Ta.

The flattened form of Te in Tonic Sol-fa.

Taarab.

A musical genre, the term *tāarab* comes from the Arabic *tārab* (from the root *trb*), meaning pleasure, rapture, entertainment, or these emotions as evoked by music. In East Africa it denotes a style of popular entertainment music played at weddings and other celebrations along the Swahili coast. The style contains the features of a typical Indian Ocean music, combining influences from Egypt, the Arabian peninsula, India and the West with local musical practices. Musicians generally agree that *taarab* was introduced to the island of Zanzibar from Egypt during the reign of the third Omani sultan, Sultan Barghash bin Said (1870–88). Since its introduction, the style has spread throughout the East African coastal region and has become stylistically and ideologically entwined with Swahili identity.

The original instrumentation and repertory is based on the Egyptian *takht* tradition featuring *ʿūd*, *qānūn* (plucked zither), *nāy* (end-blown flute), *riqq* (small frame drum), violin and *darabūkka* (goblet drum), with a solo singer and chorus. This core has expanded to include electronic keyboard, piano accordion, bongos, cello, double bass, electric guitar and several violins. But *taarab* takes different forms: orchestral *taarab* is played by large ensembles; *taarab ya wanawake* ('women's *taarab*') is performed by clubs with exclusively female membership and smaller instrumental ensembles; and *kidumbak* is played by small, informal groups along the lines of other local music and dance styles (*ngoma za kienyeji*) with more of a percussive quality and characteristically features two *kidumbak* drums (local versions of the *darabukka*) and *sanduku* (one-string tea-chest bass).

JANET TOPP FARGION

Tabachnik, Michel

(*b* Geneva, 10 Nov 1942). Swiss composer and conductor. He studied at the Geneva Conservatoire and attended the 1964 Darmstadt summer courses. In 1965 he was a member of Boulez's class at the Basle Musikakademie; he then became Boulez's assistant until 1971. His earliest

published compositions show the influence of his mentor in their harmonic conception, their use of open forms and their concern with comprehensive serial order. He was also influenced by his 1969 encounter with Xenakis. The première of *Fresque* at the 1970 Royan Festival initiated Tabachnik's independent career as a conductor (he had already taken part with Boulez in performances of *Gruppen*). From 1976 to 1977 he directed the Ensemble InterContemporaine in Paris and from 1975 to 1981 the Lorraine PO in Metz. Since 1983 he has regularly conducted the National Opera Company of Canada. Specializing in 20th-century music, he gave the first performances of Xenakis's *Synaphaï*, *Aroura*, *Linaia*, *Eridanos* and *Cendrées*; he also gave the first performances of Boucourechliev's *Concerto pour piano*, Boulez's *Messagesquisses* and Grisey's *Modulations* and *Jour, Contrejours*. Returning to composition in 1981 after a six year break, he took a greater interest than before in religious and esoteric subjects, frequently employing a synaesthetic approach. *Le pact des onze* (1985), which grew out of a study of connections between text, image and music, sets the apocryphal Gospel of St Thomas in the ancient Coptic language and is more tonal than his earlier works, taking up ideas from spectral music. In 1994, his interest in the occult and cosmology brought about a life crisis, when he was suspected of taking part in the cult of the Solar Temple, whose members committed collective suicide. After he was cleared of any liability, he published an extensive work in his own defence, *Le bouc émissaire: Michel Tabachnik dans le piège du Temple solaire* (Hauts-de-Seine, 1997), which includes a foreword by Boulez.

PAUL GRIFFITHS/ROMAN BROTBECK

Tabakov, Emil

(*b* Ruse, 21 Aug 1947). Bulgarian composer and conductor. He graduated in 1978 from the Bulgarian State Academy of Music having studied three subjects: double bass (under Todor Toshev), conducting (under Vladi Simeonov) and composition (under Marin Goleminov). In 1977 though, he had won the Nikolay Malko competition in Copenhagen and he had been conducting the Ruse SO since the age of 17. He conducted the Ruse

Philharmonic (1975–9) before directing the Soloists of Sofia ensemble with whom he appeared internationally (1980–89). He was appointed conductor of the Sofia Philharmonic in 1985 and was made its general music director three years later. With this orchestra and as guest conductor with others he has performed all over the world; he has enjoyed particular associations with orchestras in Brazil, California, Germany, Japan and South Korea. Under his baton the Sofia Philharmonic recorded a large amount of the Romantic repertory. From his earliest days as a composer, he has shown an affinity for large-scale works and during the 1980s and 90s this disposition gave rise to monumental compositions such as the *Requiem* and his four symphonies. But despite this complex and philosophical approach he has always paid attention to orchestral colour and to the delicate use of timbral nuance, especially in his concertante works. During the 1990s his harmonic palette was broadened by an awakened interest in Bulgarian folklore; the resultant language is notable for its laconic bareness and rich pictorial allusion.

ANDA PALIEVA

Tabakov, Mikhail Innokent'yevich

(*b* Odessa, 6 Jan 1877; *d* Moscow, 9 March 1956). Ukrainian trumpeter. He studied at the Odessa Music Academy (1889–92) and performed in various orchestras between 1891 and 1896. From 1897 to 1938, with interruptions, he was a member of the Bol'shoy Theatre Orchestra, becoming first trumpet in 1908 when Brandt became first cornet. From 1910 to 1917 he was the manager of Koussevitzky's virtuoso symphony orchestra, in which he played first trumpet, and he was a founder-member and manager of the Persimfans Orchestra (1922–32), an orchestra without a conductor. From 1914 until his death, Tabakov taught the trumpet at the Academy of Music and Drama (later combined with the Moscow Conservatory), where he also taught military band conducting from 1928; from 1944 he was in charge of

the department of specialist orchestration (later of military band orchestration). In addition, in 1947 he became head of the department of wind instruments at the Gnesin Institute.

The first 20th-century Russian concerto for trumpet (as opposed to cornet), by Shchelokov (1929), was dedicated to Tabakov. His tone was highly praised, notably by Skryabin; as a teacher he emphasized the importance of good tone, calling it 'the valuable capital of the artist'. He wrote *Progressivnaya shkola dlya trubi* ('Systematic guide to trumpet playing') in four volumes (Moscow, 1946–53).

EDWARD H. TARR

Tabart [Tabaret, Thabart, Tharbart], Pierre

(*b* Chinon, bap. 8 Jan 1645; *d* Meaux, 1716). French composer. He was the son of Yves Tabart, a tanner, and Anne Gaultier, and was baptized in the parish of St Etienne, Chinon. According to Sébastien de Brossard, he studied music with Burgault, 'the best contrapuntist of his time', as a choirboy at Tours, and was then active as *maître de musique* at the cathedrals of Orléans (until about 1683) and Senlis (1683–9). He was defeated in the competition for the four positions of *sous-maître* at the Chapelle Royale in 1683, but he succeeded Nicolas Goupillet, one of the winners, as *maître de musique* of Meaux Cathedral. His nine-year contract (signed on 10 June 1689) was not renewed, but when Brossard took over the position in April 1699 Tabart was still at Meaux as titular head of a *grande chapelle*. Brossard thought highly of him and consulted him about the selection of a *maître de musique* for Evreux Cathedral in 1711. His 'excellent counterpoint' is exemplified by a six-voice mass (on Christmas carols), a requiem, *Te Deum*, *Magnificat* and two motets (*Veni sponsa Christi* and *Valerianus nobilis romanus*) which were included in Brossard's library (now in *F-Pn*).

WILLIAM HAYS, JEAN-PAUL MONTAGNIER

Tabel [Table, Tabell], Hermann

(*b* Low Countries *c*1660; *d* London, before 8 May 1738). Flemish harpsichord maker. He may have learnt from the Couchets, successors to the Ruckers of Antwerp. Probably about 1700 he settled in London, where both Shudi and Kirkman worked for him. In 1738 Kirkman married Tabel's widow. Only one of Tabel's instruments survives, and is now in the County Museum, Warwick; the top key of the lower manual is inscribed 'No. 43 Herm Tabel Fecit Londini 1721' (see Mould).

Tabel's one surviving harpsichord caused Russell to think it 'likely that the standard large harpsichord made in this country derived from his designs', Hubbard to suggest it 'likely that the traditional role ascribed to Tabel and his posthumous fame were the fabrication of both Kirkman and Shudi in their dotage' and Mould to point out that in any case 'there is no element of this disposition which is not found elsewhere on earlier English harpsichords'. Nonetheless, the 1721 instrument is one of the few extant English double-manual harpsichords to have been built before 1730, and its dogleg upper-manual jacks and original lute arrangement (perhaps both familiar in Flanders by 1720) did become normal. Burney called him 'the celebrated Tabel', and an advertisement in the *Evening Post* for 30 May 1723 noted that he had three harpsichords for sale, 'which are and will be the last of his making'. Nevertheless, on 8 May 1738, Kirkman advertised 'several fine harpsichords', made by 'Mr Hermann Tabel … the famous harpsichord maker, dead'. In short, his historical position is uncertain, as are the details of his work, known from one, much altered instrument. For a more detailed account of Tabel's life and work see Boalch, 3/1995 (pp.188–9).

Tabl.

Arabic generic term for drums. It is particularly applied to double-headed cylindrical drums in the Arab Middle East, including North Africa (especially Egypt, Tunisia, Algeria, Morocco and the Sudan). It may occur in combination with other words, indicating drums of the same type with regional differences of size or drums used in different regional combinations of instruments. The term *tabl* can vary from region to region; it is sporadically found as *tabīl* in Osmanli, and in modern Turkish the term *davul* is most commonly used for the double-headed cylindrical drum. The

tabl baladī ('people's drum') is regarded as the smaller version of the *tabl turkī* ('Turkish drum', *davul*).

Cylindrical drums were known in classical antiquity, and various different sizes of such instruments are still in use. The cylindrical drum is central to Islamic musical cultures; it is used in military bands and is also played at village ceremonies such as weddings, circumcisions and funerals and on religious occasions. During Ramadan, the month of fasting, the drum and *zurna* (*surnāy*) signal the time when a meal can still be eaten before sunrise. In Islamic countries the cylindrical drum is often played with the shawm in rural music and in military bands; trumpets, kettledrums and cymbals may be added to create larger ensembles.

The body of the *tabl* is a wooden cylinder. A head made of cowhide is stretched over each end of the cylinder and fixed in place with a wooden hoop; the edges of the skins are wrapped around the hoops, and the two hoops are linked with a tensioning lace made of string or gut. The size of the cylinder varies; drums used in military music are not always larger than those played in rural music. The *tabl* is played either with two sticks or with a stick and a bundle of thongs.

Tablā.

Asymmetrical pair of small, tuned, hand-played drums of North and Central India, Pakistan and Bangladesh. The *tablā* are the principal drums of modern Hindustani music. They accompany vocal (*khayāl, thumrī, ghazal* etc.) and instrumental music, as well as the dance style *kathak*. They are also found today in various popular and devotional musics (*bhajan, qawwālī*). The word *tablā* is a Persian and Urdu diminutive of the Arabic generic drum-name *tabl*.

1. History.

The modern *tablā* pair comprises a treble drum (the *tablā*, on the right), its body a tapering wooden cylinder, and a bass kettledrum (*duggī*, or *daggā*, on the left), with a body of clay or chromed copper. This pairing cannot be documented before the late 18th century, but it probably results from a combination of the two separate types which are found, themselves paired, in northern court paintings from *c*1745.

In Delhi, Rajasthan and Avadh, miniatures of this period show small, hand-played kettledrums, played standing with the drums held at the waist, accompanying dance. This type survives today as the *duggī* of the *śahnāī* ensemble of eastern Uttar Pradesh. Its origins seem reasonably clear: smaller, hand-played versions of the ceremonial drum-pair Naqqāra were evolved for these more intimate musical occasions.

In the north-west, especially the Punjab, however, contemporary painting shows two cylindrical drums, similarly played. This type also survives in its region today, in the Punjabi *dukkar* and Kashmiri *dukrā* (both terms mean simply 'the pair'), also called *jorī* by the Sikhs in the context of their religious music *śabad*. The origin of this, the modern *tablā* right-hand type, is harder to trace. It may represent a remodelling of the *duggī* type under influence of the *pakhāvaj*.

The bringing together of the north-western *tablā*-type and the north-central *duggī* would have occurred in the latter half of the 18th century. The evolving *tablā* probably incorporated aspects of technique and repertory from the *dukkar* and *duggī*. Tradition allows seniority to the school of Delhi and to its founder, Siddhar Khan (thought to have been born *c*1710–20).

There are two principal influences on the older Delhi playing style and repertory (*bāj*): that of the *dholak* (which the *tablā* was to replace in the accompaniment of the quieter styles of northern court and chamber music); and that of the stick-played treble- and bass kettledrum pair *nagārā*, or *naqqāra*. The influence of the *dholak* has been seen chiefly in finger-strokes. The main contribution of the *nagārā* has been in the compositional and elaborative organization of certain sound-categories – pitch (the 'high-low', *zir-bam*, structures familiar in Islamic musics), resonance, variation in timbre and, to a lesser extent, force of attack – into a distinctive metrical system, characterized by a nucleus of pitch, stress and timbre-oriented metres, primarily symmetrical, and variational and extensional procedures.

Early in the 19th century a Delhi player, Bakshu Khan (*b c*1780), is credited with founding the Lucknow *tablā* school. This added not only a further layer of *nagārā* techniques, but also an overlay of *pakhāvaj* strokes. The latter was taken much further by the Banares school (founded by Ramdas Sahay, *b c*1810). The Lucknow and Banares schools are known as the 'eastern' (*pūrab*) *baj*, in opposition to the Delhi, 'western' (*pachāo*, *pachva*), style.

2. Structure.

The name *tablā* denotes the right-hand treble drum (also *dāya*, *dāē*, *dāhinā*: 'right'), and also the pair (the plural *table* is rarely used in this sense). The left-hand bass drum is *duggī*, or *daggā* (or *bāya*, *bāē*: 'left'). Only the *bāya* is a true kettledrum, a roughly hemispherical bowl somewhat straightened at the top and tapering at the base. Today, it is usually of cold-spun copper, chromed on the outside, but *bāya* of terracotta can still be found, although their fragility makes them less common (they are usually said to give an excellent sound). The right-hand *dāya* is a lightly upward-tapering, or truncated conical, wooden cylinder about 1 cm thick; at its base is a shallow (about 2 cm), round, solid wooden stem, integrally carved.

Different woods are employed, the best being dense and heavy: *bījīsār* or *bijyaisār* (a kind of *sāl*-wood) and *śīsam* or *sīso* are often recommended.

Absolute sizes cannot be given, since *tablā* players (*tabaliyā*, *tablāvādak*) purchase drums to suit the size of their hand and also have a selection, to suit different pitches according to the requirements of the accompaniment. The *dāya* is generally a little longer (about 26 or 27 cm) than the *bāya* (about 25 or 26 cm). Three main sizes can be seen with professionals: an older type, with a very large *dāya*, played by masters of the older generation and still found in manufacture, with a *dāya*-head diameter of 16·5 cm or more, fully as large as the *pakhāvaj*; the medium-sized Bombay type, with a *dāya* diameter of 14 cm or more, often considered the mellowest of modern *tablā*; and the modern small Calcutta *tablā*, around 13 cm or less on the *dāya*, developed in this century, when Calcutta was the centre of patronage for instrumental music, and reflecting the rise in instrumental system-tonic pitch in recent decades. The *bāya* is about 22 cm across.

The drumheads are similar to those of the older *pakhāvaj*. Each head (*purī*: 'skin'; in Bengali also *chāuni*: 'covering') has two main membranes, of goat, the upper cut away to leave an outer ring. These are attached to a plaited, four-ply leather hoop (*gajrā*), wider than the diameter of the wooden shell which lies about half to 1 cm below the rim when fitted. Inside the flange formed, two thick pieces of rough leather are also stitched to the hoop beneath the main membranes, to protect the playing-skins from the wooden rim. Both right and left heads are laced by a long leather strap (*davāl*, *dvāl*; *singār*), about 1 cm wide and 2 mm thick and of untanned buffalo hide, in a V pattern through 16 holes in the hoops and running round a multiple leather hoop (*gudrī*) at the narrow base of each drum. Under each W is a wooden cylindrical block (*gattā*), about 6 cm long and 3 cm wide, which raises the pitch when hammered downwards. On the similar *bāya* lacing there are generally no tuning blocks, though some use thin wooden dowels or metal tuning-rings. Fine-tuning is done with a small metal hammer (*hāthauri*) on the drumhead hoops.

In the centre of the exposed main skin of the *dāya* is a round, hardened, black tuning-paste (*siyāhi*, *syāhi*: 'black'; or *gāb*: 'mangosteen tar') applied in five or more progressively smaller concentric layers, each allowed to harden and smoothed down before the next is deposited. The essential ingredients are said to be iron-oxide ash, glue, wheatflour paste (some say rice), soot and copper vitriol (*nīlathotthā*). When the paste is dry and the drumhead stretched, the drum has a bright, sonorous and pitched tone. The *dāya* head is thus divided into three main concentric areas: the outer, upper skin ring (*kinār*, *cati*), most of which lies over the wooden rim of the shell; the exposed lower main skin (*maidān*, *sur*, *lav*), these two occupying about a quarter each of the drumhead area; and the central black spot, occupying about half the drumhead. The outer ring, when tuned to the soloist's tonic, struck with the forefinger and partly damped by the third finger on the edge of the black spot, gives a ringing tone, rich in first harmonics; the central lower-skin area, similarly played, gives a pitch in which second harmonics, or upper-octaves, dominate; the central black circle, when struck by the fingers and held, gives a dry, unpitched, wooden

sound; and the whole drumhead, when struck and released, gives a ringing tone roughly a 2nd above the fundamental.

The *bāya* head is similarly constructed, but here the outer upper ring is proportionally much smaller (it is not struck functionally), and the black tuning-paste, about 8 cm across, is placed eccentrically on the exposed main skin. This positioning of the paste results in a less precisely-pitched tone for the head, distinguished by its darker timbre, but it often appears to be at around the subdominant below the fundamental of the right-hand drum. In this, the *tablā* differs from the *mrdangam* of the South and the northern *pakhāvaj* and compares more with the kettledrum *nagārā*. The *dāya*, like the *mrdangam*, has two qualities of system-tonic, but the *bāya* has not. The *syāhi* of the *bāya* is also a development unique to the *tablā*, showing that its pitch-timbre relationship to the treble *dāya* is carefully controlled.

3. Technique.

The composite development of the *tablā* is reflected not only in its physical structure but also in its playing technique. The major sources of influence are the Hindustani *pakhāvaj* (*see* Mrdangam) and *dholak*. *Dhrupad tāla*s are performed on the *tablā*, often retaining the original *pakhāvaj* syllabic formulae but modifying the actual execution, the predominantly open-handed strokes of the *pakhāvaj* giving way to the edge tones of the *tablā* or *dāya*. The difference between *dhrupad*-related and non-*dhrupad* (*khayāl*, *thumrī*) *tāla*s lies both in the mnemonic syllable drum patterns (*thekā*) of the various *tāla*s and in the repertory of compositions. *Pakhāvaj* syllables (*bol*) retain their prominence in some essentially non-*pakhāvaj* compositions (e.g. *gat*).

Tablā playing is approached essentially through the means of mnemonic syllables translated into a variety of strokes which are underlined by the metric structures of composition. The two drumheads of a pair (*jorī*) of *tablā* accommodate a limited number of strokes and combinations, which are given a variety of syllabic interpretations. The *dāya*, unlike the *bāya*, utilizes all three concentric areas of the drumhead; the edge (*kinār*), the middle or sounded area (*sur*, *maidān*) and the black tuning-spot in the centre (*siyāhi*, *gāb*). Though there are similar areas on the *bāya* head, here the black spot is placed towards the top right-hand edge, and is usually played across, rather than on. The *kinār* on the *bāya* does not have any syllabic content.

The pair are placed upon their rings before the player; the *bāya* is usually kept with its head horizontal, the *tablā* is nearly always tilted slightly outwards. The *dāya* is tuned to the tonic with the aid of a tuning hammer, but the *bāya* is tuned to a suitable tension, rather than a pitch. Here the *bāya* and *dāya* are taken in their literal sense, as 'left' and 'right' (drums), respectively (there are, of course, left-handed *tablā* players).

Each head has two basic tone-qualities, closed or open (the latter with dampening or without). The open tones are produced by the first (index) finger, with a few exceptions, striking along various portions of its length, such as the stroke/syllable *nā/tā* (whole-hand, whole-head) on *kinār*. Closed syllables are mostly those struck on the *siyāhi*. Whenever possible the third finger acts as an anchor, resting gently on the bottom right-hand

edge of the *siyāhi*. There are two basic stroke-qualities on the *bāya*. Two strokes of the tip of the second and first fingers at the top of the skin, between the *siyāhi* and the *kinār*, produce the open and resonant tones (*ghe*, *ga*, *ghen*). The third stroke is played with the flat of the hand, producing *kā*, *ke*, *ka*, *ki* or *kat*, a closed or dampened tone.

The two resonant stroke-syllables on the *bāya* are added simultaneously to the unvoiced ones on the *dāya* to produce voiced and aspirated syllables (e.g. *tā* + *ghe* = *dhā*). The voiced syllables epitomize the notion of *bhārī* ('heavy', 'full') and the unvoiced *khālī* ('empty'). These notions play an important part in the breakdown of a *tāla*. Syllabic phraseology (*bol*) is central to the mnemonic approach to *tablā*, presented as known formulae of various sizes. These permute and combine to form various compositions and so constitute the foundation of the *tablā* repertory.

Tablature

(Fr. *tablature*; Ger. *Tabulatur*; It. *intavolatura*).

A score in which the voice-parts are 'tabulated' or written so that the eye can encompass them. In practice, scores in staff notation with one voice-part per staff are not usually called tablatures unless they are for a solo keyboard instrument (see §2(v) below). The term is more often used for a condensed score in which two or more voice-parts are written or printed on a single staff or comparable area of the page, although when this consists entirely of staff notation it is more often called 'keyboard score' or (for concerted music) 'short score'. The common use of the term 'tablature' therefore excludes these; the following article thus discusses any notational system of the last 700 years that uses letters, numbers or other signs as an alternative to conventional staff notation. Such systems were chiefly used for instrumental music; dance tablatures are beyond the scope of this article. For a discussion of tablature in its historical context, *see* Notation, §III, 5(i).

THURSTON DART/JOHN MOREHEN/RICHARD RASTALL

Tablature

1. General.

Systems of tablature have been in use in western European music since at least the early 14th century, most of them deriving from the playing technique of a particular instrument. Whereas staff notation shows in one symbol both the pitch and duration of a note, tablature systems in general use one symbol to show how to produce a sound of the required pitch from the instrument in question (which string to pluck, which fret to stop, which key to press, which holes to cover and so on) and another to show its duration. Staff notation was developed for, and is primarily associated with, single-line music, whereas tablature's speciality is part-music. Each was originally at its maximum effectiveness in its own field. Although staff notation has now superseded most tablatures, it gained much from its long contact with its rivals, and many of its most valuable features derive ultimately from one or other of them. In tablature systems, for instance, each note or rest was worth two of the next smaller value, and a dot after a note had only one meaning: that it increased the note's duration by half its original value. Regular barring, too, was frequently adopted, especially in lute tablatures. The simplicity, clarity and logic of such common features of tablatures were considerably in advance of staff notation. The most important categories of tablature are those for keyboard (usually organ) and lute. A large proportion of the keyboard pieces copied between 1320 and 1520, many of which are of German origin, survive in tablature form. The various types of lute tablature, on the other hand, represent a more direct form of instruction to the player, and these have been used for virtually all lute music from the early 16th century to the present day.

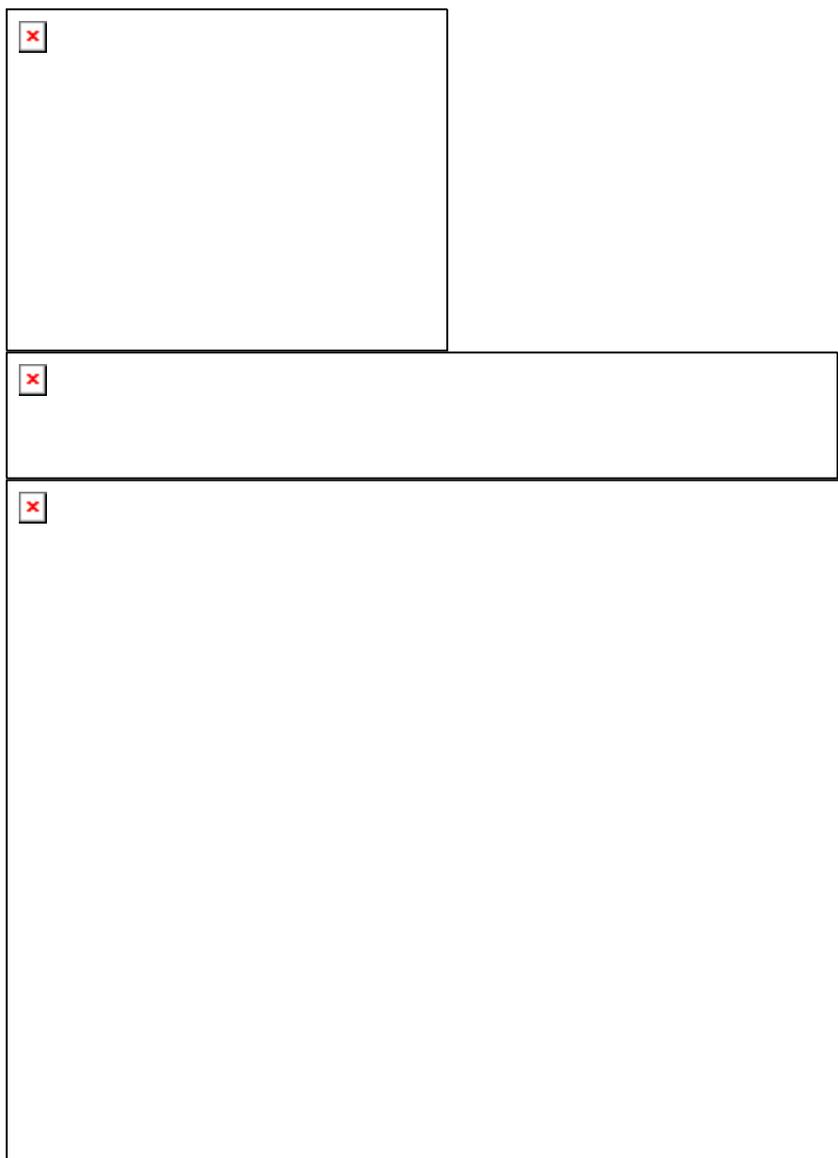
2. Keyboard.

(i) Germany, 14th century.

The earliest known example, the Robertsbridge Codex (*GB-Lbl* Add.28550; fig.1), dates from about 1360 and was almost certainly intended for the organ, but some scholars consider that it may have been for clavichord. Although some of its contents are French, and the manuscript itself comes from an English abbey, its rightful place in a discussion of tablatures is under German keyboard tablature since many of its characteristics are, in embryo, those of later German ones. It is a part-tablature only, however, since the top voice of the music is notated on a five-line staff (no explanation has been suggested for this illogical feature of early German tablature). The notes of the lower voices are written in letter notation beneath the notes on the staff; their length and the beat on which they are to be played is determined by their position with respect to the staff-notes and their octave by considerations of part-writing. The word 'sine' (or simply the letter 's') denotes a rest. The black notes of the keyboard are regarded as belonging to the white note on their left (B♭ and B♯ taking the normal forms of ♭ and ♮ however): thus the black note between C and D is regarded as 'the black note of C' or, for short, 'of-C' and, in vulgar Latin, 'Cis'. In the Robertsbridge Codex this is shown by a wavy line following the letter, and the chromatic scale thus appears as in ex.1; later scribes used the normal abbreviation for terminal '-is', . Although the compass of these pieces does not exceed *c–e″*, it is interesting that, in the middle octave at least, all 12 notes of the octave are in use, even at this early date. Organ pedals were in existence in Germany by the time the manuscript was written, yet these six pieces do not appear to require their use.

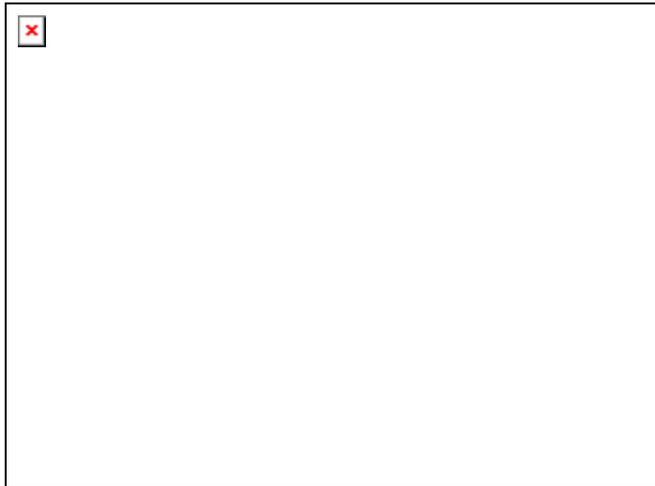
(ii) Germany, 1432–1570.

The above system of tablature had been considerably improved in many respects by the time it is next encountered, a century later. The top part was written on a six-, seven- or eight-line staff (a retrograde step, perhaps: five-line staves were not in general use again for keyboard music until the 17th century); a downward stem, with or without a dash through it, indicated chromatic alteration (♭ or ♮ as appropriate), and a loop to such a stem denoted an ornament, perhaps a shake or a mordent (Arnolt Schlick's *Tabulaturen etlicher Lobgesang und Lidlein* of 1512, however, used the loop for chromatic alteration). Each lower voice was shown as a row of letters, the sharp affix now taking the form of a loop; the letters b and h signified B♭ and B♮ respectively. The middle octave consisted of plain letters, the ones above it of doubled letters or letters with a dash or dashes above them (cc, c,) and the one below it of capital letters or letters with a dash beneath them (C, c). Each letter had a rhythm sign above it to show its duration; these signs were derived from their staff notation equivalents as in ex.2. For rests, staff notation signs or slight variants of them were used. Many of the tablatures dating from this period were barred regularly. Some, such as the 'Ileborgh' tablature (formerly *US-PHci*, but now in a private collection), contain what appear to be indications for two-note

chords in the pedals, although not all scholars agree with this interpretation (see fig.2). When possible, notes and rhythm signs of like value were grouped together, as in ex.3. The extract of music which in staff notation would appear as in ex.4*a* would have been shown in this tablature as in ex.4*b* (all the music examples in this article show the first two bars of Dowland's ayre *Flow my tears*).


(iii) Germany, 1570–1750.

From about 1570 the above system continued in use, but with two substantial changes: the top part no longer used staff notation but was written in letter notation like the other parts; and the value of the rhythm signs was doubled in conformity with contemporary lute tablature. The modern tie sign appeared for the first time, although its use in staff-notation keyboard scores was already well established. This modified form of the earlier German keyboard tablature remained in widespread use, especially in northern Germany, until the mid-18th century, and it is last mentioned in Johann Samuel Petri's *Anleitung zur praktischen Musik* (Leipzig, 2/1782). J.S. Bach used it occasionally in the *Orgel-Büchlein* as a space-saving device when insufficient allowance had been made for the length of a

chorale prelude (*see* Bach, fig. 7). An example of this later German keyboard tablature is shown in ex.5.


(iv) Spain, 1550–1700.

Nothing is known of Spanish keyboard music before 1555, when Juan Bermudo explained two new systems of notation in his *Declaración de instrumentos musicales*; the systems he proposed may well have been his own inventions. The first assigned a number, from 1 to 42, to each key of the organ, the numbers proceeding in unbroken sequence from left to right of the keyboard (*C–a″*, but fully chromatic *A–a″* only). The number of lines to a 'staff' in the resulting tablature corresponded to the number of voices in the composition, and the music was barred regularly. The apparent suitability of this system for contrapuntal music was more than outweighed by the ambiguities that inevitably resulted from the absence of rhythm signs and from the inability to indicate ties in the inner parts (see ex.6). This system was quite unsuited to music that included cross-rhythms, considerable independence of parts, or a free-voiced texture. Its use was apparently confined to Bermudo's book.

Bermudo's second system, also used for certain Italian publications, assigned a number, from 1 to 23, to each white note of the keyboard (because of the 'short octave' the *E* key, assigned the number 1, was tuned to *C*, numbers 2 to 23 representing *F* to *f″*). The black notes were all considered as sharps, and were shown by a sharp sign above the appropriate number. Thus a sharp over a 6 was *c♯*; a sharp above a 10 was *a♭* or *g♯*; according to context, and so on; the letter 't' above a figure denoted an ornament. The right-hand and left-hand parts were shown above and below a horizontal line. The durations of individual musical events were indicated as in lute tablature by signs above the right-hand part; each rhythm sign above the staff applied to all the figures in the column immediately below it and remained valid until contradicted by another sign. These were supplemented by original signs (; : and ? for 1½, 2, 3 and 4 minims), placed after the figures to which they refer, which

modified the durations of the individual notes, thus clarifying the part-writing (see ex.7).

A third numerical system of Spanish keyboard tablature was used also for the harp or the vihuela. It was first used by Venegas de Henestrosa in his *Libro de cifra nueva* (Alcalá, 1557), and later in Cabezón's *Obras de música* (Madrid, 1578) among others. It emphasized the division of the scale into a repeating octave pattern of seven white notes: the middle octave from *f* to *e'* was assigned the numbers 1 to 7; pitches one or two octaves lower were shown by one or two dashes through the number, pitches one or two octaves higher by a superscript dot or comma (fig.3). Each voice (from two to six) had a line of its own, chromatic alteration was indicated by sharps or flats placed after the note they affected, and rhythm signs of staff notation were added where required. Since these rhythm signs were valid for all the figures in the column below, the value of only the shortest of the notes to be played simultaneously could be precisely notated. A comma by itself indicated a tie from the preceding note, an oblique stroke or the letter 'p' a rest, and the letter 'R' an embellishment. Time and key signatures were given before the beginning of the piece, with B and ♮ standing for B♭ and B♮ respectively (see ex.8). An early 17th-century extension of this tablature for vocal music is discussed in §8 below.

All these numerical systems, *cifras* ('ciphers') as they were called in Spanish, had the great advantage that they could be set up in any printer's shop from standard or near-standard founts of type by unskilled compositors. Founts of music type were expensive; they could be adapted to keyboard music only with great difficulty and labour and they needed experienced and skilled typesetters. The engraving and punching of plates was ultimately to prove the best method of printing music, but it was still in its infancy when these numerical systems were developed. Derivations of them were in use for psaltery and dulcimer music as late as 1752 (in Pablo Minguet's *Academia musical*). Many variants have been put forward by a legion of theorists from the 13th century (*GB-Ob* Marsh 161) to the present day (see Wolf).

(v) Other forms of keyboard notation from 1500.

Words like 'intavolatura' and 'tabulatura' were loosely used in many 16th- and 17th-century sources to describe music in staff notation or (at a slightly later date) in keyboard partitura. In Italy this can be seen in two of the earliest surviving printed sources of keyboard music, Andrea Antico's *Frottole intabulate da sonare organi, libro primo* (Rome, 1517) and Girolamo Cavazzoni's *Intavolatura cioè recercari, canzoni, himni, Magnificati* (Venice, 1543). In France a parallel can be seen in the *Dixneuf chansons musicales reduictes en la tablature des orgues espinettes*

manicordions (Paris, 1530), the first of several such collections of keyboard music published by Pierre Attaingnant in the 1530s. In the early 17th century the use of the term 'tabulatura' to describe staff notation spread to Germany, an early example being Johann Ulrich Steigleder's *Ricercar tabulatura* (Stuttgart, 1624). Some early 17th-century German sources of keyboard music use words such as 'Tabulatur' or 'Tabulaturbuch' to describe the form of notation more properly known as keyboard partitura. These include Samuel Scheidt's *Tabulatura nova* (Hamburg, 1624) and Johann Ulrich Steigleder's *Tabulatur Buch darinnen dass Vater Unser* (Strasbourg, 1627). (*See* Intavolatura and Partitura.)

Tablature

3. Lute.

Although the German system of notating lute music is possibly the oldest, it appears that the three principal systems of lute tablature were developed almost simultaneously in the second half of the 15th century. Their basic principle was to guide the fingers of the player's left hand over the lattice, formed by courses and frets crossing at right angles, on the fingerboard. (In the following explanations 'course' will have its standard meaning. The usual 16th-century lute had seven frets and six courses of strings, usually tuned *G–c–f–a–d'-g'* or *A–d–g–b–e'–a'*; in general, France and England used the G tuning, Italy, Spain and Germany the A tuning. Each course consisted of either a single string or a pair of strings, the strings of a pair being tuned either in unison or at the octave; later instruments acquired extra frets and more strings: *see* Lute). Each intersection of fret and course corresponded to a specific note, and an efficient system of notation therefore needed to identify each such intersection clearly and unmistakably. Even on a 15th-century lute with only five courses and five frets there were 30 such intersections (including the open strings) and on an early 17th-century theorbo-lute there might have been seven courses, up to 12 frets, and also six or seven 'diapasons' (open strings running clear of the fingerboard). The tablature for such an instrument needed to be capable of directing the player to form almost 100 notes. Moreover, the lute was required to give the impression of polyphonic part movement, so the tablature symbols needed to be capable of being grouped together two, three or four at a time. One area of inadequacy that lute tablatures share with Spanish keyboard tablatures is that the value of only the shortest of the notes to be played simultaneously could be notated precisely.

(i) Germany, 1511–1620.

Although the earliest known printed example of the cumbersome German tablature, in Sebastian Virdung's *Musica getutscht* (fig.4), dates from 1511, the fact that the system was clearly designed for a five-course lute with five frets shows that it must have been invented considerably earlier. According to Virdung the system was attributed to the blind organist Conrad Paumann (1410–73). The open courses are numbered 1 to 5, with 1 corresponding to the bottom course, and each intersection of fret and course is denoted by a letter of the alphabet running across the fingerboard from bottom course to top. In order to provide the 25 symbols required, the common abbreviations for 'et' and 'con' were added to the 23 letters of the German alphabet; for higher frets the alphabet was repeated either in doubled letters or in letters

with a dash above them (aa or ā, bb or b etc.). When a sixth course was added below the original five it was not possible to extend this closed system in any logical way, and several compromise solutions were used. The German tablature, with the most important of its alternative forms, is given in the diagram shown as ex.9. In practice, symbols intended to be played simultaneously were grouped in vertical columns; rhythm signs were placed above each note or group of notes, often grouped in twos or fours. The music was usually barred regularly (see ex.10).

The German tablature was strongly criticized as early as 1528 by Martin Agricola, although the alternative system he proposed was not adopted anywhere. Melchior Neusidler tried to introduce Italian lute tablature into Germany in the mid-16th century, but he met with much opposition.

(ii) Italy, 1500–1650.

The Italian system was more logical than German lute tablature since it was a visual representation of the fingerboard. Its clarity and ease of application remained, however many courses or frets the instrument possessed. Each course was represented by a horizontal line, the bottom course corresponding to the top line (fig.5; in the playing position the bottom course of the lute is nearest to the player's eye). The 'staff' formed in this way normally had six lines (i.e. as many as there were courses). The open course was represented by a figure 0 on the appropriate line, the first fret by 1, the second by 2 and so on, the 10th, 11th and 12th frets being represented by the special single symbols x, x and x, since a double symbol like 10 might be confused with the two separate symbols 1 and 0. Rhythm signs were shown above the notes; at first they were repeated for each note or chord (see ex.11), but from about 1530 onwards a more economical system prevailed whereby each rhythm sign remained valid until it was replaced by another. In later sources, both printed and manuscript, the normal staff notation rhythm signs tended to replace the traditional lute ones. Diapasons were shown as numbers (from 7 to 14) set between the 'staff' and the rhythm signs. Italian tablature was used for some books printed in Kraków, Lyons and Strasbourg in the second half of the 16th century, and a few English and Austrian manuscripts are known (e.g. *GB-Lbl* Add.29246–7 and 31992); but it was mainly confined to Italy.

(iii) Spain, 1530–80.

The indigenous Spanish instrument of the lute family was the vihuela, tuned and played like a lute, but shaped and strung slightly differently. Spanish tablature closely resembled Italian, although exceptionally, as in Milán's *El maestro* (1536), the six-line 'staff' was inverted so that the top line represented the highest course of the vihuela (fig.6). Occasionally a vocal line was included in staff notation above the tablature, as in Germany and Italy; or it might be incorporated in the tablature itself in red numerals. In some collections of Spanish lute music the compositions are barred in units of one semibreve, a system of barring that differs from that of most barred lute sources. Ordinary staff notation rhythm signs were used (see ex.12).

(iv) France, 1500–1815.

The French form of lute notation, adopted by English composers, was the most successful of all lute tablatures, and it eventually superseded the others (although not for guitar music). It used a five- or six-line 'staff' in which, as in Milán's book, the top line represented the highest course. The frets, however, were lettered and not numbered, the open string being 'a' or 'A', the first fret 'b' or 'B', and so on. To assist the eye in distinguishing between similar letters these were soon given special forms; the commonest lute alphabet is shown in ex.13. The letters were placed either on or above the line to which they referred. Lute and, later, staff notation rhythm signs were used, placed as usual above the 'staff'. Letters or figures beneath it denoted diapasons (fig.7); their tuning sometimes varied according to the key of the piece, but they usually descended diatonically (a, /a, //a, ///a, ////a …; 7, 8, 9, 10 or X, 11 …). In English lute music plain letters below the 'staff' often denoted a seventh course running over the fingerboard and tuned a 4th below the sixth course.

(v) Supplementary signs.

Many of the niceties of lute playing were indicated by special signs, the most important of which are listed here. A dot beneath a symbol sometimes meant that the chord was to be struck from above instead of, as normally, from below; it was more likely, however, to have been a fingering indication for the right hand (· = 1st, ·· = 2nd,   or   = 3rd, ···· = little finger). A vertical line facilitated orientation when the components of a chord were widely spaced. An asterisk, cross or oblique stroke by the side of a symbol showed that the stopping finger must be held down on its fret for as long as possible, thus sustaining the note or notes in question. A numeral by a symbol showed left-hand fingering. Slurs joining two symbols indicated a special kind of legato playing, only the first of the two notes being plucked. A wide variety of special signs was used to indicate trills and ornaments (see Dodge and Spencer).

Tablature

4. Guitar.

(i) Tablature proper, 1549–1741.

Throughout this period a certain amount of contrapuntal guitar music was written and published using French, Italian or Spanish lute tablature, and it needs no special discussion. Music for four-string or for five-string guitar can be identified by its tunings and the number of 'staff' lines, corresponding to the number of strings. The first steps towards a new type of notation were made by Joan Carlos Amat in his *Guitarra española* (Barcelona, 1596, and later edns); he assigned a single arabic numeral to each of the most frequently used chords (i.e. positions of the left hand), arranging them in a systematic order.

(ii) 'Alphabets' (alfabeto), 1606–1752.

An important innovation was introduced by Girolamo Montesardo in his *Nuova inventione d'intavolatura* (Florence, 1606; fig.8) – although the system is used in at least one earlier source (*I-Rvat* Chigi L.VI.200, from 1599). It was a new shorthand notation for *rasgueado* playing, sweeping the hand back and forth over all the strings at once, as distinct from

punteado playing, in which the strings were plucked individually according to the lute technique. In Montesardo's system each left-hand finger position for the 27 most usual chords was denoted by a single letter. Thus 'A' stood for the finger position which in five-line Italian tablature would have been shown as in ex.14 according to the tuning *A–d–g–b–e'*. These symbols were arranged above or below a horizontal line according to one of the following plans: a symbol above a line meant a chord struck upwards, below the line a chord struck downwards, and note values were shown by capital or small letters; or upward and downward dashes above or below the line showed the direction in which a chord was to be struck, and note values were shown by rests and staff notation notes or by the spacings between the dashes. Sometimes bar-lines were used, sometimes the horizontal line was broken up into a number of short equal segments, each representing a bar of music. Numerous modifications, additions and improvements were made to this primitive but adequate shorthand by the leading 17th-century guitar players such as Foscarini and Millioni (most are given in Wolf). Their most important single feature was the introduction of symbols for discords. The system was obviously easy to learn and extremely cheap to print, and a considerable amount of music in these 'alphabets' is still extant, most of it dating from the 17th century. Many manuscript collections of popular Italian poems of this period have 'alphabets' above the words as in ex.15, so that they may be sung to a strummed guitar.

Combinations of *alfabeto* and staff notation are found in some sources of the period. However, the most worthwhile guitar music of the period, for example Foscarini's and Corbetta's, is written in an unusual combination of conventional tablature and *alfabeto*; once the principles of each have been grasped it is not difficult to transcribe (see ex.16).

After about 1750 guitar music was written in conventional staff notation an octave above the sounding pitch, the guitar like the double bass being regarded as a transposing instrument.

Tablature

5. Other string instruments.

(i) Plucked instruments.

Most plucked instruments (angelica, chitarrone, cittern, colascione, gittern, mandolin, orpharion, pandora, theorbo) used either French or Italian lute tablature, and once the tuning is known the transcription presents few difficulties. It is often impossible to tell for which instrument a tablature was intended until, by process of elimination, the tuning has been discovered, and this can sometimes be a lengthy process. Special harp tablatures were used in Ireland and Wales during the Middle Ages, and some features of their notation show surprising analogies with neumatic or ancient Greek notation; one of them (*GB-Lbl* Add.14905) purports to be a 17th-century copy of music played at a bardic congress of the late 11th century, but the music itself and its notation make this extremely unlikely (*see* Robert ap Huw, and Notation, fig.143). The surviving sources are too few and too meagre to deserve detailed description of their tablature systems. The Spanish keyboard tablature used by Arauxo, Cabezón, Venegas and Ribayaz was also suitable for the guitar, harp and vihuela (perhaps

bowed), according to the title-pages of many of their works. 17th-century sources containing tuning instructions such as '(high) harpway sharp' or 'ton de la harpe par b mol' are for lyra viol or perhaps lute, but not for harp.

(ii) Bowed instruments.

Much 17th-century lyra viol music was written in French lute tablature, and since some of the many lyra viol tunings were identical with contemporary lute tunings the question sometimes arises as to the instrument for which a certain composition was intended. There are usually two clues: in lyra viol music there are no gaps between the component letters of a chord, since it is impossible on a bowed instrument to omit one string when playing those on both sides of it; and all lyra viol music uses staff notation rhythm signs. Lyra viol tuning is often indicated at the beginning of a piece, the first letter of a pair shown for a string being the fret required to be stopped for that string to be in unison with the string above (see ex.17).

A certain amount of early viol and violin music is found in Italian tablature and there is a little 16th-century viol music in German tablature. Its mainly homophonic texture readily distinguishes it from lute music. *Lira da gamba* and baryton (*viola di bordone*) music is occasionally found in French tablature; as with music for lyra viol it may be identified by its tuning and by the disposition of the chords. A number of systems using figures have been used during the last two centuries for instruments such as the English guitar, zither, autoharp, balalaika, guitar and accordion, none of great interest or importance. One rather unexpected modern example of true tablature should be mentioned, however; it is for the ukelele, and is a schematic representation of the strings and frets of the instrument, with dots marking the position of the left-hand fingertips (*see* Notation, fig.141).

Tablature

6. Wind instruments.

Diagrams representing the finger-holes of wind instruments such as the clarinet, fife, flageolet, galoubet, oboe, recorder and so on showing which holes should remain open and which should be closed to produce certain notes and trills, have been a common feature of instrumental tutors since 1535 and have never lost their value and appeal. Mersenne's *Harmonie universelle* (1636–7) is a valuable source of a wide variety of such diagrams. Many tablatures of this nature ought more accurately to be described as 'fingering charts', since their use for the notation of music was at best limited, and mainly confined to late 17th-century music. Sufficient pictorial evidence exists to suggest that, for players of such instruments, the use of staff notation was very much the rule rather than the exception. Even so, 'dot-way' notation, as it was called, was in widespread use among English enthusiasts of the flageolet, and it survived into the 18th century. Six lines represented the six finger-holes of the instrument; a short vertical stroke on a line indicated that the hole in question was to be closed, a horizontal line through a stroke that it was to be played an octave higher, and a large comma that a grace note was called for. Rhythm signs, one to each note, were placed above the 'staff', and the music was barred regularly. Articulation, when shown, was notated by slurs (see ex.18).

Another tablature, for recorder, is found in Sebastian Virdung's *Musica getutscht* (1511), but as it was apparently not used for practical music it does not justify detailed explanation; a dot in a circle indicated that all the holes were closed, 1 that the bottom hole was open, the figure 2 with a diagonal stroke through it that the second was open, 2 that the bottom two holes were open and so on. A derivative of this system was in use in 17th-century music for the musette, but at no time did it completely replace staff notation. A special system of tablature was used by the Russian horn bands of the late 18th century; a band consisted of ten to 50 players, and as each was required to produce a note of only a single pitch all he needed to know was the rhythm and dynamic markings of his part. This was shown in staff notation on a single line with special signs for rests (fig.9). Other systems for notating rhythms alone have been used for hunting horns, trumpets and drums, but since they ignore the element of pitch they do not rank as true tablatures.

Tablature

7. Figured bass and similar chordal notations.

A distinction must be drawn between the accumulations of figures found in textbooks on figured bass and harmony, and those found in actual musical practice. The latter may be considered as a part-tablature, since their use constituted a valuable system of musical shorthand, conveying a great deal of information clearly and succinctly. The figured bass principle still fell short of a true tablature in two important respects: it required the retention of staff notation for the bass line; and a figured bass part was never intended to convey the detail of a continuo part but merely its most important harmonic and melodic features – only in exceptional cases, for instance, did the figures delineate the octave in which the various intervals above the bass were to be placed. Even so, it probably remains the only tablature which, although long since discarded for the notation of music, is still used in performance (for a full discussion *see* Thoroughbass). Certain other systems of chordal notation must be classed as true tablatures, for example Gottfried Weber's system of upper- and lower-case letters to indicate major and minor chords, or roman numerals to indicate root-position chords on various degrees of the diatonic major scale; this system was first expounded in his *Versuch einer geordneten Theorie der Tonsetzkunst* (1817–21). Hugo Riemann's functional harmony notation, proposed in his *Vereinfachte Harmonielehre* (1893), is another important tablature and is of great value in the analysis of classical harmony. It uses a combination of capital letters and signs of various kinds to denote the principal chords of a key and their variants.

Numerous new systems of musical notation and shorthand have been proposed during the last three centuries, but only those that dispense completely with the conventional five-line staff can be classed as true tablatures. Most, in any case, were too short-lived or too fanciful to be dealt with in detail here (but *see* Notation, §III, 5(iv), 6). The Braille system of musical notation for the blind (1829–34) must be mentioned, however. Its basis is a frame of six dots grouped as a rectangle; a large number of different and distinguishable symbols are available by embossing any dot or combination of dots on the paper, and by the use of various ingenious

contractions and abbreviations both melody and harmony can be speedily notated and equally quickly deciphered (*see* Braille notation).

Tablature

8. Vocal music.

Attempts at devising vocal tablatures had been made as early as 1600 or so, but none of them was very successful or important, nor were they true tablatures, since they did not completely dispense with the five-line staff. An extension of Venegas's system of Spanish keyboard tablature (see §2(iv) above) was used for vocal music in William Braythwaite's *Siren coelestis* (London, 1638), an illegally printed English edition of Catholic motets by Georg Victorinus which had first been issued in Munich in 1616. Braythwaite's system (see ex.19) was both complex and unattractive, being based predominantly on minor modifications of a single typographical fount of the numerals 1 to 7; the system required no fewer than 231 symbols, and must have proved extremely unpopular with singers if it was ever used for music-making. Its only advantage was that it required no music type and nothing that an adventurous jobbing printer would not have had in stock.

Tonic Sol-fa, which dates from 1812, is the only other vocal tablature of any importance (*see* Tonic Sol-fa).

Tablature

Table

(Fr.).

See Belly.

Table, Hermann.

See Tabel, Hermann.

Table-book.

A manuscript or printed book of the 16th or 17th century in which the vocal or instrumental parts of an ensemble composition are displayed in such a way that the performers can read their parts while seated across or around a table. It is an extension of the choirbook system in which one volume suffices for all the performers, as opposed to the partbook system in which each performer is allocated an individual book. The Lyons printer Jacques Moderne was probably the first to issue a collection in which parts were disposed in inverted positions on the upper half of each side, *recto* and *verso*, of an opening (*Le parangon des chansons*, 1538). A similar system, but with the complete *recto* page inverted, was adopted by Pierre Phalèse for lute duets (1568). The continental sources in table-book format are considerably outnumbered by the English sources, which include most of the books of lute airs and such works as Dowland's *Lachrimae* (1604; see illustration) and Sir William Leighton's *The Teares or Lamentacions of a sorrowfull Soule* (1614).

Although printed music books account for the majority of table-books this principle was also adopted for a small number of manuscript sources, such as *GB-Lbl* Add.31390 (for illustration see Sources of instrumental ensemble music to 1630, fig.4) and *Och* 45. The latest sources in table-book format are certain English prints of the 1630s. These systems were later modified to cater for up to six performers, and exceptionally for as many as 12, although there are obvious practical difficulties for so many musicians.

JOHN MOREHEN/RICHARD RASTALL

Table d'harmonie

(Fr.).

See Soundboard (i).

Table entertainment.

A peculiarly British species of performance, consisting generally of a mixture of narration and singing delivered by a single individual seated behind a table facing the audience. The material was often satirical. It seems to have originated about the middle of the 18th century. G.A. Steevens gave table entertainments in Dublin in 1752 and actors and singers such as R. Baddeley, G.S. Carey and J. Collins mounted them with great success in 1775–6 at many towns in Britain.

From 1789 to 1809 Charles Dibdin gave a series of table entertainments in London in which song was the prominent feature. Dibdin united in himself the functions of author, composer, narrator, singer and accompanist. Impersonations were added by comedians who took up the genre, which had much in common with the techniques of music hall in the Victorian period. The Edinburgh singer John Wilson gave table entertainments with a Scottish flavour from 1841 to his death, the first of which was entitled 'A Nicht wi' Burns'. The solo performances of Joyce Grenfell and others may be seen essentially as a modern survival of the tradition.

MICHAEL TILMOUTH

Tablettes [cliquettes]

(Fr.).

Medieval (and later) French term for Clappers.

Tabor.

A side drum with one or more snares. *See* Pipe and tabor and Drum, §II, 2.

Tabor, June

(*b* Warwick, 31 Dec 1947). English folk, contemporary and jazz singer. Educated at the University of Oxford, she began her musical career as a part-time folksinger, becoming a full-time musician only in 1988, 12 years after recording her first album. Her first solo albums, *Airs and Graces* (1976) and *Ashes and Diamonds* (1977), showed the strength of her unaccompanied singing of traditional songs. She also recorded a series of duets with Maddy Prior as *Silly Sisters* (1976), a partnership repeated with the album *No More to Dance* (1988). The early folk albums were followed by *A Cut Above* (1981), including songs by contemporary writers such as Richard Thompson and Bill Caddick. Tabor continued to explore modern songs in a minimalist setting on *Abyssinians* (1983) and *Aqaba* (1988), and in 1989 recorded an album of jazz standards, *Some Other Time*. This was followed by a much acclaimed partnership with the folk-rock group the Oyster Band with whom she recorded *Freedom and Rain* (1990).

In the 1990s her musical horizons continued to expand with albums that included *Angel Tiger* (1992) and *Against the Streams* (1994) on which

appeared 'I want to vanish', a song written for her by Elvis Costello. *Aleyn* (1997) was followed by a further period of experimentation, this time with the Creative Jazz Orchestra.

<div align="right">ROBIN DENSELOW</div>

Taborowski, Stanisław

(*b* nr Krzemieniec, Volhynia [now Kremenets, Ukraine], 1830). Polish violinist and composer. He studied music under Fenz and Billi at Odessa; he was also a student at St Petersburg University from 1847. He played his own compositions with success at a concert in Odessa in 1853, and then undertook a concert tour of Poland, Volhynia, Podolia and the Ukraine. From 1854 he studied in Brussels with Léonard (violin) and Damcke (composition), and returned to St Petersburg in 1859. He gave concerts in Warsaw in 1860, Kiev and Zhitomir in 1861, Kraków and Poznań in 1871–2, Breslau, the spa of Ciechocinek, as well as many European cities, including Berlin and Paris. He was also a professor at the Freie Deutsche Hochschule der Musik, founded in Berlin in 1872 by Tyszkiewicz, and from 1878 he was in charge of the music school of Kronstadt (now Braşov) in Transylvania.

<div align="right">IRENA PONIATOWSKA</div>

Táborszky, Nándor [Ferdinánd]

(*b* 1831; *d* 1888). Hungarian music publisher. He was the son of János Mihály Táborszky, for whose benefit Liszt gave a concert in Pest on 8 January 1840. He opened his shop in 1868 as a branch of Rózsavölgyi és Társa, but soon became independent and, with József Parsch, set up as Táborszky & Parsch. As early as 1873 they received a letter of commendation at the Vienna Weltausstellung. Their publications are marked with the letters 'T & P' or 'T és P' followed by the plate number (usually accurate). Táborszky not only had business relations with Liszt, between 1871 and 1886 publishing more than 18 of his works; he enjoyed the composer's personal friendship, as Liszt's correspondence in Hungarian collections shows. The firm ceased in 1895 with the death of József Parsch, after more than 25 years of activity. The legal successor

was Kálmán Nádor; since nationalization it has been Editio Musica Budapest.

Tabuteau, Marcel

(*b* Compiègne, 2 July 1887; *d* Nice, 4 Jan 1966). American oboist of French birth. At the age of six he began to study the violin with his brother-in-law, Emile Létoffé, changing later to the oboe. In 1902 he was admitted to the Paris Conservatoire as a pupil of Georges Gillet, and he received the *premier prix* in July 1904, at the age of 17, for a performance of *Légende* by Diémer. In 1905 Tabuteau was invited by Walter Damrosch to play the english horn in the New York SO. From 1908 until 1914 he was first oboist of the Metropolitan Opera, playing for Toscanini, Alfred Hertz and, briefly, Mahler. He joined the Philadelphia Orchestra as solo oboist under Stokowski in 1915, remaining there until his retirement in 1954.

From 1924 he taught at the Curtis Institute of Music, where he passed on the best traditions of 19th-century French wind playing. Known for his mastery of phrasing, Tabuteau cultivated a distinctive quality of tone and playing style which crucially influenced his students, many of whom became first oboists in major US orchestras. Among his recordings are Mozart's Sinfonia Concertante, k297b, and concertos by Bach and Handel, as well as of *Marcel Tabuteau's Lessons*, a 'masterclass' with his own explanations and illustrations.

LAILA STORCH

Tacchinardi, Nicola [Niccolò]

(*b* Livorno, 3 Sept 1772; *d* Florence, 14 March 1859). Italian tenor. After playing the cello in the orchestra of the Teatro della Pergola, Florence, he studied singing, appearing in various Italian cities in 1804. In spring 1805 he made his début at La Scala in Paer's *Griselda* and Farinelli's *Odoardo e Carlotta* for the celebration of Napoleon I's coronation as king of Italy; during Carnival 1805–6 he sang at the Teatro Carcano, Milan, in Gnecco's *Le nozze di Lauretta*. He then established himself in Rome, Bergamo, Bologna (summer 1809) and Turin (Carnival 1810–11); his greatest successes were in Rome, at the Teatro Valle (1806–7) and the Teatro

Argentina (1809–10) in Morlacchi's *Le danaidi*, Giuseppe Nicolini's *Traiano in Dacia* and Zingarelli's *La distruzione di Gerusalemme*. His performance of the last-named at the Paris Odéon on 4 May 1811 brought him tumultuous applause; he remained in Paris until 1814 at the Théâtre Italien, singing in Paer's *Didone*, *Don Giovanni* (with the title role transposed), Cimarosa's *Gli Orazi ed i Curiazi* and Pucitta's *Adolfo e Chiara*, and, most successfully, in Paisiello's *La molinara*. He sang in Spain, 1815–17, and in Vienna in 1816. In 1818–19 he sang at the Teatro Argentina and elsewhere in Italy, in Mayr's *Le danaidi* (as Danao), Nicolini's *Cesare nelle Gallie* and Rossini's *Ciro in Babilonia* and *Aureliano in Palmira*. In April 1820 he sang Rossini's *Otello* (which became his warhorse) at the Teatro del Giglio, Lucca, and in 1820–21 appeared in *Il barbiere di Siviglia* and *La donna del lago*.

Tacchinardi was made principal singer of the grand ducal chapel in Florence in 1822, but was free to continue his operatic career; he appeared again in Vienna (1823), Barcelona (1826) and throughout Italy (1827–8); in 1825 he sang at the Teatro Ducale, Parma, in *Il crociato in Egitto*, which Meyerbeer composed for him. He retired from the stage in 1831. He wrote an essay on contemporary opera in Italy (*Dell'opera in musica sul teatro italiano e de' suoi difetti*, Florence, 2/1833). Short and stocky, though with a noble, expressive face, Tacchinardi had a voice that was mellow, powerful, extensive in compass and almost baritone in colouring. His technique was masterly, especially with regard to breathing, phrasing, agility in vocal flourishes and ease in passing from chest to head voice. A marble bust of him by Canova is in the Museo Teatrale alla Scala in Milan.

FRANCESCO BUSSI

Tacchinardi-Persiani [née Tacchinardi], Fanny

(*b* Rome, 4 Oct 1812; *d* Neuilly-sur-Seine, 3 May 1867). Italian soprano, daughter of Nicola Tacchinardi and wife of the composer Giuseppe Persiani. She made her début in Livorno in 1832 in the title role of Giuseppe Fournier-Gorre's *Francesca da Rimini*. Singing in *Tancredi*, *La gazza ladra*, *Il pirata* and *L'elisir d'amore* (Carnival 1832–3, Venice) and in *L'elisir*, *Beatrice di Tenda* and *La sonnambula* (summer 1833, Milan), she made a deep impression as an interpreter of Bellini and particularly of Donizetti, who wrote for her the title roles of *Rosmonda d'Inghilterra* (1834, Florence), *Lucia di Lammermoor* (1835, Naples) and *Pia de' Tolomei* (1837, Venice). She triumphed further in 1834 at the Teatro del Fondo,

Naples, in Valentino Fioravanti's *Le cantatrici villane* and again in *L'elisir* and *Beatrice*, and in 1836 at the Teatro Comunale, Bologna, in Persiani's *Ines de Castro*; her frequent appearances in her husband's operas contributed to their success.

She first sang in Paris at the Théâtre Italien in autumn 1837 in *La sonnambula* and *Lucia*, and distinguished herself as Carolina in *Il matrimonio segreto*. She remained there for 13 years, appearing also in *Le nozze di Figaro*, *Don Giovanni* (as Zerlina), *Il barbiere di Siviglia*, *Linda di Chamounix* (1842) and her husband's *Il fantasma*. She sang in London almost every year between 1838 and 1849, first at the King's Theatre (where she made her début in *La sonnambula*) and later at Covent Garden, appearing in, among other operas, *Lucia* with Rubini. She also appeared in Vienna (1837, 1844) in *Torquato Tasso*, *Lucrezia Borgia*, *I due Foscari* and *Ernani*, in the Netherlands (1850) and at the Italian Opera in St Petersburg (1850–52), where in her last performances she showed signs of decline with a 'hoarseness' which, according to Fétis, had been noticeable in London in 1843.

Called 'la piccola Pasta', she had a small and delicate voice that was sweet, polished, distinct by virtue of good placement, and had a compass of *b*♭ to *f*‴. Her technique was almost impeccable, with an extraordinary agility in embellishing. A lack of fullness of tone and passion was compensated for by exceptional bel canto purity and near-instrumental virtuosity. Tacchinardi-Persiani's ethereal presence and fragile build fitted her for identification with her roles of the early Romantic 'amorosa angelicata'. She was less effective in comic roles (in which she nevertheless triumphed) than as a dejected, tremulous heroine of a gloomy Romantic tragedy.

<div align="right">FRANCESCO BUSSI</div>

Tacchino, Gabriel

(*b* Cannes, 4 Aug 1934). French pianist and teacher. He began his studies in Nice and received a *premier prix* in the class of Jean Batalla at the Paris Conservatoire in 1953. He also studied with Marguerite Long, Jacques Février and Francis Poulenc. He won prizes at several competitions, including Vercelli (1953), Bolzano (1954), Geneva (1955) and Naples (1956), and has subsequently enjoyed a distinguished international career. From 1975 to 1994 he taught a piano class at the Paris Conservatoire, and

he has also taught at the Nice Summer Academy. He founded two festivals in Cannes, the Nuits Musicales du Suquet (1975) and an international festival of classical music (1992). He has been active as a chamber musician with such artists as Isaac Stern, Jean-Pierre Rampal and Jean-Pierre Wallez. Tacchino is a pianist of gentle but disciplined temperament, praised for his interpretation of a wide repertory from Bach to Gershwin. His numerous recordings include excellent accounts of the five concertos of Prokofiev and a fresh and stylish exploration of the complete piano works of Poulenc.

DOMINIC GILL/CHARLES TIMBRELL

Tacet

(Lat.: 'he is silent', pl. *tacent*).

An indication found in vocal and instrumental parts, mainly when a performer is silent for a whole movement. *Tacet al fine* shows that the performer is not required for the rest of the piece.

Tachezi, Herbert

(*b* Wiener Neustadt, 12 Feb 1930). Austrian organist and harpsichordist. He studied at the Vienna Music Academy under Karl Wolleitner (piano), Alois Forer (organ), Ernst Tittel, Alfred Uhl and Karl Schiske (composition) and Otto Siegl (musicology), while doing a course of German studies at Vienna University. From 1952 to 1967 he taught music in secondary schools in Vienna. In 1958 he began teaching the organ and composition at the Vienna Music Academy (now the Hochschule für Musik), where in 1972 he became a professor. After taking harpsichord lessons from Fritz Neumeyer, in 1960 he began to play with the Vienna Soloists and the Solisti di Zagreb. In 1964 he became permanent organist and harpsichordist with the Viennese ensemble Concentus Musicus, and in 1974 organist of the Hofmusikkapelle in Vienna. His many awards include first prize in the 1958 Innsbruck International Organ Competition and the Viennese Theodor Körner prize in 1965. He has given concerts in many European countries and in the USA, and has performed frequently with the Concentus Musicus. Tachezi's repertory is based on Bach, Handel, contemporary works and improvisation. His recordings include the organ concertos of Handel and the complete organ works of C.P.E. Bach. He is also known as a composer of lieder, chamber music, and piano, organ, orchestral and vocal works (including choruses and masses). He has written an introduction to the playing of contemporary organ music entitled *Ludus organi contemporarii* (Vienna, 1973); he edits early music and contributes to Austrian music journals.

GERHARD WIENKE

Tactus.

(1) The 15th- and 16th-century term for a beat, i.e. a unit of time measured by a movement of the hand, first discussed in detail by Adam von Fulda

(*De musica*, 1490). One *tactus* actually comprised two hand motions, a downbeat and an upbeat (*positio* and *elevatio*, or thesis and arsis). Each motion was equal in length in duple time (*tempus imperfectum*); in triple time (*tempus perfectum*) the downbeat was twice as long as the upbeat.

In theory the *tactus* in 16th-century music measured a semibreve of normal length (*integer valor notarum*), a breve in diminution (*proportio dupla*), and a minim in augmentation. Gaffurius (*Practica musice*, 1496) wrote that one *tactus* equalled the pulse of a man breathing normally, suggesting that there was an invariable tempo then of M.M. = *c*60–70 for a semibreve in *integer valor*. However, in the 16th century (as Dahlhaus, 1960, pointed out), it was possible for the tempo of the *tactus* to vary, depending on the interpretation of the mensural conditions. The diminution in *tempus perfectum diminutum* (), for example, was understood as a reduction of the time value of the notes by one third and not by half, so that the *tactus alla semibreve* became two thirds of the usual length. Furthermore, there are some isolated cases in which verbal instructions indicate a change of the speed of the *tactus*: for example, in Luys Milán's *El maestro* (1536) he indicated that the *tactus* should be fast or slow with the expressions *apriessa* and *espacio* respectively. From the possibility to divide the *tactus* while the value of the notes was retained (i.e. to beat twice as fast) there followed the distinction between a larger and a smaller *tactus* (Martin Agricola, *Musica figuralis deudsch*, 1532). Hence in *tempus imperfectum diminutum* (C) the *tactus maior* constitutes a breve and the *tactus minor* a semibreve; in *tempus non diminutum* (C) the unit is correspondingly able to contain a semibreve or a minim. At the turn of the 16th century the *tactus* was seen primarily as a measure of the semibreve, which could by now be faster or slower: according to Michael Praetorius the *tempus imperfectum diminutum* corresponded to a *tactus celerior*, the *tempus non diminutum* to a *tactus tardior* (*Syntagma musicum*, iii, 1618, 2/1619). The mensural concept of *tactus* continued to have an effect on music theory until the 18th century; Mattheson especially held unwaveringly to the definition of *tactus* as a dual unit of thesis and arsis.

See also Conducting, §1 and Performing practice, §I, 4 and Tempo.

(2) The verb *tangere* was used from the Middle Ages onwards to mean 'to touch an organ' or, more generally, any keyboard instrument. From this, *tactus* came to mean a formulaic musical unit that was particularly constitutive for cantus firmus settings, determining the progress of such keyboard pieces. German organ treatises of the 15th century (e.g. *D-Mbs* Clm 7755, ed. in Göllner, 1961) teach how a musical work may be constructed on a given tenor by the use of prewritten ornamented figures, in a rhythmic-melodic movement from one concordance to another, the initial harmony being emphasized and the final sonority prepared each time. In so far as each *tactus* represents, in its relationship to a single note of the cantus firmus, a metrical unity whose length is determined by the prescribed 'beats' of the movement (e.g. *quatuor* or *sex notarum*), which is also marked by analogous tablature-lines, this instrumental structure is closely related to the modern concept of metre. In some sources the

sample exercises as a whole – and in the Buxheimer Orgelbuch (*D-Mbs* Cim.352b) even entire pieces – are called *tactus*. After Conrad Paumann, organ teaching became more influenced by vocal composition and the elementary *tactus* procedure was replaced by new techniques of formulation; however, the principle of working to such formulae remained important for instrumental music. Thus, in terms of musical history, it is likely that the modern bar system is also related to these older practices of instrumental performance.

(3) Giorgio Anselmi (*De musica*, 1434), used the word to mean the Fret on a lute or clavichord, and also the keys of a clavichord or organ (*see* Key (ii)). Gaffurius (*De harmonia musicorum instrumentorum opus*, 1518) followed Anselmi's example.

HOWARD MAYER BROWN/CLAUS BOCKMAIER

Tacuchian, Ricardo

(*b* Rio de Janeiro, 18 Nov 1939). Brazilian composer, conductor and writer on music. He earned bachelor and graduate degrees in piano, composition and conducting from the Federal University of Rio de Janeiro (UFRJ). As a Fulbright scholar (1987–90) he earned a doctoral degree in composition at the University of Southern California in Los Angeles. He was professor of composition at UFRJ (1965–95), was a visiting professor at SUNY-Buffalo

(1998), and since 1996 has been teaching at the University of Rio de Janeiro (UNIRIO).

He has been active as a conductor of several Brazilian orchestras, as a member of editorial boards of the main Brazilian music journals and as an adjudicator in several music contests. From 1993 to 1997 he was the President of the Brazilian Academy of Music. His music has been commissioned, published and broadcast in Brazil and other countries, and commercially recorded in Brazil and the USA.

After showing neo-classical and nationalist tendencies in the 1960s and going through an avant-garde period in the 1970s, Tacuchian's aesthetic outlook since 1980 has been based on a postmodern style with a cosmopolitan and urban flavour. He overcomes polarities such as national/international or old/new, achieving a synthesis of 20th-century techniques. In the late 1980s he evolved what he called the 'T' system, a form of pitch control derived from a nine-pitch scale, a serial setting and a pitch-class set. His output totals more than 120 works.

GERARD BÉHAGUE

Taddei, Giuseppe

(*b* Genoa, 26 June 1916). Italian baritone. He studied in Rome and made his début there in 1936 as the Herald in *Lohengrin*. He sang regularly in Rome, where his repertory included Alberich, Germont and Rivière (Dallapiccola's *Volo di notte*), until he was conscripted into the army in 1942. Engaged in 1946 for two seasons at the Vienna Staatsoper, he scored particular successes in Verdi roles. In 1947 he sang Scarpia and Rigoletto at the Cambridge Theatre, London, and in 1948 Mozart's Figaro at the Salzburg Festival. At La Scala (1948–61) his roles included Pizarro, Malatesta, the four villains in *Les contes d'Hoffmann* and parts in operas by Nino Sanzogno and Ferrari Trecate. Elsewhere in Italy he sang (in Italian) Hans Sachs, Gunther, Wolfram and the Dutchman. Later he specialized in Mozart, singing Papageno, Figaro and Leporello. He appeared at Covent Garden between 1960 and 1967 as Macbeth, Rigoletto, Iago and Scarpia and also sang in San Francisco, Chicago and at the Bregenz Festival (1968, 1969, 1971) as Falstaff, Dulcamara and Sulpice (*La fille du régiment*). Taddei had a warm, subtly coloured voice and intelligently inflected diction, and was successful in both comic and dramatic roles. He made notable recordings of his Verdi roles as well as his Figaro, Guglielmo, Dulcamara and Scarpia.

HAROLD ROSENTHAL/ALAN BLYTH

Tadei, Alessandro

(*b* ?Graz, *c*1585; *d* Gandria, nr Lugano, 1667). Italian composer and organist, possibly of Austrian birth. From 16 March 1604 to 16 September 1606, at the expense of Archduke Ferdinand of Inner Austria, he studied in Venice with Giovanni Gabrieli, whom he visited again in 1610. At the end of 1606 he was appointed court organist at Graz. When the archduke became emperor as Ferdinand II in 1619, Tadei moved to Vienna with other musicians of the Graz court, and there is evidence that he was organist to the imperial court until 1628. From 11 November 1628 to 20 May 1629 he acted as Kapellmeister at the abbey of Kremsmünster in Upper Austria. It may well have been soon after this, as he was then a widower, that he entered the Carmelite monastery in Venice; Ferdinand II had written a letter of recommendation to the head of the Carmelite order in 1633, and he was certainly there in 1640. On 22 May 1642 he became second organist of Udine Cathedral, but his successor was appointed on 29 May 1647. He may then have retired to Gandria, though nothing is heard of him until his death.

Like his predecessors at Graz, Annibale Perini and Francesco Stivori, Tadei transplanted to Austria elements of Gabrieli's style, including polychoral techniques, as in his *Missa sine nomine* for 16 voices (*A-Wn*; Lugano, 1937) and the motet *Hodie beata virgo* for 10 voices (*A-KR* L13). His only known collection, the *Psalmi vespertini integri* for eight voices and continuo (Venice, 1628), contains simple homorhythmic psalm settings for two choirs. There is also a motet for three voices and continuo, *O beatum Carolum*, in G.B. Bonometti's anthology *Parnassus musicus Ferdinandaeus* (RISM 1615[13]). According to Gerber, Tadei was 'a famous contrapuntist and composer of church music' in Italy, which may indicate

that he continued to compose after 1630 although no music by him from his later years is known.

HELLMUT FEDERHOFER/STEVEN SAUNDERS

Tadinghen, Ja [Jacob]

(*fl* late 15th century). Composer. His name suggests Netherlandish origin. His only extant works are two secular pieces published by Petrucci in the *Odhecaton* and *Canti C*. The first of these, *Pensif mari*, bears an attribution (undoubtedly mistaken) to Josquin in a late manuscript. The lost text would appear to have been a rondeau and Tadinghen's setting is competent but unremarkable. The other work consists of a contrapuntal voice added to the superius line of the well-known chanson *Le serviteur*. The added voice, employing busy scalar contrapuntal figures as well as sesquialtera, provides a continuous running accompaniment to the slow-moving superius that closely resembles the counterpoints against chant given as examples in Tinctoris's *Liber de arte contrapuncti*. In its only source, *Canti C*, it is followed by an even more complicated counterpoint to the same melody by Martin Hanart. (*Vander StraetenMPB*, vi)

RICHARD SHERR

Tadolini [née Savonari], Eugenia

(*b* Forlì, 1809; *d* Naples, after 1851). Italian soprano. She studied with Giovanni Tadolini whom she married, and made her début in 1828 in Florence. She first appeared in Paris at the Théâtre Italien in Rossini's *Ricciardo e Zoraide* (1830). During the next 12 years she sang at La Scala and in Venice, Vienna and Florence. Her repertory included Donizetti's Jane Seymour, Anne Boleyn, Lucia, Adina, Antonina (*Belisario*), Parisina, Fausta, Maria Padilla (see illustration) and Norina, as well as Bellini's Amina, Elvira and Norma. She created the title roles of *Linda di Chamounix* (1842) and *Maria di Rohan* (1843), both in Vienna. After singing Elvira (*Ernani*) in 1844, she created the title role of Verdi's *Alzira* in Naples (1846), and sang Odabella (*Attila*) at La Scala and Lady Macbeth at Naples

in 1848, the year she made her London début at Her Majesty's Theatre as Linda; she also sang Léonor (*La favorite*) and Paolina in the Italian première of *Poliuto*, both at Naples. She retired in 1851. She had a large, flexible voice, which Verdi considered too beautiful for the role of Lady Macbeth.

ELIZABETH FORBES

Tadolini, Giovanni

(*b* Bologna, 18 Oct ?1789; *d* Bologna, 29 Nov 1872). Italian composer and singing teacher. He studied with Stanislao Mattei and Matteo Babbini at the Liceo Musicale in Bologna, and became répétiteur and later chorus master at the Théâtre Italien, Paris (1811–14). He returned to Italy, where his eight operas were produced between 1815 and 1827. The soprano Eugenia Tadolini was his wife. He was a member of the Accademia Filarmonica di Bologna and *maestro di cappella* of the cathedral (1825). In 1829 he returned to Paris to become musical director of the Théâtre Italien. He is said to have composed six sections of the *Stabat mater* commissioned from Rossini which was performed in Madrid on Easter Saturday, 1833. In 1839–41 Tadolini was in Italy; he founded a singing school at Bologna, went back to the Théâtre Italien in 1841, then returned to teach singing at his school in 1848.

ELIZABETH FORBES

Taegio [Taeggio].

See Rognoni.

Taegŭm.

Large transverse bamboo flute of Korea (*tae*: 'large'; *gŭm*: 'flute'). It is also called *chŏ* or *chŏttae*. The standard *taegŭm* is about 80 cm long and has six finger-holes plus the blowing-hole and a membrane-covered hole. It gives the pitch *b*♭ with all finger-holes stopped and has a range of over two octaves. Folk instruments, generally pitched a tone higher, are somewhat shorter.

Since the blowing-hole is large, the performer can obtain gradations of pitch by varying air pressure and by altering the angle of embouchure; the wide vibrato characteristic of Korean music is produced by simultaneously bobbing the head up and down and rotating the instrument slightly. The finger-holes are also large and nearly equidistant. Between the blowing-hole and the first finger-hole is an aperture covered with a thin, fragile reed membrane; a curved metal plate laced to the instrument can be slid over the membrane hole for protection. Towards the far end of the flute are two to five unstopped holes which define the maximum sounding length and decorate the instrument. Owing to its large size the *taegŭm* is awkward to play. The performer supports the extension of the blowing-hole end on the left shoulder and in reaching the finger-holes must bend the left wrist sharply backward (*see* illustration).

The *taegŭm* sounds in three basic registers. The middle register is obtained by overblowing the low register at the octave (these two registers each having the compass of an octave), and the four notes in the high register are obtained by overblowing at the 12th: thus the same fingering yields *e*♭; *e*♭ and *b*♭. In its lower range the sound is both gentle and full, but the membrane imparts a piercing buzzing quality to high or loud notes.

The *taegŭm*, together with the *chunggŭm* ('medium flute') and *sogŭm* ('small flute'), is mentioned as one of three important flutes of the United Silla period (668–935 ad), and it has remained a dominant instrument in Korea. The treatise *Akhak kwebŏm* (1493) gives the full length of the instrument as 86·4 cm (but maximum sounding length about 70 cm) and goes to the trouble of demonstrating seven sets of fingerings for different modes; it also reveals that the *taegŭm* was an important member of numerous ensembles.

Today the *taegŭm* is used in a variety of ensembles and as a solo instrument in both court and folk traditions. In the court tradition it appears in *hyangak* ('native music'), such as the long suite *Yŏngsan hoesang*, and in *tangak* ('Chinese music'), such as *Nagyangch'un*. A particularly favoured court solo is *Ch'ŏngsŏng chajin hanip*. In the folk tradition it is used in shaman ensembles (*sinawi*) and the virtuoso solo genre, *sanjo*. It also serves as a tuning instrument in ensembles.

ROBERT C. PROVINE

T'aep'yŏngso.

Conical wooden double-reed pipe of Korea (*t'aep'yŏng*: 'great peace'; *so*: 'flute'). It is also called *hojŏk*, *swaenap* or (onomatopoeically) *nallari* and is related to the Chinese Suona. About 47 cm long, it has eight finger-holes, the second of which is in the rear. Unlike the bamboo P'iri, it is made of hardwood, has a broadly conical bore, and uses a short, narrow double reed. There is a small circular metal lip disc below the reed and a large metal bell at the lower end of the instrument. The *t'aep'yŏngso* is capable of the compass of a 12th but is mainly restricted in use to an octave. The performer places the entire reed in his mouth, pressing his lips against the metal disc below the reed (see illustration). Intonation is extremely difficult to control and no overblowing is used. The instrument produces an extraordinarily loud and piercing sound and is normally played out of doors.

The *t'aep'yŏngso* is thought to have been introduced to Korea about the turn of the 15th century, and the treatise *Akhak kwebŏm* (1493) indicates that it was used then, as now, in military processional court music (*Taech'wit'a*). Nowadays it is also played in three pieces performed at the Royal Ancestral Shrine (*Chongmyo*) and as the only melodic instrument in *nongak* ('farmers' music').

ROBERT C. PROVINE

Tafall y Miguel, Mariano

(*b* Lérida, 27 Sept 1817; *d* Santiago de Compostela, 26 Sept 1874). Spanish organist, organ maker and composer. Tafall began his career as an instrumentalist. In 1836 he was already conductor of an important military band, but resigned the post within a year to become an instrumentalist at the Cathedral of Burgos. In 1854 he went to Santiago as an instrumentalist for the cathedral there; he was later appointed organist and made and repaired organs. As an organ maker Tafall was active in the provinces of Galicia, repairing and constructing organs in various cathedrals and churches. By 1855, he had fully repaired one of the two main organs of the Cathedral of Santiago.

In his last years, he assembled the knowledge gained from his long experience as an organ maker in his four-volume treatise: *Arte completo del constructor de órganos, o sea guía manual del organero* (Santiago de Compostela, 1872–6). This book is still valuable, for it is extraordinarily clear, practical and complete, although Tafall was more an artisan than a theoretician.

Tafall left some fine compositions including a mass, a complete office for the dead and a psalm setting, *Miserere*. Both his sons, Rafael and Santiago Tafall Abad, were good organists and composers.

Tafelklavier

(Ger.).

See Square pianoforte.

Tafelmusik (i)

(Ger.: 'table music'; Fr. *musique de table*).

A term used since the 16th century for music at feasts and banquets, both in noble and middle-class circles, and as a title for printed and manuscript music anthologies. Musical presentations at feasts were common in antiquity, and written and pictorial accounts of musical compositions and performances *in conviviis et festis* survive from the Middle Ages (see illustration). However, the expression 'Musik zur Tafel', 'Tafelmusik' or 'musique de table' (with related compounds) came into use only in the mid-16th century, when it delimited a genre equivalent in stature to sacred or chamber music. Appointment records and descriptions of duties in chapel archives from the second half of the century frequently refer to vocal and instrumental performance *zur Taffel* ('at the table').

Michael Praetorius (*PraetoriusSM*, iii, 130 [*recte* 110]) reported that vocal and instrumental music was performed at feasts as at intermezzos ('Also und dergestalt kan man es mit anordnung einer guten Music vor grosser Herrn Taffel oder bey andern frölichen conventibus auch halten'). In 1617 Samuel Schein published his *Banchetto musicale*, and paraphrases of the expression 'Tafelmusik' soon became common, for example in Isaac Posch's *Musicalische Tafelfreudt* and Thomas Simpson's *Taffel Consort erster Theil* (both 1621). During the 17th century vocal works (often with continuo) and instrumental suites alike were published under the title 'Tafelmusik' or 'Musique de table'. In J.V. Rathgeber's collections (1733–46) instrumental works in several genres appear alongside songs and polyphonic vocal pieces; Telemann's three sets (1733, published as *Musique de table*) each consist of an overture and suite, a quartet, a

concerto, a trio sonata, a solo sonata and a 'conclusion'. In the second half of the 18th century *Tafelmusik*, which had always tended to be light and entertaining, approached the character of the Divertimento and was given such alternative titles as *Musicalische Blumenlese*, *Musikalisches Magazin* or *Musikalischer Blumenkranz*. The importance of the genre soon diminished and even the purpose met with disapproval. Zelter's *Liedertafel*, although based on nationalist political elements, partly restored the original function of *Tafelmusik* to the 19th century. Male-voice choral societies called Liedertafel continued the practice of singing and dining until the mid-20th century. (For further illustration *see* Nuremberg, fig.4.)

HUBERT UNVERRICHT

Tafelmusik (ii).

Canadian period-instrument orchestra, based in Toronto. It was founded in 1979 under the leadership of the violinist Jeanne Lamon, who has remained the orchestra's musical director. Admired from the outset for its spirit and technical polish, Tafelmusik has achieved an international reputation through its tours (including annual visits to Europe) and its numerous recordings. The precision and vitality of its playing are heard to particular advantage on discs of Bach's Brandenburg Concertos, Handel's concerti grossi and Vivaldi's 'Four Seasons', and in an invigorating series of Haydn symphonies under Bruno Weil, who regularly directs the orchestra in performances and recordings of Classical repertory. Tafelmusik has been the orchestra-in-residence at the Klang und Raum Festival in Irsee, Bavaria, since 1993, and gives an annual concert season at Trinity-St Paul's United Church in Toronto. The Tafelmusik Chamber Choir was formed in 1981 to complement the orchestra.

RICHARD WIGMORE

Taffanel, (Claude) Paul

(*b* Bordeaux, 16 Sept 1844; *d* Paris, 21 Nov 1908). French flautist and conductor. Taffanel was the founder of the modern French school of flute playing which has since been widely adopted throughout the world. He studied at the Paris Conservatoire with Louis Dorus (who imposed the new Boehm flute there), winning a *premier prix* in 1860. For the next 30 years he pursued a brilliant career as a soloist and as an orchestral player at the Société des Concerts du Conservatoire and the Paris Opéra. He pioneered

a new expressiveness of tone and sensitivity of musicianship which proved the flute to be capable of emotional depth. He was a founder member of the Société Nationale de Musique in 1871, and in 1879 created his own influential Société de Musique de Chambre pour Instruments à Vent which he directed for 15 years. This stimulated a whole new chamber music repertory for wind instruments, including Gounod's *Petite symphonie* (1885) dedicated to him. At the age of 45 Taffanel adopted a new career, becoming principal conductor of the Société des Concerts in 1892, where he expanded the repertory to favour contemporary music, and of the Paris Opéra in 1893, where he conducted the first French productions of operas by Verdi and Wagner. He was also professor of flute at the Conservatoire from 1893 until his death. As a composer Taffanel produced a prize-winning Wind Quintet in 1876 and various transcriptions and original works for flute and piano, notably the *Andante pastoral et Scherzettino* of 1907 which demonstrated the new lyricism of the French school. That year he also wrote an article on conducting for Lavignac's *Encyclopédie de la musique et dictionnaire du Conservatoire* (Paris, 1913–31). He began a history of the flute and a *Méthode* elaborating his principles of the instrument as a 'singing voice'. These projects were completed after his death by his pupils Louis Fleury and Philippe Gaubert.

EDWARD BLAKEMAN

Tag, Christian Gotthilf

(*b* Beierfeld, 2 April 1735; *d* Niederzwönitz, nr Zwönitz, 19 July 1811). German Kantor and composer. In 1749, through the assistance of G.A. Homilius, he was awarded a scholarship to the Dresden Kreuzschule, where he studied for six years. In 1755 he became Kantor and schoolteacher in Hohenstein-Ernstthal, where he remained until his retirement in 1808, having established an outstanding reputation as a Kantor and organist.

Tag was a prolific composer of *Kantorenmusik* in a style combining elements of the Baroque and *Empfindsamkeit*. At the centre of his creative output were his sacred cantatas; written between 1760 and 1780, predominantly to Pietist texts, they reflect the influence of Hasse and J.G. Naumann (a personal friend of Tag's) and are particularly striking for their conservative adherence to fugue and their penchant for tone-painting and symbolism. The masses, of the two-movement *missa brevis* type with recitatives and arias, closely resemble the cantatas. After 1780 Tag emerged as a fashionable composer of lieder and keyboard pieces in a style heavily indebted to J.A. Hiller and the Berlin lied school. In his organ compositions he used orchestral and keyboard music techniques of the

Rococo and *empfindsamer Stil*. An *Orgelprobe* and a series of 26 letters formerly in the archives of Breitkopf & Härtel (1795–1806) are now lost.

WORKS

Sacred: 115 cants., solo vv, chorus, insts [3 with only texts extant], most in *PL-GD*, some in *D-ABG*, *BNms*, *Bsb*, *CR*, *HOE*, *LST*, *ZE* and elsewhere (details in Vieweg, 1933); 6 masses, 4vv, 3 with insts, *Bsb*; Mass, 4vv, insts, *HOE*.; motets, hymns, other sacred works, *ABG*, *Bsb*, *BIT*, *HOE*, *LÜh*, *MLHb*, *USSR-KAu*; Melodie zum Vaterunser und zu den Einsetzungsworten des Abendmahls, org acc. (Penig, n.d.)

Lieder collections: [17] Lieder beim Clavier zu singen (Leipzig, 1783); [16] Lieder beim Clavier zu singen nebst einer melodramatischen Scene, ii (Leipzig, 1785); [3] Lieder der Beruhigung (F. von Matthisson, S.G. Bürde) (Leipzig, 1793); 24 Lieder nebst einer 4-stimmigen Hymne … beim Klavier zu singen, iii (Dresden, 1798)

Other vocal: Auf den Borschberg bei Pillnitz (Leipzig, 1783); Pilgerlied (C. Overbeck) (Leipzig, 1787); Volksgesang an die Chursächsische Armee (J.F. Dietrich) (Dresden, 2/1795); Urians Reise um die Welt … und Urians Nachricht von der neuen Aufklärung (Leipzig, 1797); Wörlitz, eine Ode … nebst einem Vorberichtung des Dichters (Dietrich) (Berlin, 1802); Todtenopfer unserm vollendeten Naumann (Dresden, n.d.); many lieder in contemporary anthologies; secular cants., incl. 3 in *D-Dlb*, 1 in *Bsb*, 1 in *A-Wn*; 2 arias, S, orch, *PL-GD*; miscellaneous lieder, *A-Wn*, *D-Dlb*

Kbd: 6 Choralvorspiele nebst einem Trio und Allabreve, org (Leipzig and Dessau, 1783); 70 Veränderungen über ein Andantino fürs Klavier (Leipzig and Dessau, 1784); Der Glaube, mit einer neuen Melodie für die Orgel (Leipzig, 1793); 12 kurze und leichte Orgelvorspiele nebst einer Orgelsinfonie, org, pf, i (Leipzig, 1794); 6 kurze und leichte Parthien für kleine Anfänger … mit darüber gesetzter Applikatur und einer Ausführung der Manierung nach Bachischen Grundsätzen, i (Meisser, 1804); several pieces in contemporary anthologies; chorale preludes and arrs., org, 11 in *D-LEm*, 2 in *Bsb*; Kurtze und leichte Clavier Stücken durch alle Tone Dur und Moll, *LEm*; Divertimento II, hpd, *LEm*

Sym., qt, other kbd sonatas and divertimentos, other works, lost, mentioned in Tag's letters, *GerberNL* and Vieweg (1933)

DIETER HÄRTWIG

Tag, Christian Traugott

(*b* Hohenstein-Ernstthal, 2 June 1777; *d* Glauchau, 12 July 1839). German Kantor and composer, nephew of Christian Gotthilf Tag. He received his early education from his uncle, then attended the Leipzig Thomasschule for eight years, where he was encouraged by J.A. Hiller. After studying philosophy and theology at Leipzig University he became Kantor in Jessen (1803). In 1805 he went to Glauchau as Kantor, director of music and schoolteacher. Unlike his uncle, he composed few works; his known publications include two sacred choral pieces (*Worte der Beruhigung bey unverschuldeten Schicksalen*, 1813, and the litany *Ewiger, erbarme dich*, 1815) and 12 variations on *Gaudeamus igitur* for keyboard and flute, all published in Glauchau. A Gloria for chorus and instruments survives in manuscript, and his *Hosianna! Davids Sohn* for Advent was mostly transmitted orally until its publication by Walter Hüttel.

