Critical Inquiry*, vi, 1979, 153–6). Because of this quasi-objective musical logic, Classical music gives the appearance of being universally intelligible to all listeners within its cultural reach.

However evident this musical logic now appears, certain aspects of Classical harmonic practice were not theorized until well after the fact. Schoenberg, for instance, conceptualized the firm sense of closure in this music in terms of 'monotonality', the idea that, no matter how extended in duration, pieces of music retain their allegiance to the original tonic from beginning to end (*Structural Functions of Harmony*, 1954). Schenker, who elaborated the same basic idea, heard modulations as temporary 'tonicizations' of non-tonic scale degrees rather than permanent departures from the original tonic. This allowed him to regard entire pieces as recursive hierarchies of harmonies, progressions within progressions. In ex.7, his musical picture of the Moderato from Haydn's Piano Sonata in G minor h XVI:44 (*c*1771–3) from 'Vom Organischen der Sonatenform', *Das Meisterwerk in der Musik*, ii, (1926), tonicized scale degrees control isolated contexts as local tonics while retaining their original identities as non-tonic harmonies in the large-scale progression that governs the piece as a whole: the large-scale III at bar 13 in ex.8*a* is thus heard as I in B♭ major in ex.8*b*, where it controls its own I–II–V–I progression between bars 13 and 20. Schenker viewed pieces as melodic projections (or prolongations) of the tonic in the form of an *a priori Ursatz*, in which both the bass and the melodic *Urlinie* (outlined with semibreves and carets in the upper voice of ex.8*a*) move within the intervals of the tonic triad. Within this contrapuntal framework, tonicizations of non-tonic scale degrees, however near or remote, have their rationale not as autonomous harmonies but in the coincidental confluences of melodic lines. The bass, in particular, moves from I through III to V before returning to I at the beginning of the reprise, a large-scale arpeggiation of the tonic that Schenker equates with *Tonalität*. The crucial moments in this long-range elaboration of the tonic coincide with the main formal divisions of the sonata: I with the so-called first theme (*erster Gedanke*), III with the second theme (*zweiter Gedanke*), the motion from III to V with the development (*Durchführung*) and the return to I with the reprise (*Wiederholung*). In this sense, the tonic controls and coordinates not just the large-scale harmonic and melodic organization of the piece but also the succession of textural contrasts that characterize sonata form in its various generic guises: the tonic seems to saturate the music and reach down to its very core, determining its points of internal articulation.

(iii) The Romantic period.

In its use of distinctive harmonic sonorities and remote tonal relations, the harmonic focus in Romantic music is on the particular, concrete, sensuous

and contingent. In drawing attention to these unusual harmonies, the music tarries over the present moment and distracts the listener from large-scale tonal relations. At the same time, motivic chromaticism destabilizes the careful coordination between the melodic and harmonic dimensions that characterized Classical music, freeing music from the requirement to close on the original tonic: numerous pieces from Schubert onwards begin and end in different keys. At first the two termini were a major or minor 3rd apart, as in *Ganymed* d544 (1817), which moves from A♭ major through C♯ major to F major. With Wagner, however, relations between the two tonics become less diatonic and increasingly remote: Act 3 of *Tristan und Isolde* (1860), for instance, begins in F minor but concludes in B major; the dictum that pieces close on the original tonic was an aesthetic rather than a cognitive requirement. As Romantic music turned away from the autonomous, self-contained and absolute, it began to depend more and more on the extrinsic and extramusical for its coherence: poems, dramatic narratives, programmatic conceits, visual imagery. Tonal relations become increasingly 'associative' in nature, unique to a given piece. Hence the overall motion from E♭ major in the prologue to *Götterdämmerung* (1877) to B minor at the end of Act 1 can be heard in the context of the entire *Der Ring des Nibelungen* to effect a transition from Nature to Evil (see R. Bailey, 'The Structure of the *Ring* and its Evolution', *19CM*, i, 1977–8, 48–61). It is this thematic relation between the two tonics rather than any intrinsically musical logic that accounts for the tonal coherence of the music.

The aesthetic predilection for sensuous sonorities and striking progressions in late Romantic music led to what Kurth (*Romantische Harmonik und die Krise in Wagners 'Tristan'*, 1920) called 'absolute effect', where chromatic harmonies stand out as figures against a more normative diatonic ground. These chromatic harmonies were characteristic of the 'alteration style', which he diagnosed in terms of three factors: (1) chord alteration, where a chord note is raised or lowered a semitone, (2) melodic displacement, where a dissonant neighbour replaces a regular chord note and (3) chromatic progression, where chromaticism inflects the interval of bass progression between harmonies. In combination with one another, these three factors tend to occlude references to the tonic and obliterate the distinction between chromatic figure and diatonic ground. In general, references to the tonic become increasingly ambiguous and occasional: in the music of *Tristan* (which for Kurth represented a 'crisis' in Western music), cadential dominants and tonics are few and far between and the connections between them, are for the most part, melodic rather than harmonic. Kurth heard these interspersed functional harmonies as pillars (*Grundpfeiler*) supporting a texture of melodic chromaticism more non-tonal (if not atonal) than tonal. On occasion, this chromaticism resulted in the 'repression of the tonic', the indirect assertion of the tonic in music where the tonic itself remains in abeyance. In the first three bars of ex.8, the opening phrase of *Tristan*, the music moves to a dominant 7th above E, which refers to an absent A minor tonic. Kurth hears the entire prelude to Act 1 as a series of increasingly violent 'oscillations' between the dominant and subdominant in A minor that never once in over 14 minutes of music touches on the tonic.

In late Romantic music, moments of orientation towards the tonic become allusive and fragmentary, a condition that Schoenberg (an ever reliable source of neologisms) termed 'floating tonality'. In the sequential continuation of ex.9, the music moves out of A minor to the dominant in C minor, and so on. In the historical wake of *Tristan*, music underwent an atomization in which non-tonal harmonies cluster around isolated dominants and tonics. This tonal disintegration has often been understood as a dissolution from within, an organic process in which the forces of melodic attraction that gave rise to tonality led to its inevitable destruction. Kurth believed that the directional tendencies of the leading note – where major 3rds (and raised notes) move upward, minor 3rds (and lowered notes) move downward – resulted in an amorphous chromaticism that neutralizes and obscures references to the tonic. Coherence in this music is no longer tonal but melodic and, above all, motivic in nature: it makes far more sense to hear the *Tristan* chord (which occurs on the downbeat of bar 2 in ex.9) as a verticalization of the melodic minor 3rd from G♯ to B (the 'Yearning' motif) and the diminished 3rd from F to D♯ (the 'Suffering' motif) than to hear it as an altered dominant (Kurth) or subdominant (an augmented 6th chord above F) in A minor.

In extreme cases, the motivic chromaticism of late Romantic music negates all reference to the tonic and veers over the precipice into atonality. In ex.9, the climactic bars in Act 2 of *Parsifal* (1881), Wagner loads harmonies with dissonances that render them ambiguous and inoperative: while the music is littered with tonal debris – 7th and 9th chords familiar from more conventional tonal contexts – those harmonies fail to coalesce around a tonic. Sustained bass notes immobilize the harmonies above them and arrest forward momentum: the music wanders between functionless harmonies that neutralize rather than progress to one another, sonorities that seem to float in the music, without a goal, without direction. Dissonant harmonies are either severed from their resolutions or resolve back into themselves: with his agonized 'Amfortas!', Parsifal resolves the minor 9th F in bar 993 to a no less dissonant, no less wrenching E in bar 995. As Adorno noted (*Versuch über Wagner*, 1952), dissonances in Romantic music 'stand for negation and suffering'. Amfortas's open wound thus becomes symbolic of what some listeners (Adorno among them) have heard as the death throes of tonality.

Tonality

5. Historiography.

The diachronic account of tonal music in §4 is most often related in terms of musical evolution or continuous progress, a master narrative in which the historical course of tonal music is directed toward its own end, depicted either as a heroic completion or (as is more common) a tragic demise. In either case, the *telos* of these stories reflects the strong forward momentum toward a cadential goal so often viewed as an essential attribute of tonal music. While these histories are sometimes recounted as technological allegories in which tonality collapses, breaks down or wears out from overuse, it is more common to imagine them as genetic narratives, organic processes of growth and decay, birth and death.

Ideas of evolution and progress make powerful claims on the historical imagination, claims consistent with a musical aesthetic that privileges (as Romanticism did) the new and original. This aesthetic led both composers and listeners to fetishize striking harmonies and to associate chromaticism with the irrational, foreign and erotic. This fascination with harmonic colour can be understood in quantitative terms as an increase in chromaticism and dissonance, a progression either towards some utopian *Zukunftsmusik* (Schoenberg regarded the progressive increase in dissonance as an 'emancipation' of musical resources) or towards a musical apocalypse (both Choron and Fétis warned their readers of an impending atonal catastrophe).

Popular accounts of this musical evolution follow the familiar lines of biological evolution, with its concern for selection and adaptation. These stories assert, more or less explicitly, that there were forces at work within tonal music analogous to those that determine the form and development of an organism. Perhaps the most important of these were the energetic tendencies of the semitone, which accounted for the earlier mutation of modality into tonality (for Fétis, the occurrence of the appellative minor 5th between 4 and 7 in both the C and A mode explained the reduction of the six ecclesiastical modes to two) and also the later mutation of tonality into atonality. This historical process is further understood to be unidirectional and irreversible, where relations between successive stages are both genetic and causal. In biological terms, the evolution of tonal music is both specific (where newer phenomenal forms – harmonies – differentiate themselves from older ones) and general (where more complex phenomenal forms replace simpler ones).

There are, however, reasons to question this historical narrative, as there are reasons to dispute the application of evolution to cultural phenomena in general. First, the notion of a musical evolution ignores the crucial factor of mediation: composers write music with an awareness of their role as agents of historical change and make compositional decisions in an effort either to transform the music of their own time or to maintain the *status quo*. Their active interference in the historical course of events undermines attempts to explain musical change on the basis of some genetic, self-regulating musical process. Secondly, the notion of an evolution in tonal music tends to compress the messy diversity of contemporaneous compositional practices into a single historical mainstream. Hence all the metaphors of trunks and branches, rivers and tributaries; Tovey, whose commitment to evolution was self-conscious and emphatic, described this unilineal compression as 'the mainstream of music'. As a result, accounts of musical evolution smooth over historical discontinuities, either failing to register divergent practices or dismissing them as inconsequential departures from the main music-historical current. Thirdly, such accounts tend to privilege later forms of harmonic phenomena over earlier ones: later harmonic practices, that is, are thought to be more complicated, more advanced and therefore better with respect to the common tonal language of the historical mainstream. Chopin is thus heard to be progressive in relation to his contemporaries, while Rachmaninoff, from within his own historical horizon, is regressive. This attitude lies at the root of the prejudice (common in academic music circles) that atonal music is somehow more complicated and more difficult, and therefore more worthy of sustained

critical attention, than tonal music, which is believed to be simpler and easier.

However compelling within the narrow confines of a particular historical tradition, from a broader perspective the notion that tonality somehow dissolved is implausible, for tonal music has never faded from cultural attention. It has continued to thrive in what are sometimes considered to be conservative idioms within Western Concert music, but also in popular music, commercial music and – despite ongoing experiments with atonal procedures – jazz, where it has never loosened its grip on the musical imagination. To insist on the dissolution of tonality as a historical fact is to confuse a historical phenomenon with a cognitive one. In the West and elsewhere, tonal music remains the music most people listen to, most if not all the time.