DIETER HÄRTWIG

Tagelied

(Ger.: 'day song').

A German strophic song announcing or praising the break of day, cultivated notably by Minnesinger in the late Middle Ages and strongly influenced by the Provençal Alba, which dealt with similar subjects. Early polyphonic examples include one attributed to the Monk of Salzburg in the Mondsee-Wiener Liederhandschrift, in which the lower part is the song of a nightwatchman while the upper part is a trumpet prelude followed by a dialogue between parting lovers. Wolfram von Eschenbach and Oswald von Wolkenstein are other important composers of *Tagelieder*. The tradition of the *Tagelied* was eventually incorporated into German folksong and especially into popular hymns, as in Philipp Nicolai's 16th-century chorale *Wachet auf, ruft uns die Stimme*. It was revived by Wagner in the warning 'Habet acht! Schon weicht dem Tag die Nacht', with which Brangäne wakes the lovers in Act 2 of *Tristan und Isolde*.

Taglia, Pietro

(*fl* Milan, 2nd half of the 16th century). Italian composer. He was *maestro di cappella* at S Maria presso S Celso, Milan, in 1565. Taglia was a madrigalist of cultivated taste, a member of the circle of noble connoisseurs who, during the period when Milan was reduced to a province of Spain and was dominated by the spirit of the Counter-Reformation, nevertheless kept alive the love of secular music. In his two books of madrigals Taglia followed the new and daring harmonic technique of Cipriano de Rore; indeed, one of his madrigals is included in Rore's *Quarto libro di madrigali* (RISM 1557[23]). The poetry he set is taken from some of the finest writers: Petrarch, Ariosto, Boiardo, Sannazaro and Giraldi. Taglia's style is rich in harmonic and rhythmic alternations and contrasts, but he could adapt it to the direct and the popular when the text so required. The extent to which his compositions were appreciated is demonstrated by the large number of collections in which they appear. The greater part of these anthology pieces are new compositions as distinct from those included in the three books published by Taglia himself. Einstein had high praise for Taglia referring to him as 'a genius of high order'.

MARIANGELA DONÀ

Tagliabue, Carlo

(*b* Mariano Comense, 13 Jan 1898; *d* Monza, 5 April 1978). Italian baritone. He studied with Gennai and Guidotti and made his début at Lodi in 1922 as Amonasro. After appearances at provincial theatres and in Florence, Palermo and the Verona Arena he was engaged at La Scala, where he sang regularly from 1930 to 1953. As well as the Italian repertory, his roles included Telramund, Wolfram, Gunther and Kurwenal. At the Teatro Reale dell'Opera, Rome, he created Basilio in Respighi's *La fiamma* (1934), and he sang Scedeur in the first performances at La Scala of Pizzetti's *Lo straniero*. He sang at the Teatro Colón (1934), at the Metropolitan (1937–9), where he made his début as Amonasro, and in San Francisco (1938). He made his Covent Garden début in 1938 as Rigoletto and returned in 1946 as Germont with the S Carlo company. In 1953 he sang Don Carlo (*La forza del destino*) at the Stoll Theatre. He continued to sing until 1960. Tagliabue's resonant, well-produced baritone was ideally suited to Verdi roles, as can be heard in his Don Carlo from a wartime recording of *La forza del destino*.

HAROLD ROSENTHAL/ALAN BLYTH

Tagliaferro, Magda(lena)

(*b* Petrópolis, 19 Jan 1893; *d* Rio de Janeiro, 9 Sept 1986). French-Brazilian pianist. After early studies in São Paulo she went to Paris and studied with Antonin Marmontel at the Conservatoire, where she received a *premier prix* in 1907. She also studied regularly with Cortot, whose musical aesthetics she perpetuated throughout her life. In 1910 she was chosen by Fauré to perform several of his works with him on tour. She enjoyed a brilliant career in Europe and South America, appearing with such conductors as Furtwängler, d'Indy, Weingartner and Paray. She gave the first performance, or was the dedicatee, of works by Villa-Lobos, Hahn, Migot, Rivier and Pierné. Tagliaferro taught at the Paris Conservatoire from 1937 to 1939 and in Brazil, where she lived during the war years. She re-established her European career in 1949, founded a piano competition, and gave masterclasses in Europe and the USA. Her students included Władysław Kędra, Cristina Ortiz and James Tocco. At the age of 90 she performed acclaimed concerts in Paris, London, New York and South America. Her recordings include masterly interpretations of Fauré's Ballade, Saint-Saëns's Fifth Concerto and Mozart's Concerto in D k537. She wrote an autobiography *Quase tudo* (Rio di Janeiro, 1979).

CHARLES TIMBRELL

Tagliafico, Joseph (Dieudonné)

(*b* Toulon, 1 Jan 1821; *d* Nice, 27 Jan 1900). French bass of Italian parentage. He studied in Paris and made his début there in 1844 at the Théâtre Italien. On 6 April 1847 he sang Oroe in the performance of *Semiramide* that inaugurated the Royal Italian Opera at Covent Garden, and he appeared there every season until 1876. He sang Oberthal in *Le prophète* (1849), Sparafucile in *Rigoletto* and Fieramosca in *Benvenuto Cellini* (1853), Ferrando in *Il trovatore* (1855), the High Priest of Brahma in *L'Africaine* (1865) and Friar Lawrence in *Roméo et Juliette* (1867), all first London performances. Although his voice was neither large nor remarkable in quality, his extreme versatility made him one of the most highly valued singers of his day. His enormous repertory included many other roles in the operas of Mozart, Rossini, Bellini, Donizetti, Halévy, Meyerbeer, Gounod and Verdi. He was the stage manager at Covent Garden from 1877 to 1882, composed some songs, and wrote criticism for *Le ménestrel* under the name of De Retz.

ELIZABETH FORBES

Tagliapietra, Gino

(*b* Ljubljana, 30 May 1887; *d* Venice, 8 Aug 1954). Italian composer, pianist and musicologist. He studied in Vienna and under Busoni in Berlin, and taught the piano at the Liceo Musicale, Venice (1906–40). A promising career as a concert pianist was soon undermined by recurrent neuritis in his right arm. As a composer Tagliapietra has attracted little attention, even in Italy, though his piano music has remarkable qualities. A loyal disciple of Busoni, he showed in his best pieces (e.g. the two sets of *Tre pezzi*, or the tough, uncompromising *Otto preludi*) that he could use a basically Busonian language with a vitality that is not merely second-hand: these pieces sometimes have a distinctive, rugged hardness that has led one writer to see aptness in Tagliapietra's name ('stone cutter'). Similar qualities may be found even in his didactic works, notably the *40 studii di perfezionamento*: technical exercises whose musical intensity and exceptional harmonic enterprise call to mind those in Busoni's *Klavierübung*.

Tagliavini, Ferruccio

(*b* Reggio nell' Emilia, 14 Aug 1913; *d* Reggio nell' Emilia, 29 Jan 1995). Italian tenor. He studied in Parma with Brancucci and in Florence with Amadeo Bassi. He made his début in October 1939 in Florence as Rodolfo in *La bohème* and first sang at La Scala, as Rossini's Almaviva, in 1942. By the end of World War II he had established himself as one of the leading tenors of the Italian stage; he then appeared successfully at the Metropolitan (1947–54 and 1961–2). During the visit of the La Scala company to Covent Garden in 1950, he sang Nemorino in *L'elisir d'amore*, revealing his vocal achievements as well as a considerable talent as a comic actor. He made further appearances in London as Cavaradossi (1955–6, Covent Garden) and as Nadir in *Les pêcheurs de perles* (1958, Drury Lane). He retired from the stage in 1966.

Essentially a *tenore di grazia*, Tagliavini excelled in the bel canto operas of Bellini and Donizetti and in the title role of Mascagni's *L'amico Fritz*, which

he recorded under the composer's direction, with his wife, the soprano Pia Tassinari, as Suzel. Many regarded him as the successor of Tito Schipa; Tagliavini's style, however, was less dependable. He could spin out a sustained note until it became a mere thread of tone, and he sang florid passages more accurately than was usual in the postwar period; but he also relied on abrupt transitions between *fortissimo* and *pianissimo* to the neglect of the intermediate shades, and in later years permitted his louder tones to develop a harsh quality. His art is best represented in his early Cetra discs, which have been reissued on CD.

DESMOND SHAWE-TAYLOR/R

Tagliavini, Luigi Ferdinando

(*b* Bologna, 7 Oct 1929). Italian organist, harpsichordist and musicologist. He studied at the conservatories of Bologna and Paris (1947–52) under Ireneo Fuser and Marcel Dupré (organ), Napoleone Fanti (piano) and Riccardo Nielsen (composition). He took the doctorate at the University of Padua in 1951 with a dissertation on the texts of Bach cantatas. He taught the organ at the Bologna Conservatory from 1952 to 1954 and had charge of the conservatory library from 1953 to 1960. In 1954 he became organ professor at the Bolzano Conservatory and taught there until 1964, when he was appointed organ professor at the Parma Conservatory. From 1959 to 1984 he taught regularly at the summer organ courses at the Haarlem Organ Academy. In 1991 he was awarded the Italian music critics' 'Massimo Mila' prize. He became a member of the Accademia Nazionale di S Cecilia in 1992 and in 1996 received the honorary doctorate from Edinburgh University.

Tagliavini's academic career began in 1959 with his appointment as an external lecturer in music history at the University of Bologna. He was visiting professor at Cornell University in the summer of 1963 and at the SUNY, Buffalo in the autumn of 1969. In 1965 he became reader in music history and director of the Institute of Musicology at the University of Fribourg, and in 1971 was appointed professor there. Since then he has divided his time between Bologna, where he has made a fine collection of old instruments, and Fribourg.

Tagliavini has taken a pioneering interest in organ restoration based on historical research, and in his official capacity on Italian and Swiss state commissions he has rescued a number of valuable organs from neglect and destruction. He has also contributed three volumes to the Neue Mozart-Ausgabe and is editor of Monumenti Musicali Italiani and of *L'organo*, which he founded in 1960 with Renato Lunelli. He is a well-

known and widely recorded performer on the organ and harpsichord; his concerts have taken him to nearly every European country and to North America. His performances of older music, particularly Italian, combine his talents as musicologist and practical musician to produce lively, yet authentic interpretations. Taking advantage of the Italian placement of organs in the choir, he has frequently explored the two-organ repertory and has made several such recordings with Marie-Claire Alain.

<div align="right">ETIENNE DARBELLAY/TERESA M. GIALDRONI</div>

Täglichsbeck, Thomas

(*b* Ansbach, 31 Dec 1799; *d* Baden-Baden, 5 Oct 1867). German violinist and composer. He received his first violin lessons from his father, Johann Täglichsbeck, who settled in Voigtland, Lower Saxony, in 1800. In 1816 he was a fellow student of Molique with Rovelli in Munich; a mass of his, written under the supervision of Josef Gratz, was performed in 1817. That year Täglichsbeck became a violinist in the Isarthortheater orchestra, and, despite his youth, succeeded Lindpaintner as music director two years later. In 1822 he became a solo violinist at the Munich court, a post which allowed him more time to give concert tours and to compose; his first opera, *Webers Bild*, and the variations on *La gazza ladra* date from this period. In 1824 he made an extensive tour of Germany, Switzerland and northern Italy; he joined the Società Filarmonica of Bergamo, where Rovelli then lived. Reviews of his concerts in the *Allgemeine musikalische Zeitung* (1825–32) are laudatory, although his playing in Munich in 1832 was described as 'more charming than exceptional'.

In 1827 Täglichsbeck became the Kapellmeister to Prince Hohenlohe-Hechingen. Under Prince Constantine (1838–48) the court became a well-known musical centre which was visited by Berlioz (1842) and Liszt (1848). When political changes in 1848 eliminated the principality Täglichsbeck was pensioned and the musicians were given paid leave. Constantine recalled Täglichsbeck from Stuttgart in 1852 and reconstituted his orchestra at Löwenberg. Five years later Täglichsbeck was pensioned and succeeded by Max Seyfriz. He subsequently taught composition at the Dresden Conservatory for two years, then lived for a while in Munich before retiring to Baden-Baden in 1866.

The climax of Täglichsbeck's career as a composer came with the performance of his Symphony no.1 in E♭ at the Paris Conservatoire in 1836. It was a popular success, though Berlioz dismissed it as 'academic music, and nothing more'; reviewing a performance a year later, Berlioz wrote more graciously: 'works of this kind gain 100% on rehearing'. The opera *König Enzio*, produced in Karlsruhe in 1843, did not establish itself in the repertory. Täglichsbeck was an excellent Kapellmeister, a good if not brilliant violinist and a skilled if not very original composer.

ALBERT MELL

Taglietti, Giulio

(*b* Brescia, *c*1660; *d* Brescia, 1718). Italian composer, violinist and violin teacher, probably brother of Luigi Taglietti. He taught at the Jesuit Collegio dei Nobili, Brescia, from at least 1702. His music was popular in the first decades of the 18th century and was published in Italy at a time when the printing of instrumental music there was becoming comparatively rare. The Amsterdam publisher Pierre Mortier, in a 1709 list of his publications, placed him and Luigi Taglietti second only to Corelli, and they were indeed important in the development of the concerto and sonata. His concertos have more in common with the concerto grosso than with the solo type, though his op.8 features four solo violins, antedating by a few years the publication of Vivaldi's op.3, which contains some concertos for the same scoring. Occasional solo passages, including some for the viola, do, however, occur. He was among the first composers regularly to limit his concertos to three or four movements only. He shows a marked preference for only one solo treble line in his non-concerto works, witness his numerous instrumental arias (opp.3, 6 and 10) and the powerful melodic lines of his op.13 sonatas. His scorings for violoncello and violone, either together or as alternatives, have been cited as evidence of the co-existence of independent instruments.

ROBIN BOWMAN/PETER ALLSOP

Taglietti, Luigi

(*b* 1668; *d* ?Brescia, 1715). Italian composer, trumpet marine player and teacher, probably brother of Giulio Taglietti. He was associated with the Jesuit Collegio dei Nobili, Brescia, from at least 1697; in 1702 he was recorded as *maestro di tromba marina* there. Like that of Giulio Taglietti, his music was popular in the early 18th century and was published in Italy at a time when the printing of instrumental music was becoming comparatively rare. The Amsterdam publisher Pierre Mortier, in a list of his publications dated 1709, placed the two composers second only to Corelli, and they were indeed important in the development of the concerto and sonata. Like Giulio's, his concertos have more in common with the concerto grosso than with the solo type, and he too was among the first composers to write concertos with only three or four movements. Some of his movements show a remarkably clearcut and enterprising ritornello structure.

Taglietti, Giulio

Taglioni, Filippo

(*b* Milan, 5 Nov 1777; *d* Como, 11 Feb 1871). Italian dancer and choreographer. In 1794 he became first dancer at the Teatro dei Nobili, Pisa, where his father Carlo was ballet-master. After touring Italy, 1796–8, he went to Paris to study with J.-F. Coulon, making his début at the Opéra in *La caravane* (1799). He worked at the Royal Opera, Stockholm, in 1803–4, and at the Hoftheater, Vienna, in 1805, before undertaking an extended European tour. Taglioni's importance lies mainly in his choreography for the premières, all at the Paris Opéra, of Auber's *Le dieu et la bayadère* (1830) and *Gustave III* (1833), Meyerbeer's *Robert le diable* (1831) and *Les Huguenots* (1836), and Halévy's *La Juive* (1835). That for *Robert*, including the famous 'Scène des nonnes' in which 50 dancers dressed in white wafted through the ghostly cloister, made theatrical history: the first *ballet blanc*, it proclaimed a new aesthetic, combining an airy style of dancing with the mysterious atmosphere of the spirit world. Soon afterwards, Taglioni gave up his artistic projects to devote himself to his daughter Marie's career, choreographing ballets to display her genius.

Marie Taglioni (*b* Stockholm, 23 April 1804; *d* Marseilles, 22 April 1884), among the first ballerinas to capture the spirit of Romanticism in dance, incorporated astonishing *pointe* techniques into an individualistic and highly poetic style that was unusual for its modesty and spirituality. Among her greatest operatic successes were *Guillaume Tell*, *Le dieu et la bayadère* and *Robert le diable*, though the ballet most closely identified with her was *La sylphide* (1832). Her brothers Salvatore (1789–1868) and Paul (1808–84) were also active as dancers and choreographers.

Taglioni, Marie

(*b* Stockholm, 23 April 1804; *d* Marseilles, 22 April 1884). Italian dancer. She was the daughter of the dancer and choreographer Filippo Taglioni (1777–1871). *See* Ballet, §2(ii).

Tagore, Rabindranath

(*b* Calcutta, 7 May 1861; *d* Calcutta, 7 Aug 1941). Bengali poet, writer, teacher, painter and composer. Of his manifold artistic creations, Tagore correctly predicted that his songs would remain best loved by his countrymen. Known as *Rabindrasangīt* ('Rabindra-music'), they number about 2500 and have become the national music of West Bengal and Bangladesh. Songs by Tagore have been adopted as the national anthems of India and Bangladesh.

Tagore encountered a variety of musical influences in the aristocratic household in which he grew up. Classical Indian musicians were frequent visitors or teachers there, but Tagore did not master any instrument or vocal style. This may have limited his technical range as a composer, but it fostered in him a spirit of experiment. Most of his songs have a four-part structure derived from *dhrupad*, but he also drew from other traditions including *kheyāl*, *tappā*, *kīrtan*, Bengali traditional songs and the songs of the wandering Baul singers of Bengal. He created several new *tāla* and was never a purist in his use of *rāga*; his famous song *Krsnakali* (1931), which celebrates the beauty of a dark-skinned, 'deer-eyed' maiden, changes the *rāga* from verse to verse.

Tagore was not greatly influenced by Western music, but an illustrated edition of *Moore's Irish Melodies* enchanted him as a child, and his elder brother Jyotirindranath Tagore enjoyed playing the piano. After his first visit to England in 1878, Tagore wrote Bengali words to the melodies of songs such as *Auld Lang Syne*, *Ye Banks and Braes*, *Robin Adair* and *Drink to Me Only*. His first musical play, *Vālmīki pratibhā* ('The Genius of Valmiki', 1881), was inspired by his knowledge of Western opera and operetta, and his interest in combining song, drama and dance led him to compose *nrtya-nātya* ('dance-dramas') for performance by staff and students at the school and the university which he founded at Santiniketan in West Bengal.

His special talent as a songwriter was his ability to blend words with melody. He composed tunes in his head and relied on others, particularly his brother Jyotirindranath and later his grand-nephew Dinendranath Tagore, to notate them. The emotional range of his songs is wide; his works include songs of love and religious devotion as well as celebrations of nature and the seasons. His songs are at their most effective when performed by voice alone or with *tambūrā*, *esrāj* and sparing use of *tablā*. However, the popularity of the songs has inevitably led to their vulgarization, and accompaniment by harmonium and other instruments, both traditional and modern, has become common.

Tagore won the Nobel Prize in 1913 for his English versions of his poems and songs, and books such as *Gitanjali* (1912) and *The Gardener* (1913) were quickly translated into other languages. Western musical settings of Tagore's work include Alexander von Zemlinsky's Lyrische Symphonie, op.18 (1922–3) and three songs by Frank Bridge, *Day After Day* (1922),

Speak to Me, my Love (1924) and *Dweller in my Deathless Dreams* (1925). The Australian composer Raymond Hanson was fascinated by Tagore's poetry and set 28 of his poems from *Gitanjali*, *The Gardener* and *Lover's Gift*. More recently, translations by William Radice have been set, notably by Param Vir in *Brahma, Vishnu, Shiva* (1988) and by Knut Nystedt in *The Conch* (1993), both of which works are for unaccompanied voices. Param Vir's chamber opera *Snatched by the Gods* (1992), with a libretto by William Radice, is based on a narrative poem by Tagore.

WILLIAM RADICE

Tagore, Sir Sourindro Mohun [Saurīndramohana Thākura]

(*b* Calcutta, 1840; *d* Calcutta, 5 June 1914). Indian musicologist, educationist and patron of Indian music. He was a descendant of one of the wealthiest and most influential families of 19th-century Calcutta; his grandfather, father and elder brother were all renowned for their patronage of the arts. (Rabindranath Tagore belonged to another branch of the family.) He was educated at Hindu College, Calcutta, the leading centre for British-style education, which had been founded by his grandfather, Gopi Mohun Tagore. Subsequently he made an intensive study of Indian music with K.M. Goswami and L.P. Misra, specializing in the *sitār* (1856–8). In order to prepare himself for studies in comparative musicology, he engaged two Europeans (names unknown) as his instructors in Western music.

Tagore sponsored or co-authored the production of some of the first general music treatises in Bengali (Goswami's *Sangīta sāra*, 'The Essence

of Music', 1868) and music instruction books (*Yantra kshetra dīpīka*, 1872). Such vernacular publications, produced and promoted by the Calcutta élite, were an important part of the renaissance in Bengali culture which took place in the 19th century. Tagore founded several schools of music in Calcutta beginning in 1871, and supplied music teachers and books to these and other public and private schools at his own cost. His publications ranged from music treatises in Sanskrit and Bengali to explanations of Indian music for a colonial audience. These publications were aimed at British and European orientalists both in India and in Europe as well as the Bengali intelligentsia centred in Calcutta.

Tagore was also instrumental in promoting interest in Hindustani music among the middle-class educated élite of 19th-century Calcutta. He endeavoured to promote Indian music in the West as a symbol of India's classical heritage, comparable to European art music in artistic and academic value. As part of his efforts to disseminate Indian music, he maintained extensive correspondence with learned societies, museums, scholars and monarchs in Europe and the United States. He is known to have influenced the work of the pioneering Belgian organologist V.-C. Mahillon and he donated collections of instruments to museums throughout the West, manufactured in accordance with his theories in the *Yantra kosha* (1875). There remains controversy as to whether these instruments reflect historical or contemporary practice. One of his most useful works, *Hindu Music from Various Authors* (1875), is a compilation of English writings on Indian music. It has kept scarce items, including writings by Sir William Jones and Augustus Willard, available to scholars. Although he never left India, Tagore's work was internationally recognized and he received an honorary doctorate from Oxford in 1896.

DAVID TRASOFF

Tahiti.

See Polynesia, §II, 3(i).

Tahourdin, Peter Richard

(*b* Bramdean, Hants., 27 Aug 1928). British composer and educationist, active in Australia. He studied composition with Richard Arnell and trumpet with Rowland Dyson at Trinity College of Music, London (1949–52), and for the next 12 years he worked as a freelance composer, mainly in films and television. His first important premières were those of the overture *Hyperion* in Leeds in 1952, the First Sinfonietta (Netherlands and Canada, 1952) and his first television ballet, *Pierrot the Wanderer*, broadcast by CBC in Toronto in 1955. In 1965 he was appointed visiting composer at the University of Adelaide, then taking a course in electronic music at the University of Toronto (MMus 1967). He returned to Adelaide in 1969 as teaching fellow in electronic music; in 1973 he was appointed lecturer in composition at the University of Melbourne, retiring in 1988. He chaired the Composers' Guild of Australia (1978–9). While his early works were tonal and intentionally accessible, from the late 1960s he developed a more personal style of angular, atonal writing in linear textures, employing elements of classic serial technique and less conventional formal structures. The influence of trips to Bali (1981) and India (1985) is seen in works such as Symphony no.4, *San Diego Canons* and the *Raga Music* series. He is interested in electronic music both for the dramatic possibilities exploited in his stage pieces and for its educational value as a bridge between technology and the arts.

ELIZABETH WOOD/PATRICIA SHAW

Taiber.

See Teyber family.

Tailer, Daniel.

See Taylor, Daniel.

Tailer, John

(*d* after 1569). English choirmaster and ?composer. He was probably master of the singing boys of St Anthony's Hospital, London, in 1557, and certainly, from 1561 to 1569, master of 'the children of the grammer schoole in the colledge of Westminster', where he succeeded Robert Lamkyns at an annual salary of £10. During the years of his association with the college the choristers engaged in occasional dramatic activities for which they and their master received monetary rewards: singing and playing in a Lord Mayor's Day pageant, 1561; providing 'speches and

songes' for the Ironmongers' pageant, 1566; and presenting plays, including pieces by Plautus and Terence, at court in 1564, during Shrovetide 1566 and at Christmas 1568. Tailer not only trained the boys but may on occasion have taken part in the entertainments himself: when the boys played at Putney before Bishop Grindal in 1567, the choirmaster received 2s. to pay 'for the conveiance of … his attyre fro London to puttneie and from thence to London againe'; another time the payment was for conveying the 'Masters apparell and instrumentes'. Some time after 18 June 1569 Tailer left Westminster and appears to have moved to Salisbury where, in July of that year, a John Tailer is listed in the cathedral records as lay vicar, and in September as master of the choristers. Whether the choirmaster is the same 'mastyre taylere' to whom a pavan is ascribed in the Dublin Virginal Manuscript (ed. in WE, iii, 1954, 2/1964) or the 'Mr Tayler' to whom a motet, *Christus resurgens*, is ascribed in *GB-Och* 948–88, is an open question.

Tailhandier [Taillandier], Pierre [Talhanderii, Petrus; Talhienderi, Petrus]

(*fl* 1390). Composer and theorist. It is not known whether he was related to Antoni Tallander (1360–1446), who was in charge of horns and trumpets in the service of the kings of Aragon, or to Leonard Tallander, choirmaster of the chapel of Fernando I of Aragon (1412–16), though it seems certain that he was not Antoni's grandson Pere, the son of Antoni's eldest son. He could, however, have been Petrus Taillenderoti, a priest of the diocese of Nantes who was a student of law in Avignon in 1393. Tailhandier is the author of a three-voice Credo known in five versions (three of them anonymous) with two different contratenor parts (ed. in CMM, xxix, 1962; MSD, vii, 1962; PMFC, xxiii*b*, 1991); the text is carried only by the highest voice, which is characterized by the use of melodic progressions and repetition of motifs. The manuscript *F-CH* 564 attributes the three-voice ballade *Se Dedalus an sa gaye mestrie* to 'Taillandier', who can probably be identified with Petrus, for lack of a better candidate (ed. in CMM, liii/1, 1970; PMFC, xix, 1982). Petrus Talhanderii is named as the author of a

short treatise on musical theory found incomplete in *I-Rvat* lat.5129 (ed. A. Seay, Colorado Springs, CO, 1977). From its title, *Lectura per Petrum Talhanderii tam super cantu mensurabili quam super immensurabili*, one would expect the content to relate to mensural music, but the part that survives deals only with certain aspects of plainchant.

MARICARMEN GÓMEZ

Taille

(Fr.: 'tenor').

A middle part (usually a tenor) of a vocal or instrumental piece of music. The origins of the word in this sense are obscure. 'Taille' was used to mean a tenor voice by the mid-16th century, though in published partbooks of both vocal and instrumental music in France the nomenclature was almost invariably Latin. Philibert Jambe de Fer, in his *Epitome musical* (1556), named the four voices *dessus*, *contrehaut*, *teneur* and *bas*, but he switched from 'teneur' to 'taille' in describing instruments of the viol, violin and flute families. The first published partbooks to use French nomenclature were those of the *Dodécacorde* (1598) by Claude Le Jeune, the foremost composer of the Académie de Poésie et de Musique, whose goal was to elevate the status of the French language. Mersenne (*Harmonie universelle*, 1636–7) used French terminology in describing musical instruments, equating 'taille' with 'ténor' 'because it holds the plainchant'.

'Taille' remained the standard term in France for a tenor instrument throughout the 17th and 18th centuries. In Bach's scores it refers to an oboe in F. Brossard (*Dictionaire*) described the *taille naturelle* (with range normally *e–f'*) as 'the voice in which almost all men can sing'; for the *haute-taille* he extended the range to *a'*. In Baroque opera *taille* was most often used to refer to chorus tenors, leading male roles being assigned to the *haute-contre*; Rousseau remarked in his *Dictionnaire* (1768) that 'almost no *taille* roles are used in French operas'. Towards the end of the 18th century both 'taille' and 'haute-contre' were superseded by the word 'ténor', and one of the last mentions of 'taille' as a contemporary term is in Gilbert Duprez's *L'art du chant* (1845). Duprez equated 'taille' with 'ténor limité' (range *c* to *g'*, with a falsetto extension to b♭'), contrasting this with the new 'ténor élevé' (range *e* to b♭'; with a falsetto extension to *d'*).

French organ composers of the Baroque era frequently used the term 'en taille' for pieces that featured a particular stop (e.g. Tierce, Trompette or Cromorne) for a solo melody in the middle of the texture. Among numerous examples is the 'Tierce en taille' from the *Messe à l'usage ordinaire des paroisses* by François Couperin (ii).

Tailleferre, Germaine (Marcelle)

(*b* Parc-St-Maur, nr Paris, 19 April 1892; *d* Paris, 7 Nov 1983). French composer. Despite her father's opposition and her equal skills in art she entered the Paris Conservatoire in 1904, her formative studies being undertaken with Eva Sautereau-Meyer. As a pianist prodigy with an amazing memory she won numerous prizes, and in 1913 she met Auric, Honegger and Milhaud in Georges Caussade's counterpoint class. In 1917 Satie was so impressed with her two-piano piece *Jeux de plein air* that he christened her his 'musical daughter', and it was he who first brought her to prominence as one of his group of Nouveaux Jeunes. She then went on to become the only female member of Les Six when it was formed in 1919–20. Her career was also assisted by the Princesse Edmond de Polignac, who liked her ballet *Le marchand d'oiseaux* (1923) enough to commission a Piano Concerto (1923–4), which proved similarly successful and demonstrated her natural affinities with the 18th-century *clavecinistes*. Tailleferre's talents fitted in perfectly with the prevailing spirit of Stravinskian neo-classicism, though she was also influenced by Fauré and Ravel, remaining in close contact with the latter throughout the 1920s.

Unfortunately, Tailleferre never regained the acclaim she had enjoyed through her early associations with Les Six. Two unhappy marriages (to the caricaturist Ralph Barton in 1926 and to the lawyer Jean Lageat in 1931) proved a considerable drain on her creative energies, and her continual financial problems led her to compose mostly to commission, resulting in many uneven and quickly written works. Also, her natural modesty and unjustified sense of artistic insecurity prevented her from promoting herself properly, and she regarded herself primarily as an artisan who wrote optimistic, accessible music as 'a release' from the difficulties of her private life. However, her concertos of the 1930s enjoyed a measure of success, as did her impassioned *Cantate du Narcisse* (1938, words by Paul Valéry), and she was much in demand as a skilful composer of film music. After a fallow period in the USA (1942–6) she produced the superb Second Violin Sonata (1947–8) and turned her attention towards opera – her lighthearted approach being epitomized in the four short comic pastiches written with Denise Centore in 1955 ('Du style galant au style méchant'). She also gave successful concert tours with the baritone Bernard Lefort, for whom she wrote the *Concerto des vaines paroles* (1954), and in 1957 she experimented briefly with serial techniques in her Clarinet Sonata. Although she continued to compose prolifically and teach until the end of her life, she

resorted increasingly to self-borrowing and familiar formulae (like the *perpetuum mobile*), and the circularity of her career can be seen in the stylistic ease with which she was able to complete her 1916–17 Piano Trio in 1978. Meeting the conductor Désiré Dondeyne in 1969 led to a new interest in composing for wind band and she also remained devoted to children and their music, a link which helps explain the spontaneity, freshness and charm that characterize her best compositions.

WORKS

selective list

unless otherwise stated, printed works published in Paris

operas

operas bouffes unless otherwise stated

Zoulaina (oc, 3, C.-H. Hirsch), 1930–31, unperf.
Le marin du Bolivar (1, H. Jeanson), Paris Exhibition, 1937
Dolorès (opérette), Paris, Opéra-Comique, 1950
Il était un petit navite (satire lyrique, 3 tableaux, Jeanson), Paris, Opéra-Comique, 9 March 1951
Parfums (comédie musicale, 3, G. Hirsch and J. Bouchor), Monte Carlo, Opéra, 11 April 1951
La fille d'opéra (1, D. Centore), RTF, 28 Dec 1955
Le bel ambitieux (1, Centore), RTF, 28 Dec 1955
Monsieur Petitpois achète un château (1, Centore), RTF, 28 Dec 1955
La pauvre Eugénie (1, Centore), RTF, 28 Dec 1955
Mémoires d'une bergère (musical play, 1, P. Jullian), RTF, 22 Dec 1959
Le maître (chbr op, 1, E. Ionesco), RTF, 12 July 1960
La petite sirène (op, 3, P. Soupault, after H.C. Andersen), RTF, 27 Dec 1960

ballets

Les mariés de la Tour Eiffel [Valse des dépêches and Quadrille only] (1, J. Cocteau), Paris, Théâtre des Champs-Elysées, 18 June 1921, collab. Les Six
Le marchand d'oiseaux (1, H. Pérdriat), Paris, Champs-Elysées, 25 May 1923
Paris-Magie (1, L. Deharme), Paris, Opéra-Comique, 13 May 1949
Parisiana (1, Laudes), Copenhagen Opera, 1953

incidental music

for theatre and radio

Mon cousin de Cayenne (comedy, 3, J. Blanchon), Paris, 1925; Sous le rempart d'Athènes (play, P. Claudel), Paris, Elysée Palace, 24 Oct 1927; Madame Quinze (play, J. Serment), Paris, 1935; Cantate du Narcisse (mélodrama, 7 scenes, P. Valéry), 1938, Marseilles, RTF, 1942; Conférence des animaux (M. Oswald), Paris, RTF, 1952; La bohème éternelle (A. Antoine), Paris, RTF, 1952; Ici la voix (G. Hugnet), Paris, RTF, 25 Aug 1954; Adalbert (D. Centore), Paris, RTF, 1 Jan 1958; Au paradis avec les ânes (F. Jammes), Paris, RTF, 18 Feb 1962; Le Cid (P. Corneille), Paris, 1978

film and television scores

La croisière jaune (documentary, L. Poirier), 1933; Les Souliers, 1935, collab. Devred; Terre d'amour et de liberté (documentary, M. Cloche), 1936; Provincia (documentary, Cloche), 1937; Sur les routes d'acier (documentary, B. Peskine), 1937; Symphonie graphique (Cloche), 1937; Ces dames aux chapeaux verts (Cloche), 1938; Le Jura ou Terre d'effort et de liberté (documentary, Cloche), 1938; Le petit chose [*sic*] (Cloche), 1938; [La] Bretagne (documentary, J. Epstein), 1940

Les deux timides (Y. Allégret), 1941; Les confidences d'un micro (M. Courmes), 1946; Torrents (S. de Poligny), 1946, collab. G. Auric; Coincidences (S. Debecque), 1946; Cher vieux Paris! (M. de Gastyne), 1950; Ce siècle à 50 ans (documentary, N. Védrès), 1950; Caroline au pays natal (Gastyne), 1951; Le roi de la création (Gastyne), 1952

Caroline au palace (Gastyne), 1952; Caroline du Sud (Gastyne), 1952; Caroline fait du cinéma (Gastyne), 1953; Gavarni et son temps (Gastyne), 1953; Adler – L'aigle des rues (J. Funke), 1954; L'homme, notre ami (Gastyne), 1956; Le travail fait par le patron (G. Roze), 1956; Les plus beaux jours (Gastyne), 1957; Robinson (Gastyne), 1957; Les requins sur nos plages (documentary, G. Bollore), 1959; Les requins sur nos Côtes (documentary, Bollore), 1960

La rentrée des Foin (G. Jarlot), ?1960; Les grandes personnes (J. Valère), 1961; Sans merveilles (TV film, M. Mitrani), 1963; Evariste Galois ou L'éloge des mathématiques (TV film, A. Astruc), 1964; Anatole (TV film, Valère), 1966; Impressions: soleil levant (documentary, A. Daumant), 1970

<div align="right">ROBERT ORLEDGE</div>

Tailler [Taillerus], Simon [Symon]

(*fl* ?*c*1240). ?Scottish music theorist and reformer of church music. According to Thomas Dempster, he was a Dominican, who had been personally recommended by St Dominic to Alexander I of Scotland at a (mythical) meeting in Paris, and who came to Scotland with Clement, Bishop of Dunblane (himself a Dominican); he wrote numerous treatises, of which the best, *De cantu ecclesiastico corrigendo*, *De tenore musicali*, *Tetrachordorum* and *Pentachordorum*, were still extant in the 16th century. Dempster did not claim to have seen the treatises himself but supplied a reference to the *Historia* of George Newtoun, an early 16th-century Archdeacon of Dunblane. (This work, if it ever existed, is unknown.) Dempster's evidence is as usual suspect, and it is doubtful that Tailler existed or that there were any early Dominican musical treatises of Scottish origin. The legend was, however, widely diffused, rationalized and embellished through the accounts of 18th-century authorities such as Mackenzie, Quétif and Echard, Fabricus, and Tanner, and more recently Forkel, Eitner, Placid Conway OP (in an unsigned article in *Analecta sacri ordinis fratrum Praedicatorum*, ii, 1896, p.485), Fétis, Farmer (articles 'Tailler' in *Grove's Dictionary*, 5th edn and *MGG1*) and Elliott and Rimmer.

GEOFFREY CHEW

Tailour, Robert.

See Taylor, Robert.

Tailpiece

(Fr. *cordier*, *tirechordes*; Ger. *Saitenhalter*; It. *cordiera*).

A string-holder to which the strings are attached at the lower end of a string instrument. It consists of a piece of wood (generally ebony, sometimes boxwood) or, for high-tension metal strings, metal, secured by a piece of gut (or wire) looped over a button projecting from the ribs at the bottom of the instrument (*see* Violin, fig.1). In viols the tailpiece is secured by a kind of block that projects out from the ribs at the base of the instrument.

DAVID D. BOYDEN

Tailpin.

An ambiguous term, infrequently used, sometimes meaning the Endpin of the cello and double bass, and sometimes the 'button' that is let into the bottom block of instruments of the violin family to which the tailpiece is attached by a gut or wire loop.

Taïra, Yoshihisa

(*b* Tokyo, 3 March 1937). Japanese composer, active in France. After studying composition with Ikenouchi at the Tokyo National University of Fine Arts and Music, graduating in 1965, he studied with Jolivet, Dutilleux and Messiaen at the Paris Conservatoire; remaining in Paris, he gained a teaching post at the Ecole Normale de Musique. His work has been performed at the Domaine Musical and the Itinéraire, at festivals in Avignon, Darmstadt, Berlin, Tanglewood and Tokyo, and by the Ensemble InterContemporain. Among his awards are the Lily Boulanger Prize (1971), the SACEM Grand Prix de Composition (1974), the UNESCO International Composers Tribune award (1982), and the Prix Florent Schmitt from the Paris Academy of Fine Arts (1985); he was made an Officier of the Ordre des Arts et des Lettres. Throughout his music, Taïra maintains a thoughtful

balance between traditional Japanese and Western contemporary music and aesthetics. His treatment of time and space, sonority, poetic lyricism, silence and many idiomatic techniques such as precise articulation, abrupt dynamic contrasts and glissandi are derived from traditional Japanese music and art, and are compatible with a French modernist aesthetic.

JUDITH ANN HERD

Tait, Andrew

(*b c*1710; *d* Aberdeen, 11 June 1778). Scottish organist and church musician. He was for many years a leading figure in Aberdeen's musical life. He was organist of St Paul's Episcopal Chapel from about 1735 to about 1775, master of the Aberdeen music school from 1740 until its closure in about 1755, and a founder of the Aberdeen Musical Society in 1748. He collaborated with the printer James Chalmers over *A New and Correct Set of Church Tunes* (Aberdeen, 1749), contributing a manual on choir training and a psalm tune 'Aberdeen, or St Paul's' of his own composition, which has survived to the present day (e.g. in *English Hymnal*, 1933, no.561). Samuel Johnson praised Tait's organ playing during his visit to Scotland in 1775.

DAVID JOHNSON

Taiwan.

Island off the east coast of mainland China, since 1949 comprising the Republic of China; it is separated from Fujian province, China, by the 150 km-wide Taiwan Strait. The island's area is about 36,000 km^2, and its population (1997) is *c*21 million.

HSU TSANG-HOUEI (with LU YU-HSIU) (1, 2), LÜ CHUIKUAN (with LU YU-HSIU) (3), HAN KUO-HUANG (4), JOANNA C. LEE (5)

Taiwan

1. Introduction.

The population of Taiwan includes approximately 400,000 Austronesian aborigines and 20·6 million Han Chinese: 14 million Holo (Fulao or Hokkien) from Fujian province, 4 million Hakka from Guangdong province and 2,600,000 Mandarin-speaking Chinese. The Austronesian people originated in south China, migrating to Taiwan and South-east Asia around the 9th century bce (around the 3rd century bce according to some scholars). The Han Chinese people are descendants of original immigrants from China, whose mass immigration to Taiwan began in the 17th century. The most recent increase to Taiwan's population is due to the predominantly Mandarin-speaking adherents of the Nationalist party, who came to Taiwan from all parts of China in the late 1940s.

Since the 17th century Taiwan has been a colony of many nations, and its history can be divided into several phases: the Dutch-Spanish period (1624–61), the Ming period from Prince Zheng Chenggong (the last general of the Ming Dynasty) (1661–83), the Qing period (1683–1895), the period of Japanese occupation (1895–1945) and the years of Chinese Nationalist government (1945–87). Taiwan abandoned martial law in 1987 and held its first democratic elections in 1991.

Apart from some fine studies of tribal music by Japanese scholars during the Japanese period, comprehensive studies of musical traditions by indigenous scholars did not begin until the 1960s, with the seminal 'Folksong collection movement' initiated by Shi Weiliang and Hsu Tsang-houei. The academic study of ethnomusicology started in the early 1980s and has been a major subject in graduate institutes of music since then. Many researchers of the new generation acquired their advanced degrees domestically from the National Taiwan Normal University and the Chinese Culture University or abroad in Europe and the USA. Major organizations, of which Hsu Tsang-houei was a founding member, include the International Conference on Chinese Ethnomusicology (held every other

year in Taipei since 1987) and the International Conference of the Asia-Pacific Society for Ethnomusicology (held annually since 1993).

Import libraries and sound archives are located at the Music Department of the National Taiwan Normal University, the National Insitute of the Arts, and the Institute of Ethnology, Academia Sinica. Active centres and foundations include the Chinese Folk Arts Foundation (Zhongua minsu yishu jijinhui), the National Centre of Traditional Arts (Guoli chuantong yishu zhongxin) and the National Center for Traditional Music (Guoli minzu yinyue zhongxin). Centres for the study of minority musics are the Shung Ye Museum of Formosan Aborigines and the Foundation for Music Culture and Education of Taiwan Aborigines (Yuanzhumin yinyue wenjiao jijinhui). The journals *Minsu quyi* and *Bulletin of the Institute of Ethnology Academia Sinica* (*Zhongyang yanjiuyuan minzuxue yanjiusuo jikan*) and the annual *Zhonghua minsu yishu niankan* publish music research.

Taiwan

2. Aboriginal music.

The earliest inhabitants of Taiwan can be divided into two groups, consisting of ten plains (*pingpu*) tribes and nine mountain (*gaoshan*) tribes. The plains peoples (Ketagalan, Luilang, Kavalan, Taokas, Pazeh, Papora, Babuza, Hoanya, Siraya and Thao) live along the west coast, on the plains and around the mountains. They have been assimilated into Han Chinese society for over 300 years and can hardly be distinguished from the Han Chinese people today. The mountain peoples (Atayal (Tayal), Saisiat, Bunun, Tsou, Rukai, Paiwan, Puyuma, Ami and Yami) live scattered in the high mountains along the east coast and in the Lanyu Islet (fig.1). Although they have long had some contact with the Han Chinese people, their traditional culture was retained until the end of World War II. Since the mid-20th century many groups have been converted to Christianity, and in recent years modern popular culture has also affected their traditions.

(i) Documentary accounts and research.

There are very few documents describing music in Taiwan before the beginning of the Dutch-Spanish period in 1624, though simple records can be found in local gazetteers. In Shen Ying's 'Linhai shuitu yiwuzhi' ('Record of the environment in the coastal area') from the Three Kingdoms era (220–65), included in the 'Dong yi' ('Eastern barbarians') section of the encyclopedia *Taiping yulan*, there is a description of the music of the eastern barbarians: 'For a gathering, a big hollow trunk, ten *zhang* [*c*23 m] or longer, is set in the middle of the garden. It is struck with big pestles. The drum-like sound can be heard from four or five miles away. People go for the gathering when they hear the sound'. Although historians are not sure whether the 'eastern barbarians' were the aborigines of Taiwan, similar wooden drums have been found during fieldwork on aboriginal music.

The *Sui shu* (History of the Sui dynasty, 636) mentions musical activities in the country of Liuqiu, which scholars believe denotes the islands of Okinawa, Taiwan and the Pescadores archipelago: 'One shallow wood-block with two beaks enabling them to drink wine together … They chant and stamp. One sings and the others respond; the music is melancholy.

Men, holding the arms of women, swing their arms and dance'. Such scenes of singing and dancing can still be observed in the great festivals of the aborigines of Taiwan.

Taiwan was first included in world maps in the 17th century; the Chinese name 'Taiwan' and the Portuguese name 'Formosa' were in common use. The *Dongfan ji* by Chen Di (1603) is a work in which for the first time the author personally observed and documented instruments and musical activities among the indigenous groups of Taiwan. Other important pre-modern documents include Yu Yonghe's *Pihai jiyou* (1697), Huang Shujing's *Taihai shicha lu* (1736) and Zhou Xi's *Zhanghua xianzhi* (1835). The 1736 treatise has the most detailed description of the vocal and instrumental music of the aborigines. In the Japanese period, the Linji Taiwan kyukan chosakai (Organization for the temporary investigation of old customs in Taiwan) produced an eight-volume series from 1913 to 1921. Japanese scholars, starting with Tanabe Hisao and, later, Kurosawa Takatomo, did extensive research on tribal music, including recordings and transcriptions. Systematic study by Taiwanese scholars did not begin until the 1960s, when aboriginal music was a significant aspect of the 'Folksong collection movement' led by Shi Weiliang and Hsu Tsang-houei. Individual work was also conducted by Lü Bing-chuan and Loh I-To. As ethnomusicological training has advanced in recent years, aboriginal music is now a major focus of study.

(ii) Musical practice.

(a) Vocal music.

Most aboriginal music in Taiwan is vocal; instrumental music plays a secondary role. The content of sung texts shows a close relationship with folk culture. The formats of vocal traditions range from simple to complex styles: monophony (recitative, melody-singing, call-and-response between individuals or between solo and group), polyphony (organum, canon, singing with drone bass, free counterpoint), harmony (with both natural chords using major triads and consonant harmony using both major and minor triads) and heterophony.

The act of singing is inseparable from the daily life of the aboriginal people. It is a part of religious activity, weddings and funerals; it tells myths and legends; it encourages the worker; it provides entertainment for playing and dancing; it is used to pray for rain, expel sickness or make contact with spirits; it expresses the feelings and ethics of the people; it maintains family harmony and tribal solidarity. Vocal music has an important function and meaning in the transmission of culture, as oral transmission is used instead of written records. The special usage and meanings of vocal music differ from tribe to tribe, as outlined below.

Atayal (*Tayal*). In wedding ceremonies, when a bride arrives at her new husband's village, a group of local women sings a welcome song. Two women sing during millet-husking. Both songs are two-voice canons.

Saisiat. The most important ceremony among the Saisiat is the *Pas-taai* (dwarfs' ceremony), which takes place over five consecutive days. The first day is spent welcoming the spirits of the dwarfs, the second through fourth

days are used to entertain them, and the last day is spent sending the spirits off. Singing dominates the ceremony, every part of which has its own special songs (ex.1).

Bunun. The celebrated *Pasi-but-but* (millet harvest prayer song) was demonstrated by Kurosawa Takatomo to ethnomusicologists from all over the world at the International Folk Music Council held in Paris in 1953. This song consists of male singing in one to seven parts. Parallel 4ths, parallel 5ths and triads are often sung. The upper part rises chromatically, and the lower parts follow until they form a consonant chord in the highest range. If the last chord is harmonious (a natural chord or a perfect 5th), this is thought to predict an abundant millet harvest for the year (fig.2).

Tsou. After the harvest ceremony every year, the *Mayasvi* (war god) ceremony is held to welcome and then send off the spirit. Everyone sings and dances in triple metre, which is found only in this tribe. Each part of the ceremony has special two-part songs for male chorus, in 3rds, 5ths or 6ths.

Paiwan and Rukai. For the Paiwan harvest festival, polyphonic group singing with a drone bass is popular. The Paiwan also sing and dance at wedding ceremonies: the bride, a shaman (or shamans) with family members, and attendants sing their own vocal parts, resulting in an interesting heterophony. In addition, some of their vocal parts seem to employ the same tonal system (ex.2) used in Okinawa or Bali. Whether it is related to the 'black current' (*kuroshio*) cultural circle suggested by the Japanese anthropologist Shikano Takeo has yet to be investigated. The singing and dancing styles of the Paiwan have influenced its smaller neighbour, the Rukai.

Puyuma. Narratives are sung for headhunting, shamanistic ceremonies and adolescence rites. Their sung poetic texts, in which nonsense syllables play a complex part, make creative use of rhymes and refrains. Puyuma folksongs are influenced by those of the Ami people.

Ami. The most celebrated music of the Ami involves group singing and dancing for the harvest ceremony. Solo and response alternate, with strong rhythm and distinctive melody (ex.3). In addition, the Ami people in Taidong have special entertainment songs, in which two or three mixed voices sing in free counterpoint.

Yami. The Yami perform distinctive recitative-like songs (ex.4..\Frames/F922869.html) using a narrow range and declamatory parlando style. Women dance and recite for the men, whereas work songs are sung by men only. Of their two animistic ceremonies, also for men only, one is held for the first sailing of newly constructed boats in order to drive away any bad spirits, while the other is held before fishing in order to ensure a good catch. In the *Mikariyag* ceremony for the completion of a work-house, people sing heterophonically all night.

(b) Instrumental music.

All of the aboriginal peoples of Taiwan except the Yami play instruments as well as performing vocal music.

Idiophones. The stamping pestle and the jew's harp are the most common instruments; other idiophones include a few gongs and rattles. Although accounts of gongs occur from the Qing dynasty, the instruments have disappeared since the early 20th century.

The stamping pestle (fig.3) is played by the Thao and Bunun peoples. Eight to ten different sizes of pestle are used as a group, usually tuned to a pentatonic scale; two to three big bamboo tubes, stroked against a stone-plate on the earth, are played together with the pestles. The music from these instruments is played as prelude or interlude between the unison singing of eight to ten females for a festival or welcoming the guests.

The jew's harp, called *huang* in ancient China, is played by all aboriginal groups except the Yami. The frame is made of bamboo, into which are inserted one to five (sometimes as many as seven) metal tongues (fig.4). These are vibrated by pulling the thread that is fixed on one side of the tongue. The Atayal tribe uses the jew's harp most frequently to accompany dancing, play melodies or replace verbal communication.

Xylophones of wood or bamboo may come from Indonesia or the Philippines. In the past, only the Ami used them, and they are very rarely seen today. The wooden drum is hollow in the middle and played with wooden sticks. Although it may be called a drum, it is merely a large wooden box or bowl without membrane. It also serves as a loom or mortar for husking millet and is still used in this way by the Atayal people.

Membranophones. Although it has been documented that plains tribes, as well as the Ami and the Puyuma, have played drums, which are believed to have originated from the Han Chinese, the aborigines do not presently use any drums in their traditional music.

Chordophones. The five-string zither is played only by the Bunun people. The strings are fixed in a wooden plate and can be tuned e.g. E, F, G, A, C. The musical bow, now used for entertainment, is common to all the aborigines and is used most frequently by the Bunun.

Aerophones. Transverse, end-blown and nose flutes, all made of bamboo, are native aboriginal instruments and are very similar to other flutes in South-east Asia (fig.5). End-blown flutes have two to eight finger-holes, five being most common. In the past, they were used in headhunting ceremonies and in the ceremony held after hunting wild animals. People now play the end-blown flute for entertainment and for tribal gatherings. The Paiwan play it most frequently.

The nose flute, which is common throughout the Austronesian area, especially in the Philippines, may have single or double pipes. All groups except the Yami formerly used it, but now it is mainly used by the Paiwan. When two pipes are played together, the following combinations are possible: one pipe with holes plays the melody while the other without holes plays the drone; two pipes with the same number of holes play the same melody; or two pipes with different numbers of holes play in polyphony. Only the chief and the higher-ranking members of the tribes are allowed to play end-blown or nose flutes for ceremonies.

Taiwan

3. Han Chinese traditional music.

Han Chinese traditional music in Taiwan is performed mainly by Holo (Fulao) and Hakka people, descendants of migrants from south-east China. According to research on the widespread Daoist religion in Taiwan, *beiguan* music in religious celebrations and Daoist ritual was popular on the island not later than the beginning of the 18th century. Nowadays Han Chinese traditional music can be heard primarily in the western plain of the central mountains and in some hilly areas.

(i) Genres.

The performance of traditional music may take the form of singing, pure instrumental music, theatre, dance and narrative. There are four main genres in practice: ritual music, *nanguan*, *beiguan* and other vocal music. The influence of *nanguan* and *beiguan* on the vocal and instrumental music of other genres respectively is profound.

(a) Ritual music.

This refers to Buddhist, Daoist and shamanistic rites. There are two kinds of Buddhist music: temple and folk music; both consist mainly of chanting and singing. Temple music is used primarily for morning and evening services and for celebrating gods' festival days, led by a monk or a nun. Folk Buddhist music is used in funeral ceremonies. Chanting of texts, accompanied by percussion, has a similar tradition in both temple and in folk styles, but the melodic systems are different.

Daoist music is divided into two sects: *zhengyi* and *lingbao*. The *zhengyi* sect performs for the worship of the gods and for exorcisms. The music for the former is elegant; song texts like *Buxu* (ex.5), *Sanhua* and *Santuwukusong* can be found in descriptions of ceremonies in the Wei, Jin and Northern-Southern dynasties (3rd–6th centuries). The musical style of exorcisms is similar to folksong, with colloquial texts and simple forms. The *lingbao* sect performs for the worship of the gods (fig.6) and for funerals. Musically, its style is solemn. Again, song texts like *Buxu* (ex.6), *Sanqingyue*, *Sanqisong* and *Miluofan* can be found in accounts of ceremonies in the Wei, Jin, Northern-Southern, Tang and Song dynasties. Shamanistic music has a similar style to the exorcistic music of the *zhengyi* sect.

All of the three rites use various styles of instrumental music, the repertory of which derives from the *guchui* and the *sizhu* ensembles of *beiguan*.

In addition, a ritual performed on the 28th September every year at the Confucian temple in Tainan perpetuates the Confucian ceremony that has been constantly re-interpreted throughout imperial and modern times. As some of the instruments from the large ensemble have fallen out of use, a secular *sizhu* ensemble genre called *shisanyin* has been introduced, itself a continuous tradition much valued by scholars.

(b) Nanguan.

This is mainly a vocal repertory accompanied by instruments; many vocal melodies in other genres derive from *nanguan*. It may be divided into

'authentic' *nanguan* and *nanguan*-derived forms. The 'authentic' *nanguan*, performed while seated, includes three genres: *zhi*, *qu* and *pu*. *Zhi*, the most exalted form, is instrumental music with texts that are not for singing, but rather to help memorize the instrumental melodies. *Qu* is vocal music accompanied by a small ensemble, in which the singer also plays the clappers. The contents of the song texts originated in libretti from the Yuan or the Ming dynasty. However, the meaning of the song texts and their musical expression are hardly related; the function of the texts is solely to introduce the melody. *Pu*, consisting of suites for instrumental ensemble, uses a wider pitch range, more complex instrumental techniques and a livelier style.

Nanguan-derived forms, including *geguan* (or *pinguan*), *taiping ge*, *chegu* and the theatres of *nanguan* and *jiaojia* (*gaojia*), adopt parts of the *qu* core repertory of *nanguan* with differences in performance methods, instruments and instrumentation.

(c) Beiguan.

Beiguan music comprises the *guchui* ('drumming-and-blowing') ensemble, the *sizhu* ('silk-and-bamboo') ensemble, lyrics (*xiqu*) and theatre music (*xiqu*, written with different characters).

Guchui music employs *qupai* ('labelled melodies') and may be subdivided into suites and single pieces. The single pieces embody ancient style (*gulu*) and new style (*xinlu*). The *qupai* melodies in ancient style originated from the 'northern songs' (*beiqu*) of the Yuan dynasty and the 'southern songs' (*nanqu*) of the Ming dynasty. Although they all have texts, they are not now sung but played by two shawms plus drums and other percussion. This music is used for preludes and at transitional points in ceremonies, weddings and funerals.

The *sizhu* ensemble, also called *xianpu*, uses three kinds of instruments: bamboo wind, plucked strings and bowed strings. While the instruments and instrumentation vary between regions and ensembles, the *kezixian* (coconut-shell fiddle) is always the leading instrument (fig.7).

The vocal music of *beiguan* is called *xiqu* (lyrics, literally 'fine song') owing to the subtlety of its singing technique. It comprises suites and single pieces. A singer sings and plays the clapper, accompanied by the *sizhu* ensemble.

The theatre of *beiguan* (also called *luantan* when performed by professionals) includes three genres: *banxian*, ancient style (*guluxi*) and new style (*xinluxi*). The greater part of the sung melodies of the *banxian* dramatic repertory originated from the 'northern songs' of *Kunqu*. The ancient-style theatre was imported earlier than the new-style one. Both are accompanied by the *sizhu* ensemble, with gongs and drums added for interludes. The ancient style uses the coconut-shell fiddle, whereas the new style uses the *diaoguizi* (*jinghu*, two-string bowed fiddle) to lead the ensemble. For singing, the ancient-style theatre uses mainly the head voice, giving the music strength and dynamism (ex.7). The new-style theatre consists of *xipi* and *erhuang* melodic structures, similar to those of Beijing opera.

The repertory and the ensemble forms of *beiguan* are the model for nearly all traditional instrumental music in Taiwan. Typical examples are the music of marionette (*kuilei*) and glove-puppet (*budai*) theatres in northern Taiwan, in which both instrumental and vocal melodies adopt *beiguan* music. Independent instrumental ensembles such as the Hakka *bayin* or the Minnan (Holo) *shiyin* or *shisanyin* also employ *beiguan* msuic, with only minor differences in instrumentation and context. In general, *bayin* is performed for Hakka festivals, *shiyin* for Holo funerals and *shisanyin* for the rituals for Confucius and the god of examinations.

(d) Other vocal music.

Other genres of Han Chinese singing include vocal music from other theatres, narrative singing and folksongs in the Holo and Hakka languages. Although many of these songs were collected during fieldwork in the 1960s and 1970s, they have virtually been destroyed by more recent economic changes. One genre in which these songs can still be found is *Gezai* theatre (*Koa-a-hi*), which originated in Taiwan itself at the beginning of the 20th century. Its structure is flexible. The accompanying *guchui* and *sizhu* ensembles are similar to the ensembles of the *beiguan* theatre.

(ii) Instruments.

(a) Nanguan.

The core instruments are *pai* (clappers), *pipa* (lute), *dongxiao* (end-blown flute), *erxian* (two-string fiddle) and *sanxian* (three-string lute). The same terms are also used in *beiguan*, though their forms are different.

The *pai*, which consist of five hard wooden slabs, are used to control the tempo. The *pipa*, held horizontally, is pear-shaped and has four silk strings with two tuning systems of *d–g–a–d'* and *d–f♯–a–d'*. The *dongxiao* is about 54 cm in length and is made out of bamboo, using the basal part with ten nodes and nine segments. It is the tuning instrument for *nanguan* music; the pitch is *d* when all holes are closed. The *erxian* has a drum-like body, two silk strings, two pegs on the same side and two tuning systems of *g–d'* and *f♯–d'*. The wooden bow is soft and of horse hair. The *sanxian* has a long neck with both sides of the body covered by snakeskin; nylon strings are used today, tuned *a–d–a'*. The 'authentic' *nanguan* ensemble is played by the above-mentioned five instruments. Sometimes other instruments are added to the ensemble: an *ai* (or *aiya*, small shawm) and the four percussion instruments *shuangyin* (paired small bells), *xiangzhan* (small gong), *sikuai* (four bamboo pieces) and *jiaoluo* (a small 'wooden-fish' woodblock combined with a small gong).

(b) Beiguan.

All instruments except those used in the 'authentic' *nanguan* belong to the *beiguan* system. According to the traditional *beiguan* classification, instruments can be divided into four kinds: skin (*pi*), bronze (*tong*), wind (*chui*) and string (*xian*) instruments.

The skin instruments consist of large drum (*da gu*), medium drum (*tong gu*) and small drum, which are used primarily in the *guchui* ensemble and

theatre music. The small drum conducts the ensemble and plays a leading role. The timbre and the rhythm of the *tong* drum are varied but are merely decorative, playing a secondary role.

The bronze instruments comprise gongs and cymbals. The *luo* (gong) has three sizes: big, medium and small. The *ba* (or *bo*, cymbals) have large and small sizes. In addition, the *nao* cymbals have a smaller central boss.

Wind instruments consist mainly of double-reed instruments in large, medium and small sizes (*dachui*, *xiaochui* and *tat*), played on different occasions. There are also transverse and end-blown flutes.

Two kinds of string instruments are played, either bowed or plucked. The *kezixian*, *jinghu* and *hexian* are the dominant bowed instruments and *yueqin*, *sanxian* and *pipa* the main plucked ones. *See also* China, §III.

(iii) Notation and articulation.

The notational system of *nanguan* has a fixed *doh*, while that of *beiguan* has a movable *doh*. The former is the *nanguan pipa* tablature (fig.8). Pitches, rhythms (the signs of the *pipa* playing techniques) and metres are marked.

The *beiguan* notation more closely resembles the standard *gongche pu* system (*see* China, §IV, 4(i)). The intervals between the pitches are fixed as major 2nd–major 2nd–minor 3rd–major 2nd. Metrical signs vary, but the main beats of the measure are usually marked with the symbol º or '.

Singing is an important part of Han Chinese traditional music, and there are three methods of articulating the song texts. In *nanguan* the syllables of the song text alone are sung; melodies are therefore more punctuated. In the ancient-style songs of *beiguan*, insignificant syllables with /a/ or /i/ are added to the song text (see ex.7); the music is therefore dynamic (with /a/) or elegant (with /i/). In some Daoist ritual songs of the *zhengyi* sect, different insignificant syllables are added to the song text (see ex.5); the texts are thus becoming less intelligible.

Taiwan

4. Western art music.

(i) Before 1945.

Although both Dutch Calvinist and Spanish Catholic missionaries taught Christian hymns to local people, primarily aborigines, in Taiwan in the 17th century, it was not until the mid-19th century, when Taiwan was reopened to the West, that Christianity and its music returned in full force, this time to take root permanently. Presbyterian missionaries from Britain and Canada spread Christianity and its music to the people, with lasting impact. British missionaries arrived in 1860 and worked primarily in the south, whereas Canadians arrived in 1872, working in the north.

In 1895, Taiwan was ceded to Japan by the Chinese Qing dynasty after the Sino-Japanese War. A formal education system based on Western models was established by the Japanese. Music was an integral part of this system, especially in the normal schools for training teachers; Western and

Westernized Japanese songs were the core of these courses. The best students were encouraged to study music formally in Japan, even being offered scholarships. Students from Christian schools also went to Japan to further their studies of music.

It was at this time that the first group of native Taiwanese art musicians arose. Among these pioneers were the composers Jiang Wenye, Chen Sizhi (Chen Szu-chih, Chen Su-ti, 1911–92), Lu Quansheng (Lu Ch'uan-sheng, *b* 1916) and Guo Zhiyuan. Jiang Wenye is the best known of these musicians internationally. While living in Japan he won several awards for his compositions, including a special prize for his orchestral piece *Formosan Dance* op.1 in the art and literature category of the 1936 Berlin Opera International Competition. He moved to Beijing and died there. A Jiang renaissance began in New York in 1982 and continued in Taiwan and elsewhere, and he has become venerated as the first modern Taiwanese composer. Conferences devoted to him and his works were held in Hong Kong (1990) and Taiwan (1992). Much of his style shows the influence of Debussy and Bartók, which was new and refreshing at the time. Chen Sizhi is famous for his piano pieces and Lu Quansheng for his art songs and choral work. Guo Zhiyuan, who has written with great success on native subjects, has enjoyed much attention in recent years.

(ii) Since 1945.

Like all developing countries, Taiwan faced many challenges immediately after World War II. However, by the 1990s it ranked among the developed countries, with a high per capita income, a well-educated and motivated populace, and worldwide trade and networking contacts. Along with these improvements came inner political conflicts, an identity crisis, and tensions between tradition and modernity, native and foreign, Taiwan and China etc. Inevitably, musical culture reflected and responded to these changes.

The development of art music in postwar Taiwan can be divided into the three periods of government cultural policy distinguished by Winckler (1994), namely 1945–60, 1960–75 and 1975–90.

(a) The First Period (1945–60).

Following its defeat in World War II, Japan returned Taiwan to the Nationalist government of the Republic of China. Politically authoritarian and sensitive, this was a period in which science and technology were encouraged at the expense of long-term humanistic investment. Chinese and Russian communist elements were completely banned, whereas Western culture was allowed. It was safer to approach Western culture, which was novel at the time, so modernism and cosmopolitanism became the norm in the 1950s and 60s.

While Japanese-trained Taiwanese musicians continued to work, they were joined by many mainland musicians. Among these were composers and theorists Xiao Erhua (Hsiao Erh-hua), Zhang Jinhong (Chang Chin-hung, *b* 1907), Li Yonggang (Lee Yung-kang, 1910–95), Kang Ou (Kang Ngou, *b* 1914) and Shen Bingguang (Sheng Ping-kwang, *b* 1921). Many of them taught in the newly established Department of Music, Taiwan Teachers' College, which became Normal University in 1955. The style of most of

these composers (both Taiwanese and mainlanders) was more or less 19th-century Romanticism with Chinese melodies – in other words, pentatonic-Romanticism. All the first-generation composers after the war graduated from Normal University, among them Shi Weiliang (Shih Wei-liang, 1925–77), Liu Deyi (Liu Te-i, also called Pietro, 1929–91), Hsu Tsang-houei and Lu Yan (Lu Yen, *b* 1930). In 1957, the Taiwan Academy of the Arts was established. The first group of graduates included composers such as Chen Maoliang (Chen Mau-liang, 1937–97), Ma Shuilong, Shen Jintang (Shen Chin-tan, *b* 1940), Li Taixiang, You Changfa (Yu Ch'ang-fa, *b* 1942), Dai Hongxuan (Tai Hung-hsuan, 1942–94), Lai Dehe (Lai Deh-ho, *b* 1943) and Wen Longxin (Wen Loong-hsin, *b* 1944). These two groups of composers pursued their higher education in Europe and America instead of Japan. When they returned, they became the leading force in art music in Taiwan.

(b) The Second Period (1960–75).

This was a period of gradual transition, when ideological emphasis gave way to economic development. Initially, modernity and cosmopolitanism occupied the minds of most intellectuals. The setback in international relations due to the expulsion of Taiwan from the United Nations and the confrontation with Japan over the Diaoyutai fishing islands in the early 1970s sparked national sentiment and regionalism.

When Hsu Tsang-houei, one of the first graduates from Normal University, returned in 1959 after studying in Paris, the arts in Taiwan, including painting, literature and drama, were highly modernistic and cosmopolitan. Hsu's avant-garde compositions epitomized this trend and departed from the Romantic and tonally orientated tradition. He was responsible for introducing the techniques of Debussy and others to Taiwan. Such young composers as Xu Boyun and those from the Taiwan Academy of the Arts mentioned above flocked to his side.

The leading composers of this period were the two groups from the Normal University and the Taiwan Academy of Arts who had returned from study overseas. Most of these composers had begun with avant-garde approaches and had then embraced other forms, such as atonality, serialism, minimalism, unconventional playing and singing, the use of electronics and even stage movements. At the same time, they also tried to use these newly acquired techniques to express personal style and cultural heritage. However, pentatonic Romanticism was never completely abandoned, though it was sometimes modified.

Two private institutes with important music departments were established during this period: the Chinese Culture University (1962) and Soochow (Dongwu) University (1972). From 1961 Hsu Tsang-houei actively organized composers' forums to promote new music. This culminated in 1973 in a permanent organization, the Asian Composers' League (ACL) – Taiwan Headquarters. The ACL, brainchild of Hsu and several other Asian composers, hosted conferences almost yearly in various Asian cities. Hsu's involvement in local and international activities was always important; he can be called the founder of Taiwan's new music movement.

The early 1970s witnessed the awakening of an interest in native culture. The Taiwanese folksong collecting projects begun by Shi Weiliang and Hsu Tsang-houei in the mid-1960s became an inspiration for the Modern China Music Bureau and the Cloud Gate Dance Theatre, both established in 1973. The former did not survive when its founder, Shi Weiliang, died, but the latter, founded by choreographer Lin Huaimin (Lin Hwai-min), became internationally known for its high level of performance, its depiction of native experiences and the commissioning of music composed by Taiwanese composers.

(c) The Third Period (1975–90).

From the mid-1970s, with growing economic power and a rising middle class, Taiwan experienced its most dramatic political and social changes. The event that accelerated the whole return-to-native trend was the Native Literature (*Xiangtu wenxue*) movement of 1977–8. Native, in this case Taiwanese, subjects became the themes of writings, films, paintings and popular songs. Collecting Taiwanese folk art and antiques became fashionable. The liberalized and localized Nationalist government shifted its cultural policy and paid more attention to native subjects and local benefits. This can be most vividly seen in the establishment of the Council for Cultural Planning and Development under the Executive Yuan in 1981, the opening of the National Theatre and Concert Hall in 1987 and the construction of many local culture centres in the 1980s.

One important institute, the National Institute of the Arts, was established in 1982 to combine the traditional and modern in teaching. The music department, headed first by composer Ma Shuilong, required all composition majors to study the *qin* zither, an educational innovation. By this time, increasing international exchange and exposure in every aspect of cultural life had become possible. In 1988, a meeting of Taiwanese and mainland Chinese composers was arranged under the auspices of the Chinese-American composer Chou Wen-chung and the US–China Art Exchange at Columbia University in New York. Under the leadership of composer Pan Huanglong, a Taipei section of the ISCM was founded in 1989; it further advanced interaction between composers, and concerts of Taiwanese music were sponsored in New York, Paris and elsewhere.

By the 1980s and 90s none of the political taboos of the early years after the war existed. Commissions came from the government as well as the private sector. Large and small festivals were sponsored by orchestras as well as public and private agents. New compositions, often commissioned by these festivals, were performed, and many composers had their works performed overseas.

A host of composers returned to Taiwan in the 1980s. Some of the best known are Pan Huanglong (*b* 1945), Zeng Xingkui (Tzeng Shing-kwei, *b* 1946), Ke Fanglong (Co Fan-long, *b* 1947), Qian Nanzhang (Chien Nan-chang, *b* 1948), Wu Dinglian, Qian Shanhua (Chien Shan-hua, *b* 1954), Pan Shiji and Chen Shuxi (Chen Shu-si, *b* 1957). They faced two dilemmas: the search for identity amid continuing tensions and conflicts, and the rationalization of their works in the context of an ever-changing society. However, they increasingly found themselves on more solid ground when approaching modern or post-modern techniques. They

employed contemporary practices such as the frequent use of percussion, they experimented with Chinese and other instruments or unusual media, including multimedia, they emphasized the inflection of pitch and timbre, and above all, they considered Asian philosophical and aesthetic concepts and literary sources, most of which their Western counterparts had borrowed from Asia; an important concern was to capture and assimilate the Asian traditional spirit and express it in a contemporary language. Few quoted directly from traditional melodies, but traditional rhythmic ideas were sometimes employed. In this sense, the return-to-native movement in new music became what Barbara Mittler (1996) has called a 'double mirror effect'.

Taiwan

5. Popular music.

As a Japanese colony and an island separate from China, Taiwan's commercial popular culture in the first half of the 20th century was mostly imported from Japan, although some films (and film music) from Shanghai were also distributed. Taiwan's own popular music culture came into being after 1949, the result of the migration of Nationalist Chinese led out of mainland China by Chiang Kai-shek. However, a significant portion of popular music in Taiwan in the 1950s was imported from Hong Kong, since the majority of Shanghai musicians had settled there. *Shidaiqu* (contemporary song) became the general term referring to such music in the 1960s.

1960s *Shidaiqu* was highly stylized: strophic in structure, with American dance-band instrumentation of strings, keyboard, brass and percussion, but with Chinese lyrical melodic character and vocal delivery. The leading Taiwanese composer of the genre was Liu Jiachang, who was also an actor and film director. Although some songs were original compositions, Taiwanese popular music sources included popularized versions of folksongs and cover versions of Japanese popular songs. Lyrics are exclusively about love, and revenues for the industry were generated by record sales and singers' appearances in nightclubs, on television and on radio.

The most celebrated Taiwanese singer in the 1970s and 80s was Deng Lijun (Teresa Teng). Deng was among the first Taiwanese singers who made an impressive career along the Pacific Rim (including Japan). Her growing popularity in the late 1970s coincided with the open-door policy of the People's Republic of China. Although cassette tapes of Deng's songs were officially banned in the People's Republic of China until the 1980s, her songs made an impact on musical tastes of mainland Chinese from 1978. After her death, Beijing's rock musicians paid their tribute by recording her songs.

Luo Dayou (Lo Ta-yu) came to prominence in the late 1970s. Luo is a pioneer and an all-round composer, lyricist and performer (piano and voice), whose career, mainly based in Hong Kong and Taiwan, has also expanded into mainland China since the late 1980s. He has written some compositions using the Taiwanese dialect of Hokkien, rather than Mandarin, as a symbol of Taiwanese regionalism. His output also contains much political commentary. Hou Dejian, a contemporary of Luo, wrote one

of the most important Taiwanese popular songs of the 1980s, *Long de chuanren* ('Descendants of the Dragon'), which became an anthem in the 1989 Chinese democracy movement.

Campus folksongs, accompanied by acoustic guitar, were popular in the 1980s. Stemming from a search for simplicity by urban youths, the music and lyrics were original and reflective, influenced by the American folk tradition of the 1960s.

Hong Kong's Cantopop dominated Taiwan by the 1990s; singers such as Kenny Bee recorded Mandarin versions of Cantopop songs for distribution in Taiwan and China. On the other hand, Emil Chau, a Hong Kong native who developed his career in Taiwanese pop in the 1980s, became a Cantopop star from 1995 onwards. Stylistically, Hong Kong and Taiwanese popular music became indistinguishable in the 1990s.

Taizé.

Religious community near Cluny in France. Founded in 1940 by Brother Roger (*b* 1915), it is an ecumenical brotherhood whose members (about 100 in the late 1990s) come from many different countries. In the early stages the music for worship was composed by the brothers themselves, but in 1955 Jacques Berthier, organist at the Jesuit church of St Ignace in Paris, supplied the community with chants for four voices. The Jesuit liturgical scholar and composer Joseph Gelineau first visited Taizé in 1948 and worked closely with the brothers on what was to become his celebrated version of the psalms.

By 1975, with ever-increasing numbers of young adults visiting Taizé, the brothers were obliged to look for music that would permit the largely transient and multilingual assembly to participate actively in prayer. They provided Berthier with short texts, initially largely in Latin (for its universality), to which he composed the music according to specific formal guidelines. Some of the songs are in canonic form, while others are brief ostinatos, which may continue under solo versicles (often sung in many languages). Berthier frequently looked to the continuo age for inspiration: for example, the chant *Laudate Dominum* is based on 'La follia'. His melodies, built on grammatical basses of extreme simplicity and harmonic clarity, are often adorned with additional instrumental lines, thereby reawakening the Baroque traditions of improvisation and division. The Community also makes considerable use of Orthodox church music. Brothers have continued to compose new alleluias, kyries and repetitive songs, and in recent years have further collaborated with Gelineau, whose newer compositions include several psalm settings and a complete mass.

Taizé's music is used by churches throughout the world and its songs have been translated into many languages, making a potent contribution to Christian worship. Two volumes, *Music from Taizé*, were published in 1982, and a further volume, *Taizé: Songs for Prayer*, appeared in 1999. The enduring strength of the repertory lies in its artistic worth, its simplicity, and in the Community's reluctance to sacrifice quality to quantity.

ANDREW WILSON-DICKSON

Tajčević, Marko

(*b* Osijek, 29 Jan 1900; *d* Belgrade, 19 July 1984). Serbian composer, writer on music and conductor. He studied in Zagreb with Lhotka, D. Dugan and Bersa, in Prague with Štepán and in Vienna with Marx. During the period 1924–40 he taught at many schools in Zagreb, where he founded the Lisinski Music School; he then taught in Belgrade at the secondary music school and at the academy as professor of theory and composition (1945–65). In Zagreb he conducted several choirs, and he wrote music criticism for reviews and daily papers in Zagreb and Belgrade (1924–40, 1953). Tajčević's music either employs folk motifs in a refined manner or else consists of original material imbued with the spirit of folk music. His style is moderately progressive, its expression noticeably direct. The vocal and piano works, the mainstay of his output, are highly accomplished and have formal elegance and modal harmonies. His choral works display a mastery of polyphonic technique, with melodies arising from spoken inflections, for example in *Komitske pesme* ('Heroes' Songs'), as they do in *Priča* ('Story') and other solo songs. The work with which he made his reputation, the *Sedam balkanskih igara* ('Seven Balkan Dances'), became a classic of the Yugoslav repertory and was performed by such pianists as Orlov and Rubinstein.

WORKS

(selective list)

Choral: 4 duhovna stiha [4 Spiritual Verses] (Pss), 1928; Komitske pesme [Heroes' Songs], male chorus, 1932; Makedonske pesme [Macedonian Songs], 1932; Na petrovačkoj cesti [On the Road to Petrovac], 1947; Pesme iz Gradišća [Songs from Gradišće], A, male chorus, 1950; 3 madrigala (I. Bunić-Vučić, Dubrovnik, Merčetić); pieces for children's chorus

Songs: Priča [Story], 1930; Iz ruske lirike [From Russian Lyrics], 1938–48; Balade Petrice Kerempuha [Petrica Kerempuh's Ballads], 1948; 2 soneta Mikelanđela [2 Michelangelo Sonnets], 1952

Pf: 7 balkanskih igara [7 Balkan Dances], 1926; 5 preludijuma, 1935; Srpske igre

Principal publishers: Hrvatski Glazbeni Zavod, Muzgiz, Prosveta, Schott

Tajikistan (Tajik Jumkhurii Tojikiston).

Country in Central Asia. Tajikistan differs from the other Central Asian Republics in its Aryan-Iranian heritage. For nearly two millennia before the arrival of the Turkic people who now predominate in Central Asia the area was part of a great cultural melting-pot that included the Persians, Sogdians, Seleucid Hellenes and Kushans and the Parthians. At least two branches of the Silk Road passed through the area that became Tajikistan, bringing religions, goods, ideas and music. The arrival of the Huns, Arabs, Turks, Mongols and Uzbeks ensured a rich cultural mix.

It was only in the 1920s that the Soviet neologisms Tajikistan and Uzbekistan were created from the broader geographical area of Transoxania. Consequently, Tajik musicians are traditionally located in both republics. In Uzbekistan, female *sozanda* and male *mavrigi* wedding entertainers of Bukhara, Samarkand and Shakhrisyabz have developed special styles that suit these urban contexts (*see* Uzbekistan, §I, 1(v)).

Uzbek and Tajik musical symbiosis is the result of a long and complex process, which began around 1500 with the Uzbek invasions. The Tajik culture to which the Uzbeks adapted was formed during two periods: that of a Persian (later Tajik) substratum developed before the earliest Turkic incursions (i.e. by 500 ce) and that which evolved in a millennium of pre-Uzbek Turco-Persian contact (500–1500). Tajik music culture is a product of the same conditions, which Uzbek culture influenced later. Perhaps the area of most significant musical cooperation has been that of the classical style of Transoxania, which reached its height in the court music of the Kingdom of Bukhara, the *shashmaqom* ('six *maqām*').

Tajikistan

I. Traditional music

1. People, instruments, repertories and practices.

Tajik instruments, repertories and practices fall into two broad categories, those of the mountain dwellers and those of the plains and river-valley Tajiks. The latter group shares many components of its music culture with the neighbouring Uzbeks, while the former maintains highly distinctive, at times archaic, traits.

The mountain Tajiks consist of the inhabitants of the Karategin, Darvaz and Gissar zones, who speak dialects of Tajik (eastern Persian), and the Pamir peoples, small isolated populations near the Pyandzh river (on the Tajik-Afghan border), who speak ancient Persian languages. The distinctiveness of Pamir music rests primarily on a type of lute, often called *robab*, and on characteristic types of song. The Pamir *robab* has a bent pegbox, broad fingerboard, thick hide soundboard, bowl-shaped belly and wide flanges. Its most obvious morphological ties are with the *damyan* of Nepal, confirming a pattern of cross-mountain relationships between the Pamirs and Himalayas. The *robab* is played with sharply accented strokes of a thick wooden plectrum and often accompanies songs in a low register and tremulous, hoarse timbre. Women's antiphonal work songs are another Pamir genre. The Pamir share many musical traits with neighbouring mountain Tajiks (who also live in adjacent Afghan Badakhshan), including masked and animal-imitation dances, brief folk scenarios (generally humorous or satirical) and depictions of occupations (textile-making, hunting etc.). The mountain Tajiks' three main instruments are the *tulak*, a fipple flute, the *dumbrak* (or *dambura*, *dutar-i maida*), a two-string fretless lute, and the *ghidjak*, a spike fiddle with a tin-can resonator. (The *dumbrak* is a close relative of the southern Uzbek *dombra* or *dömbra* and of the Afghan Turkestani *dambura*.) Each of these instruments has a characteristic repertory among mountain Tajiks without parallel in the lowlands regions. A general term for some of the styles is *falak* ('firmament', 'fate') or *gharibi* ('poor man's music'), whose typical features include a narrow melodic range, considerable chromaticism, extremely protracted final syllables, free rhythm or frequent use of heptameter quatrain verse form, and parallel 4ths on the lute and fiddle. These features also characterize the music of Afghan Badakhshan.

The instruments of the plains and river-valley Tajiks are largely the same as those of the Uzbeks (*see* Uzbekistan). The two groups share the *tanbur* (see fig.1), *dutar*, Kashgar *robab*, *chartar*, *panjtar* and *shashtar* (long-necked lutes), *tar* (a Caucasian instrument, recently widespread), *chang* (a struck dulcimer), *ghidjak* (fig.2) and *sato* fiddles, *surnai* (shawm; fig.3), *karnai* (horn), *juftnai*, a paired single-reed pipe (Uzbek *qoshnai*), *naghara* and *doira* drums (fig.4), *qairaq* stone castanets and *safail* jingle. Among those not shared with the Uzbeks are the Afghan *robab* lute, the Dulan *robab* and the *panjtar* as a fiddle.

Within the framework of these two groups – the mountain Tajiks and the lowland dwellers – there are differences in the music found in some of the local regions, each having its own specific styles and genres. In the northern regions (Khojand, Ura-Tyube, Isfara) the vocal genre known as the *naqsh* (literally: 'pattern, ornament') is widespread, and it exists also in other parts of Tajikistan. Usually it consists of a cycle of pieces (*naqsh-i-kalon*, *naqsh-i miyona*, *naqsh-i khurd*) performed by male singers during wedding rituals in both the Tajik and Uzbek languages. In recent times the *naqsh* formed part of the spring calendar ritual: a festival of tulips (*sair-i gul-i lola*).

In the southern part of Tajikistan – Kulyab, Kurgan-Tyube, the Garm region and the Gissar valley – the tales (*dastan*) of the Gurugly epic cycle are common. These *dastan*, accompanied by the two-string *dutar* or *dumbrak*,

are one of the most popular and important features of the oral epic tradition. The repertory of a bard who performs this epic (*guruglikhon*) comprises more than 30 such melodies. There are two principal schools of *guruglikhon*: the *Kulyabian* and *Karateginian*.

The Yagnob, a people of scant population, are the descendants of the ancient Sogdians. They inhabit villages of the Upper Zeravshan and Yagnob river and retain their own musical traditions. Their vocal and instrumental pieces are not melodically expanded. The most widespread song genre (both in the Yagnob and Tajik languages) is the *bait*. It forms the basis of such genres as the *muhammas*, *khavozi*, *askari* and the *baithoi oshuqi*. Wedding songs are performed separately by male and female singers. Women sing *barakallo* (exclamations of approval) and *muhammas* with dances. Usually, the Yagnobs use the *doira* drum and the two-string *dutar* or short-necked *dumbrak*. In general, the music of the Yagnobs forms part of the stylistic unity of northern Tajikistan.

2. Shashmaqom.

It was posited by the Uzbek scholar Is'haq Rajabov (1927–82) that the formation of the *shashmaqom* was already in progress during the 18th century. The earliest written reference to the *shashmaqom* was discovered in the *bayaz*, collections of poetry for *shashmaqom* performers dating from the time of the Bukharan ruler Nashrullah Khan (1826–60). The crystallization of the cycle was based on the system of 12 *maqām* (*duvazdah maqām*), which had its own local school in Bukhara in the 16th and 17th centuries. The founder of the school, the poet and court musician at the time of the Sheibanid rulers, Mawlana Najm ad-Dim Kawkabi Bukhari (*d* 1531), created new *maqām* theory in his treatises on music written in Persian-Tajik. The theory influenced the science of music in northern India and Iran. His successor in Bukhara, the court musician, scholar and poet Darwish Ali Changi, who lived during the late 16th and early 17th centuries, wrote an important historical treatise on music in Persian-Tajik.

From the late 19th century until the 1920s, the principal centre of the *shashmaqom* was the court of the Bukharan rulers Muzaffar Khan (1860–85), Akhad Khan (1885–1910) and Alim Khan (1910–20). At this time a number of treatises on music and the *shashmaqom* in a light and popular form, as well as many *bayaz*, were written in Bukhara. The *shashmaqom* and their various branches were also widespread in the educated strata of urban society. The prominent performers of the *shashmaqom* at the close of the 19th century until the 1920s were Ota Jahol (1845–1928), Ota Ghiyos (1858–1927), Levi Bobokhan (1873–1926), Domla Khalim (1878–1940), Hoji Abdulaziz Rasulov (1852–1936) and others. The six *maqām* (in standard order) are *buzruk*, *rast*, *nava*, *dugah*, *segāh* and *iraq*. The last five terms are also names of classical Persian *āvāz* (modes), while *buzruk* is an archaic variant of Persian *bozorg* ('large'). All six *maqām* have the same basic internal structure, with some variation in detail, and exist in both Uzbek and Tajik versions. Each *maqām* is divided into an instrumental section followed by an extensive set of accompanied songs. The former (*mushkilot*: 'difficulties') is considerably shorter than the latter (*nasr*: 'text'). The *mushkilot* consists of five movements known as *tasnif*, *tarje*, *gardun*, *mukhammas* and *saqil*. Except for the *gardun*, all movements have a

rondo-like structure consisting of a recurring phrase (*bazgui*) and varied *khana* ('departures'); the *gardun* contains only *khana* sections. Ex.1 gives the first two *khanas* and the *bazgui* of the *tasnif* movement of *maqām buzruk*.

In contemporary practice the *nasr*, or text section, of each *maqām* employs a small chorus of singers in unison with a group of instrumentalists, who also play in unison with only minor embellishments. The internal structure of the *nasr* is complex. The largest subdivisions are termed *shuba* ('branches'); of these the first group of *shuba* has a unique configuration, while the remaining groups (up to three) each follow a standard outline. The first group of *shuba* contains four extended songs known as *sarakhbar*, *talqin, nasr* and *ufar*, the last being in a dance rhythm. Between each of these weightier songs are up to six lighter and briefer compositions called *tarona*, which may be based on folk texts and rhythms rather than on the complex metrics of classical Persian verse. The second and subsequent groups of *shuba* have five songs called *sawt*, *talqincha*, *qashqarcha*, *saqinama* and *ufar*; there are no *taronas*. A principle is introduced whereby each movement employs the same melody but varies the rhythmic structure according to the metre of the poem being set. The basic structures are 15 (4 + 4 + 4 + 3) for the *sawt*, 14 (7 + 7) for the *talqincha*, 20 (5 + 5 + 5 + 5) for the *qashqarcha*, 10 (5 + 5) for the *saqinama* and 13 (5 + 5 + 3) for the *ufar*. Apart from the groups of *shuba* there are usually groups of separate movements in each *maqām*, sometimes bearing the name of an outstanding performer who has left his mark on the repertory.

Complex musical material fills out the structural skeleton of each major song. There are four main components of the *maqām* songs, each involving a different aspect of performance. Two are rhythmic factors: the verse metre (the sole differentiating element in the later groups of *shuba* but important in every movement) and the *usul*, or drum pattern, beaten out by the tambourine unvaryingly throughout the song; these two rhythmic components are interrelated. The other two factors are melodic and structural. One is the tendency towards an asymmetrical arched contour for each movement, which reaches its peak (*auj*) nearer the end than the beginning of the song. This basic contour is terraced, with each successive rise or fall of tessitura marked by an instrumental interlude setting the new pitch level. The other important melodic factor is the grand scheme of modal relationships within each *maqām* and within each movement. Extended melodic patterns (*namud*) are identified by a modal name and are grafted on to the melodic structure of the given *maqām*. A *namud* often occurs as an *auj* culmination section. Ex.2 illustrates *namud-i nava* (Uzbek version), which appears definitively in the opening of the *sarakhbar* movement of *maqām-i nava* and is found in the *nauruz-i saba* group of *shuba* of *maqām-i rast*, in the *sarakhbar*, *talqin-i nasr* and *ufar* of *maqām-i segah* and in various *shuba* of *maqām-i nava* proper. As a *namud* such as the one in ex.2 appears in various metro-rhythmic contexts (including diverse drum accompaniments), it takes on new characteristics.

It is worth noting that the only indigenous Central Asian system of music notation was developed for the *shashmaqom*. This is the 'Khorezmian' notation, a tablature for the *tanbur* lute (the leading instrument of the

maqām ensemble) developed for the Khan of Khiva, Muhammad Rahim-Khan II (1865–1910), by Niaz Mirzabashi Kamil (*d* 1899). The entire *shashmaqom* was transcribed into this system: it consists of a horizontal grid indicating frets, with vertical connecting lines to show melodic motion and dots to represent the number of back and forth right-hand strokes (e.g. quaver values) for each note. The underlying rhythm is notated by stating the *usul* drum pattern. The relationship of the *shashmaqom* to surrounding classical music, such as that of Iran, Azerbaijan, Turkey and the Arab countries, has to a certain extent been established, and links to other neighbours such as the Kashmiri *maqām* and the north Indian *rāga* have been explored.

In the Soviet period, the practice of performing the *shashmaqom* was extended within the context of concert forms; they were performed by state organizations such as radio, television, the Philharmonia and educational organizations. These organizations were concentrated in Dushanbe, the capital of Tajikistan. A separate local tradition of performing the *maqām* has been preserved in Khojand.

Tajikistan

II. Western-inspired music

1. Opera, ballet, orchestral and chamber music.

After the October Revolution in Russia (1917) and creation of the Soviet Empire, the Tajik Soviet Socialist Republic was formed within the borders of the USSR and European genres of classical music were introduced.

During the 1920s professional training in music composition was organized in colleges in Bukhara and Samarkand, then the capital of Uzbekistan, of which the Tajik Autonomous Republic was a part (1924–9). The Russian musicians A. Listopadov and N. Mironov were the first teachers in these colleges. In 1929 in Dushanbe, the capital of Tajikistan, the Tajik State Dramatic Theatre, consisting of the dramatic and musical ensembles, was opened. Opera, ballet, orchestral and chamber music were introduced. Tajik musicians became members of the Tajik Composers' Union (1940), and many musical schools and centres were opened in Dushanbe, including a musical-ballet school (1934–7) and the Tajik Philharmonia (1937–40), comprising an orchestra of national instruments, the ensemble of masters of the *robab*, the Folk Dance and Song Ensemble, the Pamirian Ethnographic Ensemble and a children's ensemble.

Russian professional composers, teachers and ballet masters took an active part in the formation of a new style of Tajik music. Using the national Tajik ritual 'sair-i gul-i lola' (festival of tulips), the composers S. Balasanian and S. Ubakh and the librettist S. Saidmuradov created the musical performance *Lola*. In 1937 Balasanian, together with the poets A. Dekhoty and M. Tursunz-ade, presented the first Tajik opera, *Vosstaine Vose* ('Rebellion of Vose'), which synthesized Tajik traditional arts with the new musical forms. Several Tajik musicians trained in Russia; these include A. Mullogandov, H. Tairov and B. Turayev. At the Dekada (ten days festival) of Tajik Art in Moscow in 1941, a new opera, *Kuznetz Kova* ('Blacksmith Kova') (libretto: A. Lokhuty, music by Balasanian and Sh. Bobokalonov),

the first Tajik ballet, *Du guls* ('Two Roses') (composer A. Lensky, libretto: M. Rabiyev), and other performances were staged. During World War II musicians created politically motivated works relating to the war, for example the musical comedy *Rozia*, 1942 (by Balasanian and Z. Shahidi), the musical drama *Pesnya gneva* ('The Song of Wrath') by Balasanian and many popular songs by Bobokalonov, F. Saliyev and Shahidi. During the war, the Ukraine SO was evacuated to Dushanbe. This stimulated and supported the development of the 'new' Tajik music. In 1945 a Music College was opened in Dushanbe. In 1940 the Pamirian Ethnographic Ensemble was organized by F. Saliyev, P. Uzakov and A. Proclenko; among its artists S. Bandishoyeva, G. Gulomaliyev and G. Khudoyarbekov became famous singers.

Balasanian's ballet *Laily and Majnun* (1947) received a state award of the Soviet Union (1949) and was made into a film. Some Tajik composers and musicians found their own particular styles (including the songs and romances of F. Shakhobov, Shahidi and Sh. Sahibov); others developed new genres, such as the first Tajik string quartets composed by Y. Sabzanov, D. Aakhunov and Sh. Sayfiddinov, while a sonata for chorus and orchestra was written by A. Lensky and Y. Sabzanov.

In the latter half of the 1940s the traditional musical form *shashmaqom* (see §2 above) was notated by F. Shahobov, Sh. Sakhibov, B. Faizullayev and U. Rodalsky. Five volumes with a preface by eminent scholars E. Bertels and V. M. Belyayev were published in the 1960s in Moscow. Barno Iskhokova, now resident in the USA, was considered one of the best singers of *shashmaqom*; G. Gulomalye, A. Alayev and N. Shoulov were the most eminent instrumentalists.

There was no professional popular music group in Tajikistan until the 1960s. In 1962 the first vocal–instrumental ensemble was organized (director: L. Sharipova); a popular music ensemble called Gulshan (director: Sharipova, composer: M. Muravin, since 1966 director: O. Orifov) followed in 1964. The music group Daler (director and master of modern and ancient instruments: D. Nazarov, together with M. Mirzoshoyev, I. Zavkibekov, A. Gulomkhaidarov, Y. Iliyayev and others) has been popular since 1979 and is internationally renowned. Popular Tajik songs were written by the composers H. Abdullayev, F. Odinayev, D. Dustmuhamedov, K. Yahyayev, Sh. Pulodi, F. Bakhor, A. Yadgorov, Z. Zulfikarov, Z. Mirshakar and D. Nazarov. Popular Tajik singers include M. Nabiyeva (1947–79), M. Hamrahulova (now resident in the USA), R. Shaloyer, U. Ziyayev, B. Negmatov, H. Shirinova and D. Nazarov.

Against the background of socialist realism during the 1970s and 80s an entirely new style of music emerged from musicians including F. Bakhor, T. Shahidi, Z. Mirshakar, U. Mamedov, A. Aleksandrov, Sh. Pulodi and B. Pigovat. This school took its final shape during the late 1980s and is associated with such composers as A. Latifzade, L. Pulatova, H. Niyazi, P. Turabi, P. Tursunov, K. Tushinok, M. Khasava, K. Khikmatov, T. Sattorov and B. Yusupov, all of whom used the artistic traditions of the East, the organists Y. Aripov and D. Valamat-Zoda, and the pianists A. Finkelberg, D. Khakimova, G. Inoyatova, V. Orlov and N. Obidova. In the late 1970s and early 80s an interest in Tajik history, culture, folk tradition and religion

began to play an increasingly prominent part in the musical life of Tajikistan. Many attempts were made to revive national traditions on all levels and to create orchestral works using national instruments, for instance *Falaq* by V. Odinayev, *Rubayat of Omar Khayam* by T. Shahidi, the ballet *Legend of Mountains* by U. Ter-Osipov and songs to classical Persian–Tajik texts by A. Khamdamov, Sh. Sayfiddinov and Dustmuhamedov.

2. Recent developments and institutions.

Since independence in 1991, many talented Tajik musicians, singers and composers have emigrated because of the unstable political situation, worsening cultural prospects, professional isolation, a declining standard of living and low or non-existent wages. Musicians have perhaps found it hardest of all to adjust to the new demands of a struggling market economy. Until recently almost every musician, singer and composer was employed by the state. In contemporary Tajikistan there is a lack of resources for creative projects and thus difficulties in attracting new audiences.

In December 1995 the Ministry of Culture and Information, assisted by the United Nations Development Programme, organized a 'Dekada' (ten-day festival) of peace, art and culture in Dushanbe and the region of Khatlon. Famous Tajik musicians included the conductors I. Abdullayev, A. Kamalov, F. Soliyev, N. Niyazmamadov and E. Ayrapetian, the opera singers A. Bobodulov, L. Kabirova, H. Mavlanova, O. Sabzaliyeva and P. Miradjabov and the folksingers M. Bokiyeva, T. Fazilova, D. Murodov, R. Galibova, M. Bakhodurov, M. Nazardodova and H. Rizo.

Many informal popular groups appeared on the Tajik stage during the 1990s, such as Parem. Contemporary musical centres and institutions include the Theatre of Opera and Ballet, named after A. Aini in Dushanbe (founded 1940); the Republic Theatres of Musical Comedy located in Khujand, Khorog, Kulyab, Kanibad and Nan; the Tajik Composers' Union (founded 1936); the Tajik Philharmonia in Dushanbe (1938); the Ensemble of Masters of the *Robab* (1940); the Symphonic Orchestra (1965–93); three Ensembles of Song and Dance; a quartet of string instruments (1978–93); the State Radio Orchestra of National Instruments; the Ensemble of Shashmaqom Masters (1964–91); the popular music ensemble Gulshan (1964–91); the children's choir (1982–91); the Department of Art of the Ministry of Culture (1940–91); the Department of Art and Culture of the Historical Institute of the Tajik Academy of Sciences (founded 1958); the Institute of Arts named after M. Tursun-Zade (1973); the Musical College; musical schools; the Museum of Musical Culture named after Z. Shahidi; and the Gurminj Museum of National Instruments.

Tajiyev, Mirsadïk

(*b* Tashkent, 25 March 1944; *d* 9 June 1996). Uzbek composer, brother of Mirhalil Mahmudov. One of the most distinguished Uzbek composers, he graduated in 1970 from the composition classes of Feliks Yanov-Yanovsky and Rumil Vildanov at the Tashkent Conservatory, where he taught from 1979. His works are among the most convincing examples of synthesis of Western and Eastern traditions. Taking the genre of symphony as a point of departure, he pioneered an Uzbek model of the form in which properties of Central Asian traditional music – such as the cycle of six maqams prevalent in Uzbek music known as shash makom – are organically developed into elaborate one-movement structures. This technique was first fully expressed in his Third Symphony of 1972. His style is furthermore characterized by a lyrical dramatic tendency which is alternated with epic

and heroic themes, frequently drawn from Uzbek history and mythology. From 1982 to 1987 he was the head of the Composers' Union of Uzbekistan. He received numerous awards, including the Premium of Youth League of Uzbekistan (1974) and the title of Meritorious Worker of Arts of Uzbekistan (1981).

RAZIA SULTANOVA

Tajo, Italo

(*b* Pinerolo, Piedmont, 25 April 1915; *d* Cincinnati, 28 March 1993). Italian bass. He studied with Bertozzi in Turin and in 1935 made his début there as Fafner in *Das Rheingold* under Fritz Busch. Busch took him to Glyndebourne that summer as a chorus member and understudy: Tajo sang Bartolo's 'La vendetta' in the first Glyndebourne recording of *Le nozze di Figaro* because Norman Allin was not available. During the war he sang at the Rome Opera in a variety of roles, including the Doctor in the Italian première of *Wozzeck* (1942), and at La Scala, where he returned in the first postwar season (1946) as Don Magnifico and Ochs, and where he continued to appear until 1956. At the 1947 Edinburgh Festival he sang Figaro and Banquo with the Glyndebourne company, then appeared in London at the Cambridge Theatre (1947–8), as Don Basilio, Leporello and Don Pasquale, and at Covent Garden with the Scala company in 1950 when, as Dulcamara, he revealed his outstanding gifts as a *buffo* artist. He made his American début in Chicago as Ramfis (1946), and sang at San Francisco (1948–56) and the Metropolitan (1948–50). In Italy Tajo created roles in operas by Malipiero, Nono and Berio, among others, and took part in the Italian premières of *Troilus and Cressida* (1956) and *The Nose* (1964). He continued to make occasional appearances in the USA as the Sacristan and Benoit and in other character roles until the late 1980s.

Tajo's voice, though not large, had a distinctive timbre. He made a notable recording of Mozart concert arias.

HAROLD ROSENTHAL/ALAN BLYTH

Takács, Jenő [Eugene]

(*b* Cinfalva [now Siegendorf], 25 Sept 1902). Austrian composer, pianist, ethnomusicologist and teacher of Hungarian origin. He studied composition with Hans Gál and Joseph Marx and the piano with Felix Weingartner in Vienna, where he was also in contact with the Second Viennese school. From 1927 to 1932, and again from 1934 to 1936, he taught at the Cairo Conservatory, taking an interest in Arab music; at the 1932 Cairo congress on Arab music he met Bartók, whom he had come to know in 1926 in Budapest. On his second visit to Egypt, he also served as music adviser to Egyptian Radio. In between he taught at the University of the Philippines in Manila (1932–4), from where he made ethnomusicological expeditions to the tribes of north Luzon. Apart from making concert tours of Europe he has visited the Middle East and East Asia (he played his Piano Concerto for Radio Tokyo) and in 1938 he gave his first series of concerts in the USA. Later, he taught in the music school at Szombathely (1940), was director of the Pécs Conservatory (1942–8), and visiting professor at the conservatories of Geneva and Lausanne (1949). In 1952 he was appointed to the University of Cincinnati, where in 1970 he was made emeritus professor and fellow of the graduate school. While based in the USA he has made frequent visits to Europe as a pianist and conductor in performances of his own works; he established a home in his native town and accepted the post of music adviser to the Eisenstadt Liszt Centre. His honours include an Austrian State Prize (1963) and the freedom of Siegendorf. In his works he has made use of Hungarian and other folk musics and contemporary tonal, atonal, micro-tonal and aleatory style. Over the years these have become more wide-ranging and involved.

JÁNOS DEMÉNY/WOLFGANG SUPPAN

Takács Quartet.

American-based string quartet. It was founded in Budapest in 1975 by four pupils of András Mihály at the Liszt Academy: Gábor Takács-Nagy, Károly Schranz, Gábor Ormai and András Fejér. In 1977 and 1979 respectively it won the Evian and Portsmouth international competitions and in 1983, at the instigation of Zoltán Székely – with whom it had studied the Bartók quartets – it became resident ensemble at the University of Colorado in Boulder. In those days it played with great beauty of tone, albeit without the rhythmic energy and fire of the best Hungarian quartets; but a major recording contract in the late 1980s coincided with a noticeable decline in form. In 1989 the group settled permanently in Boulder but in 1993 Takács-Nagy resigned and returned to Hungary, to be replaced by Edward Dusinberre. In 1995 Ormai was struck down by a fatal illness and his place was taken by Roger Tapping. The resulting combination of two English musicians and two Hungarians has continued to be successful with the public but has inevitably betrayed signs of a patchwork of playing styles. The group has made many recordings, including Bartók cycles under both leaders. For a time it played a set of Amatis but its instruments are now

Giovanni Baptista Guadagnini violins of 1755 and 1763, an anonymous Italian viola (*c*1760) and a Giorgio Serafin cello (*c*1755).

<div align="right">TULLY POTTER</div>

Takahashi, Yūji

(*b* Tokyo, 21 Sept 1938). Japanese composer and pianist. He studied composition at the Tōhō Gakuen School of Music with Shibata and Ogura (1954–8) and lived in Berlin (1963–6) on a Ford Foundation grant, the only composition pupil at that time of Xenakis. In 1966 a grant from the Rockefeller Fund took him to New York for work on computer composition, and he remained in the USA until 1972, teaching at the San Francisco Conservatory and attending the Tanglewood courses of 1966–8. He has been internationally active as a pianist able to make a brilliant effect with difficult avant-garde works. During his time in Berlin he began to apply serial procedures to his works, as in *Chromamorphe I* (1963), and in *Metatheses* (1968) and other works he took up the stochastic methods introduced by Xenakis; in *Orphika* (1969) he treats each player as a soloist, and calculates all parameters by computer. In the 1970s Takahashi began to turn away from the Western avant garde and to employ traditional texts and Asian instruments. *Maeander* for piano (1973) incorporates ancient Chinese and Japanese languages into the reciting text, *Zanshi no kyoku* (1988) is written for *shitsu*, an early form of koto, and recitation, and *Ari no susabi no Alice* (1990) employs ancient instruments, including the *Yayoi-goto* and stone pipe. A synthesis of his changing styles is found in *Ongaku no oshie* (1995), which combines a computer with both Western and Japanese instruments and with *shōmyō*, a form of Buddhist chanting. An introduction to his writings, which include books on music, is given in R. Reynolds: 'A Jostled Silence: Contemporary Japanese Musical Thought', *PNM*, xxx/2 (1992), 60–63; see also K. Hori, ed.: Nihon no sakkyoku nijusseiki [Japanese composition in the 20th century] (Tokyo, 1999), 176–9.

MICHAEL STEINBERG/YOKO NARAZAKI

Takata, Saburō

(*b* Nagoya, 18 Dec 1913). Japanese composer. He was a pupil of Nobutoki and Pringsheim, and graduated from the Tokyo Music School in 1939. For some time he was active as a composer and conductor (of the Central SO), but after World War II he gave up conducting. In 1947 he joined the Japanese Society for Contemporary Music, of which he was president from 1963 to 1968, and he was professor of composition at the Kunitachi Music College (1953–79). His style draws principally on the German Romantic tradition, though some works show the influence of Impressionism, particularly of Debussy. He has contributed many choral works to the Catholic liturgy in Japanese.

MASAKATA KANAZAWA

Takemitsu, Tōru

(*b* Tokyo, 8 Oct 1930; *d* Tokyo, 20 Feb 1996). Japanese composer. A month after his birth he was taken to China, where his father was working. In 1938 he returned to Japan to attend elementary school, but his formal education was interrupted by conscription in 1944. It was during his military service that he had his first encounter with Western music, which had been banned in Japan during the war; a military officer played a gramophone recording of the French chanson *Parlez-moi d'amour* to him and a group of fellow-conscripts. The song left a deep impression, and when, after the war, Takemitsu was employed at an American military base, he took the opportunity to listen to a good deal of Western music on the radio network set up for the US armed forces. At the age of 16 he decided, notwithstanding his lack of musical training, to take up composition. He received intermittent instruction with Kiyose from 1948, but was otherwise essentially self-taught.

Early on he identified Debussy as a mentor, and his fellow-composer Ichiyanagi introduced him to the music of Messiaen. Messiaen's influence is already apparent in Takemitsu's first performed work, *Lento in due movimenti* (1950) for piano, which was given at the seventh concert of the New Group of Composers, headed by Kiyose. The work already embodied what would became characteristic elements of Takemitsu's musical language – modal melodies emerging from a chromatic background, the suspension of regular metre and an acute sensitivity to register and timbre. The première was received rather coldly, but there were two enthusiastic supporters in the audience, Yuasa and Akiyama, who were to remain his friends. In 1951, together with other musicians and artists, the three founded a new group, the Jikken Kōbō (Experimental Workshop), for collaboration on mixed media projects. For this association Takemitsu composed *Saegirarenai kyūsoku I* ('Uninterrupted Rest I', 1952) for piano, written in irregular rhythm without barlines, and the Chamber Concerto (1955) for 13 wind instruments. He then turned to electronic music in *Relief statique* (1955) and *Vocalism A·I* (1956); the latter uses only the phonemes 'a' and 'i' ('ai' being the Japanese for 'love') pronounced in various ways by two actors. Material is similarly restricted in *Mizu no kyoku* ('Water Music', 1960), formed exclusively from recorded water sounds. Many of Takemitsu's works from the early 1960s are characterized by textural fragmentation. In works such as *Ring* (1961) and *Sacrifice* (1962) non-sustaining instruments – such as terz guitar, lute and vibraphone – predominate, and the texture is pointillistic, featuring pizzicato, harmonics and wide intervals.

By this time, Takemitsu's work was starting to attract international attention. His *Requiem* for strings (1957), dedicated to the memory of Hayasaka, was heard in 1959 by Stravinsky, who declared it a masterpiece, commenting

on the music's unbroken intensity. *Kanshō* ('Coral Island') received favourable mention at the 1962 ISCM Festival, and *Textures* for orchestra gained the first prize in 1965. In 1964 Takemitsu was invited by the East-West Center of Hawaii to give a series of lectures in conjunction with Cage; later in the same year he staged happenings with Cage and Ichiyanagi in Tokyo. Cage's influence was to prove decisive less in terms of techniques of indeterminacy, which Takemitsu had already employed in the graphic scores of *Ring* (1961) and *Pianisuto no tame no Corona* (Corona for pianist(s), 1962), than in terms of the American composer's fascination with Japanese culture, which encouraged Takemitsu to begin his first serious exploration of the traditional music of his native country. As he commented in 1988, 'in my own development for a long period I struggled to avoid being "Japanese", to avoid "Japanese" qualities. It was largely through my contact with John Cage that I came to recognize the value of my own tradition'. From the early 1960s onwards Takemitsu began to make use of Japanese traditional instruments. He used the biwa in his score for the film *Seppuku* (1962), and from that point on employed Japanese instruments frequently in his music for the cinema, radio and television.

In 1966 he wrote his first concert work for traditional instruments, *Eclipse* for biwa and shakuhachi, which was widely performed by the virtuosos Kinshi Tsuruta and Katsuya Yokoyama. When he was commissioned in 1967 to write a piece for the 125th anniversary of the New York PO, it was to the same two instruments and performers that he turned, producing a sort of double concerto, *November Steps*. Takemitsu's stated aim in the composition was a juxtaposition of the Japanese and Western instruments in a way that emphasized their differences of sonority, rather than potential correspondences. However, correspondences do emerge: the sound of the biwa's plectrum plucking the string is reflected in the percussive effects among the orchestra's strings, such as the striking of the body of the instrument, while the use of dense, chromatic clusters, often combined with glissandos, provides an orchestral counterpart to the force and litheness of breath passing through the pipe of the shakuhachi. The sounds of the two instruments are thereby harmonized with the Western orchestra without a weakening of their general sound characteristics. In subsequent works Takemitsu employed instruments drawn from other non-Western traditions: in *Gitimalya* (1974) the solo marimba is complemented by an array of percussion which includes Chinese and Javanese gongs and an African log-drum.

During the 1970s Takemitsu gradually turned away from these dense textures of chromatic clusters and sound masses towards a greater harmonic and timbral differentiation. *Garden Rain* (1974), his first work for brass instruments, is characterized by slow-moving, widely-spaced chords, which show little inclination towards directional harmonic motion, while *Shiki* ('Seasons', 1970) for four percussionists makes exclusive use of pitched metallic percussion, rather than the arrays of unpitched instruments employed in the works of the previous two decades. Also in the 1970s Takemitsu began to state his ideas on form. Speaking of *Quatrain* (1975) for clarinet, violin, cello, piano and orchestra, he compared the work to 'a picture scroll unrolled': 'the scenes change successively without a break. In other words, it is similar to the relationship of a garden and a person walking through it'. The form of *Quatrain* is strongly determined by the

number four, reflected in the four-bar phrases, the prevalent interval of the fourth and the four concertante instruments (Takemitsu's choice of the quartet of Messiaen's *Quatuor pour le fin de temps* was a conscious homage). One of his most celebrated orchestral works, *Tori wa hoshigata no niwa ni oriru* ('A Flock Descends into the Pentagonal Garden', 1977), once more combines the image of the Japanese garden with all-pervading numerology. Here the image is not of walking through the garden, but of approaching it from a distance: the flock, represented principally by the solo oboe with its mobile but sharply contoured melodic figures, traverses a comparatively static succession of harmonic fields, symbolizing the garden. These fields are based on the serial transformation (by means of a rotational array) of an anhemitonic pentatonic collection (see Ohtake, 29–33). Five further five-note fields, varied and often dissonant in their intervallic structure, are thus generated, enabling a harmonic motion in the course of the work from a pure pentatonicism at the opening to dense chromatic complexes and back again.

Throughout *A Flock Descends into the Pentagonal Garden*, the note F-sharp (the central pitch-class of the source pentatonic collection) provides a consistent focus amid the gradual harmonic transformations. In *Yume mado* ('Dream/Window', 1985) a pedal D serves a similar function, anchoring statements of the striking, four-note motivic gesture which recurs in various instrumental and rhythmic guises throughout the piece. Most of the works of the 1980s and 90s involve a stronger degree of tonal focus than those of the previous two decades, but only occasionally – as in *Keizu* ('Family Tree', 1992), a work for narrator and orchestra, where the harmonic allusions range from Ravel to American popular song – does this involve passages of straightforward diatonic tonality. In the early 1980s, Takemitsu wrote three compositions based on *Finnegans Wake* by James Joyce: *Toi yobigoe no kanata e!* ('Far calls, coming far!', 1980) for violin and orchestra, *A Way a Lone* (1981) for string quartet, and *Riverrun* (1984) for piano and orchestra. All three works embody images of water, a continual and obsessive interest of Takemitsu's dating back to *Water Music* (1960). In the first of the three compositions, the principal material is a six-note theme, E♭–E–A–C♯–F–A♭, and its inversion, the first three notes of the theme being a cipher for the word 'sea' (E♭ = S in German). This melody, with its predominance of diatonic intervals – major and minor 3rds and perfect 4ths – mutates in its tone-colours, transforming itself into textures of varied resonance as it touches on different groups of instruments within the orchestra. This increasingly linear orientation – equally evident in chamber works such as *Umi e* ('Toward the Sea', 1981) for alto flute and guitar (together with its two additional versions from 1981 and 1989, all again based on the 'sea' cipher) and *Jūichigatsu no kiri to kiku no kanata kara* ('From Far Beyond Chrysanthemums and November Fog', 1983) for violin and piano – is related to Takemitsu's fundamental notion of *cantos* (melody or song): 'the song I would like to sing', he commented in the 1990s, 'is not a simple lyric line but more than this – a narrative line intertwined with many threads'. The title of *Fantasma/Cantos* (1991) for clarinet and orchestra epitomizes this equation between song and fantasy, characteristic of Takemitsu's music from the beginning. Meanwhile the 'narrative line' leads him into the domain of quotation in his work for two pianos and orchestra *Yume no in'yo* ('Quotation of Dream', 1991), whose

subtitle, 'Say Sea, Take Me!', drawn from a poem by Emily Dickinson, is reflected in the integration of number of passages from Debussy's *La mer*. While conspicuous and undisguised, the quotations create no sense of irony or stylistic rupture, Takemitsu's orchestral textures sharing with Debussy's a refinement, luminosity and remarkable transparency that caused him to be regarded, by the end of his life, as one of the finest orchestrators of the late 20th century.

The first prize Takemitsu won outside Japan, the Prix Italia for his orchestral work *Tableau noir* (1958), was followed up by numerous other awards in his lifetime, including the Otaka Prize (1976 and 1981), the Los Angeles Film Critics Award (1987, for the film score *Ran*) and the Grawemeyer Award (1994, for *Fantasma/Cantos*). He was invited as featured composer to many international music festivals, including Aldeburgh (1984 and 1993), Tanglewood (1986) and Wien Modern (1993), and was also a regular guest lecturer, especially in the USA, where he visited Yale University (1975), the State University of New York, Buffalo (1977), the University of California, San Diego (1981) and Columbia University (1989) among other institutions. He received honorary membership of the Akademie der Künste of the DDR (1979) and the American Institute of Arts and Letters (1985), and in France was admitted to the Ordre des Arts et des Lettres (1985) and the Académie des Beaux-Arts (1986).

Takemitsu published a large number of essays and other writings in which he often discussed his own works. He was popular as a speaker and interviewed many composers on their visits to Tokyo, including Cage, Xenakis, Nono, Shchedrin, Ligeti and Berio. Late in his life, Takemitsu conceived an idea of composing an opera, but his untimely death prevented him from realizing the plan.

Takemoto Gidayū [Gorobei, Chikugonojō; Shimizu Ridayū]

(*b* Osaka, ?1651; *d* Osaka, Sept 1714). Japanese singer. He was the originator of a dramatic or narrative vocal style known as *gidayū* or *gidayū-bushi*, performed to the accompaniment of a large shamisen (a *futozao*); the style was indispensable to puppet plays (bunraku) and some of the kabuki repertories. He studied with Shimizu Rihei and made his début in 1677, adopting the name Ridayū. In 1673–84 he sang at the Uji-za (Uji theatre) in Kyoto and in 1684 he founded his own theatre, the Takemoto-

za, in Osaka, where he introduced his new singing style under the name of Gidayū. He and his singing soon gained popularity and fame, thanks partly to his collaboration with the playwright Chikamatsu Monzaemon, who wrote for him such plays as *Shusse Kagekiyo* ('Kagekiyo's Success', 1685) and *Sonezaki shinjū* ('Double suicide at Sonezaki', 1703). His artistic accomplishments earned him the prestigious name of Chikugonojō in 1701.

See also Japan, §VI, 2(i).

<div align="right">MASAKATA KANAZAWA</div>

Taki, Rentarō

(*b* Tokyo, 24 Aug 1879; *d* Ōita, 29 June 1903). Japanese composer and pianist. In 1894 he was admitted to the Tokyo Music School where he studied with Aya Kōda. Four years later he began to teach at the school and made his début as a pianist. In June 1901 the Japanese government sent him to study at the Leipzig Conservatory, but after a year of study he fell ill; he was sent home in October 1902 and was confined to bed for the remaining months of his life. He left only a few piano pieces, short vocal works and songs for children, in which he attempted to handle traditional Japanese melodies with the techniques of German Romanticism. As a composer and as a pianist he did not reach maturity, but he is remembered as a leading advocate of European music at the earliest stage of its introduction into Japan, and his song *Kōjō no tsuki* ('Moon at a desolate castle', 1901) became the best known of early Japanese songs in a European style.

Takt

(Ger.).

(1) Metre or time, as in *Dreivierteltakt* (3/4 time), *im Takt* (in strict tempo), *Taktart* (metre), *taktieren* (to indicate the beat), *Taktmesser* (metronome), *Taktstock* (baton), *Taktvorzeichnung* or *Taktzeichen* (time signature), *Taktwechsel* (change of metre), and so on.

(2) Bar, as in *Taktstrich* (bar-line). *Taktteil* means beat (i.e. a part of the bar; *see* Beat (i)), as in *guter Taktteil* (good, i.e. strong, beat).

Taktakishvili, Otar

(*b* Tbilisi, 27 July 1924; *d* 21 Feb 1989). Georgian composer, teacher, conductor and writer on music. He graduated from Barkhudarian's composition class at the Tbilisi Conservatory in 1947 and then did postgraduate work at the same institution, where he taught choral literature (from 1947), counterpoint and instrumentation (from 1959) and served as

rector (1962–5). In addition, he was appointed artistic director of the State Choral Kapella of Georgia in 1952, having previously worked as a choirmaster and conductor. He also served as a deputy to the Supreme Soviet of the USSR (fourth to sixth convocations), a deputy to the Supreme Soviet of the Georgian SSR and a member of the Presidium of the International Music Council of UNESCO. In 1965 he was appointed Minister of Culture of Georgia and held the post for nearly 30 years, in addition to serving as chairman of the Georgian Composers' Union (1962), secretary and board member of the USSR Composers' Union (1957–89), Presidium member of the International Council at UNESCO and as jury member and chairman of various international competitions. He is a three-time laureate of the USSR State Prizes and a laureate of the highest decoration in the USSR – the Lenin Prize (1982).

Taktakishvili's output embraces almost all genres and, despite its variety, it displays a consistency of intention and thematic working. He achieved wide recognition right from his earliest creative years, from the mid-1940s to the early 1950s. The best works of this period, the two symphonies and the First Piano Concerto, are marked by technical mastery, the creative use of folk material and a reliance on international symphonic traditions. They also share a lyric-dramatic narrative quality and a loftiness of sentiment, which at times mutates into pathos. In his subsequent development Taktakishvili has turned increasingly to vocal music and concrete images; his deployment of the expressive possibilities of the voice has been significantly affected by his continuing interest in folk choral singing, as well as by his early work as a choirmaster. This evolution led him naturally to opera, by way of a programmatic symphonic poem (*Mtsïri*, 1956), songs to words by Pshavela and Pushkin, and vocal orchestral cycles on texts by G. Tabidze and other Georgian poets (1957–9), works distinguished by an ever more noticeable social element. *Mindia* (1960) was the culminating opera, an organic solution of new problems, glorifying the wisdom of a harmonious union between man and nature. It is built on the transformation of folk styles and marked by a melodious character; dramatically it relies on the alternation of epic narration with lyric-dramatic scenes. A creative response to the traditions of the ancient theatre can be detected in the principles of plot development and in the endowment of each of the main characters with a distinctive philosophical symbolism.

Subsequent works testify to Taktakishvili's continuing development of this tendency. The oratorio *Rustavelis nakvalevze* ('In the Steps of Rustaveli', 1964) creates an image of the great poet of the 12th-century Georgian renaissance through the epic strength of its choral frescoes, which draw on folk choral polyphony, and it also raises the question of the place of the past in the present. Another oratorio from the same year, *Tsotskhali kera* ('The Living Hearth'), addresses the theme of war and peace, extolling the value of the latter and the immortality of the people. Taktakishvili's third such work, *Nikoloz Baratashvili* (1970), is deeply imbued with the spirit and words of the outstanding Georgian Romantic poet of the first half of the 19th century; its underlying theme is the inseparable link which binds the creative artist to the history and fate of his country, and this theme is developed on three planes: those of the poet himself, his world view and his relationship with the composer. The scoring of the work supports quasi-dramatic functions: a tenor soloist expounds the lyrical and philosophical

burden, an octet of male voices symbolizes time arising (the proximity of their music to an ancient chorale assists this) and the chorus is used in an epic and dramatic role, commenting and summarizing.

The trilogy of one-act operas *Sami novela* ('Three Stories', 1967) marked a new development in the Georgian musical theatre. Set in pre-revolutionary Georgia, the pieces concern the tragic fate of the country's simple people, employing a wide range of expressive means from developments of banal urban street songs to parodies of genre music and the music of everyday life; the result is a musical narrative of posterlike boldness. The cantata *Guruli simgerebi* ('Gurian songs', named after a region of western Georgia having a particularly highly developed tradition of folk choral polyphony) extended Taktakishvili's expressive use of folk materials, employing as it does quite specific folksong features in music that contrasts characteristic, lyrical and heroic ideas.

Averse in equal measure to reckless innovation and to conservative protectionism, Taktakishvili was a true heir of the great Georgian composer Paliashvili, developing his traditions by projecting them onto modern life. A melody from one of his works was adopted as the national anthem of Georgia and was in use from 1946 to 1989. He wrote a number of articles which appeared in *Sovetskaya muzïka* and *Sabchota khelovneba*.

WORKS

(selective list)

operas

Mindia (2, R. Tabukashvili, after Vazha-Pshavela), 1960, Tbilisi, 21 July 1961

Triptikh '3 novela': [no.1] 2. ganacheni [2 verdicts] (1, O. Taktakishvili, after M. Javakhishvili), [no.2] Jariskatsi [A Soldier] (1, Taktakishvili, after Javakhishvili), [no.3] Droshebi chkara [Raise Up the Banners] (1, G. Tabidze), Tbilisi, 19 Nov 1967; rev. as 3 zhizni [3 Lives], 1972 [with new no.3, Chikori (S. Tsenin, after Javakhishvili)], Moscow, Stanislavsky-Nemirovich-Danchenko Music Theatre, 9 Sept 1972

Mtvaris motatseba [The Abduction of the Moon] (3, Taktakishvili, after K. Gamsakhurdia) 1976; Moscow, Bol'shoy, 25 March 1977

Mususi [The Ladies' Man] (comic op-novella after Javakhishvili), Tbilisi, 30 June 1978

Pirveli siqvaruli [First Love] (comic op, 2, R. Gabriadze), Tbilisi, 30 Dec 1980

Marita (Taktakishvili, after G. Leonidze), 1988

Tāl [tāl, tāla, tālam].

The general South Asian term for cymbals, and sometimes also for other types of concussion idiophone. The word derives from the Sanskrit *tāla*, meaning basically 'palm of the hand', 'clap', 'metre', and so (in Sachs's evolution) denotes naturally the principal type of instrument used to maintain metre in traditional, religious and art musics. The North Indian form of the word is generally *tāl*; the South Indian is *tālam*.

There are two principal types: cup-cymbals, generally small and without a rim, and rim-cymbals, with a central depression. Following Kothari (who calls them 'metal clappers'), rim-cymbals may be divided into two sub-types, medium-sized and large.

The cup-cymbals are generally small, about 5 cm to 10 cm in diameter, 1·5 cm to 2 cm deep and 2 mm to 3 mm thick. They are clashed mainly on the edges and their tone is bright and shimmering. They include the *manjīrā* of the North, the eastern *mandīrā* and the southern *tālam*. This type is common in Hindu devotional music and in dance and dramatic performances.

The South Indian *tālam* are clashed together on the edges, or struck, the edge of one against the inside of the other. Different types are used for marking time, or sometimes for performing *jati* (rhythmic formulae). The *tālam* and *kulittālam* (with larger rims), made of bronze, are used in devotional song-meetings, dance music and some popular theatres; the *nattuva tālam*, one of bronze and one of steel, accompany *bharata-nātyam* and folk-dances; the *brahmatāla*, or *brhattāla*, are larger and are used in temple music. The *tālam* which accompany the *nāgasvaram* have the flat shape of the *jālra* but are thicker.

In the North-West, especially Gujarat, there is a tradition of virtuoso cymbal-playing in which one *manjīrā* is secured in the left hand, and the other, hanging from it by a string, is swung to strike it in many rhythms.

Medium-size rim-cymbals are roughly 8 cm to 15 cm in diameter and 3 mm to 5 mm thick, with a definite flat rim by which they can be clashed face to face. They include the *tāl* of the North (Rajasthan, Uttar Pradesh), the *kartāl* of the East (Bengal and Orissa), the *kasiā jorī* of Gujarat, the *cakvā* of Maharashtra (with wooden handles), the *jālra* and *ilatālam* of the South (Tamil Nadu and Kerala), the Sri Lankan *tālampota* and the *sengkheng* of Manipur. These also are found in devotional and dramatic music. A modern tradition of *tāl* playing is found in Rajasthan, where, in *terā-tālī* ('thirteen pairs of *tāl*'), a woman ties several *tāl* to her legs and other parts of her body and plays them by striking with a pair held in the hands.

Large rim-cymbals are about 15 cm to 35 cm in diameter and have prominent flat rims; the central depression can be quite small. The name *jhānjh* is commonly used in the northern and eastern regions of India, variants including *jhāni* (Santhāl), *jhānj* and *jhān-jhān* (Uraon). This type includes the *brhattāla* (*brahmatāla*) of the South, the *kasala* and *kasale* of Orissa and Karnataka respectively (the latter are asymmetrical), the *tālalu* of Andhra and the very large *bartāl* of Assam. These are often held vibrating together, edge on edge, in long-held notes.

The *tāl* of Maharashtra are made of heavy bronze. They are held one in each hand and struck normally edge to edge; the centre is deeply hollowed. *Tāl* are used for accompanying devotional songs by the Vārkarī community.

ALASTAIR DICK, PRIBISLAV PITOËFF/R

Tal [Gruenthal], Josef

(*b* Pinne, nr Posen, 18 Sept 1910). Israeli composer. Soon after his birth his family moved to Berlin. He studied at the Staatliche Akademische Hochschule with Hindemith and Tiessen (composition), Curt Sachs (music history) and Trapp (piano). In 1927 he established an electronic music studio. During these years he worked as a pianist accompanying dancers and silent movies. In March 1934, with the rise of Nazism, he emigrated to Palestine, becoming a member of Kibbutz Gesher. In 1936 he settled in Jerusalem, where he performed as a pianist, taught piano lessons and played with the newly-founded Palestine Orchestra as a substitute harpist. He was soon appointed to teach the piano and composition at the Palestine Conservatory. His early years in Jerusalem among the intellectual circles dominated by the poet Else Lasker-Schüler are reflected upon in his cantata *Else* (1975).

In 1951 Tal was appointed to a post at the Hebrew University. There he established the first electronic music studio in Israel. His comprehensive acoustical research led to the development of a notational system for computer-generated composition. In 1965 he was among the founders of the department of musicology at the Hebrew University, where he was appointed professor and chair. His awards include the Israel Prize (1971), three Engel Prizes, the Arts Prize of the City of Berlin (1975), the Wolff Prize (1983) and the J.W. Stamitz Prize (1995). He has also been elected an honorary member of the American Academy of Arts and Letters.

Tal's compositional style is characterized by intense and concentrated expressive gestures. The First Symphony (1953), a reflection on his position as a composer in the young state of Israel, is written in a powerful atonal language that communicates his commitment to his German heritage. Its slow movement is dominated by the quotation of a traditional Babylonian Jewish tune (derived from A.Z. Idelsohn's *Thesaurus*) that is transformed in the finale into a lively *horra*. His Piano Sonata (1950) uses a modal folksong by his friend Yehudah Sharett as the basis for a set of atonal variations. Despite his use of quoted material in these works, Tal has rejected the notion that a consistent use of old tunes and modes is his obligation as an Israeli composer. He has argued instead that his music is Israeli by virtue of his daily life in Israel, a modern heterogeneous society open to the world. The influence of Schoenberg is clear in his synthesis of

dodecaphonic organization with traditional unifying devices such as motives and closed recapitulatory processes, as in his powerful cello *Treatise* (1973). The single movement Symphony no.2 (1960) elaborates a sequence of motivic elements, mostly the major 2nd of the opening, against a backdrop of ostinato patterns and extreme registral changes, and the String Quartet no.2 (1964) employs the single pitch F' as a frame for a series of brief contrasting variants of a 12-note row.

Tal's electro-acoustic compositions combine electronically generated sound with conventional instruments and voices. In *Hamavet ba el Sus ha 'Etz Michael* (Death came to the Wooden Horse Michael) delicate electronic sounds merge into the timbre of the chorus; in the Piano Concertos nos.5 and 6 (1964, 1970) virtuoso toccata-like piano-writing forms dialogues with contrasting tape sounds. Although financial difficulties initially limited his operatic writing, a breakthrough came with the commissioning of *Ashmedai* (1969) by the Hamburg City Opera. Its première in 1971 paved the way for a number of additional operas, many the result of collaborations with the poet Israel Eliraz.

Tāla

(Sanskrit: 'clap').

In Indian musical theory and practice the marking of musical metre by means of hand gestures (or alternatively by small cymbals or by drum-patterns), and hence, the metres so marked. In Hindustani music the drum pair *tablā* performs the function of time-keeping through a repeated pattern of strokes called *thekā* in most genres. However, cheironomy is still used in *dhrupad* and in Karnatak concert music. Cymbals are often used in religious music, for example Karnatak *nāgasvaram* music or Newar temple singing (*see* India, §III, 6(ii); Nepal, §I, 2(i)). Each *tāla* pattern comprises a fixed number of equal beats, with claps and silent gestures asymmetrically disposed to facilitate time-keeping. The pattern is considered to be a cycle (*āvart(anam)*), in which the first beat is the culmination of the previous cycle as well as the beginning of the next. The cycle is repeated as many times as necessary to complete the composition and any ensuing improvisation; change of *tāla* in the course of an item is rare in concert music, but it can occur in pre-composed or non-classical music and dance. (*See* India, §III, 4).

<div align="right">RICHARD WIDDESS</div>

Talai, Dariush

(*b* Damāvand, 15 Feb 1953). Iranian *tār* and *setār* player. He began his musical training at the age of 11 at the National Music Conservatory in Tehran, studying with Ali Akbar Shahnazi (1896–1984), who had a profound influence on his playing style. Talāi continued his musical education with a degree in music at the University of Tehran, where he was awarded various prizes on graduation. Between 1971 and 1978 he also studied and taught at the Centre for the Preservation and Propagation of Iranian Music, working with prominent masters including Nur Ali Borumand, Abdollah Davami, Yusef Forutan and Said Hormozi. He also taught at the University of Tehran (1976–9). During the 1970s he performed at concerts organized by the Centre for the Preservation and Propagation of Iranian Music and appeared on television, at the Tālār Rudaki Hall in Tehran and at the annual Shiraz festival.

In 1979 Talai moved to France, combining his international performing career with teaching and research into Iranian music. From 1979 to 1987 he taught at the University of Paris (Sorbonne). He was also a visiting artist at the University of Washington from 1991 to 1992. More recently he has

spent longer periods in Iran and was appointed to teach in the music department at Tehran University in 1993. As a performer Talai is noted for his extensive knowledge of the traditional repertory. He has been regarded as particularly important for his role in the promotion of Iranian music outside Iran.

LAUDAN NOOSHIN

Talbot [Munkittrick], Howard

(*b* Yonkers, NY, 9 March 1865; *d* Reigate, 12 Sept 1928). English composer. He came to England as a child; he was a medical student at King's College, London, and studied at the RCM under Parry, Bridge and F.E. Gladstone. A few early songs were published before he turned his attention to the popular theatre, composing the scores to *Wapping Old Stairs* (1894) and *Monte Carlo* (1896), and achieving fame with the musical comedy *A Chinese Honeymoon*, which toured extensively from 1899 and then ran for over 1000 performances in London from 1901. From 1900 he conducted at various London theatres for George Edwardes, continuing to compose successful scores, of which *The Girl Behind the Counter* (1906) also achieved a long run in America. Talbot also composed several works in collaboration with Monckton, Rubens, Felix, Finck and Novello. Here his greater technical expertise set off to good effect the songwriting abilities of his collaborators, Talbot's ensemble and finale writing being especially good. The best known of these works is *The Arcadians* (1909, with Monckton), from which such numbers as the opening chorus, 'I like London', 'My Motter' and 'Half-past Two' testify to Talbot's inventiveness and craftsmanship.

ANDREW LAMB

Talbot, James

(*b* London, 1664; *d* Spofforth, 1708). English writer on music. He was educated at Westminster School and Trinity College, Cambridge where he matriculated in 1683, becoming a minor Fellow in 1689 and major Fellow in 1690. He played a leading role in the early promotion of Cambridge University Press. He was Regius Professor of Hebrew at Cambridge from 1699 to 1704 when he moved to Spofforth, where he had a rectorship since 1700. He received his doctorate from Cambridge in 1705. His importance to music history derives from his manuscript *GB-Och* Music MS 1187 (formerly owned by Henry Aldrich) which provides copious information on instruments. The manuscript, which was probably written between 1690 and 1700, consists mainly of 250 numbered sheets on which are recorded details of instruments; much of the information was obtained first-hand from leading players and makers (including Gottfried Finger, John Banister (ii), James Paisible, John Shore and William Bull) and from Talbot's examination and measurement of instruments provided by these men. Other pages record tunings and tablatures, or quotations from Praetorius, Mersenne and Kircher. The remainder of the manuscript, including sections on ancient Greek music, is in another hand.

ANTHONY C. BAINES/DARRYL MARTIN

Talbot, Michael (Owen)

(*b* Luton, 4 Jan 1943). English musicologist. He was a junior exhibitor at the RAM (1954–60) and studied the piano and the organ at the RCM (1960–61), then read music at Clare College, Cambridge (BA 1964, MusB 1965, PhD 1968) where his teachers included Nicholas Temperley, Peter le Huray, Thurston Dart, Ian Bent and Charles Cudworth. He joined the staff of the department of music at the University of Liverpool (1968), becoming James and Constance Alsop Professor of Music (1986).

Talbot's research has focussed on late Italian Baroque music, in particular the concerto, the serenata and the music of Albinoni and Vivaldi. He has published important biographical and critical monograph studies of both composers and has edited many instrumental and vocal works by them and their contemporaries. His writings include contributions to identification and attribution, reports of newly discovered works, and studies of instrumental form and style. He is joint editor of the journal *Informazioni e studi vivaldiani*. In 1980, in recognition of his work on the history of Italian music, he was made a Cavaliere dell' Ordine 'Al merito della Repubblica Italiana' and he is an external member of the Ateneo Veneto, Venice.

ROSEMARY WILLIAMSON

Talea

(Lat.: 'a cutting').

A medieval term usually understood to denote a freely invented rhythmic configuration, several statements of which constitute the note values of the tenor of an isorhythmic motet (or of its first section, if diminution is later applied to the tenor).

While medieval writers were far from unanimous in their use of 'talea' and 'color', modern musicology has been influenced by the definitions that Johannes de Muris, the first to mention talea (*c*1340), ascribed to 'some musicians': 'A configuration of pitches and its repetitions are called "color"; a rhythmic configuration and its repetitions are called "talea"' (*CoussemakerS*, iii, 58*b*; cf also 99*a*). Even more precise are the statements of the anonymous author (late 14th century) of an *Ars cantus mensurabilis* (Anonymous V of *CoussemakerS*, iii, 397*b*): 'When the same note shapes [i.e. rhythms] are repeated, but with different pitches, this is called "talla" … When the same pitches are repeated, but with different note shapes, that is "color"'.

While most medieval writers defined 'talea' as a process of repetition, for the anonymous author of the *Notitia del valore* (late 14th century) it denoted the entity ('cutting') to be repeated, which the composer devised by 'dividing [cutting] the tenor into parts'. He therefore referred to two particular motet tenors as 'a tre taglie di valore' (CSM, v, 57). This meaning is consistent with the original sense of the word, and has been adopted by musicologists (the modern usage of 'color' is analogous). It is possible that the large strophes produced by the lengthy taleae of isorhythmic motet tenors account for the appearance of the term, by analogy with the rhetorical term 'taille'.

The differences in medieval opinions are more apparent in the definitions of color (evidently the older term) than in those of talea. 'Color' as the more generic term meant any process of repetition, including purely rhythmic reiteration. Hence Johannes de Muris began his definitions with the statement that 'color in music is the rhythmic identity of a section (passage) repeated several times in the same voice part'. Since rhythmic recurrence is the governing structural principle affecting, to varying degrees, all the voices of an isorhythmic motet, 'color' was the obvious traditional term to apply to it. Only in the tenor does melodic repetition play a role, and even there a subordinate one. Johannes therefore added that while the difference between color and talea 'applied to a good many motet tenors, it does not apply to the upper voices [*ipsis motettis*]', where only the term 'color' is needed. Moreover, the origins of the musical use of 'color' are evidently connected with the upper voices of Notre Dame polyphony.

All the medieval authors cited so far wrote in the 14th century. The two 15th-century authors to mention color and talea were Prosdocimus de Beldemandis and Tinctoris. The latter, writing several decades after the demise of the isorhythmic motet, reversed the above definition; he identified color as rhythmic identity and equated talea with both rhythmic and melodic identity in one voice part (*CoussemakerS*, iv, 180*a*, 189*b*). But as early as the beginning of the century Prosdocimus found it necessary in his *Tractatus pratice cantus mensurabilis* to report elaborately on three different understandings of the two terms, for two of which he cited Johannes de Muris as authority. According to the first opinion 'there is no

difference between color and talea; rather, they are the same, and therefore [Johannes de Muris] defined color and not talea in his treatise' (see the beginning of the latter's definitions cited in the preceding paragraph). Secondly there is the opinion attributed by Johannes de Muris to 'some musicians', which according to Prosdocimus was the most common of the three. The third opinion was the result of intentional compromise: color is identical repetition of rhythms as well as pitches, while talea concerns rhythmic repetition only (*CoussemakerS*, iii, 225ff). Four years later Prosdocimus again mentioned the third definition, but otherwise simply stated that 'color or talea in music is the repetition of like rhythms or like pitches' (*CoussemakerS*, iii, 247*b*). The mention of the possibility of repeating the pitches as well as the rhythms of phrases reflects the appearance of isomelic passages in the upper voices of motets written in the early 15th century, especially those by composers resident in northern Italy.

Tālib bin Gharīb (bin Mustehīl)

(*b* Suhar, Oman, *c*1942). Omani musician. He was the son of a leading musician and servant of the ruling family in Suhar. As a child he learnt drumming, movement, singing and the rules of proper behaviour which govern any performance that is to be considered the enactment of an 'art' (*fann*). In 1956 he followed the route that took many Suharis to Kuwait in search of economic advancement in the oil boom and, sometimes, education; but he disliked being so far from home. After 1970 he worked as a driver on the road from Dubai to Suhar. In 1976 he moved back to Suhar and accepted a job as a driver for the Directorate of Education. A few years later he was placed in charge of transportation for the Directorate. This

offered him the opportunity to serve the arts in Suhar as his father had before him, which Tālib considered his passion and his duty. In 1990 he became the *de facto* head of a group (*firqah*) of artists which performed the 'true' arts of Suhar town, the *razhah* and *lāl al-'ūd* dances, and he participated in all the other arts which are traditionally the privilege of the male servants of African descent. His father, who was by this time completely blind, was still the nominal head of the group, and both he and Tālib remained loyal to the ideals and hierarchies which had largely been pushed aside by progressive modernization. In 1987 the central government had arbitrarily nominated a different set of arts, namely the *wahhābīyah* or *'ayyālah*, as the 'official' arts of Suhar, and as a result of the ensuing conflict, Tālib began to turn his back on performing in 1992, although he continued to join his group when invited to do so.

DIETER CHRISTENSEN

Talich, Václav

(*b* Kromerěříž, Moravia, 28 May 1883; *d* Beroun, 16 March 1961). Czech conductor and violinist. He began to learn the violin with his father, Jan Talich (1851–1915), and subsequently studied the violin with Ševčík and chamber music with Kàan in Prague. From 1903 to 1904 he served as leader of the Berlin PO under Nikisch. He was also greatly influenced by Hanuš Wihan, founder of the Bohemian String Quartet. In 1904 Talich worked as leader of the Odessa Opera orchestra; the following year he became professor of the violin at the Tbilisi Conservatory, and in 1908 first conductor of the newly organized Slovenian PO in Ljubljana. From 1912 to 1915 he conducted opera in Plzeň. In this period he also studied conducting with Nikisch and theory with Reger in Leipzig and deepened his association with leading Czech musicians. In 1918 he gave the première of Suk's symphonic poem *Ripening*, the success of which established his reputation.

From 1919 to 1941 Talich served as principal conductor of the Czech PO, his most important post. During this era he entirely rebuilt that ensemble, creating its distinct sound, giving a number of first performances and making many recordings. In 1924 he organized an internationally acclaimed Festival of Contemporary Music in Prague. He directed the Scottish Orchestra in Glasgow in 1926–7, and from 1926 to 1936 acted as principal conductor of Stockholm's Concert Society orchestra. In 1935, after the sudden death of Otakar Ostrčil and for largely nationalistic reasons, he accepted leadership of the National Theatre in Prague. Talich directed it until 1944, taking much the same view as Furtwängler concerning the artist's obligation to culture during a period of national tumult. Under the occupation he avoided all music associated with the Reich; accordingly, the Nazis viewed him as unreliable. When the Minister of Culture and his German supervisor came on stage to congratulate the company during a performance of *Fidelio* in February 1944, Talich walked out. He was then interrogated by the Gestapo. In May 1944 the National Theatre was closed, and Talich did not conduct for another 19 months.

In May 1945 he was arrested by communist forces on grounds of alleged collaboration. He was imprisoned for six weeks and, although no charges

were ever brought, he long remained suspect in the eyes of the regime. In 1946 Talich was involved in organizing what would become the Prague Spring Festival. At the initiative of his students at the Prague Conservatory, the Czech Chamber Orchestra was founded the same year, becoming a leading centre for training young musicians. He directed it until April 1948, when the Culture Minister, Nejedlý, forced the students to choose a new conductor or face dissolution. They chose to dissolve the orchestra. Talich's students included Ančerl, Krombholc, Mackerras, Ladislav Slovák and Otakar Trhlík. From 1948 to 1956 he made over 40 recordings, principally of Czech music with the Czech PO. In 1949 he founded the Slovak PO in Bratislava, directing it until 1952. Under President Zápotocký he was allowed to return to radio, and towards the end of his life became music consultant to the Czech PO. In 1955 he broadcast the complete Dvořák Slavonic Dances for Czech television. These films have survived and, although his health is visibly impaired, they provide clear evidence of his formidable talents.

Talich's career, perhaps the most underrated of the mid-20th century, was undermined in turn by the Depression, the Nazis and the communist regime. His gifts embraced a strong musical line, natural tempo relationships and a mingled humanity and authority. His methods included a simple baton technique and an emphasis on sectional rehearsals; he frequently rehearsed even the individual string parts separately. He was disciplined and painstaking, determined to arrive slowly at detailed perfection. He regularly doubled wind and brass instruments, and often repeated one work at the succeeding concert in order to allow even more rehearsal time. His 1951 recording of the Dvořák Cello Concerto with Rostropovich reveals him at his most persuasive, with outstanding clarity of attack, subtly interrelated tempos, strong colours and rhythms and complete emotional identification.

Talich conducted the premières of Janáček's Sinfonietta (1921) and numerous orchestral works by Suk and Novák, and enjoyed international success in a wide repertory, notably Mozart, Martinů and the French Impressionists. In 1929 he made the first complete recording of Smetana's *Má vlast* with the Czech PO. He was a member of the Royal Swedish Academy of Music (1928) and the Czech Academy of Arts and Sciences (1936), was made National Artist in 1957 and received decorations from France, Italy, Romania, Sweden and Yugoslavia.

CHARLES BARBER

Talich Quartet.

Czech string quartet. It was founded at the Prague Academy of Musical Arts in 1962 by Jan Talich, Jan Kvapil, Karel Doležal and Evžen Rattay. Its teachers were Josef Micka and members of the Smetana Quartet, and it took the name of its leader's uncle, the conductor Václav Talich. After Doležal had briefly been replaced by Jiří Najnar, in 1975 the ensemble was reorganized, Petr Messiereur coming in as leader and Talich moving to the viola. This combination proved outstandingly successful, especially in France, and the group quickly became second only to the Smetana Quartet among Czech chamber ensembles. Although it had a large 20th-century repertory and played the music of its native country with flair and refinement, it was sometimes criticized for being too cultured and restrained. Its greatest successes were won in the quartets and quintets of Mozart and the quartets of Beethoven, all of which it recorded. It also gave premières of works by Viktor Kalabis, Luboš Fišer and Luboš Sluka. In 1993 Vladimír Bukač replaced Kvapil with no loss of quality; but a further reorganization in 1997, with Jan Talich jr becoming leader and Petr Prause taking over the cello position, proved more problematical and many observers felt that the ensemble was no longer of the highest class.

TULLY POTTER

Talking drum.

Because of its great tonal flexibility, the hourglass pressure drum is sometimes referred to as 'the talking drum', but in many parts of Africa not only do all kinds of drum 'talk', but so also do various wind instruments, string instruments and certain rattles and other idiophones. *See also* Hourglass drum.

In general the term includes any drum (including the Slit-drum) that is beaten in such a way that certain features of an unvocalized text can be recognized by a listener, these features acting as clues to the meaning of the words being drummed. The two main instances in which a drum is used in this way are in signalling and in musical performances especially in part of Africa (for illustration, *see* Ghana, fig.2). The textual features most commonly reproduced on a drum are syllabic tone, stress and quantity, and

phrase or sentence intonation and rhythm, but not all of these are used in any one culture or on any one occasion.

ANTHONY KING/ROGER BLENCH

Talking Heads.

American new wave group. It was formed in 1974 by David Byrne (*b* Dumbarton, Scotland, 14 May 1952; vocals and guitar), Tina [Martina] Weymouth (*b* Coronado, CA, 22 Nov 1950; bass) and Chris Frantz (*b* Fort Campbell, KY, 8 May 1951; drums). Jerry [Jeremiah] Harrison (*b* Milwaukee, 21 Feb 1949; keyboards and guitar) joined in 1977; the group disbanded in 1991. New wave developed out of punk, but by the late 1970s the Talking Heads' music, with its precision and polyrhythms, could not have been more different from the deliberate crudeness of the Sex Pistols. The three original members attended the Rhode Island School of Design, and a kind of arty playfulness and eclecticism marked their music. Initially, they drew upon funk, African pop and minimalism to forge their sound; later, they explored country, Cajun and other genres. Byrne's singing was initially a sort of squawking that reflected his nervousness as a performer; his voice eventually smoothed out somewhat, but his neurotic persona became a permanent part of the group's image. Brian Eno collaborated with the group during the late 1970s and early 80s, producing and writing songs for such albums as *Remain in Light* (Sire, 1980). The group might usefully be described as postmodern, both in its music and because of lyrics that depict disorientation, ironic distance and distrust of centring narratives. In the 1990s, Byrne helped bring popular musicians from Brazil and other countries to the attention of American audiences.

ROBERT WALSER

Talkin' Loud.

English record company. It was founded in London in 1990 by Gilles Peterson (*b* 1965) with the backing of Mercury Records. Peterson was already a well-known club and radio DJ in London and had previously set up a number of other labels, notably Acid Jazz. He aimed to create a recognisable sound in the same way as Motown, 2-Tone, Stiff Records and other specialist labels. With such singles as Galliano's *Power and Glory* and *Prince of Peace*, Incognito's *Always There* and *Don't you worry 'bout a thing*, Omar's *There's nothing like this* and the Young Disciples's *Get youself together* and *Apparently Nothin'*, Talkin' Loud established a style that blended hip hop beats and raps with elements of jazz, funk and latin. Like Acid Jazz, with which the label was often compared, it placed an emphasis on live music at a time when house and techno were popular. However Talkin' Loud had a more varied and less overtly commercial sound that stretched to include rock, dub and poetry, and with an overall tendency towards hip hop rather than jazz funk and rare groove, it generated a genuinely contemporary style which can be heard on such albums as Galliano's *In Pursuit of the 13th Note* (1992), the Young Disciples's *Road to Freedom* (1991) and Urban Species's *Listen* (1994). In 1995 the label shifted its focus towards a new crop of artists notably Roni Size, 4-Hero and Nu Yorican Soul embracing more varied styles including drum and bass and house.

CHARLIE FURNISS

Tallafangi Calabr., Andreas

(*fl* 1440–50). Italian composer. He is known through a brief textless work for four voices in *I-TRmp* 89 (ed. in Cesari, Monterosso and Disertori) and is sometimes credited with a three-voice Sanctus found in *I-TRmp* 92 attributed to 'Magister Andreas'. In the section beginning 'Pleni' the tenor is silent, but a fourth voice, perhaps added by a later hand, enters for this section only. All four voices are low, using tenor and bass clefs.

TOM R. WARD

Tallat-Kelpša, Juozas

(*b* Kalnujai, nr Raseiniai, Central Lithuania, 20 Dec 1888/1 Jan 1889; *d* Vilnius, 5 Feb 1949). Lithuanian composer and conductor. He received his first music lessons from his father, a church organist. After preliminary studies in Rokiškis and Vilnius music schools he entered, in 1907, the St Petersburg Conservatory where he was taught by Vitohls, Lyadov and Steinberg. Having graduated in 1916, he was active in the cultural life of St Petersburg's Lithuanian community, conducting choirs and operettas, and accompanying singers. During the summer months he collected folk songs in Lithuania, settling in Vilnius as a music teacher in 1918. After short studies in Berlin with G.A. Schumann he moved to Kaunas (then Lithuania's capital) and became a prominent figure in the city's musical life. He taught at the J. Naujalis music school (1920–33), then at the conservatory, where he conducted the orchestra and directed opera class; in 1948 he was appointed professor. As head of the music section of the *Lietuvių Meno Kūrėjų Draugija* (Lithuanian Creative Artist's Society), along with the famous singer Kipras Petrauskas and others he co-founded the Opera Theatre and was its principal conductor during the years 1920–41 and 1944–8. More than 30 operas and standard works of the symphonic repertory were performed under his baton. In 1948 he became the first Chairman of the Lithuanian Composers' Union. His vocal music, which consists of solo and choral songs, duets and folksong arrangements (nearly 300 in all, mostly written before 1920), is simple in style, melodious and sincere and is probably the most valuable part of his output. His other works include an *Unvertiŭra lietuviškomis temomis* ('Overture on the Lithuanian Themes', 1945), a Suite for wind quartet on folksong themes (1946), numerous piano pieces including *Tautiški šokiai* ('National Dances', 1918), *Pasaka* ('A Fairy Tale'), *Impromptu* (both of 1919) and *Keturios parafrazės* ('Four Paraphrases', 1946, originally written as a Theme with Four Variations, 1920), as well as incidental music for the stage. He was forced to write a cantata about Stalin (1947, awarded Stalin Prize in 1948), and it was while conducting this work that the composer suddenly died. Two collections of his solo and choral songs were published posthumously in Vilnius (1951, 1955); his only opera *Vilmantė* was left unfinished at his death. Between 1949 and 1993 Vilnius Higher Music School bore his name. His works are mostly published by Švyturys, Muzgiz and Vaga.

ADEODATAS TAURAGIS

Tallián, Tibor

(*b* Salzburg, 12 April 1946). Hungarian musicologist. He studied musicology at the Liszt Academy of Music in Budapest under Szabolcsi, Bartha and Kroó (1964–9), and continued his studies at the University of Vienna on a Herder grant (1971–2). He was a research fellow in the library of the Liszt Academy (1969–72) and in the Institute of Musicology at the Hungarian Academy of Sciences (1972–91); he became deputy director of

the Institute (1995) and director (1998). He joined the musicology faculty of the Liszt Academy in 1976 and held a chair there from 1997. He worked in Rome (1976), New York (1984) and Berlin (1988–90) on research projects, and was awarded the Erkel prize in 1982.

Tallián is one of the leading personalities of Hungarian musicology. His writings on the life and music of Béla Bartók have become an intrinsic part of the Hungarian and international literature on the composer. His main area of research is the history of 20th-century Hungarian music and musical life, with a special emphasis on opera as a genre, opera performance, the concert scene, communist policy on music and the ideology of the decades between 1940 and 1960, and the reception of Hungarian music in the 20th century. He has carried out large-scale archival research on these subjects. As an opera critic he writes on operatic performances in Hungary and abroad, as well as the harvest of contemporary Hungarian operas.

AGNES GÁDOR

Tallinn

(Ger. Reval).

Capital city of Estonia. It was the northern centre of medieval Livonia, ruled by the Livonian knights, but had considerable autonomy as a free Hanseatic city from the 1280s onwards. Despite changing political authority, it remained a Baltic German city up to the end of the 19th century, its commercial and thereby cultural links being with other such cities (Riga, Lübeck).

The first documents concerning music go back to the 14th century. By 1365 the Dominican monastery (founded in 1246) was campaigning for a school separate from that of the cathedral; by 1475 the Dominican school had three teachers and probably included musical studies. New members of the order came from among local people, and the names of several priests testify to Estonian origin. There were also Estonians among students at the town school, which had been founded in 1428 by the church of St Olaus. Here music was important in the curriculum: by 1559 the school was employing cantors who were responsible for music at various churches.

In the 1520s the Reformation arrived, but its spread was interrupted by the Livonian war (1558–83). More documents relating to music survive from

the ensuing period under Swedish rule. The institution of town musicians is recorded from the 15th century to the 18th, when that institution was transformed into the Kapelle, later the nucleus of the opera and concert orchestra. The Revalsche Gymnasium, founded in 1631, became the centre of musical life; the most prominent of its cantors was Johann Valentin Meder (1674–83), whose opera *Die beständige Argenia* was performed by the students in 1680. The school choir and instrumental ensemble, comprising teachers, students and townspeople, performed in the churches of St Nicholas and St Olaus and on festive occasions. In the 17th century there were also musical and theatrical performances in the guild halls and occasional visits by touring companies.

The beginning of the 18th century was overshadowed by the Nordic war and comcomitant famine and plague. In 1710 the city was taken by the Russians, and the war ended in 1721 with the absorption of the Baltic provinces into the Russian empire. In the second half of the century amateur music flourished: the *Revalsche Wöchentliche Nachrichten* published many advertisements for music lessons, printed music and instruments. One such advertisement in 1779 offered locally made fortepianos (though other instrument makers were active before this), and in 1818 a piano factory was founded by Heinrich Falck. The industry continued: in the 1930s the firm of Ernst Hiis (Ihse) emerged from among several smaller workshops, and in 1950 the Tallinna Klaverivabrik was established with Hiis as principal constructor.

In 1784 the Revaler Liebhaber-Theater was founded by August von Kotzebue to perform plays and Singspiele, but there was also opera given by visiting companies, such as Mme Tilly's troupe from Lübeck, which presented *Die Zauberflöte* and *Don Giovanni* in 1795. The Revalsche Theater (renamed Revaler Stadttheater in the 1860s) opened in a new building in 1809, and most seasons included some opera (e.g. *Tannhäuser* in 1853 and 1860).

Two important figures during the first half of the 19th century were the German singer Gertrud Elisabeth Mara (in Tallinn from 1812 until her death in 1833, teaching singing and organizing concerts) and August Hagen (1786–1877), a composer, organist at St Olaus and music teacher at the Gymnasium. He ran a choral society, conducted several choirs and published singing and organ manuals in Estonian. In 1835 an amateur music society was formed, and in 1841 another, the Musikverein, with the aim of arranging regular concert series. The Musikverein had its own chorus and orchestra, its first director being the prominent pianist Theodor Stein, later a professor at the new St Petersburg Conservatory. In the 1840s there were performances of Beethoven symphonies and both Haydn oratorios. Visits by touring soloists (Vieuxtemps played here in 1839) became more frequent after the 1870s, when the railway placed Tallinn on the main route from the west to St Petersburg. Philipp Spitta, who came to teach languages in 1865–6, gave public lectures on music history.

In the second half of the 19th century cultural life became more organized. The city grew, and its ethnic proportions changed: in 1820 there were 34.8% Estonians and 42.9% Germans in the population of 12,902; by 1913 those figures were 71.6% and 8.3% in a population of 116,132. The first

Estonian choral society, Revalia, was founded in 1863, and two years later the most influential cultural organization, the music society Estonia, was established. The latter had a choir and orchestra and occasionally performed Singspiele, even before opening its permanent theatre in 1906. In 1908 it began presenting opera there, and in 1913 it opened a new theatre and concert hall, which was rebuilt after World War II and has remained the city's cultural centre. Regular opera seasons began in 1918–19, and the ballet company was engaged in 1924. In 1949 the theatre company left and Estonia became the national opera.

The city became the capital of the new Estonian republic in 1919. That same year the Estonia society opened a higher music school, which became the Tallinna Konservatoorium (Tallinn Conservatory). Several leading Estonian musicians returned from Russia during or after the Revolution and taught there, among them the pianists Artur and Theodor Lemba, the hornist Jaan Tamm and the composer Artur Kapp. After the Soviet take-over, the conservatory was restructured as a university-level institution, with lower courses offered by the new Tallinna Muusikakool (Tallinn Music School). In 1993, two years after the country regained independence, the conservatory was restyled the Eesti Muusikaakadeemia (Estonian Academy of Music).

Regular broadcasting began in 1926, controlled from 1934 by Riigi Ringhääling (State Broadcasting, succeeded by Eesti Raadio), which formed its own orchestra. This sometimes combined with Estonia's orchestra, for example to perform Stravinsky's Symphony of Psalms in 1936, and in the early 1940s it reached high standards under Olav Roots. It remained under the radio until 1975, when it became the Eesti Riiklik Sümfooniaorkester (Estonian State SO); its conductors have included Roman Matsov (1950–63), Neeme Järvi (1963–79) and Peeter Lilje (1980–90), and it has made recordings of new Estonian music.

Great changes took place after the reabsorption of the state into the Soviet Russian domains in 1940, and especially after the cessation of hostilities in 1944. Many musicians had emigrated; all private societies were closed and institutions nationalized. The ENSV Riiklik Filharmoonia (State Philharmonia of the Estonian Soviet Socialist Republic) was created in 1941 as the central concert agency, under whose auspices the ESSR Riiklik Akadeemiline Meeskoor (State Academic Men's Choir, widely known by the acronym RAM) was founded in 1944 by Gustav Ernesaks. Throughout the Soviet years this choir was the most popular representative of Estonian music; in 1989 it was renamed the Eesti Rahvusmeeskoor (Estonian National Men's Choir). A full-time mixed choir was formed in 1945 by the radio, the Eesti Raadio Segakoor, and the two choirs joined the Estonian State SO to give most oratorio performances in the city during a period of several decades.

Nationalization also changed a private music museum (founded in 1934) into the Teatri- ja Muusikamuuseum (Theatre and Music Museum) in 1940. Thanks to the state system by which new music was controlled by the Ministry of Culture during the Soviet era, and thanks to its own work in collecting earlier documents, the TMM has become the central archive of

Estonian music. It also has a small collection of historical and folk instruments.

More recently founded performing groups include the Tallinna Kammerkoor (Tallinn Chamber Choir, particularly important from its foundation in 1966 into the 1970s, for both modern and older unaccompanied music), the early music ensemble Hortus Musicus (1972, led by Andres Mustonen) and the Eesti Filharmoonia Kammerkoor (Estonian Philharmonic Chamber Choir, professional from 1981 onwards and conducted by Tõnu Kaljuste), which has been the outstanding representative of Estonian music abroad (Pärt, Tormis) and of choral classics at home.

Independence restored pluralism to musical life, and various societies were founded or refounded. Among competing concert organizations, the Philharmonia's successor, Eesti Kontsert, remains the leader. Best known of the festivals are the Estonian Song Festivals (Laulupidu), which have often been accompanied by international choral competitions, oratorio performances and other events. There are also the Tallinna Orelifestival (Tallinn Organ Festival, held each August), the Barokkmuusika festival (spring) and Nyyd, a festival of contemporary music.

URVE LIPPUS

Tallis [Tallys, Talles], Thomas

(*b c*1505; *d* Greenwich, 20 or 23 Nov 1585). English composer.

1. Life.

PAUL DOE/DAVID ALLINSON

Tallis, Thomas

1. Life.

Although no record of his childhood has been found, Tallis must have been born in the first decade of the 16th century probably in Kent, the county with which he had lifelong professional and family connections. His earliest known documented appearance is in the accounts for 1530–31 of the modest Benedictine priory of Dover, which record that a 'Thomas Tales', the 'joculator organorum' (organist), had received an annual salary of £2 (see Haines). His name appears among the general household staff; no other musicians are listed and it is likely that the priory's resources for the performance of polyphony were sparse. Perhaps Tallis was able to draw upon the singers employed by Dover's nearby parent monastery, Christ Church, Canterbury, which boasted lavish musical provision. Dover Priory was dissolved in 1535 and there is no record of Tallis's departure; we next encounter him in London, where his name appears on the 1537 and 1538 payrolls of the church of St Mary-at-Hill, noted for its music. Whether he was a singer or the organist is not stated. Tallis undoubtedly came into contact with some of England's foremost musicians during his time at St Mary-at-Hill; he may also have come to the attention of the abbot of Holy Cross, Waltham, whose London residence stood nearby, for towards the end of 1538 he moved to Waltham Abbey in Essex, becoming one of the most senior members of the extensive musical foundation there. Unfortunately for Tallis the abbey was dissolved on 23 March 1540 (it was the last monastic foundation to fall); as a relative newcomer he was not granted a pension, instead being paid off with 20s. in outstanding wages and 20s. 'reward'. He seems to have taken with him a volume of musical treatises copied by John Wylde, a former preceptor of the abbey; the book has the autograph 'Thomas Tallys' on its last page (*GB-Lbl* Lansdowne 763).

Tallis returned to East Kent, finding employment at Canterbury Cathedral, which was being refounded as a secular establishment with a much expanded choir of ten boys and twelve men. An undated list of staff recruited to the new establishment (Canterbury, Dean and Chapter Library, MS D.E.164; probably from summer 1540) lists Tallis first among the singing men. He appears in the cathedral records of 1541 and 1542 but not in 1543, the year in which he probably began to serve full-time at the court as a member of the Chapel Royal (he may have been helped in securing the position by Cranmer, Archbishop of Canterbury). Although there is no record of his enrolment at court, Tallis's name appears on a lay subsidy roll of 1544, and in a document of about 1545 (*Lbl* Stowe 571) his name is 16th in a list of 32. In a petition of 1577 Tallis claimed to have 'served yo[u]r Ma[jes]tie and yo[u]r Royall ancestors these fortie yeres', implying that his association with the court may have begun even during his employment at St Mary-at-Hill.

Tallis remained in the royal household until his death, serving under Henry VIII, Edward VI, Mary Tudor, and finally for more than half of the reign of Elizabeth I. He undoubtedly acted as an organist throughout this period, but was not so designated until after 1570. As an organist his duties would have included the rehearsal of the singing-men. Harley has speculated that Tallis shared with the Master of the Children, Richard Bower, responsibility for training the boys, probably at this time including William Byrd, with Bower teaching singing and Tallis keyboard and composition. However, he had always been active as a composer as well, and in the middle decades of the century the provision of new vocal polyphony for the royal chapels must have occupied much of his time and earned him great prestige. In 1557 Queen Mary granted to Tallis and Bower jointly a 21-year lease of the Kentish manor of Minster in Thanet, with the considerable annual income of £91 12s. The royal household accounts for the first year of Elizabeth's reign contain the entry 'In bonis Thomas Talys … 40li', which has been thought to record a gift of this amount, but which is more likely to represent an assessment for the purposes of a subsidy or forced loan to the queen, and confirms that Tallis was living in fairly comfortable circumstances at the time. Rapid inflation had evidently changed that situation by the time Byrd joined the Chapel Royal in 1572, for in 1573 the two men petitioned the queen for some source of additional income. On 22 January 1575, she responded by granting them an exclusive licence to print and publish music, the letters-patent issued for this purpose being among the first of their kind in the country (seeillustration; printed in full in E.H. Fellowes: *William Byrd*, 2/1948, p.7). Later that year there duly appeared the *Cantiones sacrae*, an anthology of Latin motets to which Tallis and Byrd each contributed 17 compositions, perhaps in reference to the 17th year of Elizabeth's reign. Financially the undertaking was a failure, for a second petition followed in 1577 resulting in the grant of a joint lease to the two composers of crown lands with annual rents totalling £30.

In or around 1552 Tallis married a woman named Joan, who survived him by nearly four years. There is no evidence that they had any children (Tallis's will mentions a cousin, John Sayer, living in the Isle of Thanet, but neither his nor his wife's will gives much evidence of other family connections). During later life, like many of the Gentlemen of the Chapel Royal, Tallis lived in Greenwich, probably in a rented house close to the royal palace (tradition holds that he lived in Stockwell Street). Whether Tallis ever owned his house in Greenwich is uncertain (Joan's will of 1587 describes her home as 'lately purchased'). The Bodleian Register and the Cheque Book of the Chapel Royal disagree as to the date of Tallis's death, the former giving 20 November 1585 and the latter 23 November. He was buried in the chancel of the parish church of St Alfege; his epitaph, lost in the subsequent rebuilding of the church, was recorded by Strype in his *Continuation of Stowe's Survey of London*. (The texts of the epitaph, and of both wills, are printed in TCM, vi, 1928, pp.xv ff; the wills are also printed in Harley, Appx C.)

The potential significance of the first bequest in Joan Tallis's will ('to m^r Anthony Roper esquier one guilte bowle with the cover therunto belonginge in respect of his good favors shewed to my late husband and mee') has been persuasively argued by Bennett. He has shown that the beneficiary was almost certainly the grandson of the Catholic martyr Thomas More and

member of one of Kent's most influential – and most notoriously recusant – families, Anthony Roper (*c*1535–1597). As Bennett has commented, 'The phrase "good favours" suggests that Roper and Tallis were linked in some sort of patron/client relationship' (p.42), the possibilities including links at Canterbury and at the court. Bennett concluded that Tallis and the Ropers might have had a similar relationship to that which Byrd enjoyed with his patrons the Petres.

Perhaps the most interesting aspect of such a relationship would be the potential religious connections; Roman Catholic Masses were certainly celebrated at the family chapel at Well Hall, Eltham, less than three miles from Greenwich. Musicologists have disagreed about Tallis's religious convictions: he has been variously claimed as a Protestant, a Catholic and (most usually) a pragmatist who avoided religious controversy. However, Bennett's speculations, taken with other evidence such as Tallis's long and fruitful association with the ardently recusant Byrd (and indeed Byrd's choice of Tallis as godfather to his son), and the heartfelt expressivity of late works such as *In jejunio et fletu* and the Lamentations, may shift the balance of plausibility towards a view of Tallis as a committed Catholic who never relinquished his faith, however equally he served his successive regal and ecclesiastical paymasters.

Tallis, Thomas

2. Music.

(i) Introduction.
(ii) Latin-texted church music.
(iii) English church music.
(iv) Secular and instrumental music.
Tallis, Thomas, §2: Music

(i) Introduction.

Tallis's compositional career spanned decades of unprecedented political and religious turbulence whose effect on English music was profound. Musical genres and styles declined, mutated or were invented afresh in response to the liturgical and doctrinal demands of the moment. From extended votive antiphons such as *Salve intemerata* to succinct Anglican service music, Tallis's diverse output covers almost every musical genre used in the English church during the 16th century. However, style was not determined only by religious circumstances: it is likely that the profound differences between ostensibly early and late works of Tallis (for example, the reduction in melismatic writing and the corresponding growth in chordal homophony, and the tendency for imitation to become less decorative and more structural) may be attributed equally to the influence of continental musical developments on the native style. In this way, political and artistic imperatives converged to change the style of Tallis and many of his contemporaries.

The secret of Tallis's success in surviving – not to say thriving – during such a period of turmoil lay in his combination of pragmatism and perfectionism. He was happy to turn good material to new purposes (as in his revision of *Gaude gloriosa Dei mater* from an English-texted anthem to a Latin-texted antiphon, on which see below; or the conversion of instrumental fantasias into motets such as *O sacrum convivium* and

Salvator mundi (ii)); he moved flexibly between genres, invoking old-fashioned or progressive features as circumstances demanded, and during the middle years of the century he must have moved rapidly between these idioms (from simple anthems such as the homophonic *Remember not* to ambitious and lengthy votive antiphons such as *Gaude gloriosa Dei mater*). His perfectionism is revealed by his habit of revising his compositions, sometimes at a level of mere detail but often on a large scale; these 'second thoughts' are revealed by disparities between manuscript sources, or between manuscript versions and those published in the *Cantiones sacrae* of 1575 (see Milsom, 1983 and 1988). Tallis's lack of complacency meant that even in his old age he continued to develop his musical language and to explore compositional problems, and not only in the obvious sense of meeting the logistical and technical challenges of writing for 40 voices in *Spem in alium*. *Derelinquit impius* and *In jejunio et fletu* – perhaps his last motets, written around his 70th year – are highly original essays in a harmonically conceived, chromatically inflected expressive style that reveal a startlingly fertile imagination.

Many of Tallis's works, especially those Latin-texted compositions that are of an ostensibly early date, have survived in sources that are remote from their date of composition and the circumstances of performance, making the establishing of a chronology of the composer's music extremely difficult. The work of John Milsom (1983) represents the most thoroughgoing and convincing attempt to order and date Tallis's works on the basis of external (source) and internal (stylistic) evidence. Despite the problem of dating Tallis's works and the bewildering variety of genres to which he contributed, his musical personality is consistent (the very earliest works aside): his compositions are supremely crafted, with a knowing sense of where to place a dissonance; in performance the effect is often one of muted richness. In his Latin-texted works Tallis transmuted the inherited musical language of pre-Reformation England and in adapting it contributed to its survival for another generation; in his Anglican music he established the formal and stylistic norms of an entirely new repertory that, under reforming pressures, might have fallen into drabness. Through all its changes the English court and Church were fortunate to have the music of Tallis as their ornament.

Tallis, Thomas, §2: Music

(ii) Latin-texted church music.

Votive antiphons were strongly cultivated in pre-Reformation England until the 1530s when they were attacked by reformers such as Cromwell and Cranmer. Three such pieces by Tallis, all in five parts (*Ave Dei patris*, *Ave Rosa* and *Salve intemerata*) are probably his earliest surviving works. They follow the traditional formal scheme of two halves of roughly equal duration, the first in triple metre, the second in duple, with frequent scoring contrasts that coincide with fresh units of text. *Ave Dei patris* is almost certainly the earliest piece by Tallis that we have; it has all the hallmarks of an apprentice work (it closely shadows Fayrfax's setting of the same text in terms of mode, scoring, section breaks and even some motivic material) and betrays its author's youthful inexperience (the setting lacks the assurance of its exemplar in the control of antiphony and imitation, and pacing is often misjudged). The work's tenuous state of survival

(incomplete, in sources compiled during or after Elizabeth's reign) suggests that the young composer was conscious of its shortcomings and chose to forego an opportunity to establish it in the cathedral repertory, withholding it from the copyist of the new collection of polyphony being assembled for Canterbury Cathedral in 1540 or 1541 (now known as the 'Henrician Partbooks', *GB-Cu* Peterhouse 471–4); he did, however, supply the copyist with his other antiphons, *Ave Rosa* (which similarly betrays youthful inexperience) and the more assured *Salve intemerata*, along with the mass setting based upon it. That *Ave Dei patris* has survived at all is a testament to the prestige that became attached to Tallis's name during his subsequent career.

Salve intemerata, with its mixture of modern imitative techniques and older procedures, is an especially impressive achievement considering its long, closely-argued prose text which demanded of Tallis the production of sustained musical paragraphs (again he probably used an exemplar, this time Taverner's *Gaude plurimum*). Intriguingly, *Salve intemerata* is found in the partbook *Lbl* Harl.1709, sole survivor of a set of five, which contains music from the Eton Choirbook and dates from the late 1520s (see Sandon, 1993), making it likely that Tallis had composed the antiphon by about 1530 (or in any case shortly before we hear of him at Dover Priory). The mass setting based upon the antiphon is transmitted only by the Henrician Partbooks, and was probably composed several years after the antiphon since it is noticeably more cogent. The quoted material is used concisely and the joinery between it and newly-composed material is impressive. With each successive movement Tallis's reliance on the model diminishes; thus while the Gloria draws almost entirely upon material from the antiphon the Agnus Dei is substantially newly-composed. The so-called 'parody' mass was a rarity in England; only a handful of earlier examples are known, most notably Taverner's *Mater Christi* and *Small Devotion* Masses; thus Tallis's first known essay in the genre was, at least in spirit, modern.

The four-part *Sancte Deus* is a succinct and intimate votive antiphon addressed to Jesus. It has often been said that its short phrases, cadentially-orientated style and Christocentric text show that Tallis's music was affected by the winds of doctrinal change during the late 1530s; while this may be partly true the setting is not especially innovatory, being close in spirit and substance to Taverner's *Sancte Deus* (which was almost certainly composed about a decade earlier for evening devotions at Christ Church, Oxford). The short antiphon to Mary or Jesus became increasingly popular during Henry VIII's reign and gradually supplanted the large antiphon; like other smaller-scale musical forms, both sacred and secular, it tended to absorb continental features such as imitation and antiphony more readily. The four-part *Magnificat* setting is, like *Sancte Deus*, scored for men's voices but shows greater evidence of inexperience, and so may have been composed during the 1530s or earlier. Tallis followed a text-setting scheme that had been standard in England for about a century but which was beginning to be superseded during the 1530s: only the even-numbered verses are set, in contrasting scorings, and the tenor is a faburden.

The Latin-texted *Magnificat* and *Nunc dimittis* pair, which survive only in an Elizabethan source, were long thought to have been composed for use in association with the Latin translation of the Prayer Book made by Walter Haddon and published in 1560 with the Queen's approval for use in universities, colleges and at court. The two canticles appeared in close succession within the Anglican evensong service, whereas in the Sarum rite they were sung at separate services, and so it was reasoned that Tallis would not have had cause to link the two settings musically if he had composed them before the Reformation. However, an examination of the inventories of two significant choral foundations, Magdalen College, Oxford (1522/4) and King's College, Cambridge (1529) (reprinted as Appendices III and IV of *HarrisonMMB*) suggests that composers had begun to regard the *Magnificat* and *Nunc dimittis* as a musical pair well before the Reformation (see also Sandon, 1997–). In this light, the likely date of composition for Tallis's paired setting may be plausibly revised, in accordance with stylistic evidence, from the 1560s to the 1540s.

The move towards a less florid style during the 1530s accelerated during the last years of Henry VIII's reign, in part through the direct influence of Cranmer and other reformers who demanded audibility in word-setting and greater simplicity in musical style, but also because of a growing awareness among composers about recent developments in continental music, where imitation tended to be less ornamental and more structural, and where there was an increasing desire to represent or express momentary textual meaning. Tallis's Mass for four voices is predominantly syllabic, proceeding in chordal homophony, and belongs to a group of shorter mass settings, by Taverner, Sheppard and others, that lack a cantus firmus and are conceived in a relatively plain style. Tallis's setting contains occasional infelicities of part-writing and could conceivably have been composed at about the same time as the Mass *Salve intemerata*; on the other hand, it is not far removed from the style of Edwardian English-texted works such as the four-part *Benedictus*.

After six years of Protestant liturgy under Edward VI (1547–53), the Catholic Mary Tudor set about undoing the religious reforms of the preceding decades. For church musicians this meant a revival of the large-scale forms of mass, votive antiphon and respond in a luxuriant polyphonic style. Tallis, now in his mid-forties and well established in the Chapel Royal, seems to have responded with enthusiasm: it is possible that his six-voice votive antiphon *Gaude gloriosa Dei mater* dates from this time. Certainly, the assured handling of its monumental proportions and sumptuous textures make it likely that this was the last of his antiphons to be composed. The work follows the traditional pre-Reformation disposition into two roughly equal halves, in perfect and imperfect time respectively, each scored for successive groups of solo voices (including an exuberant double gymel for divided trebles and altos at 'Gaude Maria, quam dignum laude') and building to forceful tuttis. Tallis achieved coherence mainly through the use of flexible imitative expositions, which dovetail one into the next, to shape the harmonically-driven polyphony; momentary climaxes are achieved as an idea is passed up the texture to the topmost voice, where it often appears in rhythmic or intervallic extension. *Gaude gloriosa* is an essentially conservative creation that does not break new ground; however, it marks the consolidation of Tallis's musical language into a compelling,

flexible style capable of sustaining long-term argument across a large canvas.

It is tempting to read the text of *Gaude gloriosa* as a stream of complimentary epithets directed not only at the Virgin Mary but also at the eponymous queen, restorer of the true faith. However, it is possible that Tallis may have conceived the work sometime earlier and in different circumstances. A manuscript fragment discovered in a wall cavity in 1978 (now *GB-Occ* 566) dates from the mid-century and preserves one voice-part of an English-texted version of the work (with sufficient musical variants to suggest that the Latin-texted version known today represents a revision). Milsom (1982) has suggested that *Gaude gloriosa* may therefore have been in existence – in some form – by the close of Henry's reign, and that the English contrafactum may have been made before or during Edward's reign; he also admitted the possibility that the adaptation was made following the death of Mary. Nevertheless, given that other composers, most notably William Mundy with his celebrated *Vox patris caelestis*, made major contributions to the votive antiphon genre during Mary's reign, a Marian date for *Gaude gloriosa* in its final form remains most likely.

The only work that can be dated with any certainty to Mary's reign is the seven-voice Mass *Puer natus est nobis* which was probably written in 1554 for performance at Christmas during Philip of Spain's residency in London after his ill-fated marriage to the queen. The unusual choice of cantus firmus, the Mass introit 'A boy is born to us, and a son is given to us whose government shall be on his shoulders', would have been doubly appropriate since Mary was believed at this time to be expecting an heir. The low-voice scoring suggests that the work was conceived for performance by the gentlemen of the English and Spanish royal chapels in combination, as Philip's choir lacked trebles. Perhaps Tallis was writing to a commission (he would have been unlikely to select such an inconveniently short cantus firmus voluntarily); if so he rose to the challenge magnificently, producing a mass setting that pays homage to continental models while remaining true to the conventions of the English pre-Reformation festal mass. The resulting composition cannot be categorized easily; as Milsom commented, the Mass is 'clearly an enormous experiment' (1983, i, 147). The cantus firmus treatment is old-fashioned in its strictness yet virtuosic in its ingenuity: Tallis assigned a number to each note of the introit, depending upon which of the five vowels it carried ('a' was worth 1 and 'u' worth 5; thus 'p*ue* r n*a* t*u* s' produced the durations 5–2–1–5). These factors were multiplied by the prevailing time unit of each mass movement. The whole chant is used only twice through, once in the Gloria/Credo and once in the Sanctus/Agnus; in several sections (such as the first Agnus Dei, where the time unit is the dotted breve) it proceeds in extremely long values. The internal proportions of each movement may also have been calculated around symbolic numbers (see Kerman, 1993). Although Tallis employed full texture almost throughout the mass – a 'progressive' feature – the rich, melismatic sonorities produced are conservative in spirit. The most overtly 'modern' feature is the use of canon in the top voices during the second Agnus Dei: Tallis was evidently aware of the continental fashion for ending mass settings with a display of technical virtuosity. (For a detailed critical

treatment of the mass, see Kerman, 1993.) The editors of Tudor Church Music could publish only fragments of the Mass (vol.vi, 49–61), but the discovery in 1960 of most of the remainder in the partbooks of the Madrigal Society in London has permitted all but the Credo to be satisfactorily reconstructed.

For several groups of Tallis's Latin-texted sacred works, including responds and Office hymns, establishing secure dates of composition is virtually impossible since their style is determined primarily by liturgical function. However, because *Hodie nobis*, *In pace* and *Audivi vocem* are responds of the solo type, which was becoming old-fashioned by the end of Henry's reign, it is likely that these were composed earlier (source evidence also seems to confirm a Henrician date). These works follow a traditional procedure: the sections of plainchant normally sung by soloists are cast into four-voice polyphony, with the notes of the chant scattered across the texture using a paraphrase technique (except in *Hodie nobis*, which makes little use of the chant). The choral sections of plainchant are retained as such. Taverner, with *Dum transisset Sabbatum*, had pioneered the choral respond, which reverses this groundplan (i.e. solo sections are chanted and chant for the choir is set as an equal-note cantus firmus within polyphony); Tallis composed six responds that follow this procedure (*Videte miraculum*, *Dum transisset sabbatum*, *Loquebantur variis linguis*, *Homo quidam fecit*, *Candidi facti sunt* and *Honor virtus et potestas*), at least some of which are undoubtedly Elizabethan. The restrictions of such a severely ritual design inspired Tallis to some of his noblest music, from the hypnotic dissonances at the opening of the sensual *Videte miraculum* to the sheer rhythmic audacity of *Loquebantur variis linguis*.