Composers, music historians and music theorists, however, have tended to exaggerate the importance of tonality as a theoretical construct. The entire historical account in §4 could in fact be rewritten without reference to the idea: the history of tonality is better understood in terms of specific harmonic practices rather than immutable laws. Before 1910, moreover, tonality – as a construct that informs the production and consumption of music – had a modest historical provenance. Liszt, who corresponded with Fétis, was perhaps the first composer (besides Fétis himself) to create music with a conscious awareness of the idea, and it was not until Schoenberg that it assumed crucial historical significance. Almost all the tonal music written during the three previous centuries emerged without reference, tacit or otherwise, to the concept now thought to define its essential condition.

Tonality, then, is an ideological as well as a theoretical construct: from the very beginning, the term has been used primarily for historiographical purposes. Both Choron and Fétis, for instance, cite the birth of the dominant 7th in the music of Monteverdi as the decisive event in the historical separation of *tonalité moderne* from *tonalité antique* (Choron) or *ancienne* (Fétis). In this sense, one can equate modality with musical premodernism, tonality with modernism, its putative dissolution with high modernism and its re-emergence in the avant garde of the late 20th century (however changed in musical and cultural significance) with postmodernism. According to this scenario, tonality virtually coincides with the age of Western modernism, the great era of representation that stretches from the philosophical meditations of Descartes to the general crisis of representation in the arts around 1910. It thus forms a precise analogue to linear perspective in painting as one of the principal cognitive structures in Western culture: in their respective media, tonality and linear perspective are responsible for the effect of subjectivity – the notion that an individual embodies a historical consciousness – so crucial to modernity. The origins of tonality have in fact been traced back to the use of fauxbourdon in the 1430s (H. Besseler, 'Tonalharmonik und Vollklang', *AcM*, xxiv, 1952, pp.131–46), the same decade in which Brunelleschi demonstrated the basic geometrical principles of linear perspective from within the central portal of Florence Cathedral.

Tonality, for Choron, was in fact 'entirely modern'. It was the culmination, 'the goal and the result', of a teleological process. He regarded each historical era as a succession of progressive stages: 'formation, development, progress toward perfection, permanence and decline'. This process was cyclical: it was the coincidence of decline and formation that separated one historical age from another. Choron believed that the guiding spirit of each age (and here Hegelian language is appropriate) manifests itself in the objective tendencies of the musical material, hence the epochal division between *tonalité antique* and *tonalité moderne*. He heard the music of his time as the apex in the historical curve of modernism: he believed that his contemporaries could look back on 'the progressive rise' of *tonalité moderne* and 'the attainment of its present state of perfection'. The current age was one of 'permanence', a plateau from which one could cast a sad glance at the future of music and its inevitable historical descent.

Fétis, who read Hegel, understood this historical process as the progressive actualization of immutable laws. He believed that tonality was a metaphysical principle, a fact not of the inner structure or formal properties of music but of human consciousness, which imposes a certain cognitive organization – a certain set of dynamic tendencies – on the musical material. As a metaphysical principle, then, tonality does not itself evolve, but rather remains invariant and universal, true for all people and for all time. He thus regarded what he felt to be the undeniable historical progress of Western music as a series of discrete advances toward completion, the ever more perfect realization of a musical absolute.

Fétis arranged these historical transformations (as he called them) into a teleological series that culminated in the music of his contemporaries. The first of these was the *ordre unitonique*, the music of plainchant: the *tonalité ancienne* of liturgical music was, for him, placid and dispassionate, free of appellative tendencies and thus incapable of modulation. He heard the onset of the *ordre transitonique* around 1600 in the music of Monteverdi, whose invention of the dominant 7th allowed for a wide range of modulations and marked the birth of *tonalité moderne*. Intense and subjective, transitonic music was well suited to the dramatic requirements of opera. The historical transition to the *ordre pluritonique* in the music of Mozart and Rossini was more subtle. Remarkable for its chromaticism, pluritonic music represented the culmination and perfection of *tonalité moderne*. In their orientation around diminished 7th and augmented 6th harmonies (both of which Fétis considered to be deformations of the dominant 7th), the volatile appellative tendencies of this tonal language allowed for remote modulations appropriate to the violent emotions of the age. The historical logic behind this progression of tonal orders gave Fétis the confidence to predict the future course of music: he believed that the chromaticism of the *ordre pluritonique* would dissolve into the ambiguous enharmonism of an *ordre omnitonique*, premonitions of which could be detected in music as far back as Mozart. Fétis, however, listened in on 'the insatiable desire for modulation' in the omnitonic music of Berlioz and Wagner with revulsion: in their music, the intense appellative energies of pluritonic music neutralize and even negate themselves, weakening the gravitational forces on which *tonalité moderne* – with its clear references to

the tonic – relies. For Fétis, *musique omnitonique* was sensual, decadent and dangerous; it was music in historical decline.

Tonalité was in fact the site of a remarkable number of cultural anxieties about the future of music, and also (perhaps surprisingly) about race. For Fétis, there was a strong anthropological dimension to *tonalité*: he believed that different human societies were attracted to different pitch repertories because of their different cognitive capacities, which were, moreover, a function of 'cerebral conformation'. Fétis asserted that 'primitive' (non-Western) societies were limited to simpler scales because of their simpler brain structures, while the more complex psychological organizations of Indo-Europeans permitted them to realize, over historical time, the full musical potential of *tonalité*; his theories were similar in their biological determinism to the racial theories of Gobineau. His inquiries into non-Western music advanced the academic agenda of Orientalism, an ambitious international attempt to research the languages, social organizations, sciences and arts of non-Western societies, those under European rule in particular. In its most common forms, this research was used to bolster vast and often irrational generalizations about race, intelligence, emotional temperament, social organization and various forms of cultural expression. A strong motive behind these generalizations was the tacit fear that various African and Eastern cultural practices constituted a threat to European notions of social self-identification: in contrast to the modern West, the Orient appeared to European writers as a primitive or even animalistic realm of sexual desire, religious violence and racial terror. In general, these writers organized knowledge about the East into cross-cultural comparisons that served to denigrate non-Western others and thus associated the Oriental with marginalized elements in their own societies – the ignorant, backward, degenerate, insane and the feminine. (For a full description, see E.W. Said: *Orientalism*, New York, 1978.) Fétis's contribution to Orientalism was to associate pitch repertories with racial characteristics. His accounts of non-Western music, which he collected in the *Histoire générale de la musique* (1869–76), thus conceal emotive assertions within the neutral language of factual description. Because of its dearth in appellative semitones, Fétis contended (in the *Traité complet*) that the pentatonic music of 'la race jaune ou mongolique' – the music of the Chinese, Japanese, Koreans, Manchus and Mongols – was 'grave and monotonous'. Arab, Persian and Indian music, in contrast, was 'langoureuse et sensuelle', befitting 'the manners and mores [*moeurs*] of the nations that conceived it'. Fétis believed that the dangerous excess of microtonal inflections in the pitch repertories of the Levant was consistent with the expressive content of their music, which consisted of nothing but 'amorous songs and lascivious dances'.

While the essentialization of race in terms of pitch repertories has since been discredited, the practice remains part of the genealogical heritage of tonality. But the main point here is that the concept of tonality, as an ideological construct, serves to articulate and promote a far from disinterested view of the historical past. The notion of a tonal evolution or progress, in particular, has been appropriated for both conservative and radical aesthetic agendas: decisions about what constitutes historical continuities or discontinuities are never empirical. Conservative ideologies, drawn to the hierarchical organization of harmonies in tonal music, have

often advanced the concept of tonality (as Fétis did) as a means of regulating compositional practice or to naturalize Western music as a form of cultural expression. Some writers have also used the notion of its demise to warn of a cultural decline or to argue for a return to traditional musical values. An almost random selection of more or less recent books on 20th-century music, for instance, yields chapters entitled 'Tonality as Order' and 'The Twilight of Tonality'. Uses of the term in accounts of modern music often express a profound loss and infinite nostalgia, even among proponents of the new. Within this discursive tradition, the onset of atonal music in the avant garde around 1910 constitutes a decisive (and for some listeners irreparable) rupture in the history of Western music.

The concept of tonality has also been an important one for radical ideologies. Here the seminal figure was Schoenberg, who relied on the idea of a progressive development in musical resources to compress divergent *fin-de-siècle* compositional practices into a single historical lineage in which his own music brings one historical era to a close and begins the next: he appealed to notions of musical evolution and progress to position himself as the sole legitimate musical heir to Brahms. 12-note music could thus be heard either as the natural and inevitable culmination of an organic motivic process (Webern) or as a historical *Aufhebung* (Adorno), the dialectical synthesis of late Romantic motivic practice on the one hand with a musical sublimation of tonality as pure system on the other. It could be heard and understood in this sense as a simultaneous completion and negation of tonal practice. Schoenberg thus depicted himself as Siegfried to Brahms's Wotan, the hero who shattered the sacred musical spear (with its contractual obligations to the tonic) and blazed a path to the new world order, rebuilt from the ruins of musical tradition. 'The Atonal Revolution' proclaims a chapter in another recent volume on modern music.

From this perspective, the rise and fall of tonality is far from a neutral account of music history, but serves, rather, to situate atonal and 12-note music as the focus of musicological (if not cultural) attention. The fierce commitment of music historians and music theorists to ultra-modernist narratives of evolution and progress buttresses the hegemonic position of a serialism long since on the wane. It allows its advocates to characterize composers who continue to pursue tonal idioms as regressive, but also to exclude popular music – which continues to embrace tonal materials – from music curricula: narratives of evolution and continuous development are conspicuous for their silences and elisions. The failure of these narratives to account for the continuous use and renewal of tonal resources in Bartók, Cole Porter, Coltrane or Britten (among numerous others) alongside the music of Schoenberg, Berg and Webern (not to mention the arcane experimentalism of Babbitt, Boulez and Stockhausen) is remarkable.

Yet as Adorno pointed out, the dissolution of the distinction between consonance and dissonance – a distinction crucial to all theories of tonal music – into the closed, algebraic structures of serialism constituted a doubtful 'emancipation'. Now that popular and commercial music has overwhelmed and displaced 'serious' music in cultural attention, and in view of an ongoing re-emergence of tonal idioms within the postmodern avant garde, the narrative of continuous tonal evolution no longer seems

as credible as it once did and has begun to loosen its grip on the music-historical imagination. In the absence of the musical and cultural polemics that were responsible for the tremendous prestige of the concept, musicologists, whether historians or theorists, will turn to the description of tonal music in terms of contingent harmonic practices rather than invariable laws that inhere in or arise from the musical material and determine its ultimate historical fate.

For bibliography *see* Harmony.

Tonal space.

A theoretical model setting forth 'distance' relationships between pitches, chords or keys, in accordance with the principles and procedures of Tonality. A particular space may represent pitch, chord and key, but theorists have customarily proposed models limited to one or two of these categories. The Circle of fifths is a well-known tonal space that shows the relative distance between keys but excludes chord and pitch relations altogether. A more idiosyncratic example is Schoenberg's 'Chart of the Regions', which arranges key areas in tabular format around a central tonic. Theorists have tended to present tonal spaces in geometrical formats – circles, tables and graphs – but this is not a requirement as long as some underlying method of measurement is made explicit: a spatial model might consist of an abstract algorithm (see Lerdahl), from which a geometrical space could potentially be constructed in order to give visual form to the output.