The start of Elizabeth's reign and the Act of Settlement of 1559 may seem in retrospect to mark the beginning of a period of growing stability in the English church; at the time, however, the emerging Protestant settlement must have seemed as contingent and subject to reversal as the preceding wave of Catholicism. At court, composers continued to set Latin texts, and some of these works (in particular, chant-based hymns and responds) would have been deemed acceptable for use within the queen's private services, which were more elaborate than those held in many more Puritan cathedrals. Tallis's later Latin-texted music seems to divide between such 'neutral' works suitable for performance by the Chapel Royal and those that appear to be more subjective essays in personal expression. The former category includes works that bear obvious signs of continuity with ritual music of the past: the chant-based choral responds *Honor, virtus et potestas* and *Candidi facti sunt*, for example, use a fluid imitative language, with constant rhythmic and intervallic mutation of text-based points around a monorhythmic cantus firmus. The music has a seamless, effortless quality; the imitated ideas are characterful and never used mechanically. These particular responds were published in the 1575 *Cantiones Sacrae* and no manuscript copy survives that is not derived from the prints, and so a late composition date is likely (see Milsom, 1983, i, 37). The chant-based hymns *Sermone blando* and *Te lucis ante terminum* are also likely to be products of Elizabeth's reign; they show Tallis entirely at ease with a chordal, syllabic and metrically regular style that often flowers briefly into melisma at phrase ends. Interest is maintained through the planned modulation of phrases, anticipations of chant material in the free voices,

and differentiated inner part motion. The hymn *O nata lux de lumine* is almost certainly Elizabethan, but unlike *Sermone blando* and *Te lucis ante terminum*, all liturgical vestiges (*alternatim* setting, the quotation of chant within the polyphony and the need for chant verses to complete the work) are absent. Despite its near-continuous homophony the work is a gem: phrase lengths are cleverly varied, modulation is swift and well-planned, and the occasional inner part motion is motivically cogent.

Tallis joined the mid-century fashion for the 'psalm-motet', a genre cultivated by Tye, White and Mundy that was, to some extent, the successor to the techniques that had been used in the votive antiphon. His *Laudate Dominum* and *Domine quis habitat* almost certainly date from the 1560s: they are written in a thoroughly modern style, imitative expositions alternating with homophony. The writing is predominantly syllabic; melisma was by this time one available expressive resource among many. *O sacrum convivium* may also have been composed in the 1560s; it was first conceived as an instrumental fantasia and then radically revised for publication in 1575 (see Milsom, 1985 and 1988). An English-texted version, *I call and cry*, may also date from the mid-1570s; both texts fit equally well to the music, causing scholars to disagree about which represents Tallis's intentions. Since it was published with a Latin text in 1575, perhaps this version should take precedence; on the other hand, the composer may have authorized the English version since it dates from his own lifetime. It is a superbly crafted motet whose cogency is achieved by means of pervading imitation and climactic sequential repetition.

Salvator mundi (ii) also seems to have begun life as an instrumental fantasia; it was probably conceived as a two-part canon (at the octave) with a bass part, and may have had its first five-voice incarnation as *When Jesus went into Simon the Pharisee's house*. The Latin-texted version represents a further and final revision, in which the inessential (non-canonic) voices were substantially recomposed. *Salvator mundi (i)* is, like *O sacrum convivium*, cast in the *ABB* form that was fast becoming standard in the English anthem. It has been unjustly singled out for the rigidity of its imitative procedures (Kerman, 1966), but in fact only the opening and closing sections could be criticized as overly predictable, and even then their counter-materials and musical joinery are of peerless quality. On the contrary, from 'qui per crucem' onwards the imitation is suggested rather than actual (entries are rhythmically and metrically congruent), and among the features that strike the ear are the rising sequence in the treble, emphasizing the words 'crucem' and 'redemisti' and the treble/bass canon at 'auxiliare nobis', the first word being set to one repeating note.

Milsom has suggested that *Salvator mundi (i)* may represent the start of the final stage of Tallis's development as a composer: a move towards textures in which the voices do not contribute continuously and equally to the prevailing musical discourse; the start of a decrease in the importance of pervasive imitation as a generator of musical structure and a search for new agents of unity, continuity and contrast. Tallis began to explore the possibilities offered by canon, sequence, ostinato, modulation and chromaticism; at the same time his text choices grew palpably more

subjective (and his works therefore less suitable for Chapel Royal performance).

It is likely that *Suscipe quaeso* is one such late work (all surviving manuscript versions were copied from the *Cantiones sacrae* prints, suggesting a composition date shortly before 1575). It is a setting of a long, penitential non-liturgical text of a type also used by Tye (*Peccavimus cum patribus*) and Byrd (*Tribue, Domine*). Tallis engaged unusually closely with his text: the seven voices are used in various combinations with great flexibility, moving from strict imitation and the freer development of motivic cells to whole phrases of dramatic homophony (most memorably for 'peccavi', 'I have sinned'). Much of the writing is syllabic; melisma is introduced only at cadences or as a deliberate effect. The result is a seamless dramatic whole, an integrated musical language that amplifies the meaning and import of the text. Although some scholars have considered that *Suscipe quaeso* may have been written at about the same time as the Mass *Puer natus est* on account of its similar, unusual scoring and the suitability of its text for the ceremony in which Cardinal Pole absolved England from schism in November 1554, the evidence of the sources and the musical style (which is closer to the sound world of *Spem in alium*) makes a late date far more likely. Two motets with similarly 'confessional' texts, *Mihi autem nimis* and *Absterge Domine*, are also almost certainly Elizabethan.

The two sets of Lamentations were probably composed in the mid- or late 1560s, when the practice of making musical settings of the Holy Week readings from the Book of Jeremiah enjoyed a brief and distinguished flowering in England (the practice had developed on the continent during the early 15th century). Tallis set the first two lessons for Maundy Thursday in the Sarum rite. His text contains slight, inconsequential variations from the known specified text; these have led scholars to describe these compositions as non-ritual, independent motets and to speculate that Tallis was writing in an allegorical, recusant spirit. While the likely expressive appeal of the texts to Tallis's composing imagination and (in all probability) Catholic heart is obvious, it should not be assumed that these works were never used liturgically, nor should it be assumed that he 'doctored' the texts for affective reasons (as has been claimed similarly about Byrd's setting). An examination of the contents of a contemporary manuscript (*Lbl* Roy.App.12–16) by Flanagan has shown that polyphonic Lamentations with near-identical textual irregularities (the wrong Hebrew letters at the start of verses, odd cuts in the text) were in circulation in England at the time and that they may have been used liturgically, albeit presumably in a private, recusant context. Tallis included the customary opening and closing formulae (opening with 'Incipit Lamentatio' or 'De Lamentatio Jeremiae prophetae' and ending with 'Jerusalem, Jerusalem, convertere ad Dominum Deum tuum') and also follows the convention of setting the Hebrew letters that mark off the verses (Aleph, Ghimel, Heth etc.) in rich melisma. Tallis integrated every compositional resource at his disposal – imitation, expressive modulation, homophony, antiphony – to produce soulful settings that rank among his finest works.

Two further Lenten works, the responds *Derelinquit impius* and *In jejunio et fletu*, are almost certainly among the last that Tallis composed. They are

markedly 'experimental' settings of penitential texts that seem especially apposite to the plight of the recusant Catholic community. *Derelinquit impius* is a plea for the sinful to return to the Lord, while *In jejunio* tells of weeping priests who beg to save their heritage from destruction. In the former work Tallis was clearly preoccupied with the expressive possibilities of modulation, of denying the gravitational pull of a 'tonal centre', a concern signalled at the outset by an imitative exposition in which voices enter on unexpected degrees of the scale. The work is harmonically conceived, with much of its interest achieved by chromatic means. *In jejunio et fletu* takes this tendency further, dispensing with standard imitative techniques altogether and replacing them with canon and repeating blocks of texture; in addition the nominal 'tonal centre', G, is not established until the closing bars, thus creating a disorientating aural effect.

It was long speculated that Tallis's monumental 40-voice work, *Spem in alium*, was inspired by the example of Alessandro Striggio (i). Indeed, the two composers probably met in London in the summer of 1567 during Striggio's visit to the English court on diplomatic business (see Fenlon and Keyte). Striggio was completing a tour of European courts during which he had presented a 40-voice mass (with a 60-voice Agnus Dei); it seems that in Protestant London he presented not the mass but the 40-voice motet *Ecce beatam lucem*. The suspicion that Tallis's work was written in competitive emulation of Striggio's is confirmed by an account of 1611 in the notebook of one Thomas Wateridge, a law student at the Temple (first published by Fleetwood Sheppard and then forgotten until attention was called to its existence by Roche in 1981). Wateridge reported how a music-loving duke 'asked whether none of our Englishmen could sett as good a songe' as that which had been sent into England by the Italians. 'Tallice beinge very skilfull was felt to try whether he would undertake ye Matter, wch he did and made one of 40 partes wch was songe in the longe gallery at Arundell house.' It may be presumed that the duke in question was Thomas Howard, 4th Duke of Norfolk, and son-in-law of Henry Fitzalan, 12th Earl of Arundel (*d* 1580). Arundel House was Henry's London home; he possessed a vast musical establishment there and at his country residence, Nonsuch Palace. The Arundel connection is given further credence by the appearance of a score of *Spem in alium* in a 1596 catalogue of music in the library at Nonsuch. Wateridge's anecdote allows us to establish a relatively secure dating for *Spem in alium*, between Striggio's visit in the summer of 1567 and Norfolk's execution in January 1572; Stevens (1982) made a convincing case for the first performance being given for the Duke of Norfolk in London after his release from prison in August 1570. Milsom (1983) has speculated that Tallis may in fact have conceived the work specifically for the country residence: the banqueting hall at Nonsuch Palace was octagonal and possessed four first-floor balconies, which might have tempted the composer to indulge in a spatial, as well as purely musical, conception. An examination of *Spem in alium* shows that, where Striggio's composition was probably designed for semicircular performance, Tallis had designed his music to be heard 'in the round', with the listener seated within the circle of performers. As Milsom commented, the exchanges between different choirs 'acquire a more structural significance, for they take on the quality of a pair of intersecting "cantoris/decani"-like dialogues, the first operating between left and right, the second between front and back' (1983, i, 190); the music may also be

shown to 'rotate' around a circle if the choirs are positioned in a particular way. Tallis's command of pacing and texture is also consummate: reduced sections are driven by expositions of characterful imitative ideas against constantly varying countersubjects, while the forceful tuttis, with their strong harmonic rhythm, frame the work. The sense that this is Tallis's *summa* is strengthened by Keyte's observation (1989) that the work is 69 longs in duration, and that 69 is a cryptogram for TALLIS (using the numbering of the Latin alphabet: 19+1+11+11+9+18). The work survives only in English-texted sources, as *Sing and glorify heaven's high majesty*; the earliest source, *Lbl* Eg.3512, which was not available to the editors of TCM, probably dates from the first decade of the 17th century. The work was sung in 1610 and 1616 at the investiture ceremonies of Henry and Charles, respectively, as Prince of Wales. The making of a contrafactum for these occasions probably ensured the work's survival.

Tallis, Thomas, §2: Music

(iii) English church music.

Tallis was clearly one of the first musicians to write for the new Anglican liturgy of 1547–53, and he again composed to English words in the reign of Elizabeth. Four pieces are found in sources dating from 1547–8: the anthems *Hear the voice and prayer* and *If ye love me* in the Wanley Partbooks, and *Remember not* and a setting of the Benedictus in the Lumley Books. (The first three of these, together with *O Lord in thee is all my trust*, were also printed in John Day's *Certaine Notes*, first assembled in Edward's reign.) A further five anthems (the dubiously-ascribed *Christ rising*; *A new commandment*; *Blessed are those*; the fragmentary *Teach me thy ways*; and *Verily, verily*), three services and a *Te Deum* may be Edwardian but are found only in Elizabethan or even later sources. Internal evidence is a very unsafe guide, for there is some relatively elaborate music that must have been written under Edward VI (notably by Sheppard), whereas certain Elizabethan music, such as Tallis's psalm tunes, is in a simple chordal style.

The four works of Tallis that are known to be early do reflect, on the whole, the express wish of Cranmer and other reformers for clear syllabic word-setting. *Remember not* (which, like the *Benedictus*, uses a text from the King's Primer, 1545) is a particularly ascetic piece, almost entirely chordal and in effect deeply penitential. (In Day's later printed version it was, interestingly, somewhat expanded and elaborated.) *Hear the voice and prayer* and *If ye love me*, however, represent in every way the prototype of the early Anglican anthem: they are cast in an *ABB* form, and mix homophony with rather formal imitation in a succinct and neatly turned manner, somewhat reminiscent of certain French chansons. The most extended of the four, the *Benedictus*, is possibly the earliest of all, but nevertheless has the greatest variety of texture and thematic resource. The Dorian Service, which is also probably Edwardian, is for the most part heavily chordal and incantatory, but does use limited imitation in its longer movements. It consists of the five morning and evening canticles, together with Gloria, Creed and Sanctus for the Communion; other items are probably later accretions.

This music is all in four parts. The Chapel Royal, however, evidently used some in five or six, and occasionally even more where decani and cantoris voices divided. An entire five-voice service by Tallis, probably with two canonic voices, has been lost except for the bass. An indication of his richer manner can, however, be gained from the isolated five-voice *Te Deum*, almost 200 bars long in a modern edition, and astonishingly well shaped and varied for a piece with so little melismatic writing. As in the Dorian Service, textual archaisms reflecting the use of the 1549 Prayer Book suggest that they are Edwardian, although this evidence is not conclusive. In his service music for the Anglican liturgy Tallis was a pioneer, leading the way in satisfying the reformed church's demand for a chordal, syllabic style of text-setting while managing to transcend the merely functional. Aplin and Monson have shown how Byrd and Morley in particular used Tallis's services as models for their own settings; in this respect Tallis fashioned many of the stylistic and formal features that were to become standard in Anglican service music for several generations.

During the first half of Elizabeth's reign the country as a whole, now fairly strongly puritanical, seems to have had little interest in liturgical polyphony except for various simple forms of psalm singing. Tallis contributed nine four-voice psalm tunes (one of which has since been made famous by Vaughan Williams) for one of the many metrical psalters published at this time, that of Archbishop Parker in 1567. Otherwise, however, his English music of this period was almost entirely for five voices and was probably written for routine use in the Chapel Royal. It includes the litany, the Preces and Responses, and some simple polyphonic treatments of prayer book psalms for the Christmas season (called 'festal' psalms).

Of the more elaborate anthems that must have been produced by the queen's composers scarcely one by Tallis is known. *Blessed are those*, which uses antiphony between high and low voices (in a refinement of the more progressive idiom developed by Taverner in works such as *Mater Christi*), may be an adaptation from a Latin psalm setting; indeed, the Vulgate text *Beati immaculati* fits the notes equally well, causing scholars to disagree about which text was set first. Certainly, the scoring is that of a pre-Reformation Latin-texted antiphon, making a late Henrician or Edwardian date most probable, although the debate seems unlikely to be conclusive. Several of Tallis's best motets were certainly fitted with English words, for use as anthems: *Absterge Domine*, for example, had at least three such adaptations by 1600.

Tallis, Thomas, §2: Music

(iv) Secular and instrumental music.

The Mulliner Book (*Lbl* Add.30513) contains keyboard reductions of the four known partsongs by Tallis, of which only *When shall my sorrowful sighing slake* is found with its text in contemporary sources. Three of the partsongs may have been composed during, or shortly before or after, Edward's reign: *O ye tender babes* draws on a text published in 1542/3 (see Stevens, 1957 and Milsom, 1983, i, 24); *When shall my sorrowful sighing slake* and *Purge me, O Lord* appear in *Lbl* Add.30480–84 in the company of late Henrician partsongs by Sheppard and Edward Johnson (i). *When shall my sorrowful sighing slake* was circulating in a corrupt form by

the mid-1560s in the company of Henrician and Edwardian partsongs, making a composition date in the 1550s plausible. *Purge me, O Lord* is cast in the characteristic *ABB* form of a church anthem, and indeed is only a shade simpler in style than an anthem such as *If ye love me*. Yet, on the basis of its text (verse rather than prose) and its source it is classified as a devotional partsong. At this time the distinction between the genres of anthem and devotional partsong was blurred: several of Tallis's anthems are found in sources of domestic chamber music, while a simple devotional partsong such as *O Lord in thee is all my trust* appears in church sources and was published as an anthem in Day's *Certaine Notes*. In the Mulliner Book *Purge me, O Lord* is titled *Fond youth is a bubble*; the original text has not been located (the underlaid version in *Ob* Tenbury 958 is a speculative attempt dating from *c*1800). Only one of Tallis's partsongs, *Like as the doleful dove*, is likely to be Elizabethan, both because it does not appear in sources containing earlier music and because it is close in style to the settings of Archbishop Parker's Psalter.

Tallis's relatively small contribution to the rich repertory of consort music of around 1550 to 1570 includes two fine and well-contrasted In Nomine settings. A third piece is composed not on the usual *Gloria tibi Trinitas* plainchant but on that of a different Trinity Sunday antiphon, *Libera nos, salva nos*: although very vocal in style, the setting is clearly instrumental because the cantus firmus includes the incipit.

As Tallis apparently spent at least 50 years as an active organist, it must be assumed that his surviving keyboard compositions represent no more than a fraction of his output. Most are in the Mulliner Book and consist of hymn verses and other short liturgical items which set imitative points against a plainchant cantus firmus, presumably for service use before 1559. The contrapuntal working is skilful, but shows somewhat less concern for idiomatic keyboard writing than is found in Redford and others. However, a small group of later pieces, probably composed for performance before the queen in the Chapel Royal, displays a developed virtuoso manner that has no known parallel anywhere in Europe during Tallis's lifetime. They include, most conspicuously, the two extended treatments of the *Felix namque* plainchant found in the Fitzwilliam Virginal Book, where they are dated 1562 and 1564 respectively. In each the chant melody is, for the most part, presented as an equal-note cantus firmus against which the composer explored a succession of highly resourceful keyboard idioms and textures. Another piece, the 'Lesson' (ascribed to Bull in one source but generally agreed to be by Tallis), consists of a two-part canon at the 5th over a bass line in continuous running figuration.

Tallis, Thomas

Short Service (Dorian Service), 4vv, D ii, 1

Service 'of five parts, two in one', 5vv, D ii, 179 (B only)

Service, 5vv, *GB-SHR* 356.2 (B only)

Benedictus, 4vv, D ii, 102 (text earlier than 1549)

Te Deum, 5vv, D ii, 78 (defective but restorable)

Preces and Responses (i), 5vv, D ii, 120, 144 (first preces printed with second responses in 1641[5])

Preces and Responses (ii), 5vv, D ii, 122, 147 (second responses printed with first preces in 1641[5])

Litany, 5vv, D ii, 150 (ends at Lord's prayer)

Psalm sequence for Christmas, 5vv: 24 Dec: Blessed are those (B only), D ii, 189; Wherewithal shall a young man cleanse his way, D ii, 125; O do well, D ii, 131; My

soul cleaveth, D ii, 138; 25 Dec: The Lord saith (B only), D ii, 189; Lord, remember David (B only), D ii, 189; 26 Dec: I call with my whole heart (B only), D ii, 189; O consider mine adversity (B only), D ii, 189; Princes have persecuted me (B only), D ii, 189; Let my complaint (B only), D ii, 189

9 psalm tunes, 4vv, for M. Parker, *The Whole Psalter translated into English Metre* (London, 1567): Come, Holy Ghost ('Tallis's Ordinal'), D ii, 177; E'en like the hunted hind, D ii, 168; Expend, O Lord, D ii, 171; God grant we grace ('Tallis's canon'), D ii, 175; Let God arise, D ii, 162; Man blest no doubt, D ii, 160; O come in one, D ii, 166; Why brag'st in malice high, D ii, 173; Why fum'th in sight, D ii, 164

english anthems and motet adaptations

For full details of sources see R.T. Daniel and P. le Huray: *The Sources of English Church Music 1549–1660*, EECM, suppl.i (1972)

A new commandment, 4vv, D i, 19 (lacks B but restorable)

Arise, O Lord, and hear [= Salvator mundi (i)], 5vv

Blessed are those, 5vv, D i, 1 (?adaptation of psalm, Beati immaculati)

Blessed be thy name [= Mihi autem nimis], 5vv, D i, 55

Discomfort them, O Lord [= Absterge Domine], 5vv

Forgive me, Lord, my sin [= Absterge Domine], 5vv (inc.; only in kbd scores)

Hear the voice and prayer, 4vv, D i, 11

I call and cry to thee [= O sacrum convivium], 5vv, D i, 60 (printed in C, with Latin text, but English version is directly contemporary)

If ye love me, 4vv, D ii, 16

O give thanks unto the Lord, D ii, 189 (single voice)

O God, be merciful [= Absterge Domine], 5vv

O Lord, give thy Holy Spirit, 4vv, D i, 25

O Lord, in thee is all my trust, 4vv, D i, 29

O praise the Lord [= O salutaris hostia], 5vv

O sacred and holy banquet [= O sacrum convivium], 5vv

Purge me, O Lord [= Fond youth is a bubble], 4vv, D i, 40

Remember not, O Lord God, 4vv, D i, 111 (earlier version)

Remember not, O Lord God, 4vv, D i, 43 (later expanded version)

Sing and glorify [= Spem in alium], 40vv

Teach me thy way, D ii, 178 (Tr only)

Verily, verily, I say unto you, 4vv, D i, 51

When Jesus went [= Salvator mundi (ii)], 5vv, D i, 68

Wipe away my sins [= Absterge Domine], 5vv, D i, 73

With all our hearts [= Salvator mundi (i)], 5vv, D i, 88

secular partsongs

Fond youth is a bubble [= Purge me, O Lord], 4vv, Smb 21, D i, 95

Like as the doleful dove (text: W. Hunnis), 4vv, Smb 84, D i, 98

O ye tender babes (text: W. Lyly), Smb 61, D i, 102

When shall my sorrowful sighing slake, 4vv, Smb 63, D i, 106

Tallis Scholars.

British vocal ensemble. Founded in 1973 by its director Peter Phillips, it specializes in *a cappella* performance of Renaissance polyphony. Its membership is flexible and its approach choral rather than soloistic. A discography of over three dozen titles (all on its own label, Gimell) ranges through most of the Franco-Flemish composers from Ockeghem onwards, the Tudor period and the Iberian Renaissance. The group has been influential in broadening the appeal of Renaissance polyphony to modern audiences. In February 1994 it gave a concert commemorating the 400th anniversary of Palestrina's death in the Roman basilica of S Maria Maggiore. The Tallis Scholars have also commissioned and performed works by contemporary composers, including John Tavener.

FABRICE FITCH

Talma, Louise

(*b* Arcachon, France, 31 Oct 1906; *d* Saratoga Springs, NY, 13 Aug 1996). American composer. She studied at the Institute of Musical Art, New York (1922–30); at the Fontainebleau School of Music (1926–39), where her teachers included Isidore Philipp (piano) and Nadia Boulanger (composition); and at New York (BMus 1931) and Columbia (MA 1933) universities. She taught at Hunter College, CUNY (1928–79), and was the first American faculty member at the Fontainebleau School. She became a Fellow of the MacDowell Colony in 1943. Her many awards include two Guggenheim fellowships (1946, 1947); a Senior Fulbright Fellowship (1955–6); the Sibelius Medal for Composition from the Harriet Cohen International Awards, London (1963); and election to the National Institute of Arts and Letters (1963, she was the first woman to be so honoured). Her opera, *The Alcestiad*, was the first by an American to be performed in a major European opera house (1962, Frankfurt).

Talma's early works are tonal and neo-classical, showing the influence of her strong background in counterpoint and her study of Stravinsky with Boulanger. Indeed, her whole output is marked by clarity of line, gesture and proportion. The Piano Sonata no.1 (1943) and the exuberant Toccata for Orchestra (1944), both superbly tailored to their respective instrumentations, incorporate elements of jazz and Americana. Exemplifying the range of her style during this early period is the rhythmic vitality of the *Alleluia in Form of Toccata* for solo piano (1945) and, by contrast, the impressionistic languor of *Terre de France* (1943–5). In 1952, after hearing Fine's String Quartet, Talma began to experiment with serialism; her mature style incorporates 12-note techniques within a freely tonal context. She did not adhere to strict set technique, but arranged subsets in tonally related patterns, such as in the Violin Sonata (1962), or distributed row elements among voices, as in the cantata *All the Days of my Life* (1963–5). In the song cycle *Diadem* (1978–9), clever character sketches of seven gems, shimmering clarinet trills illustrating the 'Aquamarine' give way to the bold angularity of 'Diamond'. The circular structure of this work and its septuple division is also apparent in *Full Circle* for orchestra (1985), the last section of which (the seventh of seven) is a modified reversal of the first. The linear simplicity of *Seven Episodes* for flute, viola and piano (1986–7) highlights Talma's talent for shaping a phrase; based on a row the first and last notes of which form a perfect 5th, this work exemplifies the dodecaphonic writing grounded in tonal relationship that is characteristic of her late style.

Vocal works form a significant portion of Talma's oeuvre. Her vocal writing displays the same lyricism as her instrumental writing, although many of her choral works are contrapuntal. Her strong religious faith is reflected in her many settings of Biblical texts. Much of her music has been recorded. She is the author of *Harmony for the College Student* (1966) and *Functional Harmony* (with J. Harrison and R. Levin, 1970).

WORKS

stage

Op: The Alcestiad (3, T. Wilder), 1955–8, Frankfurt, 1 March 1962

vocal

Choral: La belle dame sans merci (J. Keats), women's vv, 1929–30; 3 Madrigals, women's vv, 1929–30; In principio erat verbum (Bible: *St John*), mixed chorus, org, 1930; The Divine Flame (orat, Bible, liturgy), Mez, Bar, mixed chorus, org, 1946–8; The Leaden Echo and the Golden Echo (G.M. Hopkins), S, double mixed chorus, pf, 1950–51; Let's Touch the Sky (e.e. cummings), mixed chorus, fl, ob, cl, 1952; La corona (J. Donne), 7 sonnets, unacc. mixed chorus, 1954–5; A Time to Remember (Bible, J.F. Kennedy, A.M. Schlesinger), mixed chorus, orch, 1966–7; Voices of Peace (Bible, Hopkins, liturgy, Bible: *St Francis*), mixed chorus, str, 1973; Celebration, women's chorus, small orch, 1976–7; Ps lxxxiv, unacc. mixed chorus, 1978; Mass for the Sundays of the Year, 1984; Mass in English, unacc. mixed chorus, 1984; A Wreath of Blessings, unacc. mixed chorus, 1985; Give Thanks and Praise (Bible, W. Cowper), antiphonal double chorus, pf, 1989; In Praise of a Virtuous Woman (Bible: *Proverbs*), women's vv, pf, 1990; Ps cxv, unacc. mixed chorus, 1992

Other vocal: One need not be a chamber to be haunted (E. Dickinson), S, pf, 1941; Carmine Mariana (liturgy), 28vv, pf, 1943 [arr. women's vv, org/small orch]; Terre de France (C. Peguy, J. du Bellay, C. d'Orléans, P. de Ronsard), song cycle, S, pf, 1943–5; Leap before you look (W.H. Auden), S, pf, 1945; Letter to St Peter (E. Dean), S, pf, 1945; Pied beauty, spring and fall (Hopkins), S, pf, 1946; 2 Sonnets (Hopkins), Bar, pf, 1946–50; Birthday Song (E. Spenser), T, fl, va, 1960; All the Days of my Life (cant., Bible), T, cl, vc, pf, perc, 1963–5; The Tolling Bell (W. Shakespeare, C. Marlowe, Donne), Bar, orch, 1967–9; Rain Song (J. Garrigue), S/T, pf, 1973; Have you Heard? Do you Know? (Talma), divertimento in 7 scenes, S, Mez, T, pf/(fl, vn, cl, vc, pf), 1978–9; Variations on 13 Ways of Looking at a Blackbird (W. Stevens), S/T, fl/ob/vn, pf, 1979; Wishing Well, S, fl, 1986; Infanta Marina (Stevens), S, pf, 1988; The Lengthening Shadows, 1v, fl, vn, cl, vc, pf, 1991–2; Sonnet (J. Keats), Falling Leaves (W.S. Landor) [third song remains as sketch]

instrumental

Ens: Toccata, orch, 1944; Song and Dance, vn, pf, 1951; Str Qt, 1954; Sonata, vn, pf, 1962; Dialogues, pf, orch, 1963–4; 3 Duologues, cl, pf, 1967–8; Summer Sounds, cl, 2 vn, va, vc, 1969–73; Lament, vc, 1980; The Ambient Air, fl, vn, vc, pf, 1980–83; Studies in Spacing, cl, pf, 1982; Fanfare for Hunter College, 2 tpt, 3 trbn, 1983; Full Circle, chbr orch, 1985; 7 Episodes, fl, va, pf, 1986–7; Conversations, fl, pf, 1987; Spacings, va, pf, 1994

Kbd (solo pf, unless otherwise stated): Four-Handed Fun, pf 4 hands/2 pf, 1939; Pf Sonata no.1, 1943; Pf Sonata no.2, 1944–5; Soundshots, 20 short pieces, 1944–74; Alleluia in Form of Toccata, 1945; Wedding Piece, org, 1946; Venetian Folly, ov. and barcarolle, 1946–7; Pastoral Prelude, 1949; Bagatelle, 1950; 6 Etudes, 1953–4; 3 Bagatelles, 1955; Passacaglia and Fugue, 1955–62; Textures, 1977; Kaleidoscopic Variations, 1984; Ave atque vale, 1989

Talon

(Fr.).

See Frog.

Talon, Pierre

(*b* Reims, 25 Oct 1721; *d* Paris, 25 June 1785). French cellist and composer. He probably arrived in Paris from Reims before 1753, when he was granted a privilege to publish instrumental music. His *Six simphonies* op.1, dedicated to the Marquise of Ségur, were published that year in Paris by Vernadé. By 1763 he had entered the service of the king as a cellist; announcements of his works in 1765 refer to him as 'ordinaire de la musique du roi', and those of 1767 as 'ordinaire de la chambre du roi'. The contemporary almanacs do not record any solo performances, nor is he listed as a member of any Parisian orchestra or as a teacher. He was retired from the king's service in 1782.

Talon was a moderately gifted musician, composing in the popular Parisian genres and styles of the period. His published works, all dedicated to minor nobility, targeted professional and amateur musicians for public and private use, and were flexible in the instrumentation and the number of players required for each part. The op.1 symphonies (1753), all in three movements, combine the older French Baroque traits of rapid harmonic movement and occasional passages in dotted rhythms, reminiscent of Cupis and Aubert, with Italian influences such as the fast triple metre finales of Sammartini and Brioschi. The op.5 *simphonies à quatres parties* (1767) appear among a flourishing crop of such instrumental quartets in vogue during this period. Also in three movements, they are longer and more orchestrally conceived. A substantial viola part replaces the third violin, and the string writing is expert, with careful and frequent expression markings. They are in a clear early Classical style. Unlike the earlier symphonies, their first movements are bi-thematic and in sonata-allegro form; the slow movements show more flexibility in choice of key, and the finales are all in double rather than triple metre. Talon's predilection for his own instrument is apparent in his chamber works (opp.2 and 4) which feature a cello obbligato in addition to a figured bass.

WORKS

partial thematic catalogue in BrookSF

op.

1 Six simphonies à quatre parties ou à plusieurs instruments, 3 vn, b (Paris, 1753; no.6 ed. in *BrookSF*)

[2] Six quatuors, vn, ob (/fl/vn/descant viol), vc/va obbl, bc (Paris, 1761), lost; as Six symphonies à quatre, op.2 (Paris, 1767)

2 Six trio, vn, vc/va obbl, b (Paris, *c*1761)

4 Six trio, vn, vc/bn/va obbl, b (Paris, 1765)

5 Six simphonies à quatre parties ou à grand orchestre (Versailles, 1767)

BARRY S. BROOK, RICHARD VIANO

Taltabull (Balaguer), Cristòfor

(*b* Barcelona, 28 July 1888; *d* Barcelona, 1 May 1964). Catalan composer. Born into a middle-class family, he began his musical studies with Claudi Martínez Imbert and Josep Font Roger. He then studied harmony, composition and musicology with Felipe Pedrell. In November 1907, shortly after the performance of his first symphonic work *Waldemar daae*, he left for Munich, where he lived until June 1908. During this period he wrote the Sonatina for piano (1910) dedicated to Reger, with whom he was in contact, and the *Prólogo sinfónico para un drama*, a composition with a title similar to Reger's *Symphonischer Prolog zu einer Tragödie*. The *Prólogo sinfónico* received its first performance in Barcelona in February 1910, when it was conducted by Franz Beidler.

From 1912 to 1940 Taltabull lived in Paris, where he was active in the musical field in various capacities: proof-reading for musical publishers such as Durand, conducting Gaumont Cinema's orchestra (1914–19) and working as a pianist and composer. He also gave private composition lessons. According to his own account his works of this period were destroyed during World War II.

After the Spanish Civil War (1936–9) he returned to Barcelona, where he did a great deal of teaching, although never with any security and always on the margins of the official institutions. Among his pupils we find

distinguished members of the generation of Catalan composers mainly born in the 1930s, such as Josep Soler, Guinjoán, Benguerel and others. During these years his compositions were mainly choral, combining German contrapuntal solidity with the sensual Impressionist harmonies of France.

WORKS

(selective list)

Orch: Waldemar daae, perf. 1907, lost; Prólogo sinfónico para un drama, 1910; 3 other orch works

TEODOR ROURA

Talvela, Martti (Olavi)

(*b* Hiitola, 4 Feb 1935; *d* Juva, 22 July 1989). Finnish bass. Perhaps the outstanding Finnish singer of the postwar period, he was originally a schoolteacher by profession. He entered the Lahti Academy of Music in 1958, continued his studies in Stockholm and made his début at the Swedish Royal Opera there in 1961, as Sparafucile; shortly afterwards, an audition with Wieland Wagner resulted in his being engaged as Titurel at the 1962 Bayreuth Festival (the year he joined the Deutsche Oper, Berlin). A voice of immense size and wide range, capable of thundering grandeur and great gentleness, allied to a giant's physique and an impressive stage presence, won him international fame in Musorgsky, Verdi and all the principal Wagner bass roles. He was Boris Godunov in New York's first 'original version' of the opera, at the Metropolitan (1974). His first Gurnemanz at Covent Garden in 1973 was remarkable for its natural nobility; he is also remembered there for notable appearances as Dosifey (*Khovanshchina*) and Hunding. Talvela was the inaugural director of the Savonlinna Festival (1972–9), the first opera under his aegis being, in 1973, *Die Zauberflöte*, in which he was Sarastro. In 1975 he created (and later recorded) Paavo Ruotsalainen in Kokkonen's *The Last Temptations* at

Savonlinna, repeating the role in London the following year. Along with Boris Godunov and Sarastro, both of which he recorded, this was accounted among Talvela's most majestic and compelling interpretations. Shortly before his death he was appointed general director of the Finnish National Opera. His many other recordings include Sibelius and Kilpinen songs (of which he was a devoted advocate), Haydn's *The Seasons*, Verdi's Requiem, King Mark and the Grand Inquisitor (*Don Carlos*).

MAX LOPPERT

Tamagno, Francesco

(*b* Turin, 28 Dec 1850; *d* Varese, 31 Aug 1905). Italian tenor. A pupil of Carlo Pedrotti in Turin, he began his career in the chorus of the Teatro Regio, also singing small roles such as Nearco in Donizetti's *Poliuto* (1872). After further study, in 1874 he sang Riccardo (*Un ballo in maschera*) at Palermo and in 1875, Poliuto and Edgardo (*Lucia di Lammermoor*) at La Fenice, Venice. He first appeared at La Scala in 1877 as Vasco da Gama (Meyerbeer's *L'Africaine*), then sang the title role of Verdi's *Don Carlos* (1878), Alim in Massenet's *Le roi de Lahore* and Fabiano in the first performance of Gomes's *Maria Tudor* (1879); he created the role of Azaele in Ponchielli's *Il figliuol prodigo* (1880), then sang Ernani, and Gabriele Adorno in the first performance of the revised version of *Simon Boccanegra* (1881); he sang Raoul in *Les Huguenots* and John of Leyden in *Le prophète* (1884), created Didier in Ponchielli's *Marion Delorme* (1885), then sang Radames in *Aida* (1886).

His greatest triumph came on 5 February 1887, when he created Verdi's Othello (see illustration); he repeated the role in the first London performance of *Otello* (Lyceum Theatre) in July 1889, at Chicago (where he had made his American début a few days previously as Arnold in *Guillaume Tell*) in January 1890, at the Metropolitan in March 1890 and at Nice in 1891. He appeared in Puccini's *Edgar* at Madrid (1892) and in the first performance of Leoncavallo's *I Medici* at the Teatro Dal Verme, Milan (1893). He returned to the Metropolitan for the 1894–5 season, and made his Covent Garden début in 1895 as Othello. After creating the role of Helion in De Lara's *Messaline* at Monte Carlo in 1899, he sang it at La Scala and at Covent Garden, where he returned for a final season in 1901.

Tamagno's heroic voice, with its brazen, trumpet-like top notes, was heard to best advantage in Verdi roles, especially Othello, which displayed the magnificent strength and security of its upper register. He was a forceful, convincing actor, and though not a subtle artist, he brought great vocal and dramatic excitement to all his performances.

ELIZABETH FORBES

Tamba, Akira

(*b* Yokohama, 5 Dec 1931). Japanese composer and musicologist, resident in France. After studying composition with Ikenouchi at the Tokyo National University for Fine Arts and Music, graduating in 1958, he was awarded a French government scholarship to study at the Paris Conservatoire with Aubin and Messiaen. Further work with Schaeffer's Groupe de Recherches Musicales acquainted him with modern techniques and the musical structure of nō theatre, which became the inspiration for his eclectic compositional style. He gained international recognition by winning the Divonne-les-Bains International Competition (1962), the first prize for composition at the Conservatoire (1963) and the Lily Boulanger Prize (1963). In 1979 Radio France held an Akira Tamba day and in the same year ten of his compositions were presented at the Holland Contemporary Music Festival. Works have been commissioned from him by groups ranging from the French Ministry of Culture to the Japanese traditional music group Yonin no kai.

He was appointed director of the Centre National de la Recherche Scientifique in Paris and a lecturer at the National Institute for Eastern Languages and Civilisation at the University of Paris III, pursuing a joint career as a composer and a musicologist. Among his writings is *La structure musicale du nō*, which received the Japan Translation Culture Prize (1975); in 1986 he received the doctorate for his work under Chailley's supervision on Japanese musical theory and aesthetics at the University of Paris-Sorbonne. His compositional style combines modern French-inflected tonality and orchestration with influences on developmental structure, dynamics and rhythm derived from the music of nō theatre, gagaku and shōmyō. As a leading scholar of traditional Japanese music history, theory and musical aesthetics, he is known for his original analysis and has written more than 50 articles and books on the subject. He has directed a comprehensive series of recordings of traditional Japanese music for Ocora, *Japon 1–10* (1977–97).

JUDITH ANN HERD

Țambal

(Rom.).

Romanian duclimer played in the *taraf* ensemble. *See* Cimbalom (its cognate term).

Tambari

(pl. *tambura*).

A common name for the Kettledrum used in sets as part of the regalia of many traditional savanna states of West Africa. Its association with royalty in, for instance, the Hausa states of Nigeria is chronicled in the 17th century, and in its form, usage and name the *tambari* is related to the 16th-century court *tabl* at Fez in the Maghrib.

The individual drums in a set vary considerably in size so that the membranes may measure from 23 cm to 65 cm in diameter, and the height of the drum bodies from 20 cm to 60 cm. The *tambari* is beaten with two heavy thongs of hippopotamus hide, producing a deep and resonant sound. In performances the drums may be mounted singly or in pairs on heavy stakes driven into the ground (see illustration), or in pairs on the backs of camels for use in royal cavalcades.

The drums have a wooden or bronze-cased body and a membrane of cowhide laced to a metal ring round the base. In the areas of the traditional Hausa states, the *tambura* rank with Kakaki trumpets as the most important ceremonial instruments of the Islamic rulers. However, even within Hausaland the drums and their usage vary according to area. In Zaria the practice is to use two pairs of large wooden *tambura* (a *salo-salo* pair and a *'yan dai-dai* pair) with one or two smaller wooden *kuntukun tambura*. The large *tambura* range from 42 to 53 cm in height and 40 to 52 cm in diameter, and the *kuntukun* are 27 cm in both height and diameter. The *'yan dai-dai*, suspended from one forked pole, are struck alternately by one drummer while on the *salo-salo*, on another pole, the chief drummer, a beater in each hand, drums out the emir's praise rhythm (*take*). The *kuntukun tambura* are placed upright on the ground and struck by seated drummers, each with two beaters.

In the Katsina region there are ten royal drums which are all approximately the same size, 50 cm in height and 40 cm in diameter, apart from the *gwabron tambari*, known as the 'unique' or 'bachelor' drum. A trophy of the early 19th century jihad (religious war), it is saucer-shaped, 65 cm in

diameter and 22 cm high. In processional usage in Katsina six *tambura* are used, slung in pairs on three camels. In stationary performances five *tambura* are held on three Y-shaped poles, the central drum being beaten by an official known as *tambura* and the outer pairs by his two assistants. Each drummer has two beaters. The *gwabron tambari* is again unique in that it is suspended just above the ground by two men each holding a handle on either side of its body. Its only use is when beaten on its own with a single beater for a traditionally prescribed number of strokes on the installation of the emir or certain officials.

At Abuja are two unusual small bronze-cased *tambura* called *lingarai*. They were brought from Zaria in the early 19th century and are wider than they are tall, measuring 21 cm in height and respectively 26 cm and 30 cm in diameter.

Among other *tambura* which have been reported in Hausaland are drums at Sokoto measuring about 30 cm in height and 45 cm in diameter, which were played propped up on stones or wooden blocks by seated drummers. Another set at Argungu comprises three deep and three shallow drums. At Anka in the Zamfara area there were once 12 or even 24 *tambura* but in the early 1960s it was learnt that only one had survived the collapse of the emir's palace. Two ancient metal *tambura*, 45 cm in height and 37 cm in diameter, were found in a very dilapidated condition in 1927 in the emir's palace at Daura. Silver and copper drums of Songhay are said to have been buried during the 16th century Moorish invasion and two *tambura* found at Kengakwoi are believed to be copies.

Despite slight variations according to locality, the *tambura* are used in general either for 'signalling', as at Daura to mark the beginning and end of certain months in the Islamic calendar, or for the performance of identificatory rhythms, such as in salutation of the emir on Thursday evening. At Anka in 1961 on the evening before the major Islamic festivals the emir himself would beat the one remaining *tambari* several times with his left hand.

Pre-Islamic practices also survive. At Anka, for example, the official entrusted with repair of a *tambari*'s torn membrane would ritually pour a mixture of goat's blood and honey through a hole in the side of the drum. Royal drums are reputed to have hidden such relics as the dried-up heart of an enemy and a very ancient copy of the Koran.

Elsewhere in Nigeria the status and performing practices associated with the *tambura* are similar to those of Hausa areas. *Tambari* drumming was introduced to the Bauchi emirate by Malam Yakabu (1805–43). In Yorubaland in the 19th century the Fulani preacher, Malan Alimi, who was called in to assist the local people at Ilolin in their struggle against Oyo dominance and whose sons became the first two emirs, had his own *tambura*. Today royal drums see use not only by non-Hausa rulers such as the Etsu Nupe, whose wooden *tambari* at Bida is reported as 150 cm in diameter, and the Emir of Yola, but even among the Kambari people where a large, ground-standing *tambari* is beaten for the Muslim chief.

ANTHONY KING/K.A. GOURLAY/ROGER BLENCH

Tamberg, Eino

(*b* Tallinn, 27 May 1930). Estonian composer. He studied at the Tallinn Conservatory (graduated 1953), where his composition teacher was Eugen Kapp. In 1968 he was appointed to a teaching position at the Estonian Academy of Music. An initiator of the anti-romantic composition movement of the late 1950s, he won a gold medal for his Concerto grosso (1956) at an international festival in Moscow. In his music neo-classical features are combined with a striking power of expression. Relying on poetry as an essential source of inspiration, he has composed much theatre music and a number of vocal cycles. In early works such as *Ballett-sümfoonia* ('Ballet Symphony', 1959) and *Kuupaisteoratoorium* ('Moonlight Oratorio', 1962), he combined the genres of concert and theatre music. During this period, his most complex musical structures are found in the ballet *Joanna tentata* (1970), which contains 12-note themes and aleatory sections.

Tamberg's musical language simplified with the composition of the Trumpet Concerto no.1 (1972), the slow movements of which contain chordal sequences reminiscent of Baroque music. *Cyrano de Bergerac* (1974), a number opera, shows the influence of early Baroque conventions and bel canto singing. Among the most important works of this period is the oratorio *Amores* (1981), based on a compilation of love lyrics that includes poems by G.V. Catullus, Sappho, Jacques Prévert and 20th-century Estonian poets. Towards the end of the 1980s Tamberg returned to a more complex style. His four symphonies (1978, 1986, 1989, 1998) exhibit a dramatic emphasis that is particularly notable in their final movements.

MERIKE VAITMAA

Tamberlik [Tamberlick], Enrico

(*b* Rome, 16 March 1820; *d* Paris, 13 March 1889). Italian tenor. He studied in Rome, Naples and Bologna. At the age of 18 he sang Gennaro in a semi-private performance of *Lucrezia Borgia*, but his official début, under the name of Danieli, was in 1841 at the Teatro del Fondo, Naples, as Tebaldo (*I Capuleti e i Montecchi*). At the S Carlo in 1843 he appeared (as Tamberlik) in Nicolai's *Il templario*. He made his London début in 1850 as Masaniello at Covent Garden, where he appeared regularly until 1864, singing Rossini's Otello, Arnold (*Guillaume Tell*), Florestan, Max, Pollione, Zampa, Ernani, Robert le diable, John of Leyden, Gounod's Faust, Hugo (Spohr's *Faust*) and Alphonse (*La favorite*), a baritone role. He also sang the title role of *Benvenuto Cellini* (1853) and Manrico in *Il trovatore* (1855; see illustration), both British premières.

Tamberlik sang at St Petersburg, creating Don Alvaro in *La forza del destino* (1862). He also appeared at Buenos Aires, Paris, Madrid and Moscow; in 1881, when over 60, he toured the Spanish provinces as Arturo (*I puritani*), Poliuto, Ernani, Manrico, the Duke and Faust. His robust voice, with its ringing top notes (including a top C♯ sung in full chest voice), was marked by a fast vibrato, but his musicianship and handsome, exciting stage presence made him a superb interpreter of heroic roles.

Tambor (i)

(Port., Sp.).

See Drum.

Tambor (ii)

(Port., Sp.).

See under Organ stop (*Pauke*).

Tamboril.

The name of various single- or double-headed drums of Spain and Latin America. In Spain *tamboril* is the most common name for the double-headed drum in the Pipe and tabor combination. In this form it is an important folk instrument in many regions, including Salamanca and Extramadura (*gaita y tamboril*) and the Basque country (*txistu y tamboril*). The *tamboril* of the Salamanca region is 30–40 cm in height and a little more in diameter, and is now typically made of tin. It uses goat-skin membranes tensioned by cords attached to paired wooden hoops and is either slung from the player's left forearm or from a broad belt hung around one shoulder.

In the rural Andes the term *tamboril* is sometimes applied to a small double-headed drum used to accompany, for example, *pinkillu* (duct flute) ensembles. The Colombian *tamboril* was a small drum used in the 18th century for church services. It is also documented throughout the 19th and 20th centuries as an instrument accompanying dancing. In Uruguay, where it is a major folk instrument, the *tamboril* is a small single-headed drum, the membrane of which is nailed to a barrel-shaped wooden shell. It is carried over the shoulder and played with two hands, one holding a stick. Four sizes were traditionally played together: *chico* (smallest), *repique*, *piano* and *bajo* (largest), although the *bajo* is now rarely heard.

JOHN M. SCHECHTER/HENRY STOBART

Tamborito.

An Afro-Hispanic recreational dance of Panama. It is sung responsorially by women, solo or in chorus. It is accompanied by hand-clapping in duple metre and a drum ensemble including *repicador*, *llamador*, *pujador*, *tambor*, *almirez* and the small *tamborito* from which the dance gets its name. Song texts are often in *copla* (four-line stanza) form and express the exuberance of the Panamanian *costeño*, serving also as a vehicle for socio-political commentary.

WILLIAM GRADANTE

Tambour

(Fr.: 'drum').

A term applied generically to various types of drum (membranophones). Pierre Trichet's *Traité des instruments de musique* (MS, *c*1630, *F-Psg* 1070) used it to denote a side drum, kettledrum or tambourine. In French the word is usually modified in some way, for example *tambour militaire*, *tambour roulant* etc. As applied to educational percussion instruments, 'tambour' denotes a small single-headed frame drum (resembling a tambourine without jingles) with a head of parchment or plastic. This instrument is used as a timekeeper in percussion and instrumental groups. It is held in the hand and struck with the fingers or a soft-headed drumstick, and in some cases is sufficiently deep in tone to be used instead of a bass drum.

See Woodblock.

Tambourin (i).

An 18th-century French character-piece supposedly based on a Provençal folkdance accompanied by pipe and tabor. The bass part simulates a drum by sharply accentuating the rhythm and by the repetition of a single note, usually the tonic, while an upper voice imitates the pipe with a fast-moving melody. The metre is usually 2/4 and the tempo lively. Rousseau described it as 'a kind of dance much in style today in the French theatre', adding that it must be lively and well accented, or 'swinging' ('sautillant et bien cadencé').

The most famous tambourins are in Rameau's operas and ballets, where they usually occur in pairs, one in a major key and one in the minor, with the first repeated da capo; rondeau form is also used. Ex.1 shows a keyboard version of the tambourin in *Les fêtes d'Hébé* (1739; Entrée 3 scene vii). Rameau also composed two tambourins in his third *concert* for harpsichord and two melody instruments (1741). François Couperin's harpsichord works contain a short piece entitled *Les tambourins* (XXe Ordre), in 3/4 metre and marked 'tres legerement' and 'notes égales'. Other examples are in J.-M. Leclair's violin sonatas op.5 no.10 (1734) and op.9 no.3 (1743), Niccolò Piccinni's opera *Roland*, Act 2 (1778), and Maurice Duruflé's Three Dances for orchestra, op.6 (1932). A 'tamburino' occurs at the end of Handel's opera *Alcina* (1735).

MEREDITH ELLIS LITTLE

Tambourin (ii) (de Provence) [tambourin provençal]

(Fr.).

A double-headed drum from Provence in the form of a large tabor with a long cylindrical body and a single snare on the upper head (see illustration); it is classified as a membranophone. It is often referred to as *tambourin provençal*; the variant forms 'tabour' and its diminutive 'tabourin' are also found in medieval sources. The depth of its shell is approximately 70 cm and the width 35 cm. It was known in the 15th century and is still

played with a three-holed pipe known as a *galoubet*. Characteristically this species of tabor is struck in simple rhythmic sequences, with a single drumstick (*see also* Pipe and tabor).

The tambourin was scored for by Rameau (*Les fêtes d'Hébé*, 1739), Berton (*Aline*, 1803) and later by Ernest Guiraud (*L'arlésienne*, second suite, ?1876, after Bizet). 20th-century composers who have scored for *tambourin de Provence* include Milhaud (*Suite française*, 1944), Copland (*Appalachian Spring*, 1945) and Roger Sessions (Third Symphony, 1957).

'Tambourin' is used in German to denote the tambourine.

<div align="right">JAMES BLADES</div>

Tambourin de Béarn [tambourin de Gascogne, tambourin à cordes]

(Fr.).

A string instrument in the form of a simple dulcimer (it is classified as a Chordophone: box zither), used primarily in southern France, as an accompaniment to the pipe (*see* Pipe and tabor). It has sometimes been referred to as a 'string drum'. It was commonly used to accompany dancing during the Renaissance; La Borde in the late 18th century mentioned it as still popular in the Gascogne and Béarn regions of France. The 18th-century vogue for the pastoral created a fashion for it in French court circles, and produced numerous keyboard pieces featuring bass drones, often entitled 'Tambourin'. It continues to flourish in and around the Basque country, where it is known by such local names as *bertz, soinu, tuntun* and *toutouna*. In Aragon it is known as *chicotén* or *salterio* ('psaltery'), and elsewhere in Spain as *salmo*. In its earlier history it was known in Germany, Italy and Switzerland.

The instrument consists of six thick gut strings stretched over a wooden soundbox some 90 cm long and tuned to the key note and 5th of the pipe. The strings are struck with a stick (*baguette*), held in the player's right hand, and provide a rhythmic bass to the pipe – the three-holed flute, or *galoubet* – played by the left hand. Both instruments are shown being played in Lancret's painting *Danse pastorale* (see illustration) and in a fresco (dated 1488–93) by Filippino Lippi in the chapel of S Maria sopra Minerva, Rome. Examples of the *tambourin de Béarn* survive in the Stearns Collection, University of Michigan, the Musée de la Musique, Paris and the Metropolitan Museum of Art, New York. A similar instrument is mentioned by Altenburg (*Versuch einer Anleitung zur heroisch-musikalischen Trompeter- und Pauker-Kunst*, Halle, 1795) – the *trombe*, a wooden chest with a gut string stretched over a bridge. A two-string example is depicted in the Angers Tapestry (1380). In the preface to his *Six sonates en duo pour le tambourin avec un violon seul* (Paris, n.d.), Lavallière gives a description and tunings for both the six- and 13-string tambourines.

Tambourine [timbrel]

(Fr. *tambour de Basque*; Ger. *Schellentrommel*, *Tamburin*; It. *cimbaletto*, *tamburello*, *tamburino*; Sp. *panderete*).

A small single-headed frame drum of Middle Eastern origin (it is classified as a Membranophone; *see also* Drum, §I, 2(vi)). It consists of a shallow ring of wood, covered on one side with parchment (or a plastic material). With isolated exceptions small metal discs called jingles (and occasionally small bells), arranged singly or in pairs, hang loosely in openings in the shell. In the modern European form the head is nailed to the shell (see fig.1). Rod-tensioning is occasionally applied. In many Middle Eastern instruments, the heads are glued to the frame. The diameter of the present-day instrument (varying from 20 to 30 cm) seems to correspond with early representations, though certain 18th- and 19th-century specimens reach a diameter of about 50 cm.The following frame drums have entries in this dictionary: Bendīr, Bodhrán, Daff, Dāira, Mazhar, Rebana, Riqq and Tār. For further information see entries on individual countries.

1. History and distribution.

The simple frame drum which was the ancestor of our tambourine is of high antiquity. It appears on Babylonian reliefs of the 20th century bce and in Egyptian reliefs from the 18th Dynasty (*c*1500 bce), with at least one excavated example in the National Museum in Cairo, and it is unlikely to have been new at those dates. It is probable that the Biblical *tof*, played by Miriam and her women after the crossing of the sea (Exodus xv.20), was a similar instrument (*see* Biblical instruments). Many Greek representations

of maenads in Bacchic or Dionysiac processions, as well as on other ocasions, show similar instruments (*see* Tympanum (i)), and such scenes were copied by Roman carvers (and later by artists of the Renaissance, such as Luca della Robbia; see fig.1).

Similar instruments are found today in India, as well as throughout Central, East and South-East Asia, the Middle and Near East and North Africa. They are also endemic right round the Arctic Circle, especially as ritual instruments, from Lapland through Siberia with the shamans, to North America and Greenland, where it is said that the frame drum is the Inuit's only instrument. From North America it has percolated down to the south, as far as Peru.

Some of these drums have rattling elements added. Many Central Asian drums have a series of metal rings fixed to the inner surface of the shell, overlapping each other like chain mail. The Siberian shamans' drums have diametric cross-bars, usually of metal or twisted sinew, from which hang folded iron and other jingles. Near Eastern and some North African frame drums have, like those of Italy and Spain, pairs of circular discs of brass or ferrous metal let into slots cut in the frame, much like our orchestral tambourine. These jingles are usually equidistantly spaced around the frame, and it is noteworthy that a common number is five pairs, as it most frequently is in the European medieval iconography also. In North Africa the rattling element is more usually one or more snares or strands of gut running across the underside of the skin. This is also found in Portugal where, as in Morocco, the drum is usually square or rectangular, rather than round, and with two heads, on each side of the frame, rather than single as in most other areas. In such cases, the snares and any other rattling elements are usually concealed inside the drum.

It is impossible to say whether the frame drums of antiquity had any such rattles. Nothing is visible in Mesopotamia and Egypt, but a snare would not be; the paintings on Greek pots often show small circles on the frame, but whether these are decorative or whether they represent jingles we cannot tell.

The frame drum appears in many medieval carvings and manuscripts, and was then known in English as the timbre, which later became timbrel, especially in poetic parlance. It sometimes had pellet bells attached to the frame, as well as the normal jingles, and frequently there was a snare (Fr. *timbre*) running across the upper surface of the head.

After seeming to disappear from European art music during the Baroque and Classical periods, the frame drum reappeared, presumably having survived as a folk instrument, in the late 18th century in the military band and in the orchestra in the 19th century as an exotic sound. In North Africa and the East it had never lost its popularity, being played with an elaborate technique combining the use of the free hand at various points on the head to obtain different tone colours, with that of the fingers of the hand that holds it to strike close to the rim.

In most of the world's cultures, it is unusual for women to play drums of any kind – when they do so it is the frame drum they most frequently use.

2. Orchestral and popular usage.

Gluck (*Echo et Narcisse*, 1779) and Mozart (German Dances k S71, 1787) were among the earliest composers to make orchestral use of the tambourine. By the early 19th century the tambourine was, as Berlioz said, 'in considerable use'. Its firm introduction into orchestral works was occasioned by the need for special effects of a Spanish or gypsy character, as for instance in Weber's overture to *Preciosa* (1820). Berlioz, who in his *Grand traité d'instrumentation* (1843) dealt to some extent with technical details concerning the instrument, often used the tambourine. He occasionally called for two tambourines, as in *Le carnaval romain* (two players), and for three in *Harold en Italie*. Later composers have used the tambourine in a variety of ways (see fig.2). In addition to providing local colour, the instrument is used to mark rhythms and supply a particular background. Exemplary scoring for the tambourine is found in Rimsky-Korsakov's Spanish Capriccio (1887) and *Sheherazade* (1888), and in Stravinsky's *Petrushka* (1910–11). In *Petrushka* (Gypsies and a Rake Vendor) Stravinsky asked for a tremolo to be produced by a shake and a thumb roll (see ex.1).

Composers make frequent use of the thumb roll to ensure a quiet tremolo or trill; it is produced by rubbing the moistened ball of the thumb in an upward direction along the surface of the vellum near the rim. This vibrating of the jingles by means of friction is by no means a simple matter, and at times may elude the most skilful. (In the case of a *pp* tremolo, if not marked as a thumb roll, the player will use either a shake or a friction roll depending on the context.) The 'thumb roll' technique was referred to as the 'travale', a term that has become obsolete (see *Monthly Magazine and British Register*, Feb 1798, p.136; A *Dictionary of Musical Terms*, ed. J. Stainer and W.A. Barrett, 1876). One of the most generally known examples of the use of the thumb roll occurs in the Arabian Dance in Tchaikovsky's *Nutcracker Suite*. In the same work (Trepak) there is a vigorous part for the tambourine, calling for an extremely deft wrist, or the use of two tambourines (or the striking of the instrument back and forth on the knee and the hand).

For a normal tremolo the tambourine is held aloft and shaken, and for the normal stroke the head is struck with the fingertips, knuckles, palm or closed fist, according to the composer's instructions or the player's discretion. For a series of quiet strokes the rim may be struck with the fingertips or drumsticks. To ensure a *pp* or *ppp* many orchestral players use a jingle-ring – a tambourine without a head. (The jingle-ring (*Schellenreif*) is occasionally referred to and illustrated in medieval manuscripts.)

More unusual methods of playing the tambourine include flicking the jingles (Walton, *Façade*) and brushing the jingles (Lambert, *The Rio Grande*). Possibly the most unusual request came from Stravinsky, who (in *Petrushka*: The Scuffle) asked for the instrument to be held close to the floor and dropped. A tambourine without jingles is occasionally used in the orchestra, e.g. in Stravinsky's *Renard* and Falla's *El retablo de Maese Pedro*. In George Benjamin's *Sudden Time* (1990–93) five very small tambourines are required: these are meant to be used in ascending order

of pitch, but though they may start at the correct pitch, atmospheric conditions in the hall can change this very rapidly.

Kolberg has developed a tambourine mounted on a stand, which the player can turn with one hand while executing a continuous thumb roll with the other. This instrument is provided with several sets of interchangeable jingles, allowing a choice of tone colour. A tambourine with no head, but sometimes provided with a handle, has often been used in pop and light music as a rhythm instrument.

Notation for the tambourine is generally on a single line (as in ex.1), though staff notation and pictographic notation have become more common in 20th-century music.

Tambūr.

See Tanbūr.

Tambūrā [tambūrī, tampūrī, tānpūrā].

A term for long-necked plucked drone lutes of South Asia, found in both art and traditional musics. Although the name and basic construction of these instruments indicate a Middle Eastern origin, their development and use as drones are characteristic of South Asia.

Drone lutes of local traditions, such as the *tambūrī* of Karnataka and the *tambūrā* of Andhra, not only provide a drone (with tonics and 5ths predominating) but also, being plucked in a regular ostinato pattern, give a rhythmic accompaniment. The Andhra and Karnataka instruments are of similar construction, though the former (about 97 cm long) is larger than the

latter (about 84 cm). Both are entirely of wood, and their structure indicates an influence from the long-necked *rabāb* (as does that of the southern *vīnā*). The hemispherical wooden bowl and straight heavy neck are sometimes of one piece of wood, but are more often joined; the bowl is covered by a wooden soundtable and the neck with a fingerboard. The neck terminates in a heavy, open pegbox, with two pegs on each side, surmounted by varying large animal shapes which, though here of Hindu mythological significance (the divine bird *garuda*, the hood of the cosmic serpent *śesa*, or a dragon, *yāli*), recall those of the *rabāb*. The four metal strings, often tuned, like the classical *tambūrā*, to a 5th, two upper tonics and a lower tonic (the first three of steel, the last of brass), pass over a low nut and a deep bridge (of uncommon type, with upper and lower downward-sloping areas divided by a notched upright blade, the lower area being deeper). They are secured at the bottom through holes in a projecting inferior wooden string holder.

The *tambūrā* of the northern and southern art musics, though differing from each other in detail, relate more closely than the above to the *tanbūr* family of long-necked lutes widespread in West, Central and South Asia: both have joined resonator and neck, and no pegbox, the pegs being simply inserted frontally and laterally in the top of the neck. The northern or Hindustani *tambūr* is closely related in body structure to the *sitār*. Its resonator or 'shell' (*khol*) is also made of three pieces: a two-thirds segment of gourd joined to a heavy wooden shoulder-piece, both covered by a wooden soundtable (the latter is more markedly convex than on the *sitār*). This shows a connection with the carvel-built shoulder-and-ribs construction of the Central Asian and Mughal long lutes. The neck is more massive than that of the *sitār*, and is square-sectioned, but with rounded sides. *Tambūrā* come in many sizes, chosen by singers to suit their voice-range: those used by male singers are often over 130 cm long, with a gourd diameter of almost 40 cm (even larger ones can be found today, their gourds imported from Zanzibar); those used by female singers are smaller. A famous centre of production is Miraj, in southern Maharashtra.

The vocal *tambūrā* has four strings, tuned traditionally to an open chord of dominant or subdominant (according to *rāga*), two upper tonics and a lower tonic; today, there is increasing use of the leading-note in place of the dominant. The first three strings are of steel and the last is of copper, phosphor bronze or brass. Models with five, six or more strings, however, are not infrequent nowadays, with many tunings varying with the *rāga* to be sung. The four-string *tambūrā* has two frontal pegs and one at each side of the top of the neck. From here the strings pass through holes in an upright bone or ivory blade, the string-guider, set in the neck, and are directed over notches in a second blade, the nut. A deep bench-shaped bridge is set in the centre of the table; it is similar to that of the *sitār* and consists of an antler or bone plate filed in a parabola (the slope being more gradual on the upper side) and glued over a wooden trestle. This is called *javārī* (probably from the Hindi *javār*: 'flood-tide'), indicating the full and long-lasting tone this device allows. An extra feature here, however, are the silk threads (*jīva*: 'life') inserted under the strings at the nodes before playing. These further increase the resonance, give a rich harmonic spectrum, and also reduce the sound of attack as the strings are plucked (or rather brushed) by the ball of the second and first fingers to give a repeated

spread chord which, though in regular rhythm (often with a one-beat rest, e.g. the four strings to a count of five, which accelerates along with the music), does not provide a stress or metrical accompaniment as do the traditional drone lutes. Before being secured to an inferior string holder, each string passes through a fine-tuning bead lying on the table below the bridge.

The southern classical *tambūrā* or *tambūrī* (*tampūrī* in Tamil orthography) is similar in principle. The proportions, however, especially of the neck, are here more slender, and the bowl of the resonator is carved from a single piece of jakwood. The latter, like the southern *vīnā*, has incised on its back an ornamental vestige of the original rib-and-shoulder caivel-building. The wooden soundtable is flat. *Tambūrā* of the Thanjavur style have the unique feature of a sliding nut which can be adjusted to different notes.

The *tambūrā* is held vertically, resting on the shoulder, or horizontally on the floor, either by the singer or his assistants; sometimes two are used together. The use of small *tambūrā*, alone or with a large one, to accompany instrumental music appears to be a 20th-century development. Recent innovations are the various electronic or bellows-pumped substitutes such as the *Śruti-box*. The free-reed, bellows-pumped reed organ may, to some extent, provide a drone for vocal music, but its function is primarily textural.

Tamburini.

Italian firm of organ builders. Giovanni Tamburini (*b* Bagnacavallo, 25 June 1857; *d* Crema, 23 Nov 1942), an accordion maker, was apprenticed as an organ builder to Pietro Anelli of Codogno before joining Pacifico Inzoli of Crema (1887), where he invented the Tamburini wind-chest with double compartments. In November 1893 he established his own business in Crema: direction later passed to his son-in-law Umberto Anselmi, and later still to his grandsons Franco and Luciano, who added 'Tamburini' (their mother's maiden name) to their family name by decree of the President of the Republic of Italy, thus becoming Anselmi-Tamburini. In 1979 the brothers set up independent firms: Franco continued in Crema under the name of Tamburini until October 1995 when he went out of business, while Luciano established his shop in Pianengo under the name 'Anselmi-Tamburini', later passing it over to his son Claudio. In 1998 Franco's son Saverio started a new firm in Crema under the name 'Comm. Giovanni Tamburini'.

The firm built large electro-pneumatic action organs, including those for Messina Cathedral (1930), S Croce, Florence (1931), and Milan Cathedral (1938; in collaboration with the firm Mascioni). In 1967 the Tamburinis were the first Italian firm to abandon the universally accepted electro-pneumatic action in favour of tracker action for the organ of the basilica of S Maria dei Servi, Bologna. They also carried out restorations of important historical organs, such as the two organs of the basilica of S Petronio, Bologna (Lorenzo da Prato, 1471–5, and Baldassarre Malamini, 1596) and the three-manual organ at S Alessandro in Colonna, Bergamo (Giuseppe ('il giovane') Serassi, 1781–2), with its divisions situated in opposite galleries and connected by an original mechanism, reconstructed during the organ's restoration, which passes through a subterranean gallery for a distance of about 30 metres.

GUY OLDHAM/UMBERTO PINESCHI

Tamburini, Antonio

(*b* Faenza, 28 March 1800; *d* Nice, 8 Nov 1876). Italian baritone. He made his début at Cento in 1818 in Generali's *La contessa di Colle Erboso*, and then sang in Piacenza, Naples, Livorno and Turin. In 1822 he appeared at La Scala in Rossini's *Matilde di Shabran*, Mercadante's *Il posto abbandonato* and the first performance of Donizetti's *Chiara e Serafina*. After singing in Trieste and Vienna, he took part in the première of Donizetti's *L'ajo nell'imbarazzo* at Rome (1824). Engaged in Palermo (1825–6), he appeared in Rossini's *L'italiana in Algeri*, *Il barbiere di Siviglia*, *Aureliano in Palmira*, *L'inganno felice* and *Tancredi* and Mercadante's *Elisa e Claudio*. In 1826 he sang in the first performance of Donizetti's *Alahor di Granata*.

At La Scala he created Ernesto in Bellini's *Il pirata* (1827), repeating it in Vienna. He sang in Bellini's *Bianca e Fernando* and in the first performance of Donizetti's *Alina, regina di Golconda* at Genoa (1828). He took part in the premières of Donizetti's *Gianni di Calais* (1828), *Imelda de' Lambertazzi* (1830), *Francesca di Foix* (1831), *La romanziera* (1831) and *Fausta* (1832) in Naples. He created Valdeburgo in Bellini's *La straniera* at

La Scala (1829), a part he repeated in Naples (1830) and at the King's Theatre, London (1832).

In 1832 Tamburini appeared for the first time at the Théâtre Italien, Paris, singing Dandini (*La Cenerentola*), Assur (*Semiramide*), the title role of *Mosè in Egitto* and Valdeburgo. For a decade he sang alternately in London and Paris; his repertory included Mozart's Don Giovanni and Count Almaviva, and roles in Rossini's *La gazza ladra*, *Otello*, *La donna del lago*, *Le siège de Corinthe* and *Guillaume Tell*. He created Riccardo in Bellini's *I puritani* (see illustration) and Ismaele in Donizetti's *Marino Faliero* (both 1835, Paris) and also sang in *Lucia di Lammermoor*, *Parisina*, *Roberto Devereux* and *Lucrezia Borgia*. He sang in the first Paris performance of Donizetti's *Linda di Chamounix* (1842) and created Malatesta in *Don Pasquale* (1843). After an absence from London of five years, he sang Assur at the opening of the Royal Italian Opera at Covent Garden (1847). He retired in 1855. His voice, unusually flexible for a baritone, was rich and solid throughout its range.

As is clear from much of the music created for him, Tamburini's compass extended unusually low for a baritone; he would today probably be classed as a bass-baritone. His talent was essentially lyrical, a far cry from the higher, more intense 'Verdian' baritones of the next generation. Henry Chorley wrote in his *Thirty Years' Musical Recollections* (1862): 'He was a singularly handsome man; his voice was rich, sweet, extensive and equal – ranging from *F* to *f'*, two perfect octaves – and in every part of it entirely under control. His execution has never been exceeded. … No one since himself has so thoroughly combined grandeur, accent, florid embellishment and solidity.'

ELIZABETH FORBES

Tamburini, Giuseppe [Bagnacavallo, Giuseppe da]

(*b* Bagnacavallo, nr Ravenna; *d* after 1677). Italian composer and organist. A minorite, he was *maestro di cappella* of the Accademia della Morte, Ferrara, in 1668 and of Urbino Cathedral from 1669 to 1674, when he resigned because of ill-health. Later he was an organist at Assisi. A small amount of sacred music by him survives in manuscript, and a manuscript note on a copy of the volume of four-part masses published at Bologna in 1678 as the work of Bartolomeo Baldrati states that Tamburini was, in fact, the composer.

Tamburini, Pietro Antonio

(*b* Bologna, bap. 10 Aug 1589; *d* Rome, 22 July 1635). Italian composer and singer. He sang at S Petronio, Bologna, from 1601 to 1613. He then moved to Rome, where from 1619 until his death he sang alto in the papal chapel. Several works by him survive in manuscript, including ten masses for four to six voices (all in *I-Rvat* C.S., except one, which is in *I-Bc*), an eight-part *Te Deum* and three motets for four and eight voices (all in *I-Rvat* C.S., the first-named also in *A-Wn*).

Tamitius [Damitius, Tomnitz].

The name of two German organ builders, father and son, active in Saxony.

No complete organs by Andreas Tamitius (*b* Döhlen, nr Dresden, 13 Aug 1633; *d* Dresden, 1700) survive. The son of a pastor, he served his apprenticeship in the Low Countries. He was granted the privilege of Electoral Saxon Court Organ Builder in 1665. A contract giving him the care and maintenance of the organs in the Frauen- and Kreuzkirchen in Dresden was concluded on 7 January 1671.

He built organs for Sts Peter und Paul in Görlitz (destroyed in a town fire in 1691); the town church in Bischofswerda, 1688–90; the St Jacob hospital in Dresden, 1692 (*positiv*); the town church in Torgau around 1695. He also repaired or rebuilt instruments in Freiberg, Pirna, Dresden, Neustadt an der Orla, and elsewhere.

Those of his registrations that survive reveal Dutch influence in the clear division of the stops. He had a special fondness for the Sesquialtera and for the Trichterregal as a covered reed stop. His contemporaries praised the sonority of his Trombone.

His son Johann Gottlieb Tamitius (*b* Dresden, 9 Feb 1691; *d* 26 March 1769) was a pupil of the famous Thuringian organ builder Johann Georg Fincke of Saalfeld. He married Christiane Eleonore Cadner, a pastor's daughter from Zittau, in 1728. He first set up business in Strahwalde near Herrnhut, then settled in Zittau around 1717–20. In 1741, together with Johann Georg Pisendel, he examined Gottfried Silbermann's organ in the Johanniskirche in Zittau.

He built approximately 40 organs, most in the Zittau region, as well as in Nieder- and Oberlausitz and Bohemia (Prague). He compiled a list of 24 instruments in 1737. His most important were at Lossow near Frankfurt an der Oder, 1744; Waltersdorf near Zittau, 1765–6 (extant); Reichenau near Zittau (extant). His son-in-law Leonhard Balthasar Schmahl (1729–79) assisted in his workshop from 1758.

As well as typical 18th-century specifications, J.G. Tamitius also built newer stops such as Flaute douce 4', Flute à traverse 4' and Viola da gamba 8'. His organ cases are in the Rococo style.

FELIX FRIEDRICH

Tämmerinpfeife

(Ger.).

The pipe of the Pipe and tabor.

Tampon [mailloche double]

(Fr.).

A double-headed drumstick originally used for playing rolls on the bass drum. This type of drumstick is still used in the military band and occasionally in the orchestra when the bass drum and cymbals are played by one performer. The roll (which today is normally played with two soft-headed drumsticks) is produced by a rapid oscillating movement of the wrist bringing the heads of the stick into contact with the drumhead. Dukas scored for this effect in *L'apprenti sorcier*, Stravinsky in *The Firebird*, and Britten in *The Burning Fiery Furnace*.

Tan, Melvyn

(*b* Singapore, 13 Oct 1956). British pianist and fortepianist of Singapore birth. From the age of 12 he studied at the Menuhin School in England, where his piano teachers included Perlemuter and Nadia Boulanger. In 1978 he went to the RCM where he made a special study of performance practice, and from 1980 he devoted himself exclusively to the harpsichord and fortepiano. He performed regularly with period instrument ensembles such as the Academy of Ancient Music and the London Classical Players as well as with the English Chamber Orchestra and the RPO. In 1985 he toured the USA, and in 1987 gave a series of concerts with the London Classical Players under Roger Norrington in Europe, America, Canada, Australia and Japan. Tan founded the New Mozart Ensemble in London, with which he appears regularly. His recordings include music by Beethoven and Schubert; he achieved wider public recognition when he played the fortepiano in the theme music for a popular BBC serialization of Jane Austen's *Pride and Prejudice* (1996). In 1996 he began to favour the modern piano once more in recitals. Tan is an original and historically well-informed musician, and plays with great delicacy as well as with a notable freshness and vitality.

JESSICA DUCHEN

Tanabe, Hisao

(*b* Tokyo, 16 Aug 1883; *d* 5 March 1984). Japanese musicologist. His mother was a music teacher and performer on Japanese instruments and he himself began to learn the violin at the Tokyo Music School in 1903. As a physics student at Tokyo University (1904–7) he began studying composition with Noël Peri, and while continuing postgraduate studies in acoustics at the university (1907–10) he studied Japanese music and dance with Shōhei Tanaka. He taught acoustics and music history at Tōyō Music School (1907–35), mathematics and physics at Waseda Junior High School (1908–18), and music history and theory at the Imperial Music Bureau (1919–23). He also made frequent field studies, working on Korean court music (1921) and visiting Formosa and the Ryūkyū Islands (1922), north China (1923) and the Pacific islands (1934). He was successively professor in Japanese music history at Kokugakuin University (1923), lecturer in Japanese music history at Tokyo University (1930), lecturer in acoustics and Japanese music history at Tokyo Music School (1934), lecturer in music history at Waseda University (1947) and professor of acoustics at Musashino College of Music (1949). When the Society for

Research in Asiatic Music was founded in 1936, Tanabe became the president. For his contribution to Japanese music he received the Imperial Academy Prize (1929), the Medal of Honour with Purple Ribbon (1957) and the Fourth Order of Merit (1964).

Tanabe can be regarded as a pioneer among modern Japanese music scholars. Although he is primarily known as an authority on oriental music and acoustics, his interests covered broader fields including European music, dance, mathematics and physics. In the early years of the 20th century he had already become active as a leading promoter of European music in Japan through his writings and lectures. He performed both European and Japanese music – *gagaku* performance, nō singing and *shamisen* and violin playing – and composed many school songs in European style, and some orchestral works including *Takiguchi Nyūdō* (1927) and *Geijutsu no hikari* ('Light of the Arts') for chorus and orchestra (1929). His first publication on Japanese music, *Nihon ongaku kōwa* ('Lectures on Japanese music', 1919) was followed by several other versions of Japanese music history, each with a slightly different title and emphasis.

Tanaka, Karen

(*b* Tokyo, 7 April 1961). Japanese composer. She began piano lessons at the age of four and formal composition lessons when she was ten. After finishing her compositional studies with Miyoshi at the Tōhō Gakuen School of Music, Tokyo (BA 1986), she moved to Paris on a French government scholarship to study with Murail and to work at IRCAM. In 1987 she won the Gaudeamus prize for *Anamorphose*. She studied with Berio in Florence in 1990–91, and in 1991–2 attended the IRCAM composition technology course. Her music is delicate and emotive, beautifully crafted, showing a refined ear for both detail and large, organic shapes. Her harmonic vocabulary is consonant without being tonal, and she is attracted by what she describes as 'transformation of timbre in space, analogous to a gradual change of light refraction in crystals and prisms' (for example, in *Metallic Crystal* and *Crystalline II*). Landscapes are another source of inspiration (*Echo Canyon*, *Frozen Horizon*). Her later works, such as *The Song of Songs* and *Metal Strings*, develop new directions in her musical language using the latest technology and reflecting different aspects of contemporary culture. As a freelance composer she has worked largely from Paris.

STEPHEN MONTAGUE

Tanbūr [tambūr, tembûr, tunbūr].

A name applied to various long-necked, fretted, plucked lutes of the Middle East and Central Asia.

The existence of the lute in Mesopotamia (ancient Iraq) dates from the Akkadian era (3rd millennium bce). It later became popular in Babylon; contemporary reliefs depict its small body and long, thin neck. al-Fārābī (*d* 950) devoted a large part of his *Kitāb al-mūsīqī al-kabīr* ('Great book on music') to the *tunbūr al baghdādī* (Baghdad *tunbūr*; known also as *tunbūr al mizānī*). His reference to its 'pagan' ligatures suggests a pre-Islamic history. According to him, the Baghdad *tunbūr* was distributed south and west of Baghdad, while the Khorasan *tunbūr* was found in Persia (*see* Arab music, §I, 3(ii)). This distinction may account for the modern differentiation between present Arab instruments and other types of *tanbūr* found throughout northern Iraq, Syria, Iran and Turkey. The ancient Baghdad *tunbūr* had five equidistant divisions on the neck. The strings could be divided into 40 divisions, but only the first five are likely to have been used. The theorist Safī al-Dīn (*d* 1294) based his analysis of scale on al-Fārābī's first tetrachord division of 17 pitches on the Khorasan *tunbūr* (*see* Arab music, §I, 3(ii)). During the Ottoman period several types of *tanbūr* were reported in large Arab towns during the 18th and 19th centuries. The *tanbūr sharqī*, *tanbūr kabīr turkī*, *tanbūr buzurk*, *tanbūr bulghārī* or *tanbūr baghlama* were observed by Villoteau in Cairo at that time. These varieties have since disappeared in Arab centres, giving way to the *buzuq* (*see* Arab music, §I, 5(ii)).

Terminology presents a complicated situation. Nowadays the term *tanbūr* (or *tambūr*) is applied to a variety of distinct and related long-necked lutes used in art and folk traditions. Similar or identical instruments are also known by other terms. Saz (Persian: 'instrument') is applied in the Caucasus, Turkey, northern Syria, western Iraq and south-eastern Europe (also *tambura*). In western and northern Iraq, Turkmen people distinguish three sizes of lute: the large *diwan saz*, the medium *baghlama* and small *jora*. The terms Bağlama and *saz* are used somewhat interchangeably in Turkey, applied to a long-necked lute of folk traditions; the *tanbur* (distinguished as the 'great' *tanbur*) is a larger instrument of art music. In Baghdad, Damascus and Beirut, the *buzuq* is an urban instrument. In

northern Iraq the terms *chambar* and *jumbush* were familiar until the first part of the 20th century. In Iran and Central Asia two other terms distinguish long-necked lutes derived from the Khorasan *tunbūr*: Dutār ('two strings') and Setār ('three strings'). A further terminological complication is the use of words related to *tanbūr* for instruments that are not long-necked fretted lutes, e.g. Tambūrā (Indian long-necked, fretless, plucked drone lute) and Tanbūra (bowl lyre found in Iraq, Egypt, Sudan and elsewhere).

In Syria and Iraq the *tanbūr* varies from 40 to 120 cm in length (for illustration *see* Syria, fig.3). The wooden soundbox is usually of mulberry, walnut or white beech, carved from a single piece or carvel-built (constructed of several sections of curved wood). Modern performers may use a half-gourd or metal container for the soundbox. Most instruments are predominantly pear-shaped, but turnip-shaped and spherical ones are not unusual. The soundboard of resinous wood may be oval, rectangular, rhombic or trapezium-shaped; the Turkmen *tanbūr* lacks soundholes, while the *buzuq* and Kurdish *tembûr* have openings, openwork rosettes or perforations spread irregularly over the surface. The long thin neck is fitted with about 10–24 adjustable gut or nylon frets. The Kurdish *tanbūr* normally has 14 frets, while Turkmen and Arab instruments have more. The pegbox may extend from the neck or be a separate piece fixed to it; pegs are of wood or bone. Strings are arranged in single, double or triple courses (e.g. 2:1, 2:2, 3:2, 3:3:3, 3:3:1 etc.), plucked with the fingers or a plectrum made from half a razor blade, a piece of plastic or a quill. The range is from two to two and a half octaves, with various tunings (4th, 5ths, 6ths or octaves). On a *tanbūr* with two courses, only the upper-pitched is fingered continually; the lower-pitched course, often one string only, is used as a drone.

In rural communities of northern Iraq and Syria, the *tanbūr* is played solo to accompany love songs and epic tales at private gatherings. It is also played outdoors, solo or accompanied by a rhythmic instrument, at festivals and important events of the life cycle. The Turkmens of Kirkuk use a related instrument called the *sāz* in traditional ensembles with spoons and membranophones. The Shabak and Sarlia sects of northern Iraq respect the instrument greatly and use it to accompany secret sacred ceremonies and praises sung to Ali and the 12 imams.

Another form of *tanbūr* (rendered as *tembûr* in Kurdish orthography) is associated with the Ahl-e Haqq sect in Kurdish areas and in Lorestan, Iran. Lightly constructed, it is 80 cm long and 16 cm wide, with a pear-shaped resonator of mulberry wood (in one piece or carvel-built), a wooden soundboard and a neck of walnut wood. Two steel strings (or three, as the highest string is often doubled) are tuned a 5th, 4th or sometimes a 2nd apart. 14 gut frets are arranged chromatically in a quasi-tempered scale, giving the open strings a range of a 9th. Playing technique resembles that of the Khorasan *dotār*, but all five fingers of the right hand are used, producing a characteristic continuous tremolo (*shor*). Reserved solely for sacred music, it has a distinctive repertory, forming one of the most secret and inaccessible musical traditions of the Middle East. (*See* Kurdish music, §5; for illustration *see* Iran, §III, 2(iv), fig.3.)

In Turkey the *tanbur*, sometimes called *tanbur kebir türki* ('great Turkish *tanbur*'), is played solo and in ensembles for classical suites (*fasıl*). It has a virtually hemispherical carvel-built body, covered with a thin soundboard of resinous wood. The very long neck has up to 48 gut frets; six to nine strings run in courses, tuned with wooden pegs. It is played with a tortoiseshell plectrum or, less commonly, a bow (then known as *yayli tanbur*).

The *tanbur* of Afghanistan is associated with urban popular music (see illustration; *see also* Afghanistan, fig.3*a*). Its resonator is usually carved from a single block of mulberry wood; sometimes a gourd is used. The wooden soundboard has small soundholes arranged in decorative patterns. The neck is massive and hollow, with no pegbox. There are usually six strings running from medial and lateral tuning-pegs inserted in the head, and a variable number of sympathetic or drone strings with tuning-pegs on the side of the neck. The steel strings are secured at the proximal end to a bone post inserted in the base of the resonator; the first two, tuned in unison, provide the melody. Frets are of gut, nylon or wire, tied round the neck; their number and arrangement varies from diatonic to chromatic. The instrument is sounded with a thimble-like metal plectrum worn over the forefinger of the right hand, which is usually supported over the soundboard by the thumb and third finger. The main stroke is the upstroke, with the finger moving in towards the palm. The instrument is held vertically with the resonator resting in the lap of the player. Sometimes the player strums all the strings. On some instruments the shortest sympathetic string is raised by a protuberance on the bridge for the technique known as *sīmkārī* (*see* Rabāb, §5(i) and Dutār).

The Central Asian *tanbur* is used in art music. In Uzbekistan and Tajikistan it is made from three pieces of mulberry wood (forming the neck, resonator and soundboard) and is shaped very differently from other *tanbur*s. It has three metal strings, two tuned in unison and the third tuned to a 4th or 5th. The melody is plucked on the higher string with a brass plectrum (*nokhunnâkhun*: 'fingernail') fitted onto the index finger; the other strings act as drones. Variants (known as *setār*, *panjtor*, *shashtor*) used in folk music have four, five or six strings, with the use of double courses. Nowadays one or two extra drone strings are frequently added. The gut frets are wound around the neck so the player can obtain ornamental oscillations of up to a semitone, known as *nala* ('lament'). In the city of Bukhara, prior to the Soviet period, it was common for singers to pluck the *tanbur* while they sang, and to use a bow during instrumental interludes between verses. In western China the Uighur *tanbur* is a similar instrument; relatively long, with five strings (double courses used on the unison strings).

Tanbūra [tambūra, tanbūr, tumbura etc.].

Bowl lyre of Egypt, the Sudan, Djibouti, Yemen, southern Iraq and the Gulf. It was known formerly also in Zanzibar, where it was called the *tambira*. The name is a dialectal mutation of the classical Arabic *tunbūr* (lyre), a survival from a rich variety of lyres in that part of the world. Arabian authors seldom mention it, as they recognize the *tunbūr* as a long-necked lute, and it is this that makes it difficult to identify the instrument organologically. The more recent version, 'tanbūra', dates from the 19th century.

The term 'tanbūra', mutated from 'tunbūr', was borrowed by the Arabs from the Sassanids and was used for the lyre from the beginning of the Islamic era in the 7th century. It is found again in the Nile valley during the period of the Ottoman Empire, often paired with other instruments. The lyres known as *tanbūra* probably originated in upper Egypt and the Sudan (*see also* Lyre, §2).

While the instrument's shape is the same in all types, the size varies considerably, from 70 cm for small Sudanese instruments to 1·4 metres for the *tanbūra* of the Yemen; the body may be up to 50 cm in diameter. Various materials are used. The body, circular or bowl-shaped, may be made from a gourd, wood or metal; in the past tortoiseshell has also been used. From the lower part of the body protrude two skin-covered arms, forming two sides of an isosceles triangle whose base is a yoke on which five or six strings are wound. These are fastened with strips of cloth or cords which can be varied in tension to alter the pitch. The strings are usually made of gut, but other materials have also been used: cotton, fibre, jute, steel, antelope tendons or ox sinews. They converge towards the lower part of the body and are held in place by a metal ring which also serves as a bridge, although most models have a separate bridge which improves the quality of the sound. The soundboard may have two holes.

The various tunings are based on one of two systems: the pentacord (five successive notes in the diatonic scale, usually C minor), used for the *tanbūra* of the Yemen, and the pentatonic (with or without semitones). The strings are plucked with a large horn plectrum, sometimes attached to the frame by a leather strap; performance without a plectrum has occasionally been reported in secular Sudanese music. The player holds the instrument

in his arms, turning it inwards; larger instruments are placed on the ground, while smaller instruments are leant against the player's side. The outer arm covers the lyre and picks out the melody at face level; the other holds the plectrum close to the bridge. The music is primarily melodic, but three-part harmonies tend to occur in the secular music of the Sudan. The *tanbūra* is now played mainly by men, a sign of the social changes brought about by the spread of Islam; previously the *mi'zaf* (lyre) was played by women.

The sung repertory includes songs of war, rejoicing, love and above all the *zār* cult, whose ceremonies also include purely instrumental pieces. Association with the *zār* cult would explain the particular attention paid to decoration of the instrument, especially at Djibouti, where it is laden with ribbons, plumes, pompoms, golden balls, shells, small bells, photographs and mirrors with magical powers. In these ceremonies, it is rarely played alone; it is often accompanied by a *manjūr* (a belt goat-hoof rattle), worn by an acolyte dancer. The *tanbūra* is also accompanied by various kinds of drum: in Egypt by the *tūza* and the tabl, in Iraq by the *kuenda* played with a single drumstick and by hand. Although less favoured in the cult, the *tanbūra* has become very popular in the Sudan as a secular instrument, and threatens to rival the *'ūd* as the national instrument of the country.

CHRISTIAN POCHÉ

Tanburî Cemil Bey

(*b* Istanbul, 9 May 1873; *d* Istanbul, 12 Aug 1916). Turkish instrumentalist. He learnt theory and notation from his elder brother and briefly attended

repertory classes (*meşk*) with Tanburî Ali Efendi as a child, dropping out of school at an early age and working intermittently as a minor civil servant.

He mastered the cello, clarinet and *ūd* (lute) as well as the *kemençe* (bowed lute) and the *tanbur* (long-necked lute). On this latter instrument his *taksim* improvisations (*see* Turkey, §II, 3) were characterized by their melancholy, elegiac character and a hitherto unknown level of technical virtuosity. Some contained humorous programmatic references, for example to dogs barking (note his *Çoban taksimi*) and neighbourhood fires. He became famous throughout the Ottoman world: about 100 of his *taksim* improvisations were recorded by Blumenthal and Regent from 1910 to 1914 while many were also notated and distributed by contemporary commercial publishers. His *taksim* reflected an interest in rural music that was emerging among Turkish nationalist intellectuals: in them he reproduced, for example, the sounds of the rural song style *uzun hava* and Black Sea dances (*see* Turkey, §IV, 4). He also learnt to play rural instruments such as the *zurna* (double-reed aerophone) and the *bağlama* (long-necked plucked lute). In his later years he relied heavily on the patronage of Sultan Abdulhamid II and court circles.

In addition to his work as a performer, he composed a number of pieces in the *peşrev*, *saz semaisi* and *şarkı* forms and wrote extensively on musical theory. He taught a number of musicians who were particularly significant in institutionalizing the classical genre in the early years of the Turkish Republic, most notably his son Mesut Cemil (1902–63).

MARTIN STOKES

Tanç, Cengiz

(*b* Istanbul, 10 April 1933; *d* Istanbul, 16 Dec 1997). Turkish composer. After studying with Saygun at the Ankara State Conservatory and Sydney Compton at the GSM in London, he received a Fulbright scholarship to pursue further studies in composition with Persichetti and Babbitt at the Juilliard and Columbia University in New York. His early compositions show the influence of Turkish traditional music as well as the music of Bartók and Stravinsky. After some early atonal pieces, Tanç developed serial techniques which derived their pitch material from modal music, thus producing unique and impressionistic instrumental textures. His ballet suite *Yoz Döngü* (1974) employs a solo *bağlama*, a long-necked lute, with an orchestral accompaniment. In his later compositions he turned to a neo-romantic style. Many of his orchestral works were commissioned by musical institutions in Turkey and are performed extensively.

Stage: Çoğul, 1971; Yoz Döngü, 1974; Deli Dumrul (op, 3), 1974–5; Yaratılış, 1980; İnsanın Yükselişi, 1987

Orch: Lament for Dardanelles, chorus, orch, 1960; Suite, str, 1960; Soyutlama, 1961; Divertimento, 1963–4; Çağırışımlar, 1973; Suite, str, 1974; Sentez, 1975; Yankılar, 1978; Doğaçlama, 1979; Yaratılış, 1981; Yükseliş, sym., str, gong, 1981; Lirik Konçerto, fl, ob, str, 1983; Legend of the Blacksheep, 1984; Va Conc., 1986; Metamorphosis I, orch, synth, 1991; Tertium Quid, 1992; Metamorphosis II, orch, synth, 1993; Vc Conc., 1994

MÜNİR NURETTİN BEKEN

Tan Dun

(*b* Simao, Hunan Province, 18 Aug 1957). American composer of Chinese birth. Growing up during the Cultural Revolution, he received no schooling or early musical training. For several years he planted rice in a commune. After working as a violinist and arranger at the local opera theatre in Beijing, he was admitted at the age of 19 to the composition department of the newly reopened Central Conservatory of Music, where he studied with Zhao Xindao and Li Yinghai and encountered Western classical music for the first time. As the restrictions of the Cultural Revolution were lifted, Tan and his fellow students discovered a wide range of formerly suppressed 20th-century music, from Bartók and Schoenberg to Boulez; they were also stimulated by visits from a number of guest composers, including Goehr, Crumb, Henze, Takemitsu and Yun. Tan soon became recognized as the leading composer of the Chinese 'New Wave', the generation of artists, writers and composers that came to prominence in the new atmosphere of cultural pluralism in the early 1980s. As such his music aroused much debate and political controversy: for a brief period in 1983 it was branded 'spiritual pollution' by the Chinese government, and performances were banned. In 1986 he moved to New York, where he completed his studies at Columbia University (DMA 1993) with Chou Wen-chung, Mario Davidovsky and George Edwards. Among his numerous honours are the Glenn Gould International Protégé Award, the Grawemeyer Award (in 1998 for the opera *Marco Polo*) and commissions from such organizations as the Edinburgh Festival, the Metropolitan Opera, the New York PO, the International Bach Academy and NHK, Japan. His *Symphony 1997: Heaven Earth Mankind* was composed for the ceremony reuniting Hong Kong with China on 1 July 1997, and his *2000 Today: a World Symphony for the Millennium* was broadcast internationally by more than 55 television networks on 1 January 2000.

Describing himself as a composer 'swinging and swimming freely among different cultures', Tan has drawn inspiration from nature, Chinese philosophy and his childhood memories, a combination that lends his work qualities of timelessness, spirituality and mysticism. The last composition he completed before leaving China, *On Taoism* (1985), already signalled a radical break with the conservative Westernized style that had dominated

Chinese art music in previous decades, and the works which followed set about integrating within what Tan has called 'the concentrated lyrical language of Western atonality' elements of Chinese traditional music. The influence of Beijing opera is especially evident: *Eight Colors for String Quartet* (1986–8) employs its characteristic melodic patterns, while *Silk Road* for soprano and percussion (1989) draws on a number of the vocal techniques (including falsetto, glissando and sharply articulated consonants) associated with it. Tan's first full-length stage work was *Nine Songs* (1989), a 'non-narrative, even surreal' music-dance drama which derives both its fragments of text (in English and classical Chinese) and its ritualistic essence from poetry by Qu Yuan (340–277 bce). It is also one of a number of Tan's works to employ original Chinese ceramic instruments. Altogether more ambitious in scale was *Marco Polo* (1995), which charts both the 'outer', physical journey of the title character and an 'inner', spiritual journey from West to East, played out by characters symbolizing 'shadows', 'memory' and 'nature'. These physical and spiritual dimensions are demarcated musically, the former represented predominantly by music in a Western avant-garde idiom, the latter by the style of Beijing opera. Meanwhile the changes of geographical landscape in the course of the voyage are mirrored by changes of instrumentation within an ensemble that incorporates medieval European, Indian, Tibetan and Chinese instruments.

The series of works entitled *Orchestral Theatre* provides perhaps the best summary of Tan's concerns in the 1990s. The cycle aims, in the composer's words, to restore music's place 'as an integral part of spiritual life, as ritual, as shared participation' through the 'dramatic medium' of the orchestra. Consequently it explores the dualities that underlie his work as a whole: those of East and West, the sacred and the secular, the pre-modern (shamanistic) and the modern (urban). Whereas *Orchestral Theatre I: Xun* (1990) sets out to recreate a Chinese village celebration, evoking its sounds through the use of both folk and Western instruments, the ceremony in *Orchestral Theatre II: Re* is essentially an imaginary one, though it owes something to Tibetan sources. In *Red Forecast: Orchestral Theatre III* these elements of ritual confront the modern paraphernalia of multimedia: a variety of Western styles – classical, jazz, rock and pop – are combined with the sounds of news reports and archival video footage focussing on events of the 1960s. That decade symbolizes for Tan a period of idealism both in the West and in the China of his upbringing, and the work courageously addresses the question of whether such idealism can survive the threats posed to it by technological and economic development and the upheavals of global politics. That the 'forecast' of the work's title is not ultimately pessimistic is demonstrated by the transcendent quality of the final movement 'Sunshine', a 'lovesong' to nature and the future, performed on a stage flooded symbolically with red light.

WORKS

(selective list)

Dramatic: Nine Songs (ritual op, Tan Dun, after Qu Yuan), 1989, New York, Pace Downtown Theatre, 12 May 1989; Marco Polo (op, P. Griffiths), 1995, Munich, 7 May 1996; Orch Theatre III 'Red Forecast', S, orch, tape, video, 1996; Bitter Love, S, 6 pfmrs, slide projections, video, 1998; Peony Pavilion (op, Tang Xianzu, trans. C. JOANNA C. LEE

Tanel

(*fl* late 14th century). Composer, probably French. His name, clearly incomplete, seems to appear at the head of a simple two-voice virelai, *Nulle pitié, ma dame* (ed. in CMM, liii/3, 1972, no.209, and in PMFC, xxi, 1987, no.45), in the French fragment *I-Bu* 596 (described, with further references, in RISM B/IV/4, p.738).

KURT VON FISCHER/R

Tanenbaum, David

(*b* New York, 10 Sept 1956). American guitarist. He studied the guitar at the Peabody Conservatory with Aaron Shearer, 1974–6, and at the San Francisco Conservatory with Michael Lorimer, 1976–8. In 1977 he won first prize in the Carmel Classic Guitar Festival Competition, and the following year won second prize in the Toronto International Guitar Competition. He has given recitals in the USA, Europe and Asia, and has also appeared as a soloist with leading American orchestras. Among his many premières are Henze's concerto *An eine Äolsharfe* (1986), which he also recorded under the composer, and Terry Riley's *Ascención* (1994). He has also made the first recordings of Tippett's *The Blue Guitar*, Maxwell Davies's Sonata, Takemitsu's *All in Twilight* and Reich's *Electric Counterpoint*, as well as works by many other American composers. Tanenbaum has edited studies and works for the guitar and has contributed many articles on its technique and repertory. He was appointed to the San Francisco Conservatory in 1981, becoming the chairman of the guitar department in 1987.

THOMAS F. HECK

Tañer

(Sp.).

See Toccata, §1.

Tanev, Aleksandar

(*b* Budapest, 23 Oct 1928; *d* 15 April 1996). Bulgarian composer. He studied law at Sofia University and then music at the Sofia Conservatory, where he studied composition with Veselin Stoyanov. He was active as an official of the Bulgarian Composers' Union (particularly with regards choral singing at leading institutions), and from 1970 he taught composition at the Sofia Conservatory. The political songs, choral songs and folksong arrangements for which he is best known are influenced by the choral

music of Dobri Khristov. With their emotionality, concise melodies and well-conceived structures, Tanev's songs are popular with amateur choral societies and are frequently performed. In large-scale works for chorus and orchestra, for example the oratorios *Letopis na svobodata* ('Chronicle of Freedom') and *Pesen na pesnite* ('Song of Songs'), he endeavoured to create an art form that contains clear politico-social aims. His entire output conveys the tenets of socialist realism: democracy, patriotism and a direct means of expression.

MARIYA KOSTAKEVA

Taneyev, Aleksandr Sergeyevich

(*b* St Petersburg, 5/17 Jan 1850; *d* Petrograd [now St Petersburg], 26 Jan/7 Feb 1918). Russian composer and civil servant. He was an uncle of S.I. Taneyev. On graduating from St Petersburg University, he entered the civil service and rose to become chief secretary to the imperial chancellery. But he also took music seriously, studying theory and composition with F. Reichel in Dresden and later with Rimsky-Korsakov and A.A. Petrov. Of his three symphonies, the first was admired by Glazunov; the second showed the influence of Balakirev; and the third is more eclectic. His operas were performed because of his powerful influence in high circles and are of little account. His lighter orchestral works, songs and piano pieces, two of which Balakirev arranged for publication, are pleasant and unassuming.

As well as being on the board of the Russian Musical Society and the St Petersburg Conservatory, from 1900 Taneyev headed the folksong commission of the Imperial Russian Geographical Society, which sponsored the collection and publication of *Fifty Songs of the Russian People*, harmonized by A.K. Lyadov, who used eight of them in his orchestral work *Eight Russian Folksongs*. He was deputy chairman of the

committee that organized the celebrations for the centenary of Glinka's birth in 1904, and ensured that Balakirev was invited to write a cantata for the unveiling of the memorial to Glinka.

DAVID BROWN

Taneyev, Sergey Ivanovich

1. 1856–89.

Taneyev was the son of a government official, a cultured and intelligent man with aristocratic connections. He had his first piano lessons when he was five, and in September 1866 he entered the Moscow Conservatory, even though he was not yet ten years old. In the following year his course was interrupted, but in 1869 he resumed his piano studies with Eduard Langer, also joining the theory class of Nikolay Hubert and, most important, Tchaikovsky's composition class. In 1871 his piano tuition was undertaken by Nikolay Rubinstein. Taneyev's official début occurred on 29 January 1875, when he played Brahms's D minor Concerto at a concert of the Russian Musical Society, and on 3 December he gave the first performance in Moscow of Tchaikovsky's First Piano Concerto. Subsequently Taneyev was to play the solo part in the Russian premières of all Tchaikovsky's works for piano and orchestra. A firm friendship between them had begun while Taneyev was still a student, and it continued until Tchaikovsky's death, despite the frankness with which Taneyev was prepared (and, uniquely among Tchaikovsky's circle, encouraged) to criticize Tchaikovsky's work.

In May 1875 Taneyev graduated from the conservatory, being the first student to receive a gold medal for performance and composition. During the summer he travelled abroad with Nikolay Rubinstein, and in February and March 1876 he toured Russia with the violinist Leopold Auer. In October he went abroad again, visiting Paris for a year and meeting Turgenev and leading French musicians. In 1878, on Tchaikovsky's resignation from the Moscow Conservatory, Taneyev was persuaded to take his place, though he consented to direct only the harmony and orchestration classes. So far, Taneyev had kept his own music a secret confined almost exclusively to Tchaikovsky and himself. He had already written one symphony while still a student, and after his Paris visit he started upon a second, though this was interrupted by his conservatory appointment. His self-criticism was severe, and it was not until June 1880 that he at last made his début as a composer with the cantata for the unveiling of the Pushkin memorial in Moscow. An eclectic and conservative at heart, Taneyev had early been drawn to the music of Bach, and subsequently he was to extend his studies to the great contrapuntists of the Renaissance, such as Ockeghem, Josquin and Lassus. This interest is demonstrated not only in the considerable number of contrapuntal exercises which survive in manuscript, even from his mature years (including attempts to use Russian folksongs as the basis of contrapuntal pieces), but also in the powerful contrapuntal element in his independent work. By contrast, his unpublished works reveal a strong humorous streak, engagingly displayed particularly in a variety of musical greetings to friends.

The next few years saw Taneyev being increasingly drawn into the work of the conservatory. After a further visit to Paris in 1880 he returned to take over the piano class of Nikolay Rubinstein, who had died in March 1881, and, when Hubert resigned in 1883, he undertook the composition class. Then in June 1885 he reluctantly became director of the conservatory. Meanwhile his list of compositions had been growing slowly. Quite apart from his arduous conservatory duties, he was interested in a wide range of

intellectual pursuits. During the 1890s these included Esperanto, and among his vocal works are settings of texts in that language. Because of such distractions composition was normally confined to summer months spent on the estate of his friends the Maslovs. On 23 March 1884 he conducted his cantata *Ioann Damaskin* ('John of Damascus'), published as his op.1, and in January 1885 he directed the première of his D minor Symphony. During the summer he visited the Caucasus, noting down folksongs, and in 1886 he began what was to be his first published string quartet. The following year he started upon his most ambitious work, the opera *Oresteya* ('The Oresteia'), a task which occupied him for the next seven years. In May 1889, finding that work at the conservatory was distracting him from composition, he resigned the directorship (which he had held very successfully), though he continued to teach counterpoint. He was one of the best and most influential Russian teachers of his period, his pupils including Skryabin, Rachmaninoff, Lyapunov and Glière.

Taneyev, Sergey Ivanovich

2. 1889–1915.

Having now more free time, Taneyev embarked systematically upon a book on counterpoint, finishing it in 1906; in addition he pressed ahead with *The Oresteia* and completed it in July 1894. It was first given in St Petersburg on 29 October 1895, but despite initial success, it never established itself in the repertory. During the summer of 1895 Taneyev became friendly with Tolstoy, and subsequently often visited the Tolstoys' estate at Yasnaya Polyana. It is known that Tolstoy's wife became infatuated with Taneyev, though it appears that he himself was quite unaware of this. (He was, it seems, by temperament an ascetic, being a teetotaller and fiercely opposed to tobacco.) During Tchaikovsky's last years Taneyev had some contact with Rimsky-Korsakov, and acquaintance now developed into a firm friendship which lasted until the latter's death. Taneyev also became more sympathetic to other members of the nationalist school, conceding at last Borodin's gifts, and in 1898 dedicating his C minor Symphony to Glazunov.

Taneyev was a man of marked integrity and openness, and seems to have had a gift for arousing respect and even affection in people who could not share his musical outlook. In 1905, when the revolutionary movement in Russia sparked off disturbances at the conservatory, his principles led him to resign from the staff in protest at the director's repressive disciplining of some students. Being now free from teaching, he resumed his career as a concert pianist, as both soloist and participant in chamber music, on which he had, since completing *The Oresteia* 11 years earlier, centred his creative attentions. By 1905 he had composed six string quartets and two quintets, and now he was able to pursue this line of composition more intensively, composing in particular chamber works with a piano part which he could play in concerts. He also wrote some choruses and a substantial number of songs. His book on counterpoint appeared in 1909, and he then turned his attention to a study of canon, though this work remained unfinished. In 1913 he was elected an honorary member of the Russian Musical Society. His last completed work was the cantata *Po prochtenii psalma* ('At the Reading of a Psalm'), completed at the very beginning of 1915, and universally acclaimed at its first performance in March. On 27

April his former pupil Skryabin died and Taneyev, after attending the funeral, developed pneumonia. He rallied, but soon succumbed to a heart attack.

3. Works.

The Russian scholar Boris Asaf'yev observed that Taneyev, 'like no other Russian composer, lived and worked immersed in the world of ideas, in the development of abstract concepts'. Taneyev is, indeed, a lone figure in late 19th-century Russian music, owing nothing to the indigenous Russian tradition established by Glinka, and openly disapproving of contemporary nationalist composers. He was the antithesis of Glinka, for whereas the latter was possessed of a powerful and vivid imagination but was deficient in technique, Taneyev had little imaginative endowment but commanded a compositional skill unsurpassed by any Russian composer of his period. The patient diligence of his approach to composition was the very opposite of the capricious bursts of energy that characterized the work habits of many of his contemporaries. It was his normal practice to do extensive preliminary work on his basic materials, such as working out contrapuntal possibilities, before setting about the main task of composition. His creative mentality is clearly exposed in a letter he wrote to Tchaikovsky while working on *The Oresteia*:

> [My approach] means that not one number is written in its final form until the outline of the whole work is prepared. It is written, you might say, concentrically, not by composing the whole out of the separate, successive parts, but by going from the whole to the details: from the opera to the acts, from the acts to the scenes, from the scenes to the separate numbers … Thus one may perceive the most important points in the drama on which the attention of the composer must be most concentrated, determine the length of scenes and numbers according to their importance, plan the modulatory scheme of the acts, define the orchestral sounds, and such like.

Accordingly, his scores are among the most orderly and polished in Russian music. His inclination to contrapuntal techniques and his studies of the great contrapuntists of the past fortified his skill, resulting in textures which, however complex, are always engineered with precision and polish. He often used contrapuntal procedures as an enrichment of his harmonic palette, and despite the lack of individuality in his melodic fund, his skill in building melodic paragraphs and in devising interesting phrase structures is admirable. In an early work like the *Canzona* for clarinet and strings (1883) the lyricism and waltz proclivities of his teacher Tchaikovsky are clearly reflected, but his style was to develop a more broadly based eclecticism which ultimately achieved an illusion of individuality through its constant capacity to avoid commitment to the style of any one composer, however close certain passages may be to the sound worlds of masters like Tchaikovsky and Brahms (whose music, however, he claimed to dislike).

The fastidiousness of his craftsmanship is evident in his songs, many of which are admirable compositions, but his gifts are seen to better

advantage in his accomplished handling of large-scale forms, particularly in his fluent sonata structures, as in the first movement of his C minor Symphony (1898), usually considered his finest instrumental work. The slow movement is also an impressive piece, revealing a warm lyricism deployed on an impressive scale, while the scherzo shows his capacity for delightful, if restrained, capriciousness. It was natural that a composer of Taneyev's leanings should be drawn increasingly to chamber music. Nor is it surprising that one who thrived on counterpoint should wish to augment the linear resources of the string quartet, and to write, besides six numbered quartets, three string quintets. The first of these (1901, revised 1903) is typical of his chamber music, opening with a vast sonata structure which exhibits a thoroughly Germanic handling of thematic and tonal mechanisms. Despite that, his penchant for contrapuntal thinking is revealed in the constant thematic interactions of the first movement, and even more explicitly in the variation finale, which concludes with a parade of contrapuntal expertise in a fugue on three subjects. His contrapuntalism reached its apogee in his last work, the choral-orchestral *At the Reading of a Psalm*, a cantata which some regard as his masterpiece.

But his most ambitious work was *The Oresteia*, which, despite the retention of the original designation 'trilogy', is in fact an opera in three acts. Its subject suggests his antipathy both to the graphic realism and to the fairy-tale fantasy that dominated contemporary Russian opera, and though it has the stage-picture manner typical of the Russian tradition, this comes less from commitment to the principles that guided Glinka or Musorgsky than from his lack of interest in the events of the plot (significantly, for instance, the offstage murders of Aegisthus and Clytemnestra have no effect upon the musical flow), which are purely incidental to the broader themes of fate, revenge and expiation that are the fundamentals of Aeschylus's drama. Taneyev employed musical styles and dramatic conventions deriving from French grand opera, but overlaid these with an epic vein which makes his loftier musical intentions clear. The care with which he composed the piece is reflected in the final result, which is a splendidly efficient score. Nevertheless, the conventional character and inequality of his musical invention causes the achievement to fall short of the intent. Taneyev had none of Tchaikovsky's gift for full-blooded melody, and his lyrical passages sound like his master's at their weakest; nor had he any trace of Musorgsky's ability to capture a character or action within an unforgettable musical invention. His music envelops the tale in a noble aura instead of illuminating it by uncovering the souls and feelings of human beings caught in a train of events which is their destiny. In *The Oresteia* he was usually at his best when composing a passage in which his resourcefulness as a composer was exercised (as in some of the chromatic sections which avoid stock progressions and combinations), or when the dramatic situation demanded the construction of a large musical span. On such occasions he sometimes produced music that has real distinctiveness.

Taneyev Quartet.

Russian string quartet. It was founded at the Leningrad Conservatory in 1946 by Vladimir Ovcharek, Grigory Lutsky, Vissarion Solov'yov and Veynus Morozov, all second-year students born in 1927. After graduating in 1950 and 1951, they played in the Leningrad PO, the quartet functioning as an offshoot of the orchestra. In 1956 it marked the centenary of the birth of Sergey Taneyev – its members' favourite composer of the past, after Beethoven and Tchaikovsky – by playing a cycle of his quartets in Leningrad; it adopted his name in 1963. For many years its career was effectively confined to the Soviet Union, although the quartet was permitted to visit other Eastern bloc countries. In 1967 Iosif Levinzon (*b* 1934) replaced Morozov as cellist, the latter continuing for a time to appear as second cellist. In 1984 the inner parts were taken over by A. Stang and V. Stopichev. The group toured America in 1989 and has also visited Japan and some European countries. The 'Taneyevs' made a speciality of Shostakovich's chamber music, which they studied with the composer. He would send them the score of each new quartet and allow them to play it as

soon as his most favoured interpreters, the Beethoven Quartet, had given the première. When, owing to the death of its cellist, the Beethoven Quartet was prevented from playing the 15th Quartet in 1974, Shostakovich allotted the première to the Taneyev, which over the years has also introduced works by Salmanov, Yevlakhov, Basner, Chernov and Agafonnikov. Among its recordings are the complete quartets and quintets of Taneyev, a Shostakovich cycle, and arguably the finest performance of the Schubert C major Quintet ever achieved in the studio (1963, with Rostropovich as guest).

TULLY POTTER

Tangent.

(1) The brass blade at the back of a clavichord key which strikes the string when the front of the key is depressed (*see* Clavichord, fig.1).

(2) In some 17th- and 18th-century writings from Germany and the Low Countries, a Jack.

Tangent piano

(Ger. *Tangentenflügel*).

A keyboard instrument whose strings are struck by freely moving slips of wood resembling harpsichord jacks rather than by hinged or pivoted hammers. A 16th-century pentagonal octave spinet by Francesco Bonafinis in the Metropolitan Museum of Art, New York, was originally constructed with jacks, but these were later replaced with striking tangents. The date of this instrument's conversion into a tangent piano is uncertain, but evidence suggests that the conversion predated Cristofori's invention of the hammer mechanism around the year 1700. The most important instrument of this type was the *Tangentenflügel* said to have been invented in 1751 by Franz Jakob Späth the younger and made by him (in partnership with his son-in-law Christoph Friedrich Schmahl after 1774) in Regensburg. The tangent piano principle was, however, incorporated in a number of other designs both earlier and later, none of which can be shown to have had any direct connection with Späth's. It is embodied in the actions devised by Jean Marius in 1716 and C.G. Schröter in 1739 but not published until 1763; and a grand piano action patented in England in 1787 by Humphrey Walton (no.1607) altered the ordinary square piano action by making the hammer propel a padded jack-like striking element towards the strings. In addition, a number of surviving harpsichords and virginals were converted to instruments of the tangent piano type simply by replacing their jacks with shorter slips of wood and then shifting either these or the strings so that the short jack-like pieces would strike the strings from below when the keys were depressed.

None of these converted instruments, however, includes the refinements found in Späth and Schmahl's instruments, of which all the surviving examples seem to have been made after 1790. The action of these instruments includes an intermediate lever to increase the velocity with

which the jack-like striking element is propelled towards the strings, as well as a large assortment of tone-altering devices, including means for raising the dampers, for introducing a strip of cloth between the striking elements and the strings, for shifting the striking elements sideways so that they strike only one of the two strings provided for each note, and a buff stop that mutes the strings by pressing a piece of leather or cloth against them at the nut; moreover, in several of the surviving examples one or more of these devices can be used separately in the treble and bass. These instruments look very like grand pianos of the period and, as in pianos, the loudness of their sound is determined by the force with which the keys are struck, although the action is far less complicated. Their sound is very beautiful, especially when one of the muting devices tempers the somewhat metallic sound of the bare wooden striking elements against the strings.

The conversions from quilled instruments must be thought of as makeshifts and the tangent piano actions of Marius and Schröter were experimental constructions, each employed in only a single instrument (if, indeed, any instruments employing them were ever built), but the developed tangent piano is neither an experiment nor a compromise. Rather, it is a valuable instrument in its own right, and is the only one of many short-lived 18th-century keyboard instruments to survive in sufficient numbers for it to be judged on its merits. The rest, including two developed by Johann Andreas Stein and a number produced by the highly inventive Parisian makers of the period, have vanished entirely, leaving nothing but the enthusiastic claims of their inventors on which to speculate.

Tangerine Dream.

German psychedelic rock and synthesizer band. It was formed in 1967 by Edgar Froese (guitar and keyboards) with Klaus Schulze (keyboards) and Conrad Schnitzler (flute). Their first album, *Electronic Meditation* (Ohr, 1970), combined experimental sounds and synthesizer effects with rock. Schulze and Schnitzler were replaced with Chris Franke and Peter Baumann, and the new line-up released the albums *Alpha Centauri* (Ohr, 1971), *Zeit* (Ohr, 1972) and *Atem* (Ohr, 1973), through which their style became more reflective, moving towards ambient music on synthesizers with the constant adoption of developing electronic music technology. The album *Atem* brought them success throughout Europe, consolidated with the following *Phaedra* (Virgin, 1973). They gained some limited success in

the USA, and in 1977 recorded their first film score, for *Sorcerer* (directed by William Freidkin). Further film scores included those for *Risky Business* (Virgin, 1983), *Firestarter* (MCA, 1984) and *Near Dark* (Silva, 1987). Through continual changes of personnel the band has continued to experiment with new technology, as for *Le parc* (Jive, 1985), but remains most influential for its early work in this field.

Tanggaard, Svend Erik

(*b* Copenhagen, 25 Jan 1942). Danish composer. He studied the piano and composition (1962–7) with Helge Bonnén and from 1968 to 1970 with various teachers in Munich. He expresses himself in many different media, including literature and the visual arts, yet his musical output is unusually large. His music is characterized by a condensed and often restless style of sound; it features both a neo-classical and neo-Romantic attitude to the musical material, and also consciously avoids symphonic development and 'culmination' in any general sense. In recent years works such as *Tre afskedskanatater fra Johannesevangeliet kap.15* ('Three Farewell Cantatas from the Gospel of St John, Chapter 15', 1993), *Tre italeinske bønner* ('Three Italian Prayers', 1985) for bass voice and cello and *Rubáiyát II* for soprano and string trio (1996) to Persian lyrics from the 12th century have attracted particular attention. He has been prominent within the ranks of the artists' association Grønningen in Copenhagen and since the 1970s he has received several grants and accolades, including from the Danish state.

SOREN HALLUNDBAEK SCHAUSER

Tanglewood.

Estate in Lenox, Massachusetts, site of an international festival of music and the Tanglewood Music Center (Berkshire Music Center until 1985). The festival began in 1934 in neighbouring Interlaken as a series of open-air concerts by members of the New York PO under Henry Hadley. The Boston SO played its first Berkshire Festival concerts in 1936 at

Holmwood, moving the following year to Tanglewood, where the 5000-seat Music Shed was inaugurated in 1938. Since 1936 the Boston SO's music directors have also been directors of the festival: Sergey Koussevitzky (1936–50; the festival was suspended from 1942–5), Charles Münch (1951–62), Erich Leinsdorf (1963–9) and Seiji Ozawa (from 1970). The eight-week season also includes concerts by the Boston Pops Orchestra, performances of chamber music, jazz and folk music, and, since 1964, a Festival of Contemporary Music (originally in cooperation with the Fromm Music Foundation).

The Tanglewood Music Center (established in 1940 as the Berkshire Music Center) is a summer academy where young musicians (instrumentalists, singers, conductors and composers) continue their training under leading musicians and teachers. It was run by successive conductors of the Boston SO until 1970, when Gunther Schuller became director. In 1985 Leon Fleisher was appointed artistic director; he was succeeded in 1997 by Ellen Highstein, working under Ozawa's artistic supervision. Leonard Bernstein served as general adviser to both the centre and the festival from 1970 to 1972. Students attend lectures, seminars, conducting classes and composers' forums, and perform in the centre's orchestra, in vocal recitals and chamber groups. Boris Goldovsky directed the Opera Workshop at the centre from 1946 to 1962. Since 1965 the Boston University Tanglewood Institute has presented a variety of programmes for younger students, mostly of high school age. In 1986 the Boston SO acquired the Highwood estate adjacent to Tanglewood; a number of new facilities have been built there, notably the Seiji Ozawa Hall (cap. 1180) situated on Tanglewood's Leonard Bernstein Campus, which was opened in 1994 and provides a modern home for the Tanglewood Music Center.

Tango.

A Latin American song and dance genre. The etymology of the word 'tango' is still much debated. During the 19th century in Spain and several Latin American countries the term designated various types of dances, songs and communal festivities. Fernando Ortíz and others claim the word is of African origin with the general meaning 'African dance'. Others believe it is of Castilian origin, derived from the old Spanish word *tañer* (*taño*; 'to play' an instrument). Rossi and Vega stated that the term 'tango' was used by black slaves in the La Plata area (Argentina and Uruguay) from colonial times to designate their percussion instruments (particularly drums), the locale of the dance and the dance itself. By the first decades of the 19th century the meaning was extended to black *comparsas*, festive carnival

groups in Montevideo also known as *candombe*. As late as 1900 the Cuban *comparsas* (a type of carnival parade) were designated as tangos. From the mid-19th century there are references to the Spanish Andalusian or gypsy ('flamenco') tango. From a musical viewpoint (particularly as regards rhythm), however, there is little doubt that the internationally known tango – the foremost Argentine and Uruguayan urban popular song and dance – is related to the Cuban *contradanza*, habanera and Cuban tango. The latter, together with the habanera, had spread throughout Latin America by the 1850s. In Brazil as well as in the Rio de la Plata area 'tango' was the name given to the habanera itself during the latter part of the 19th century. The *tango brasileiro* was at first nothing more than a local adaptation of the Cuban habanera. Several popular genres including the Maxixe developed from the habanera. All of these dances have in common the prevailing duple metre (2/4), the accompanimental patterns shown in ex.1*a* and *b*, and the formal sectional designs of the European polka.

Despite its many meanings 'tango' primarily designates the most popular Argentine urban dance of the 20th century: it is one of the most expressive and nationalistic symbols of the Argentine character. The tango is said to have developed in the *arrabal* or *orillas* (poor slum areas) on the outskirts of Buenos Aires. The arrabal or suburban culture consisted of elements introduced after 1870 by millions of frustrated European immigrants, and aspects of urbanized pampa (or gaucho) traditions. Gaucho musical traditions were especially represented by the *payada* and the *milonga*. The improvised song texts of the *payada* often referred to current events, and frequently voiced social protest. The *milonga*, a dance of alleged African origin in duple metre and syncopated rhythm, contributed to the rhythmic structure of the tango. Most tango scholars, however, interpret the dance as being at first an adaptation of the Andalusian tango, and the Cuban Danzón and habanera. Until about 1915 the tango maintained the duple metre (2/4) of the habanera and *milonga*, after which 4/4 or 4/8 became more frequent; after 1955 new rhythmic complexities developed. Three types of tango may be distinguished: the *tango-milonga*, the *tango-romanza* and the *tango-canción*. The *tango-milonga* is strictly instrumental (for popular orchestras) and has a strong rhythmic character; the most 'classic' example is the tango *Boedo* (1928) by Julio De Caro (although it originally included lyrics by Dante Linyera, these were rarely used in performance). The *tango-romanza*, either instrumental or vocal, is more lyrical and melodic, and has a strongly romantic text; one of the best known is *Flores negras* (1928) by Francisco De Caro, considered a model of refined lyricism in tango style. The *tango-canción*, as its qualification indicates, is always vocal with instrumental accompaniment and has a strong sentimental character. This type represented, particularly in the 1930s, the tango's transformation into a wider urban popular genre no longer associated primarily with the underworld of the *arrabal*. The lyrics of the 'tango-song', however, continued to express views of love and life in highly pessimistic, fatalistic and often pathologically dramatic terms, as was the case in the intensely bitter, ill-humoured and introverted songs of the *arrabal*. During the same period social protest themes appeared in numerous tango-songs. Some of the best examples of tango-songs include Samuel Castriota's *Mi noche triste* (*c*1915), Julio César Sanders's *Adiós muchachos* (1928), Enrique Delfino's *Milonguita* (1920) and Anîbal Troilo's *Sur* (1948).

From a structural viewpoint the first tangos tended to have a tripartite form, but after about 1915 the two-part form began to predominate. Delfino (1895–1967) is considered the first composer to have established the standard form of the tango: two parts of equal length (14–20 bars), the second generally in the dominant or the relative minor of the main key. The first instrumental ensembles performing tangos were *tercetos* (trios), generally including violin, guitar and flute, with accordion frequently replacing the guitar. Numerous pieces were also written for piano solo, and voice with piano accompaniment. About 1900 the new trio included piano, violin and *bandoneón* (diatonic accordion with 38 keys or buttons for the high and medium registers and 33 for the low register, in the most classic size adopted by *bandoneón* tango players). Vicente Greco (1889–1924), a famous composer and band-leader, is generally credited as the first to standardize the ensemble which he called 'orquesta típica criolla', and which initially included violin, flute, guitar and *bandoneón*. Greco's ensemble was first recorded in 1911 (with two violins and two *bandoneones*). After that, larger bands were formed, culminating with ensembles of up to four *bandoneones*, a sizable string section, with violins, a cello, a double bass, and a piano. Often during the 1930s and 1940s vocal duets were added to the instrumental groups. Ensembles that gained great popularity included those of Juan Maglio ('Pacho'), Roberto Firpo, Francisco Canaros and Eduardo Arelas. Some of the best-known bands included the orquesta típica 'Select' (established in 1919), the orquesta típica 'Victor' (1925) formed to record for RCA, the orquesta típica 'Novel' (1934) and the orquesta típica 'Los Provincianos' under the famous *bandoneón* player and composer, Ciriaco Ortiz *(b* 1908). Under the influence of Astor Piazzolla (1921–92) the large orchestral arrangements with percussion instruments and other additional colours appeared in the 1940s, breaking away from the *orquesta típica* arrangement. In the 1960s Piazzolla introduced the electric guitar in smaller ensembles, for example in his Quinteto 'Tango Nuevo'.

The internationalization of the tango took place during the first 15 years of the 20th century. It became fashionable in Parisian society after 1907 when Camille de Rhynal (or 'Tod Cams'), a dancer, dance teacher and producer of dance competitions, modified the abrupt movements which were considered too crude for the ballroom. In England it became popular from 1912, when it was danced by George Grossmith and Phyllis Dare in *The Sunshine Girl* (Gaiety Theatre), and soon was being danced in restaurants and at tango parties or 'tango teas'. After World War I it became the most popular ballroom dance with many bands and featured in most dance competitions. The extraordinary figure Carlos Gardel (1887–1935) was particularly influential in making it fashionable throughout Europe and the western hemisphere; in the 1920s he became an Argentine popular idol whose legend still continues. Himself a product of the *arrabal*, Gardel came to symbolize the fulfilment of the dreams of the poor *porteño*. Ohe of his major contributions to the history of the tango was to transform it from its strictly dancing character to a song type of socio-cultural significance, and a type with which Argentines of different social classes could identify. Besides his own recordings of well-known tangos and his numerous appearances in classic films, his best-known compositions include *El día que me quieras, Mi Buenos Aires querido, Por una cabeza, Volver, Silencio* and *Cuesta abajo*. Perhaps the most popular tango ever written was

Gerardo Matos Rodríguez's *La cumparsita* (1917). Other representative pieces of the international repertory are Sanders's *Adiós muchachos* (1928), Enrique Santos Discépolo's *Yira, yira* (1930), Juan Carlos Cobián's *Nostalgia* (*c*1930), Francisco Canaro's *Adiós, pampa mía* and Edgardo Donato's *A media luz*.

The choreography of the tango is also symbolic of the *arrabal* culture, in that dance figures, postures and gestures reflect some of the mannerisms and style of the compadrito, a popular hero similar to Don Juan, and a pimp in the early Buenos Aires *barrios* (districts). Mafud (1966) interpreted the straight, immobile upper body of the male dancer as a reflection of the characteristic posture of the *compadrito*; he related the smooth pattern of steps to the same patterns in the creole knife duels, and the forward tilt of the spine to the use of elegant high-heeled shoes. The major theme of the tango as a dance for embracing couples is the obvious domination of the male over the female, in a series of steps and a very close embrace highly suggestive of the sexual act. Characteristic of the dance is the contrast between the very active male and the apparently passive female. Taylor (1976) interpreted this as a danced statement of *machismo* (manly assertion), confidence and sexual optimism. Savigliano (1995) on the other hand, provides a subtle and complex analysis of the engendering capabilities of tango.

The tango lost some of its earlier popularity in the late 1940s and 1950s but it was revived in the 1960s and 1970s. In Argentina, however, the socio-cultural complex of the tango has always attracted the attention of both intellectuals and other social strata, including the younger generation of the 1970s.

GERARD BÉHAGUE/R

Tanguay, Eva

(*b* Marbleton, PQ, 1 Aug 1878; *d* Hollywood, CA, 11 Jan 1947). American singer and dancer of Canadian birth. Her family moved to Holyoke, Massachusetts, in the early 1880s, where she played the child leads in stock companies from the age of eight. In 1901 she was performing in *My Lady* when an altercation with a chorus girl made her a celebrity. Two years later she had more substantial roles in *The Office Boy* and *The Chaperones*, and in 1904 she achieved stardom, playing the leading role with her own company in *The Sambo Girl*. Thereafter her career was primarily in vaudeville, where routines were tailored to her unique blend of humour and audacity. She vaunted her theme song *I don't care* (by Lennox and Sutton, 1905), scandalized the prudish with an outrageous version of Salome's dance, and fought uproariously and continually with managers, critics and other performers. In the 1910s she was the highest-paid vaudeville artist in America, and her career continued unabated until she was weakened by illness in the late 1920s. Her substantial fortune was lost in the great crash of 1929, and her state of health forced her to leave the stage after 1932. For the last eight years of her life she was an invalid and destitute.

Photographs and recordings give no hint of Tanguay's appeal; indeed, commentators (and she herself) agreed that her singing was raucous and her dancing graceless. It was her extraordinary, earthy magnetism that made her 'The Girl who Made Vaudeville Famous'. Her mocking, exuberant sexuality shattered stereotypes of femininity and helped make the 'flappers' of the 1920s not merely possible but inevitable; more than any other performer she came to epitomize the restless vulgarity of the new century.

WILLIAM BROOKS

Tanguy, Eric

(*b* Caen, 27 Jan 1968). French composer. He studied at the Caen Conservatoire, privately with Horatiu Radulescu (1985–8), at the Darmstadt summer courses (from 1986) and at the Paris Conservatoire (first prize for composition, 1991) with Grisey, Malec and others. Strongly influenced by the spectral compositions of his teachers and indebted to the tradition of the avant garde, his music is both dense and spontaneous. Almost always extremely concise, it bears witness to his preoccupation with coherence among different formal levels. His works have been widely broadcast on radio, both in France and abroad, and have been performed at many festivals. His honours include a Darmstadt scholarship (1988), the extra-mural prize of the Villa Medici (1989), the Darmstadt Kranichstein prize (1992) and a residency at the French Academy in Rome (1993–4).

Tanimoto, Kazuyuki

(*b* Sapporo, Hokkaido, 11 March 1932). Japanese ethnomusicologist. After studying musicology at Hokkaido University (BA 1956, MA 1958), he began teaching in 1960 in the musicology department of Hokkaido University of Education, where he became professor in 1976 and was president of the university from 1989 to his retirement in 1995. He then became director of the Hokkaido research centre of Ainu culture in Sapporo in 1995. He began his field research on Ainu music cultures while an undergraduate. He considers music in a broader sociocultural context as well as examining a cultural group in relation to surrounding groups. This led for instance to his field research among such circumpolar peoples as the Chukchi-Koryak, Sakha, Yukagir, Nivkh, Itelmen and Inuit. He has also conducted research on Hungarian music, including the music of Bartók, Kodály and the Roma people. A broad holistic approach led him to organize international

symposia and research teams such as the International Symposium on the Comparative Studies of the Music, Dance and Games of Northern Peoples.

YOSIHIKO TOKUMARU

Tann, Hilary

(*b* Llwynypia, Glam., 2 Nov 1947). Welsh composer active in the USA. She studied with Hoddinott at University College, Cardiff (BMus 1968), then with Jonathan Harvey at Southampton University (research into Gerhard's music) and from 1972 at Princeton University with Babbitt and J.K. Randall (PhD 1981). She took up a teaching appointment at Union College, Schenectady, New York, in 1980, becoming chair of the Department of Performing Arts in 1992. After co-editing, in 1989, a volume (xxvii/2) of *Perspectives of New Music* about Japanese music, she visited Japan a year later, teaching at Kansai University and pursuing her studies of the shakuhachi (bamboo flute) and nō performing traditions. She served on the executive board of the International League of Women Composers (1982–5) and was the editor of its journal from 1982 to 1988. Tann's output, though not prolific, covers a wide variety of media and is always fastidiously produced. Drawing inspiration from environmental phenomena and sometimes reflecting Japanese instrumental traditions, her music is spare in texture, meticulous in its sensitivity to timbre, and frequently

entails development from cellular motifs that emulate organic growth patterns, as in *As Ferns*; though it is generally marked by a strong lyrical impulse, there are also moments of vehement expression, as in *Doppelgänger*.

A.J. HEWARD REES

Tannenberg [Tanneberg, Tanneberger], David

(*b* Berthelsdorf, nr Herrnhut, Saxony, 21 March 1728; *d* York, PA, 19 May 1804). American organ builder of German birth. Brought up and educated in Count Zinzendorf's Unitas Fratrum (Moravian) community of Herrnhut and trained as a joiner, he emigrated to America with a group of fellow Moravians in 1749, settling in their community at Bethlehem, Pennsylvania. He worked first as a joiner there and in nearby Nazareth, but with the arrival of the organ builder J.G. Klemm in 1757, he became his assistant, working with him on five organs and learning all aspects of the trade. Following Klemm's death in 1762 the Moravian elders tried to dissuade Tannenberg from working as an organ builder, and he seems to have made some stringed keyboard instruments around this time. His continuing interest in the organ is confirmed by his acquisition, in about 1764, of G.A. Sorge's manuscript treatise (*c*1760) on pipe scaling.

In 1765 Tannenberg completed an organ for the Moravian Chapel in Lancaster, Pennsylvania, and shortly thereafter removed with his family to the Moravian community of nearby Lititz, where he was to spend the rest of his life, building an average of one organ per year. Of his total known

output of 42 organs, less than one third, most of them small, were built for Moravian congregations. The rest, which included Tannenberg's largest instruments, were mostly for Lutheran and Reformed churches, and all but 12 of his organs were located in Pennsylvania. His largest organ (three manuals, 34 stops), for Zion Lutheran Church in Philadelphia, was completed in 1790 but destroyed by fire four years later. Among his larger two-manual organs were those built for the Reformed Church (1770) and Holy Trinity Lutheran Church (1774) in Lancaster, Pennsylvania, and the Home Moravian Church of Salem, North Carolina (1800). The last is still extant.

Tannenberg's organs were cast in the classic 18th-century central German mould, all but the smallest having handsome 5-sectional cases of pleasing proportions, usually painted white, with gilded pipe shades. The sound of extant examples combines silvery chorus work with gentle flute and string colours. With regard to tonal design, Tannenberg followed the classical central German pattern, especially in his Lutheran organs, but for his organs for the Moravians, used largely as continuo and accompaniment instruments, he eschewed reeds, mixtures and mutations in favour of unison flue stops.

Tannenberg died suddenly while completing an organ for the Lutheran Church in York, Pennsylvania. Although he had hoped that his son David (1760–*c*1802) would succeed him, the young man had left the Moravian community in 1781 for Philadelphia, where he made and repaired keyboard instruments. In 1793 Philip Bachman (1762–1837), trained in instrument making in Germany, came to Lititz, married Tannenberg's daughter, and became his assistant, carrying on the organ building business until 1821 and building nine or ten organs in Tannenberg's style. Tannenberg's work was little known outside eastern Pennsylvania during his lifetime, but it had an indirect influence on other German-speaking organ builders in the area during the late 18th and early 19th centuries. At least nine of Tannenberg's organs are still extant.

BARBARA OWEN

Tanner, Jerré E(ugene)

(*b* Lock Haven, PA, 5 Jan 1939). American composer. He studied composition at the University of Northern Iowa (1956–8), the University of Iowa (BA 1961) and San Francisco State University (MA 1971). He is particularly noted for the influence of Hawaiian musical traditions (such as chant, hula, hīmeni, slack-key guitar and others) on his compositional style. His operas, song cycles, choral and symphonic works unite these influences with Western traditions, creating an unusual balance of form, ethos, invention and orchestration. *Boy with Goldfish* (1974–6), *The Kona Coffee Cantata* (1984–5) and *Aukele* (The Swimmer) (1987–8) have been recorded. In 1997 Tanner received Hawaii's State Foundation on Culture and Arts Artist Fellowship.

WORKS

Stage: The Naupaka Floret (tragic op, 1, H. Hess), 1973–4; Ka lei no Kane [The Garland of God Kane] (comic op, 1, Hess), 1975–7; Boy with Goldfish (musical theatre, 2, L. Siu, M. Elliott), 1974–6; Na Pupu-kani-oe [The Singing Snails] (youth op, 1, Hess), 1979–80; The Kona Coffee Cant. (comic chbr op, 1, Hess), 1984–5

Vocal: Holy Wisdom (orat, P. Appleman, Hess, J. Rorty), S, A, T, B, chorus, orch, 1963–70; Ruins (Hess), Mez, orch, 1963; Fragrant Harbor (Hong Kong), T, orch, 1964; From an Albian Songbook (Hess), song cycle, 1v, pf, 1965; 6 Songs from a Winter's Pillowbook (Hess), song cycle, C, orch/pf, 1971–2; Hawaiian Songbook: I 'Kona' (Hess), song cycle, C, orch/pf, 1973–5; II 'The Tradition Monarchy' (Hawaiian royal family), 1v, orch/pf, 1977–8; Hawaii Ponoi, chorus, orch, 1989; In Settlers' Cemetery (Hess), song cycle, 1v, pf, 1993–4; Ku 'u lpo i ka He 'e Pu 'e One' (Princess Likelike), chorus, orch/chbr orch, 1996

Inst: A Kalakaua Diptych, sym. portrait, orch/band, 1981 [based on Kalakaua songs]; Royal Tucket and Flourish, fanfare, orch/band, 1982; Prelude and Double Fugue, wind qnt, 1984; Suite, orch, 1984 [from The Singing Snails]; Aukele (The Swimmer), sym. poem, orch, 1987–8; Concerto grosso, E, chbr ens, 1993 [from The Kona Coffee Cant.]; Fanfare for a River City, brass, perc, 1995

Principal publisher: Malama Arts Inc.

HARVEY HESS

Tanner, Philip [Phil]

(*b* Llangennith, Glamorgan, 1862; *d* after 1937). Welsh traditional singer. He learnt many of his songs from his grandfather, father and five elder brothers, as well as from others in the locality. As a child, he worked in his father's mill and in early adolescence moved into farm work.

Tanner sang as he worked, in pubs and at weddings and harvest homes. In 1887, aged about 25 years, he married and in 1897 moved to Lower Mill where he operated a grain grinding mill. When the oil engine put watermills out of business, he reverted to farm labouring. Prior to 1905, he performed the role of wedding bidder, using rhyme to invite guests to the ceremony, and lilted for dancing in the absence of a fiddler.

In 1932 Phil Tanner came to the attention of two undergraduates, the Braceys, who accompanied him to London in 1936 for a recording session at Columbia and a live radio appearance on 'In Town Tonight'. At that time, he still toured local farms annually on Old Christmas Day, January 6th, performing wassailling songs. In 1937 he appeared at an English Folk Dance and Song Society festival at Cecil Sharp House, London, and in the same year was recorded by the BBC. Phil Tanner is important as the only Welsh traditional singer to have been of interest to the members of the Folksong Revival.

REG HALL

Tannhäuser [Danhuser, Don heusser, Tanvser, Tanhûser], Der

(*fl* mid-13th century). German Minnesinger. The details of his life can be gathered only from the songs transmitted in the Manessesesche Liederhandschrift (*D-HEu* cpg 848, without music). According to these works, he had connections with Duke Friedrich II 'der Streitbare' of Austria, with King Konrad IV, and with a duke in Bavaria; he took part in a crusade or a pilgrimage to the Holy Land. That this journey was actually the fifth crusade of Friedrich II is uncertain, as is the assumption that he came from a Bavarian noble family of ministerial rank.

Six *Leiche*, six Minnelieder, three *Sprüche* and a pilgrim or crusade song by him are extant. In his lyric verse there is a mixture of gravity and humour, of courtliness and satirical parody. The dance-songs depict the joys of life and of courtly love with a new and realistic spontaneity which reveals the influence of Neidhart von Reuental in particular. The transmission of melodies for the authentic works began much later; the 'Busslied' (penitential song), transmitted with music in the Jenaer Liederhandschrift (*D-Ju* E1.f.101), is doubtful. Although Tannhäuser was not named as one of the 12 *alte Meister*, he was named by Hans Folz and

others, his *Töne* were used by Meistersinger until well into the 17th century, and melodies for them were used as examples in books of lieder.

The legend of Tannhäuser, who went to Venus's mountain but then sought absolution from the Pope, dates from the 'Tannhäuser-Ballade' of the mid-15th century, which was available in print from the early 16th century. The hero of the ballad is certainly meant to be the poet, but motifs from older sagas are also worked into the narrative. It was extensively used and reworked in 19th-century German literature: after Tieck's *Novelle* of 1800, entitled *Der getreue Eckhart und der Tannhäuser*, a reprint of the ballad apeared in Achim von Arnim's and Clemens Brentano's collection *Des Knaben Wunderhorn*. Poems by Heine (1836), Geibel (1838) and Brentano (*Romanzen vom Rosenkrantz*, published posthumously in 1852), the operas of Wagner (1845) and C.A. Mangold (1846, later revived as *Der getreue Eckart*) and Grisebach's epic poem *Der neue Tannhäuser* (1869) followed in the same tradition.

BURKHARD KIPPENBERG/LORENZ WELKER

Tānsen

(*fl c*1545). Indian musician and poet. The name-form is a sobriquet; his original name is obscure. Amidst the copious legends and traditional hagiography surrounding the name, little is known for certain about Tānsen's life; more precise details and an accurate chronology may be possible only when the relevant Sanskrit and Persian sources have been properly assessed. Nevertheless, it seems that he was born in Gwalior, perhaps in a village called Behata not far from the city, that he trained there and served as court musician at Reva. He attained great fame and was already advanced in years when he was taken into the court of the Mughal Emperor Akbar (ruled 1556–1605), who conferred upon him the title *Miyām* ('master'); this title figures in the names of some prominent Hindustani *rāga* attributed to his invention, such as *Miyām kī Todī* and *Miyām Malhār*. Abul Fazl, the chronicler of Akbar's reign, recorded some details about Tānsen's career at court, referring to his unparallelled musical prowess. Tānsen was said to be a disciple of the saint-singer Svāmī Haridās; the religious and devotional element in his training was invoked to account for the fabulous powers his performances were said to possess, and the magical effects of his singing gave rise to a mass of legendary tales. His renown as a performing artist was such that in more recent times numerous singers and

instrumentalists have attempted to show either familial or pupillary descent from him. Thus, for instance, the so-called *senia gharānā* of *sitār* players, starting around the beginning of the 19th century, claimed historical links with Tānsen, and the performers within this tradition added the designation *sen* to their names. Some evidence of Tānsen's poetic gifts may be found in the song texts attributed to him; these texts have survived in *dhrupad* performance traditions. Tānsen has sometimes been credited with the authorship of three works on music theory, but such attributions are almost certainly false.

JONATHAN KATZ

Tansman, Alexandre [Aleksander]

(*b* Łódź, 12 June 1897; *d* Paris, 15 Nov 1986). French composer and pianist of Polish birth. Following studies at the Łódź Conservatory (1908–14) with Wojciech Gawronski and others, he moved to Warsaw where he completed the doctorate in law at the University of Warsaw (1918). He continued his piano studies with Piotr Rytel and took composition lessons with Henryk Melcer-Szczawiński. Although he won three prizes in the Polish National Music Competition of 1919 (for *Impression*, Preludium in B Major and *Romance*), critics considered his distinctive chromaticism and polytonality too bold. Disappointed with his reception in Poland, he moved to Paris, giving a début recital in February 1920. Soon after his arrival, he became friendly with Stravinsky and Ravel, both of whom encouraged and advised him. Stravinsky's repetitive, rhythmic patterns and Ravel's chords of the 11th and 13th influenced much of his inter-war music. Acquainted with many leading musical figures in Paris during these years, Tansman was part of the circle of foreign musicians, known as the Ecole de Paris, that included Martinů, Alexander Tcherepnin, Conrad Beck and Marcel Mihalovici. While his music retained many distinctively Polish features, such as Mazurka rhythms and Polish folk melodies, and while he wrote collections of Polonaises, Nocturnes, Impromptus, Waltzes and other Chopinesque miniatures, neo-classical traits appear in works such as the *Sonata rustica* (1925), the Sonatine for flute and piano (1925), the Symphony no.2 (1926) and the Second Piano Concerto (1927). A more

romantic approach to neo-classicism is evident in his fairy tale ballet *Le jardin du paradis* (1922) and the first of his seven operas, *La nuit kurde* (1927). Although he never completely abandoned a diatonic framework, critics of the 1920s and 30s described his harmony at times as Scriabinesque and atonal. His Hebraic background provided compositional stimulus for works including *Rapsodie hébraïque* (1933) and *The Genesis* (1944), although this influence became more prominent in his postwar music.

Tansman was quick to achieve international success. Vladimir Golschmann was an early champion of his music, conducting the orchestral *Impressions* in 1921; Koussevitzky conducted *Scherzo sinfonico* in 1923 and both piano concertos in Paris and Boston with the composer as soloist. Thereafter Tansman's music was performed under Toscanini, Mengelberg, Stokowski, Monteux, Wood and Boult. During his first American tour as a pianist with Koussevitzky and the Boston SO in 1927, Tansman became acquainted with Gershwin. Later, he toured extensively in Europe, Asia, Palestine and India, where he was a guest of Mahatma Gandhi in 1933. Although awarded French nationality in 1938, he and his family were soon forced to flee France. He settled in Los Angeles in 1941 where he became acquainted with Schoenberg, renewed friendships with other European émigrés, including Milhaud and Stravinsky, and composed a number of film scores. He returned to Paris in 1946. In addition to his many compositions, he completed a monograph on Stravinsky (Paris, 1948). His honours included the Coolidge Medal (1941), election to the Académie Royale of Belgium (1977) and the Polish Medal of Cultural Merit (1983).

CAROLINE RAE

Tanso.

End-blown bamboo Notched flute of Korea (*tan*: 'short'; *so*: 'pipe'). It is about 39–40 cm long and has five finger-holes, the first of which is in the rear; there is a small notch at the front of the upper end. The instrument can produce a range of more than two octaves, $g\sharp$–a''', but in practice the lowest pitch is never used. Small gradations of pitch are obtained primarily through air pressure, and the wide vibrato characteristic of Korean music is produced by varying the angle of embouchure.

The tone of the *tanso* is pure and delicate, and the instrument is often played on its own. It is considered an easy flute to learn and is typically the initial choice for a beginner, preparatory to more advanced flutes like *taegŭm* and *tangjŏk*.

Although the name *tanso* (i.e. Chin. *duanxiao*) appears in China by the 1st century ce, the instrument is not mentioned in the *Akhak kwebŏm* (1493) and is thought to have been imported perhaps in the early 19th century. The Chinese flute *xiao* is a related instrument.

The *tanso* is used in quieter chamber ensembles, such as the 'string' ensemble for the suite *Yŏngsan hoesang* and the ensemble accompanying the lyrical song *kagok*. There are solos in both the court (e.g. *Ch'ŏngsong chajin hanip*) and the folk tradition (virtuoso *sanjo*), and a favourite duet, *Suryongŭm*, pairs the *tanso* with the mouth organ Saenghwang. The *tanso* is not used for ritual music (*aak*) or for *tangak* ('Chinese music').

ROBERT C. PROVINE

Tans'ur [Tansur, le Tansur, Tanzer], William

(*b* Dunchurch, Warwicks., 1700, bap. 6 Nov 1706; *d* St Neots, Hunts., 7 Oct 1783). English psalmodist and theorist. He was the son of a labourer named Edward Tanzer, but generally used the spelling Tans'ur. The main facts of his life emerge from the prefaces to his publications. For many years he travelled to various parts of England as a teacher of psalmody, sometimes working also as an organist. Later he settled at St Neots as a stationer, bookseller and music teacher, but surprisingly he seems to have played no part in the music of the local parish church. His son, also named William Tans'ur, was a chorister at Trinity College, Cambridge, on which flimsy pretext the father signed some of his prefaces 'University of Cambridge'. In reality he had no links with the upper strata of English musical life. His field was country music, and here he established a dominance that extended as far as the American colonies.

In 1735 Tans'ur published his first psalmody collection, *A Compleat Melody, or The Harmony of Sion*, consisting of metrical psalms, hymns and anthems, chiefly of his own composition. The music is in two to four parts without accompaniment, but so contrived that it could be sung throughout in two parts (tenor and bass). The text of the metrical psalms is the Old Version of Sternhold and Hopkins, with revisions by Tans'ur. In the same year he produced a similar collection, *The Melody of the Heart*, using the New Version of Tate and Brady. The two books together appeared as *The Works of Mr William Tans'ur* and went into several editions. There were several later compilations, of which the most important was *The Royal Melody Compleat* (1754–5), containing revised versions of earlier pieces as well as some new compositions. It was later printed in revised form as part of Daniel Bayley's *The American Harmony*.

Tans'ur was one of the most successful exponents of the elaborate hymn tune of the time, with repeating last lines, solo sections and heavily ornamented melodies. His tunes were enormously influential in both Britain and America. From 1755 he introduced fuging-tunes, taking care to design them so that the contrapuntal sections could be left out. At least three of his simpler tunes ('Bangor', 'Colchester' and 'St Andrew') survived into the 20th century. Four of them were among the 15 pieces most often printed in America before 1811; 'St Martin's' outdid in popularity all tunes by American composers. His anthems are remarkable for their freedom of rhythm, often following the rhythms of speech at the expense of regular musical accent. The basis of his harmony is the two-part combination of tune and bass: the upper parts often produce meaningless clashes, and breaches of the very rules of counterpoint that he laid down in his introductions. His style, as composer and as writer, was pretentious. In the preface to *The Royal Melody Compleat* he lamented that

> there are many in this *Age*, that assume the Shape of a *Master*, or *Tutor*, who are so very ignorant, as not to say their *Gamut*; and much less to understand it … Many of these will set up for *Composers*, which neither know *Tune*, *Time*, nor *Concord*: And, for all they cut so *ridiculous a Figure* in the Eyes of the *Learned*, yet they gain *Proselytes* luckily amongst the Ignorant.

Unfortunately this comes close to a description of Tans'ur himself.

Tans'ur's published collections include 43 anthems, some canticle settings and responses, chants and canons, and 197 psalm and hymn tunes claimed as his own. A large number of other works have been attributed to him with little justification. His principal work of theory, *A New Musical Grammar* (1746), went into several editions, and appeared in revised form as *The Elements of Musick Display'd* (1772); it was still in use in the 19th century (another revised version was published in 1829). Beneath its rather grandiose manner it is a sound treatise of a conservative type, based on the medieval gamut and deriving much from John Playford's *Brief Introduction*, but well designed for the aspiring country church musician.

EDITIONS

published in London unless otherwise stated

A Compleat Melody, or The Harmony of Sion (1735; 2/1735; 3/1736, with The Melody of the Heart (2/1736), as The Works of Mr William Tans'ur; 4/1738; 5/1743) [CM]
The Melody of the Heart (1735; 2/1736, with A Compleat Melody (3/1736), as The Works of Mr William Tans'ur; 3/1751) [MH]
Heaven on Earth, or The Beauty of Holiness (1738) [HOE]
Sacred Mirth, or The Pious Soul's Daily Delight (1739) [SM]
The Royal Psalmodist Compleat (a/Rugby, 1742; b/n.p., 1743; c/n.p., c1744; d/n.p., 1745; e/n.p., 1748; f/n.p., c1750; g/n.p., c1752; 2/n.p., 1753) [RPC]
The Royal Melody Compleat, or The New Harmony of Zion (1755); 2/1760; 3/1766; rev. D. Bayley, Boston, 3/1767, Newburyport, MA, 4/1768, and as part of the American Harmony, Newburyport, MA, 5/1769; 6/1771; 7/1771; 8/1774) [RM]
The Psalm-Singer's Jewel, or Useful Companion to the Singing-Psalms (1761;

2/1766 as The Psalmist's Jewel)

Melodia sacra, or The Devout Psalmist's New Musical Companion (n.p., 1768; 2/1772) [MS]

Tanto

(It.: 'so much').

In a tempo mark such as *allegro ma non tanto* ('*allegro* but not so much') it should presumably suggest something a little slower than *allegro*; but there is no evidence that this is always the case, and for many composers it is barely distinguishable from *allegro ma non troppo* ('*allegro* but not too much', i.e. do not let it run away, keep it steady).

Tanvser, Der.

See Tannhäuser, Der.

Tan Xiaolin [T'an Hsiao-lin]

(*b* Shanghai, 1911; *d* Shanghai, 1 August 1948). Chinese composer. While studying music theory and the *pipa* at the Shanghai National Music College (1932–9), the forerunner of the conservatory, he composed works for Chinese instruments and several songs. He moved to the USA in 1939 for further studies with Hindemith at Yale and at Oberlin College, winning a John Day Jackson scholarship with his string trio (1945); he returned to Shanghai in 1946 to teach at the National Music College. His later pieces show the influence of Hindemith and his interest in aspects of neo-classicism. The art song *Zi jun zhi chu yi*, for instance, underpins a pentatonically constructed tonal melody in 4/4 with accompanimental quavers in the piano, effectively in 5/8, and which emphasize 4ths and 7ths; the song resolves from conventional dominant harmony onto a C major chord with an added 6th and 9th. Some of his songs are published in *Tan Xiaolin gequ xuanji* [A selection of songs by Tan] (Beijing, 1982), and further information is given in Wang Yuhe: *Zhongguo jin-xiandai yinyue shi* [A history of modern and contemporary Chinese music] (Beijing, 2/1994), 252–61.

Vocal (all composed 1930–48): Qingping diao [Qingping Tune], unacc. 3 pt female chorus; Jiang ye [The River at Night], unacc. 4 pt mixed chorus; Jinling cheng [Jinling City], 2 male vv; Chun yu chun feng [Spring Rain and Spring Wind], male v; Zi jun zhi chu yi [Since my Husband's Departure] (Zhang Jiuling), 1v, pf; Song qinglang [Seeing off my Lover], trad., 1v, 2 erhu

Inst: music for trad. Chin. ens, incl. Hu shang chun guang [Spring Brightness on the Lake], c1939; Duet, vn, va, 1943; Str Trio, 1944; Romance, vn, hp, 1945; Trio, fl, cl, bn

JONATHAN P.J. STOCK

Tan Xinpei [T'an Hsin-p'ei]

(b Hubei, 23 April 1847; d Beijing, 10 May 1917). Chinese opera actor, a specialist in *laosheng* (old male) roles. He began training for the stage at the age of ten and was for a time the disciple of Cheng Changgeng and a member of the latter's Sanqing company. Later he founded his own troupe, the Tongqing, and became a distinguished *laosheng* actor of Beijing opera. He spent most of his life in Beijing but travelled frequently to Tianjin and four times to Shanghai, the last being in 1913. His greatest social success was to become the favourite actor of the Empress Dowager Cixi. Tan had a powerful voice but as a performer he was better known for his capacity to absorb and transmit the best features of earlier masters than for his creativity. He was highly skilled in acrobatics and his repertory ran to over 300 plays. Five of his 11 children became actors.

COLIN MACKERRAS

Tanymarian.

The bardic name of Edward Stephen.

Tanz

(Ger.).

See Dance. *See also* Ballo.

Tanzania, United Republic of (Swa. Jamhuri ya Muungano wa Tanzania).

Country in East Africa. It has an area of 945,090 km^2 and a population of 33·69 million (2000 estimate). Tanganyika, a German colony from 1884 to 1919 and a British trust territory from 1919 to 1961, became independent in 1961. Zanzibar was a British protectorate from 1890 to 1963 when it became independent. In 1964 the two territories united to form one nation. Tanzania's population speaks KiSwahili (Swahili) as a national language, and most speak Bantu languages as their principal language. Exceptions include several communities living in the northern part of the Rift valley, such as the Hadzabe (also known as Hatsa, Kindiga or Tindiga), Sandawe, Iraqw, Gorowa, Burungi or Burunge and Maasai. (*See* fig.1 for a map of the distribution of ethnic groups referred to in this article).

GERHARD KUBIK

Tanzania

1. Historical background.

Tanzania is a country rich in artefacts that illuminate the past. The Irangi district, in particular, is valued by historians for its rock paintings, some of which depict dance scenes. Even in some present-day Tanzanian traditions, musical traits from the remote past are occasionally displayed, particularly in areas of central Tanzania and near Lake Eyasi.

Internal development and external influences have creatively interacted in Tanzania from earliest times. In *Periplus of the Erythraean Sea*, written in 120 ce, a Greek merchant relates that traders from the Near East visited the Indian Ocean coast. Some scholars have postulated that maritime contacts with south-east Asia during the 1 millennium ce were responsible for the importation of banana plants, outrigger canoe technology and other cultural traits. The Indian Ocean trading network is probably responsible for the presence of bowed lutes in Tanzania, the *sese* flat-bar zither among the Yao, and even hourglass drums with a characteristic handle in central Tanzania and the south-western highlands, notably among the Pangwa.

The claim that Indonesians introduced the xylophone to Africa (see Jeffreys, 1961; Jones, 1964; Phillipson, 1977, p.217; and Blench, 1982) is a simplification of more complex historical interaction. Indonesian gamelans may have been an inspirational source for the original construction of one specific type, the trough-resonated xylophone found today on the Tanzanian coast (Hyslop, 1974) among the Zaramo (Zalamo) and as far inland as Lake Chilwa among the Cuabo and Khokola (Kubik, 1982, p.110). The attachment of keys in some box-resonated or log xylophones, particularly those pegged at one end, and loose at the other, is also considered a diagnostic marker. Gamelan aesthetics are detectable in the shape and manufacture of a unique type of lamellophone, the *lulimba* of the Mwera and Makonde in south-eastern Tanzania (Dias, 1981).

From 700 ce onwards Indian Ocean trade increased with the activities of Arab merchants. In the centuries that followed, the influence of Islam gradually transformed the Tanzanian coast. Cultural differences emerged

between the Islamicized coast and the interior, which had little direct contact with the Indian Ocean trading network in the period c1000–1500.

Coastal music was also exported. Some scholars claim that East Africa exported xylophone technology to south-east Asia, and not vice versa (Jeffreys, 1961). The issue is difficult to settle, since historical sources are virtually unavailable for remote periods. Conclusions are therefore based on the interpretive projection of present-day data into the past. However, some exports from later periods are documented. A popular dance performed by descendants from East Africa in Bahrain is called *leiwah* (Olsen, 1967). Its source is in Zanzibar and along the coast near Mombasa. Its introduction dates back to the political union of Mascat and Zanzibar (c1690–1861). The term *leiwah* – more accurately *lewa* – could derive from the KiSwahili verb *kulewa* ('to be drunk'). Wegner and Ruhnke found similar East African survivals among communities of African descendants in Iraq during their fieldwork in that country in 1978 (Wegner, 1982).

After 1700 the Nyamwezi, a Bantu-language-speaking people settled in central Tanzania, became the leaders in the long-distance ivory trade with the interior. The primary trade route was from Bagamoyo to Ujiji on Lake Tanganyika, with a secondary route leading from Tabora northwards towards Karagwe and the kingdoms of Buganda and Bunyoro. Ivory trumpets, used for signalling, still exist in villages near Bagamoyo. The power of Nyamwezi chiefs grew with increased trade, so that representational and ceremonial music became important. Thus, large drums were built. Until the 1950s (Tracey, 1973) some of the largest drums in Tanzania were found in the palace of Nyamwezi paramount chief in Tabora, at the junction of the two trade routes. The National Museum in Dar es Salaam possesses a Nyamwezi chief's set of drums, four of different sizes suspended along a beam supported by two forked sticks (Gnielinski, 1986). On the occasion of the installation of a new chief, the set was taken to the place of the ceremony. People danced in a circle, with the drums in the centre. The lacing of the drums' two membranes is elaborate, and they can be compared to the so-called 'Uganda' drums (double-headed drums with skins laced to the cylindro-conical bodies). 'Uganda' drums are found among the Haya in northern Tanzania but also in the south-west among the plantain-growing Nyakyusa, where they are employed in one of the oldest dances, the *kitumbwike*, demonstrating the far-reaching ramifications of the trading network.

Of particular historical interest was the recent discovery of the so-called cave drums. North of the town of Singida, 78 drums were found distributed in 16 caves, as reported by the National Museum. The age of these instruments, many of which had partly disintegrated, was estimated at over 200 years. The makers belonged to neither the Iramb, nor the Nyaturu, nor any other people living there today. Some one-string bowed lutes were also found in the caves. A huge ancient drum discovered near the summit of Samaja Hill in Irambaland, approximately 45 miles north of Singida can also be seen in the National Museum. The drum's body is cut from the stem of an acacia tree and looks like a big tooth with two roots. To produce the tension needed for the skin, large wooden plugs laced with strings were

used. It is thought that some of these 'hidden drums' were used in religious or ritual contexts (Hunter, 1953).

In the 19th century Nyamwezi traders were responsible for the dissemination of various musical instruments along the trade routes linking the Tanzanian coast with the Congo. A case in point is the arrival in Tanzania of the box-resonated lamellophone known as *malimba* among the Sangu and *ilimba* among the Gogo. Since the early 20th century it has been an important instrument among Sangu, Kimbu, Nyakyusa, Gogo, Gorowa and other musicians. Its organological characteristics point to a relationship with certain box-resonated models in the Democratic Republic of the Congo. According to oral traditions surveyed in 1976 (see Kubik, 1982, p.37), it probably spread from the Congo to Tanzania in Henry Morton Stanley's time (late 19th century) with Nyamwezi porters. Among the Gogo, large specimens were later developed with 20, 22, 36 or more iron lamellae (fig.2).

Lamellophones were unknown in most parts of East Africa until the late 19th century, except in the Rovuma valley where at least two types were clearly established in pre-colonial times. One of them, the *chityatya* board lamellophone with a small gourd resonator, was carried to the Makonde from the Zambezi valley probably by Lomwe intermediaries. The other type, the Makonde (Mwera) *lulimba* with a bed-shaped wooden resonator, looks like a miniature *saron barung* with the metal keys turned lengthwise and one gabled wall cut off. This type of lamellophone is also a variant within the African lamellophone family in that the metal lamellae are all hooked into the resonator. Thus, their tuning cannot be changed. The very specific, even strange organological traits of these specimens in their geographical distribution within a relatively narrow area point to considerable antiquity.

During the second half of the 19th century, Ngoni warriors from South Africa invaded south-western Tanzania, finally settling east of Lake Malawi, mainly in the Songea district. They have considerably influenced the musical practices of south-western Tanzanian rural communities such as the Pangwa of the Livingstone mountains. The *mundele* musical bow with a gourd resonator of the Pangwa is a local version of an original Nguni South African instrument. The *mtyángala,* a mouth-resonated musical bow played by Pangwa and Kisi women, is obviously derived from the South African *umqangala*. Comparative research has suggested that the Ngoni also introduced a specific type of pentatonic multi-part harmony to the Lake Malawi area (Kubik, 1994, p.172–3 and recorded examples).

During the 1830s the Nilotic Maasai entered Tanzania from Kenya. Their advance was finally halted by the Gogo of central Tanzania who were later culturally influenced by the Maasai. The Gogo and their neighbours adopted the red-ochred dance decoration (*ng'husi*) and hair-style (*ngoti*) from the Maasai and influenced Gogo choral singing. Maasai music itself is basically vocal; their vocal style, intonation and choral form are distinctively different from Bantu musical styles in Tanzania. Since cattle–herding and raiding are a part of the Maasai economy, many of their songs deal with these subjects.

Tanzania

2. Main musical style areas.

Tanzania can be divided into seven distinctive areas of musical style. These areas are cultural rather than political, and some of them therefore spill over into neighbouring countries. There are also some border zones too small to be listed, for example a Luo style area near the Kenyan border. Such overlapping zones are better discussed under the respective country entries.

(i) Coastal strip and the islands of Zanzibar and Pemba.
(ii) Nyamwezi-Sukuma.
(iii) North-western Tanzania.
(iv) Central area.
(v) Ruvuma river area.
(vi) South-western Highlands and Lake Malawi.
(vii) Western Tanzania.
Tanzania, §2: Main musical style areas

(i) Coastal strip and the islands of Zanzibar and Pemba.

Arab influence is especially strong in music, particularly in Zanzibar and Pemba, as can be heard in the playing of the unfretted Swahili *udi* lute (from the Arab 'ūd) by musicians such as the late Ali Othmani of Zanzibar and Rajabu Madua of Dar es Salaam. In the 1950s a popular centre for this kind of music was the Egyptian Music Club in Dar es Salaam. Hugh Tracey made recordings of its leader Bom Amberon who had established a small orchestra of *udi* and violins which played *taarab* music (Tracey, 1951; 1973). Arab aesthetics also determine certain aspects of KiSwahili verse and song. Most pieces were intended to be sung or recited. The main recited forms are the *shairi*, a piece of moderate length on topics such as love or war, and the *utenzi*, long, often epic narratives on religious or historical subjects, such as the life of the Prophet (see Knappert, 1966; Jones, 1974; 1975–6).

Other coastal music shows fewer signs of Arab influence. Xylophone music, for instance, contrasts with the Arab-influenced musical styles, as does the Zaramo use of drums and *viyanzi* (flutes) in the *mbeta* dance in which the flute ensemble is accompanied by sticks and rattles. Kwere initiation dances for girls are common along the coast. The Zigula, who are also influenced to a certain extent by Indo-Arab cultures, retain a predominantly African profile in the following dances, according to Martin Mluanda (1971, p.57): the *sero*, *bigilia*, *kinzalia*, *silanga*, *ndekule*, *beni* and *madogoli*, which have various origins. It is interesting to note that Mluanda includes *beni*, a dance derived from British military parades (Ranger, 1975), although largely Africanized.

Trough-resonated xylophones are favoured among the Zaramo, but they are also played by Sambaa (Shambala) and Bondei musicians, as well as on the islands of Zanzibar and Pemba (see Tracey's recordings in 1950). They are generally called *marimba*, a term used both for xylophones and lamellophones. According to Hyslop (1974), the Zaramo xylophones are usually played in pairs. The *marimba ya kuanza* begins with variations later played by the *marimba ya kugeukizia*. Most of these instruments have from eight to ten keys struck with rubber-headed beaters. They are tuned pentatonically and may be accompanied by drums.

(ii) Nyamwezi-Sukuma.

These areas of central and northern Tanzania have been influenced by Islam from the coast and from the once powerful Ugandan kingdoms to the north. The adoption and adaptation of coastal traits in Nyamwezi music resulted from trading contacts in the 18th and 19th centuries. Unlike neighbouring Gogo music based on a tetra- to pentatonic tonal system, the Nyamwezi use a heptatonic scale with a tendency towards vocal melisma, comparable to singing styles along the coast and in Zanzibar.

Among the Sukuma, initiation ceremonies and didactic songs play important roles in secret or semi-secret societies. Large double-headed cylindrical drums are used on such occasions. Musical instruments in this area include trough zithers, the single-stringed bowed lutes (similar to the *endingidi* of Buganda), drums, flutes and more rarely the gourd-resonated musical bow called *endono*. The latter is also found further south among the Nyaturu under the name *ndonondo*.

(iii) North-western Tanzania.

Among the Haya, Zinza and Ha, music is stylistically linked to the musical cultures of Rwanda, Burundi and the kingdoms of Bunyoro, Nkore and Buganda. The seven-string *enanga* (trough zither) was associated with high social status among wealthy Haya men. Trough zithers were introduced to this area of Tanzania from Rwanda, Burundi and western Uganda. In Tanzania several varieties are found as far south as the Safwa and Hehe.

Haya zithers have deep tones and were used to accompany sung legends telling of the 'Spirit of the Wind' on Lake Victoria, and concerning the emergence of the Haya people from the lake (Tracey, 1951). They were also used to accompany songs about local history and praise-songs for the chiefs. Like the Nyoro in Uganda, the Haya use ensembles of *makondere* (composite gourd horns). Each horn produces two notes which interlock with pairs of notes produced by other members of the ensemble. The result is an elaborate interlocking polyphony accompanied by drums.

The Kerebe, who are settled on the island of Bukerebe (Ukerewe), are linguistically and culturally related to the Haya and Zinza. G.W. Hartwig (1969) conducted a comprehensive survey of various traditions on the island and determined that the seven-string trough zither was the only Kerebe chordophone used before 1900. It first appeared when the eight clans of the Kerebe, including the royal clan, arrived from Buhaya in the late 17th century. The royal drums in Bukerebe were made by Haya and Ganda slaves. Horns for hunting, including the *enzomba* animal horn and the wooden *omwomba* horn, were once used a great deal. The side-blown *omwomba* was made from a hollowed-out branch of a tree 4–6 cm in diameter; one end was closed.

(iv) Central area.

This is perhaps the most musically active area of Tanzania. Musicians are often both players and dancers, as when a dancer holds and shakes a *kayamba* (raft rattle) to his body movements. Some of the music of this area is associated with secret societies, such as the *mandabaha* society of old men among the Cushitic Gorowa (or Wafiomi), in which a sacred horn plays an important part. Music is also used in the initiation of the young. Among the Gogo there are three dances associated with circumcision and initiation: *chasi* sung by old people, *chipande* for boys and *chaluko* sung by girls. The *chipande* is danced in the dry season (August–October) during the *ikumbi* circumcision feasts. It is accompanied by large cow-bells played by the girls and is danced by men and women and, at a distance, by the boys awaiting circumcision.

Before 1960 the Gogo used to come in thousands to the old town of Dodoma (now Tanzania's capital) to take part in annual dance festivals; their dances included *nindo*, *msunyunho* (or *msunyuntho*), *saigwa*, *ng'oma*, *chiganda*, *mpendo*, *chasi*, *chipande*, *chaluko*, *saigweda* and the *sero* (or *selo*) adopted from coastal Tanzania. *Nindo* was performed at one time at the death of a chief before the installation of his successor, but is now more often performed during visits by government officials. *Nindo* consists mostly of praise-songs; the dance movements are slow and solemn with men and women forming two front lines. Male dancers wear bells strapped to their legs, jumping and grunting the syllables *hrr-hra*, while male and female choruses sing alternately. The composer or his assistant guides the singers by calling out the first line of each stanza or phrase of text as a cue, since praise poetry is very long, and one piece may consist of many stanzas. The instruments used in the *nindo* dance are the *ndulele* (side-blown animal horn) and the *mlanzi* (side-blown flute). The performance often begins with whistle signals, followed by the entrance of the flute and the horn. The flute and horn do not play in the pentatonic scale of the *nindo* chants, but play signal patterns unrelated tonally to the vocal parts (Nketia, 1967; Kubik, 1982, pp.134–5).

Msunyunho is danced during the millet and maize harvest, usually in May. Sometimes hundreds of people take part, but men and women do so separately, with men holding shepherd sticks. It is also danced in January, when the rains have stopped as a plea for further rain. *Msunyunho* consists of two parts: the first comprises a long chorus; the second is in a faster tempo in which the men vocalize syllabic patterns called *kilumi*, mainly on *hrr-hra*. In another type of *msunyunho*, *ndualala* (small bells) may be struck in polyrhythms, often two against three. There is also a type of *msunyunho* for young boys who form vocal duos or trios, with each boy producing a short melodic fragment starting at a different point from his partner's. A similar type of polyphony occurs in *saigwa*, in which men and women sing in hocket fashion.

In the *ng'oma* dance women hold hourglass drums between their legs (fig.3) and tap them with the hands in triple rhythms, the main accents of which cross and interlock. While drumming they twist their shoulders; they also play police whistles, bought locally, in hocket-style combinations. One or two *kayamba* (raft rattles) or metal rattles filled with stones are used by men to accompany the group. The drums played exclusively by women are single-headed and open-ended. The big drum played by the group's leader

is called the *ng'oma fumbwa* and is about 55–60 cm high; the smaller drums are called *nyanyulua*. *Ng'oma* is danced at the end of a girl's first menstrual period, when a boy is taken for circumcision and at weddings.

Chiganda was formerly danced before an elephant hunt but is now a popular Gogo dance. The instruments used are one to three *ilimba* (lamellophones), a *chizeze* (bowed lute), *mlanzi* (a side-blown flute) and rattles usually shaken by women. The *ilimba* is a large, box-resonated lamellophone with a deep tuning and a buzzing sound quality produced by the sympathetic resonance of a mirliton located at the centre of its soundboard. Gogo lamellophones are colourfully decorated with brass nails, beads and pieces of animal skin. Until the early 1960s, only two-string varieties of the *chizeze* (or *izeze*) were known among the Gogo. They were often played solo along the road or in the shade of a tree. The *chizeze*'s neck is about 50–70 cm long, and the two strings are tuned to an interval of a minor 3rd. Varieties with many more strings have been developed in recent years.

The tuning of Gogo musical instruments follows patterns derived from the natural harmonic series; most often partials 4–9 (occasionally 10) over one fundamental. The result is a pentatonic scalar framework consisting of the notes C, E, G, B♭, C, D (from bottom to top), occasionally extended to the upper E (i.e. the 10th partial). This framework is the foundation of Gogo multi-part singing and accounts for the characteristic chordal patterns heard in Gogo choral chants. The singers generate bichords by combining notes of the scale that are separated by one step (ex.1), thereby generating characteristic harmonic progressions. Even trichords can form and resolve, such as those often heard in *msunyunho* chants. Significantly, the Gogo harmonics-based tonal system does *not* proceed from the experience of the harmonics of a stretched string. It can be generated vocally by expert musicians, through the technique of Overtone-singing, as is testified by the Gogo musician Hukwe Zawose in a recording made by Phillip Donner. Besides the Xhosa of South Africa, Gogo musical culture is the only other African culture known to use the diphonic or overtone-singing commonly associated with Mongolian and Tuvan music.

Tanzania, §2: Main musical style areas

(v) Ruvuma river area.

This large culture area includes the music of peoples who live to the north (in Tanzania) and to the south (in Mozambique) of the Ruvuma river: the Makonde, Makua (Makhuwa), Yao, Ndonde, Mwera and related communities. The Makonde of Tanzania and Mozambique share a musical culture similar to certain areas in Central Africa, indicating a possible migratory pattern from these areas to the Ruvuma area centuries ago. But the Makonde have also assimilated coastal Indo-Arab traits and, more recently, have been subjected to musical influences from European missions. Like the peoples of west-central Africa, the Makonde and Ndonde have strong traditions in the visual arts, such as the manufacture of wood sculpture, masks and decorated utilitarian objects of various kinds.

Makonde boys' circumcision dances south of the Ruvuma were described by Jorge and Margot Dias ([16]1970). The *mapiko* (sing. *lipiko*) masked dancers are accompanied by a set of drums peculiar to the Makonde: the

bodies of the smaller, single-headed instruments end in thin extensions, so that each instrument looks like a giant nail. Before starting to play, the musician pushes the thin end of his drum into the ground.

Apart from the circumcision rites and masked dancing, there are many other parallels with Central African traditions. For example, the *bamoto* dance is based on a technological secret: the use of glowing bark cloth attached to arms and other body parts. During a dark night dancing men create a display of fireworks with sparks.

The Makua are known for their *isinyago* dances, featuring animal masks that consist of large bamboo structures thatched with grass and covered with rags (Wembah-Rashid, 1970–71; 1975; Kubik, 1982). Another category of masks among the Makua is called *midimu* (sing. *n'dimu*), meaning 'ghosts'. These facial masks are a special Makonde variant of masked dancing called *midimu yamuha*, in which the dancers perform on stilts. The face-cover is curiously smaller than the dancer's natural face and is worn on the forehead (Wembah-Rashid, 1975).

Musical instruments in the Ruvuma culture area are varied. The Makonde use the *chityatya* eight-note board lamellophone, the *akanyembe* (single-string bowed lute) and the *dimbila* (log xylophone). The *dimbila* usually has six keys placed over two hard stems of wood with cushions made of grass covering them. The light and flat keys are pegged at one end with small sticks. The other end is left loose, but at both sides of each key small sticks are pressed into the grass bundles. This instrument is played at a fast tempo in an interlocking combination technique by two musicians sitting opposite each other.

Log xylophones, larger than those of the Makonde, are used by the Yao in whose language they are called *mangolongondo*. The term is onomatopoeic, imitating the sound of the strokes *ngóló-ngòndò-ngóló-ngòndò* heard from a distance. Yao instruments are normally placed over banana stems and have heavier and larger slats, often nine or more. The tuning of xylophones and other instruments in this culture area is hexa- to heptatonic. Multi-part patterns in 3rds are widely used in songs and instrumental play. A tendency to structure melodic performance over a constant drone reveals the proximity of this cultural area to Indian Ocean musical cultures.

Tanzania, §2: Main musical style areas

(vi) South-western Highlands and Lake Malawi.

This area is a stylistic continuum extending from the Njombe plateau across the Livingstone mountains into neighbouring Malawi. Many vocal and instrumental traditions are shared by Tanzania and Malawi. In the 1950s and early 1960s songs about Chikanga Chunda, a prophet, herbalist and exorciser of witchcraft based in Rumphi, Malawi, were prominent among the Pangwa and Manda. Thousands of accused *wachawi* (wizards and witches) on the Tanzanian side of the lake were forced by their communities to undertake a pilgrimage to Chikanga to establish their innocence. Chikanga's songs in the Tumbuka language became known in Manda and in many villages along the lake.

Another example of cultural exchanges is the presence of the dances called *ndingala* and *ling'oma* among the Nyakyusa (Kubik, 1978). *Ling'oma* is virtually identical with *malipenga* in northern Malawi and is performed with military-style drums and kazoos. The *mganda* dance, which was once popular at Manda, a small town on the lake shore, and along the lake, is a similar case. These dances have roots in European military music imported during World War I. In a sense they are analogous to the *beni* dance along the Tanzanian coast but seem to have an independent history (Kubik, 1982, pp.192–7). Military musical fashions also made an impact on women's music. The *kihoda*, a popular girls' dance among the Kisi on the Tanzanian lake shore, originated in the Nkhata bay area of Malawi, where it is known as *chihoda* (Kubik, 1982, pp.198–201).

At Manda, one of the stopping points of the Arab caravan trade routes from Kilwa to Lake Malawi, Islamic musical traditions are well established and can be heard particularly during the Muslim New Year festivities. These traditions are limited, however, to certain sectors of the population. A more penetrating influence, particularly among the Pangwa in the highlands, came from the Ngoni settlers. The *matuli* dance of the Pangwa is of Ngoni origin and is related to the *nkhwendo* in Malawi. It is performed with drums and bamboo scrapers. However, the *ngwaya* Pangwa dance is very old and performed with large hourglass single-headed drums. Often the drummers 'ride' their drums, jumping up and down with them. While the men strike their *ng'oma* drums with their right hand in a slow, steady pulse, women dancers hold up small hourglass *fimkhang'u*, tapping them above their heads in interlocking rhythms (fig.4). The result is a surprisingly slow-paced triple rhythm combination. Men and women sing in interlocking polyphonic patterns. Polyphonic singing combined with yodel is also found in the *kimele* and *kibota* performed by Nyakyusa youth.

Tanzania, §2: Main musical style areas

(vii) Western Tanzania.

This is one of the least known musical areas of Tanzania. The Safwa in the Mbeya region have produced important performers of the trough zither. The *ligombo*, as it is called among the Hehe, has been repeatedly recorded (Tracey, 1951; Kubik, 1978). It is used to accompany heroic songs and legends, and praise-songs concerning the chieftainship. The *ligombo* is about one metre long with a broad, gourd resonator with an orifice only 10 cm in diameter. The instrument has six strings and is tuned to a low pitch. Sangu informants claim that it was originally a Sangu instrument and only later adopted by the Hehe (Kubik, 1978).

Sangu music is surprising when compared with that of the neighbouring Hehe, Bena, Kimbu and Gogo. Sangu music is hexa- to heptatonic with multi-part singing in 3rds or 4ths. It is strangely reminiscent of the music of cattle-herding peoples in Zambia and Angola. Another historical puzzle is the existence of the *mbasi* reedpipe dance (Kubik, 1978). Although no longer practised, it was reconstructed in 1976 with the assistance of Habibu Mwaluwalile and village elders at Uhambule, Mbeya region (fig.5). Five players are needed for this dance, each holding one pipe. The reedpipes are cut from *tete* reed and play only one note blown in combination. In addition to blowing into them, players also produce vocal

sounds with head voice inserted between the blown notes. This technique is known in other African panpipe traditions. The alternation between vocal and pipe sounds creates polyphony.

Tanzania

3. Recent developments.

Before World War II church hymns and German and British military music were a stimulus for the creation of new musical fashions (Barz, 1997), particularly in the south-western highlands. After 1945 soldiers returning from Burma brought rumba music to Tanzania, and a lucrative market in shellac discs developed (Kubik, 1982). Congolese, particularly Katangan, and Kenyan dry-style guitar records inspired many youths of the next generation. Simultaneously, by the late 1950s, Christian liturgies became more African due to the efforts of composers such as Stephan Mbunga who used local harmonies from the Lake Malawi area in his *Misa Baba Yetu*, a Catholic mass (1959).

In the late 1960s bands began to use electronically amplified guitars, modelling their sound after famous Congo dance orchestras. Morogoro Jazz Band, Dar es Salaam Jazz Band and in the 1970s Nuta Jazz Band with its strong political ties are representative of that period in Tanzania. At the same time *taarab* music along the coast, tenaciously maintaining stylistic independence, began to use 'modern', i.e. Western, instruments and to adapt songs from Indian films (Bender, 1985, p.144). *Taarab* from Tanga became very popular from the 1960s into the 1970s through the recordings of two female singers: Shakila, and later Sharmila, working with the Black Star Musical Club (Askew, 1997).

With a large tape archive (about 1500 tapes in 1980, according to Bender, 1985, p.142), Radio Tanzania's dissemination of popular music and *musiki wa kiasili* (traditional music) was the dominant influence in *ujamaa* villages. From the 1980s onwards Tanzanian popular musicians were urged to abandon the usual night club topics in their song texts and compose words relating to the nation-building ideals of *ujamaa* (socialism). *Ujamaa* ideology and a tight financial situation interacted in Tanzania to stimulate innovative trends in music that use people's own material resources. With electric amplification inaccessible to poor village populations, youths have used locally produced traditional instruments to play songs picked up from guitar orchestras heard on the radio since the 1970s. Among the Hehe, the *kipango* board zither was used just for this purpose by musicians such as Lekitani Sanga, recorded in 1976. Among the Sangu, modern guitar music was even played on the *ndonga* gourd-resonated musical bow (Kubik, 1978, p.84). Political pressure to create a national music and to promote the development of traditional instruments became a stimulus for instrumental innovation. The College of Music and Art was formed in Bagamoyo as a response to such stimulae. The Gogo musician Hukwe Zawose from Dodoma regularly appeared with Tanzania's National Dance Troupe in overseas concerts and constructed an *ilimba* lamellophone with 56 lamellae in the 1970s. Lubeleji M. Chiute, another gifted Gogo musician, constructed an 11-string *izeze* bowed lute, incorporating four bowed and eight plucked strings (Kubik, 1982, p.116; Gnielinski, 1986, p.32).