Tonal spaces are extensions of a broader reliance on spatial metaphors to describe music and musical experience which may be traced back through Boethius to antiquity. In spite of this close association, it is useful to distinguish between spatial figures of speech, such as the 'interval' between *c* and *g*, and a tonal space *per se*, which offers some means of gauging and comparing such intervals. Schenker's notion of *Tonraum* – the 'tonal space' articulated by the *Urlinie* in its descent from 8, 5 or 3 – falls somewhere between the two. It exceeds metaphor in that the three possible *Urlinien* do form a framework wherein comparison of motions through the octave, 5th and 3rd (major or minor depending on the mode) can take place. On the other hand, the limited scope of Schenker's *Tonraum*, which denotes only spaces formed between pitches of the tonic triad, is atypical of tonal spaces in general.

A further distinction can be made between 'tonal space' and 'pitch space'. The former is appropriate in connection with music that exhibits features of major–minor tonality; the latter is preferred when these features are lacking or significantly altered, as in some music by Skryabin and Bartók. 'Pitch space' may be considered the general term, 'tonal space' (sometimes 'tonal pitch space') the more specific.

Among early tonal spaces are the musical circles of Heinichen (1728; *see* Key (i)), Kellner (1732), and Mattheson (1735); several tabular models

followed in the writings of Kirnberger (1771–9), Gottfried Weber (1817–21), Schoenberg and others. A relatively neglected space is the 'Table of Relations' advanced by Oettingen and included in Riemann's doctoral dissertation. In Riemann's later works, this served as a model for an original and highly elaborate theory of harmony. More recently, music theorists and psychologists have proposed a variety of tonal spaces based on empirical studies in music perception (see Krumhansl).

Tonary [tonal]

(Lat. *tonarius*, *tonarium*, *tonale*, *toni*, *octo toni*, *intonarium*, *intonarius*; Ger. *Tonar*; Fr. *tonaire*).

Liturgical book of the Western Christian Church in which the antiphons of the Office and the Mass and, by extension, the responsories and even other chants are classified according to the eight psalm tones of Gregorian chant. Tonaries are theoretically self-contained (e.g. the *libellus* of *F-ME* 351, ff.66*v*–75*v*), but were often copied in other liturgical books such as antiphoners, graduals, tropers and prosers, and in collections of musical treatises. Their terminology, of Byzantine origin, laid the foundations for the vocabulary of modal theory, in which the standard description of the church modes was developed in the 11th and 12th centuries through the division of the octave into a 4th and a 5th. In the absence of precise melodic notation, the tonary was indispensible to the memorization of the psalmodic endings for each of the eight tones. It was an important adjunct to the antiphoner during the latter's dissemination at the end of the 8th century, and its prolonged use in German-speaking areas until the end of the 13th century may be attributed to the continued need to memorize the chant.

1. Nomenclature and terminology.
2. Intonation formulae and model antiphons.

MICHEL HUGLO

Tonary

1. Nomenclature and terminology.

The earliest tonaries, from the late 8th century, have no title but begin immediately with the title of the 1st tone (see below). Their contents came, however, particularly in Germany, to suggest a title. At first these varied: *Toni* (*D-TRs* 369, f.168*v*; *SI* HB.XVII.17, f.227*v* etc.), *Incipiunt toni* (*F-Pn* lat.12584, f.216; *Ps* 1220, f.602*v*; *I-Rvat* Pal.lat.552, f.59 etc.), *Incipiunt octo toni* (the tonary of Regino of Prüm: *CoussemakerS*, ii, 3) or *Incipiunt octo officiales toni* (the tonary in the Winchester Troper: *GB-Ccc* 473, f.70*v*).

The term 'tonarius' appeared in the second half of the 10th century in the region of Lake Constance, in the abbey catalogue of Pfävers and in the *Musica* of Berno of Reichenau (*GerbertS*, ii, 63*a*). The term 'tonale' was used first in the *Tonale sancti Bernardi* of the Cistercians, and the terms 'intonarium' and 'intonarius' did not appear before the 13th century.

In the earliest tonaries, the first pair of tones have D as their final, and are both called *protus*, a term derived from the first Greek ordinal number. The pairs of tones with E, F and G as their finals are similarly termed *deuterus*, *tritus* and *tetrardus* respectively. Each pair contains one authentic (Lat. *aut(h)enticus*, *aut(h)entus*; see Huglo, 1974, pp.758–61) and one plagal (*plagalis*, *plagis*; from Gk. *plagios*) mode, which are distinguished by their higher or lower ambitus, respectively. The Greco-Latin terminology was current but unexplained in the first half of the 9th century; the first explanations appeared in the prologue of the Metz Tonary (see Lipphardt, 12) and in approximately 850 with Aurelian of Réôme (*GerbertS*, i, 40*a*).

Hucbald proposed a new system to replace this, according to which the tones were to be numbered from 1 to 8 (*GerbertS*, i, 119*a*): this terminology was adopted in all the Aquitanian tonaries, and, according to the anonymous early 11th-century *Dialogus de musica* from northern Italy (see Odo, §3), was by then an established custom (*consuetudo*; *GerbertS*, i, 259*a*). In the 9th-century Metz Tonary, no special terminology was adopted for the psalm tone endings (see §3 below), which were simply listed under the abbreviation Evovae (et in secula s*e*cul*o*r*u*m *A*men). Later, however, a wide variety of terms was adopted as equivalents for 'ending': *divisio*, *varietas*, *diffinitio*, *differentia*, *figura*, *modus*, *formula* and so on (for further details, see Huglo, 1971, p.393).

Tonary

2. Intonation formulae and model antiphons.

Byzantine intonation formulae (*enēchēmata*), with nonsense 'words' set to them as identifications of the individual modes, are found in all tonaries until the mid-11th century, and in some as late as the 12th. These formulae

end with long melismas on the 'words' *noenoeane*, for the authentic modes, and *noeagis*, for the plagal modes, and were introduced into Carolingian Francia. Medieval theorists were puzzled by them: Aurelian of Réôme questioned a Greek about them (*GerbertS*, i, 42), and the author of the *Musica enchiriadis* (*GerbertS*, i, 158*b*), Regino of Prüm (*GerbertS*, i, 247*b*) and Berno of Reichenau (*GerbertS*, ii, 77*a*) believed that they were meaningless syllables suited to vocalises, serving only to reveal the mode of a chant. In the 11th century, however, they were said to be derived from the Greek *nous*, 'perception'.

Another method of modal identification lay in the use of model antiphons, introduced with the intonation formulae and ultimately displacing them. These antiphons, of unknown origin (they were not drawn from liturgical books), are based on New Testament texts as a literary elaboration of the numbers of the modes; this parallels their artistic elaboration in the decoration of Aquitanian tonaries or on the capitals that illustrate the tones in the abbey of Cluny and in Autun Cathedral: (1) *Primum quaerite regnum Dei* (*Matthew* vi.33)(2) *Secundum autem simile est huic* (*Matthew* xxii.39)(3) *Tertia dies est quod haec facta sunt* (*Luke* xxiv.21)(4) *Quarta vigilia venit ad eos* (*Matthew* xiv.25)(5) *Quinque prudentes intraverunt ad nuptias* (*Matthew* xxv.10)(6) *Sexta hora sedit super puteum* [common version] (*John* iv.6)*Sexta hora ascendit in crucem* [Aquitanian version] (*Mark* xv.25 or *Matthew* xxvii.45)(7) *Septem sunt spiritus ante thronum Dei* (*Revelation* iv.5)(8) *Octo sunt beatitudines* (*Matthew* v.3–11)Other texts are found in Berno of Reichenau (*GerbertS*, ii, 84ff), and at St Gallen and Augsburg (see Huglo, 1971, pp.234, 290).

These antiphons ended with the same melismas (*neumae*; *see* Neuma) as the intonation formulae; these served as touchstones by which the mode of a chant could be determined. In due course the *neumae*, otherwise known as caudas, *jubili* or *stivae* (*PL*, clxxxii, col.1130), disappeared from the tonary and came to be used in the liturgy at festivals, being limited to the Lauds and Vespers antiphons. Some 13th- and 14th-century motets were composed using the *neuma* as a tenor (see Huglo, 1971, p.338), and by the 16th century the *neuma* was played on the organ.

Tonary

3. Psalmody.

No examples of psalmody are given in the earliest tonaries, since the tradition was oral and was first committed to writing in the 10th-century *Commemoratio brevis de tonis et psalmis modulandis* (*GerbertS*, i, 213–29; ed. H. Schmid, *Musica et Scolica enchiriadis*, Munich, 1981, pp.157–78). Later tonaries usually include a psalm verse with notation, and sometimes also an example of the more ornate psalmody used for the *Benedictus* and *Magnificat*. These examples end with the first of the psalm tone endings (*differentiae*). Such endings were designed to smooth the transition from the psalm verse to the beginning of the repetition of the antiphon after the verse; accordingly, within each tone chants are classified by the endings best suited to them. This classification varies occasionally from one tonary to another, depending on the individual preferences of the compilers; the number of endings, too, is not the same for each tone and varies for any single tone from tonary to tonary. The order in which the endings are

presented varies greatly. Early tonaries generally begin with the simplest and commonest endings, under which the largest number of antiphons is listed. In later tonaries the number of endings declined. Some later theorists established a rational order based on a musical principle: Berno of Reichenau classified the endings according to their proximity to the final of the mode (*GerbertS*, ii, 76*a*).

Among the psalm tones of the tonaries, one, the *tonus peregrinus* ('wandering' or 'alien' tone), is unlike any other: it has two recitation notes, whereas the regular eight tones have only one each. The theorists found difficulty in fitting it into the scheme of eight tones; it is often found after the 8th, but less because it has any connection with that tone than because it is foreign to Gregorian psalmody (see Huglo, 1971, pp.394–6, and J. Claire: 'The *tonus peregrinus*: a Question Well Put', *Orbis musicae*, vii, 1979–80, pp.3–14; *see also* Gallican chant, §10).

Tonary

4. Repertory.

The tonary is an index of the psalm tone endings best suited to individual chants, and might thus be expected to be limited to antiphons of the Office and Mass. Nevertheless, responsory verses possess stereotyped formulae, varying according to their mode, which constitute a sort of very ornate psalmody; accordingly, the 9th-century tonary of Metz (see Lipphardt) and the tonary of Regino of Prüm (*GerbertS*, i, 231*a*) include some examples of responsories for each tone.

It is more difficult to understand the inclusion of graduals, alleluias and offertories of the Mass in the earliest of all tonaries, the late 8th-century tonary of St Riquier (ed. Huglo, 1971, pp.26–8). Not all the chants in the Gregorian repertory imply a dominant–final relationship (these elaborate non-antiphonal chants are used, in any event, only as illustrations of the division of the repertory into eight tones).

Individual chants are not assigned in every tonary to the same mode; in some cases the differences arise only because the chants may be assigned to an authentic mode in some tonaries and to a plagal mode in others, but in some cases there appears to have been some uncertainty over the choice of the modal pair (see Huglo, 1971, pp.402–9). But the schemes of classification in the earliest tonaries provide clear evidence of the conception of modality in the Carolingian era, if mistakes in classification (e.g. arising from errors in the transcription of the letters or numbers referring to the mode) are ignored. This Carolingian conception of modality was rather different from that which became universally established in the 13th century.