An Organ stop.

Tapales, Ramón

(*b* Baybay, Leyte, 17 Feb 1906; *d* Daly City, CA, 22 Feb 1995). Filipino composer and conductor. He had his first training in solfège and the violin from his father; and continued violin lessons at the age of 12 with Abdon. In 1923 he went to Europe for further studies at the Milan Conservatory (from which he graduated in 1929), with Flesch at the Berlin Hochschule and with Kaplan at the Klindworth-Scharwenka Conservatory; he also studied composition with Butting and conducting with Robitsok. In Riga he appeared as guest conductor of the National Opera. After returning to the Philippines in 1937, he conducted opera and orchestral concerts in many parts of the country. He was appointed director of the Silliman University Conservatory (1939–41), a teacher at the Philippine Women's University, and director, then dean, of the Conservatory of the University of the Philippines (1947–70). Founder-president of the National Music Council of the Philippines and the Regional Music Commission of south-east Asia (both 1953), he served on the executive board of the International Music Council for several years. Later he became commissioner for culture in Makati, Rizal. His orchestral works include the ballet *Mariang Makiling* ('Legendary Maria of Mount Makiling', 1934), the *Philippine Suite* (1935), *The Last Trial* (1946) and the *Messa in stile antico* (1956); among other compositions are the *Sonata satirica* for solo violin (1971) and the songs *Luha, masaklap na luha* ('Tears, Bitter Tears', 1927), *Ave Maria* (1938), *Stranger at the Gate* (1936) and *Carnations* (1953). His textbook *Singing and Growing* (Manila, 1952) is used in Philippine primary education.

LUCRECIA R. KASILAG

Tap dance.

A form of theatrical dance in which rhythmic patterns are sounded by the toes and heels striking the floor. The style emerged from 19th-century dances of European and black American origin, including the Irish jig, the English clog dance, the hornpipe and a number of black American step dances. In tap dancing, the rhythmic patterns articulated by the feet on the floor are heightened by metal plates, or 'taps', fitted to the soles of the shoes at the toe and heel.

An early forerunner of modern tap was the spectacular solo dancing of John Durang (1768–1822), who first established the step dance as a theatrical dance through his performances of the hornpipe. The interaction of black American dance with Irish and English step dances became evident a little later through the performances of minstrels such as Thomas Dartmouth ('Daddy') Rice and William Henry Lane. The immediate predecessor of tap was 'soft shoe', with similar footwork but performed without taps on the shoes. Tap dance was later influenced by characteristic or eccentric dances such as the cakewalk of the 1890s, the 'animal' ragtime dances of the 1910s, and the jazz dances of the 20s. It matured further in vaudeville, the Broadway musical comedy and especially in American films. Major figures in the history of tap dance include Billy Kersands, Bill 'Bojangles' Robinson, Fred Astaire, Gene Kelly and Ruby Keeler. Perhaps the most famous example of tap dance is Gene Kelly's performance in *Singin' in the Rain* (1952).

Taphouse, Thomas William

(*b* Oxford, 11 Feb 1838; *d* Oxford, 8 Jan 1905). English music and instrument dealer and collector. He was the son of Charles Taphouse (*c*1816–1881), the founder of the firm of Charles Taphouse & Son Ltd, first established in 1857 at 10 Broad Street, Oxford, shortly after at 33 St Giles, and from 1859 at 3 Magdalen Street. Taphouse held various local appointments as organist, and made the music shop into a lively musical centre, having added a piano warehouse and several music rooms to the premises – one of which was for many years the home of the Oxford University Music Club. His collection of early music and instruments, which contained numerous rare and some unique printed and manuscript items

(including the only contemporary source of the Violin Sonata by Henry Purcell), became one of the finest in the country. The library was sold by auction at Sotheby, Wilkinson & Hodge's in 1905, for a total of £1062. His only son, Charles Milner Taphouse (1863–1928), took over the firm in 1897 and, from 1913, in new and larger premises, expanded its scope. Further developments in all departments took place under the management of his two sons John Milner Taphouse (*b* 1907) and Charles Trevor Taphouse (*b* 1913).

ALBI ROSENTHAL

Tapia [Numantino], Martín de

(*fl* 1559–70). Spanish theorist. He came from the province of Soria, in which the ancient Iberian city of Numantia was located. He is thought to have been a 'bachiller' of Salamanca University and a musician in the Cathedral of Burgo de Osma. Tapia's treatise, *Vergel de música spiritual, speculativa y activa, del qual muchas, diversas y suaves flores se pueden coger* (Burgo de Osma, 1570; ed. J. Subirá, Madrid, 1954), was completed in 1559, 11 years before publication. It was held in high regard both by later Spanish theorists and by recent music historians, earning him a reputation for erudition and originality. The respect was misplaced, as has been shown by Stevenson and León Tello, who discovered independently that Tapia plagiarized in its entirety, including even the dedication and prologue, Bermudo's *Libro primero de la declaración de instrumentos* (1549). The trifling alterations made by Tapia, chiefly consisting of added sentences at the beginnings and ends of chapters, were designed to conceal the deception.

ALMONTE HOWELL

Tapissier, Johannes [Jean de Noyers]

(*b c*1370; *d* before Aug 1410). French composer and pedagogue. Tapissier, whose true name was Jean de Noyers, is named along with the composers Susay and Jehan Vaillant in the anonymous *Règles de la seconde rhétorique* (*c*1400) as one of the principal French poet-musicians of the day. By 1391 he had been engaged as a chamber valet and court composer to Philip the Bold, Duke of Burgundy. That same year he accompanied Philip and his court on a journey to Milan and Avignon; in the spring of 1395 he made a second visit to Avignon in the ducal service; and in the summer of 1399 he was with Duke Philip in Flanders. The Burgundian court records reveal that Tapissier maintained an 'escole de chant' in Paris and that in 1406 three choirboys of the court were sent to his school 'to learn how to sing'. In 1408 Tapissier was ordered to bring his choirboys from Paris to Amiens to sing before the new Duke of Burgundy, John the Fearless, and later the same year he was rewarded for having helped perform the divine service before Duke John when the Burgundian court was in Paris. Although the accounts show that Tapissier died before August 1410, his name was known well enough several decades later to be mentioned in Martin le Franc's poem *Le champion des dames* (the citation is given in the article Johannes Carmen).

Johannes Tapissier's extant compositions are a three-voice Credo, a three-voice Sanctus and a four-voice isorhythmic motet. The motet, *Eya dulcis adque vernans rosa/Vale placens peroratrix*, laments that the church was then divided by the Great Schism. His Credo appears with two different concluding Amens, one in the Apt Manuscript (F-APT 16 bis) and a second in the more recent *I-Bc* Q15. In the latter source the Credo is preceded by a Gloria composed by Thomas Fabri, one of Tapissier's pupils in Paris. *See* Baude Cordier for a Gloria that possibly forms a pair with the Credo. Tapissier's three compositions are published in *Early Fifteenth-Century Music*, ed. G. Reaney, CMM, xi/1 (1955).

CRAIG WRIGHT

Täpkov, Dimitär

(*b* Sofia, 12 July 1929). Bulgarian composer. He studied at the Polytechnic University, Sofia, and in 1955 graduated from Goleminov's composition class at the State Academy of Music. He was head of the music department of Sofia Radio (1956–62), general secretary of the Bulgarian

Composers' Union (1962–5) and director of the National Opera (1967–70). He then served as deputy director of the Institute of Art Studies at the Bulgarian Academy of Sciences (1972–9), rector of the State Academy of Music (1979–82) and as the Bulgarian deputy minister for culture (1982–6). He was appointed professor of composition at the academy in 1976 and professor of music theory at the University of Shumen in 1995. In his many works, Täpkov leant towards a classical style but with a wider harmonic range. His musical language derives from both Bulgarian folklore and the contemporary idioms of Honegger and Shostakovic. Fine detailed handling of single instruments and instrumental colour are characteristic of his work.

MARIA KOSTAKEVA

Tappato

(It.).

An Organ stop (*Tapada*).

Tappert, Wilhelm

(*b* Ober-Thomaswaldau, Silesia, 19 Feb 1830; *d* Berlin, 27 Oct 1907). German music scholar and critic. Initially trained as a schoolteacher, he

turned to musical studies at the age of 26. Among his teachers in Berlin were the music theorist Siegfried Dehn and the critic and historian Adolph Kullak. Between 1858 and 1866 he worked as a music critic in Glogau (now Głogów), in Silesia. He then settled in Berlin where he developed a career as a music journalist, teacher, scholar and collector. His interests were divided between historical research and contemporary music. As one of the earliest modern scholars of lute tablature he acquired a notable collection of early manuscript and printed sources which he left to the Prussian Royal Library. This research led to a wider study of the history of notation, culminating in an unpublished monograph of 1901–3 and a variety of journal articles, some of them in the *Allgemeine deutsche Musik-Zeitung*, which he edited from 1878 to 1881. From the later 1860s onwards he was an active partisan of the 'New German School' and the works of Richard Wagner in particular. He headed the Berlin chapter of the 'Society of Patrons' supporting the first festival at Bayreuth in 1876 and acted as liaison in Berlin for Wagner with regard to various financial and artistic matters. One year after the first festival Tappert published a small 'dictionary' of critical abuse and satire of Wagner culled from a wide variety of contemporary periodicals, pamphlets, letters and monographs; it was revised and expanded several times. Although compiled 'for amusement in idle hours', as the title-page stated, the publication was not much appreciated by Wagner. He nevertheless provided Tappert with extracts from his unpublished autobiography (*Mein Leben*) and autographs of several early unpublished works for Tappert's short biography that appeared the year after the composer's death. In addition to his studies and editions of early lute tablature and repertory, Tappert contributed many Wagner-related items to the *Musikalisches Wochenblatt* as well as critical perspectives on such other contemporary themes as 'Women and Musical Composition' (1871). His manuscripts and printed material are housed in the Deutsche Staatsbibliothek, Berlin.

THOMAS S. GREY

Tappolet, Willy

(*b* Lindau, Bavaria, 6 Aug 1890; *d* Geneva, 24 Feb 1981). Swiss musicologist. After studying literature, psychology and musicology he took the doctorate at Zürich University in 1917 with a dissertation on Heinrich Weber. In 1938, after teaching in Geneva, he completed his *Habilitation* in musicology at Geneva University with a study of musical notation and its practical influence. He was appointed reader at Geneva University in 1955 and, following his retirement, honorary professor in 1960. His writings were mainly concerned with new music, notably French music, whose cause in the German-speaking world he took up with success. In this connection his Honegger biography occupies a particularly important place and remains a standard work on the composer.

JÜRG STENZL

Tappy, Eric

(*b* Lausanne, 19 May 1931). Swiss tenor. He studied at the Geneva Conservatoire with Fernando Carpi (1951–8), at the Salzburg Mozarteum with Ernst Reichert, in Hilversum with Eva Liebenberg, and in Paris with Nadia Boulanger. He made his début in 1959 at Strasbourg as the Evangelist in the *St Matthew Passion* and later that season appeared in Zürich in Milhaud's *Les malheurs d'Orphée* under Paul Sacher. His musicianship and intelligence commended him to Frank Martin and Ernest Ansermet, and under the latter he sang in the first performances of Martin's *Le mystère de la Nativité* (1959) and *Monsieur de Pourceaugnac* (1963). Tappy's first operatic appearance was in the title role of Rameau's *Zoroastre* at the Paris Opéra-Comique in 1964, during the bicentenary commemorations of Rameau's death. At Herrenhausen in 1966 he sang Monteverdi's Orpheus and the following year he played Nero in *L'incoronazione di Poppea* at Hanover. From 1963 he has appeared regularly at the Grand Théâtre, Geneva, distinguishing himself especially in

the Mozart repertory. He made his Covent Garden début in 1974 in the title role of Mozart's *La clemenza di Tito*, and the same year made his American début as Don Ottavio in San Francisco. His operatic repertory also included Aaron (*Moses und Aron*), Pelléas, Idomeneus and Lysander (*A Midsummer Night's Dream*). His concert repertory included choral works of Bach, Berlioz, Handel, Haydn, Mozart, Schütz and Stravinsky, as well as lesser-known music by Campra, Carissimi, Nono, Scarlatti and Vivaldi. Tappy made many recordings of concert and operatic repertory; his Orpheus (Monteverdi) and his account of the tenor part in Colin Davis's second recording of *L'enfance du Christ* are perhaps the most notable.

HAROLD ROSENTHAL/R

Tapray [Taperay, Taperet], Jean-François

(*b* ?Nomeny, Lorraine, 1738/9; *d* ?Fontainebleau, after 1798). French composer, organist and teacher. He was the son of Jean Taperet (*b* 1700), an organist who held posts in Nomeny, Jussey (1740), Gray (1746), Dole (1753) and finally Besançon (1763). Taperet had a reputation as a fine teacher, and in 1755 he published a figured bass method, *Abrégé de l'accompagnement du clavecin*. Jean-François had at least six siblings, of whom three can be identified as organists and harpsichordists: Jean-Baptiste (*b* 1741) entered Cîteaux Abbey (south of Dijon); Claude-Antoinette (1744–1815) became organist at the Hôpital de la Sainte-Famille in Fontainebleau; and Henri-Philibert (*b* 1748) dazzled the court in Versailles with his harpsichord playing at the age of seven. A newspaper account of Henri-Philibert provides the only clue to the birth date of Jean-François, referring to him as the composer of an organ concerto at the age of 18 in 1757; it also hailed him as one of the most skilful organists in the realm. He must have studied with his father, and one early biographer stated that he was also a pupil of one Monsieur Dancier, a student of Domenico Scarlatti (Choron). He was co-*titulaire* with his father at Notre-Dame in Dole when he was 16 or 17. In 1756 he composed a set of concertos for harpsichord or organ with strings, published in 1758, but later ignored in his opus numbering. In 1765 he moved with his father to Besançon. He was already married to Elizabeth-Simone Lejeune, with whom he was to have three children. Tapray spent the summers of 1767 and 1768 in Paris and then moved there, becoming the first *titulaire* of the new organ at the Ecole Militaire in 1772. That chapel was attached to the Ordres Royaux Militaires et Hospitaliers de Notre-Dame du Mont-Carmel et de Saint-Lazare de Jérusalem in 1779, and Tapray retained this name in his primary title for the rest of his life, adding 'former' when he resigned from the post in 1786 because of poor health. His reputation in Paris rested primarily on his ability as a harpsichord teacher. Grétry selected him to instruct one of his daughters at about the time of his retirement from the Ecole Militaire, and he was still listed as a teacher in Paris in 1789 when his keyboard method (op.25) was published. During the Revolutionary years there are references to him conducting two orchestral concerts in Fontainebleau (1793, 1794), where his sister lived, and he published his last works without address just before 1800. In the first biography (Choron,

1811), it is not clear if he was still living, and he is not mentioned in his sister's death certificate of 1815. Fétis claimed that he died in Fontainebleau about 1819.

Virtually all of Tapray's output was for harpsichord and piano, spanning the era of transition from one to the other. He, like most of his contemporaries in Paris, made no significant stylistic distinction between the two instruments, and thus it is uninstructive to compare his harpsichord sonatas to those which include 'piano' on the title-page. He was the most published French member of the Paris school of keyboardists in the two decades before the Revolution, a world dominated by Germans and Alsatians. His style is essentially in the same idiom as that of the resident foreigners, however, and only occasionally individual. The keyboard part is normally accompanied, and almost always carries the thematic material, allowing no meaningful division of the music into 'solo', 'chamber' and 'orchestral' categories. The almost improvisatory spinning out of charming melodic ideas over figural accompaniments with minimal development and simple modulation was much appreciated in France, but found little favour in Germany, especially after the late works of Mozart were known. Tapray was singled out in 1800 by the *Allgemeine musikalische Zeitung* in a lengthy and scathing analysis of his last opus, the only one known in Germany. This review has coloured subsequent evaluations of Tapray's music, lamenting the lack of tonal variety, formal coherence and correctness in modulatory passages, and holding up Mozart as the ideal. Tapray, perhaps recognizing a need to create interest in the face of harmonic and figural monotony, called for unusual timbres in many works (*peau de buffle* stop in op.21; harpsichord, piano and violin as soloists in op.9; clarinet or flute in place of the usual violin, and bassoon rather than cello in opp.18–20). Much of his music is extremely simple compared with that of his contemporaries in Paris, but the best of it, such as the substantial *Symphonie concertante* op.9, succeeds in delighting in the quick movements and has touching songlike beauty in the slower ones.

Taqsīm [*taksim*].

Term referring to an improvisation section in Arab and Turkish art music. *See* Arab music, §I, 5(ii); Egypt, §II, 2(iv); Greece, §IV, 1; Lebanon, §IV, 3(ii); Mode, §V, 2(iv); Ottoman music, §1; Turkey, §IV, 4.

Tār [t'ar].

Double-chested plucked lute of the Rabāb family, with a membrane as a soundtable, found in Iran and the Caucasus. It is used in popular urban entertainments (*motrebi*) but is associated more with art music, owing its popularity in classical Iranian music to such 19th-century performers as Ali Akbar and Hoseyn Qoli. It exists now in two forms, the Iranian and the Azerbaijani or Caucasian.

The Iranian *tār*, which is the older of the two, is carved from a block of mulberry wood and has a deep, curved body with two bulges shaped like a figure 8. The upper surface is shaped like two hearts of different sizes, joined at the points (illustration). The long neck has a fingerboard covered with bone. On the lower skin a horn bridge supports six metal strings in three courses, tuned *c*/*c*' (or *d*/*d*') – *g*/*g* – *c*'/*c*' (in 19th-century examples the bottom string is not doubled at the octave). Twenty-five movable gut frets divide the octave into 15 microtonal intervals. The timbre of the Iranian *tār* is clear and resonant because of the delicate skin of lamb's foetus used for the soundtable. The strings are plucked with a brass plectrum coated in wax, making possible both subtlety and virtuosity in the playing technique. Attempts to construct a bass version of the instrument have not succeeded.

The Caucasian *tār* (*tār-e qafqāzi*) is differentiated from the Iranian by its shallower, less curved body; in Azerbaijan, the two bulging sections are glued together in large instruments. As well as the three main double courses, tuned variously according to the mode to be played (e.g. *f* – *g* – *c*', *d* – *g* – *c*' or *c* – *g* – *c*'), it has five or six sympathetic strings (*zang*), sometimes played as open strings without a plectrum. These are tuned an octave and a 5th higher. Modern instruments may have five or six melody strings, tuned *g*' – *c*'' – *c* – *g* – *c*'. The Caucasian instrument has a wider neck and bridge than the Iranian, and usually has 22 gut frets. These can be adjusted to produce microtonal intervals for traditional *mugam* performance or to the 12-note tempered scale. The membrane, usually made of the pericardium of a bullock, is thicker than the Iranian type. The strings are plucked with a plectrum usually made of bakelite or similar hard, synthetic material, or in rare cases of bone. The timbre is harder and drier, and its playing style is closer to that of the Central Asian *kashgar rubāb*: it is held almost horizontally against the upper chest, and the performer shakes the *tār* slightly to produce a vibrating sound. The Caucasian *tār* is

highly esteemed in Azerbaijan and Armenia. It is sometimes found among the Turks of Khorāsān and in Uzbek and Tajikistan, where it is played in ensemble and, in the Shirvani style of epic performance, by *bakhshi*s, and has also been introduced in Turkey.

Tār.

Circular frame drum (*see* Drum, §I, 2(vi)), found throughout the Arab world except in Lebanon (Daff, Riqq) and Syria (*daff*, Mazhar, *riqq*). It varies in diameter from 12 cm (Morocco) to 70 cm (Bahrain). Successive migrations have brought the instrument to the borders of the Indian Ocean, to Kenya (*matari*), Uganda (*matali*), Zanzibar (*tari*, the name of both a dance and the instrument), to the Comoros (*tari*), to the Maldives (*thaara*, name of the instrument and a semi-religious festival) and to Malaysia (*tar*).

The term derives from the Soqotri (southern Arabic), meaning 'frame drum' and 'round object'. The roundness applies to all the models described in the field except for the Maldivian *thaara* (circular or octagonal); so this, unlike the *duff* (where anarchy reigns over the shape), shows the likelihood of a pre-Islamic split: angular shape in north Arabia, circular in the south, linking up with the round *daff* of Phoenician, Syrian and Mesopotamian antiquity. While with the angular *duff* the supporting frame is concealed by two sewn membranes, in the circular *tār* with one membrane the frame is exposed; this would explain the current expression reconciling *tār* and *duff*, '*itār al-duff*' ('the roundness of the frame drum'). *Duff*, however, is a generic term while *tār*, though more widely used in the Arab world, can only aspire to it. The conflict between the oral tradition (*tār*) and the written (*duff*) is often resolved by local definitions. In the Comoro islands, the distinction between the *tār* and *duff* (both circular frame drums) is that the second has jingles but the first has not; in Morocco the *tār* is round, the *duff* angular; in Sudan, both instruments are round and without jingles, but the term *tār* is found in the north, *duff* in the east.

The small *tār* is an instrument of the connoisseur, while the large is generally associated with worship. Between the two, a *tār* with a diameter of about 30 cm would represent explicitly the semi-profane and semi-sacred repertory (marriage, circumcision). The smallest model is confined

to Morocco and has a goatskin 12 to 21 cm wide and a frame of nearly 7 cm in depth. With four or five pairs of small cymbals (*shanshanāt*), this instrument lends a glitter to the orchestration of music of the Andalusian *nawbāt*. Though very supple, it is a less virtuosic instrument than the *riqq*. In the context of rural Moroccan music, the instrument is often larger (up to 40 cm in width) and has jingles. Another difference is in the way it is held: perpendicular to the body in Algeria, Morocco and Tunisia, parallel to the body in Egypt and other parts of the Middle East (like the *duff* and *riqq*). A slightly larger version than the Moroccan, with inlay, is fully described by Lane (*An Account of the Manners and Customs of the Modern Egyptians*, London, 1836/*R* p.362); this model has five double pairs of little cymbals and is slightly smaller in Tunisia (20 cm) than in Algeria where it is handed down to women at the time of marriage. Lane also described another kind of *tār* 'which is without the tinkling plates of metal which are attached to the hoop of the common tar' (ibid., p.505). This type is nowadays found in upper Egypt, used during funeral rites. It is about 40 cm wide. The Malaysian instrument is about 30 cm in diameter, with a cowhide head attached by a metal ring and studs; its body is about 7·5 cm deep, with sloping sides into which are let three pairs of small brass cymbals.

The north Yemeni *tār* closely resembles the religious *daff* from Syria (30 cm): lambskin stuck roughly on a frame nearly 6 cm deep. The instrument has no metallic ornament. This example, for the semi-secular, semi-sacred repertory, remains unexpectedly the property of women while the larger model (60 cm) from this region is confined to the men. There is similar variety in the Maldives where the *thaara* exists in three formats: octagonal (40 cm) with a very deep frame (nearly 15 cm), supporting three pairs of cymbals each side; a smaller example, circular, nearly 23 cm in diameter and without cymbals; and a 25 cm model with cymbals and covered with the skin of a ray. These last two, played together in a ceremony named after the instrument, use the small cymbals choreographically but not musically. Also in Yemen, a *tār* about 40 to 50 cm in diameter, without jingles, sustains the heroic and religious ballads of wandering minstrels. In Sudan, the Nubian *taar*, from 30 to 50 cm wide and 5 to 7 cm deep, is used for secular music and music for worship.

The large diameters (50, 60, even 70 cm), covered in sheepskin, are more often linked to religious or socio-religious activities (Qatar, Bahrain). They are played together or separately and the membrane (as with the *mazhar*) serves as a mute. They sometimes have a few jingles. The *tār* can be played alone, in pairs (Sudan), in larger groups (up to 10 *tār* together) or in ensembles with other instruments, by men or women. If the frame is not deep and the material is not resistant to weather, the tightening of the skin in the heat may cause the frame to buckle, which makes the instrument unusable. Present-day mass production has not eliminated these faults. For all this vast family of Arab frame drums, the ideal is a dry skin, well stretched and high pitched, in direct contrast to the homonyms of southern India where dampness of the skin predominates (as in the *kañjīrā*).

CHRISTIAN POCHÉ

Tarade, Théodore-Jean

(*b* Paris, 1 Nov 1731; *d* La Flèche, 14 Sept 1788). French violinist and composer. He may have been a pupil of Jean-Marie Leclair. He played for the balls at the Paris Opéra in 1750–51 and was a member of the Opéra orchestra from 1751 until he was pensioned in 1776. Between 1754 and 1757 he appeared as soloist at the Concert Spirituel on four occasions, and he played in the orchestra there from 1755 to 1772. His operetta *La réconciliation villageoise* (1765) was well received, the *Mercure de France* finding its music 'agreeable, and extremely well suited to the light kind of spectacle to which it is adapted'. Its success was reflected by 14 performances in 1765–6, by two published editions of the score (dedicated to Papillon de la Ferté, *Intendant des menus plaisirs du roy*) and by the appearance of its airs in several anthologies. From the 1760s to the early 1780s he ran a music shop with his wife, the former Françoise-Madeleine Dutartre, *graveuse de la reine*, who during these years published works under the name Mme Tarade. In 1783 the couple moved to La Flèche, where Tarade taught violin at the Collège Royal.

Apart from preserving Gaviniès's famous *Romance* and demonstrating contemporary taste, Tarade's music is of slight worth. More important are his two violin treatises. The first of these is known only from excerpts published in Cartier's *L'art du violon* (1798) in which Tarade is cited as an authority on bowing. The second, a reworking of the first published about 1778, offers an excellent formulation of the basic French violin technique of an earlier generation (Anet, Senaillé, Leclair, Mondonville, Guignon). Of particular interest are instructions for the proper bowing of *notes inégales*, cadences, appoggiaturas and *martèllements*. Although the technique of his own day had already been handled in the better-known, more forward-

looking treatise of L'abbé *le fils* (1761), Tarade's *Traité* remains an important document for the study of performing practice.

WORKS

operas

La reconnaissance (comédie, 1), 1765; *F-Pc*, according to *EitnerQ*

La réconciliation villageoise (comédie, 1, Poinsinet, after La Ribardière), Comédie-Italienne, 15 July 1765 (Paris, 1765)

other works

Tarakanov, Mikhail Yevgen'yevich

(*b* Rostov-na-Donu, 20 Feb 1928; *d* Moscow, 26 Sept 1996). Russian musicologist. He studied musicology at the Moscow Conservatory with Igor'

Vladimirovich Sposobin (1948–52), and undertook postgraduate work there with Sergey Sergeyevich Skrebkov (1952–5). He took the *Kandidat* degree in 1957 with a dissertation on the thematic development of Myaskovsky's first six symphonies, and was awarded the doctorate in 1970 for his book on the style of Prokofiev's symphonies. He taught music theory at the Moscow Conservatory (1955–60), and was a research fellow at the Institute for History of the Arts (later the State Institute of Artistic Studies of the Ministry of Culture of the Russian Federation; 1960–96). He returned to the conservatory to teach music theory in 1980, and in 1986 was made professor and head of the department of Soviet music (later the department of contemporary Soviet and Russian musical culture). He was a member of the USSR Composers' Union and the Moscow Union of Composers from 1951.

Tarakanov's chief areas of interest were the operatic and instrumental music of the 20th century. His most significant work was the book *Muzïkal'nïy teatr Al'bana Berga* (1976), which contains detailed analyses of the literary sources of Berg's operas, their musical concepts, their figurative and tonal structure, the features of their dramatic composition and their relationship to the artistic tendencies current at the turn of the 20th century. In the last years of his life, he worked on two books on the operas of Prokofiev. The first of these, *Ranniye operï Prokof'yeva* ('Prokofiev's early operas'), appeared in 1996; the second remained unfinished at his death.

His broad experience of 20th-century music led him to devise new methodological approaches to the analysis of contemporary music and its bearing on musical life in general. By analogy with the noosphere of Teilhard de Chardin and Vernadsky he introduced the concept of the phonosphere, referring to the sonic background which surrounds modern man and influences his aesthetic notions and his mental and emotional make-up. Tarakanov's writings combine analytical method with an emotional and figurative literary style. Over time, historical, theoretical and cultural aspects came to play a noticeable role. His works remain accessible, without compromising their professional thoroughness.

<div align="right">NELLI GRIGOR'YEVNA SHAKHNAZAROVA</div>

Tarandla.

See Tarantella.

Taranta.

A flamenco-type song of Andalusian origin. *See* Flamenco, Table 1.

Tarantella [tarandla, tarantela, tarantelle].

A folkdance of southern Italy also used in art music. It derives its name from Taranto (the ancient Tarantum) in Apulia. It is now a kind of mimed courtship dance, usually performed by one couple surrounded by a circle of others, accompanied by castanets and tambourines held by the dancers; occasionally the onlookers sing during the dance, usually a regularly phrased tune in 3/8 or 6/8 that alternates between major and minor mode and gradually increases in speed. Ex.1 shows a traditional Italian tarantella.

The tarantula (*Lycosa tarentula*) also derived its name from the town of Taranto, a coincidence that may have given rise to the popular but repeatedly discredited legend that the dance (sometimes called 'tarantula'

in literary references) was a cure for the mildly toxic bite of the spider. A disease known as tarantism, prevalent in southern Italy from the 15th century to the 17th, seems to have been more a form of hysteria than a consequence of the bite. Athanasius Kircher included eight songs used to cure tarantism in the early 17th century in his *Magnes* (1641; iii, chap.8), remarking that these tarantellas were ordinarily 'rustic extemporizations'. All but one are in simple duple metre, unlike the traditional tarantella, and all have regular phrases made up of eight beats with a caesura after the fourth and a point of repose on the seventh or eighth. Melodic figures characteristic of the tarantella include repeated notes, the alternation of a note with its upper or lower auxiliary, scalic motion, leaps and arpeggios. Like some early 17th-century correntes which are notated in simple duple metre, Kircher's tarantellas might have been altered in performance to accommodate the dance's characteristic patterns; in fact, the music of Kircher's compound duple tarantella (ex.2) is similar to the typical early 17th-century corrente. Seven 18th-century tarantellas, both Spanish and Italian, are reprinted by Schneider, all in compound metres and all structurally similar to Kircher's examples (for a further 18th-century example, said to have been used to cure a case of tarantism in Torre Annunziata near Naples, see 'Tarantella' in *Grove5*).

The tarantella was revived as a concert piece in the 19th and 20th centuries, perhaps because of the enthusiasm for its frenzied energy evinced by such writers as Goethe and Rilke. Cairon, writing in 1820, spoke of the violent and untutored movements of those dancing the tarantella; nonetheless, he discredited the tarantula connection as a 'ridiculous idea'. Tarantellas for piano, normally in 6/8, are marked 'Presto', 'Prestissimo' or 'Vivace', and are often virtuoso showpieces. The salient features of the folkdance music are reflected in the piano tarantella: phrase structure tends to be regular, and the melodic devices are like those of the dance, although the dance's diatonic scales are frequently replaced by virtuoso chromatic scales. Sectionality is emphasized by modulation and by the use of contrasting tempos. Good examples of the concert tarantella are those by Chopin (op.43) and Liszt (*Venezia e Napoli*, 1859, no.3); less virtuoso are those by L.M. Gottschalk (op.67), Stephen Heller (op.85), Anton Rubinstein (op.82), Rachmaninoff (op.17) and Mario Castelnuovo-Tedesco (op.156).

A tarantella-like movement may also appear as the final movement of a sonata, symphony or suite. Weber used the driving rhythm of the tarantella in his Piano Sonata op.70; Richard Strauss introduced Italian themes, including a tarantella, in *Aus Italien* op.16. Mendelssohn headed the finale of his Italian Symphony op.90 'Saltarello', but Tovey quoted Rockstro as saying that the legato running theme so prominent in the development is a tarantella; the saltarello and tarantella rhythms of the finale are differentiated by their melodic styles and qualities of movement (ex.3). The concert tarantella has also been parodied: the finest is Rossini's *Tarantelle pur sang (avec traversée de la procession)*, where the furious tarantella is twice interrupted by a religious procession featuring bells and a harmonium. William Albright's *Gothic Suite* (1973) for organ, strings and percussion closes with a 'Tarantella demente' marked 'Presto furioso'.

ERICH SCHWANDT

Tăranu, Cornel

(*b* Cluj, 20 June 1934). Romanian composer and conductor. After studying theory with Mureşianu and composition with Toduță at the Dima Conservatory, Cluj (1951–7), he went on to study in Paris with Messiaen and Nadia Boulanger (1966–7) and at the Darmstadt summer courses (1968, 1969, 1972) with Ligeti, Stockhausen, Caskel, Xenakis and Maderna. He was appointed senior lecturer in composition at the Dima Conservatory in 1957 and in 1968 he became conductor of the Ars Nova ensemble. In his music he has employed the *parlando rubato* cantilena and the rhythmic freedom and the folk-whistle sounds of Romanian peasant music; he has been particularly influenced by the innovations of Enescu. Țăranu's instrumental works use improvisation and aleatory ideas, together with harshly acid harmonies and other material of a folklike modality. The experience of several cantatas and incidental scores for the National Theatre at Cluj resulted in the comic opera *Secretul lui Don Giovanni* ('Don Giovanni's Secret'), a piece that achieves a surprising stylistic unity although it includes collages of Renaissance, Baroque, serial and jazz elements. In 1974 he took a doctorate in musicology at Cluj and in 1993 became a member of the Romanian Academy. He was recipient of the Koussevitzky International Record Award in 1982 and has been honoured four times by.the Romanian Composers' Union

VIOREL COSMA

Tarchi, Angelo [Angiolo]

(*b* Naples, *c*1760; *d* Paris, 19 Aug 1814). Italian composer. He is said to have entered the Pietà dei Turchini conservatory, Naples, in 1771, studying with Lorenzo Fago and Sala. In 1778 his first opera, a Neapolitan dialect comedy, was performed so successfully at the conservatory that the king commanded a performance at the palace in Caserta. This was followed by three more comic operas for Neapolitan theatres in 1778–80, his last for that city except for one in 1790. From 1781 to Carnival 1785 he worked mostly in Rome and then farther north, centring his activities on Florence in 1785 and Milan in 1787–8. He produced his first serious opera *Ademira* at Milan in 1783, and from Carnival 1785 most of his work was in that genre.

A remarkably fertile composer, even for the time, he usually produced from four to six operas each year; perhaps his most successful work of this period was *Ariarate* (1786, Milan), also performed at Naples and elsewhere.

The quick growth of his reputation resulted in his appointment as music director and composer at the King's Theatre in the Haymarket, London, for the seasons December 1787 to June 1788 and January to June 1789 (he had earlier composed the music for the castrato Rubinelli's part in a pasticcio, *Virginia*, performed at the King's Theatre for Rubinelli's début there on 4 May 1786, but it is not clear whether he went to London then). In 1790 his earlier opera *Il conte de Saldagna* (1787) was performed in Paris, and two new comic works were given there in 1790–91. Continuing his career in Italy, he is said by Fétis to have fallen ill on a visit to Naples in 1793, making a slow recovery and not producing a new opera until Carnival 1794–5. His output of operas had slowed somewhat in the early 1790s and now it did so still more. His last Italian works were performed early in 1797. He then went to Paris and attempted to establish himself as an *opéra comique* composer, having seven works performed between late 1798 and early 1802. But he never found the formula for success in that genre. Although some Italian influence was not distasteful to *opéra comique* audiences at this time, Tarchi's music seems to have remained too italianate to please completely. Several of his attempts were failures (Fétis called *D'auberge en auberge*, 1800, his best), and he finally abandoned the stage, remaining in Paris as a fashionable singing teacher.

During most of his career in Italy Tarchi was involved in breaking down the century-long *opera seria* conventions, although a series of Metastasian operas runs through his entire career. His work with the innovatory librettist Moretti, in Milan, yielded operas incorporating spectacular French elements such as choruses, dance and pantomime, along with early examples of *introduzioni*, scene complexes and multiple ensembles within and at the end of acts. In his two-act version of *Ifigenia in Aulide* (1785) the ensemble finale of Act 2 encapsulates all the action in Zeno's original Act 3, while in his *Adrasto* (1792) the quartet in Act 2 includes an extensive battle pantomime, and the finales, with chorus, are comparable to those in comic operas. *L'apoteosi d'Ercole* (1790), a *dramma per musica* in the French style based on a mythological subject, is progressive for the scene complexes concluding each act but is retrospective for the supernatural finale in which Hercules appears in the heavens.

Tarchi's setting of *Il conte di Saldagna* (1787, Milan) was the first *opera seria* with no simple (secco) recitative. It was among the first to present a murder and prolonged death scene on stage, and it was also among the first tragedies in which the hero dies rather than the villain. In his revised version of *Ifigenia in Tauride* for Florence two years earlier the death on stage of the tyrant Thoas, equally foreign to Italian audiences, paved the way for a happy ending. More shocking would have been the tragic ending of *Virginia* (1785, Florence), where, to save her from the tyrant, the young heroine dies offstage at the hands of her father, who then carries the bloody dagger on stage to swear vengeance in the final scene. By the mid-1790s deaths on stage had become fashionable. Still, the excessive carnage in *Le Danaidi* (1794) required a supernatural finale in which the

offending Danaus is dragged down to Hell in an inferno scene that harks back to the origins of opera.

Tarchi's comic operas, notably those on texts by G. and P. Mililotti, are sophisticated pieces usually involving conflicts between the nobility and their servants. The number of arias is reduced in order to accommodate sizeable introductions, expansive finales and many ensembles, including arias with interjections by one or two other characters. Both the introduction and the sextet in *Il re alla caccia* (1780) are unusual for multiple entries of characters and extensive action. Tarchi wrote two operas in the French *opéra comique* style, with spoken dialogue interspersed with arias, ensembles and finales: *Dorval e Virginia*, on a serious subject set in colonial America, and *Lo spazzacamino principe*, a comedy.

The popularity of Tarchi's music is evident from the abundance of operatic excerpts in contemporary manuscripts and the number of his serious operas that were produced in more than one city. The source of his popularity lies in his smooth and facile style, especially in his talent for grateful vocal writing with accompaniments skilfully contrived to highlight the voice without obscuring it. Tarchi was also effective in writing highly-charged dramatic music intensified by chromaticism, modal contrast, wind colour and a short-breathed, often declamatory vocal line. In arias and obbligato recitatives he often scored for solo wind instruments, including bassoon, and provided individual parts for cellos and violas (sometimes *divisi*). His choral pieces are sometimes extensive, incorporating contrapuntal and antiphonal styles within the homophonic framework normally expected at this period.

Tardando

(It. 'delaying').

See Ritardando.

Tarditi, Orazio

(*b* Rome, 1602; *d* Forlì, 18 Jan 1677). Italian composer and organist. He became a brother in the Camaldolese order. In the first part of his career

he was an organist: at Arezzo Cathedral from 23 December 1624 to 21 August 1628, at S Michele, Murano, near Venice, in 1629 and at Volterra Cathedral in 1637. For the remainder of his career he was a *maestro di cappella*: at Forlì Cathedral in 1639, at Iesi Cathedral, 1644–5, and at Faenza Cathedral from 1647 to 1670.

Tarditi was both one of the most travelled and one of the most prolific Italian church composers of his time. His output is mainly of sacred music, including many volumes of concertato motets, solo motets with or without violins, small and large concertato masses and psalm settings. He tended generally to write for increasingly intimate scorings: thus a fair number of his early works are for up to five voices and organ, whereas, entirely in accord with changes in north Italian church music at this period, the later ones are dominated by duet and trio textures. As early as 1629 he had a fine grasp of the declamatory solo motet writing of the Venetians, and the duet *Dulcis et suavissime Jesu* (1637) is a particularly fine example of spontaneous, emotionally charged melody; the two voices come together only at the end of each exposition, by way of climax. On a grander scale some of the masses in his 1639 collection are impressive in their use of dramatic tuttis, especially at the openings of movements; they have extended solo episodes, which tend to be a trifle repetitive when treated in sequences. This judgment applies perhaps to Tarditi's largest work, the third of his 1648 collection of masses, which is for five voices, two violins, trombone and organ and is thus a ceremonial mass in the Venetian manner. Exciting choral tuttis are counterbalanced by overlong cantata-like triple-time solos.

Tarditi's secular works are less interesting, though the arias of 1628, all unassuming strophic songs, include some agreeable tunes (e.g. that of *Gioisca pur contento*), the canzonets have a certain charm, and the duets resemble his better sacred ones in their combination of declamatory and contrapuntal interest.

<div align="right">JEROME ROCHE/ELIZABETH ROCHE</div>

Tarditi, Paolo

(*b* 2nd half of the 16th century; *d* after 1649). Italian composer. There is no evidence that he was related to Orazio Tarditi. He seems to have spent his entire career in Rome. From 1597 he was apparently a member of the Confraternita dei Musici di Roma. On 23 March 1601 he took part in a procession to S Biagio degli Armeni, and on several occasions between 1602 and 1623 he was in charge of the choir of the Arciconfraternita del SS Crocifisso at S Marcello. Early on he was organist of S Giovanni dei Fiorentini. He refused the post of *maestro di cappella* at S Maria Maggiore when it was offered to him in 1610 on the departure of Vincenzo Ugolini. He was *maestro di cappella* of SS Giacomo e Ildefonso degli Spagnuoli about 1619–20, of S Maria Maggiore from 1629 to 1640 and of the church of the Madonna dei Monti from 1649.

Tarditi's most interesting works are those in his collection of 1620. This consists of music for double choir – five psalms and a *Magnificat* for voices alone and nine psalms, a *Magnificat* and four Marian antiphons in the concertato style with instrumental accompaniment; together with G.F. Anerio's *Il teatro armonico spirituale* (1619), this last-named group of 14 works affords the earliest instance of the use of obbligato instruments in works by Roman composers. There is usually a close motivic connection between the voice parts and the instrumental accompaniment (lute and theorbo with the first choir, cornett and violin with the second). Tarditi frequently transferred parts of his vocal themes, especially their first few notes, to the instrumental introductions and interludes, which are mostly composed in motet style. The same procedure is found in monodic sections with continuo; the solo part here is usually interspersed with instrumental imitations, both preceding and following it. In the concertato psalms the instrumental and vocal textures change with every new verse. This creates a continuous series of contrasts, to which the obbligato instruments make a telling contribution: it is an element in Tarditi's style that points to later developments, with formal anticipations of the sacred concerto and even of the later cantata. Traditional components are nevertheless still very pronounced. The conservatism in Tarditi's style is clearest in the monodic psalm verses with continuo. Even here there is imitative writing; the melodies owe much to the nature of motet themes of the early 17th century, and their metre is governed by that of the text. In his polyphonic compositions, too, there is an obvious preference for imitation. This predilection is symptomatic of the change of style that took place after 1600, as are also the melodic shapes rising to climactic points, and the occasional replacement of the freely flowing melody which was characteristic of earlier, classical vocal polyphony, by melody with periodically recurring sections. Tarditi's works do not reveal the identification with the content of the text and the representation of emotions

which characterize the genuine monodic style: they are at once typical of an age of transition and of the Roman tradition.

WORKS

Motecta, 1–6vv, bc (Rome, 1619)

Psalmi, Magnificat cum 4 antiphonis ad vesperas … liber II, 8vv, bc (Rome, 1620)

Tardo

(It.: 'slow').

One of the earliest tempo marks in music. Perhaps it came into early favour because of being cognate with the Latin adverb *tarde* which has a long history of appearances in musical theory: Augustine and Aribo both contrasted *tarditas* with *celeritas*; and Aribo added that these were the correct interpretations of the Romanus letters *t* and *c*. So when tempo marks began to be used it initially had some prominence. Michael Praetorius gave *tarde* as the Latin equivalent of the Italian *lento* and the German *langsam* (e.g. in *Syntagma musicum*, iii, 2/1619). Monteverdi marked at one point in the organ part of his 1610 collection 'va sonata tardo perchè li doi tenori cantano di semicroma' ('should be slow because the two tenors sing semiquavers'). It was used as the designation for a slow tempo by Marini (op.1, 1617), Priuli (1618), Jelich (1622), Schütz and several other composers in the 17th century. But its career was thwarted, so to speak, by the sheer plethora of slow tempo marks: *adagio*, *grave*, *lento* and *largo* left little room for yet a fifth word meaning essentially the same thing. And though the word was still defined in Brossard's *Dictionaire* (1703) and the anonymous *A Short Explication* (1724), examples of its use after Schütz are hard to find. For the gerund, *tardando*, *see* Ritardando.

See also Tempo and expression marks, §5.

<div align="right">DAVID FALLOWS</div>

Tardos, Béla

(*b* Budapest, 21 June 1910; *d* Budapest, 18 Nov 1966). Hungarian composer. He studied the piano at the National Conservatory in Budapest (1926–9) and composition with Kodály at the Liszt Academy of Music (1932–7), earning his living in an insurance company between 1930 and 1945. A printworker's son, he had early connections with the Hungarian labour movement; from 1933 to 1945 he conducted workers' choirs, notably the Vándor Chorus, which performed several of his works. Later he held appointments as music editor of the Szikra publishing house (1945–8), general manager of the National Philharmonic Concert Bureau (1950–52) and director of Editio Musica (1955–66).

The most important works from Tardos's first creative period, up to 1945, are the Divertimento for wind octet (1935), the Piano Quartet (1939–41) and *Német zsoldosdal* ('German Mercenary Song', 1942); many other pieces, such as the first version of the cantata *A város peremén* ('At the Outskirts of the City', 1944), were lost during the war. In 1948 Tardos won the first prize at the Bartók International Competition in Budapest for his String Quartet no.1. The major part of his output of the early 1950s consists of cantatas, choruses, film music, songs and mass music. It was in his last decade that he produced his best work, whose quality was recognized by the award of two Erkel Prizes, one, in 1960, for the second version of *At the Outskirts of the City*, the other, in 1966, for his whole oeuvre.

Targhetta.

See Virchi, (giovanni) paolo.

Targioni-Tozzetti, Giovanni

(*b* Livorno, 17 March 1863; *d* Livorno, 30 May 1934). Italian librettist and critic. He was a professional journalist who became a newspaper editor and filled a number of public appointments. His earliest libretto seems to have been *Pinotta*, written for Mascagni in the early 1880s; the score was lost for 50 years. Then came *Cavalleria rusticana*, a work which, like all of Targioni-Tozzetti's, shows a strong sense of the theatre. In this, as in a number of his subsequent librettos, he worked with Guido Menasci (*b* Livorno, 1867); it was said that while Targioni-Tozzetti was responsible for the passionate, dramatic sections, Menasci supplied the more elegant, restrained ones. Targioni-Tozzetti was responsible for the first Italian translation of Massenet's *Werther*, and the Italian version of Mascagni's *Amica*, the composer's only work to a French text. He is sometimes credited (see for example *LoewenbergA*) with a share in the libretto of Mascagni's *Il piccolo Marat* but the libretto carries the name of Forzano alone. In 1900 Targioni-Tozzetti and Menasci published a libretto *Vistilia*, 'scene liriche per la musica di Pietro Mascagni', but nothing seems to have come of it. In it they also listed five other librettos in preparation but none of them was heard of again. (*Nascita e gloria di un capolavoro italiano: cinquantenario della 'Cavalleria rusticana'*, Milan, 1940)

JOHN BLACK

Tarisio, Luigi

(*b* Fontaneto d'Agogna, nr Novara, *c*1790; *d* Milan, Oct 1854). Italian violin dealer and collector. He was born of humble parents and is said to have trained as a carpenter, with violin playing as a hobby. He developed an interest in violins themselves, and with a natural talent both as a connoisseur and for business he began to acquire and resell some of the many fine instruments that were lying unused in the towns and villages of northern Italy. His first journey to Paris (in 1827) was evidently profitable for him and for the dealers there, who gave him every encouragement. In the same year he made his greatest coup, acquiring a number of violins from Count Cozio di Salabue, including a 1716 Stradivari in unused condition. This violin was Tarisio's treasure, and as he spoke of it on every visit to Paris but never actually brought it with him it came to be known as the 'Messiah'.

Tarisio searched indefatigably for violins and had a true love of them. The novelist Charles Reade, who knew Tarisio, wrote of him: 'The man's whole soul was in fiddles. He was a great dealer, but a greater amateur, for he had gems by him no money would buy'. An insatiable demand in northern Europe for what nobody wanted or appreciated in the south, and the absence of much competition, gave him unique opportunities; and by bringing his stock to Paris, the only place where the art of restoration was at all advanced, he rescued many great instruments for posterity. After Tarisio's death it was the turn of Vuillaume, the leading Parisian dealer, to make the greatest purchase of his life: at a small farm near Fontaneto, where Tarisio's relatives lived, were the six finest violins of the collection, including the celebrated 'Messiah'; and in a dingy attic in Milan, where Tarisio's body had been found, were no fewer than 24 Stradivaris and 120 other Italian masterpieces.

CHARLES BEARE

Tarkhnishvili, Maro [Mariam]

(*b* Kavtiskhevi, nr Gori, 1891; *d* Tbilisi, 1969). Georgian folksinger. The most outstanding female folksinger in Georgia, she was expert in eastern Georgian (Kartli-Kakhetian) traditional singing, with a repertory acquired from her family. Her debut with a choir came in 1910, and by 1920 she had organized a tour throughout Georgia with her own choir. In 1921 Dimitri Arakishvili invited her to lead an ethnographic choir at Tbilisi State Conservatory. During the 1930s she made personal appearances in Russia and the Ukraine, including recording sessions and radio broadcasts. She performed the traditional repertory of both women and men, and many of her versions of traditional songs (including *Orovela*, a virtuoso solo harvest song) are known as the 'Tarkhnishvili versions'. Her performance style was based on a beautiful voice with virtuoso technique.

JOSEPH JORDANIA

Tarmakov, Russi (Dragiev)

(*b* Malko Tarnovo, 5 Dec 1949). Bulgarian composer. He completed his studies at the Institute of Architecture and Civil Engineering in Sofia (1972) before entering the Bulgarian State Music Academy. In 1980 he graduated from the composition class of Zdravko Manolov and the piano class of Ruzhka Tcharakchieva. From 1986 to 1988 he was repertory director of the Stefan Makedonski State Musical Theatre, and in 1989 he became executive music producer of the Bulgarian National RSO. He won a scholarship from the Gaudeamus Foundation (Netherlands) in 1985, and attended the Cité Internationale des Arts in Paris in 1991 on a scholarship from the Bulgarian Ministry of Culture. In 1990 he became a member of the Bulgarian section of the ISCM.

His first notable composition was *Vizantiyski napevi* ('Byzantine Melodies', 1981), which evokes the atmosphere of Orthodox liturgical chant. The work that established him as an international figure, however, was *Narodna muzika I* ('Folk Music I'), which won the Reine Marie José competition in Geneva in 1984 and was critically acclaimed following its performance at the 1995 Wien Modern festival. Tarmakov's compositions have an improvisational quality. Yet in actuality, he layers his materials, which he derives from archaic modal and folk sources in precise mathematical proportions. His music employs a variety of styles often within a single work.

ANNA LEVY, GREGORY MYERS

Tarnopol'sky, Vladimir Grigor'yevich

(*b* Dnepropetrovsk, 30 April 1955). Russian composer. Born into a musical family, he graduated from the Moscow Conservatory in 1980 and in 1983 completed postgraduate studies with Denisov, Sidel'nikov and Yury Kholopov. By the late 1980s his works were frequently heard at major festivals in Europe and the USA; they have been performed by Rostropovich, Rozhdestvensky, the Ensemble Modern and the Bol'shoy Theatre Ensemble. He is active in developing contemporary music in Russia: in 1989 he was one of the founders of the revitalized ASM (the Association of Contemporary Music, originally founded in the 1920s and dissolved soon after), he initiated the Society for New Music at the Moscow Conservatory (1993) and the Moscow Forum Festival, of which he has been artistic director since 1994. He has taught composition at the Moscow Conservatory since 1992 – his students have repeatedly gained recognition in international competitions – in addition to giving classes in European conservatories and serving on the juries of various competitions. He won the Shostakovich Prize and the Hindemith Prize in 1991. His works tend to be large scale compositions with bold contours and dramatic content. They can be typified by intense emotional expression and vivid inner dynamic. Two distinct aesthetic strands are often combined in paradox: the first is governed by a search for a 'dissonant euphony', developed from a foundation of carefully arranged sound material, the texture and timbre of which is subject to the utmost attention; the second is characterized by postmodern stylistic play that produces theatrical musical imagery which ranges from the cheerfully ironic to the grotesquely surreal in tone.

Tárogató [also töröksíp: 'Turkish pipe']

(Rom. *taragot*, *torogoată*).

A woodwind instrument generally associated with Hungarian music. A variant of the Eastern oboe, it may have been introduced to central Europe in its original form in the 16th century during the Turkish invasion and occupation. The first known appearance of the name was in 1533. The tárogató was generally between 30 and 40 cm in length. It had a slightly tapered body with a conical bore, six to eight finger-holes and a thumb-hole, and a bell with seven vent holes. The double reed rested on a conical brass staple, 6–7 cm in length, which ended in a fork and was, in turn, inserted in a cylindrical wooden mouthpiece. The reed was placed in the mouth and, following Eastern practice, the player's lips were supported by a small disc, or pirouette, at the end of the mouthpiece. The tone of the instrument was harsh and shrieking. Though principally a military instrument, it was also employed at funerals, weddings and other outdoor ceremonies, often together with drums and trumpets. During the Rákóczi uprising at the beginning of the 18th century the tárogató was popular with adherents of the cause, but when the movement was defeated the instrument, having become a symbol of freedom to the Hungarians, was prohibited. It reappeared in the early 1850s, after the war of independence against Habsburg rule was lost. At that time several old instruments were given to the Hungarian National Museum; a number of reconstructions were made and were used in concerts (see illustration). In 1860 Albert Skripsky (*d* Ofen, 1864), a woodwind instrument maker in Pest, constructed a type of tárogató with 13 keys, but the sound of his instruments was not in accord with 19th-century ideals.

At the end of the century Wenzel Josef [Vencel József] Schunda (1845–1923), a successful musical instrument manufacturer in Budapest, made some new double-reed instruments, larger than the historical tárogató but similar in form. After several years of experiment with the aim of constructing a tárogató suited to orchestral use, in 1897 Schunda was granted a patent for a single-reed woodwind instrument, the modern tárogató. It resembles a soprano saxophone made of wood, with a conical bore, Keywork based on the German simple system, and vent holes in the bell. It was made in three pitches: B♭ (range *b*♭–*c''*), A♭ (*a–b*♭') and E♭. Because of its woody, mellow tone it became a popular 'national' instrument. As well as being played as a solo instrument it appeared in

ensembles with cimbalom and viols, and in tárogató bands with 15 or more members, including also tenor and bass instruments.

The first known use of the tárogató in symphonic music was in Károly Thern's incidental music to *Szvatopluk* (1839). Soon after the development of Schunda's instrument it was used for the shepherd's solo in *Tristan und Isolde* at the Budapest Opera, the Vienna Hofoper and at Bayreuth. Today it is used by folk musicians in Hungary and Romania.

ESZTER FONTANA

Tarompet.

Wooden oboe used in Sundanese areas of West Java. It is about 50 cm in length and has seven fingerholes and a narrow, slightly conical bore which widens towards the lower end into a large bell. Its double reed is held entirely within the musician's mouth and vibrates freely there; a crescent-shaped piece of coconut shell attached to the mouthpiece serves as a cheek support. The player employs circular breathing to produce a continuous tone. The instrument has a piercing sound and is played in the rare *gamelan goong ajeng* and in smaller outdoor ensembles, mainly those which accompany the combat dance, *penca*, for which one or two *tarompet*, one or two sets of drums and a small gong are used (a similar ensemble is used in ritual and festive processions). Other ensembles in which the *tarompet* plays the leading melodic role are those of the *ujungan* stick-fights (*tarompet* with gong, drum and iron clappers), and of the *kuda lumping* hobby-horse trance-dance (*tarompet* with bamboo Angklung and four single-headed *dogdog* drums). It is possible to produce both *pélog* and *saléndro* scales by way of intricate fingering. *Saléndro* tunes are reserved for the particular section of the *kuda lumping* dance involving entering a state of trance. The *tarompet* (like its central Javanese parallel *selompret*) is derived from the musical culture of Islamic south-western and southern Asia but the name is derived from the Dutch word 'trompet'.

ERNST HEINS

Taroni [Tarroni, Tarone], Antonio

(*b* ?Mantua; *fl* 1598–1646). Italian composer and singer. Before his arrival in Mantua he sang contralto in the ducal church of the Madonna della Steccata, Parma. His earliest recorded association with composers of the Mantuan *cappella* is the appearance of his *Eran ninfe e pastori* in Gastoldi's popular *Concenti musicali* (RISM 1604[21]). Between July and April 1609 and in August and September 1612 he served temporarily as *maestro di cappella* of the ducal chapel of S Barbara, Mantua. From July 1610 to September 1612 he also held the less important post of *maestro di canto fermo* with responsibility for instructing the choristers in 'canto figurato e contrappunto'. His abilities as a composer seem to have been highly valued by his Mantuan colleagues. His *Ardo mia vita* appeared together with works by Gastoldi, Virchi and Monteverdi in 1608 in Wert's posthumous *Il duodecimo libro de madrigali a 5, 6 & 7*. In 1610 G.B. Sacchi, a singer and composer employed at S Barbara, sent madrigals by him to Cardinal Ferdinando Gonzaga, a noted patron of music and a composer, who succeeded to the Duchy of Mantua in 1612. Cagnani included Taroni in the lists of Mantuan composers in his *Lettera cronologica*, though he mistakenly stated that he contributed to *L'amorosa caccia de diversi eccellentissimi musici mantovani nativi* (RISM 1588[14]); his absence from that volume possibly signifies that he was not born in Mantua, though it may have been because he was too young at the time. Despite the support of distinguished contemporaries and the efforts of Sacchi, he seems not to have held an important musical post, at least at Mantua. In 1614 he was a canon at S Barbara; he continued to teach the clerics in succeeding years. According to a letter from Monteverdi, dated 13 June 1627, Taroni was then in Poland, evidently in the service of King Zygmunt III Wasa; he had been there for at least two years. Nothing is heard of him between that date and the appearance 19 years later of his *Messe da capella*, which is a reprint with basso continuo of *Il primo libro di messe*.

IAIN FENLON

Tarp, Svend Erik

(*b* Thisted, 6 Aug 1908; *d* Charlottenlund, 19 Oct 1994). Danish composer. He began his music studies at the University of Copenhagen and with Elof Nielsen for the piano. At the Copenhagen Conservatory he was taught theory by Jeppesen and music history by Simonsen. After graduation he studied in Germany, the Netherlands and Austria (1933 and 1937). He taught intermittently during the 1930s and 40s at the opera school of the Royal Theatre (1936–40), the Copenhagen Conservatory (1936–42), the Statens Laererhøjskole (1941–5) and the University of Copenhagen (1939–47), but gradually became completely involved in administrative tasks, especially for Koda, of which he was administrative director from 1960 until his retirement in 1974. He was also an administrator for Edition Dania (1941–60) and chairman of Samfundet til Udgivelse af Dansk Musik (1961–4). These and other organizational posts were responsible for a diminished later output.

Tarp is one of the most original and striking composers of the post-Nielsen generation. His early Te Deum (1945) is an eloquent masterpiece: the dramatic tutti rhythmic writing is reminiscent of Walton, although Tarp's interest in large-scale contrapuntal textures is a more particularly Danish characteristic. The motoric ostinato formations of his Piano Concerto in C (1942–3) suggests a French-orientated neo-classicism, but Tarp's essentially modal polyphony sounds distinctively Northern. In later works, such as the Symphony no.7 'Galaxy' (1977), Tarp moved closer to Danish contemporaries such as Høffding and Holmboe. His language here is sparser than his works from the 1930s and 40s: blocks of nearly static music are often juxtaposed against more dynamically active phrases with disconcerting results. However, none of the directness that characterized his earlier music is lost, especially in the funereal tread of the first movement. This directness of expression also served Tarp well in his activity as a notable composer of much film music.

WORKS

(selective list)

dramatic and vocal

Stage: Den detroniserede dyretaemmer (ballet, B. Bartholin), Copenhagen, 1944; Prinsessen i det fjaerne (lyric comedy, E. Hjejle), Copenhagen, 1953; Haesblaes fra Husum (school op), 1954; Skyggen (ballet, Bartholin), Copenhagen, 1960

NIELS MARTIN JENSEN/DANIEL M. GRIMLEY

Tarr, Edward H(ankins)

(*b* Norwich, CT, 15 June 1936). American trumpeter and musicologist. He studied the trumpet under Roger Voisin in Boston (1953) and Adolph Herseth in Chicago (1958–9); after leaving the USA, he studied musicology in Basle under Leo Schrade (1959–64). His main interest is in reviving early trumpet music on modern and old instruments and on present-day reconstructions, on which he has collaborated with the German makers Meinl & Lauber. He cultivates a brilliant and resonant tone on these instruments to match the sound described by contemporary writers. His repertory includes many solo Baroque works (from Italy, Germany, England and France), Classical concertos and a number of modern works, including *Atem* and *Morceau de concours* by Kagel (dedicated to and recorded by him) and pieces by Berio and Stockhausen. He has received enthusiastic acclaim for his recordings and public performances, particularly on his annual tours of the USA. In 1967 he founded the Edward Tarr Brass Ensemble to perform Renaissance and Baroque music on authentic instruments, as well as contemporary music on modern ones.

As an author and editor Tarr has been equally adventurous, contributing much to the history of the trumpet and making a vast range of Baroque music available for the first time in modern performing editions, as notable for their scholarship as for their practical advice in authentic playing. Particularly noteworthy are his editions of many Italian Baroque works, including the complete trumpet works of Torelli. Tarr taught the trumpet at the Rheinische Musikschule, Cologne (1968–70); in 1972 he was appointed to the Schola Cantorum Basiliensis to teach the cornett, and in 1974 to the Basle Conservatory to teach the trumpet. In 1985 he became director of the Trumpet Museum in Bad Säckingen.

NIALL O'LOUGHLIN

Tárrega (y Eixea), Francisco

(*b* Villarreal, Castellón, 21 Nov 1852; *d* Barcelona, 15 Dec 1909). Spanish guitarist and composer. When he began the study of the classical guitar with Julian Arcas in 1862, the instrument was at a low ebb throughout Europe, overshadowed by the piano. Tárrega's father insisted that the boy study the piano as well, and he became accomplished on both instruments at an early age. In 1869 he had the good fortune to acquire an unusually loud and resonant guitar designed and constructed by Antonio Torres, the famous luthier, then living in Seville. With this superior instrument Tárrega was to prepare the way for the rebirth of the guitar in the 20th century. He entered the Madrid Conservatory in 1874, and received a thorough grounding in theory, harmony and the piano. By 1877 he was earning his living as a music teacher and concert guitarist; he gave recitals in Paris and London in 1880, and was hailed as 'the Sarasate of the guitar'. He married María Josepha Rizo in 1881 and they settled in Barcelona in 1885. Within a few years he displayed a repertory that included, besides his own compositions in the smaller forms, piano works by Mendelssohn, Gottschalk, Thalberg and others arranged for the guitar. The Spanish 'nationalist' composers, Albéniz and Granados, were his friends; many of their works were first transcribed for the guitar by him. He also adapted movements from Beethoven's piano sonatas (including the Largo of op.7, the Adagio and Allegretto from the 'Moonlight' Sonata) and half a dozen preludes of Chopin. During the years 1885–1903, Tárrega gave concerts throughout Spain. He toured Italy in 1903. At the height of his fame, in 1906, he suffered a paralysis of the right side from which he never fully recovered. He did, however, appear publicly, and to loud applause, in 1909.

Tárrega's influence on the 20th century, through pupils who included Emilio Pujol, Maria Rita Brondi and Josefina Robledo, has been tremendous. His compositions for solo guitar, not all of which have been published, comprise approximately 78 original works and 120 transcriptions; he also made 21 transcriptions for two guitars. Among his most famous solos are *Recuerdos de la Alhambra* (a tremolo study), *Capricho árabe* and *Danza mora*.

Tarreria, Francesco.

See Terrieria, Francesco.

Tarroni, Antonio.

See Taroni, Antonio.

Tartaglino, Hippolito

(*b* ?Modena, ?1539; *d* Naples,1582). Italian composer and organist. He was probably in Rome by 1574; he was named *maestro di cappella* of S Maria Maggiore, Rome, on 10 October 1575. He was organist of S Pietro in February 1577, and during Holy Week and Easter he performed for the Arciconfraternità del SS Crocifisso at S Marcello, Rome, where there are still some of his motets or parts of motets. Some time between January 1580, when his name appears in the archives of the SS Annunziata in Naples, and June 1581, when he was officially replaced at S Pietro, he moved to Naples, where he was organist of the SS Annunziata until his death. Fétis asserted that he had been made a Roman citizen and Knight of the Golden Spur through the influence of Cardinal Farnese, and Prota-Giurleo said that he received the patronage of Cardinal Burali of Arezzo. Giovanni d'Avella (*Regole di musica*, Rome, 1657) treated Tartaglino among Neapolitan composers, although he is not listed as such in Scipione Cerreto's *Prattica musica* (Naples, 1601, 157ff).

Tartaglino's surviving music is less ambitious in scope than the masses and motets for three and four choruses which Eitner, without giving details, claimed for him. His only motet publication, *Motettorum quinque & sex vocum liber primus* (Rome, 1574, inc.), constitutes the entire known musical production of the printer Giovanni Osmarino Gigliotti (Liliotus). The book was dedicated to Cardinal Alessandro Farnese. Tartaglino's madrigal for five voices, *Celeste donna*, was included among the *Dolci affetti* collected by a Roman academician from works by Roman composers (RISM 1582[4]). Two of his madrigals for four voices were printed in Rodio's *Secondo libro di madrigali a quattro* (1587[12]); one of these, *Hor le tue forz' adopra*, was reprinted in the five Neapolitan editions of Arcadelt's *Primo libro di madrigali a quattro*. Prota-Giurleo reported the existence, as yet unconfirmed, of a book of *Madrigali a cinque voci* (Rome, 1576).

Tartaglino's surviving madrigals alternate imitative passages with homophonic phrases that are sometimes in declamatory chordal style, sometimes in echoed two-voice figures. The harmonic language is mostly conservative, but with some unexpected twists and a few conspicuous cross-relations. Word-painting occurs nearly as frequently as the text permits. There are some poorly concealed 5ths and octaves, but his vocal style is mostly smooth and ingratiating.

Very different are the two *canzoni francesi* attributed to 'Ippolito' (undoubtedly Tartaglino) in a manuscript (*GB-Lbl* Add.30491), which employ free and sometimes irrational dissonance with very frequent simultaneous cross-relations, often required by written accidentals.

PIERLUIGI PETROBELLI

Tartini, Giuseppe

1. Life.

Tartini's father Giovanni Antonio, of Florentine origin, was general manager of the salt mills in Pirano. Giuseppe, destined for the church by his pious parents, was to have been first a *minore conventuale*, a branch of the Franciscan order, and subsequently a full priest. To this end he was educated in his native town and then in nearby Capodistria (now Koper, Slovenia) at the *scuole pie*; as well as the humanities and rhetoric, he studied the rudiments of music. In 1708 he left his native region, never to live there again, but carrying in his memory the peculiarities of the local musical folklore. He enrolled as a law student at Padua University, where he devoted most of his time, always dressed as a priest, to improving his fencing, a practice in which, according to contemporary accounts, few could compete with him. This account of Tartini's youth has been questioned (see, for instance, Capri), but it is supported by contemporary evidence and is consistent with the later development of his personality, characterized by a fiery and stubborn temperament with a strong tendency towards mysticism. These qualities are equally evident in his writings – both letters and theoretical works – and in his compositions.

A few months after his father's death, Tartini openly rebelled against his parents' intentions, and on 29 July 1710 he married Elisabetta Premazore, a girl of lower social standing and two years his elder. He was then

compelled to leave Padua and took refuge in the convent of S Francesco in Assisi, where he was sheltered by the superior, Padre G.B. Torre, from Pirano. There Tartini remained for at least three years, devoting himself determinedly to practising the violin, always without tuition. Although direct evidence is lacking, he probably studied composition during this period with Padre Bohuslav Černohorský, then organist of the basilica in Assisi.

With the death of Father Torre, Tartini lost his protector and was obliged to support himself as a violinist. We learn from his *Trattato di musica* that in 1714 he was in the orchestra of the Ancona opera house, and he claimed that it was then that he discovered the 'terzo suono' (combination tone), the acoustical phenomenon that was to play a fundamental role in his theoretical system as well as in his composing and playing techniques. In July 1716 he heard Veracini play at a musical academy in the Mocenigo palace in Venice, and was so impressed by his style, especially by his bow technique, that he decided to return to the Marches in order to perfect his own playing; in Carnival 1717–18 he was first violin in the opera house orchestra in Fano. His activities during the next two years are not known, but presumably involved commuting between the Veneto and the Marches in order to play in academies, church services and opera performances, as well as teaching. He was in Venice early in 1721, when he had as a pupil the young Gerolamo Ascanio Giustiniani, the future translator of the Psalms for Benedetto Marcello and the dedicatee of Tartini's own violin sonatas published as op.1 in 1734 by Le Cène in Amsterdam.

Thanks to the intervention of Gerolamo Ascanio's father, Tartini was appointed *primo violino e capo di concerto* at the basilica of S Antonio in Padua (known as 'Il Santo') on 16 April 1721; the proceedings of the appointments board expressly stated that Tartini was exempt from the usual examination because of his acknowledged perfection in the profession, and he was at the same time granted complete freedom to play in opera and musical academies whenever he so wished. The document is in itself proof of the high reputation Tartini had by then acquired. Taking advantage of the permission he was granted, he took part in occasional performances in Parma (1728), Bologna (1730), Camerino (1735), Ferrara (1739) and, most frequently, Venice.

In 1723 Tartini was invited by his lifelong friend and colleague, the cellist Antonio Vandini (the source of the earliest biographical information about Tartini), to join him in Prague in performances connected with the coronation of Emperor Charles VI as king of Bohemia. Tartini's ready acceptance resulted partly from a wish to avoid a scandal about to erupt in Padua, provoked by a Venetian innkeeper who accused him of fathering her recently born child. Tartini remained for three years in Prague in the service of the Kinsky family, and enjoyed contacts there with Prince Lobkowitz's household as well as with the musicians Fux, Caldara and S.L. Weiss. The bad climate and resulting health problems obliged him – 'against his will', as he said in a family letter – to return in 1726 to S Antonio in Padua, where he remained for the rest of his life.

The following year Tartini began his violin school, which soon became famous and was labelled 'the school of the nations' because students came to it from all over Europe. It was probably about this time that he

began his relationship, mainly epistolary, with Padre Martini in Bologna, which lasted for the rest of his life. Also about this time (c1730) Le Cène of Amsterdam brought out Tartini's first published works, 12 concertos op.1, books 1 and 3. In spite of repeated invitations from France, Germany and especially England, Tartini firmly refused to leave Padua, just as he always declined to write for the stage. Several travellers visited him: in 1739 De Brosses reported at length in his *Lettres familières* on the excellent impression the violinist made on him, but there is no evidence of a supposed journey to Rome in 1740. About this time Tartini suffered a stroke which partly paralysed his left arm and affected his playing. Frequent contacts with the cultural milieu in Padua, and especially with his countryman Gianrinaldo Carli, professor of astronomy at Padua University, fostered the change in Tartini's conception of music from that of a purely abstract construction of sounds to that of an expressive language capable of moving the listeners' affections. The discussions concerned also theoretical subjects, dealing with the physical and mathematical principles behind musical phenomena; but Tartini's interest in – or indeed his passion for – these matters dates from much earlier, and was promoted also by the presence in Padua of two Franciscans who were *maestri di cappella* of the institution in which he served and also deeply involved in the same theoretical matters: Francesco Calegari, who held the office from 1703 to 1727, and his successor Francesco Antonio Vallotti.

As time went by, Tartini devoted himself less to playing and composing, concentrating his energies (apart from those used for teaching) almost exclusively on theoretical speculation. By 1750, as can be inferred from his correspondence, the text of what was to become the *Trattato di musica secondo la vera scienza dell'armonia* was complete, and it was circulated to the 'learned world' (as Tartini himself called it) to be evaluated and discussed. Padre Martini and the mathematician Lodovico Balbi, both in Bologna, were rather sceptical of the hypotheses expounded in the treatise, which was eventually published in 1754 with the financial support of Count Decio Agostino Trento, its dedicatee. Criticism continued after publication, emphasizing that it was written in a deliberately obscure style. Tartini decided therefore on a plainer and more comprehensible presentation of his ideas in his next printed treatise, *De' principi dell'armonia musicale contenuta nel diatonico genere*, completed in 1764 and published in 1767. In between these publications, and even after, he wrote several shorter theoretical texts, principally to defend his convictions against attacks coming mainly from Italian mathematicians and foreign music theorists. Not all judgments were unfavourable, however; D'Alembert, in his *Elémens de musique*, expressed support for Tartini's ideas, and J.-J. Rousseau took the trouble of including an extensive and thorough résumé of them in the article 'Système' in his *Dictionnaire de musique* (1768). But Rousseau's concept of harmony was too close to Rameau's to be acceptable to Tartini, who attacked him in what turned out to be his last published work. Another large theoretical text, *Dell'armonia musicale fondata sul cerchio*, remained unpublished until modern times.

Throughout his life Tartini was harassed by requests for financial help from his family in Pirano, which obliged him to devote his last years more than ever to teaching; but he was also obsessed by the incomprehension with which his theories and ideas were met. After the death of his wife, Vandini

joined him to spend their last years together. Tartini died on 26 February 1770; he bequeathed his musical and theoretical manuscripts to his nephew Pietro.

Tartini, Giuseppe

2. Works.

Tartini's musical output is almost entirely limited to two instrumental genres, the solo violin concerto with string accompaniment and the violin sonata; the only exceptions are a few trio sonatas, a handful of *sonate a quattro* and some devotional vocal pieces. Furthermore, except for two flute concertos the instrumental music is all for string instruments. In a century in which practically every composer was obliged to write for the church and the theatre, this fact is in itself striking and significant. In the course of his conversations with De Brosses, Tartini found the opportunity to assert: 'I have been asked to write for the opera houses of Venice, but I always refused, knowing only too well that a human throat is not a violin fingerboard' – an assertion followed by a sharp critique of Vivaldi, who ventured in both genres.

The chronology of Tartini's compositions presents problems for which no solution has yet been found. Not only is it difficult to date precisely almost all the available printed sources (though for the violin sonatas Paul Brainard established a canon of their years of publication, as well as the inner relationship of their contents), but dates are conspicuously absent from all extant autographs. This was a deliberate choice on Tartini's part; research on his composing process has established beyond doubt, and for all genres, that he returned time and again to the original manuscripts of his finished works and added or deleted bars or sections and even, in the solo violin sonatas, moved entire movements from one place, or even piece, to another. As a result no definitive text for Tartini's music can be established, for in fact such text seldom existed; instead there are successive versions of the same piece, each representing the composer's intentions at the time it was written (or modified), and since there is no way of knowing precisely when the changes were made their validity and chronological position can be established only in relation to the other versions. The division into periods proposed by Dounias for the concertos and by Brainard for the sonatas, in both cases based primarily on stylistic evidence, have therefore to be accepted and it must be borne in mind that the reworking of a particular piece may have taken place long after its original conception. These difficulties may explain why a satisfactory edition of Tartini's music has yet to be produced.

Corelli's printed collections, especially the violin sonatas and concerti grossi, were for Tartini, as for other composers of string music, the unparalleled models. It is not by chance that in the engraving of the only true portrait of Tartini the oval containing the bust stands on a pedestal on which rests a sheet of music with the name of Corelli clearly highlighted; the engraving dates from 1761, showing that Corelli was still recognized as a model when Tartini's admirers sponsored the portrait. In the sonatas and concertos that can be ascribed to Tartini's first period (up to 1735) the Corelli model works on two distinct levels: that of instrumental technique and that of organization of the musical language (in the sense that

contrapuntal openings are neatly distinguished from the rest of the movement, where free rein is given to the soloist's virtuosity). This is especially true of the sonatas, where the model is followed also in the order of movements: a slow cantabile movement is followed by an allegro, the centrepiece of the composition, in which (as far as the *da chiesa* sonatas are concerned) the contrapuntal display of the three voices (two entrusted to the soloist, the third to the continuo bass) is given ample room; the third movement is again an allegro, but with a different metre and character – usually lighter and, in the *da camera* sonatas, in dance rhythm. This pattern remains unaltered for most of the sonatas, even when the musical style changes; all three movements are in the same key and, with rare exceptions, use the same binary structure, moving to the dominant in the first section and returning to the tonic in the second, with each section repeated.

The violin concertos printed by Le Cène (and dating therefore from before 1730) bear the mark of Corelli's influence in the occasional presence of an introductory slow movement and of fugato style in some of the opening allegros, while the slow central section is treated as a link between the two allegros rather than as a movement in its own right. On the other hand, the Vivaldi concerto model is also evident, above all in the basic structure, which soon follows the established pattern of two allegros embracing a slow movement, with the soloist acquiring a dominant role. In the fast movements the alternation of tutti (usually four) and solo episodes (three) is clearly marked by a tonal scheme based on the principal key centres, the soloist repeating and elaborating the thematic material first presented in the tutti. The tonal and thematic pattern of the first movement is usually repeated in the third, which differs from it only in metre and in its lighter material.

In the first period, after a short phase of experimentation, the form of both the concerto and the sonata became crystallized, and subsequent stylistic modifications took place only in the musical language. At the same time the thematic material became so unmistakably individual in melody, rhythm and harmony that a Tartini composition can be immediately recognized after the first bars. These 'themes' recur time and again throughout Tartini's works and become interchangeable between concertos and sonatas. Typical also of Tartini's style is the use of specific harmonic devices, among the most striking being the use of an 'open' chord (without the 3rd) to end a movement. Another stylistic feature concerns the accompaniment of solo episodes in the concertos: in the earlier period this consists of a simple realization of the thorough bass, but gradually it is taken over by the concertino violins, which realize the harmonies in repeated quavers. A gradual blending of the 'thematic' and the 'virtuoso' sections is achieved in such a way that instrumental skill becomes an integral part of the melodic language. This leads to the disappearance of a typical virtuoso feature of the early concertos: the written-out 'capriccio' at the end of the first allegro – a solo passage which elaborates, often in double and triple stops, the thematic material of the movement and concludes with an improvised 'cadenza' (a short virtuoso section without elaboration of the thematic material, supported by a dominant chord for the concertino instruments). The transformation of instrumental virtuosity into a more expressive style is

particularly evident in the opening slow movements of the sonatas and the central slow movements of the concertos.

To understand the significance of this stylistic change it is necessary to summarize the principles of Tartini's conception of music as manifested in both his theoretical writings and his letters; these ideas are not presented in any systematic way and have, rather, to be uncovered through a careful reading of the sources. It is appropriate to consider these ideas not so much an elaborate and organic system, but rather as a sort of by-product, a continuation and development of Tartini's mysticism. Behind his ideas lies the notion of a task entrusted to him by God – that of revealing to mankind the unifying principles of the universe.

The source of every truth is Nature, to be understood as all the phenomena which fall under our senses and are exempt from any intervention of man throughout history. An essential task of Nature is to regulate different orders of phenomena through principles that can be reduced to specific mathematical formulae. Nature, however, is extremely secretive about these principles, and reveals them only in exceptional cases. One of these phenomena is the 'terzo suono' (or combination tone), whose discovery was considered by the young Tartini as a true revelation as well as an invitation to investigate the wonderful, mysterious principles governing both the world of music and that of Nature. Opposite to Nature is Art, to be understood as every human activity which manifests itself, in accordance with specific principles, in order to modify a natural event. If Nature is the source of all truth, and if Art is the modification of a given truth, it necessarily follows that the closer an artist remains to Nature the closer he will be to the truth. In a letter of 20 December 1749 to Algarotti, Tartini wrote: 'I am at home as much as I can be with Nature, and as little as possible with Art, having no other Art than the imitation of Nature'. In this way Tartini's system of ideas is clearly connected with the aesthetic principles of his time.

From these general principles several consequences arise which are particularly important for musical practice. Music, like every natural phenomenon, manifests itself through a series of events hierarchically organized; at the basis of them all Tartini places, once more, the combination tone. This natural phenomenon, produced by the simultaneous vibration of two tones related to each other by a mathematical ratio in the number of the vibrations generating them, indicates the harmonic basis for each interval, and therefore for the chords; in this way we arrive at the 'true science of harmony'. The diatonic scale stems from the horizontal disposition of the sounds which form the chords; it has, therefore, a 'natural' basis and is accordingly 'true'. These principles can also be applied to practical music; for Tartini the perfection of performance lies with the human voice, which is by definition a 'natural' phenomenon, in contrast to instrumental music, which is realized by 'artificial' means. 'A voice naturally excellent, and perfectly governed by art, is a universal principle, and when nature fails, then the intervention of art is necessary, because in my opinion the universality and the perfection of good taste is with the human voice, and with its expression'.

How then can these statements be reconciled with the fact that Tartini purposely excluded vocal music almost completely from his own compositions? The answer lies with the music composed in his central period. The stylistic innovations in the concertos and sonatas of this period aimed to obtain with instrumental means the same expressive results achieved in contemporary vocal music. Tartini modified his musical style, at the same time clarifying and giving form to his ideas about these problems. In vocal music the 'affect' finds its shape through the position of the intervals and the prosodic scansion implied in the poetic text which accompanies it; the more faithful to the affect there expressed, the more the melody will be capable of moving the listener: 'If the intention of the Greeks was to move, not indiscriminately but rather by exciting a specific passion, it is surely a certitude of nature that each passion has its own peculiar movements and its particular tone of voice' (*Trattato di musica*). Affects can therefore be expressed perfectly only through melody, since when several voices or parts sing or play together (i.e. when there is polyphony) the movement of each voice, placed in the register specific to it, eliminates the effect produced by the others. Primacy of melody and simplicity of structure are essential features of this concept, and they are the very features found in the compositions of Tartini's middle period, from 1740 onwards, especially in the slow movements of both sonatas and concertos. The insistent references to vocal music may explain the presence in the composer's autographs of poetic lines written at the beginning of several (mostly slow) movements. Some (but by no means all) of these mottoes come from Metastasio's librettos (see Dounias), and some of them use ciphers. They must be understood as an indication (sometimes a secret one) of the prevailing affect of the movement.

The instrumental composer has no text to clarify the affect of a piece; he has at his disposal only music itself. To enlarge the expressive possibilities of his own music Tartini had recourse to a rich repertory offered to him by vocal practice in the form of embellishments, which he used not only for ornamentation and diminution of a melody, but even more to specify through them the basic affect he wished to express. In this way the composer of instrumental music achieves, in Tartini's words, 'good taste according to nature'. Next to the basic version of a slow movement melody we find, sometimes in the same autograph but more often in a separate part, other versions in which diminutions and embellishments are written out in order to give sure guidance for the performer to express the piece's affect. Each embellishment has its own character and function; it cannot be used in a casual way, nor can any passage of the basic melody be ornamented at random. It is necessary to know the 'mode' (i.e. the way) and the place where each ornament should be applied in order to produce (again using Tartini's expression) 'good taste according to nature'.

Probably in order to satisfy requests from his students, Tartini wrote a treatise, clearly modelled on similar ones for vocal practice, which has survived in various versions. In the first part the nature, function and use of each ornament is specified; in the second Tartini explained the principles according to which melodies should be ornamented, distinguishing once more between 'natural' and 'artificial' ways ('modi'), the first being directly taught by Nature, the latter invented by man. The treatise was printed by Pierre Denis in 1770, immediately after the author's death, in a French

translation as *Traité des agrémens de la musique*; the original Italian version survives in no fewer than four manuscripts. In it we find yet another distinction to be made in performing styles – one peculiar to Tartini's concepts. It concerns the difference between 'cantabile' and 'suonabile'. The first implies the use of a legato technique, directly modelled on vocal style, in order to create clearly defined musical phrases; the second, typical of the instrumental idiom, implies a more detached performance style. These two ways of playing are clearly distinct, almost antithetic.

Tartini's system of ideas helps us to understand yet another characteristic feature of his music. Of the diatonic and chromatic genres, he obviously preferred the former, since 'artificial' aspects are absent and the system is therefore closer to Nature; by the same token, he stated that he did not favour modulation, since it is an 'artificial' procedure. There exists a type of music (again according to the *Trattato di musica*) to which both the diatonic genre and the absence of modulation are conspicuously relevant; this is folk music, a typically 'natural' phenomenon. Folktunes, or folklike tunes, are thus introduced into slow movements in both concertos and sonatas. Sometimes there is just a quotation at the beginning of the movement, which is then developed independently (a typical example is the opening slow movement of Sonata b d1); at other times the entire melody, entrusted to the soloist, seems to be of folk origin (as in the central slow movement of the Concerto d109); finally, in the most original part of his output, the sonatas for solo violin, Tartini used folk melodies as autonomous movements, one example being the 'Aria del Tasso', the tune sung by Venetian gondoliers to the eight-line stanzas of Tasso's *Gerusalemme liberata*. This is one of the few exceptions to the general rule that the folk melodies quoted by Tartini originate in his native Istria, an observation all the more striking since he never returned to live there after leaving for Padua in 1708. It is noticeable that most references to folk music in the *Trattato* indicate, as their place of origin, the 'Dalmatian region', and when speaking to Algarotti about his solo violin sonatas Tartini said that he played them 'senza bassetto', a term still used today in Istrian folk music to indicate the cello.

In his last creative period Tartini carried to an ultimate point the principles developed during the previous years. In the fast movements of the concertos both harmony and rhythm serve a structure reduced to its essentials; the slow movement becomes the real centre of the composition, with the solo part dominating throughout and its melodic line carrying the entire expressive weight. In these slow movements the most important stylistic achievement of Tartini's music is completely realized: the solo part accomplishes the same expressive ends as a vocal line, without contradicting the instrument's peculiar features. Indeed, by exploiting them to the full, the composer created a truly original musical language. The instrumental cantabile is Tartini's legacy to the history of music, and in the solo sonatas of his last period it finds its fullest realization. If the substance of the musical discourse can be entirely entrusted to the soloist, the bass line becomes superfluous, and indeed can be eliminated. Thus Tartini wrote what he called 'piccole sonate' (small sonatas), stemming from several rather short movements, almost always bipartite, to be played by the violin alone. The cantabile character of the opening movement again contrasts with the virtuosity of the others, but the musical language of these

sonatas is very different from that of the earlier ones; it is a language reduced to its basic elements, and its 'speaking' character is emphasized by rests and by the melodic contour. The bass line included in the autographs of the earlier ones is explicitly indicated as optional (in another letter to Algarotti, Tartini wrote: 'I play them without bass, and this is my true intention').

This repertory, so unusual and original in character, did not have a long life, and was taken up by few except Tartini's students. Only 15 years after his death a review of a performance at the Concert Spirituel by Maddalena Lombardini Sirmen, a student from the Venetian Ospedale degli Incurabili and the recipient of the most famous of Tartini's letters (one concerning bowing practice), explicitly stated that her playing was by then completely out of fashion, adding that 'she may very well charm the ear, but she doesn't astonish any longer'. And yet Tartini's legacy found its way outside Italy; the entire section devoted to embellishments in Leopold Mozart's *Violinschule* is simply a translation of the first part of Tartini's treatise on the same subject, and the instrumental cantabile became one of the most salient features in the music of Leopold's son.

Tartini, Giuseppe

3. Tartini's school.

Tartini began his teaching activity either in 1727 or 1728 (both dates are given by the composer himself), after his return to Padua from Prague. By that time he already had an international reputation, which brought students from all over Europe to his school. It was the first instrumental school of such fame. From Tartini's correspondence we learn that he taught not only violin technique but also composition, and that a standard course of study usually lasted two years. Among students who afterwards achieved a reputation of their own, as both players and composers, were Paolo Alberghi from Faenza (a student before 1733); Domenico Dall'Oglio from Padua (from 1735 active in Russia); Pasqualino Bini from Pesaro (a pupil of Tartini between 1735 and 1740); Gugliemo Fegeri, the dedicatee of the sonatas published in Rome as op.2 in 1745, who came to Padua (as Tartini himself stated in the dedication) all the way from Java; Bernard Schelff, from Arolsen in Germany (a student in 1740–41); the Frenchmen André Noel Pagin (a student before 1748), Pierre Lahoussaye and Joseph Touchemoulin; and Pietro Nardini from Livorno, the most illustrious and original of them all as a composer. J.G. Naumann from Dresden, later active in Stockholm as Kapellmeister and opera composer, also studied and corresponded with Tartini. Of his many other pupils we know little more than their names or a few compositions; they included girls from the Venetian conservatories, players in the *cappella* of the Santo in Padua, Venetian noblemen and pages to ambassadors in Venice.

From an instrumental point of view, the Tartini school was based on the mastery of the bow. 'Your main exercise and study should be the bow, in such a way that you become a complete master of it, both in the "suonabile" and in the "cantabile" styles': this is the opening sentence of the letter to Maddalena Lombardini in which the study method is thoroughly described, a study applied mainly to the imitative movements of Corelli's op.5. Complete control of the bow is essential for the realization of the

stylistic innovations of Tartini's music; only this control can make possible a correct cantabile performance of the instrumental melody, as well as of the embellishments through which the same melody can be even more fully characterized. The breathing technique of the singer finds its match in the use of the bow. The normal bow was not long enough to make an instrumental melody 'sing' properly, and the Tartini bow was made longer for this very reason. It is not by chance that the set of 50 variations on a Corelli gavotte (again from the op.5 collection) bears the title *L'arte dell'arco*.

Less striking is Tartini's influence on the compositions of his pupils. If the formal principles are easily assimilated (as in the concertos), it is in the musical language that the influence of the master is particularly evident – once more, especially in the slow movements. But Tartini's knowledge of acoustics found its way also into his teaching: he used the combination tone as a means of testing correct intonation in the playing of the double stops.