Tonary

5. Pre-11th-century sources.

The earliest surviving tonary is that of St Riquier in the late 8th-century Psalter of Charlemagne (*F-Pn* lat.13159; ed. Huglo, 1952, pp.225–7; and 1971, pp.26–8); it contains only the first five tones and no Office chants. The tonary of Aurelian of Réôme dates from about 850 (*GerbertS*, i, 39–59; ed. Gushee). The tonary of Metz or Carolingian Tonary, which, according

to Lipphardt, was compiled about 830, survives in four manuscripts: *F-ME* 351, copied in about 878 (ed. Lipphardt); *D-W* Helmst.1050 (catal.1152), of the 11th or 12th century, in which the chants are listed under each ending according to their position in the liturgical year; *D-BAs* lit.5 (Ed.V.9), from Reichenau, of the year 1001 (text collated by Lipphardt); *I-Rc* 54, from Nonantola, of the 9th century (analysed by Huglo, 1968, pp.22–8): this tonary, a copy of the Reichenau tonary, was probably brought to Italy by Jean Philagathos, private tutor to Otto III, who was named Abbot of Nonantola in 982 by the Empress Theophano.

The 9th-century tonary of the group of churches centred on St Denis and Corbie may be reconstructed from marginal letters opposite the introit and communion texts in three early graduals (see Huglo, 1971, pp.94–101): *F-Pn* lat.12050 (ed. R.-J. Hesbert, *Antiphonale missarum sextuplex*, Brussels, 1935/*R*, pp.CXXIII–CXXVI); the gradual from a private collection in Paris (pubd as PalMus, 1st ser., xvi, 1955); *F-LA* 118. The tonary of Regino of Prüm dates from about 900; Coussemaker's edition of it (*CoussemakerS*, ii, 3–73) is based on *B-Br* 2750–65. Several tonaries date from the 10th century: the tonary of the *Alia musica* (ed. Chailley); the tonary common to the various *Enchiriadis* manuscripts (see Huglo, 1971, pp.66ff); an anonymous tonary in a troper and proser of St Martial de Limoges (*F-Pn* lat.1240, dated 933–6) which contains the Byzantine intonation formulae but no model antiphons as did the later Aquitanian tonaries (see Huglo, 1971, pp.146–7); and the late 10th-century tonary of Odo of Arezzo (*see also* Odo, §2 (see also Huglo, 1971, pp.206–13).

Tonary

6. 11th- to 13th-century sources.

From the 11th century the number of tonaries increased considerably and a division according to region occurred. Tonaries of an eastern group (from the German-speaking countries) represent a continuation of the Carolingian tradition – a complete tonary designed for practical use by singers, and covering the entire chant repertory; its use was greatest before the appearance of diastematic notation. Tonaries of a western group comprise mere abridgments, used for instruction, in which only a few examples from each chant category are cited to illustrate each tone.

(i) Eastern group.

Of the anonymous German tonaries, the most important is that in a Reichenau manuscript (*D-BAs* lit.5; see §5 above), in which the chants are classified alphabetically. This was probably the model for the tonary of Berno of Reichenau (*d* 1048) which survives in 17 manuscripts (list in Huglo, 1971, pp.266–7); Gerbert's severely mutilated edition of the Berno tonary quotes only the beginnings of the first six tones and omits the examples (see Huglo, 1971, pp.274–6; see Donato for edn after *I-Rvat* Pal.lat.1344). The tonary of Gondekar of Eichstätt (*c*1070) is partly derived from that of Berno; that of Frutolfus of Michelsberg (*d* 1103) is merely a slightly amended amplification of Berno's (ed. Vivell). Berno also influenced the *Registrum tonorum* of Udalscalcus of Maisach (*d* 1151), which survives in *D-Mbs* Clm.9921, *W* Gud.lat.4641 and in the fly-leaves of Melk.

(ii) Western group.

Of the western tonaries the most homogeneous group is found in Aquitaine, and it may in turn be subdivided into a group from Toulouse and one from Limoges. The Toulouse tonaries survive in the following manuscripts: *F-Pn* lat.776, lat.1084, lat.1118, and *GB-Lbl* Harl.4951 (see illustration). Similar characteristics are present in a Narbonne tonary (*F-Pn* lat.780), a tonary in a troper from St Martial (*Pn* lat.1240), and some Paris fragments (*Pn* lat.7185). The Limoges tonaries are found from the 10th century in the following manuscripts: *F-Pn* lat.909, lat.1084, lat.1118, lat.1121, and *US-BEm* 88, from St Allyre, ?Clermont-Ferrand (RISM, B/III/4, 1994, pp.141–2). From these two sub-groups are derived the tonaries of *F-Pn* lat.7211 and n.a.lat.443, and of *I-Nn* VIII.d.14. Spanish tonaries were also linked with the Aquitanian tradition, although they are all short and there are complex problems in linking them with the earliest sources; they survive in *E-Bac* Ripoll 74 (10th-century) and *GB-Lbl* Add.30850 (from Silos).

Abridged tonaries, usually anonymous, appeared in the *langue d'oïl* regions north of the Loire from the 10th century, and increasingly from the 11th century (*F-Pn* lat.4995, f.38*v*; *T* 96; *I-Rvat* Reg.lat.1638, f.126, pp.315ff). The collected works of Odorannus of Sens (*d* 1046) include a tonary of this kind (*I-Rvat* Reg.lat.577; see Bautier and Huglo). The tonary of Guillaume de Dijon (990–1031), the instigator of a monastic reform, is probably the finest of the French tonaries; it survives in *F-MOf* H.159 (PalMus, 1st ser., viii, 1901–5/*R*) and is supplemented – for the Office chants – by a 13th-century copy at the beginning of an antiphoner from Fécamp (*F-R* 245 [A 190]).

In England short tonaries were sometimes transcribed in liturgical books (see §iii below). The most important English tonary, however, was the Sarum tonary (*Tonale secundum usum Sarum et universalis ecclesiae*, ed. Frere), compiled in the early 13th century like the Sarum gradual and antiphoner. This tonary is detailed, and preceded by remarks on theory; it corresponds in every respect with the Sarum antiphoner (*AS*, 1901–25/*R*), and contributed to the tradition of sound theoretical and practical training of cathedral choristers in England. Complete or in part it survives in numerous 14th- and 15th-century manuscripts (Longworth House, Longworth, Berkshire, the Denchworth Breviary; *GB-En* Adv.18.2.13a; Mayer Museum, Liverpool, 12016, originally from Cardington, Bedfordshire; *Lbl* Arundel 130; *Occ* 44; *SB* 175; *I-PAc* 98).

(iii) Transitional group.

Intermediate groups of tonaries were borrowed at times from the eastern and western groups described above. These borrowings are found most notably in tonaries associated with the Liège school, and also in Swiss tonaries. The rise of the Liège school is reflected in anonymous treatises of the second half of the 9th century, such as the *De musica sive modulatione cantus* and, more particularly, the *Quaestiones de musica* (ed. Steglich), both of which contain musical formulae borrowed from tonaries. This Liège school had contacts with both Metz and Bavaria. Tonaries associated with it include that ascribed (apparently without foundation) to Sigebert de Gembloux (1030–1112; *B-Br* 10078–95), and that in the *De musica* of

Johannes Afflighemensis, formerly regarded as of the school of Normandy (see Huglo, 1971, pp.299–301).

The earliest examples of Gregorian chant in Switzerland seem to belong to the western group described above, but the tonary of the 10th-century Hartker Antiphonary (*CH-SGs* 390–91: PalMus, 2nd ser., i, 1900/*R*; Monumenta palaeographica gregoriana, iv/1–2, Münsterschwarzach, 1988) contained intonation letters, a novel feature that later influenced tonaries in the eastern group. The six Latin vowels (i.e. including both i and y) and the two Greek long vowels are used to indicate the psalm tone appropriate to an antiphon, and the vowel for the tone is followed by one of the consonants b, c, d, g, h, k, p and q (rather than an ordinal numeral) to indicate the psalm tone ending to be used. This system of pairs of letters became traditional not only in Swiss tonaries, but also in antiphoners and graduals, and it came to be used in other regions influenced by Switzerland, especially Swabia and Bavaria, probably by way of Weingarten and Ottobeuren (an abbey with contacts with the Swiss abbey of Einsiedeln). Intonation letters ultimately spread as far as Kremsmünster in Upper Austria and to Monza (*I-MZ* C.12/75).

The short English tonaries transcribed in liturgical books include the *Octo officiales toni* in the Winchester Troper (*GB-Ccc* 473, f.70*v*). At the beginning of each tone there are verses, written by Berno of Reichenau for his tonary (*GerbertS*, ii, 84).

(iv) Tonaries of religious orders.

Since early tonaries are heterogeneous it is unnecessary to distinguish between those of secular and those of monastic origin, as must be done with antiphoners (indeed, many of those cited in earlier sections are monastic in origin). From the 12th century, however, the increasing systematization of the liturgy of the religious orders is reflected in the development of distinctive tonaries (see Huglo, 1971, chap.11). The Cistercian tonary, or *Tonale sancti Bernardi*, was a product of the liturgical reforms of Bernard of Clairvaux (1090–1153) and the consequent unification of chant in the Order. In it the number and complexity of the psalm tone endings were reduced. It represents a systematic application to the tonary of the *Regule* by Guido of Eu (*CoussemakerS*, ii, 150ff; ed. C. Maître, *La réforme cistercienne du plain-chant: étude d'un traité théorique*, Brecht, 1995, pp.108–233; and survives complete (*GerbertS*, ii, 265–77; *PL*, clxxxii, 1153ff), in abridged form and also in a form comprising only the notated sections and omitting the theoretical exposition (as in antiphoners such as *GB-Lbl* Eg.2977).

The Dominican tonary, included in the graduals, was based on that of the Cistercians but was not as systematic as the latter; it was sometimes preceded by a short prologue, *Omnis cantus ecclesiasticus* (see Huglo, 1967, p.124). Dominican antiphoners were preceded by an extract from the *Tractatus de musica* of Hieronymus of Moravia rather than a tonary. A similar prologue of the *Omnis cantus ecclesiasticus* occurs in several noted Franciscan books, but the Franciscan tonary is difficult to reconstruct because the archetypal Franciscan liturgical books do not survive. Some Augustinian manuscripts (not of the Premonstratensians) contain tonaries, but there is no evidence that any unified tonary was compiled for the Order.

Only two Carthusian tonaries survive (Parkminster, Charterhouse A.33, and *F-G* 124), and they are rather dissimilar, possibly representing Carthusian practice before and after the reform of chant in that Order (see Becker).

Tonary

7. Post-13th-century sources.

Tonaries continued to be copied until the 16th century, but apparently became manuals for teaching the theory of the eight tones rather than practical manuals for oral instruction in the chant. In this field, however, they are of purely documentary interest since late tonaries are only abridgments, and they provide much less information about the development of the concept of modality than can be obtained from treatises. The main interest of the tonary lies in the earliest examples – for the light cast on the conception of modality held by the earliest orderers of the Gregorian repertory in the Carolingian era. Late tonaries are full of mnemonic devices and verses summarizing the rules concerning the intonations or psalmody for each mode; these appeared mainly from the 12th century, particularly in Germany. There are some tonaries in verse, for example that of Hugo Spechtshart (1332). Tonaries still occur in early printed books, such as that of Dietrich Tzwyvel (*Tonarius qui vulgo Primum querite dicitur*, Cologne, 1505 or 1515). *See also* Psalm, §II.

Tonbund

(Ger.).

See Fret.

Toncheva, Yelena

(*b* Sofia, 26 June 1933). Bulgarian musicologist. She studied music theory and piano with Andrey Stoyanov at the Bulgarian State Music Academy, Sofia, graduating in 1958. She also studied in France, specializing in medieval western European music at Paris University with Corbin Solange (1971–2) and returned in 1973 to focus on medieval French civilization. She was head of the music department at the Institute of Musicology, Sofia (1981–9), and became director of the Institute of Art in 1996. Her main studies and activities are in medieval European and Bulgarian music, the history of Bulgarian music and in Byzantology, in which she is recognized as a leading figure.

MAGDALENA MANOLOVA

Ton de rechange

(Fr.).

See Crook.

Tondichtung

(Ger.: 'tone poem').

A term adopted by Richard Strauss for his symphonic poems in preference to the previously accepted German term 'symphonische Dichtung'; it was widely current at the beginning of the 20th century.

See Symphonic poem.

Tone (i)

(from Lat. *tonus* and Gk. *tonos*; Fr. *ton*; Ger. *Ganzton*; It. *tono*).

The interval equal to the sum of two semitones and hence referred to as a 'whole tone', usually perceived as a major 2nd; in equal temperament, the sixth part of an octave. It and the semitone are the intervals by which conjunct motion in a part or voice is generated.

In the Pythagorean tuning system the whole tone is the excess of two pure 5ths over an octave (reckoned from *c*, the interval *c'–d'*), a ratio of 9 : 8, or 203·9 cents (a cent is a logarithmic unit equal to 1/1200 of an octave; an equal-tempered whole tone is by definition 200 cents). In Just intonation, however, there are two sizes of whole tone: the major tone, which is the same size as the Pythagorean whole tone, and the minor tone, which is the difference between a major tone and a pure major 3rd, that is, a ratio of 10 : 9, or 182·4 cents. Yet in any regular mean-tone temperament, as in equal temperament and Pythagorean intonation, the whole tone is always precisely half the major 3rd.

WILLIAM DRABKIN

Tone (ii).

Any steady sound, especially one used in making measurements, as in, for example, 'pure tone' (a single frequency), 'test tone', 'standard tone', 'combination tone' etc.

<div align="right">WILLIAM DRABKIN</div>

Tone (iii).

The quality of a musical sound. An oboe might be described as producing a 'reedy' tone whereas a flute produces a 'mellow' tone. *See* Timbre (i).

<div align="right">WILLIAM DRABKIN</div>

Tone (iv).

An American term for pitch or pitch class, as in '12-tone music'; British usage prefers 'note'.

<div align="right">WILLIAM DRABKIN</div>

Tone (v).

In Gregorian chant, the generic name given to a recitation formula; *see* Plainchant; Psalm, §II; *see also* Mode.

<div align="right">WILLIAM DRABKIN</div>

Tone cluster.

Tonelli [De' Pietri], Antonio

(*b* Carpi, 19 Aug 1686; *d* Carpi, 25 Dec 1765). Italian cellist and composer. After early musical training under Nicolò Pace and Gaspare Griffoni, *maestri di cappella* of Carpi Cathedral, he moved to Bologna, where he continued his musical studies, including composition, the organ, cello, viola d'amore and singing. In 1706 he became a music teacher at the Collegio dei Nobili in Parma and *virtuoso di camera* for Duke Farnese. From Parma he went on several journeys, spending some time in the service of the King of Denmark. In 1723 he reappeared in Italy, where he collaborated on an opera at Reggio nell'Emilia (*L'enigma disciolto*), and in 1724 became organist and later *maestro di cappella* of the Accademia del Rosario in Finale Emilia. At the same time he pursued his career as a cellist, often playing in Venice. In 1730 he was named director of music at Carpi Cathedral, and in 1731 was court virtuoso at Modena. Six years later he resumed his journeys and gave performances in various north Italian cities. From about 1741 to 1745 he was *maestro di cappella* in Alassio; in 1746 he returned to Carpi and founded a music school for poor children, which closed three years later. In 1753 he left Carpi for Alassio, then returned once again in 1755 to his native city to serve as *maestro di cappella* in the

cathedral, a post he held until his death; during that time he wrote his *Trattato di musica*.

Often reduced to being an itinerant musician, Tonelli was evidently an eccentric figure, dressed always in clerical black, though he was never even a minor cleric. Much has been written about the relationship with his young pupil Rosa Partegiotti, to whom he taught the organ and singing. In spite of a difference in age of 62 years, the bizarre Tonelli wished to marry her; she, however, entered a convent where she continued her musical profession as organist and singer.

Almost all Tonelli's music is lost. His *Trattato* shows an original method of teaching music to young children as well as insights into musical practices of the 18th century. Though the treatise was never printed, he sent it for correction to G.B. Martini, who laboriously copied it for his own library (a letter from Tonelli to Martini is in *I-Bc*); Tonelli's realization of the continuo of Corelli's op.5 (*MOe*) is perhaps the most important example of written-out continuo in the 18th century, one which may have influenced Handel's style of continuo realization.

WORKS

lost unless otherwise stated

secular vocal

L'enigma disciolto (op), Reggio nell'Emilia, Cittadella, 1723, collab. others

Lucio Vero (op), Carpi, 1731; with Canoppo e Lisetta (ints, P. Ferrari), Bologna and Carpi, 1731

Cantate per musica, Carpi, 1724

oratorios

Il trionfo dell'umiltà di S Filippo Neri, Bologna, Madonna di Galliera, 1724, *I-Bof*

Dialogo per musica fra il beato Andrea Conti e un'anima divota (A. Zallotti), Finale di Modena, Franciscan church, 24 Oct 1724

Sapienza, S Antonio ed Eresia, 3vv, insts, Bologna, 1725

other works

Diurno musicale ad uso della Cattedrale di Carpi; cioè 2 messe, una solenne e l'altra breve, con i salmi per tutti i vespri dell'anno, antifone, finali, inni, Tantum ergo, Litanie della BVM

Responsori per la Settimana Santa

Kirie e Gloria, hpd, vns ad lib, cavati dai I, VI, VII, IX, e X duetto di Don P. Bellinzani, op.5, 1745

Corelli trasformato in 4 antifone ed 8 Tantum ergo, a varie voci

Realizzazione del basso continuo dell'opera quinta di A. Corelli, *I-MOe* Mus.F. 1174 [incl. 8 short preludes by Tonelli]

ANNE SCHNOEBELEN

Tonello, Antonio

(*fl* 1598). Italian composer. He was *maestro di cappella* at Feltre Cathedral when his *Madrigali a cinque voci* (Venice, 1598, inc.) was published. This collection, which is largely devoted to settings of pastoral verse, includes one piece dedicated to a local worthy, Paolo Bellato, whose name is incorporated into the text. The volume as a whole has the air of having been composed for some local gathering of music amateurs. A four-voice setting of *Suggea da duo coralli* appeared in an anthology edited by Giovanni Maria Radino, then organist at S Giovanni di Verdara, Padua (RISM 1598[9]).

IAIN FENLON

Tonelus.

Tonger, P.J.

German firm of music publishers. Augustin Josef Tonger (1801–81) founded a music shop and publishing firm in Cologne in 1822. The retail business was taken over as an independent concern in 1872 by his son Peter Josef (i) (1845–1917). The latter's son, Peter Josef (ii) (1875–1960), and grandson, Peter Josef (iii) (1902–89), did much to develop a flourishing business. Peter Tonger (*b* 1937), son of Peter Josef (iii), joined the firm in 1965 and has been sole owner of the company since the death of his father. Tonger's *Taschen-Alben* series, of which 62 volumes had appeared by World War II, reached an overall circulation of more than three million copies. The firm has also published choral and school music, Hausmusik and music literature. After the Cologne premises were destroyed in World War II, it moved to Rodenkirchen. Contemporary composers whose works it publishes include Jürg Baur, Bialas, Bresgen, Dinescu, Feld, Lemacher, Mersmann, Siegl, Schroeder and Julius Weismann. Works by female composers published for the first time include those by Johanna Kinkel, Fanny Mendelssohn, Marianne von Martínez and Anna Amelia von Sachsen-Weimar.

Tongues, singing in.

See Singing in tongues.

Tonguing.

In playing mouth-blown wind instruments, the technique used for beginning (and sometimes ending) notes, except those which are slurred. With reed instruments the tip of the tongue is placed against the reed, then drawn quickly back to release the air stream. In playing cup-mouthpiece instruments and members of the flute family the tip of the tongue is generally placed against the palate behind the upper teeth, then drawn back as if forming the consonant 'T' or 'D' with some suitable vowel. Such a movement is often termed a 'tongue stroke' (Fr. *coup de langue*; Ger. *Zungenstoss*). For playing rapid notes, pairs of syllables are generally employed, alternating an articulation of the air stream near the teeth ('te') with one created by the back of the tongue on the soft palate as in pronouncing 'ke' or 'ge'; this gives the pattern *te-ke te-ke* (known as 'double tonguing'). For triplets the patterns *te-te-ke te-te-ke* or *te-ke-te te-*

ke-te are normally used ('triple tonguing'). Flutter-tonguing, a common device in 20th-century music, is essentially a protracted rolling of the tip of the tongue, as in an Italian 'R'.

The representation of tonguing patterns as combinations of syllables has a long history with important implications for both instrumental technique and performance practice. The earliest extant written sources on tonguing, dating from the 16th century, reveal an already highly developed system, presumably continuing a rich oral tradition. Until the mid-17th century, most sources on tonguing were instruction books on the art of improvising diminutions, since the technique of diminunition (the ultimate expression of instrumental virtuosity) created the greatest need for rapid tonguing. The tonguing tradition as described in 16th- and 17th-century sources (notably Italian ones) demonstrated great variety and subtlety. Types of double tonguing were employed not only for speed but for expression, and also in imitation of vocal *gorgie*, the characteristic throat articulation used by singers to execute rapid diminutions. Most theorists, including Ganassi (*Opera intitulata Fontegara*, 1535), Girolamo Cardano (*De musica*, *c*1546), Girolamo Dalla Casa (*Il vero modo di diminuir*, 1584), Riccardo Rognoni (*Passaggi per potersi essercitare nel diminuire*, 1592), and Francesco Rognoni Taeggio (*Selva di varii passaggi*, 1620), distinguished between single tonguing (*te te te* or *de de de*), to be used for notes slower than quavers, and three kinds of double or compound tonguings, called *lingue*, to be used for faster notes. These *lingue* were classified according to their articulative and expressive qualities: hard and sharp (*te-che te-che*); intermediate (*te-re te-re*); and smooth (*le-re le-re*). (Note that the pronunciation of consonants in the original languages of the sources is important for understanding how the syllables were executed. The *r* in these sources was a single stroke of a rolled 'R' in which the tip of the tongue brushes quickly against the ridge of the teeth, also known as the 'alveolar ridge'; the *ch* is equivalent to the English 'K'.) Of these compound tonguings the third type, *le-re le-re*, was considered the best for diminutions, since it most closely imitated the human voice, and was thus known as the *lingua di gorgia*. It was also termed *lingua roversa* (reversed tonguing), indicating that, when executed rapidly, it was somehow transformed or 'reversed'. The exact nature of this 'reversal' is unclear but may have involved shifting the *l* from the first syllable of the pair *le-re* to the second syllable, a similar movement to Quantz's double tongue of the 18th century (see below). The tonguing considered the least suitable for diminutions was the first one, *te-che te-che*, since it was considered too 'harsh' and 'crude' to be 'vocal'. The intermediate tonguing, *te-re te-re*, was deemed to be good for diminutions of moderate speed, as it was moderate in character and easy to control. These compound tonguings were applied to all notes faster than crotchets. In the case of quavers, while the use of compound tonguings was not strictly necessary for speed, they aided in producing a slight inequality of stress considered desirable for tasteful playing. This is presumably why an alternation of hard and soft consonants (*te-re te-re*) was preferred to two hard ones (*te-che te-che*).