Tartini, Giuseppe

WORKS

Editions: *Le opere di Giuseppe Tartini*, 1st ser., ed. E. Farina and C. Scimone (Milan, 1971–) [FS]

25 piccole sonate per violino e violoncello e per violino solo, ed. G. Guglielmo (Padua, 1970) [see *Notes*, xxviii (1971–2), 299]
Numerous individual edns, many highly unreliable; for partial lists see *MGG1* and *La MusicaE*
D – *number in Dounias (1935)*
B – *number in Brainard (1975)* (*incorporating keys*)

sacred vocal

Canzoncine sacre, 1–3vv (some in more than one version): Alma contrita; Alma pentita; Amare lacrime; Caro Signor amato; Chi cerca un'innocenza; Crocifisso mio Signor; Dio ti salvi regina; Dolce mio Dio; E m'ami ancor; Iddio ti salvi; Infrangiti mio cor; Mio Gesù con tutto il cuore; No, che terreno fallo; O peccator che sai; Rimira, o peccatore; Ti voglio amar Gesù; Vedi, Signor, ch'io piango; Vergine bella del ciel regina; Vergine bella e pietosa; Voglio amar Gesù anch'io: all *I-Pca*; 5 ed. in *Musica sacra*, lxxxiii (1959), suppl.
Stabat mater, 3vv, copy, 1769; Pange lingua, 3vv; 2 Tantum ergo, 3vv; 3 Miserere, 3vv, 4vv, 5vv, copy, 1770 (additional copies, *F-Pc*, *GB-Ob*); Salve regina, 4vv, copy, 1773 ('ultima composizione del … Tartini'): all *I-Pca*

instrumental (ms)

*c*135 vn concertos (vn, str a 4, bc), thematic catalogue by Dounias, supplemented by Duckles and others; principal MS collections in *I-Pca*(incl. 55 complete autographs), *F-Pc*, *GB-Mp*, *US-BE* (first publications listed below); 6 ed. in FS: d125, i; d12, x; d83, xi; d117, xiii; d21, xiv; d115, xv
Concs. for other insts (str a 4, bc): vc/va da gamba, A, *I-Pca**; autograph; va (va da gamba), 2 hn, D, *A-Wgm**; fl, G, *S-Skma*, doubtful; fl, F, *I-Nc*; doubtful
Sinfonie and sonatas a 4 (str qt, bc): D (autograph), G, A, D, *I-Pca*; 11 (some a 5, one with 2 clarini), doubtful
*c*40 trio sonatas (2 vn, bc), mostly 1745–9, *I-Pca*, *F-Pc* (thematic catalogue by

Brainard)

*c*135 authentic, 40 doubtful sonatas (vn, bc), mostly *I-Pca*, *F-Pc*, *US-BE* (thematic catalogue by Brainard); 3 ed. in FS, xvi

*c*30 sonatas, many single movts (vn, without acc. or with optional bc), probably *c*1745–60, mostly *I-Pca*, *A-Wgm* (thematic catalogue by Brainard)

instrumental (published)

op.	
1	lib.1. Sei concerti a 5: d85, 55, 60, 15, 58, 89 (g, e, F, D, F, A) (Amsterdam, 1728)
1	lib.3. Sei concerti a 5 del … Tartini a G. Visconti:d Anh.III–VI (B♭, D, F, a), 2 others unlisted (Amsterdam, *c*1728); none definitely attributable (Dounias); date derived from Le Cène's publishing numbers
1	lib.2. Sei concerti a 5: d111, 91, 59, 71, 88, 18 (a, A, F, G, A, D) (Amsterdam, 1730); date derived from Le Cène's publishing numbers
1	VI sonate vn, b: b B♭7, a9, b5, g9, A3, B♭8 (Amsterdam, 1732)
1	(12) Sonate e una pastorale: b A14, F9, C11, G17, e6, D12, D6, c2, A15, g10, E5, F4, A16 (Amsterdam, 1734); nos.1–6 church sonatas, nos.7–12 chamber sonatas; A16, 'Pastorale', uses scordatura; the nickname of g10, 'Didone abbandonata', is of 19th-century origin; ed. in FS, vii–viii, xii
2	VI concerti a 8: d73, 2, 124, 62, 3, 46 (G, C, b, F, C, E) (Amsterdam, *c*1734)
–	VI concerti … d'alcuni famosi maestri, lib.2 (no.5): d1 (C) (Amsterdam, *c*1740)
2	VI Sonate, vn, bc: b g4, A5, d4, e7, F5, E6 (Amsterdam, 1743)
2	(12) Sonate, vn, bc: b D13, G18, A17, b6, a10, C12, g11, D14, B♭9, F8, e8, G19 (Rome, 1745); pubd as op.3 (Paris, *c*1747)
–	Nouvelle étude … par Mr. Pétronio Pinelli: b F11 (17 variations on Gavotte from Corelli's op.5 no.10) (Paris, *c*1747); see L'arte del arco
4	(6) Sonates: b E3, G20, B♭10, A3, D, c5 (Paris, 1747); no.6 probably by Mauro D'Alay
5	(6) Sonates: B, a11, B♭11, A18, G21, F10, B♭12 (Paris, *c*1747); some doubtful; ed. E. Bonnelli (Padua, 1951)
6	Sei sonate: b G8, A19, D8, A6, B5, G10 (Paris, *c*1748)
7	(6) Sonate: b D11, B♭7, G9, E4, g3, F7 (Paris, 1748); ed. P. Brainard: *La raccolta di sonate autografe per violino, Ms 1888, fasc.1 nell'Archivio musicale della Venerando Arca del Santo di Padova* (Padua, 1975)
8	Sei sonate a tre: Trios A5, D7, G4, D10, A10, D11, some with movts added (Paris, 1749)
–	XII Sonatas, 2 vn, b: Trios G4, D11, A5, D10, G3, F2, D7, A8, A9, D12, A10, A7 (London, 1750)
–	VI [and VI] sonate, 2 vn, bc, lib. [I], II: Trios D8, C4, D6, F2, D5, D2, D12, C5, D4, C3, D3, D9 (Amsterdam, *c*1755), as op.3 (London, 1756)
–	L'arte del arco: b F11 (38 variations on Gavotte from Corelli's op.5 no.10) (Paris, 1758); attrib. of both this and the earlier print is questionable
9	Sei sonate: b E♭1, G6, G22, A20, F6, D16 (Paris, *c*1763)
–	J.B. Cartier: L'art du violon: b g4, A14, F11 (expanded to 50 variations), g5 (first appearance in print of 'Le trille du diable'), and Adagio varié (17 variations on b F5, 1st movt) (Paris, 1798); the Adagio, probably spurious, *R* in H.-P. Schmitz: *Die Kunst der Verzierung im 18. Jahrhundert* (Kassel, 1955)

Tartölt.

A 16th-century Racket with a metal body brightly painted to resemble a dragon; it is a relatively squat double-reed instrument with a cylindrical coiled metal tube pierced by seven finger-holes and a thumb-hole. The crook forms a twisted dragon's tail, and the bell is the dragon's mouth with a trembling tongue, made of iron. Only one set of five *Tartölten* or *Tartölden* – two trebles, two tenors and a bass – is known to exist and is now in Vienna (see illustration). The three sizes produce as their lowest notes A, *d* and *a*. The five instruments are named in the 1596 inventory of the collection at that time in Archduke Ferdinand's castle of Ambras near Innsbruck. The word 'Tartölt' may be derived either from Kortholt (that is, a short wind instrument) or from *torto* (It.: 'crooked'). The instrument may have been used for theatrical events; similarly disguised instruments were often described in reports of 16th-century Italian *intermedii*. The *Tartölten*

from Vienna are described more fully in J. von Schlosser: *Die Sammlung alter Musikinstrumente* (Vienna, Kunsthistorisches Museum, 1920).

HOWARD MAYER BROWN

Taruskin, Richard (Filler)

(*b* New York, 2 April 1945). American musicologist and critic. He studied at Columbia University, taking the doctorate in 1975 with a dissertation on Russian opera in the 1860s. He taught at Columbia from 1973 until 1987, when he became professor at the University of California, Berkeley; he was named Class of 1955 Professor of Music in 1997. A wide-ranging scholar, Taruskin has written on the 15th-century chanson, the Early Music movement (of which he is a trenchant critic, seeing it more as an outcome of 20th-century taste than as truly re-creative), on theoretical aspects of Stravinsky and, above all, on Russian music, from the 18th century to the present. His writings, original, highly perceptive and frequently controversial, include articles dealing with views of Russian musical history and textual, technical and interpretative questions in the operas of Musorgsky and Prokofiev. Taruskin is also a vigorous, forthright critic, and is a regular contributor to the *New York Times*, *New Republic*, *Opus*, *Atlantic Monthly* and *Opera News*. He was formerly a choral conductor: as director of the Columbia University Collegium Musicum and Cappella Nova he made numerous recordings of early music. From 1976 to 1988 he toured as a viol soloist with the Aulos Ensemble. He has also edited volumes of Renaissance music under the imprint of Ogni Sorte Editions. The AMS gave him the Greenberg Prize in 1978 and the Alfred Einstein Award in 1980, and he was the recipient of the Dent Medal in 1987.

Taskin, Pascal (Joseph)

(*b* Theux, nr Liège, 1723; *d* Paris, 1793). French harpsichord maker. It is not known when he went to Paris, but he was clearly a very senior workman in the Blanchet workshop at the death of François Etienne Blanchet (ii) in 1766. Taskin was admitted to the guild as a master the same year and, shortly thereafter, married Blanchet's widow. His business card, often attached to his instruments, reads: 'pascal taskin, Facteur/de Clavessins & Garde des Instruments/de Musique du Roi, Eleve & Succes-/seur de m. blanchet, demeure/Même Maison, rue de la Verrerie,/vis-à-vis la petite porte de S. Merry,/a. paris' (he wanted it clearly known that the firm remained the same in spite of the change of name required by guild regulations). Under his responsible and creative stewardship the workshop reached its greatest prosperity. As Blanchet's successor he assumed the title 'facteur des clavessins du Roi', and on Christophe Chiquelier's retirement in 1774 he also became keeper of the king's instruments. This later responsibility proved difficult to manage from Paris; in 1777, therefore, he set up his nephew Pascal Joseph Taskin (ii) (*b* Theux, 1750; *d* Versailles, 1829) in Versailles to administer the duties. Pascal Joseph (ii) went to Paris in 1763 to work in the Blanchet workshop and in 1777 married the daughter of François Etienne Blanchet (ii). Two brothers of Pascal Joseph (ii), Henry and Lambert, also came to work for their uncle but little else is known of them. Armand François Nicolas Blanchet, son of François Etienne Blanchet (ii), was brought up by his stepfather, Pascal Taskin, and was his chief companion in the rue de la Verrerie workshop; he was Taskin's heir and succeeded to the shop on the latter's death in 1793, but shortly thereafter moved to the rue de Limoges.

Pascal Taskin continued to build harpsichords and refine the designs of the later Blanchets. He was a superb and innovatory workman and his instruments were, if possible, even more carefully made than his predecessors'. In the late 1760s a system of *genouillères* (knee-levers) to control the stops and a register of 8' jacks fitted with soft buff leather (Peau de buffle) plectra instead of quills were added to the standard French disposition of three registers controlled by hand. Although there were other claimants, Taskin, who was credited with introducing these innovations in 1768, was chiefly responsible for standardizing and popularizing them. He also continued the Blanchet practice of rebuilding and enlarging Ruckers harpsichords, but as the supply of genuine Ruckers harpsichords suitable for rebuilding dwindled while the demand grew, he was not above making a

'Ruckers' using very few, if any, antique parts. Nevertheless, they were excellent instruments (for a description of them *see* Harpsichord, §4(i)).

From the late 1770s the Taskin workshop was increasingly occupied with the building of grand pianos and the importation of English square pianos. Although the Blanchet and Taskin pianos of the 1760s and 70s, none of which is extant, were probably modelled after those of the Silbermann family, which had a complex action of the type invented by Bartolomeo Cristofori, the surviving Taskin pianos of the late 1780s have a very simple action without escapement. In a letter written in 1786, Taskin explained his purpose of simplifying the action in order to reduce friction. His pianos are beautifully made and their actions work surprisingly well. Unlike the harpsichords, the pianos were often superbly veneered in the Louis XVI style. While piano making assumed an increasing proportion of the activities of the shop in the later years, it should be noted that Taskin's death inventory (1793) shows as many harpsichords as pianos under construction. In 1790 he devised the Armandine, a large gut-string psaltery, resembling a harpsichord without a keyboard, for Anne-Aimée Armand (1774–1846). An example made by Taskin is in the Musée de la Musique, Paris.

Taskov, Krassimir

(*b* Sofia, 6 Jan 1955). Bulgarian composer and pianist. He graduated from the composition class of Pencho Stoyanov (1984) and the piano class of Konstantin and Julia Ganev at the Sofia State Academy of Music, and received further instruction in composition from Ton de Leeuw and Theo Loevendie in the Netherlands (1988–95) and Anatol Vieru in Romania (1996). Taskov has won a number of national and international competitions. These include prizes for piano performances at Santander in Spain and at the Tchaikovsky competition in Moscow, and for composition at the International Rostrum of Composers in Paris, UNESCO for his

Arkhaichni Kartini (1984); his *Fantazia* and *Triptich* for two pianos received prizes in Tokyo in 1991 and 1995 respectively. He is active as a performer of chamber music and is an associate professor of piano at the State Academy.

In his musical language Taskov is heir to the colouristic tradition established by the Bulgarian composers Iliev and Kazandzhiev. His works also show the influence of Prokofiev, Shostakovich, Stravinsky and Berg, which he amalgamates with stylized Bulgarian folk elements. Successful performances of his compositions have been given in Germany, Japan, France, Italy and Russia, as well as in Bulgaria.

ANNA LEVY, GREGORY MYERS

Tassinari, Pia (Domenica)

(*b* Modigliana, 15 Sept 1903; *d* Faenza, 15 May 1995). Italian soprano, later mezzo-soprano. She studied in Bologna with Cesare Vezzani and in Milan, making her début in 1927 as Mimì at Casale Monferrato. In 1932 she appeared at La Scala in the première of Veretti's *Il favorito del re*, and in the 1936 season she sang Elsa and Margherita and created Lucia in Zandonai's *La farsa amorosa*. After World War II she extended her career to the Americas, but continued to appear at La Scala until 1956. At the Metropolitan in 1947 she sang Tosca to the Cavaradossi of her husband, Ferruccio Tagliavini, but her voice was by then considered too worn. From 1952 she sang principally in mezzo roles such as Carmen and Charlotte, giving her last stage performance, as Carmen, in Philadelphia in 1962. Her best solo recordings are those of the 1930s, fresh of tone and generous without being excessive in emotion. She was also an excellent Alice Ford

in the first recording of *Falstaff* (1930), and as a mezzo sang an effective Ulrica in *Un ballo in maschera* (1954).

<div align="right">J.B. STEANE</div>

Tasso, Gioan Maria.

Italian composer. He published at least 15 duets together with works by Bernardino Lupacchino.

Tasso, Torquato

(*b* Sorrento, 11 March 1544; *d* Rome, 25 April 1595). Italian poet, playwright and courtier. He was one of those rare literary figures whose works held an immediate and continuing fascination for musicians and writers alike and whose life became a legend that survived his death by three centuries.

1. Life.

Tasso was the son of Bernardo Tasso (*d* 1569), a court poet well known in his day. His early years were marred by political difficulties that caused his father to be expelled from Naples and the boy himself to be separated from his mother. These events contributed to his lifelong financial insecurity, since, deprived of his father's land and his mother's dowry, he became completely dependent on – and increasingly bitter about – court patronage. His early education was that of a courtier: literature (including Latin and Greek), mathematics, music and riding. In Venice, under the constant threat of Turkish invasion, he wrote *Gierusalemme*, a first draft of his great epic, based on the historic events of the first Crusade to liberate Jerusalem. He was sent to Padua in 1560 to study law but soon switched to philosophy and rhetoric. There he continued to write poetry: the chivalrous romance *Rinaldo* and a series of love lyrics, first to Lucrezia Bendidio and then to Laura Peverara, both of whom became famous singers at the court of Ferrara. However, these years were also marked by brawls and escapades which may have been early manifestations of an unstable temperament. Before leaving Padua in 1565 he joined the newly formed Accademia degli Eterei, taking the name 'Il Pentito' ('The Repentant One').

Tasso's long association with Ferrara began in October 1565. He was first a member of the household of Cardinal Luigi d'Este and from 1572 a 'gentleman' in the service of Duke Alfonso II. The splendour and luxury of the Este court provided him with a stimulating environment, and the knowledge that Boiardo and Ariosto had written their poems there must have inspired him. Encouraged by Leonora and Lucrezia d'Este, he wrote his celebrated pastoral play *Aminta*, more lyrics and some dialogues and theoretical works. There, too, he began his *Gerusalemme liberata*, which was to occupy him for a decade.

Although Tasso won great favour with the performance of his *Aminta* (1573), he was plagued by unauthorized editions of it and of *Gerusalemme liberata*. The latter had been circulating among his friends before the first

complete edition was published in 1581, thereby sparking one of the great literary debates of the century. Anxious about piratical publishers, fearful that his work would incur the wrath of the Inquisition and worried about his ill-health, Tasso revealed in his letters an increasing tendency towards paranoia. He was imprisoned in June 1577 after attacking a servant who, he thought, was spying on him, but in July he escaped and fled the court. Although he was reconciled with the duke in April 1578, his mental agitation did not allow him to remain in Ferrara nor to find a satisfactory patron in Mantua, Padua, Venice, Florence, Urbino, Pesaro or Turin. In February 1579 he returned to Ferrara, where, amid preparations for the reception of Duke Alfonso's third bride, he felt ignored and humiliated. Within a month his angry outbursts and denunciations caused him to be arrested again and taken to S Anna, an asylum where he was confined for seven years. Although he suffered hallucinations and fits of melancholy, his writings from this period – lyrics, dialogues, letters, even a comedy (*Intrichi d'amore*) – are more suggestive of anguish than insanity.

Tasso was released in 1586 at the request of Duke Vincenzo I of Mantua, at whose court he completed the tragedy *Il Rè Torrismondo*. But his sense of persecution and dissatisfaction with his material benefits continued to make him restless. In April 1590, at the invitation of Jacopo Corsi, he was in Florence, where he may have witnessed a performance of his *Aminta*, possibly with music composed by Emilio de' Cavalieri. He divided his last years between Naples and Rome, writing prose and poetry of a religious nature, and reworking his masterpiece *Gerusalemme liberata* into the less successful *Gerusalemme conquistata* in an attempt to respond to the objections of his critics.

2. Works.

In his lyrics Tasso, like many 16th-century Italian poets, displayed a partiality for the madrigal; unlike them, however, he wrote some of his best verse in the genre and brought it to a point of unsurpassed technical perfection. His lyrics were set by almost all the important composers, both madrigalists and monodists, of his own and the next few generations (a list of settings appears in *Le rime di Torquato Tasso*, ed. A. Solerti, Bologna, 1898–1902). At Ferrara and Mantua he knew Luzzaschi, Wert and Alessandro Striggio (i), whose styles he praised in his dialogue *La Cavaletta* (Venice, 1587), contrasting them with 'degenerate music which has become soft and effeminate'. His Aristotelian studies had persuaded him that all types of poetry purge the passions (see his *Del giudizio sovra la sua Gerusalemme*, Rome, 1666), and the new, musically affective madrigal of the 1580s and 1590s reflected the passionate accents and dramatic situations of his epic poem.

Written in traditional *ottava rima* stanzas, *Gerusalemme liberata* soon surpassed Ariosto's *Orlando furioso* as a popular source of texts for composers of the madrigal (see Einstein, 1950–51). Wert gave portions of Armida's monologue (canto xvi) their first setting in his eighth book of madrigals (1586). Monteverdi's second and third books (1590–92) reflect Tasso's influence, the latter including two cycles drawn from cantos xii and xvi respectively. His *Combattimento di Tancredi e Clorinda* (staged in Venice, 1624; published in the eighth book of madrigals, 1638) is taken

from canto xii, and his lost *Armida abbandonata* (1626) is the first of numerous operas based on Tasso's epic. Composers who treated subjects and characters from the *Gerusalemme* in their operas include Michelangelo Rossi (*Erminia sul Giordano*, 1633), Lully (*Armide*, 1686), Handel (*Rinaldo*, 1711), Gluck (*Armide*, 1777), Rossini (*Armida*, 1817) and Dvořák (*Armida*, 1902–3). Also significant for the history of opera is *Aminta*, written principally in hendecasyllabic verse in which assonance and refrain, rather than rhyme, assume structural importance. This flexible style, particularly apparent in the concluding choruses of acts 2, 3 and 5, is similar to that later used by Rinuccini for the recitative sections of his first opera librettos.

The most complete edition of Tasso's works is that in five volumes by B. Maier (Milan, 1963–5).

BARBARA R. HANNING

Tastar de corde

(It.: 'testing of the strings').

A term used in the 16th century for a short introductory composition corresponding to the contemporary Toccata or Tiento. Its history seems to be limited to a single collection of lute music published in Venice in 1508, J.A. Dalza's *Intabolatura de lauto libro quarto*, whose title-page lists among the contents 'tastar de corde con li soi recercar drietro'. Its function, as the name implies, was both to check the tuning and the 'tastatura' of the instrument (the temperament between the movable frets) and to loosen the player's fingers before a more complex contrapuntal piece such as a ricercare. Dalza's collection contains five pieces with the title 'tastar de corde', four of them followed by a ricercare. The first and fifth are in G, the second in C, the third in D (with F♮) and the fourth in C (with E♮). The first *tastar* is the shortest, at 16 bars, and the third and fourth the longest, both with 42 bars. Their structure is very similar to that of the prelude-toccata or Spanish tiento for organ (*see* Prelude, §1), in which long, static chords marked with a fermata alternate with short, rapid but rarely virtuoso passages.

Isolated examples of the *tastar de corde*'s survival are the *tastata* in P.P. Melli's *Intavolatura di liuto attiorbato, libro secondo* (1614) and, later still, the *tasteggiata* in Bernardo Gianoncelli's *Il liuto* (1650). The latter in particular has the quality of a simple but attractive toccata introducing a suite of dances.

Tastatur

(Ger.; It. *tastatura*).

See Keyboard.

Tastavin, Geronimo

(*fl* ?1560–80). Italian composer. By 1569 he had possibly entered the service of Cardinal Flavio Orsini, to whom he dedicated his only known publication, *Il primo libro de madrigali a cinque voci* (Venice, 1569, inc.). The verse is of high quality: ten of the 19 madrigals are settings of poems from Petrarch's *Canzoniere*, and the collection opens with a setting of a canzone by Sannazaro, *Amor, tu voi ch'io dica*, which Tastavin truncated and carved into six parts that do not correspond to the stanzaic structure of the poem. Among the settings of Bembo are two ottavas from the

sequence *Nell'odorato e lucido oriente*. All the pieces are set in the old-fashioned *misura comune*. A *napolitana* by Tastavin, *Se mai pianser per te quess' occhi miei*, was included in an anthology compiled by Gioseffo Policretto (RISM 1571[9]). He is called here 'Hieronimo Tast.', which is probably why Fétis wrongly described him as 'Jérome Tast, allemande' (*FétisB*).

DONNA G. CARDAMONE

Tastiera (i)

(It.).

See Fingerboard (i).

Tastiera (ii)

(It.).

See Keyboard.

Tasto

(It.: 'fret').

The key (*see* Key (ii)) of a keyboard instrument; or the fingerboard (*see* Fingerboard (i)) of a bowed string instrument. *See also* Fret; Sul tasto; Tasto solo.

Tasto solo

(It.: 'single key').

A phrase used by composers to instruct the keyboard player of a continuo part to play the bass note(s) alone, without chords above. The phrase seems to occur in music (e.g. Corelli op.5) before it is described in theory books (Heinichen, 1728, Pasquali, Albrechtsberger), where the player is directed to play only those notes, singly (Heinichen) or with their octave (Adlung) or (if long) restruck (C.P.E. Bach etc.). C.P.E. Bach noted that the Italians did not in practice ever play *tasto solo*. Many composers also gave figures for passages marked *tasto solo* and in this case the figures may merely indicate the harmony implied or stated above by other instruments; these are either for the continuo player to fill in if necessary or, as in the case of Bach's cantata bass parts, for the sake of the copyist writing out a part from the full score. To distinguish single notes from those doubled at the octave above or below, C.P.E. Bach applied the phrases *all'unisono* and *all'ottava*, but only theorists and composers under his influence (e.g. G.S. Löhlein, 1791) made any use of them.

PETER WILLIAMS

Tate, Henry

(*b* Prahran, Victoria, 27 Oct 1873; *d* Melbourne, 6 June 1926). Australian writer and composer. His first musical experience was as a chorister and a piano student. On leaving high school, he was employed in clerical work while studying composition and the piano with G.W.L. Marshall-Hall at the Melbourne University Conservatorium, a post which lasted most of his life, until his appointment as music critic to the Melbourne *Age* (1924–6) finally brought his musical insight to attention. Contributions to journals, a weekly chess column and several books of verse gave meagre supplements to his income while he pursued his unique and visionary theories for the foundation of a national school of Australian music. Noting the absence of traditional folk sources, he advocated a musical vocabulary derived from characteristic natural sounds, birdsong and Aboriginal song and dance. For example, he devised a 'deflected scale pattern' (corresponding to the major scale but with a flattened 2nd and 6th) as an alternative to the diatonic system and suggested techniques of adapting rhythms and motives from bush sounds, which he then illustrated in his compositions for piano, songs and orchestral tone poems (many of which remain unpublished). A generous champion of contemporary composers (Alfred Hill, Fritz Hart and Percy Grainger), his ideas for an Australian mythology and musical identity were underrated in musical circles but welcomed by leading nationalist writers and dramatists in Melbourne who encouraged him to lecture and present his music. His lyrical programmatic music has been overtaken by a growing professionalism in Australian music and his writings have gained a historical rather than practical value.

ELIZABETH WOOD

Tate, James W(illiam)

(*b* Wolverhampton, 30 July 1875; *d* Stoke-on-Trent, 5 Feb 1922). English composer and accompanist, elder brother of the soprano Maggie Teyte. He gained varied theatrical experience as an actor, in management, and as musical director for the Carl Rosa Opera Company and at Wyndham's Theatre. In 1902 he married the music hall singer Lottie [Charlotte Louisa] Collins (1865–1910) for whom he conducted; in 1912 he married another singer, Clarice Mayne (Clarice Mabel Dulley, 1886–1966), with whom he formed a highly successful music-hall act. He wrote many songs for pantomimes, the music hall and revues, among them *I was a good little girl till I met you*, *A Broken Doll* (for André Charlot's revue *Samples*, 1915) and *Give me a little cosy corner*. His additional numbers for Fraser-Simson's musical play *The Maid of the Mountains* (1915), in which his step-daughter

José [Josephine] Collins (1887–1958) took the leading role, provided much of the score's romantic appeal. In his last years he produced touring revues and pantomimes in partnership with Julian M. Wylie.

WORKS
(selective list)

Stage (all dates those of first London performances): Sergeant Brue (musical farce, 3, J. Hickory Wood and O. Hall), Strand, 14 June 1904, collab. L. Lehmann; The Maid of the Mountains (musical comedy, 3, G. Graham and F. Lonsdale), Daly's, 10 Feb 1917, collab. H. Fraser-Simson [incl. A Bachelor Gay, My life is love, A Paradise for Two, When You're in Love]; The Beauty Spot (musical play, 3, A. Anderson, F.C. Harris and Valentine, after P.L. Flers), Gaiety, 22 Dec 1917; The Lads of the Village (musical play, Harris and Valentine), 1917

ANDREW LAMB

Tate, Jeffrey (Philip)

(*b* Salisbury, 28 April 1943). English conductor. He qualified in medicine before taking the répétiteur's course at the London Opera Centre, 1970–71, then joining the Covent Garden music staff. Boulez chose him as assistant for the Bayreuth *Ring*, 1976–80, and for the first three-act *Lulu*, in Paris, 1979. The previous year he made his conducting début at Göteborg with *Carmen*, followed by *Lulu* at the Metropolitan in 1980 and *La clemenza di Tito* at Covent Garden in 1982, where he was principal conductor, 1986–91, and principal guest conductor to 1993. In 1985 he became principal conductor of the English Chamber Orchestra and made further opera débuts, at the Salzburg Festival (the première of Henze's realization of *Il ritorno d'Ulisse in patria*) and the Vienna Staatsoper (*La clemenza di Tito*). He conducted the premières of Rolf Liebermann's *La forêt* at Geneva in 1987 and of Robert Saxton's *Elijah's Violin* with the English Chamber Orchestra in 1989, the year he became principal guest conductor of the French Orchestre National, later receiving the award of Chevalier des Arts et des Lettres.

Tate has developed his career in spite of being handicapped from birth by severe spinal malformation, which obliges him to sit while conducting. It

does not impair his decisive beat nor the clarity he imparts to his performances. He has conducted little Italian opera, preferring Mozart, Wagner and Strauss; his first opera recording was an admired *Arabella* (1988). Tate's other recordings include *Hänsel und Gretel*, *Lulu*, Beethoven's *Missa solemnis*, discs of Haydn, Mozart and Elgar symphonies, and the complete Mozart piano concertos with Uchida. He was made a CBE in 1990.

NOËL GOODWIN

Tate, Maggie.

See Teyte, maggie.

Tate [Teate], Nahum

(*b* ?Sudbury, Suffolk, 1652; *d* London, 30 July 1715). English poet, playwright and librettist. He was educated in Dublin and had settled in London by 1678, when his first play, *Brutus of Alba*, was produced. Seven other plays, mostly adaptations, followed in the 1680s.

From *Brutus of Alba* he fashioned a libretto for Henry Purcell's only all-sung opera, *Dido and Aeneas*, which was performed at a boarding-school for young gentlewomen in Chelsea run by Josias Priest, probably in 1689, but may have been written earlier for performance at court. The plot is so compressed that some of the motivation is unclear, but the trochaic tetrameter, softened by artful repetitions and enjambments, proved ideal for Purcell's plastic melodies and highly expressive recitatives. Its main weakness is the under-development of Aeneas, who has no proper aria; but his ignominious exit in Act 3, though it may seem an anticlimax, helps to focus the tragedy more sharply on Dido. In the libretto for the boarding-school performance, the main opera is preceded by a sung prologue, the music for which is lost. This prologue almost certainly had a political subtext, and since Tate was an extremely political writer and the story of Aeneas at Carthage was a favourite vehicle for covert political comment, the main opera may also have political overtones; however, because it could have been written any time between about 1684 and November 1689 (a period that saw the death of Charles II, the overthrow of James II and the coronation of William and Mary), it is impossible to know exactly what he intended. Charles Gildon inserted both opera and prologue into his adaptation of Shakespeare's *Measure for Measure*, performed at Lincoln's Inn Fields in 1700.

Tate was appointed Poet Laureate on 8 December 1692 and in this capacity provided the texts of a number of birthday, New Year and other celebratory odes. He also collaborated with Nicholas Brady in producing a metrical version of the psalms (1696). A few of these, together with Tate's Christmas hymn *While shepherds watched*, are still included in modern hymnbooks.

MARGARET LAURIE (with CURTIS PRICE)

Tate, Phyllis (Margaret Duncan)

(*b* Gerrards Cross, 6 April 1911; *d* London, 29 May 1987). English composer. Her earliest attempts at composition, dating from her teenage years, were foxtrots for her ukulele. From 1928 to 1932 she studied composition (with Harry Farjeon), the piano, conducting and timpani at the RAM. Her early works, including an operetta (*The Policeman's Serenade*), songs, a string quartet, a violin sonata, a cello concerto and a symphony, were variously performed at the RAM, at the Macnaghten-Lemare Concerts, by the Bournemouth Municipal Orchestra and at concerts organized by Hubert Foss of OUP. She also wrote and arranged commercial light music, often using the pseudonyms Max Morelle or Janos. In 1935 she married the music publisher Alan Frank. She lived and worked in London and was at various times involved with the Hampstead Music Club, the Barnet Choral Society, the PRS Member's Fund (from 1976 to 1981 she was the first woman to serve on the management committee) and the Composers' Guild.

Tate destroyed almost all her pre-war music. The first work she acknowledged was the Saxophone Concerto of 1944, which had been commissioned by the BBC. In 1947 she came to public attention when her Sonata for clarinet and cello was performed at a London Contemporary Music Centre concert and her *Nocturne for Four Voices* (composed 1945) was broadcast on the Third Programme. She was often attracted by the sounds and textures of unusual combinations of instruments: the voices in *Nocturne*, a setting of a poem by Sidney Keyes, are accompanied by string quartet, double bass, celesta and bass clarinet; later works included a setting of Tennyson's *The Lady of Shalott* (1956) for tenor, viola, two pianos, celesta and nine percussion instruments, and a *Sonatina pastorale* for harmonica and harpsichord (1974). She was particularly drawn to vocal music and wrote vocal chamber music, several large-scale choral works, such as *A Secular Requiem* (1967) and *St Martha and the Dragon* (1976), as well as her acclaimed opera, a musical thriller, *The Lodger* (1960). In later life she wrote much music for young people, including several operettas. Exploring a wide variety of formal structures and harmonic

languages, Tate's elegant and expressive music is always clear and accessible.

SOPHIE FULLER

Tattersall, William Dechair

(bap. Charing, Kent, 11 Sept 1751; *d* Wotton-under-Edge, Glos., 26 May 1829). English amateur musician. He was rector of Westbourne, Sussex, from 1778, and from 1779 also vicar of Wotton-under-Edge, where he lived. He devoted much energy to improving psalmody in the church at

Wotton-under-Edge. His first step was to take control of the choir. He then introduced Merrick's metrical translation of the psalms in place of the Old and New versions. His first printed collection, *Psalms Selected from the Version of the Revd Jas Merrick* (London, *c*1790), uses 25 traditional and 27 new tunes. *Improved Psalmody* (1794) includes a large number of tunes specially composed or adapted for the work, by many prominent composers such as Shield, Callcott, Samuel Arnold, Webbe, Stevens and even Haydn, who contributed six melodious pieces. The music is in three parts (SSB or TTB) and is for the most part too elaborate for congregational singing. Tattersall's aim was to 'excite a laudable Zeal throughout the lower Orders' by providing examples of the most elegant music available: 'the serious Glees which consist only of three Parts, seem to present a perfect Model for this Species of Divine Harmony'. The list of subscribers is impressive evidence of Tattersall's social connections: it includes most of the royal family, both archbishops, heads of colleges, peers and ladies of title, as well as prominent musicians. Perhaps for this reason *Improved Psalmody* was widely used in the south of England for 40 years or more. In 1802 he published a third collection, *Improved Psalmody; Sanctioned by the King at Weymouth*. Merrick's version was again used: but in deference to the taste of George III the music was entirely 'adapted from the sacred compositions of Handel'.

NICHOLAS TEMPERLEY

Tattoo

(Fr. *Retraite*; Ger. *Zapfenstreich*: 'Strike Tap'; It. *Ritirata*).

A term now applied to a military display or presentation to which the public is admitted. It originally referred to the summoning of soldiers back to their barracks for the final roll call of the day, and derives from the daily routine of the 17th-century mercenary armies which fought in the Thirty Years War. The armies were followed by entrepreneurs, or 'sutlers', who attached themselves to one particular regiment or brigade, selling food and drink to the soldiers (Brecht's Mother Courage was one such). At sunset a drumbeat signal, the 'Retreat', recalled the strolling or foraging soldiers to their camp, where they were wont to congregate round the sutlers' tents or wagons. Left to themselves, the soldiers would happily carouse the night away, with dire consequences the next morning, so at a set time the provost guard – the military police of the day – would tour the sutlers' premises, preceded by a drummer and fifer to warn of their approach. The taps of the liquor barrels were turned off ('Tap To'), the bungs were hammered home by the provost guard ('Strike Tap') and a cross was chalked over them to make sure they were not extracted again. A soldier found out of his billet thereafter was liable to severe punishment. The procedure is mentioned in a German regulation dated 1672 and is also described in military handbooks published in 1726 and 1727. By the 19th

century all troops in the British Army were accommodated in barracks. The process of calling the roll, or accounting for the soldiers, began at 9.30 p.m. with the sounding of the bugle call 'Tattoo: First Post'. The drums and fifes then played a sequence of music ending with the national anthem, after which the bugle call 'Tattoo: Last Post' was sounded. These bugle calls represented the tours of sentry posts, which took place every night and were known as 'Rounds'.

Tattoo remained an essentially domestic military routine until the elaboration of the simple ceremony into a major military musical spectacle by Wilhelm Wieprecht, director of music to the Prussian Guard Corps, first performed in 1838. Since 1813 the Prussian Zapfenstreich had included a pause for prayer, following the example of the Russian and Austrian armies. Wieprecht represented this religious element by the hymn *St Petersburg* by Dmitry Bortnyansky, still part of the ceremony played by the bands of the Bundeswehr. A performance of the augmented ceremony, 'Grosser Zapfenstreich', involving all musical resources, bands, drums, fife and trumpets, was staged for Queen Victoria at Cologne in 1845. By the end of the 19th century an almost identical ceremony, the Grand Military Tattoo, was taking place in the British Army, and this too included an evening hymn, usually *Abide with me*. After World War I the Grand Military Tattoo was expanded into a major public attraction, including action items as well as performances by massed bands. After World War II these events gradually disappeared, leaving the Edinburgh Military Tattoo as the only one to survive to the present in the British Isles, although similar events are frequently held in the Commonwealth countries. 'Der Grosse Zapfenstreich' is also performed occasionally in Germany, while in France there are also spectacles of a similar nature by military bands, some in costume playing French military music of the 18th century. With the progressive rationalization of military discipline since World War II, Tattoo has lost its significance and the ceremony has now entirely lapsed. However, a verse from *Lili Marlene*, sung by both sides in World War II, shows that in the German as well as the British Army it still had at that time a part to play in the soldier's daily life: 'Schon rief der Posten, sie blasen Zapfenstreich, Es kann drei tagen kosten, Kamerad ich komm' sogleich!'

D.J.S. MURRAY

Tatum, Art(hur)

(*b* Toledo, OH, 13 Oct 1909; *d* Los Angeles, 5 Nov 1956). American jazz pianist.

1. Life.

Despite seriously impaired vision (he was blind in one eye and had only partial sight in the other), he received some formal piano training as a

teenager at the Toledo School of Music, and learnt to read sheet music with the aid of glasses as well as by the Braille method. Otherwise he was self-taught, learning from piano rolls, phonograph recordings, radio broadcasts and various musicians whom he encountered as a young man in the area around Toledo and Cleveland. Tatum acknowledged Fats Waller as his primary inspiration, with the popular radio pianist Lee Sims, whose interpretations contained many interesting harmonies, as an important secondary influence. He was playing professionally in Toledo by 1926, and performed on radio in 1929–30. In 1932 he travelled to New York as the accompanist for Adelaide Hall. There, in March 1933, he made his first solo recordings, for Brunswick (including *Tea for Two* and *Tiger Rag*). After leaving Hall he worked in Cleveland (1934–5) and led a group in Chicago (1935–6). His reputation as the outstanding pianist in jazz was consolidated in 1937 with his performances in various New York clubs and on radio shows. He toured England the following year, and appeared regularly in New York and Los Angeles in the late 1930s and early 1940s. Taking Nat 'King' Cole's successful jazz trio as a model, Tatum founded his own influential trio with Slam Stewart (double bass) and Tiny Grimes (electric guitar) in 1943. Grimes left the following year, but Tatum continually returned to this format, using in particular Everett Barksdale.

In 1944 Tatum played in a jazz concert at the Metropolitan Opera House, and in 1947 he made a cameo appearance in the film *The Fabulous Dorseys*. Although he was regularly active in night clubs, radio shows and recording studios, and was lionized by jazz musicians and critics, during this period he did not acquire a large popular following and he was bypassed in jazz popularity polls. In 1953 he began an association with the record producer Norman Granz that led to a number of outstanding small-group recordings with such mainstream musicians as Benny Carter, Roy Eldridge and Ben Webster. More importantly, he was recorded in a long series of solo performances which indicated both the extent of his repertoire and his extraordinary imagination. Tatum remained active until shortly before his death, constantly improving his art.

2. Musical style.

Tatum transported the art of jazz piano improvisation beyond the real and imagined confines of his day. His first professional solo recordings in 1933 were seen as a challenge to his own and future generations of jazz and popular pianists. His technical abilities, lightness of touch and control of the full range of the instrument were unprecedented among popular pianists; he had an unerring sense of rhythm and swing, a seemingly unlimited capacity to expand and enrich a melody and a profound and continually evolving grasp of substitute harmonies. Throughout his career he retained the original melody and harmonies of a tune as starting-points for his improvisations. Most often he chose models from the standard popular repertory, including *Sweet Lorraine*/*Get Happy* (1940, Decca) and *Willow weep for me* (1949, Cap.), though he also interpreted the blues and sometimes performed parodies on light classical pieces. Only occasionally did he play original works. Tatum was often described as having two distinct musical personalities: in his professional appearances he was thoroughly businesslike, obliging audiences with almost literal repetitions of his recorded performances, seldom taking encores and, in a studio, rarely

recording more than one take of a performance. Among friends he was inclined to play (and sing) the blues, to improvise for hours on given chord sequences and to depart radically and dramatically from the original tune. He made more than 600 recordings (as unaccompanied soloist, with his trios and with other small and large ensembles), which provide ample evidence of his uncommonly creative genius as an improviser.

Tatum integrated the practices and characteristic gestures of the stride and swing keyboard traditions, at the same time transforming them through his virtuosity. Simple decorative techniques became complex harmonic sweeps of colour; traditional repetitive patterns became areas of unpredictable and ever-changing shifts of rhythm. Later generations of jazz musicians were particularly impressed by his intensification of the original harmonies of a tune (ex.1, from *Aunt Hagar's Blues* (1949, Cap.), shows his celebrated recasting of the simple tonic 7th of the blues), particularly his interpolation of passing harmonies, and the textural variety of his work, which frequently led to contrapuntal relationships among lines in different registers. Also important were his ability to apply different variation techniques simultaneously and his astonishing rhythmic sleight of hand. His influence on later jazz pianists was enormous: even musicians of radically different outlook, such as Bud Powell, Lennie Tristano and Herbie Hancock, learnt key Tatum performances by rote, though few could compass his technical range or re-create his inimitable, plush tone. Other musicians, among them Charlie Parker, were inspired by Tatum's technical accomplishments to bring a similar virtuosity to their own instruments.

FELICITY HOWLETT, J. BRADFORD ROBINSON

Taub, Robert (David)

(*b* New Brunswick, NJ, 25 Dec 1955). American pianist. He began playing the piano at the age of three, and later studied with Jacob Lateiner at the Juilliard School. At Princeton University, from which he graduated in 1977, he studied composition with Milton Babbitt. His many awards include first prize at the International New Music Competition in Washington, DC (1978), the Peabody-Mason Award (1981), a Martha Baird Rockefeller grant (1981) and the award of the Pro Musicis Foundation in 1982, which led to appearances in major musical centres around the world. As a teacher he has served on the faculties of the Juilliard School of Music, Drew University and the Berkshire Music Center. In 1994 he was appointed the first artist-in-residence at the Institute for Advanced Study in Princeton. Works written for him include Babbitt's *Canonical Form* (1983), which he has recorded, along with other music by Babbitt and the complete sonatas of Beethoven and Skyrabin. Admired for the range of his repertory, the acuity of his intellect and the immediacy and polish of his interpretations, Taub has also written a number of scholarly articles.

JEREMY SIEPMANN

Taube.

See Teyber family.

Taube, Michael

(*b* Łódź, 13 March 1890; *d* Tel-Aviv, 23 Feb 1972). Israeli conductor and composer of Polish birth. After childhood studies in the violin, flute, piano and cello, he attended the Leipzig Conservatory, then moved to Cologne to study the piano with Neitzel, composition with Strässer and conducting with Abendroth. In 1918 he founded the Concert Society at Bad Godesberg and in 1920 was invited as a guest conductor to Frankfurt, Berlin and Cologne. At Leo Blech's instigation he joined the Berlin Städtische Oper (now the Deutsche Oper) in 1924, and when Bruno Walter took over the direction of the company Taube remained with him for five years. At Berlin in 1926 he founded a chamber orchestra and choir, with which he presented rarely performed or little-known works, and some written for the ensemble. In 1935 he settled in Israel where he helped to build the orchestra that later became the Israel PO; together with Toscanini, Dobrowen and Steinberg, he was one of its principal conductors from its inception in 1936. Taube founded the Ramat Gan Chamber Orchestra and several times toured with it to Europe; concurrently he appeared with the Israel Broadcasting SO and

was a regular guest in Italy, Austria, Switzerland and West Germany, giving numerous concerts with the Berlin PO. He also taught voice training and conducting and soon after his arrival in Israel founded the Taube Conservatory (now defunct). He wrote some orchestral and chamber works, and made several arrangements.

WILLIAM Y. ELIAS

Täubel, Christian Gottlob.

German printer who worked with Franz Anton Hoffmeister.

Tauber [Taube], Maria Anna

(*fl* 1777–9). Austrian soprano, not identifiable with either of the sisters Elisabeth and Therese Teyber. *See* Teyber family.

Tauber, Richard

(*b* Linz, 16 May 1891; *d* London, 8 Jan 1948). Austrian tenor, naturalized British. He was the illegitimate son of the actor and theatre director Richard Anton Tauber. After study at Freiburg, he first appeared in opera at Chemnitz (2 March 1913) as Tamino in *Die Zauberflöte*. He was at once engaged by the Dresden Opera, where he sang all the leading lyrical tenor roles. By 1919 he was well known throughout the German-speaking countries, and he soon became extremely popular at the Munich and Salzburg Mozart festivals, most notably as Belmonte, Ottavio and Tamino. It was to lighter music, however, that he owed his world fame. He appeared with increasing frequency in the operettas of Lehár and others, charming thousands by his true tenor quality, sympathetic and somewhat 'nutty' in timbre, and by the grace and variety of his vocal inflections. England succumbed in 1931, when Lehár's *Das Land des Lächelns* repeated its widespread success at Drury Lane. When Covent Garden first heard him he was no longer at his very best; in 1938 he sang Tamino and Belmonte, in 1939 Don Ottavio, and Hans in the German version of *The Bartered Bride*. After the war, however, he surprised even his warmest admirers by the excellence of his Don Ottavio in 1947 in a single performance of *Don Giovanni* with the visiting Vienna Staatsoper. Tauber's first marriage was dissolved, and he married the actress Diana Napier in 1936. He wrote three operettas, music for films, and various songs. Tauber's successful career is chronicled on numerous recordings. The earlier ones prove what a sterling artist he was in a wide variety of operatic roles. His later recordings include, besides lieder, many operetta numbers and popular songs, in which he evinces an innate gift for turning dross into gold.

Taubert, (Carl Gottfried) Wilhelm

(*b* Berlin, 23 March 1811; *d* Berlin, 7 Jan 1891). German conductor, composer and pianist. He studied under Ludwig Berger (piano) and Bernhard Klein (composition) and by 1831 had become assistant conductor and accompanist of the Berlin court concerts. During the 1840s he was associated with the Berlin Königliche Schauspiele under Mendelssohn and Meyerbeer, and served as Generalmusikdirektor there from 1845 until 1848. At that time he also held the appointment of court Kapellmeister, a position he retained until 1869. As chief Kapellmeister, Taubert continued to conduct the royal orchestra until 1883. Highly thought of as a teacher, he taught at the Royal Academy of Arts from 1865, Theodor Kullak being one of his pupils.

Among his first compositions were small instrumental pieces and sets of songs which attracted the favourable notice of Mendelssohn. The two were part of a circle in Berlin that included the baritone and writer Eduard Devrient, librettist of Taubert's operas *Der Kirmes* (?1832) and *Der Zigeuner* (1832). Mendelssohn and Taubert both studied piano with Berger, and correspondence between the two survives. In these letters Mendelssohn identifies the lack of impetus and spirit which, with all of Taubert's real musicianship, refined taste and immense industry, nevertheless hindered him from achieving real importance as a composer. His larger works suffer particularly, but his graceful, almost popular style was well suited to the short character pieces then in fashion. The *Minnelieder* op.16 for piano have been compared with Mendelssohn's *Lieder ohne Worte*; there is some dispute as to which was published first, and as to who influenced whom (Glusman). The *Kinderlieder*, which include the best-known of Taubert's songs, opp.145 and 160, are still performed today. Many of his compositions were reviewed in Schumann's *Neue Zeitschrift für Musik*, and perhaps indicative of the high regard in which Taubert's compositions were held is the review of his Piano Duo op.11 in the inaugural issue in April 1834. Later issues featured discussions of several of his piano sonatas, and the Piano Concerto no.1 op.18. Schumann also asked Taubert to contribute to the journal, documented in their surviving correspondence.

WORKS

(selective list; see also PazdírekH)

Ops: Der Kirmes (co, 1, E. Devrient), op.7, ?1832, vs (Berlin, 1832); Die Zigeuner (Devrient), 1832; Marquis und Dieb, 1842; Joggeli (3), op.100, 1853, vs (Berlin, 1854); Macbeth (5, after W. Shakespeare), op.133 (Berlin, 1857); Cesario, oder Was ihr wollt (3, after Shakespeare: *Twelfth Night*), op.188, 1874 (Berlin, 1875)

Incid music: Othello, 1833; Das graue Männlein, 1834; Medea, op.57, 1843; Der gestiefelte Kater, 1844; Der Blaubart, op.64, 1844; Der Sturm, op.134, 1855

Orch: Sym, op.31; Sym, F, op.69; Sym, b, op.80 (Berlin, 1851); Sym, c, op.113; Festspiel zur Einweihung der Opernhaus, 1842; Der Blaubart, ov., D, op.36; Tausend und eine Nacht, concert ov., G, op.139; 25 Variationen über ein Originalthema, op.161; Geburtstagsmarch, op.146; Sieges- und Festmarsch

Solo inst and orch: Pf Conc., E♭, op.18; Bacchanale, Divertissement brillant, pf, orch, op.28; Vn Conc., d, op.173; Pf Conc. no.2, A, op.189

Chbr: Pf Qt, op.19; Qt, e, 2 vn, va, cb, op.73; Str Qt no.2, B♭, op.93; Str Qt no.3, D, op.130; Pf Trio no.1, F, op.32; Pf Trio no.2, E♭, op.92; Sonata no.3, A, vn, pf, op.104; Concertino, vn, pf, op.205; other works

Pf sonatas: Grande sonate, c, op.20; 2 Sonatas, f, d♭, op.21; Sonata no.5, e, op.35; 2 Sonatines, D, C, op.44; Sonata, op.114

c80 works for pf, incl. An die Geliebte, 8 Minnelieder ohne Worte, op.16, ?1831/4; Piano Duo, op.11; études, variations, waltzes and character pieces; many arrs. of own works for pf solo and pf 4 hands

Choral: Vater unser, solo vv, vv, orch, op.87; Festovertüre, 6vv, orch, op.111; Sturm und Frieden, SATB, orch, orch, op.148a; Der Landsknecht, cant., op.200; partsongs

Numerous songs for 1v, pf, incl. 10 Kinderlieder, op.145; 10 Kinderlieder, op.160

Taubman, H(yman) Howard

(*b* New York, 4 July 1907; *d* Sarasota, FL, 8 Jan 1996). American music and drama critic. He took the AB at Columbia University in 1929 and that year joined the staff of the *New York Times*. He became the paper's music editor (1935–55), its music critic (1955–60) and its drama critic (1960–66). As the *New York Times*'s critic-at-large, until his retirement in 1972, Taubman travelled throughout the USA and Europe, contributing articles on the complex growth and economic problems of the arts. In this capacity, he made particular use of the breadth of interests and sympathies that had been the most notable features of his more specialized earlier writings.

PATRICK J. SMITH

Taubmann, Otto

(*b* Hamburg, 8 March 1859; *d* Berlin, 4 July 1929). German conductor and composer. He studied the piano, the cello and composition at the Dresden Conservatory and then went to Paris and Vienna for further instruction. After experience as an opera conductor, he became the director of the Wiesbaden Conservatory in 1886, remaining there until 1889. He conducted in St Petersburg from 1891 to 1892 before becoming conductor of the Cäcilienverein in Ludwigshafen. From 1895 he was active in Berlin as a composer and also as critic for the *Börsenkurier*. He became professor in 1910 and senator of the Academy of the Arts in 1923. From 1920 to 1925 he taught at the Hochschule für Musik. His works include the opera *Porzia*, based on *The Merchant of Venice* and produced in Frankfurt in 1916, the choral drama *Sängerweihe* (1904), the cantata *Kampf und Friede* (1915), the *Deutsche Messe* (1899), the Symphony in A minor and String Quartet in E minor, as well as choruses and psalm settings. He also published a number of piano reductions of works by Bach, Mozart, Wagner, Strauss and Sibelius, and was a contributor to the Liszt *Gesamtausgabe*.

Tauer [Tower], Tatiana

(*b* Moscow, 29 Sept 1945; *d* Hilversum, 27 July 1994). Russian harpist. She entered the Gnesin Music School, studying with Marc Rubin at the age

of five, and from 1963 she studied at the Moscow Conservatory, first with Ksenia Erdeli, and then with Vera Dulova. A gold medal winner at the first Hartford International Harp Competition (1969), she was principal harpist of the Leningrad PO from 1968 to 1992 and taught at the Leningrad Conservatory from 1973 to 1992. The spectacular operatic paraphrase on Tchaikovsky's *Queen of Spades* which she commissioned from Valery Kikta is included on *Harp the Russian Way* which she recorded in California in 1992, the year in which she and her family settled in Oviedo, Spain. The following year they moved to Hilversum where she died from a thyroid cancer directly attributable to fallout from the Chernobyl nuclear disaster of 1986.

ANN GRIFFITHS

Tauranth, Johannes.

See Touront, Johannes.

Tauriello, Antonio

(*b* Buenos Aires, 20 March 1931). Argentine composer and conductor. His piano studies were begun with Raul Spivak and completed with Gieseking; at the same time he studied composition under Ginastera. In 1958 he began his career as a conductor when an Inter-American Festival was held in Argentina under the auspices of the Buenos Aires Chamber Concerts Association. Shortly after he was appointed conductor of the Teatro Colón, and he also conducted the percussion ensemble Ritmus. He moved to the Chicago Lyric Opera as assistant director in 1965, later conducting for the Washington Opera Society, the New York City Opera and the American Opera Theater at the Juilliard School of Music. Concurrently with this he conducted orchestral concerts, notably for the Inter-American Music Festivals in Washington, DC. These festivals saw first performances of his own *Obertura sinfónica* (1961), *Transparencias* (1964) and the Piano Concerto (1968). He was a member of the Agrupación Música Viva, founded in Buenos Aires by Gerardo Gandini, Armando Krieger and Alcides Lanza; Tauriello conducted the group in performances of contemporary music in Argentina and New York. His music has also been heard in Spain at festivals of Spanish and South American music (*Canti* in 1967, *Mansión de Tlaloc* in 1970), and at the 1970 ISCM Festival (*Serenata II*). In 1969 he received a Guggenheim Scholarship and the International Composition Prize of Bowdoin College, Brunswick, Maine (for *Signos de los tiempos*). As a composer Tauriello belongs to the Argentine avant garde. The Piano Concerto is notable for the extraordinary freedom of its solo part, which, at certain moments, is quite independent of the orchestra; sometimes durations and intensities are to be chosen by the soloist.

SUSANA SALGADO

Tausch, Franz (Wilhelm)

(*b* Heidelberg, 26 Dec 1762; *d* Berlin, 9 Feb 1817). German clarinettist, basset-horn player and composer. He founded the German playing style, which put beauty of tone above technique. He was a child prodigy: at the age of eight he played in the Mannheim orchestra with his father Jacob Tausch, who taught him. Moving with his father to Munich, Franz became a notable soloist and made several concert tours. He was chamber musician to the dowager Queen of Prussia in 1789 and from 1797 to Friedrich Wilhelm III. In 1805 Tausch opened the Conservatorium der Blasinstrumente in Berlin, where Heinrich Baermann and Crusell were among his pupils. His compositions are noteworthy, and make considerable demands on the player. They include a number of clarinet concertos, six quartets for two basset-horns and two bassoons (with two horns ad lib), duos for violin and viola and for two clarinets, and other chamber music for wind. After his death the conservatory continued under the direction of his son Friedrich Wilhelm Tausch (1790–1845), himself a fine player.

Tausch, Julius

(*b* Dessau, 15 April 1827; *d* Bonn, 11 Nov 1895). German conductor and composer. He was a pupil of F. Schneider at Dessau. In 1844 he entered the Leipzig Conservatory, then in the second year of its existence, and on leaving in 1846 settled at Düsseldorf. There he gradually advanced, taking the direction of the artists' *Liedertafel* on Julius Rietz's departure in 1847, and succeeding Schumann as conductor of the music society, temporarily in 1853 and permanently in 1855. He was associated with the direction of

the Lower Rhine Festivals from 1853 to 1887. In the winter of 1878 he conducted the orchestral concerts at the Glasgow Festival. He retired to Bonn in 1890.

WORKS

complete list in du Mont

Music to Shakespeare's Twelfth Night, op.4 (Düsseldorf, 1863)
Festouvertüre, E♭, orch, op.9, pf score (Hamburg, c1875)

GEORGE GROVE/BRUCE CARR

Tausig, Carl [Karol]

(*b* Warsaw, 4 Nov 1841; *d* Leipzig, 17 July 1871). Polish pianist and composer. He was first taught by his father, Aloys Tausig (*b* Prague, 1820; *d* Warsaw, 14 March 1885), a good professional pianist, pupil of Thalberg and the composer of many brilliant piano pieces. When Carl was 14 his father took him to Liszt at Weimar, where he quickly became Liszt's favourite, accompanying him on concert tours and studying counterpoint, composition and instrumentation, as well as the piano. In 1858 he made his public début at a concert in Berlin conducted by Bülow. Opinion was divided: his technical feats were extraordinary, but the most severe critics talked of noise and rant, and even those who might have been ready to sympathize with his 'Lisztian eccentricities' thought he would play better when his period of 'Sturm und Drang' was over. In 1859–60 Tausig gave concerts in various German towns, making Dresden his base. In 1862 he went to live in Vienna where, following Bülow's example in Berlin, he gave concerts of modern orchestral music, including some of his own symphonic poems. They were artistically only partly successful, and financially were failures. Thereafter he stayed out of the public eye for a few years. In 1864 he married the fine pianist Seraphine von Vrabely (1841–1931) and the next year they settled in Berlin; they were later divorced. The 'Sturm und Drang' was finished and Tausig was now recognized as a fine pianist. He had achieved self-possession, breadth and dignity of style, while his technique was, as Liszt described it, 'infallible'. In 1866 he opened a school of advanced piano instruction but soon gave it up as he was not much interested in teaching; there is a vivid account of his methods by Amy Fay. Continued tours weakened his health, which had never been robust, and he died of typhoid at 29.

Tausig was the most gifted and most famous of the first generation of Liszt pupils. His manner of playing at its best was both disciplined and impassioned, yet no longer with a trace of eccentricity. His tone was superb, his touch exquisite, and his technical dexterity and endurance astonished even experts: Liszt said he had 'fingers of steel'. He made a point of executing his tours de force with perfect composure and took pains to hide every trace of physical effort. His repertory was varied and extensive, and he could play from memory any representative piece by any composer of importance from Scarlatti to Liszt. His interpretations of Weber, Beethoven and, in particular, Chopin were considered exemplary, both for their technical finish and their fiery intensity. Tausig composed a few pieces for piano: they include an impromptu, *Das Geisterschiff* and *Etudes de concert*, all published as op.1; *Tarantelle* and *Réminiscences de Hallka de Moniuszko*, both as op.2; a nocturne with variations entitled *L'espérance* op.3; *Rêverie* op.5; and an étude, *Le ruisseau* op.6. He also arranged, transcribed and fingered many more works, including a piano score of Wagner's *Die Meistersinger*, six Beethoven string quartets and three Scarlatti sonatas. His arrangements are extremely effective but at times very tasteless; his transcriptions of Berlioz and Wagner are brilliant, but Weber and Schubert are over-arranged and the Scarlatti pieces show him deficient in any stylistic sense. However, Tausig's *Tägliche Studien*, transposing chromatic finger exercises, posthumously revised and edited by Heinrich Ehrlich, remain invaluable.

EDWARD DANNREUTHER/R

Tausinger, Jan

(*b* Piatra Neamt, Romania, 1 Nov 1921; *d* Prague, 29 July 1980). Czech composer and conductor. He studied at the Bucharest Conservatory with Dimitrie Cuclin and, after settling in Czechoslovakia, he continued his studies with Hába and Bořkovec at the Prague Academy (1948–52), graduating in 1947. He conducted the radio orchestras in Bucharest, Ostrava and Plzeň, and from 1954 to 1958 he was head of the High School of Music Pedagogy (later the Ostrava Conservatory). Afterwards he spent two years as director of the artistic ensemble of the ministry of the interior (1958–60), leaving this position to devote his time to composition. Later he served as chief music dramaturg at Czech Radio (1969–71, 1976–80) and director of the Prague Conservatory (1971–5).

Tausinger's earliest works were folksong arrangements and songs and cantatas written in the spirit of socialist realism. In 1964 he attended the Darmstadt courses in modern music. The impact was immediately apparent in his Colloquium for four woodwind instruments (1964) and the orchestral Confrontazione I–III, performed at the Týden Nové Tvorby ('Week of New Works'), in Prague 1966, but later withdrawn. Thereafter he continued to be attracted by Western techniques and the focus of his

composition shifted to chamber and vocal works. Particularly successful among the latter were the song cycle *Čmaranice po nebi* ('Scrawls Across the Sky', 1967) and the cantata *Ave Maria* (1972), which after its presentation at a UNESCO composers forum became one of his best-known pieces outside Czechoslovakia.

Tausky, Vilem

(*b* Přerov, Moravia, 20 July 1910). Czech conductor and composer. He studied at the University of Brno, the Janáček Conservatory and in Prague, beginning his career at the Brno Opera, first as répétiteur and then making his conducting début with *Turandot*. He came to Britain in 1939 and saw wartime service as a conductor for forces concerts. He was music director for the Carl Rosa Opera Company, 1945–9, then worked for BBC regional orchestras in Belfast, Glasgow and Manchester before becoming music director for the WNO, 1951–6. His Covent Garden début was with *The Queen of Spades* in 1951, and in 1953 he began an association with Sadler's Wells Opera, for whom he conducted the première of Berkeley's *Nelson* (1954). In that year he also conducted the same composer's *A Dinner Engagement* at the Aldeburgh Festival. With the BBC SO he broadcast a cycle of Martinů symphonies, and from 1956 to 1966 he was music director of the BBC Concert Orchestra, where he conducted much lighter music. He conducted the first stage production by a British company of *Rusalka* with Sadler's Wells Opera (1959), and *Die Fledermaus* in the company's pioneering venture at the London Coliseum that year. He also conducted the première of Williamson's *The Violins of Saint-Jacques* (1966) and the first British performance of Janáček's *Osud* (1972). Tausky worked for the National Opera School, 1952–67, Phoenix Opera, 1967–75, and was director of opera at the GSM from 1966 to 1992. In the 1950s he made several English-language recordings of operettas. His own compositions include harmonica and oboe concertos, orchestral suites and chamber music; he has published an autobiography, *Vilem Tausky tells his Story* (London, 1979), and *Leoš Janáček: Leaves from his Life* (1982). Tausky was made a Freeman of the City of London in 1979 and appointed CBE in 1981.

NOËL GOODWIN

Tăutu, Cornelia

(*b* Odorhei Secuisc, 10 March 1938). Romanian composer. After studying composition with Jora and education at the Bucharest Academy (1960–67) she worked as an editor and researcher at the Institute of Ethnology and Dialectology in Bucharest (1965–75). Tăutu took further composition studies with Raoul Plaskow at Long Island University, New York. With its blend of modal harmony and rich chromaticism, her music gains a sense of balance from the subtle interplay of introverted and expansive sonorities. Her experiments with instrumental colours and textures are directed towards the goal of simplicity and economy of means. Tăutu has composed music for the theatre and particularly for film. Further information is given in G. Tartler: 'Arhitectura independentă a muzicii de film', *Viața românească*, xxxv/9 (1982).

Music for film and theatre

OCTAVIAN COSMA

Tavares, Heckel

(*b* Satuba, Alagoas, 16 Sept 1896; *d* Rio de Janeiro, 8 Aug 1969). Brazilian composer, conductor and arranger. He received his first piano lessons from a relative and taught himself popular instruments such as the *cavaquinho* and the harmonica. He moved to Rio in 1921, where he studied orchestration with the composer João Otaviano. Self-taught in composition, he cultivated a hybrid style on the boundary between popular and art music, under the influence of nationalism and modernism. He composed for the popular theatre and wrote some 100 songs, of which *Casa de caboclo* (with words by Luis Peixoto) was his biggest success (1928) and for which he is mostly remembered in Brazil. He wrote his first art-music composition in 1935, *André de Leão e o demônio de cabelo encarnado*, a symphonic poem on Cassiano Ricardo's story. From 1949 to 1953 he travelled throughout the country collecting folk materials for use in his own works. His subsequent production was always inspired by indigenous folk music. In the tone poem *O Anhangüera*, he used Tucuna Indian percussion instruments. His national style is further expressed in his popular Piano Concerto and the *Concerto em formas brasileiras*, for violin and orchestra.

GERARD BÉHAGUE

Tavener, Sir John (Kenneth)

(*b* London, 28 Jan 1944). English composer. Having begun at an early age to improvise and compose at the piano, he continued his education at Highgate School, where he studied piano, organ and composition. Two early works, a setting of the Credo (1961) and *Genesis* (1962), were performed at St Andrew's Presbyterian Church in Frognal, Hampstead, where his father was organist. Tavener himself was appointed organist at St John's Presbyterian Church in Kensington in 1961. In January 1962 he entered the RAM, where he studied piano with Solomon and composition with Lennox Berkeley and, later, Lumsdaine, who introduced him to contemporary music such as that of Messiaen and Boulez. During his time at the Academy, his one-act opera *The Cappemakers* and his song cycle

Three Holy Sonnets of John Donne were performed, and he won the Prince Rainier III of Monaco Prize for his cantata *Cain and Abel*.

1968 was the year of the première, at the inaugural concert of the London Sinfonietta, of *The Whale*, on which he had worked during 1965–6 and which brought Tavener to public attention with its flamboyant use of collage techniques, recitation, romantic gesture and the ritualized objectivity of late Stravinsky. Far more lushly sentimental (and the most conspicuous example of the influence of Messiaen in Tavener's output) was *In alium*, setting texts from the Bible and Charles Péguy, first performed at the Proms in the same year. More important for the future development of Tavener's music in both these works, however, was the use of stasis and non-developmental block construction. These two techniques were employed more extensively in the *Celtic Requiem* of 1969, which, in its spectacular combination of rites for the dead with children's games over an unchanging E♭ major chord, provides a more profound metaphysical exploration and a more unified composition than was the case with *The Whale* and looks forward to Tavener's much later use of drones and modal harmonic stasis.

The *Celtic Requiem* excited the interest of the Beatles and was later recorded on their Apple label; Tavener also joined Trinity College as a professor of composition and was invited to write an opera for the Royal Opera House. Initially he began working on a setting of Jean Genet's *Notre Dame des Fleurs*, which he abandoned, and in the meantime was commissioned to write *Ultimos ritos*. This work, Tavener's largest so far, was completed in 1972, and incorporated two earlier pieces, *Coplas* and *Nomine Jesu* (both 1970). It is an immense meditation on the words of St John of the Cross and on the Crucifixion, finally obliterated by the last bars of the 'Crucifixus' from Bach's Mass in B minor, the performers being deployed in the shape of a cross and utilizing the spatial characteristics of the building (the first performance took place in St Bavokerk, Haarlem). The 1970s saw the increasingly pervasive influence of later Stravinsky as opposed to the more exuberant Messiaen-like fantasy of *In alium* or the Catholic monumentality of the *Celtic Requiem* and *Ultimos ritos*. Works such as *Canciones españolas* (1972), *In memoriam Igor Stravinsky* (1971), *Responsorium in Memory of Annon Lee* Silver (1971) and the *Requiem for Father Malachy* (1973) are characterized by a spareness and linearity which recalls not only Stravinsky's *Canticum sacrum*, whose influence Tavener readily acknowledges, but also the *Requiem Canticles* and shorter works such as the *Double Canon (Raoul Dufy in memoriam)*. Also Stravinskian was Tavener's engagement with earlier music. *Ultimos ritos* made use of early Spanish music as well as Bach, though in such a fashion as to be barely recognisable; in *Canciones españolas*, Tavener used medieval Spanish *cantigas* and other songs in a much more straightforward manner with austere instrumental 'commentaries'. The spare, transparent sound world of this work has much in common with that of the *Requiem for Father Malachy* (1973; there is also a shorter version, the *Little Requiem*, written in 1972), a personal work continuing Tavener's evident preoccupation with the rites of death, and written as liturgical music employing a great deal of plainchant.

Quite what direction Tavener's music would have taken without the protracted composition of the opera *Thérèse* (1973–6) is difficult to say. The long gestation of this work meant that when it at last received its première at the Royal Opera House, London, in 1979, its Expressionist dramatic approach, with dense orchestration and extremely taxing sustained vocal writing, in spite of a strong spiritual content, did not correspond to Tavener's concerns at that period. His disenchantment with this approach was reinforced by the hostile reception which the opera received. In 1977 Tavener had been received into the Orthodox Church, an event which had already begun to have a profound impact on his development as a composer. *Canticle of the Mother of God* (1976), a setting of the *Magnificat* in Hebrew and Greek, with its static choral background and ecstatic writing for solo soprano, already indicates this change of direction – or, more exactly, confirms the direction already broadly hinted at in the static element and non-developmental construction not only of such ritualistic short pieces as the *Celtic Requiem* but also of larger works such as *Ultimos ritos* and the *Requiem for Father Malachy*. As a consequence of this change in approach, the liturgical music of the Orthodox Church came to play an increasingly significant role in Tavener's work (his first real experiment in this direction was the *Liturgy of St John Chrysostom* of 1977), but another, related constant is the concept of mortality, already very much apparent in the *Celtic Requiem*, *Ultimos ritos* and the *Requiem for Father Malachy*. The monodrama *The Immurement of Antigone* (1978) further develops this theme, but it still retains much of the anguished sound world and angular vocal style of *Thérèse*. With the masterly *Akhmatova: Requiem* of 1979–80, Tavener was able successfully to reconcile his serially derived musical vocabulary with liturgical elements (prayers for the dead from the Orthodox liturgy in Slavonic) for the first time, simultaneously achieving not only an extraordinary dramatic consistency lacking in *Thérèse* but a new lyricism springing from an immediate response to Akhmatova's poetry.

A secular song cycle, *Sappho: Lyrical Fragments* (1980) confirmed this new lyrical approach as well as an increasing preoccupation with Greek culture. However, 1981 saw the beginning of a genuine flowering of the choral sacred music for which Tavener has become so well known. These works, an extensive series starting with *Funeral Ikos* and *The Great Canon of St Andrew of Crete* (both 1981), in their chant-derived melodic and harmonic simplicity, represent the core of his work from this point onwards. Larger works of this kind include *Ikon of Light* for choir and string trio (1984) on texts by St Simeon the New Theologian; its daring transparency of texture and melodic fecundity are the perfect vehicle for the transmission of the mysticism of the text; the *Vigil Service* (1984), which is strictly liturgical and a pioneering contribution to the development of an Orthodox musical tradition in English-speaking countries; the *Akathist of Thanksgiving* (1986–7), an exuberant, monumental work for solo voices, chorus and orchestra; and *Resurrection* (1989) and *The Apocalypse* (1993), which deal with the central themes of Christianity, recalling, in their dramatic sweep, earlier pieces such as *Ultimos ritos*, but far more transparent and economical in their means and structured according to chant-derived modal principles rather than serially.

Texts have always been fundamental to Tavener's music, and instrumental and orchestral music was certainly not particularly important to him at this stage. Powerful and strikingly original though they are, works such as *Trisagion* (1981) for brass ensemble, *Mandelion* (1981) for organ and *Towards the Son* (1982) are the exception rather than the rule. Similarly, after the Sappho cycle of 1980, there are only three further settings of secular words before 1993: the *Sixteen Haiku of Seferis* (1984) and two Yeats cycles, *To a Child Dancing in the Wind* (1983) and *A Mini Song Cycle for Gina* (1984), all of which share an immediacy of reaction to the poetry as well as a textural spareness reminiscent of late Britten or Shostakovich. Vocally these works allow Tavener a freedom he was not to exploit until much later in his sacred writing, though the subtle and original treatment of instruments is a constant in his output. With the impressive dramatic cantata *Eis thanaton* (1986) the composer achieved a synthesis between this chamber vocal style and the hieratic austerity of his sacred writing, something which he would pare down even more in *Mary of Egypt* (1991), which is described as an 'ikon in music and dance', the very antithesis of *Thérèse* of 18 years before. Though bearing a strong resemblance in many respects to Britten's church parables (notably in its stylized dramatic element and austere sound world), *Mary of Egypt* has rather more in common conceptually with medieval liturgical drama, and very little to do with conventional opera.

Strangely, it was an orchestral work which rekindled the flame of Tavener's reputation, *The Protecting Veil* for solo cello and string orchestra (1987). This lengthy piece takes its inspiration from the Orthodox feast of the Protecting Veil of the Mother of God, and transfers the meditative calm of Tavener's vocal and choral music to another medium as well as exploiting to the full his often overlooked exuberant lyricism. A new confidence in dealing with purely instrumental genres is evident in subsequent works such as *The Hidden Treasure* (1989), *The Repentant Thief* for clarinet and strings (1990), *The Last Sleep of the Virgin* (1991), the orchestral *Theophany* (1993) and *Diodia* (1997), though it is important to emphasize that these works are far from being abstract, rooted as they are in the beliefs and tenets of Orthodox Christianity.

The transparency to higher things evident in Tavener's musical language has left the concerns of the old avant garde far behind and simultaneously brought him a large measure of fame. The negative result of this phenomenon is evident in the sometimes formulaic approach, particularly in shorter works, in his recent output, but it is also true that few composers of the modern era have had the courage to deal so concentratedly in music with matters of the spirit, to follow their own beliefs into such initially unfashionable territory and subsequently to be so triumphantly vindicated in the public eye. He was knighted in the 2000 New Year honours.

Taverna-Bech, Francesc

(*b* Barcelona, 16 April 1932). Catalan composer. He studied the piano, harmony and composition with Ernest Cervera, and the violin with Enric Ainaud and Montserrat Millet. He complemented his musical education with studies in the humanities faculty at Barcelona University (1952–6). This broad education in the humanities has enabled him to combine his main activity as composer with his work as a reviewer, critic and historian of music, and he has written a great deal, above all on the subject of 20th-century music in Catalonia.

His early works in his extensive output reveal the undoubted influence of the Catalan musical tradition, refined, however, by a sensitivity and rigour in construction whose clearest antecedents are the music of Bartók and the urban folk music of Mompou, a more immediate predecessor. His work has evolved in a distinctly personal way, without falling into the set formulas of any school. From the mid-1970s, one can perceive in his music a transcending of the neo-classicism still present in such works as the Sonata no.2 (1969–76) in favour of a new expressive freedom in which timbric quality functions as a structural principle. The fundamental characteristics of this composer's most recent style are the meticulousness of the melodic-rhythmic line, the elegant balancing of textures and the perpetual openness to spaces evoking darkness or silence.

Taverner, John

1. Life.

Taverner's career has been much misunderstood by his modern biographers, and the following account of his life relies on a re-examination of the sources. The date of his birth is unknown. Some point around the year 1490 would seem to be most consistent with the other known facts of his biography; the region in which his family was rooted lay somewhere in the vicinity of Boston, Lincolnshire. There is no evidence whatever to support the usual assertion that in boyhood he served as a chorister of the choir of the collegiate church at Tattershall, Lincolnshire. A good deal of this college's archival material still survives for the period 1492–1507, which reveals the names of several choristers, but no John Taverner appears among them.

It has been further asserted that as a young man Taverner worked in London, and in 1514–15 joined the Fraternity of St Nicholas, the guild of the parish clerks and choir clerks of the London parish churches. This does not bear close examination. The nature of the fraternity has been somewhat misunderstood. Only a small proportion of its members were musicians; and although a certain John Tavernar was indeed admitted to membership of the guild in 1514–15, his name appears in a section of the record reserved for new members who were not active parish clerks or church musicians. Consequently there are no grounds at all for identifying this John Tavernar with the composer. Similarly, there is no justification for the claim that Taverner may have had associations with Henry VIII's court and Chapel Royal at this period.

The earliest unequivocal references to the composer occur in 1524 and 1525, when he was a lay clerk of the choir of the collegiate church at Tattershall. The archives of this college show it to have maintained a lively and enterprising musical tradition, with a large and expert choir consisting of six chaplains, ten lay clerks and ten choristers. The statutes provided for one of the chaplains or clerks to act as instructor of the choristers, but it is not known if Taverner ever served there in this capacity.

Apparently his outstanding abilities were already well known, for in the autumn of 1525 John Longland, Bishop of Lincoln, invited him to move to Oxford to become first instructor of the choristers of the choir of Cardinal College (now Christ Church), Cardinal Wolsey's magnificent new foundation there. Taverner at first declined, on the grounds that by moving from Tattershall he would lose the opportunity of a favourable marriage. However, by early 1526 he had changed his mind and had accepted the job, and by Whitsuntide he was already actively recruiting singers for his new and very large choir, which was to consist of 12 chaplains, 12 lay clerks and 16 choristers. In October 1526 Cardinal College was formally opened, and Taverner's duties there began in earnest.

His career at Cardinal College was brief. Wolsey fell from grace as Henry VIII's chief minister in October 1529, and his colleges at Oxford and Ipswich soon began to be run down. By April 1530 provision for the choral service in the chapel of Cardinal College was already becoming sufficiently attenuated for Taverner to make the decision to leave. Although the evidence is far from conclusive, it appears that he now returned to his native Lincolnshire. He became a lay clerk of the choir maintained in the parish church of St Botolph, Boston, and probably took up the post of

instructor of the choristers there. In this church the Gild of St Mary, an organization of enormous wealth, maintained a choir of almost cathedral proportions – ten chaplains, ten to 12 lay clerks and eight to ten choristers – and spent lavishly on the provision of music and musical expertise. However, Taverner's membership of this choir too was cut short. Legislation enacted in 1534–5 had the effect of depriving the guild of its major sources of revenue, and it must then have ceased to be able to pay Taverner his probably very generous salary. Certainly by 1537 he had ended his direct association with this choir, and indeed, he seems at this point to have retired altogether from full-time employment in church music.

He continued to live in Boston, but from then on he appears in the records less as a musician than as a local worthy, of some considerable wealth and local stature. He seems to have been known personally to Thomas Cromwell, then Henry VIII's chief minister, and in 1538 Taverner was entrusted with supervising the demolition and burning of the rood screen in Boston parish church (see fig.1), evidently in execution of the government's current policy towards shrines and other objects of 'superstitious' veneration. In 1537 he was admitted a member of the Gild of Corpus Christi established in the parish church of Boston, and during 1541–3 served as one of its two treasurers. Soon after the town received its first charter of incorporation in 1545 Taverner was selected as one of its 12 aldermen. He died soon afterwards and was buried in Boston parish church, survived by his wife Rose (née Parrowe) and her two daughters by a previous marriage.

In 1528, during his career at Cardinal College, Oxford, Taverner had briefly become embroiled in an outbreak of Lutheran heresy among certain members of the college. Two of those concerned were members of Taverner's choir whom he had himself recruited from Boston two years earlier. However, Wolsey made light of Taverner's own part in this incident, and no suspicion need be entertained that the composer ever seriously pursued deeply held views in conflict with the Catholic orthodoxy of the time. The Boston Gild of Corpus Christi, to which he later belonged, existed 'to honour the transubstantiation of the body of Christ', and to maintain priests to pray for the souls of deceased members – two functions embodying doctrines totally incompatible with any sympathy for Protestant opinions. Further, Taverner's courteous and generous demeanour towards the Boston friars before the dissolution of their houses in 1538–9 similarly belies an impression that he felt any hostility towards the old order, although his readiness to deal in the landed property of the dissolved friaries certainly bespeaks a conventional acquiescence in at least the economic consequences of the Henrician Reformation of the 1530s.

There seem to be few grounds, therefore, for granting any credence to the well-known statement by the martyrologist John Foxe (written more than a generation after the composer's death) that at some point in his career Taverner became sufficiently influenced by Protestant doctrine as to 'repent him very much that he had made songs to popish ditties in the time of his blindness'. Consequently there are no foundations for the assertion that he ceased composition on leaving Cardinal College in 1530; indeed, he might well have continued composing until the day of his death. Allegations that he served as a paid agent of Thomas Cromwell, and

devoted the last years of his life to the fanatical persecution and dissolution of religious houses, are totally without foundation, and have no value except as dramatic fiction. The only respect in which Taverner's career departed from that of any conventional church musician of his period lies in the way in which he achieved sufficient wealth and esteem to be able eventually to retire from a career in active music, and spend the last years of his life as a respected burgher of his adopted town.

Taverner, John

2. Works.

It is, however, likely that the greater part of Taverner's known music was composed during his employment at Tattershall and at Cardinal College in the decade 1520–30, when Wolsey was at the height of his power, and English church music still showed little inclination to depart from its well-established late medieval practices. His most substantial works are those in the three traditional forms of large-scale writing: the mass, votive antiphon and *Magnificat*.

Two of the six-voice masses, *Gloria tibi Trinitas* and *Corona spinea*, illustrate the culmination of the English festal mass, being remarkable for extraordinary contrapuntal skill, for the unerring control of a very large design and for great inventiveness and variety (fig.2). The third, *O Michael*, is by comparison awkward, even rough at times, and may reflect the inexperience of a young but already very ambitious composer. Each six-voice mass is built on a cantus firmus, which is normally stated twice or three times to a movement, with some tendency to prefer progressively shorter note values. There is a carefully planned scheme of sections for full and reduced choir, the latter occasionally employing a method of part-division known as 'gimel', the example for divided trebles and means in the Agnus of *Corona spinea* having a uniquely radiant beauty. The six-voice masses feature several stylistic elements with a long and distinguished history that were soon to fall from favour, such as frequent long spans of melisma, some hollow scoring for high and low voices and the occasional use of conflicting mensurations as a climactic device. There seem to be more recent influences: one recalls the expressive melodic lines of Fayrfax, the rhythmic tensions of William Cornysh and the purposeful (often scalic) vocal part-writing of Ludford. Taverner's own most characteristic habit, perhaps, was to develop a motif, not uncommonly a pithy triadic one, by imitation or canon or as a sequential ostinato within a single voice or pair of voices, giving many of his long melismatic sections a cogency and sense of direction less apparent in those of earlier composers.

Two large-scale votive antiphons, *Ave Dei Patris filia* and *Gaude plurimum*, belong to the same florid tradition as the works just discussed, while others are markedly more economical in style. Short antiphons, sometimes predominantly syllabic in style, had been cultivated in the late 15th century, but in some instances Taverner's approach may have been led by external circumstances as much as by musical preference. Wolsey's statutes for Cardinal College required a lengthy procedure whereby three polyphonic votive antiphons were sung daily after Compline: one each to the Trinity, St William of York, and the Virgin Mary. No Trinity antiphon by Taverner survives, but it is generally accepted that his *Christe Jesu pastor bone*

began life as an antiphon in honour of St William, *O Wilhelme pastor bone*. *Ave Maria* and *Sancte Deus* were probably composed to satisfy additional, even more specific requirements in the revised statutes of 1527. Both *Christe Jesu pastor bone* and *Mater Christi* seem clearly to show the influence of Josquin and his pupils in their use of succinct, rounded phrases repeated in high–low antiphonal groupings. Taverner used these two antiphons as material for parody Masses, one of which was entitled 'Small Devotion', the 'small' perhaps arising from a scribe's misreading of 'S[ancti] wil[helmi]'.

The three *Magnificat* settings are similar in style to the six-part masses and longer votive antiphons, with some exceptionally florid writing in the six-voice work. This and the four-voice setting are among the few English *Magnificat* settings to use the chant itself as a cantus firmus; that for five voices, of which the tenor is lost, was almost certainly based on the older faburden technique. The even-numbered verses only are treated polyphonically, the others being sung to plainchant.

Polyphonic works other than masses, votive antiphons and settings of the *Magnificat* are scarcely found among the surviving music of Fayrfax's generation, but reappear increasingly from about 1520 onwards, eventually to form a major part of the output of Tallis and Sheppard. Such ritual items, as with settings of the *Magnificat*, normally involve an alternation of plainchant and polyphony, the latter frequently incorporating plainchant as an equal-note cantus firmus. As Tallis and Sheppard did later, Taverner composed settings of the two ceremonial matins responds, *Audivi vocem* and *Hodie nobis caelorum Rex* (beginning with the verse *Gloria in excelsis*), and of the Compline respond *In pace in idipsum*. His settings of *Dum transisset sabbatum* for Easter are the only examples of larger responds, with polyphony clothing the choral rather than the solo chant, such as were composed plentifully by Sheppard in particular. Other ritual pieces are a *Te Deum*, the *prosa Sospitati dedit aegros* for the Feast of St Nicholas, and a handful of items for the Lady Mass, including two alleluias, and also a Kyrie and three Christes in each of which the cantus firmus is not a plainsong but a square. Several sequences and similar works are now known only from isolated verses in three parts, extracted by Elizabethan anthologists for instrumental playing in some cases at least.

Taverner himself may have contributed to the beginning of the Tudor fashion for playing viols in consort, for the textless six-part *Quemadmodum* uses throughout an elaborately wrought texture that seems to have been instrumentally conceived (although the authenticity of the piece is not entirely certain, as it is anonymous in one source, and bears Tye's name in another). On the other hand, the In Nomine which became the prototype of this English genre is quite clearly a direct transcription of the 'In nomine Domini' section of the mass *Gloria tibi Trinitas*, and there is no evidence that Taverner himself was responsible for any of the instrumental versions. He also composed at least four secular songs, but three of these survive in a very incomplete state. A fourth, *In women is rest*, is a vigorously florid and very subtle setting of a punctuation poem.

With the possible exception of *Quemadmodum* and the *Dum transisset* settings, all the music discussed so far seems reasonably characteristic of

the period up to 1530, when Taverner left Cardinal College. However, three masses show some novel stylistic features that may be easier to explain in the context of the changed religious conditions of the last ten or 12 years of the composer's lifetime. By this time Henry VIII had rejected the papacy and many alleged 'superstitions', including the veneration of most medieval (as distinct from biblical) saints; but he adhered staunchly to what he saw as an orthodox Catholic faith and to the Sarum rite, resisting the pressures of Cranmer and Cromwell towards Lutheran doctrines and a vernacular liturgy. The normal observance of Mass certainly continued; but there is no reason why such pressures should not have affected the musical style of settings of the Ordinary. It has been observed that Taverner's mass *The Western Wind*, for example, has an SATB vocal layout and consists of a series of contrapuntal variations on a secular tune, in a manner that has more affinity with Lutheran methods than with the hallowed English traditions of Wolsey's lifetime. The masses of Tye and Sheppard based on the same tune are sufficiently similar to Taverner's as to suggest that the three composers may have worked in close association at some time in the 1530s or early 40s, perhaps at the Chapel Royal or in Lincolnshire. Indeed John Baldwin actually ascribed the votive antiphon *O splendor gloriae* to both Taverner and Tye, and there are stylistic differences between sections that seem to support dual authorship. Three other masses by Taverner, Tye and Sheppard also have close parallels in their novel mensural structure and use of very similar melodic material: *The Mean Mass* by Taverner, Tye's five-voice mass in the Peterhouse Partbooks, and Sheppard's *Frences Masse*. *The Mean Mass* in fact shows Taverner's greatest preoccupation with 'new' stylistic features, notably with imitation that shapes entire phrases rather than being a matter of detail, and a greater harmonic tension resulting from more purposeful use of suspensions. Finally, there are the *Plainsong* masses by Taverner, Sheppard and others, which set the Ordinary in a deliberately 'plain' style with a narrow range of note values. There are parallels in a number of pieces from the late 15th-century Ritson Manuscript (*Lbl* Add.5665), but it is tempting to see the revival of this method as an embodiment of Cranmer's 'one syllable, one note' principle.

Conjectural though they must remain, such observations do tend to confirm the career pattern suggested by biographical evidence: namely, that of a church musician who composed intensively within the well-established traditions of the period up to 1530, and perhaps more sporadically in the musically experimental climate that followed it, and who was in no sense wilful or rebellious. That he was pre-eminent among English musicians of his day is beyond question. Fayrfax and Cornysh had died soon after 1520; the younger generation of Tallis, Tye and Sheppard emerged after 1530; and only Ludford, probably some ten years his senior, even approached his stature. It was Taverner who enriched and transformed the English florid style by drawing on its best qualities, as well as on some continental techniques, and who later, when ideological considerations so dictated, was able to use his experience and maturity to produce simpler works of the greatest poise and refinement.

Taverner, John

WORKS

masses and mass sections

Missa 'Corona spinea', 6vv, B i

Missa 'Gloria tibi Trinitas', 6vv, B i (c.f. ant at 1st Vespers, Trinity Sunday)

Taverner Choir.

English choir, founded by Andrew Parrott. Since its début at the Bath Festival in 1973 the Taverner Choir together with the Taverner Consort (a solo ensemble) and the Taverner Players, have established an international reputation for animated music-making informed by Parrott's imaginative and often provocative scholarship. The Taverner Choir and Consort's many recordings include Renaissance and Baroque repertory from Monteverdi and Marenzio to Handel and Bach, and several modern works. Their broadcasts on BBC Radio 3 have included some challenging juxtapositions of early and contemporary music.

Tawaststjerna, Erik (Werner)

(*b* Mikkeli, 10 Oct 1916; *d* Helsinki, 22 Jan 1993). Finnish musicologist. He studied the piano at Helsinki Conservatory with Ilmari Hannikainen (1934–7) and K. Bernhard (1937–44), in Stockholm with Heinrich Leygraf and Moscow with Heinrich Neuhaus (1946), and in Paris with Cortot and Gentil (1947); he made his début in Helsinki in 1943. His concert career was limited to a period of recitals in Scandinavia, Vienna and the USSR, but he continued his interest in the piano as a highly esteemed private teacher,

essayist and member of juries of international piano competitions (Tchaikovsky Competition 1970 and 1974, Rio de Janeiro Competition 1973, Ravel Competition 1975). He also studied at Helsinki University (MagPhil 1958), where he took the doctorate with a dissertation on Sibelius's piano works (1960) and was professor of musicology (1960–83). He has also held appointments at the press and cultural affairs department of the Finnish Foreign Ministry (1948–60), as music critic (1957–89) of *Helsingin sanomat*, the leading Finnish daily paper, and as chairman of the boards of the Finnish Musicological Society (1965–85) and the Sibelius Academy.

Tawaststjerna was the most widely known Finnish musicologist of his generation, having given lectures at many European and American universities and at musicological congresses. He was the leading authority on Sibelius: his five-volume monograph is based on exceptionally comprehensive and hitherto largely unexplored source materials (e.g. Sibelius's diaries and private letters). Besides providing new information on his life and insights into his music, it affords useful comparisons with many of his contemporaries – Busoni, Debussy, Mahler and Schoenberg as well as Scandinavian composers, writers and artists – and gives a full account of the general cultural trends of Sibelius's time and the political context as it affected the composer. Its scope, style and understanding of Sibelius's creative imagination make the book an outstanding work of its kind.

Taylor, Brook

[Brooke] (*b* Edmonton, London, 18 Aug 1685; *d* London, 29 Dec 1731). English mathematician and amateur musician. According to his grandson William Young, his early education at home included classics, mathematics and music. He was musically the most proficient member of his family, and in a large family picture he is represented at the age of 13 sitting in the centre of his brothers and sisters, the two eldest of whom crown him with a laurel bearing the insignia of harmony. Young mentioned frequent musical parties at the family's country home in Kent and reported that Geminiani, Babell and Louis Lully were among the musicians welcomed there. Taylor entered St John's College, Cambridge, in 1701 as a Fellow-commoner; he graduated LLB in 1709 and became an LLD in 1714. In 1712 he was admitted a Fellow of the Royal Society, and in January 1714 was elected first secretary, resigning for health reasons in October 1718.

Taylor's reputation as a mathematician chiefly rests on three publications. Two of these were papers that he read to the Royal Society in 1712: 'De inventione centri oscillationis' and, more importantly for music theory, 'De motu nervi tensi' (both published in *Philosophical Transactions of the Royal Society*, xxviii, 1713). A revised version of the latter paper, in which Taylor succeeded in deriving the exact frequency of vibration in the fundamental mode for a string of given length, appeared in his *Methodus incrementorum directa et inversa* (London, 1715), the first treatise on the calculus of finite differences. His analysis formed the basis of D'Alembert's article on the vibrating string for the *Encyclopédie* (1776) and was even included in the *Encyclopaedia Britannica* of 1803.

Although Taylor published nothing else on music, hundreds of pages of his notes on music theory survive (*GB-Cjc*). They suggest that he shared Newton's interest in the Pythagorean tradition of speculative harmonics linking the physical properties of strings to the structure of the universe. Among these papers is an account of his measurement of frequencies of vibrating strings (March 1713), in which he experimentally determined the pitch of his harpsichord A at 383 c.p.s. There are also three papers 'On Musick by Dr Brook Taylor, Sir Isaac Newton and Dr Pepusch'; the one by Taylor (which, according to Young, was delivered before the Royal Society) portrays his work as a culminating point in the grand Pythagorean tradition. In January 1727 he read to the Royal Society a paper entitled 'A Summary

Account of a New System of Music by M. Rameau' (in *Register Book of the Royal Society*, copy xiii, p.19). Although generally favourable, Taylor 'did not consider himself sufficiently acquainted with the Maximi received by the most eminent Professors of this Art, to judge whether our Author is right in everything he advances'. This self-assessment was later disputed by Hawkins, who wrote not only that 'besides being an excellent mathematician, [he] was eminently skilled in the theory of music' but also that it was said that he assisted Pepusch with his *A Short Treatise on Harmony* (1731) by 'forming the diagrams'.