Until the 18th century, nearly all notes in wind playing were tongued, the only important exception being the two alternating notes of a type of trill called the *tremolo*. Even cadential trills (*groppi*) were still generally tongued in the early 17th century. Rognoni Taeggio (1620) gave the first indication

that *groppi* could sometimes be slurred as well. His brief musical example with tonguing syllables below the notes is virtually the only example from before 1700 of syllables applied to actual music rather than mere tonguing exercises. It reveals that, although string players had begun to slur passages of up to 12 semiquavers, wind players continued to articulate them using compound tonguings, particularly the *lingua roversa*. The decline of the diminution tradition is represented in the work of the cornettist Bartolomeo Bismantova (*Compendio musicale*, MS, 1677, *I-REm* Reggiani E.41). He mentioned only two types of compound tonguings, of which the 'hard' tonguing, *te-che*, was 'no longer in use' although, curiously, sometimes used to 'good effect … in the *stile cantabile*'. To these traditional tonguings he added three-letter syllables, *ter-ler* and *der-ler*, without relating them to the *lingua roversa*, as well as slurred notes (*note legate*). Finally, he considered that the cornett required a sharper basic tonguing (*te*) than did the recorder (*de*).

The French woodwind methods of the late 17th and early 18th centuries, such as Etienne Loulié's *Méthode pour apprendre à jouer de la flûte douce* (MS, *c*1685, *F-Pn* fr.n.a.6355), J.-P. Freillon Poncein's *La véritable manière d'apprendre à jouer en perfection du haut-bois, de la flûte et du flageolet* (1700), and Jacques Hotteterre's *Principes de la flûte traversière* (1707), used only two tonguing syllables, *tu* and *ru*, in which the *t* is pronounced behind the upper front teeth and the *r* rolled from the teeth up to the alveolar ridge (see Ranum, 1998). Ranum (1993) proposed that these syllables helped players mimic French song, which in turn was influenced by poetic structure. Hotteterre recommended *tu* for longer notes and most quavers; conjunct quavers and all semiquavers intermixed *ru* in three ways (interpretation due to Ranum, 1993): *tu | ru* for *notes inégales* (ex.1(a)); *tu ru | tu* for dotted notes and crotchet-quaver-quaver-crotchet or quaver-semiquaver-semiquaver-quaver patterns (ex.1(b)) and *tu ru tu / tu* (ex.1(a)) to conclude a phrase. He considered slurring (*coulez*) to be an ornament; yet 12 years later, the preludes and *traits* (capricious exercises) in his *L'art de préluder sur la flûte traversière* (1719), influenced by the Italian violin style, featured a great deal of slurring over long groups of smaller note-values. Although the slurring of trills was by then universal, he still allowed the two-note termination to be tongued. As the Italian style made further inroads into French music, *tu* and *ru* were abandoned; Michel Corrette (*Méthode pour apprendre aisément à jouer de la flûte traversière*, *c*1739) considered them 'an absurdity which serves only to perplex the student'.

Subsequent 18th-century flute methods advocated two different approaches to tonguing. The first approach retained the use of syllables. The influential German flautist Quantz (*Versuch einer Anweisung die Flöte traversiere zu spielen*, 1752) varied the single tongue stroke, giving a choice of two syllables, *ti* and *di*: with *ti*, for playing leaping quavers, 'the tongue immediately springs back to the palate'; with *di*, for playing conjunct quavers and longer notes, the air stream 'is not kept from sustaining the tone'. For dotted notes and moderately quick passage work, he changed the subtle French mixture of *tu* and *ru* into 'the word *tiri*' and its *legato* counterpart *diri*, thus varying the consonant, bringing the tongue higher in the mouth, and creating regular patterns of syllables. He also introduced the double tongue *did'll* for 'the very quickest passage work'. Tromlitz (*Ausführlicher und gründlicher Unterricht die Flöte zu spielen*, 1791)

modified the vowel to *a*; he also incorporated *a* into patterns that would otherwise have been shown by slurs: *ta-a-ra-a-da-a-ra-a*, *ta-a-da-ra-a-da*, *tad-llad'l-lad'llad'll*, *tad'llda-rad'llda*, etc. The second method, which eventually dominated in the 19th and 20th centuries, rejected the use of syllables except in double tonguing. Antoine Mahaut (*Nieuwe manier om binnen korten tijd op de dwarsfluit te leeren speelen/Nouvelle méthode pour apprendre en peu de temps à jouer de la flûte traversière*, 2/*c*1759) followed Corrette's example in freely intermixing tongued and slurred notes along with accent marks and staccato dots and wedges. Mahaut's musical example featured what was to become the standard Classical two-slurred-two-tongued pattern alongside slurred pairs of notes both on and across the beat. For double tonguing he used the Quantzian *di-del*. De Lusse (*L'art de la flûte traversière*, *c*1760) advocated a new double tongue, *loul-loul*. François Devienne (*Nouvelle méthode théorique et pratique pour la flûte*, 1794) mentioned something similar, 'beating the tongue on the palate', but preferred a further pattern, *dougue dougue*, similar to the old Italian compound tonguing *te-che te-che*, rejecting *tourou* or *turu* as 'mumbling'. A similar tonguing to *dougue* had been an apparently continuous tradition among trumpeters, from Fantini's *teghe* (*Modo per imparare a sonare di tromba*, 1638) through Speer's *dikedank* and *dikedikedank* (*Ungarischer oder dacianischer Simplicissimus*, 1683) to Altenburg's *kitikiton* and *tikitikiton* (*Versuch einer Anleitung zur heroisch-musikalischen Trompeter- und Pauker-Kunst*, 1795) and beyond. John Gunn (*The Art of Playing the German-Flute on New Principles*, *c*1793) noted the Quantzian *diddle*, but for evenness of articulation preferred a new 'staccato' double tonguing, *teddy* or *tiddy* (which he considered a development of Quantz's *tiri*).

Even in the 19th century the modern double tongue did not take precedence immediately. Louis Drouet (*Drouët's Method of Flute Playing*, London, 1830) reported that he was still encountering *tutel*, *tatel* (the Netherlands), *tetel*, *titel*, *totel*, *tutel*, *take*, *teke*, etc. (northern Europe), and *dougue* (France), but no double tongue in Italy, Spain and southern France; he himself preferred *deureu* or *doru*. The Quantzian double tongue was mentioned as late as 1844 by A.B. Fürstenau (*Die Kunst des Flöten-Spiels*, pubd Leipzig, 1909), who himself used exclusively single tonguing.

BRUCE DICKEY, DAVID LASOCKI

Toni, Alceo

(*b* Lugo di Romagna, 22 May 1884; *d* Milan, 4 Dec 1969). Italian composer and writer on music. He studied at the Liceo Musicale, Bologna, under Torchi and Marco Bossi. From 1908 to 1910 he was director of the Liceo

Musicale in Rovereto, from 1918 to 1921 he was technical director of D'Annunzio's Raccolta Nazionale delle Musiche Italiane and from 1936 to 1940 president of the Milan Conservatory. He was music critic on the *Popolo d'Italia*, the official Fascist party newspaper, between 1920 and 1943, and contributed to other nationalist journals; under fascism he was also secretary of the Milan musicians' union and, subsequently, a member of the national directorate of the Fascist union of musicians. After the war he was music critic for the Milan daily *La Notte*. He was a member of the Accademia di S Cecilia, and he prepared many editions of Italian music of the 16th and 17th centuries. A passionate supporter of the Fascist regime and of musical nationalism, Toni, whether as a composer of 'retrograde tastes and great pretensions' (Sachs), or as a critic, displayed a totally closed mind towards 20th-century musical developments. In 1932 he was one of the instigators of an anti-modernist manifesto directed against the receptiveness of Malipiero and Casella to such trends.

ANTONIO TRUDU

Tonic

(Fr. *tonique*; Ger. *Tonika*; It. *tonica*).

In the major–minor tonal system, the main note of a key (also called its key note), after which the key is named; the name of the scale-step or Degree

of that note; the triad built on that note. In music based on one of the church modes, the function of tonic is most closely approached by the Final of that mode.

See also Tonic accent and Tonality.

Tonic accent.

Emphasis given to a note on account of its higher pitch, rather than because of stress (i.e. dynamic Accent) or lengthening of durational value (i.e. Agogic accent). In ex.1 the third beats of bars 1 and 2 receive a tonic accent, in addition to a dynamic accent, because the melody notes that fall on them are higher than those of beats 1 and 2.

Tonicization

(Ger. *Tonikalisierung*).

The act of establishing a new key centre, or of giving a degree other than the first the role of tonic. This is accomplished by emphasizing the crucial properties of that tonic, in particular its fourth scale degree and leading note, both of which are part of its dominant 7th chord. For example, at the beginning of the slow movement of Mozart's String Quartet k160/159*a* (ex.1), the first chord tonicizes B♭ and so helps delay the arrival of the home key of A♭ until the downbeat of bar 6.

Haydn's String Quartet op. 74 no.1 begins with a V^7–I progression; though the first chord is not a tonic, it nevertheless 'tonicizes' the home key of C major. By contrast, the opening chord of Beethoven's First Symphony, a tonic chord with an added flattened 7th, behaves initially as a V^7 of IV and so tonicizes the subdominant, F (*see* Cadence, ex.15).

The term *Tonikalisierung* originates in the second part of Heinrich Schenker's *Harmonielehre* (1906, chaps. 2–3), where examples of tonicization are used to show how one diatonic collection can be musically enriched by the implication of another (through the presence of a single foreign note), and how the concept of Stufe (i.e. a significant harmony identified with a particular scale degree) is more useful than the notion of transitory modulation.

The term 'tonicization' is sometimes used in a non-Schenkerian context to characterize modulation at a low level, where a new key is touched on only briefly.

WILLIAM DRABKIN

Tonic Sol-fa.

A form of musical notation and the system of teaching sight-singing which depends upon it, both devised by John Curwen in mid-19th-century England. One of the few alternative forms of notation to achieve international use in modern times, Tonic Sol-fa had its origin in Guidonian solmization, depending like that system upon aural perception of relative pitch (*see* Solmization, §I), but incorporating many features adopted empirically from other sources. First designed as an aid to beginners, Tonic Sol-fa was mistakenly regarded by its extreme exponents late in the 19th century as superior to standard notation in its own right. Consequently distrusted and misunderstood by many professional musicians, the system passed through a more recent period of disfavour and neglect. It is now seen to offer distinct advantages when employed purely as an ancillary device in the early stages of learning to read from notes; and, particularly following its adoption in modified form by Zoltán Kodály for use in Hungarian schools, it is employed for that purpose today in many parts of the world (*see* Schools).

2. The notation as originally used.
3. Method of teaching.
4. Modern developments.

BERNARR RAINBOW

Tonic Sol-fa

1. Historical background.

Tonic Sol-fa owes its existence to the drive to improve congregational singing which began in Britain during the third decade of the 19th century. At a conference of Sunday school teachers in Hull in 1841 the Rev. John Curwen, a young Congregationalist minister already noted for his remarkable skill as a teacher, was charged with the task of finding the most reliable method of teaching singing. Though without musical ability himself, Curwen took the charge seriously. He had already attempted unsuccessfully to teach his own schoolchildren to sing, but had found anything beyond teaching melodies by rote unattainable because of his ignorance of musical notation. Earlier attempts to teach himself to read music had failed because the technical information supplied by the instrumental primers of his day proved quite incomprehensible to him without the aid of a teacher; and later attendance at the popular singing classes organized by John Hullah only served to convince Curwen that a sol-fa system which linked *doh* permanently to the note C inevitably led to bafflement when other keys were introduced.

It was at this stage of his investigations that Curwen examined a treatise on the teaching of singing written by Sarah Anna Glover, a Norwich schoolmistress, entitled *Scheme for Rendering Psalmody Congregational* (1835). The book set out the details of a method that Glover had used to train a remarkably proficient children's choir for the church at which her father was vicar. Depending basically upon a notation of sol-fa initials, her *Scheme* was designed to make the pupil familiar from the outset with the aural effect of note relationships – instead of introducing him first to a catalogue of musical facts and symbols. After studying Glover's book Curwen was delighted to find that he was soon able to read a psalm tune

from her notation; and on teaching the first steps of her method to a child at his lodgings, he was convinced that he had found the system he was seeking.

Excited by his discovery, Curwen published early in 1842 a series of 'Lessons on Singing' in the *Independent Magazine* (a Congregationalist journal that he edited), making several amendments of his own to Glover's original method. She had anglicized the traditional sol-fa names to read *Do, Ra, Me, Fah, Sole, Lah* and *Te*; he preferred *doh, ray, me, fah, soh, lah* and *te* as being less ambiguous. She employed capital letters for her notation of initials; he used small letters because they took up less room on the page and were available in greater quantity in the stock of any journeyman printer. She codified keys by reference to an elaborate chart; he preferred to state the key simply as 'Doh is C', or 'Key C'. These and many other similar modifications, each marking an improvement on the original, reflect Curwen's practical mind and insight as a teacher. He gave the name 'Tonic Sol-fa' to his version to emphasize its key-centred nature – as opposed to the 'fixed' sol-fa which John Hullah had introduced from France and was then teaching.

Curwen was 25 when he published his first account of Tonic Sol-fa in the *Independent Magazine*, and he was to devote the rest of his life to the perfection and propagation of his method. Constantly examining the works of other teachers both at home and abroad, he eagerly incorporated into his own system any device which helped to make the pupil's task simpler. In every case where he adopted an idea in this way he readily acknowledged its source. Curwen is thus to be regarded as an agent of synthesis rather than as the inventor of an original method of teaching.

The progress of the Tonic Sol-fa movement was in itself remarkable. What had begun in 1841 as a private investigation into methods of teaching music eventually grew into a nationwide organization with an enrolled membership numbering tens of thousands. From a humble beginning in the Sunday Schools the movement first began to attract adult attention in philanthropic and temperance circles. Soon afterwards, in an age when 'self-improvement' represented an ideal for respectable and ambitious members of the working classes, Curwen's publications were being studied by a much wider circle. And with the appearance in 1852 of the series of articles that he was commissioned to write for Cassell's *Popular Educator* Curwen's readership increased astronomically. Some years earlier he had already found it necessary to set up a private printing press to supply Tonic Sol-fa publications; but by 1856 the demands made upon him by his musical activities led him to resign his ministry and devote his energies wholly to the movement. He founded the Tonic Sol-fa College in 1869. Not only was Tonic Sol-fa established in amateur choral organizations throughout Britain long before Curwen's death in 1880, but it had been adopted as the recognized method of teaching music in the schools of the land.

It is important to take into account the fact that Curwen was motivated largely by social and religious aims. In his desire to bring music to the poor and to the service of the church he tended increasingly to be swayed by the fact that Tonic Sol-fa notation could be produced very much more

cheaply than musical scores of the orthodox type. Thus, although his original intention was to employ sol-fa initials only as an approach device to help the beginner, as time went on he became less disposed to press his followers to undertake the complementary study of staff notation. As a result, armies of Tonic Sol-fa pupils became entirely dependent upon publications using their familiar notation. Confronted with staff notation, they were almost as ignorant of its meaning as they had been before their sol-fa training had begun.

Failure to integrate the learning of sol-fa with an understanding of staff notation led many of Curwen's followers into a musical cul-de-sac; it also incidentally brought Tonic Sol-fa itself into disrepute. Vividly aware of that hazard, but persuaded of the continuing value of sol-fa in the early stages of learning to read notation, teachers today employ a modified version of Curwen's original system.

Tonic Sol-fa

2. The notation as originally used.

(i) Pitch.

The notes of the rising major scale are represented, whatever the key, by the symbols shown in ex.1*a*. When notes rise above that compass they are marked as in ex.1*b*; similarly, notes falling below standard pitch are marked as in ex.1*c*. Melodies having their lower tonic within the octave above middle C are treated as standard pitch (ex.2). Tenor and bass parts are written an octave higher than sung.

Chromatic degrees are noted by changing the vowel of the sol-fa name concerned (see ex.3). Sharpened notes use 'e' (pronounced 'ee'), flattened notes use 'a' (pronounced 'aw').

Chromatic note names are always written in full. They are employed only for ornamental notes and transient modulation. When extended modulation occurs the new tonic is named 'doh', the transition being expressed by a 'bridge note' with a double name (ex.4). The upper name relates to the old key and the lower to the new key. The bridge note in ex.4 is sung as *s'doh*. Modulation to the subdominant is noted as in ex.5, in which the bridge note is sung as *m'te*. As this example shows, it is the practice to state the name of the key above the symbols at the beginning of a melody, and when modulation occurs to name the new key, adding the sol-fa name of the new 'foreign' note to be encountered – in this case *fah*. A bridge note is always introduced at the point which makes the transition easiest for the singer, whether this corresponds to the true harmonic situation or not.

(ii) Rhythm.

Curwen's method of notating rhythm depends basically upon the bar-line and the colon. The bar-line performs the same function as in staff notation; the colon precedes every weak beat within a bar. Subsidiary accents within bars are indicated by shortened bar-lines. To help the eye, equal beats are represented on the page by equal lateral spacing – no matter how many notes share a beat (ex.6 – time signatures are not used: they are shown in this example only to clarify). A beat is divided into halves by placing a full

stop in the middle of it; into quarters by placing a comma in the middle of each half (see ex.7). A note is continued through another beat or part of a beat by means of a dash. Slurs are represented by horizontal lines beneath the notes (as in ex.8). To economize on horizontal space, the common figure consisting of a dotted quaver followed by a semiquaver does not employ the dash. Instead, full stop and comma are brought close together – to show that the previous sound is continued (ex.9). Rests are not used. Silence is indicated by vacant space. Triplets are shown by using two inverted commas (ex.10).

(iii) The minor scale.

Minor keys are regarded as derived from their relative majors, the tonic being called 'lah'. The sharpened 6th of the melodic minor is named 'ba' (pronounced 'bay') to distinguish it from the sharpened 4th of the major scale (see ex.11). Theoretical considerations apart, this method saves great complication and the introduction of sundry chromatic note names.

Tonic Sol-fa

3. Method of teaching.

Even a thorough knowledge of the notation of Tonic Sol-fa can leave a misleading impression of the manner in which Curwen intended it to be taught. Contrary to popular belief, the beginner was not first introduced to the sounds and sol-fa names of the degrees of the major scale and then required to practise pitching random diatonic intervals.

To begin with, Curwen taught without the aid of an instrument, patterning everything with his own voice. The aim was to make the learner independent, and to render progress easy and natural. But when sung, the major scale, with its succession of tones and semitones, appeared too complex for beginners. Moreover, ability to strike, say, a major 3rd from the tonic does not imply ability to strike the same interval elsewhere in the octave. The mental impression of a major 3rd based on the tonic is quite different from that of the same interval based upon the dominant.

Curwen argued that every note of the scale produced its own 'mental effect'. He therefore insisted that the pupil must be given the opportunity to experience and attempt to describe the character of the different degrees for himself. He began by teaching the notes of the tonic chord – not the scale – emphasizing its bold character when the notes were sounded slowly in succession, then inviting the pupil to note for himself the firmness of *soh* and the calm of *me*. When, at a later stage, the remaining degrees of the scale were gradually introduced, an attempt was made to encourage the pupil to describe their individual qualities. The expectation was that he would find *lah* sad, *te* incisive, *ray* expectant and *fah* desolate. The precise terms employed were not important. The object was to fix the individual character of each degree in the pupil's mind and thus equip him to recall that quality when the occasion arose – rather than to calculate the position of a note by counting through the scale.

Once the tonic chord had been made familiar Curwen went on to introduce the dominant chord (ex.12). When the pupil was able to sound its notes at will and recall their individual character, the subdominant chord followed. In

that way the complete range of the scale was built up by means of concordant intervals easily imitated by a beginner. With the octave complete, a period was spent practising tunes and exercises within that compass.

In teaching and exercising the notes of the scale a diagram known as a Modulator was employed. Much of a pupil's early vocal experience was in singing melodies from the Modulator, following with his voice the teacher's pointer. The simplest form of Modulator displayed only the notes of the major scale. A more comprehensive version (see ex.13) showed a key with its dominant (to the left) and subdominant (to the right) and the chromatic degrees between.

Almost the last of the devices which Curwen introduced to his method was the series of 'Manual Signs' first brought into use in 1870 (see illustration). Curwen advocated their use because they enabled the teacher to work facing his class, instead of towards the Modulator. The commonest of the chromatic degrees could also be indicated by slight modifications: *fe*, by pointing the first finger horizontally to the left; *ta*, similarly to the right; and *se*, by pointing straight forward. (For a broader discussion of manual signs *see* Cheironomy.)

In general Curwen urged the teacher to begin his task without employing any symbols at all, gradually introducing them as they were needed to make the pupil recognize and recall what he already knew. A staunch disciple of Pestalozzi, Curwen presented his own paraphrase of the familiar Pestalozzian precepts: to let the easy come before the difficult; to introduce the real and concrete before the abstract; to teach the elemental before the compound; to do one thing at a time; to introduce the common before the uncommon; to teach the thing before the sign; to let each step arise out of what had gone before; and to call the understanding to assist the skill.

He thus separated the teaching of rhythm from the teaching of pitch. Once familiar with the scale, his pupils were introduced to rhythmic values by means of the Time Names (later known as Rhythm Names) devised by Aimé Paris and anglicized by Curwen to form part of his system. Ex.14 introduces the most common of these names in Curwen's version.

Before attempting to sing an unknown melody Curwen's elementary pupils were first required to chant its Time Names on a monotone. Once they had mastered the rhythmic element they went on to tackle the rise and fall of its pitch. Finally, the two elements were combined.

With the major scale and simple rhythmic notation mastered, Curwen next dealt with elementary modulation – to the dominant and subdominant. Then came the minor mode, chromatic notes and more distant modulations. With that total equipment supplemented by regular practice, Curwen's followers were able to sing with confidence in local choirs, or in those massed performances of oratorio which formed an essential part of the amateur musical life of Britain in the second half of the 19th century. In the great majority of cases, however, they were able to do so only because John Curwen had made available over the years a vast repertory of vocal scores printed in Tonic Sol-fa notation (*see* Notation, III, 5, fig.132*a*). A contemporary estimate claimed that by 1890 more than 39,000 copies of

the Tonic Sol-fa edition of Handel's *Messiah* had been sold. That figure is an indication of the success of Curwen's movement to bring music to the people at large; it also reveals the high proportion of his followers who failed to come to grips with orthodox notation.

Tonic Sol-fa

4. Modern developments.

Failure to adapt Tonic Sol-fa to suit changing needs steadily reduced its use in Britain after the 1920s. Curwen's own policy of constantly revising his methods was forgotten after his death and, unlike such acknowledged continental adaptations of his work as Hundoegger's Tonika-Do or Kodály's rendering, Tonic Sol-fa was allowed to petrify.

A working party set up at the University of London Institute of Education in 1970–71 re-examined Tonic Sol-fa with the current needs of schools in mind. It found that the outmoded letter notation could be dispensed with, that sol-fa and staff notation could readily be integrated, and that sight-singing in schools should be treated as a means of sharpening aural awareness rather than an end in itself. These findings were forwarded to the Tonic Sol-fa College, and a collateral body, the Curwen Institute, was founded in 1974 to develop and promote a revised form of Tonic Sol-fa on the lines recommended. As a result W.H. Swinburne published *The New Curwen Method* (London, 1980–84), after two years' experimental use in schools. It follows Curwen's general principles and uses hand signs, but abandons the original letter notation. Instead, the hand signs are used as an introductory form of notation, the hand being moved up and down an empty blackboard staff to denote precise rise and fall of pitch. Partsinging is introduced at an early stage in conjunction with devices to develop the inner ear, the musical memory and the creative sense. Reading from staff notation takes place from the earliest stages.

Tonini, Bernardo

(*b* Verona, *c*1666; *d* after 1727). Italian composer and instrumentalist. He was patronized in the 1690s by the Correggio family, nobles in his native city, and it has thus generally been supposed that he spent most of his life in Verona. But it now appears that he was active in Venice, where he was a member of the instrumentalists' guild from about 1694 until at least 1727, though in what capacity has yet to be determined.

Tonini's ballettos, which are short pieces in duple metre and a simple style, are not nearly so ambitious as his single volume of church sonatas, op.2. His style suggests a familiarity with the instrumental works of slightly earlier composers such as Legrenzi as well as those of such contemporaries as Caldara. Like many works of the preceding generation his sonatas follow no set pattern in the number or nature of movements: binary movements occasionally appear in the church sonatas, which may be in three movements (fast–slow–fast) or the usual four. Tonini's fugal movements are, like his works in general, pleasant but unexceptional; their numerous episodes sometimes make them unusually homophonic. (E. Selfridge-Field: *Venetian Instrumental Music from Gabrieli to Vivaldi*, Oxford, 1975, 3/1994)

Tonnolini, Giovanni Battista

(*b* Salò; *fl* 1616–45). Italian composer and organist. He was a Carmelite monk. He was appointed organist of Salò Cathedral in 1616. His service was interrupted in 1621, when all the cathedral musicians were dismissed, but in March 1622 he was reinstated and remained in the post for more than 20 years. His service was never entirely satisfactory: for instance, when he took leave of absence for a rest in September 1643 the *maestro* had to take over his organist's duties; and in 1645 there were serious complaints because his duties as a priest were taking up too much of his time, and his appointment seems to have terminated then. He published two volumes of music for the Mass and Offices: *Salmi a 8 voci con una lode al glorioso S. Carlo* (Venice, 1616) and *Messa et Compieta a 4 voci con basso continuo, con una lode a S. Theodoro Martire* (Venice, 1617); the additional pieces announced in the titles are motets in honour of locally venerated saints. The 1616 psalms show a meagre talent. They include much syllabic, repeated-note declamation, and two of them are dominated by elementary *falsobordone* chanting. *Laetatus sum* stands apart: instead of the antiphony between choirs customary in eight-part music, fairly tuneful solos for the soprano alternate with chordal tuttis. The Compline setting of 1617 is written entirely in triple time to suit the modern taste for brevity. There is also a motet by Tonnolini (in RISM 1619[5]).

JEROME ROCHE

Tono (i)

(It., Sp.: 'tone', 'tune').

(1) A general term for any Spanish tune or melody. It was frequently used in the 17th century, in particular, to designate a short secular or sacred song, generally for solo voice, as distinct from the Villancico, but *tonos* for two or more voices became fashionable during the 17th and 18th centuries, when *tono*, Tonada and *sonada* were used more or less synonymously. *Tono nuevo* was widely used from about 1590 to about 1650 to imply a recent, highly popular song, *tono viejo* an old-fashioned song (so regarded if only ten years old or even less), *tono humano* a secular song, *tono divino* a sacred song and *tono a lo divino* a secular song set to new, moralized, religious words.

(2) In Italian and Spanish theoretical works from the 15th century to the 18th, a term used synonymously with *modo* ('mode'); it is found, for example, in keyboard music in titles such as 'Intonatione del primo tono' and 'Tiento de primer tono'. *See also* Key (i).

JACK SAGE/ALVARO ZALDÍVAR

Tono (ii).

Danish record company. It was established in October 1937, in the wake of a Danish court injunction against the free use of gramophone records in broadcasting, which was part of a Europe-wide action by the phonographic industries in 1934–5. Before 1940 Tono imported matrices from which it manufactured its own records, and these were broadcast until a settlement was reached between the record companies and the radio stations. Tono absorbed the label Corona and was acquired by Schous Fabrikker, which also owned the popular-music labels Helofon, Ekko and Schou: it also had a matrix exchange agreement with Sonora of Sweden. From 1937 to 1955 Tono recorded and promoted both Danish jazz (Svend Asmussen, Peter Rasmussen) and classical music; notable among recordings in the latter category were those by Egisto Tango, Emil Telmányi – who made the first recording of Nielsen's Violin Concerto – Endre Wolf, Andor Foldes, Victor Schiøler, King Frederik IX (1948) and Piero Gamba. Several other works by Nielsen, including the Symphony no.6, were first recorded by Tono, as were works by the next generation of Danish composers. Tono was one of the very few companies which used compression when manufacturing shellac records, which then required corresponding expansion at replay. From 1954 it issued LP and EP records in parallel (these were licensed to Mercury (ii) for distribution in the USA; it distributed Danish pressings of concerts in the series Jazz at the Philharmonic from 1956. Tono ceased operation in the mid-1960s, by which time it had degenerated into being a distributor for the labels Vogue, Amadeo and Teener.

Tononi.

Italian family of violin makers. Giovanni Tononi (*d* 1713) worked in Bologna at a time when there was a great demand for violins in north Italian cities. He took as his model the work of the Amati family and showed himself to be a careful, competent workman, in some respects foreshadowing the Venetians. His soundholes appear long and elegant, but his scrolls are meanly cut. The varnish is usually superb and glowing orange-red in colour, and the tonal qualities generally excellent.

His son, Carlo Tononi (*d* after 8 March 1730), was a more important maker. Carlo Tononi's instruments or those made under his direction are closely related to his father's but show certain improvements. The scarcity of original dated labels makes it difficult to follow his progress, but at least two or three makers were involved in the instruments' manufacture. There are many violins, an occasional cello and quite a number of violas, all apparently modelled on the unique Amati contralto viola of 1615.

Carlo Tononi moved to Venice, probably between 1715 and 1720, and his violins labelled from there in the 1720s are in most respects different in character from those of the Bolognese period. His role in their construction is a matter for conjecture: certainly he appears to have had assistance at times, though not recognizably from his well-known Venetian colleagues. He introduced a harder, less attractive varnish than that used in Bologna, and elsewhere in Venice, but some of his violins are fine concert instruments.

CHARLES BEARE

Tonos

(Gk., pl *tonoi*; Lat. *tonus*).

A term with various meanings in the tradition of ancient Greek music theory. It could refer to a pitch (*tasis*), a note (*phthongos*), the size of an interval (*diastēma*), or a 'scalar mode' (*tropos sustēmatikos*). The last two definitions came to be synonymous as referring to a particular overall pitching of the musical system.

The *tonoi* derived their names from the traditional *harmoniai* (Dorian, Phrygian, Lydian etc.), and the distinction between *tonos* and *harmonia* was eventually obscured in the theoretical tradition. In the time of Aristoxenus, agreement on the precise identification of the *tonoi* was lacking, but the later theoretical tradition attributed to him the identification of 13 *tonoi*, with the Hypodorian positioned at the lowest pitch and each of the others rising across 12 sequential semitones to the Hypermixolydian an octave above the Hypodorian (*see* Greece, §I, Table 3). According to the

tradition, 'younger theorists' subsequently added two further *tonoi*, with the result that each basic *tonos* (Dorian, Iastian, Phrygian, Aeolian and Lydian) would also have a low (hypo-) and high (hyper-) form; these 15 *tonoi* are represented in the tables of Alypius. Ptolemy presented an alternative view of the *tonoi*, based on the seven species of the octave arranged within one characteristic octave. In this view, only seven *tonoi* were required (*see* Greece, §I, Table 4), but it is doubtful that this system was actually employed in the music of the time. For a fuller treatment *see* Greece, §I, 6(iii)(e).

Tonsor [?Scherer], Michael

(*b* Ingolstadt, before 1546; *d* ?Dinkelsbühl, Central Franconia, after 1606). German composer and organist. His original surname was probably Scherer, of which 'Tonsor' is the latinized form; moreover, the parish register at Dinkelsbühl, where he lived from 1568, records that up to 1581 five children were born to a Michael Scherer, who could well have been the same man. The first volume of music by him, issued under the patronage of Wilhelm, heir to the dukedom of Bavaria, was published at Munich in 1566 by Adam Berg (whose first music print it was); in it he described himself as Kantor at the Liebfrauenmünster, Ingolstadt. At least from 1568 he was organist of St Georg, Dinkelsbühl, and the church accounts show that he was paid up to 1607. His last volume of music (which is lost) dates from 1605. He is known to have composed only sacred music, which consists overwhelmingly of Latin motets but also includes a mass and a German Marian motet (in RISM 1604[7]). His music has not yet been much studied. He was one of the numerous lesser south German composers of the period whose music is firmly rooted in the current style, which derived above all from Lassus. The presence of works by him in a wide range of libraries shows that they were sung not only by his fellow Catholics but also by Protestants in central and north Germany.

HORST LEUCHTMANN

Tonsystem

(Ger.).

The general relationship among pitches normally used in the music of a particular era or culture, or prescribed by a particular theory or intonation; thus, for example, *mittelalterliches Tonsystem*, *persisch-arabisches Tonsystem*, *pythagoreisches Tonsystem*. In Western music a *Tonsystem* is usually characterized by the relation among notes within an octave, the concept of Interval being the most important defining element. *Tonsystem* also implies a limited range of pitches; for example, the medieval system as codified by Guido of Arezzo had a compass of *G* to *e*'', while the modern system is generally taken to have the same range as the piano, *A*'' to *c*''''.

See also Mode; Tonality; Theory, theorists; Harmony, §2; Twelve-note composition; Tuning; and Pythagorean intonation.

JULIAN RUSHTON

Tonus (i)

(Lat., from Gk. *tonos*: 'tone').

See Timbre (i).

Tonus (ii).

A stable sound or note.

Tonus (iii).

Any plainchant recitation formula, e.g. *tonus lectionum* (lesson tone), *toni psalmorum* (psalm tones; *see* Psalm, §II); also the reciting note itself, by which 'tonus' can be synonymous with the Latin 'tenor'.

Tonus (iv).

A church Mode, e.g. *primus tonus* (mode 1, or the Dorian mode), *tonus authenticus*, *plagalis* (authentic, plagal mode).

Tonus (v).

A whole tone, i.e. the Interval of a major 2nd.

See also Dorian.

FRANS WIERING

Tonus lascivus

(Lat.).

A name sometimes used for the Ionian mode in medieval and early Renaissance music. As a historical term it is probably spurious.

Tonus peregrinus

(Lat.: 'wandering tone', 'frolicsome tone').