A portrait of Taylor painted by Amiconi and presented by Young is at the Royal Society; a gouache miniature by Goupy showing him three-quarter length, standing beside a two-manual harpsichord, is in the National Portrait Gallery, London (see illustration).

SUSI JEANS/PENELOPE GOUK

Taylor, Cecil (Percival)

(*b* New York, 15 March 1929). American jazz pianist and composer. He grew up on Long Island, where his mother, who played the piano, encouraged him to begin lessons at the age of five. Later he also studied percussion with a timpanist, which probably influenced his percussive approach to the keyboard. In 1952 he entered the New England Conservatory, where he studied piano and theory; however, he soon detected a lack of appreciation in the academic world for the aesthetic values of black culture. After exploring the music of Dave Brubeck, Lennie Tristano and Stravinsky, he came under the decisive influence of Duke Ellington, Thelonious Monk and Horace Silver. In 1955 he formed a quartet that included Steve Lacy (1955–7), and it was with this group that he made his first important recording, *Jazz Advance* (Tran.), in 1956. In 1957 he began an extended engagement at the Five Spot in New York, which helped to establish that club as a forum for new jazz; he also made an appearance at the Newport Jazz Festival which won him considerable prestige. Neither of these achievements captured a large audience for his music or secured him further work, however, and by 1962, when he was given the *Down Beat* 'new star' award for pianists, he was, ironically, unemployed. In the winter of 1962–3 he made a fairly successful tour of Scandinavia in a trio with the alto saxophonist Jimmy Lyons (who then

became a regular member of his groups) and Sunny Murray. Albert Ayler joined them and returned with them to the USA. Throughout the following decade Taylor faced a baffling combination of high critical acclaim and little or no work. He made perhaps one major concert appearance each year, but otherwise worked sporadically in night clubs for modest to low pay. These difficulties undoubtedly stemmed from the unrelenting demands posed by his music on the listener.

Taylor was a leading innovator of the 1960s, and shared with Ornette Coleman the task of freeing jazz from many earlier conventions, especially those of tonal harmony. He was technically more gifted than Coleman and other free-jazz musicians of the time, commanding a great variety of rhythmic accent and keyboard texture. Taylor himself said of his style that he tries 'to imitate on the piano the leaps in space a dancer makes'. Although in the 1950s and early 1960s he frequently incorporated single-note melodies and conventional rhythms in his playing, by the late 1960s he was concentrating on clusters and glissandos produced with open palms, fists, elbows and forearms, and making use of dense, aperiodic rhythms that seemed to bear little resemblance to those traditionally associated with jazz (as may be heard on the albums *Unit Structures* and *Conquistador!*, both 1966, BN). Indeed, Taylor's later work is more akin to the European avant garde than the jazz of his predecessors.

After a brief and unsatisfying venture into college teaching during the early 1970s Taylor began to gather momentum in his professional career, and from 1973 he toured fairly regularly either as a solo pianist or as the leader of his own group. He remains totally uncompromising as an artist and is still a controversial figure.

Taylor, Charles (i)

(*fl* 1679–85). English composer. He was a lay clerk at Westminster Abbey from 1679 to 1685, when he sang at the coronation of King James II. Some pleasing songs by him are in *Choice Ayres and Songs* (RISM 1683[5]) and *The Theater of Music* (1685[5]; *SpinkES*). There is a motet by him in Christ Church, Oxford (623–6).

IAN SPINK

Taylor, Charles (Alfred) (ii)

(*b* Hull, 14 August 1922). English physicist, writer and lecturer on the physics of music. He studied physics at Queen Mary College, London (BSc 1942), and at the University of Manchester Institute of Science and Technology (PhD 1951, DSc 1959), where he was a lecturer then a reader in physics (1948–85). As professor and head of department of physics at University College, Cardiff (1965–83), he established the first electronic music studio in a British university (1970); he was visiting professor of experimental physics at the Royal Institution of Great Britain (1976–88), and became emeritus professor of physics at the University of Wales in 1983. He was elected an honorary fellow of the Institute of Acoustics (1985).

Though his major research activity was in the study of X-ray and optical diffraction, the important musical acoustics research group which he founded at Cardiff carried out pioneering holographic studies of the vibrational modes of stringed instrument bodies. In 1971 he was invited to give the Royal Institution Christmas Lectures. This series of demonstration lectures, given to audiences of schoolchildren and broadcast from the Royal Institution in London, established his reputation as an outstanding popularizer of the science of musical acoustics. He was the first holder of the Royal Society's Michael Faraday award for contributions to the public understanding of science (1986).

MURRAY CAMPBELL

Taylor [Tailer, Taler], Daniel

(*d* London, April 1643). English musician and composer. By 1625 he was a singing-man at Westminster Abbey and he apparently continued as such until his death. Two full anthems by him are known: *I will sing unto the Lord as long as I live* ('Mr Taylor of Westminster', *GB-Ob*, inc.) for five voices, and *Sing we merrily* (in *DRc*, *Lbl*, *Och*, *Y*) for six; a four-part full anthem,

The Lord is even at hand (EL), attributed to 'Taylor', may also be by him. A single part of a secular work, *Appollo did in musick's art*, survives (*Och*).

PETER LE HURAY/JOHN MOREHEN

Taylor, (Joseph) Deems

(*b* New York, 22 Dec 1885; *d* New York, 3 July 1966). American composer and critic. He began piano studies in 1895, and in 1906 received the BA from New York University. Victor Herbert, who in 1907 heard his music for a university show, *The Oracle*, advised him to study theory, and so he took harmony and counterpoint lessons with Oscar Coon, a bandsman of Oswego, New York (1908–11). After various jobs in publishing and journalism he became music critic of the *New York World* (1921–5), editor of *Musical America* (1927–9), and music critic of the *New York American* (1931–2). In addition, he was director (1933–66) and president (1942–8) of ASCAP, and he worked for NBC as opera commentator from 1931, also serving as intermission commentator for the national broadcasts of the New York PO (1936–43). His books of 1937, 1940 and 1949 contain expanded versions of his radio talks. Taylor was elected to the National Institute of Arts and Letters in 1924 and to the American Academy of Arts and Letters in 1935.

Taylor's music, like his critical work, never bores and is often witty, always deftly constructed and well timed; but it lacks sharp individual profile or sense of deep conviction. So skilful was he in blending European influences that even at his most derivative he is not easily labelled. Yet the basic style of even the later works (e.g. *The King's Henchman* of 1926 or *A Christmas Overture* of 1943) is academically post-Romantic, quite close to that of the American composers trained in Germany around the turn of the century such as Chadwick, Converse or the Nevins. Taylor resisted the influence of 20th-century avant-garde trends in perhaps every element except that of orchestration, and he was quoted in a *New York Times* obituary as saying 'This is the age – not only in America, but all over the world – of the pedant run amuck. The result has been music that has to be explained, and even the explanations are unintelligible except to the initiate'. This aesthetic conviction perhaps explains in part the initial enthusiastic acceptance of Taylor's work – his number of Metropolitan Opera performances (14 for *The King's Henchman* in 1927–9 and 16 for *Peter Ibbetson* in 1931–5) surpasses that of any other American composer, and no native American of his time had more large-scale works published. But it may also explain the fact that his music was virtually forgotten soon thereafter. His work as both writer on music and executive of ASCAP was recognized by that organization with the establishment, in 1967, of the ASCAP-Deems Taylor awards for meritorious books and articles about music and musicians. In 1990 his daughter Joan Taylor donated his archives to the Yale School of Music.

ROBERT STEVENSON

Taylor, Edward

(*b* Norwich, 22 Jan 1784; *d* Brentwood, 12 March 1863). English bass and writer on music. Born into a prominent Unitarian family with literary leanings, he worked as an ironmonger and was active in liberal politics as well as amateur musical life in Norwich. He sang at the Octagon Chapel and the Glee and Catch Club, was principal bass at the Hall Concerts, and played a key role in the founding and organization of the Norwich Triennial Festival in 1824; he was also skilled as a wind player and choir trainer. Among his teachers were the Rev. Charles Smyth, William Fish and J.C. Beckwith.

In 1825 Taylor started an engineering firm in London, but on its failure a year later took up music professionally, as a concert singer and teacher. Still associated with opposition politics, by 1829 he had become music critic for the weekly *Spectator*. Its didactic, reform-minded tone suited him well, and he wrote there regularly for 14 years, notably on provincial festivals, the relative merits of Spohr (his friend) and Mendelssohn (whom he thought overrated), and on the importance of earlier music and of amateur music-making. In 1837 he was appointed Gresham Professor, a post he took seriously by giving informed lectures, with musical illustrations, to appreciative general audiences (much of his lecture material is now in the RCM). Not the least of his achievements was the amassing of an important private collection, rich in church music, rare madrigals and motets, French, Italian and English (it was sold in 1863). His specialist knowledge bore fruit in three major articles for the *British and Foreign Review* in 1844: a history of the English madrigal, and two critical essays on the Anglican service.

Taylor's editorial work, sometimes controversial, was probably more far-reaching than anything else he did. He translated and adapted Spohr's *Die letzten Dinge* as *The Last Judgment* in 1830, and thereafter wrote English librettos of Mozart's Requiem (as *Redemption*), Haydn's *The Seasons* and other choral works; compiled, with James Turle, *The People's Music Book* (1844) and *The Art of Singing at Sight* (1846, 2/1855); and edited English madrigals and Purcell's *King Arthur* for the Musical Antiquarian Society, a body he helped found in 1840 with Chappell, Rimbault and others. He also helped found the Vocal Society (1832) and the Purcell Club (1836), and remained active in the management of the Norwich Festival until 1842.

<div align="right">LEANNE LANGLEY</div>

Taylor, Franklin

(*b* Birmingham, 5 Feb 1843; *d* London, 19 March 1919). English pianist and teacher. He showed his musical talent at an early age, and when only 13 was appointed organist at the Old Meeting Place, Birmingham, having studied the organ with Bedsmore, organist at Lichfield Cathedral. His first piano teacher was Charles Flavell, and from 1859 to 1861 he studied at the Leipzig Conservatory with Plaidy and Moscheles as well as Hauptmann, E.F.E. Richter and Papperitz (harmony and composition). However, he was not particularly gifted as a composer. In 1861 he went to Paris to work under Clara Schumann and became an enthusiastic exponent of her method and manner of playing. In 1862 he returned to London, where he soon became renowned as a soloist and teacher. He often played at the Crystal Palace concerts (from 1865) and the Monday Popular Concerts (from 1866). Returning to his early love of the organ, he held the post of organist in several London churches in succession.

In 1876 he was appointed as one of the first teachers in the new National Training School for Music, founded under the auspices of the Royal Society of Arts. When the school was amalgamated with the RCM (1882), Taylor was made professor of piano, and held this post until 1916. He was president of the Academy for the Higher Development of Pianoforte Playing (founded by Oscar Beringer) during its 24 years (1873–97) and was director of the Philharmonic Society (1891–3).

Taylor contributed several articles to the earlier editions of *Grove's Dictionary*, and published a number of works on piano playing; his *Technique and Expression in Pianoforte Playing* (London, 1897) is still used, and his *Primer of Pianoforte Playing* (London, 1877) passed through numerous editions. He also collaborated with other writers on music. He is probably best remembered for the remarkable series of *Progressive Studies for the Pianoforte*, selected and edited from the works of Bertini, Cramer, Czerny etc. (London, 1893–4). These are issued in groups, each group being designed to aid the player in overcoming one particular difficulty of technique.

GEORGE GROVE/JEAN MARY ALLAN

Taylor, James (Vernon)

(*b* Boston, 12 March 1948). American singer-songwriter and guitarist. His second album *Sweet Baby James* (WB, 1970) established him as a leading figure among the confessional singer-songwriters of the era. His light and restrained high voice carried equally well the lullaby *Sweet Baby James* and the evocation of intense feelings on *Fire and Rain*, and his folk-ballad songs were underpinned with unexpected major 7ths and other jazz-derived chords. His albums since *Sweet Baby James*, have contained original songs as well as revivals of hits from the 1950s and 60s, such as Otis Blackwell's *Handy Man* and Felice and Boudleaux Bryant's *Devoted to You* (one of a number of duets with his then wife, Carly Simon). The thematic range of Taylor's compositions has expanded to include political comment (*Let it all Fall Down* discusses the Watergate affair) and social history (*Millworker*, 1979). However, his strength has remained the confessional mode, and the exploration of the emotions embodied in personal relationships and such experiences as bereavement. Among the most notable of his later songs of this type are *That Lonesome Road* (1981), *Native Son* (1991) and *Jump up behind me* (1997).

DAVE LAING

Taylor, John

(*fl* 1628–49). English composer. He was appointed joint keeper of the king's lutes, viols and music books in 1628, becoming one of the royal 'viols and voices' in 1637 jointly with his father Robert. He must still have been alive in 1649 but presumably died before the Restoration (1660). An elegy he wrote on the death of 'his Friend and Fellow, Mr. William Lawes' was published in Henry Lawes's *Choice Psalmes* (RISM 1648[4]), and several songs were printed by John Playford in *Select Musicall Ayres and Dialogues* (1652[8]) and *Catch that Catch Can* (1663[6] and later editions). His songs are in the British Library, London (Add.29396), and in two manuscripts in the New York Public Library (Drexel 4257 and especially 4041). Drexel 4041 is an important source of pre-Commonwealth play songs, which may indicate that the composer had connections with the theatre before 1642. Two of his songs are printed in a modern edition (MB, xxxiii, 1971). An ayre and saraband by him were included by Playford in *Court Ayres* (1655[5]); there are also some instrumental pieces in the Bodleian Library (Mus. Sch.D.220) and bass parts in Christ Church, Oxford (1022). (*AshbeeR*, i, iii, v, viii; *BDECM*; *SpinkES*)

IAN SPINK

Taylor, Joseph

(*b* Lincolnshire, *c*1833; *d* after 1907). English traditional singer. An estate bailiff from Saxby-All-Saints, he is considered by many to be the quintessential English traditional singer. In 1905 Taylor won a Music Competition Festival at Brigg in Lincolnshire for his performance of the horse-racing song *Creeping Jane*. The Australian composer Percy Grainger, who was at the festival, recorded 28 of Taylor's songs including *Brigg Fair*, which was arranged in 1907 by Delius for tenor voice and mixed chorus. Taylor was certainly the most gifted of the performers recorded by Grainger. In 1908 Taylor became the first English traditional singer to appear on a commercial record when the Gramophone Company (now EMI) issued nine of his songs. He was described by Grainger as 'a perfect artist in the purest possible style of folksong singing', noting that his 'effortless high notes, sturdy rhythms, clean unmistakable intervals, and twiddles and "bleating" ornaments are irresistible'.

DAVE ARTHUR

Taylor, (Edgar) Kendall

(*b* Sheffield, 27 July 1905; *d* London, 5 Dec 1999). English pianist and teacher. The son of a professional cellist in northern England, he made his first public appearance at the age of six and his first concerto appearance, playing Mozart's Piano Concerto k466, at the age of 12. After early studies with Vera Dawson, in 1923 he won a scholarship to the RCM in London, where his teachers included Herbert Fryer, R.O. Morris, Holst, Boult and Sargent. In 1929 he was appointed professor of piano at the RCM, a post he held until 1993. During World War II he gave numerous concerts and broadcasts for the troops; after the war, his career became international. He performed 26 times at the BBC Promenade Concerts, frequently appeared with the Halle Orchestra under Barbirolli and was chosen by this conductor to perform in concerts with the Vienna PO in 1947. While associated primarily with Classical and Romantic works, especially the Beethoven sonatas, Taylor took a strong interest in contemporary music, especially by British composers; world premières he gave included the Piano Concerto by Panufnik in 1962. He made his last overseas tour in 1994 and gave his final public performances the following year. After his retirement from teaching in 1993 Taylor was appointed vice-president of the RCM. He was the author of *Principles of Piano Technique and Interpretation* (London, 1981) and prepared an acclaimed annotated edition of the Beethoven piano sonatas.

JESSICA DUCHEN

Taylor, Raynor [Rayner]

(*b* London, 1747; *d* Philadelphia, 17 Aug 1825). English organist, teacher, composer and singer active in the USA. As a choirboy at the Chapel Royal he sang at Handel's funeral in 1759, and Parker (1822) reports that his hat dropped into the composer's grave. Taylor studied with Samuel Arnold in London; in 1765 he was appointed organist at Chelmsford as well as musical director and composer for Sadler's Wells and Marylebone Gardens. He emigrated to the USA in 1792, possibly at the suggestion of his pupil Alexander Reinagle. Taylor taught and gave evening extravaganzas or 'olios' in Baltimore and Annapolis, briefly served as organist at St Anne's Church in Annapolis, and was organist at St Peter's Church in Philadelphia from 1795 until 1813. He was a major figure in the musical life of Philadelphia, active in the church, the theatre, as a teacher and as a friend and colleague of Benjamin Carr, Alexander Reinagle and J.G. Schetky. He helped found the Musical Fund Society in 1820 and served as one of its directors. As a performer he was noted for his organ improvisations as well as for his renditions of comic theatre songs. Taylor's extant instrumental works are chiefly pedagogical piano pieces. Of greater interest are his church anthems, glees and particularly the theatrical songs which show a gift for setting comic texts. His one complete extant American theatrical score, *The Aethiop*, has vocal and instrumental parts of great vitality.

WORKS

selective list; full list in Sonneck (1905), Wolfe, Cuthbert and Yellin (1983)

Stage: Buxom Joan (burletta, T. Willet), London, Haymarket, 1778, vs (London, 1778); The Aethiop (incid music, W. Dimond), vs (Philadelphia, 1814); incid music, songs, arr. songs, marches, dances (for plays, ops, burlettas, pantomimes, melodramas etc.), mostly perf Philadelphia, 1793–1822, some lost

Other vocal: 3 anthems, in *Cathedral Magazine*, ii–iii (London, ?1780s); 6 glees, 3 male vv, *c*1795–1800, *US-NYp*; Monody on the Death of Washington, Philadelphia, 23 Dec 1799, collab. A. Reinagle, lost; A Collection of [3] Favorite Songs (T. ANNE DHU McLUCAS

Taylor [Tailour, Taylour], Robert

(*fl* London, 1610; *d* London, before 11 Oct 1637). English composer. He is first heard of on 13 November 1610, registering the birth of his son Robert in the London parish of St Dunstan-in-the-West. He played the lute among Prince Henry's musicians in Chapman's *Memorable Masque of the Inner Temple and Lincoln's Inn* on 15 February 1613, and formally joined the group when it was reformed for Prince Charles in 1617. He became a member of the main royal music with the rest of his colleagues when he joined the newly-formed 'Lutes and Voices' at Charles's accession in 1625, and served until his death in the autumn of 1637; his son John Taylor was sworn into his place on 3 October. Robert was also a member of the London Waits from 1620 until his death, and was presumably the 'Mr Taylor' who taught a member of the Middle Temple the viol in the 1620s. He played bowed as well as plucked instruments. He was appointed to play 'orpheryon and base vyoll and poliphon' in the London Waits, and published a set of *Sacred Hymns, Consisting of Fifti Select Psalms of David and Others, Paraphrastically Turned into English Verse* (London, 1615) containing 12 settings for voice, lyra viol in tablature and bass viol; three inner viol parts and a tablature for lute or orpharion are on subsequent pages and could not have been used in performances from a single copy of the book.

The rest of Taylor's music survives in manuscript. He is associated with two lute pieces, a 'pavin by Mr Robert Taylor: Ye devisions sett by mr Tho Greaves' in *GB-Ctc* O.16.2, and an 'Antiq Masque per Mr Confesso [Nicolas Confesse] set by Mr Taylor', in the Board Manuscript (*GB-Lspencer*; ed. R. Spencer, Leeds, 1987). The rest of his surviving instrumental output (see *DoddI* for details) consists of two or three consort almans, two preludes for solo bass viol, 12 dances for solo lyra viol, and two fine almans for three lyra viols. Two songs, *I never laid me down to rest* and a setting of Sidney's *Go my flock, go get you hence*, are in *GB-Och* Mus.439 (facs. in ES, iv, 1987). They seem to be autograph, which raises the possibility that he also composed some of the anonymous lyra viol

music in the manuscript, apparently in the same hand. A five-part Alleluia is attributed to him in *GB-Y* M 5/1 (S). Taylor's *Sacred Hymns* do not deserve their modern neglect. They belong to the tradition of domestic psalm settings by Alison, Leighton and others, though the use of a lyra viol was a novelty. He used a more up-to-date idiom in his instrumental music, reminiscent of Robert Johnson or Alfonso Ferrabosco (ii).

PETER HOLMAN

Taylor, Samuel Coleridge.

See Coleridge-Taylor, Samuel.

Taylor [Domville], Silas

(*b* Harley, nr Much Wenlock, Shropshire, 16 July 1624; *d* Harwich, 4 Nov 1678). English antiquarian and amateur musician, brother of Sylvanus Taylor. He was educated at Shrewsbury and Westminster, and entered New Inn Hall, Oxford, in 1641. He left the university without taking a degree and joined the Parliamentary Army, where he rose to the rank of captain. During the Commonwealth period he was appointed sequestrator in Herefordshire and used the opportunity to appropriate manuscripts from Hereford and Worcester cathedrals. According to Anthony Wood he also took part in chamber music-making at Oxford during the last years of the Commonwealth (though the reference may have been to his brother Sylvanus). After the Restoration he was commissary for ammunition at Dunkirk until 1664 and keeper of naval stores at Harwich from 1665 to his death. Nevertheless he was often in London, where he was acquainted with Locke (with whom he had 'a great friendship'), Playford, Henry Purcell (i) and Pepys.

In addition to his antiquarian works (notably *The History of Gavel-Kind*, 1663), he composed anthems and 27 two-part English and Latin psalms and hymns. He also compiled *A Collection of Rules in Musicke* (*GB-Lbl* Add.4910) from theoretical works by Birchensha, Locke and Simpson. Most of his surviving anthems are incomplete, but four parts of *God is our hope* are in the Gostling partbooks at York and two others are in Ely organ books now at Cambridge University Library. On at least one occasion (St Peter's day, 29 June 1668) an anthem of his was sung at the Chapel Royal.

According to Pepys it was 'a dull old-fashioned thing of six and seven parts that nobody could understand: and the Duke of York, when he came out, told me that he was a better store-keeper than an Anthem maker – and that was bad enough, too'. Charles II had a higher opinion of him, according to Aubrey, while Pepys on another occasion remarked that he 'composes mighty bravely; he brought us some things of two parts to sing, very hard'; perhaps these were his psalms and hymns. Unfortunately, he was 'very conceited of them; and that, though they are good, makes them troublesome to me, to see him every note commend and admire them' (16 April 1665).

Playford printed Taylor's setting of Cowley's *The thirsty earth drinks up the rain* in *Catch that Catch Can* (RISM 1667[6]–1673[4]), and two suites for treble and bass viol in *Court Ayres* (1655[5]). Two instrumental pieces in the British Library (Add.31423), attributed simply to 'Taylor', are perhaps more likely to be by his brother Sylvanus.

WORKS

4 anthems: God is our hope, 4vv, *GB-Cu* (inc.), Y (inc.); I will give thanks, (?lost), mentioned in M. Billet Foster: *Anthems and Anthem Composers* (London, 1901), 85; Lord let me know my end, 5vv, *Cu* (inc.), *DRc*; The Lord is even at hand, *Cu* (inc.)

27 hymns and psalms, S, B, bc, *Cfm*

25 airs, tr, tr, b, *Ob*

2 suites, tr, b viol, 1655[5]

Doubtful: 2 pieces, *Lbl*, by 'Taylor'

JACK WESTRUP/IAN SPINK

Taylor, Sylvanus

(*b c*1633; *d* Dublin, Nov 1672). English amateur musician. He was the younger brother of Silas Taylor. He entered Wadham College, Oxford, in 1650 and graduated BA in 1654 and MA in 1657. He was later a Fellow of All Souls College. Anthony Wood listed him in March 1659 as a 'violist and songster' in William Ellis's Oxford music meetings. Taylor's three extended suites for two trebles and bass, copied by Edward Lowe in the manuscript *GB-Ob* Mus.Sch.E.429, are attractive works in the light, tuneful style associated with semi-public music-making in Oxford. A duet setting of *Anacreon's Ode*, 'The thirsty earth drinks up the rain', is in John Playford's *Catch that Catch Can, or The Musical Companion* (London, 1667). According to Wood, he 'went afterwards to Ireland, and died at Dublin in the beginning of November 1672'.

PETER HOLMAN

Taylor & Boody.

American firm of organ builders. It was founded in 1977 in Middletown, Ohio, by George K. Taylor (*b* Richmond, VA, 26 April 1942) and John H. Boody (*b* Wakefield, MA, 1 March 1946). Taylor was apprenticed to Rudolph von Beckerath in Germany. He worked briefly on his own in 1969, and then with John Brombaugh from 1970 to 1977. Boody received his training with the Noack Organ Co. After two years in Ohio, the company moved to a larger workship in Staunton, Virginia. Taylor & Boody have made an extensive study of historic European organs and most of their instruments are based on the northern European style of the 17th and 18th centuries with regard to tonal and visual design. All Taylor & Boody organs have mechanical key and stop action, and employ flexible winding systems. Some of the firm's notable organs include those built for Holy Cross College, Worcester, Massachusetts (1985), Ferris University, Yokohama, Japan (1989), Christ Church Cathedral, Indianapolis (1992), and St Thomas's Church, New York (1995). For further information see L. Edwards, ed.: *The Historical Organ in America* (Easthampton, MA, 1992).

BARBARA OWEN

Taylor & Co., John.

English firm of bellfounders. Its exports of carillons between World Wars I and II, with those of Gillett & Johnston, made the carillon widely known outside Europe for the first time. In the 19th century it contributed more than any other foundry to improvements in the tuning of tower bells. By the late 20th century it was the world's largest bell foundry, manufacturing bells for cathedrals and churches worldwide, and making handbells, fittings and bell ropes. One of Taylor's most famous bells is Great Paul at St Paul's Cathedral, London, cast in Loughborough in 1881. It weighs nearly 17 tonnes and is the largest bell in Britain.

The Taylor family began making bells at St Neots, Huntingdonshire, in 1784, and after moving to Oxford and to Devon established their foundry at Loughborough, Leicestershire, in 1839. In 1896 the Taylor brothers, John William jr and Dennison, introduced what became known as the 'Taylor true harmonic principle' for fine-tuning of bells. As a result, from 1897 they were able to make properly tuned replacements for faulty and missing bells in Dutch carillons. Between 1911 and the end of World War II (before the Dutch regenerated their own bell-tuning skills) they provided bells for ten new carillons in the Netherlands (only one of these, at Zwolle, survived World War II).

The firm makes carillons as well as bells for swinging peals. Its carillons include those at Rainbow Bridge, Niagara Falls, Canada (55 bells, *e* to *a*''''); Mountain Lake Sanctuary, Lake Wales, Florida, the University of Michigan, Ann Arbor, and Washington (Episcopal) Cathedral (each 53 bells, *d* to *g*''''); the University of Kansas, and the Carillon Tower, Canberra, Australia (each 53 bells, *f* to *b*''''); and the War Memorial, Loughborough, Leicestershire (47 bells, *g* to *g*'''').

Since 1987 the company has operated the Bellfounding Museum on its main site in Loughborough. A history of the company from 1784 to the mid-1980s is given in T. Jennings: *Master of my Art* (Loughborough, 1987).

Tcaci [Tkach], Zlata (Moyseyevna)

(*b* 16 May 1928, Chişinău). Moldovan composer. She graduated from Gurov's class at the Chişinău State Conservatory as a musicologist (1952) and later as a composer (1962). She then taught at that establishment and was appointed professor in 1992. She became a member of the Union of Composers (1962) and for many years she has been a board member and chairperson of the Commission for the Aesthetic Education of Children. She achieved her first successes in the field of music both for and about children and won acclaim as the composer of numerous children's songs, song cycles and collections, musical primers and textbooks (both of which reflect her teaching experience), choral and instrumental pieces and cycles, cantatas, operas and a ballet. Her other works encompass most genres and have met with notable success. Her style is associated with the better trends of Soviet music and with the traditions of local culture (particularly Moldovan, Bulgarian and Jewish musical folklore) while at the same time showing a tendency towards experimentation in genre. She has written works in mixed genres (cantata-rhapsody, opera-suite, vocal and choreographic poems) and new genres (such as the Double Concerto for two flautists and orchestra), and she often arranges her works to suit specific performing situations: for this reason, *Koza s tremya kozlyatami* ('The Goat with Three Kids') exists in three versions. In recent years Jewish themes have come to the fore, and these have enriched her work both in terms of genres and style. The awards she has received include the order *Gloria muncii* [Glory to Labour] (1998), the State Prize of the

Moldovan SSR (1982) and a prize for children's music (1976); she became an Honoured Representative of the Arts of the Moldovan SSR in 1974. She is regarded as the first professional Moldovan female composer.

WORKS

(selective list)

stage and dramatic

Ops: Koza s 3 kozlyatami (Capra cu trei iezi) [The Goat with 3 Kids] (op-fairy tale, I. Creangă and G. Vieru), 1966, 1st perf. 1967, rev. 1971, rev. as Volk-obmanshchik [The Wolf Impostor], 1983, Moldavian Theatre of Opera and Ballet, 1984; Golubi v kosuyu lineyku (Bobocel cu ale lui) [Pigeons in a Slanting Line] (chbr op suite, after G. Gheorghiu, I. Drută and Vieru), 1974; Shag v bessmertiye [A Step into Immortality] (E. Bukov), 1985; Moy parizhskiy dyadya [My Parisian Uncle] (A. Busuioc and V. Chaykovsky), 1987; Lamento [A Mother's Monologue] (P. Anchel) (monoop-poem) 1995

Musical Fairy Tales: Tsvetik-semitsvetik [The Floweret of Seven Colours] (V. Katayev), 1984; Tomchish-Kibal'chish (I. Vekshegonova), 1985; Povar i boyarin [The Cook and the Nobleman] (Vekshegonova), 1987; Lenivitsa [The Lazy Girl] (A. Ciocanu), 1988; The Little Prince (A. de Saint-Exupéry, Vekshegonova), 1988; The Elephant Calf's Birthday (A. Chicu), 1997

Other: Andriesh (ballet, choreog. O. Mel'nik), 1979, 1st perf. 1980; film scores, incid music, music for puppet theatre

vocal

Cants.: Pesn' o Dnestre [Song about the Dniester] (E. Loteanu), 1957; Gorod, deti, solntse [The Town, Children and Sunshine] (V. Teleucă, A. Cibotaru), 1962; Lenin (V. Galaicu), 1969; Pionerï [The Pioneers] (Galaicu), 1974; Kray pesni, kray mechtï (Plai de cânt, plai de dor) [The Land of Song, the Land of a Dream] (cant.-rhapsody, S. Ghimpu), solo vv, chorus, org, 1983

Song cycles: 6 detskikh pesen [6 Songs for Children] (Vieru), 1v, orch, 1964; Dobroye utro (Bună dimineața) [Good Morning] (Vieru), 1v, pf, 1967; 3 monologa (Vieru), 1v, pf, 1969; Iz moldavskoy poèzii [From Moldavian poetry] (song cycle), 1v, pf, 1984; Imya dobroye svoye [One's Good Name] (O. Driz), 1v, pf, 1989; Poyushchiy bukvar' (Abecedarul cântă) [The Singing ABC Book] (V. Codiță, Vieru), 1989; 3 balladï (I. Prayer, L. Kipnis), 1993; Vesyolaya azbuka [The Merry Alphabet] (Vieru), 1993; Chay so zvezdami [Tea with the Stars] (Driz), 1994; Zvenyashchiye bukvï [The Jingling Letters of the Alphabet] (L. Kvitko), 1994; Istoriya posokha [The Story of the Staff] (triptych, M. Lemster), 1996; Potukhshiye kostrï [The Extinguished Bonfires] (E. Slezinger), 1996; 5 romansov (M. Metlyayeva), 1996; Cântă, joacă, litera [Sing, Dance, Letter] (A. Chicu), 1997; Dos glecala [The Bell] (Lemster, 1998)

Other: Pamyat' [Memory] (V. Lebedeva), 1972; Dobroye utro (Bună dimineața) [Good Morning] (Vieru), 1974; Khora tsvetov (Hora florilor) [Dance of Flowers] (Vieru), 1978; Slavatich (L. Vasserman), 1992; Yad-Vashem, 1993; Kadish (M. Lemster), 1995

instrumental

Burleska, orch, 1960; Pf Trio, 1961; Detskaya syuita [Suite for Children], orch, 1963; Conc., vn, str, timp, 1971; Zabavnïye istorii [Amusing Stories], 6 sketches, cl, str qt, 1973; Sonata 'Pamyati Shostakovicha' ['To the Memory of Shostakovich'], va, pf, 1976; Sonata [no.1], cl, 1981; Str Qt no.1, 1982; Syuita, 2 pf, 1983; Music

GALINA KOTCHAROVA

Tchaikovsky [Chaykovsky], Modest Il'yich [Il'ich]

(*b* Alpayevsk, Verkhotur'yev district, Perm' province, 1/13 May 1850; *d* Moscow, 2/15 Jan 1916). Russian dramatist and librettist, brother of Pyotr Il'yich Tchaikovsky. In 1870 he graduated from the Imperial School of Jurisprudence in St Petersburg, where his brother had preceded him. After five years in the civil service he resigned his commission to devote himself to literature and to tutoring a deaf-mute boy named Kolya Konradi, who later became his ward. In the late 1870s he worked as an anonymous musical and theatrical reviewer for several newspapers. He made his début as a playwright in 1881, with the comedy *Blagodetel'* ('The Benefactor'), written the year before under the pseudonym 'Gorovoy'. Over the next dozen years he established himself as a popular fixture of the Moscow and St Petersburg stages. Modest Tchaikovsky's final work for the dramatic stage was a translation of Corneille's tragedy *Horace* (1894). Thereafter he devoted himself to his brother's memory, with a monumental three-volume biography (*Zhizn' Petra Il'icha Chaykovskogo*, Moscow and Leipzig, 1901–3; translated and abridged by Rosa Newmarch as *The Life and Letters of Tchaikovsky*), and as founder of the Tchaikovsky museum at Klin. He also wrote important biographical articles on the critic Hermann Laroche (1913) and on Sergey Taneyev (1916).

Tchaikovsky began his career as a librettist as a functionary of the Imperial Theatres, with a commission to turn Pushkin's novella *Pikovaya dama* ('The Queen of Spades') into a libretto, not for his brother, but for the minor composer Nikolay Klenovsky (1857–1915), who was employed by the Bol'shoy Theatre in Moscow as conductor. It was only after both Klenovsky and Nikolay Solov'yov had turned the project down that it was offered, with spectacular result, to Pyotr Tchaikovsky. By now it is a commonplace to hold up the libretto of *The Queen of Spades* (which the composer considerably revised) as a cautionary example of operatic hackwork; it is worth noting, therefore, that when the work was new it was hailed as an epitome of theatrical craftsmanship. The brothers followed up on his success with *Iolanta* (1892), a one-act adaptation of *King René's Daughter*,

a popular play by the Danish playwright Henrik Hertz, as translated from the Danish by Fyodor Miller and previously adapted for the Malïy Theatre (Moscow) by Vladimir Rafailovich Zotov. At the time of the composer's death the brothers were casting about for new subjects. At the young Rachmaninoff's request Modest drew up a scenario for an opera on Friedrich de la Motte Fouqué's *Undine*, but first tried to interest his brother, who had written his second (destroyed) opera of 1869 on that subject, in setting it himself. Pyotr declined (Rachmaninoff never set it either) with a request that Modest 'find or invent a subject as *unfantastic* as possible, something along the lines of *Carmen* or *Cavalleria rusticana*'. They considered a subject out of George Eliot's *Scenes from Clerical Life*, for which a fragment of a scenario survives in the composer's hand.

After his brother's death Modest Tchaikovsky found himself much in demand as a librettist for other composers. Almost immediately he received a commission from the Imperial Theatres to turn Pushkin's novella *Dubrovsky* into a libretto for Eduard Nápravník, the chief conductor of the Mariinsky Theatre (1895). This was conceived in every way like *The Queen of Spades*, even down to casting (lead roles for Nikolay Figner and Medea Mei-Figner); it survives as a sumptuous showpiece of the old Russian 'Imperial' style, and was dusted off occasionally for gala presentations on the Soviet stage. In 1899 Tchaikovsky adapted Ivan Lazhechnikov's novel *Ledyanoy dom* ('The Ice Palace', 1835) for setting by the pianist-composer Arseny Nikolayevich Koreshchenko (1870–1921), an Arensky pupil then considered a white hope of Russian music. For Arensky himself Tchaikovsky had as early as 1891 adapted Vasily Zhukovsky's *Nal'i Damayanti*, a poetic translation from the Hindu epic Mahābhārata. The opera was not completed until 1903 (first performed 1904). Tchaikovsky's last libretto was *Francesca da Rimini*, a much expanded treatment of an episode from the fifth canto of Dante's *Inferno*, set as a one-act opera by Rachmaninoff between 1900 and 1904 and first performed in 1906.

Tchaikovsky, Pyotr Il'yich

(*b* Kamsko-Votkinsk, Vyatka province, 25 April/7 May 1840; *d* St Petersburg, 25 Oct/6 Nov 1893). Russian composer. He was the first composer of a new Russian type, fully professional, who firmly assimilated traditions of Western European symphonic mastery; in a deeply original, personal and national style he united the symphonic thought of Beethoven and Schumann with the work of Glinka, and transformed Liszt's and Berlioz's achievements in depictive-programmatic music into matters of Shakespearian elevation and psychological import (Boris Asaf'yev).

<div align="right">ROLAND JOHN WILEY</div>

Tchaikovsky, Pyotr Il'yich

1. Childhood and youth, 1840–60.

Pyotr Il'yich Tchaikovsky was the second son of Il'ya Petrovich Tchaikovsky, a mining engineer, and Aleksandra Andreyevna Tchaikovskaya, born Assier. He was part of a large family, of whom his sister Aleksandra, known as 'Sasha' (1842–91, Davïdova by marriage), and twin brothers Anatoly (1850–1915), a jurist, and Modest (1850–1916), a writer, were important in his life. Modest wrote *The Life of Pyotr Il'yich Tchaikovsky* (1901–03), a fundamental biography which combines extraordinary personal authority with a playwright's flair for theatre and a brother's reluctance to be indiscreet.

Our knowledge of Tchaikovsky's childhood is based on reports of his governess Fanny Dürbach, a handful of letters, and lore collected by Modest. Critical to his first decade were his introduction to music and poetry, and the upheaval of his father's search for a new job, which took the family to Moscow in October 1848, to St Petersburg a month later, and in June 1849 to Alapayevsk, a mining town even further distant than Votkinsk.

Dürbach noted Pyotr's sensitivity to words, calling him 'le petit Pouchkine', and that at six he read in French and German. When she left the family in 1848, she kept Pyotr's copybooks: except for two prayers in Russian, Tchaikovsky wrote in French, on secular and metaphysical topics precocious for any child and remarkable for a seven-year-old living in rural Russia at mid-century. Among other projects he wrote a poem, 'The Heroine of France', and began a history of Joan of Arc. Dürbach found the young Tchaikovsky endearing if easily offended from benign causes. She told the oft-quoted anecdotes: of Pyotr's kissing the map of Russia and spitting on the rest of Europe except for France, which he covered with his hand; of his upset nerves after long improvisations at the piano; and of his sleeplessness when he could not rid his mind of music.

Modest claimed that Pyotr's milieu stifled his talent; he indicted Dürbach as unmusical and questioned his parents' musical culture. In fact the Tchaikovskys were musically literate, recognized Pyotr's ability, if not what it was to become, and supported it at Votkinsk with a tutor and an orchestrion, a mechanical organ which his father purchased as a conversation piece. Pyotr attributed his worship of Mozart to 'the sacred

delight' he felt as a child listening to excerpts from *Don Giovanni* on this instrument.

Aleksandra's lament to Dürbach in 1848 that Pyotr was not what he had been at Votkinsk must be understood in context: in two months he had been uprooted from a happy home, lost a beloved teacher, survived a cholera outbreak and enrolled in the middle of term in a highly competitive school. It was winter, and on top of it all Pyotr was studying the piano. He soon fell ill. Aleksandra's report from Alapayevsk that Pyotr was unrecognizable, lazy and vexatious also gives one pause, refuted by Pyotr's own letters, earnest and lacking any hint of sickliness for a child who had just spent nine months recovering from the measles.

While Alapayevsk may have paled before Votkinsk – which had attracted lively commerce, occupied a beautiful setting and found the Tchaikovskys at the centre of a varied social life – two events lightened Pyotr's 14 months in his new home: the birth of twin brothers in May 1850, 'angels who have come down to earth', and the arrival of a new governess, Anastasya Petrovna Petrova. She prepared Pyotr to enter school, for which he dedicated to her his first surviving music, the 'Anastasya Waltz', in 1854.

Three months after giving birth to the twins, Aleksandra took Pyotr to St Petersburg. He was to be placed in the Mining Corps, but this choice yielded to the School of Jurisprudence, where, too young to enter the school, he spent two years in a preparatory course. In Modest's telling, Pyotr's parting with his mother on this occasion was traumatic: at the Central Turnpike, he was forcibly wrested from his mother's arms, and attempted to stop her carriage as its horses galloped away. The myth of heroic suffering pre-empts any mitigation: that the parent of a sensitive child might avoid farewells in the middle of a public thoroughfare, and that Pyotr was being left to cope alone with schooling similar to that in which he had fallen ill the year before.

Tchaikovsky attended the School of Jurisprudence from August 1852 until May 1859. Our knowledge of his stay comes from his own account, from school records, and from Modest, who solicited reminiscences from Pyotr's classmates and who could speak about life there on his own authority. We know something of his subjects, grades, teachers and friends. Tchaikovsky's classmates recalled him as capable, well-liked, absentminded, and compliant with rules in a rulebound institution except for smoking, to which he became addicted for life at the age of 14.

Modest's remark that Pyotr's stay at the school was an episode only obliquely influential on the principal direction of his life underestimates its significance. The school was the setting of Pyotr's self-discovery, a point Modest ignores by dwelling exclusively on his brother's professional formation. Yet there can be little doubt that several dozen boys cohabiting into adolescence will produce a variety of responses to the emergent libido. Tchaikovsky surely took his rites of passage, but nothing about them can be specified.

The death of Aleksandra Tchaikovskaya on 13/25 June 1854 is obscure. Modest took fewer words to describe her passing than her parting with Pyotr four years earlier, and omitted from *The Life* data which suggested

that Pyotr was not present when his mother died, and lapsed into near madness when he found out. Nor did Modest explain why his principal source, a letter from Pyotr to Dürbach reporting the death, was written two and a half years later. In only three of more than 5000 extant letters did Pyotr revisit this topic, once on the 25th anniversary of his mother's death, when he remarked that the cholera which took her life was 'complicated by another disease'.

Aleksandra's death brought changes in the family. Il'ya placed some of his children in boarding schools, and invited his brother to St Petersburg to join families under one roof, an arrangement that lasted until 1857. In the spring of 1858 Il'ya lost his savings in a bad investment and was forced, at 67, to find work again after two retirements. That autumn he was appointed director of the Technological Institute in St Petersburg.

Modest's claim that Pyotr's education coincided with the stagnation of his musical gift is disputable. The School of Jurisprudence sponsored concerts by first-rate musicians, provided instruction in singing and instrumental music and gave students access to concerts and opera in St Petersburg. Tchaikovsky studied choral singing there with Gavriil Lomakin, a recognized specialist; he was a soloist in important church services and precentor of the choir for a time. He also wrote literature, pondered the composition of an opera, *Hyperbole* (in 1854), and composed, in his later student years, his first surviving song, *Moy geniy, moy angel, moy drug*, ('My Genius, My Angel, My Friend'), to words by Fet.

Outside the school Tchaikovsky's musical training was encouraged by his maternal aunt, with whom he studied *Don Giovanni* and other operas, by lessons with the singing teacher Luigi Piccioli and with the piano virtuoso Rudolf Kündinger, who later admitted that he saw no greatness in Pyotr at the time. If musicians such as Lomakin and Kündinger saw nothing extraordinary in Tchaikovsky, neither did the composer's classmates, embarrassed in retrospect at that judgment. Modest wrote that the thought of composing gave Pyotr no rest when he was at school, though he rarely spoke of it, and never recorded his improvisations.

Tchaikovsky graduated from the School of Jurisprudence on 29 May/10 June 1859 and was assigned to the Ministry of Justice five days later. It was no particular occasion: in Modest's phrase, nothing began with it, and nothing ended. Based on the frequency of his promotions – three in eight months – Pyotr took his work seriously, though later he did not remember much of office life. Modest dubs as legend the story that during a conversation Pyotr chewed up an official document, making necessary its redrafting.

Work paled before play. Tchaikovsky's social life after graduation flourished at the French theatre, ballet, Italian opera and amateur theatricals. His life at home changed when Sasha married Lev Davïdov in November 1860 and moved to Kamenka in the Ukraine, leaving Pyotr to mentor Anatoly and Modest. As translator to one of his father's business associates, Tchaikovsky toured western Europe between July and September 1861. It was the first of eight such journeys before the extended wanderlust after his marriage. Whether spurred by work or family business, these trips

showed the young civil servant avid for travel, and affirmed his ties with European culture.

One can only guess how Tchaikovsky the socialite would have ended up without the developments in music pedagogy taking shape around him. The Russian Musical Society was formed in 1859 as a concert-giving organization; it soon undertook to offer music classes to the general public, first given in the spring of 1860.

Tchaikovsky, Pyotr Il'yich

2. Study of music, 1861–5.

Tchaikovsky's professional training in music began with a theory class in the autumn of 1861. Although he kept his official post, his desire to study music had become urgent. His first teacher was Nikolay Zaremba, a naturalized Pole with German pedagogy and an adherent of Beethoven's late style. When denied a promotion in the civil service, Tchaikovsky applied in the summer of 1862 to enter the Russian Musical Society's new 'music school'. The St Petersburg Conservatory opened on 8/20 October 1862 – Russia's 1000th birthday – and Tchaikovsky graduated from it at the end of 1865. We know of Tchaikovsky at the conservatory from the recollections of his classmates, especially Herman Laroche, whose accounts are canonic. Without Laroche and Fanny Dürbach, we would have virtually no eyewitness knowledge of Tchaikovsky before the age of 26.

In addition to theory and composition, Tchaikovsky studied the piano, flute and organ. His principal teacher was Anton Rubinstein, who was pleased with Tchaikovsky the student but later resisted acknowledging a compositional gift superior to his own. Tchaikovsky disdained Rubinstein the composer but yielded to his personality and learnt from him about discipline: sketch quickly to the end of a work, then score; work every day, and hold to music as a sacred calling.

The mystery of Tchaikovsky's conservatory period is how he matured so quickly. In composition he progressed from student exercises to works of distinction: by graduation his Characteristic Dances (now lost) had been conducted by Johann Strauss (ii), and a string quartet movement, a concert overture, and his graduation cantata, to the words of Schiller's *An die Freude*, had been heard in public. His remarkable sensitivity to words had also flourished, in his devotion to literature and love of theatre, his striving for elegant exposition (including poetry), and his translation of F.-A. Gevaert's *Traité général d'instrumentation*, published just two years earlier. As a matter of philosophy, his conservatory compositions suggest that he had already decided to reconcile the controversy over national versus international which divided Russian music in his day. He would hold firmly to this principle while maintaining a respectful distance from both nationalists and composers of Western outlook.

The overture to A.N. Ostrovsky's *Groza* ('The Storm'), a work decried as immature, illustrates this reconciliation and posterity's misapprehension of it. The music is *sui generis*, full of juxtaposed themes only selectively reprised. The model was not a Western formal pattern but Ostrovsky's play itself. The theme associated with Katerina, the main character, is a folk

lament, the unstated words of which portray a young woman anxious and indecisive, like Katerina herself, wandering the meadows and the swamps; after two statements her theme is suppressed, as Katerina loses her identity in the play. A trivial theme depicting her mother-in-law opens the allegro and returns in fugue, an artifice appropriate to that character's nagging. A lyric theme representing the beauty of nature grows shorter as Ostrovsky's references to nature diminish; and the storm itself, a metaphor and a stage effect in the play, opens and closes Tchaikovsky's overture.

Mediating this Russian aspect of *The Storm*, and a noticeable presence in Tchaikovsky's early music, is Beethoven. The breaks in flow, free pattern and love of surprise in *The Storm* echo Beethoven, as does the linkage of theatre overtures with the content of their dramas. Elsewhere, Tchaikovsky referred to the opening of Beethoven's op.130 in his own B♭ major Quartet (bars 9–16 and 374–381). Typical of his allusions in being one or two notes offset from its source, he omitted this reference when he changed the quartet into the *Scherzo à la russe* for piano, as if abandoning the original medium rendered the allusion malapropos. The Piano Sonata in C♯ minor op.80 opens with a burlesqued reference to Beethoven's Violin Concerto, followed by an allusion to the second of Schumann's *Kreisleriana* (at bar 69). Unredeemed by pious modern performances, the movement spoofs nationalist advocacy of Russianness while using foreign music as a model.

The work closest to Beethoven topically, *K radosti* ('To Joy'), owes nothing to Beethoven in its style. Tchaikovsky's wish to avoid odious comparisons is understandable, assisted by an inelegant translation which maintained Schiller's prosody while substituting his striving for sublimity with softer images relatable to Marian prayers, the verbal rhythms of which inform Tchaikovsky's wordless first movement. More striking is the third movement (at bar 64) where the unaccompanied chorus, by coincidence or extraordinary historical awareness, mimics the style of the Italian madrigal.

Schumann inspired Tchaikovsky's orchestration of the last two variations from the *Symphonische Etüden* and the theme of Tchaikovsky's rhapsodic Variations in A minor for piano. Here we see the mature Tchaikovsky's approach to that form: a clear connection with the theme for two or three variations, then character variations which bear little obvious resemblance to it.

Tchaikovsky left the conservatory a fully formed composer, in need of experience but not technique. A premonition of his immense gift caused Laroche to prophesy: 'You are the greatest musical talent in present-day Russia … I see in you the greatest, or, better said, the sole hope of our musical future'.

Tchaikovsky, Pyotr Il'yich

3. First decade in Moscow, 1866–76.

In September 1865 Nikolay Rubinstein, Anton's brother, came to St Petersburg to recruit a theory teacher for music classes in Moscow similar to those Anton had organized in St Petersburg. Tchaikovsky was offered the position, and with it a place to live in Nikolay's quarters. He moved to Moscow in January 1866; in September the Moscow Conservatory opened. Important in the following decade were the securing of Tchaikovsky's

professional status, his adjustment to life in Moscow, his encounter with Balakirev and the nationalists, and, as a composer, his embrace of every important musical genre.

In Moscow Tchaikovsky made significant friends. First among them was Nikolay Rubinstein, who placed himself and the orchestra of the Moscow branch of the Russian Musical Society at the composer's service. Tireless activist, magnificent pianist, beloved in Moscow, Rubinstein could also be despotic and unscrupulous. Among his lieutenants Pyotr Jürgenson was Tchaikovsky's principal publisher and lifetime provider of financial support; Nikolay Kashkin, a conservatory professor whom Rubinstein urged to take up music criticism, was Tchaikovsky's staunchest supporter in the press and the author of significant memoirs. Others included the intendant of the conservatory Konstantin Karl Albrecht, the architect Ivan Klimenko, and Tchaikovsky's former classmates Herman Laroche and Nikolay Gubert (Hubert), who soon joined the conservatory staff as well.

In Moscow Tchaikovsky enjoyed social celebrity and lived in a manner befitting his youth. At the Artistic Circle, a club co-founded by Rubinstein, he met the élite of Muscovite literature and theatre. One friend (Klimenko), unfettered by the pieties of official biography, recalled Tchaikovsky as a prankster, lavishly greeting total strangers on the street, improvising jesting verses in a monastery, or dancing and singing the mazurka from Glinka's *A Life for the Tsar* in a railway carriage, to the shock of some lady passengers.

Yet Tchaikovsky chafed at his living conditions and resented obstacles to composition. For five years he sought quiet elsewhere in the town to escape the pandemonium of Nikolay Rubinstein's home, a veritable hotel and a meeting place for conservatory staff. Financial distress was perpetual, forcing him to supplement his income with translations and arrangements. He was diffident about teaching, which elicited complaints, amid mostly reverential testimony, about the extremity of his demands, his irritability when they were not met and his harsh treatment of women students. Classroom decorum notwithstanding, Tchaikovsky's pedagogy extended to two harmony books, one adapted to Russian church music, and a translation of J.C. Lobe's *Katechismus der Musik*.

Tchaikovsky's intimate relations during this or any other period evade verification. Much has been supposed about his personal life, ranging, often injudiciously, across parameters of homosexuality versus amorous encounters with women, physical liaison versus emotional attachment, personal impulse versus social dictate, and life versus art. These factors played into Tchaikovsky's courtship of Désirée Artôt, a diva performing in Moscow in 1868, for whom his intentions seemed to have been serious; he proposed, and if his friend de Lazari's memoirs are accurate, he competed with a rival, received Artôt's passionate declaration and chose names for his children. The affair was also reflected in his dedication to Artôt of the Romance op.5.

The expurgation of Tchaikovsky's extant letters and the suppression of others, mostly addressed to Modest, who was homosexual, and Anatoly, who dealt with Pyotr's marital problems, have stimulated conjecture about the composer's sexuality ranging from reasonable inference to completely

unfounded fantasy. His resulting reputation as a conflicted sociopath has merit, if at all, on the basis of correspondence from the time of his marriage, when his emotional upheaval was atypically acute. Amateurish criticism to the contrary, there is no warrant to assume, this period excepted, that Tchaikovsky's sexuality ever deeply impaired his inspiration, or made his music idiosyncratically confessional or incapable of philosophical utterance.

Allowing that much remains to be learnt, Tchaikovsky's letters as we have them suggest reasonable conclusions about his sexuality. First, he experienced no unbearable guilt over it, but took its negative social implications seriously. Of special concern was the threat of allusion to it in the press, and the impact this would have on his family. That prospect made him hypersensitive and moody, and may have pressured him to marry. Second, Tchaikovsky expressed the belief that he could function in a heterosexual union even if he had to lead a double life. His willingness to marry was prompted by his father, whom he wanted to please, and would satisfy not only social convention but also his own desire for a permanent home and his love of children and family. Third, the letters and diaries make unabashed if indirect reference to romantic activity. Claims made for these references, including evidence of sexual argot and of passionate encounter, far exceed the limits of the evidence. The first, by implying Tchaikovsky's intent to conceal his sexuality, and the second, by implying that he was promiscuous, have prompted the belief that he suffered neurosis over this matter.

The facts are more quotidian. Tchaikovsky associated openly with the homosexuals in his circle, establishing professional connections and lifelong friendships with some of them, and sought out their company for extended periods. His mode of address was, on occasion, the very antithesis of concealment – the expression more of humour than of secret meaning. What else could explain Klimenko's providing the prudish Modest with a letter in which Tchaikovsky referred to Klimenko, idiomatically feminizing his name, as the choicest of his harem, and to himself as sultan? The allusion is too brazen to be serious.

Tchaikovsky's successes as a composer during this time were hard won and occasional; the chief works of his youth have vanished, are rarely performed, or survive in versions made later, though a number of short pieces achieved popularity. Middling success exacerbated the composer's lifelong sensitivity to criticism. Laroche's reviews of the tone poem *Fatum* and the opera *Voyevoda* led to a temporary break in their friendship, not least his remark that the music of *Voyevoda* bore the stamp of femininity. Nikolay Rubinstein was also a notorious critic, subjecting the composer to what one acquaintance termed irrational fits of rage. But Rubinstein's views were private, and rarely barred performance. Vestiges of apprenticeship are apparent in Tchaikovsky's early Moscow compositions, in his effort to clarify genre, in the revision or the re-use of earlier music and in his need for validation from St Petersburg, which had passed by 1870.

Two early concert overtures, in F major and C minor, point to a fundamental tension in Tchaikovsky's non-programmatic works. His muse too generously provided themes which in striking effect or sheer beauty

forestall development. They are ill at ease in structures based on hierarchies of key or theme, where individuality is tolerated provided it yields to the logic of the whole. In these overtures the musical ideas do not yield, but clash with the expectations of received form. His first work performed in Moscow, the Overture in F, is simply fulsome. Tchaikovsky burdens the music with elaboration, pointed by an introduction of 109 bars which overwhelms the sonata-allegro, and a coda of 172 bars almost mirthful in its inability to achieve closure. The tension between arresting beauty and trenchant discourse is perpetual in Tchaikovsky. It made him concede an inability to deal with form, and prompted Soviet analysis to find a virtue in his sonorities and contrasts, alternate rationales of structure which bow to the grand tradition while praising individuality. This tension diminishes in music based on a programme or in the suite, where closely argued discourse is not expected.

(i) Symphonies.

Tchaikovsky's symphonies of any period are opulent, technically demanding essays in the relationship of language to form. Rich in musical substance, they also respond to Western expectations of integrated structure and coherence. These qualities mark their generic identity, as Tchaikovsky displays the rapprochement of Russian individuality with this proudest of Western genres. Aligning inspiration with genre explains the unusual features of the first three symphonies, his seeking critique from his former teachers, and the ease with which they discerned a tension between his music and their expectations of genre.

In the First Symphony, even the repeatedly revised standard version of 1874, the problem is clear: how to create unity in the whole by linking the outer movements, while indulging a penchant for beauty in the inner ones. Of these the Andante, framed by the 'nature' theme from *The Storm* delicately rescored, is an elaboration of the evocative main theme, and the Scherzo borrows from the Sonata in C♯minor for piano, but with a new trio.

Signs of tension are immediately evident in the first movement. The atmospheric, ametric opening theme is self-contained, forcing the composer to add a countersubject in order to progress to the second subject group. This is achieved, as much else, more with repetition and rhetorical insistence than musical persuasion, extending this movement and the finale to extraordinary lengths. The second theme leads away from a fermata with an arabesque-like motif which disorientates the sonata-allegro exposition in its progress to the cadential close. These pauses in the exposition continue in the development and bring the music to a complete halt before the retransition. His devices at this point – clean

break, then rebeginning with gradually rising chromatic lines – are replicated in the finale. That finale, as in later symphonies, is distinctive in form. In the First it is a hybrid of sonata and ritornello, the theme of the slow introduction returning in the second group, reprised in the middle in its initial guise, and again in a triumphant variant at the end of the movement.

The reluctance of Tchaikovsky's themes to function conventionally within received patterns does not vitiate his goal to reconcile Russian and Western approaches. The bold outer movement linkage is Western, a strategy found in Schumann's Fourth, a work he played 'almost invariably' in the evenings of the summer of 1866, and also in Brahms's First. The sense of reconciliation is stronger in the finale than in the first movement because the intermovement connection is made manifest and because the principal theme is a Russian folksong. Even in the scherzo and trio, another Western pattern, a subtle folkish element based on the prosody of diminutives in Russian speech informs the main theme.

In the Second Symphony Tchaikovsky uses folksong in three of four movements. Most dazzling is the finale, where in the first key area a famous tune, 'The Crane', is built into architectural spans of the eloquence and gravity expected in a symphony by means of changing background and rich tapestries of counterpoint. To Tchaikovsky's contemporaries this method worked, but the composer thought better of it, recomposing the first movement, rescoring the third, and making a large cut in the finale in 1879. He never used folksong so pervasively again.

The Third Symphony obscured the distinction between symphony and suite in its divertimento-like format and change of compositional strategy. Tchaikovsky chose poetically evocative themes (but no folksong), and introduced a distinctive concertante element in the middle movements, but no longer forced simple ideas into grand patterns, preferring a balance between theme and elaboration. This produced structures inimical to the perception of the music in classical forms, such as reprise patterns embedded within a sonata exposition or substituted for binary patterns in the dances. These alternative patterns anticipated his suites and made the Third unconventional from a Western point of view. Sensing a need for symphonic unity, he overlaid this piece with a latticework of closely related, non-polarized keys linking sections and movements, with understated modulatory procedures and subtle thematic connections. He might reprise with counterpoints taken from an earlier passage, or place thematic likenesses in unexpected locations. Scattered about the score, these references remind us that something being heard now has been heard before – somewhere. This strategy abandoned Western particulars of form while providing integrated connectivity in the whole. It was an innovative conception easily missed.

Tchaikovsky, Pyotr Il'yich, §3: First decade in Moscow, 1866–76

(ii) Programme music.

His programmatic works were fundamentally different. If 'symphonic' meant sweep and complexity to Tchaikovsky, 'programmatic' meant vividness, descriptive or emotional, which may pre-empt abstracting the philosophy or narrative from an external source. Tchaikovsky responded to this approach

in different degrees: conformity to received patterns yields to ever more dazzling ideas simply juxtaposed in contrasting tableaux.

Tchaikovsky's first tone poem, *Fatum* (1868), may forever resist assessment. He insisted that its programme was too personal to disclose, then consented to a friend's adding an epigraph to concert programmes to explain the title before the friend had ever heard the piece. The music is curious: three contrasting themes, stated and reprised as a group, with a concluding peroration. To Tchaikovsky, for whom fate would always connote the cruel intercession of destiny into human affairs, the reasons for his choice of title in 1868 remain a matter for speculation. It could refer to the end of his engagement to Artôt.

Whatever its meaning, *Fatum* opened the door to extensive and fruitful contacts between Tchaikovsky and Balakirev, the head of the nationalist composers known as 'The Mighty Handful' based in St Petersburg. The first outcome of this friendship was the composition of *Romeo and Juliet*, for which Balakirev proposed a programme, followed by *Burya* ('The Tempest') in 1873, and the *Manfred* symphony in 1885.

Balakirev planned *Romeo and Juliet* in sonata-allegro, associating the introduction with Friar Laurence, the *allegro* first theme with the hostility of the Capulets and Montagues, the second theme with the lovers. Tchaikovsky's music strikes a nice balance between characterization (the introduction decidedly so after revision) and the improvisation called for in a development, from which he later excised a fugue too learned for the programmatic sense. The revised ending, a funeral march based on the lovers' theme, also improved on the first version, a reprise of Friar Laurence's music from the introduction.

In *The Tempest* Tchaikovsky's approach changed. The programme, written by art historian Vladimir Stasov (spokesman for 'The Mighty Handful'), was much more pictorial and impressionistic than Balakirev's; it does not specify key or form. Tchaikovsky responded accordingly, with a collage of sound pictures. His technical masterpiece of collage, and his extreme point in the direction of musical description, was *Francesca da Rimini* (1876).

The assumption that Tchaikovsky's relationship to Balakirev was one of student to mentor is mediated by Tchaikovsky's greater talent and by musical politics of the time. Nikolay Rubinstein had been cultivating ties with St Petersburg since Balakirev replaced Anton Rubinstein as director of the Russian Musical Society there. Together with Balakirev's stature, this explains Tchaikovsky's dedication of *Fatum* to Balakirev, and his otherwise inexplicable willingness to receive from him criticism far harsher than anything which caused the break with Laroche. A bow to Balakirev's nationalism may be sensed in the Russian accents of *Fatum* – the audible similarity of its opening to that of Glinka's *Kamarinskaya* and the trepak-like intonations of the third thematic group – to say nothing of Tchaikovsky's seemingly childlike acquiescence to Balakirev's instructions for *Romeo and Juliet*. Yet these factors are external. It is doubtful that by 1869 Tchaikovsky needed anybody's advice on how to write music, nor does much in the works he produced under nationalist auspices show allegiance to their philosophy of composition or to Russian subject matter. Tchaikovsky's revisions to *Romeo and Juliet*, cited as proof of his

subordination to Balakirev, make that work more characteristic of his own voice, thus undermining Balakirev's authority in the very process of compliance.

(iii) String quartets.

Tchaikovsky's three string quartets, all written during this period, show him working in that medium as one to the manner born. They enjoyed a success in his lifetime that has waned since, excepting the Andante cantabile from the First, which helped establish Tchaikovsky's name abroad, and won Tolstoy's approbation when he heard it in 1876.

Of the First Quartet, composed in 1871 for an all-Tchaikovsky concert, Laroche rightly noted the union of beautiful music with perfect form. While the quartets need not have had models, the dearth of Russian precedents, Tchaikovsky's embrace of the grand tradition, and references in the works themselves conspire to suggest influences. In the First Quartet a Schubertian lyrical expression disarms the polarity of key. The slow movement, based on a borrowed song, and the scherzo, with its sharply accented theme, have begun to suggest a reply to Schubert's D minor String Quartet ('Death and the Maiden') when in the finale Tchaikovsky shifts references. The limpid themes, strategically placed tuttis, effortless facture, and the wilful disruption of conventional formal procedure – both the first area and the transition are repeated – bespeak a perfect understanding of Beethoven's Quartets op.59.

Beethoven also lies at the heart of the Second Quartet, written between December 1873 and January 1874. It is obscure in precisely the ways that the First Quartet is pristine: in its formal articulation and cadence. The first movement introduction, written after most of the work, sets up this obscurity, which continues into the exposition by avoiding the tonic. Beethoven's late manner is the audible source of Tchaikovsky's approach, of presenting distinctive themes freed from clear key orientation. Tchaikovsky also makes melodic allusions to Beethoven in his scherzo theme (compare with the scherzo of Beethoven's op.74), and the opening of his finale (compare the same location in Beethoven's op.130).

The folkish aspects of the quartet, notably the second theme of the first movement, are a counterpoise to Beethoven. Modest's remark linking the composition of the Second Quartet with *svyatki*, costumed neighbours who call during Christmastide and expect some cheer for their trouble, may provide a key to Tchaikovsky's unusual expression: much about the Second, including its orchestral mannerisms, is nicely explained as a metaphor for tipsiness, the intensely serious slow movement excepted. If there is something of Russian Christmas about this music, it would help explain why the Second was so well received in Russia and so disregarded elsewhere, and why Tchaikovsky himself esteemed it so.

The striking features of the Third Quartet (1876) are attributable to its purpose as a memorial to the violinist Ferdinand Laub. A stylistic link to Beethoven could again be argued, but Tchaikovsky's voice predominates in the lyric expansiveness of the first movement, which runs to over 600 bars, and in the graphically funereal second theme of the slow movement,

which mimics the chorus and chanting of the priest at an Orthodox *panikhida*, or memorial service. This is the first unambiguous inspiration from a churchly source in Tchaikovsky's music.

Tchaikovsky, Pyotr Il'yich, §3: First decade in Moscow, 1866–76

(iv) Piano music.

The secondary status accorded his works for solo piano is curious in light of their advocacy by Nikolay Rubinstein and Hans von Bülow. Many factors locate the short works which constitute most of the repertory: a distinction between salon and concert, expedients of commerce, the shadow of larger compositions in other media, a tendency to excerpt and Tchaikovsky's open condescension about many of them. At the heart of the problem is that piano music did not fully engage Tchaikovsky's creative imagination, and that he did not develop a distinctive idiom for the instrument, as Chopin and Liszt had.

These criticisms do not invalidate the attractions of this repertory, which Tchaikovsky's contemporaries enjoyed and his publishers exploited with myriad arrangements. These include the ubiquitous 'Chant sans paroles' from op.2, the *Souvenir de Hapsal*, a town where the composer and Modest took refuge after holiday funds ran out in the summer of 1867. The Romance op.5, dedicated to Artôt, may refer to Artôt and Tchaikovsky in its principal themes, an operatic cantabile which echoes the lyric of Chopin's nocturnes blatantly juxtaposed with a Russian dance. Laroche observed that the two did not go well together, an unwitting affirmation of the composer's possible subtext, that the two persons did not go well together either. The Humoresque op.10 no.2, written in Nice in the winter of 1871–2, quotes a folktune of that locale in the middle section. The main theme – with its ambiguous tonic, saucy wrongnotedness, and metre-disorientating rhythms – was a natural choice for Stravinsky to appropriate for *Le baiser de la fée*. The theme and variations of op.19 is Tchaikovsky's first piano composition to exceed the dimensions of a miniature. All six pieces of op.21 are based on the same melody; the tragic tone of the Marche funèbre, which quotes the *Dies irae*, is attributable to the death of Eduard Zak, a 19-year-old youth of whom the composer had grown fond.

Tchaikovsky, Pyotr Il'yich, §3: First decade in Moscow, 1866–76

(v) Concertante works.

A concern about characteristic writing for the solo instrument marks Tchaikovsky's concertante works. He routinely solicited advice from virtuosos in this connection, with mixed results. When Nikolay Rubinstein exposed the flaws in the First Piano Concerto (on the Russian Christmas Eve, 1874) Tchaikovsky rebelled, changing little and rededicating that work to Bülow, who went on to play the first performance. When Fitzenhagen mutilated the solo part in the *Variations on a Rococo Theme*, Tchaikovsky acquiesced to added repeat signs, the relocation and in one instance the deletion of variations. These changes obscured the music's relationship to the 18th century, which was less one of emulation than of pastiche, Tchaikovsky's bow to Mozart's era expressed in his own rhythmic and chordal language.

In the First Piano Concerto Tchaikovsky redefined concertante in light of the soloist-dominated concertos of Chopin and Ries, partly by using the orchestra to the full extent of its expressive capability and by writing extended passages where the piano accompanies it. Balancing this, the persistently demanding solo part (which may owe something to Henry Litolff's *concerto symphonique*), together with unexpected cadenzas which offer perorations in mid-pattern, make pianistic idiom crucial to maintaining the polarity of expressive weight between soloist and orchestra. Tchaikovsky shares this polarity with Liszt, but whereas Liszt eases the demand for architectural weight by connecting short movements of brightly contrasting themes, Tchaikovsky deploys his forces at full capacity to a sonata-allegro structure, engaging in a much more involved musical argument. As had become his way by 1874, he individualized the classical pattern with striking materials (the song of blind Ukrainian singers, a café waltz and a folksong) and with the celebrated first-movement introduction, which literally drops out of the work, but not before leaving its mark – in the distinctive inclusion of introductions to subsequent themes, in its key, which defines a tonal realm for lyrical themes throughout the concerto, and in its subjective affinity with the grand reprise of the lyric theme of the finale.

Tchaikovsky's concertante works for violin – the Sérénade mélancolique and the Valse-scherzo – are more modest, and resemble inner movements of larger works. Later, the Méditation from the *Souvenir d'un lieu cher* found its origin in that source, a rejected slow movement from the Violin Concerto.

Tchaikovsky, Pyotr Il'yich, §3: First decade in Moscow, 1866–76

(vi) Songs.

Our understanding of Tchaikovsky's 103 songs is lodged between condescension in English-language criticism and praise in a much more lively Russian scholarship, which views them in a different frame of reference. That difference is between judging how music divines and elevates the meaning of a poem, and how the intonational properties of words are vivified by music. The Russian preoccupation with speech intonations is deep rooted and culturally based, yet prone to disregard in the West in manifestations less extreme than those of Dargomïzhsky and Musorgsky. Tchaikovsky also warrants consideration in this critical arena, even though he believed that people do not sing the same way they talk, and song accordingly should be allowed the occasional misaccent, to say nothing of a substantial lyric component. His belief espouses musical realism in its way.

As in other genres, Tchaikovsky brought Western and Russian together in the art song. While his range of topics is Schubertian, his prototypical song is modelled on Robert Schumann: a preference for ardent, often gloomy love lyrics in the first person; a willingness to modify the poet's text, especially to reprise initial verses at the end; a tendency to involve the piano prominently in the expression of a song with introductions and postludes, extended in Tchaikovsky by rich textures and passionate outbursts during the vocal part. The Russian element lies in the basic conception – the urban romance of Glinka, Alyab'yev and others – which

Tchaikovsky enriched and refined beyond any limits his predecessors might have imagined.

An appreciation of Tchaikovsky's songs turns on these distinctions. He was surely aware of their recurrent sentiment and formal mannerism, and no less indifferent to the artistic consequences of repeating himself than Schubert was in writing hundreds of 16-bar lyrics identical in form. The Western concern with musical connotations of poetical meaning, sanctioned by a century of scrutinizing lieder, deflects attention from the interaction of prosody and musical motif, an issue about which Tchaikovsky, in later years, made his concern explicit. The dismissal of the urban romance as a degraded social and musical cliché denies the legitimacy of its heterogeneous origins in folk music, gypsy songs, social dances, mock Asian elements and operatic idioms. Yet this mix was Tchaikovsky's inheritance, and he drew upon it unabashedly.

The tendency to anthologize Tchaikovsky's songs has blunted investigation of his choice and grouping of poems, joining forces with our innocence of his motivations to obscure the possibility that groups of songs may originally have been published as coherent entities. Little has been said about the musical and textual integration of the songs within a group, and nothing about the possibility that the texts may be glosses on events in the composer's life. The op.6 poems, set in the wake of the Artôt affair, read as if addressed to her. Similarly, the op.16 songs may be the composer's response to the death of Eduard Zak, linked in this purpose to the piano pieces of op.21 by the quotation of the *Dies irae* in the last song of the group.

Tchaikovsky, Pyotr Il'yich, §3: First decade in Moscow, 1866–76

(vii) Stage works.

Tchaikovsky's challenges as an opera composer were as intractable as his inability to deal with them. Problems of dramatic conception more than musical fertility, these challenges were exacerbated by practical difficulties early in his career. Production was limited to the state theatres, where Russian opera ranked below Italian and even below spoken drama, at the same time that prestige for Russian composers resided in opera above all other media. Good librettos eluded him despite the collaboration of talented Russian playwrights; nor were other sources fruitful, including ready-made and self-composed librettos, or commissioned adaptations from literati, including his brother Modest. Once his own social blunders were impediments to success, but Tchaikovsky's most serious problem as an opera composer was to encourage his voracious muse onto the stage when it lacked dramatic sense. Rare was the time when he was not composing an opera or contemplating doing so, yet his enthusiasm, wedded to a distinctive wilfulness, almost always outstripped his theatrical instinct. That he was not fully aware of this deficiency is manifest in recurrent cycles of sustained enthusiasm followed by self-recrimination at blunders unnoticed in the heat of creation. It also finds expression in posterity's selective response to his operas, which are rightly embraced for their beauty and characterization, but do not wrench the emotions so inevitably and with such shameless theatrical effect as, say, Puccini or Leoncavallo.

Tchaikovsky's first opera, *Voyevoda* (1869, the word denotes a provincial governor), endured a hyperbole of misfortune. He was delighted when Ostrovsky agreed to make the libretto for him, but no collaboration ensued. Ostrovsky was bestowing favour, and it wore thin when in April of 1867 Tchaikovsky lost his draft and asked for a replacement with changes. The dramatist only half complied, leaving the composer to finish the text. In this effort, to say nothing of accepting Ostrovsky's topic in the first place, Tchaikovsky's operatic instincts failed. The story, in which the heroine is rescued by her lover from a threatening *voyevoda*, was bereft of its charm when the intonations of spoken language were removed, together with Russian character types who were operatically superfluous but provided vignettes essential to the play. The fable was generically indeterminate, swerving awkwardly between romantic comedy and serious drama. Any residual tension vanished at the end with the crudest *deus ex machina* in the arrival of the successor *voyevoda* to save the lovers from destruction.

The opera fared no better on stage, in part because of the composer's neurotic reluctance to give offence. Rubinstein's offer to conduct was refused, the work passing instead to an inexperienced staff musician; in rehearsal Tchaikovsky declined to enforce the merest requirements, deleting a large ensemble when singing two notes against three proved too much for the soloists. All five performances of the opera shared the stage with unrelated ballets. The first night brought the trappings of success from the audience, but ten days later in his review Laroche called the text a bad adaptation of a futile story and found the music too eclectic, effective in quiet moments but spoiled in energetic ones by loud orchestration masking feeble content. A decade later, writing to Nadezhda von Meck, Tchaikovsky affirmed Laroche's critique, but by then he had burnt the score.

Tchaikovsky's inability when pondering a scenario to curb his enthusiasm with a cold assessment of stageworthiness would be a continuing drawback. Taking counsel with no-one, he next decided to set a libretto twice removed from de la Motte Fouqué's *Undine*. While Zhukovsky's magnificent translation of Fouqué had earned a place in Russian letters, Count Sollogub's adaptation of Zhukovsky, which Aleksey L'vov had composed indifferently in 1848, Tchaikovsky set apparently unchanged and untroubled by critical scrutiny. After working on the opera steadily through much of 1869, he sent the completed score to St Petersburg, where it was initially accepted for performance but never staged.

For *Oprichnik* (1870–74) – the title refers to a special class of hand-picked, ruthless personal agents of Ivan the Terrible – Tchaikovsky adapted his own libretto from Ivan Lazhechnikov's play. At the heart of the scenario is the kind of personal conflict that motivates successful opera: the hero Andrey is torn between restoring his family honour and securing the love of Natal'ya, his enemy's daughter. To achieve his goals Andrey must become an *oprichnik*, which no-one approves, but at the point of doing this he loses his resolve in a mire of ambivalence, first joining, then withdrawing when reproached by his mother. At his wedding to Natal'ya, a plot by his enemies brings Ivan the Terrible to demand seeing Natal'ya alone. Andrey refuses this social impropriety, is beheaded, and the opera ends.

While his story is no more disjointed than that of Verdi's *Il trovatore*, with which it has points of contact, Tchaikovsky is no match for the Italian in creating powerful situations. Where Verdi would make much of the surreptitious meeting of Andrey and Natal'ya at the end of Act 1 (as did Lazhechnikov and Shakespeare, with whose Romeo Andrey is compared), Tchaikovsky allows his hero, having broken into Natal'ya's garden, to go off to see his mother instead. Any parallel with *Romeo and Juliet* withers in default of Shakespearean intensity of characterization, precluded here by the competing historical component of the story, as the animosity between Andrey's family and Natal'ya's diminishes in their shared revulsion towards the *oprichniki*. Tchaikovsky also lacked Verdi's sensitivity to the difference between his characters' public and private utterances. Otello would never sing his love duet to Desdemona in a crowd, whereas Andrey never has a private moment, a dramatic flaw unjustified by recourse to French models and uncompensated in the touching monologues of Andrey's mother or the nicely crafted folk scenes.

The music is inconsistent. Alongside expertly wrought ensembles in the last three acts and Natal'ya's unexpectedly gorgeous arioso in Act 1, which anticipates Massenet in its exhilirating counterpoint of voice and horns, we find the same blustery tuttis that propelled the music of *Voyevoda* anchored to a handful of associative themes so dutiful in plying their trade as to stifle the least dramatic effect. While composers typically recycle music written earlier, and Tchaikovsky did so often, he allowed wilfulness and bad judgment to conspire here in transferring entire numbers from *Voyevoda* into *Oprichnik*, sometimes without altering the text. These borrowings mostly affect the first act, creating dramatic longueurs, though he revisited music from *Fatum* in the love duet of Act 4, and left intact a reference to Meyerbeer in Act 3 when Natal'ya is fleeing from her father (no.11 at bar 112ff; cf the Act 2 stretta of *Les Huguenots*).

Despite pathological condemnation from César Cui in a review, *Oprichnik* was successfully produced in four Russian cities. For his part Tchaikovsky acknowledged his critics, intervened to prevent the opera's revival, and contemplated a revision for the rest of his life. As regards biography, *Oprichnik* marks a watershed in Tchaikovsky's dealings with publishers. In 1872 he assigned generous but limited rights to V.V. Bessel if Bessel would publish *Oprichnik* and see to its production in St Petersburg. Two years later, needing money, he granted Bessel full rights to the opera in return for a sum that was never fully paid. Together with problems in connection with *Romeo and Juliet* and the Second Symphony, his experience with Bessel brought Tchaikovsky decisively over to Jürgenson.

For about a year before *Oprichnik* reached the stage Tchaikovsky was contemplating another opera. *Kuznets Vakula* ('Vakula the Smith', 1873–6), to a libretto by Yakov Polonsky adapted from Gogol, was the subject of a competition sponsored by the Russian Musical Society. He composed the opera in three months in the summer of 1874 and submitted the score to the competition committee in January 1875. This turned out, to his shock, to be seven months early. In his impatience to see *Vakula* produced, Tchaikovsky abandoned all discretion as an anonymous contestant, lobbying to have it produced outside the competition, allowing Nikolay Rubinstein to conduct the overture at a public concert months before he, as

one of the judges, would actually adjudicate, and accepting a critique from Rimsky-Korsakov, another official judge, before the prize was awarded. Despite all this Tchaikovsky won, the committee sheepishly affirming that his was the only entry to meet their qualitative standard.

Polonsky's libretto blends comedy, folk mores and whimsical fantasy. Solokha, the village witch, stirs up a storm with the devil on Christmas Eve. The storm befuddles the townsfolk, a number of whom show up at her door to pay court without knowing that others have come before; the main comic episode of the opera finds Solokha hiding each new suitor in a sack. Meanwhile Vakula, her son, is paying court to the beautiful if vain Oxana, who agrees to marry him if he will produce a pair of slippers belonging to the tsaritsa. Vakula tricks the devil into flying him to St Petersburg, where the slippers are obtained.

At first *Vakula* seemed to be a turning-point in Tchaikovsky's operatic career. The popular tale, his growing reputation, the notoriety of the competition, and improvements over *Oprichnik* – notably lighter scoring and less text repetition – all pointed in a new direction. The music, moreover, is full of particular charms, including bright Ukrainian idioms, the stately polonaise of Act 3, and a vocally sensitive, dramatically apt part for Solokha. Yet many who attended the first performance were disappointed. Kashkin noted bewilderment in Polonsky that the music did not turn out as anticipated; the librettist expected a light opera in the *buffa* manner and was hearing a lyrical comedy, favouring tenderness over wit. With unsettling discernment, Laroche clarified the problem. Tchaikovsky, he wrote, could not transmit in music a libretto's full measure of stage effect, which emerges more forcefully in a reading than in a production. The composer's vigorous invention, more lyric than dramatic, more instrumental than vocal, constantly brings him to miscalculate, if sometimes only slightly, the right musical response to the dramatic moment. In *Vakula* the music is too warm for the coolness of the humour. Nevertheless, his raw talent is so far superior to others of his generation that it must be taken seriously, even if he is not fully successful in opera.

Two other works for the theatre round out Tchaikovsky's first decade in Moscow. In 1873 he wrote incidental music for Ostrovsky's *Snegurochka* ('The Snow Maiden'), a variant of the Undine tale in which the daughter of Frost and Spring joins a human family, falls in love, becomes susceptible to the warmth of the sun and dies. The play was specially commissioned to employ the drama, opera and ballet companies of Moscow at a time when only the Bol'shoy Theatre was open. Tchaikovsky's music, composed in some three weeks in early spring, is interesting for his recycling of music from the opera *Undina* ('Undine'), his first use of orchestral sound to describe magic settings, familiar from *Shchelkunchik* ('The Nutcracker'), and his treatment of a dozen folksongs, possibly in collaboration with Ostrovsky, who was considered an authority on the subject. Either the composer's haste or Ostrovsky's intervention may be responsible for the wan impression of the whole, as if Tchaikovsky were suppressing his exuberance in deference to the playwright. The spectacle ran for six performances.

The other work was *Lebedinoe ozero* ('Swan Lake', 1875–6). Also commissioned from the Moscow theatre direction, also a variant of the Undine tale, and also drawing on Tchaikovsky's opera *Undine* (for the famous love duet), it was his first ballet and his first theatre work to find a place in the canon. Apart from the commission, the origins of *Swan Lake* are mysterious. No author or literary forebear is identified in the printed libretto of 1877; no connection between the composer and balletmaster Julius Reisinger can be documented, though some discussion must have taken place, or else Tchaikovsky could not have known what to write. The multilated versions of his score staged in Moscow between 1877 and 1883 were the most serious consequences to date of Tchaikovsky's compose-and-deliver approach to collaboration; henceforth he would work more closely with dramatists and balletmasters.

However altered by producers, including Marius Petipa and Lev Ivanov in their landmark staging at St Petersburg in 1895, Tchaikovsky's score redefined the place of music in classical ballet. *Swan Lake* betrayed his inexperience with the genre in its rhythmic complexity and formidable tuttis, but the touching story – of a swan queen who yields to a young prince's first love entreaties – and sophisticated score were sure to please. The unity of his integrated key scheme may lie beyond immediate perception, but his mastery of the *dansante* – of devising melodies that match physical movement perfectly – his vivid orchestration, his effective associative themes, and his continuity of thought in music with frequent breaks were unprecedented.

Tchaikovsky, Pyotr Il'yich, §3: First decade in Moscow, 1866–76

(viii) Other works.

In all periods of his life Tchaikovsky wrote occasional pieces, most of which have disappeared. In his first decade these include a Festival Overture on the Danish national hymn (1866) to mark the wedding of the Russian heir apparent to Princess Dagmar of Denmark, a Serenade for Nikolay Rubinstein's nameday (1872), cantatas in honour of the singer Osip Petrov (1875) and the 200th anniversary of the birth of Peter the Great (1872), and the ubiquitous Slavonic March (1876), commissioned by the Russian Musical Society for a Red Cross benefit concert to support Russian troops in the Balkans.

Between 1871 and 1875 Tchaikovsky was a music critic for two Moscow newspapers, producing 61 essays in all when a few earlier and later efforts are included. His motives for becoming a journalist are not clear. A gift for exposition and a need for money would have been sufficient reasons, though Kashkin cited Tchaikovsky's discontent with the state of music criticism in Moscow, and a former student, Mikhail Ivanov, claimed that he did it less out of altruism than practicality: to offset the press's hostility towards his own music, and (urged on by Rubinstein) to support the conservatory, which was beginning to make enemies.

Whatever his reason, Tchaikovsky's criticism is variously important. It offers a detailed look at the concert and operatic life of Moscow; it supplements his views of important musicians set forth in letters; it finds him supporting Russian opera over Italian; and it shows him capable of personal vendetta, directed with special vehemence at César Cui. We

better understand Cui's demolition of *Oprichnik* in April 1874 knowing that in January Tchaikovsky had called him an ignorant, unprincipled critic and a composer of derivative operas and insignificant songs which passed their lives idly on the shelves of music stores.

Tchaikovsky's first decade in Moscow was remarkable by any measure of professional accomplishment and public acceptance. From the beginning his music was frequently heard, with few delays (discounting those of staging) between composition and première. Within six months of his move to Moscow his Overture in F had been played there and in St Petersburg; in 13 months from December 1867 his dances from *Voyevoda* were performed four times; between 4/16 and 17/29 March 1870 he had four first performances, in three weeks of November 1875 he had three. Such exposure was a common occurrence. The efficacy of public concerts in spreading the composer's fame was increased, from 1867, by the publication of songs and piano music to be played in the home. Some of these pieces achieved extraordinary popularity.

The role of colleagues in disseminating Tchaikovsky's music was critical. Nikolay Rubinstein's proselytizing as a pianist and conductor far outweighed the temporary falling-out between him and Tchaikovsky over the First Piano Concerto. He conducted the premières of the first four symphonies, the tone poems *Fatum*, *Romeo and Juliet*, *The Tempest*, *Francesca da Rimini*, the Slavonic March, as well as excerpts from operas. The worth of his advocacy was incalculable, to be matched in St Petersburg after his death by that of the conductor Eduard Nápravník and the Director of Theatres Ivan Vsevolozhsky. Because of it, the composer was established as a leading light in Russian music by the mid-1880s. Laudatory reviews by Kashkin and Laroche also helped establish Tchaikovsky's reputation.

This decade was important for Tchaikovsky, finally, for more than the music he wrote. Marking those years, Laroche noted the change in musical mores that had occurred during this time. Before, composers had been totally overshadowed by virtuosos who played nonsense of their own invention. But a new consciousness now informed Russian audiences, who were interested not just in how something was played, but also what it was. Laroche did not attribute this change explicitly to Tchaikovsky; it is nevertheless clear that he was referring to his friend.

Tchaikovsky, Pyotr Il'yich

4. Marriage and its aftermath, 1877–85.

On 6/18 July 1877 Tchaikovsky married Antonina Ivanovna Milyukova. After his decision to study music this was the most important event in his life. In two months he and Antonina had separated, but they never divorced. The marriage produced a crisis in Tchaikovsky, and although its severest impact had passed in a year, the lingering effects – impaired creativity, exploration of new genres, aimless wanderlust – would last much longer.

Giving account of his brother's marriage in *The Life* finds Modest Tchaikovsky at his least commendable. We learn that Pyotr received a letter from a distant acquaintance who now declared her love. He did not

love her, but faced an ultimatum to marry her lest she take her own life. He agreed, without telling his colleagues or family in time to stop him. Two weeks after the wedding, fearing insanity, he escaped to Sasha's estate in the Ukraine. He rejoined his wife in Moscow in September and within ten days fell ill, fleeing to St Petersburg where he suffered a nervous attack. He lay unconscious for about two weeks, whereupon Tchaikovsky's doctor ordered a new life without Antonina.

Modest acknowledged that he could not be dispassionate on the topic of Pyotr's marriage, and described it mostly by quoting letters of Pyotr himself. Recent research (Sokolov, D1994) disputes them both, claiming that the marriage was no accident, that Antonina was no stranger, that Tchaikovsky was not blackmailed, and that his medical emergencies were not spontaneous. His resolve to marry grew out of his concern that Modest was becoming too fond of his deaf-mute student Kolya Konradi. Together with the composer's horror of sexual gossip, this concern brought him to proclaim the virtues of marriage as a corrective to natural inclinations in himself and Modest, expressed in famous letters from the autumn of 1876. Pyotr's sexuality must also have fuelled the coming disaster, as he stressed to Antonina that the marriage be platonic. Yet the folly of this arrangement, the basis of notorious popular psychology in the West which disdains other causes, figures little in the new research. Tchaikovsky's marriage came in the confluence of other developments.

The first was money. Even when his income was high Tchaikovsky overspent, an embarrassing fault which required Jürgenson frequently to send him additional funds. In 1877 his financial situation was acute, a point he raised in correspondence with Antonina, who was coming into an inheritance.

The second was teaching. Tchaikovsky was tethered to the conservatory, and frustrated by the time and energy teaching diverted from composition. While this had long been true, the estrangement implicit in keeping his marriage secret from his colleagues bespeaks a particular dissatisfaction at this time, possibly directed at Nikolay Rubinstein. While grateful to Rubinstein, Tchaikovsky could also recall his mockery of the Artôt affair, his delight when it failed, his capricious judgment of the First Piano Concerto, and his contention that Tchaikovsky should be free to become the glory of Russian music, provided he earned little enough to keep him on the faculty.

The third was inspiration. In memoirs published six months after Tchaikovsky's death, Antonina stated that the cause of their separation was evil tongues claiming that marriage would dry up her husband's creativity. Given Tchaikovsky's perpetual sensitivity on this point, her claim rings true and was confirmed in his deep-seated anxieties during months of recuperation. While sexual orientation surely played a part in the crisis, to focus on it exclusively disregards the threat posed by loss of inspiration. Moreover, Antonina was aware of her husband's sexuality, as she later assured him that he need not worry about her revealing it. For a time the marriage was a topic of family discussion, Sasha reproaching Pyotr for maltreating his wife. But soon his siblings closed ranks behind him, and a sanitized image of Tchaikovsky for posterity allowed Antonina to become, through generations of commentary, a monster.

The disruptions of 1877 brought fundamental changes in Tchaikovsky's life. He had left the conservatory, though the break would not be official for another year. He had also become financially independent after Nadezhda von Meck, a recently widowed, extremely wealthy woman who had conceived an eccentric attachment for his music, began sending him a regular allowance in the autumn. The correspondence between them, which had begun in December 1876, now flowered into one of the great epistolary exchanges in Western music. Conducted over the next 14 years, it is valuable despite the onset of a businesslike tone after a first stage of passionate intensity and the agreement, less eccentric than it seems, that the correspondents never meet in person. In it Tchaikovsky recounted his life, assessed his compositions, and with the exception of some guarded topics, wrote to his 'best friend' a veritable diary.

(i) The Fourth Symphony and 'Yevgeny Onegin'.

Between 2/14 October 1877, when he left Russia, and 25 February/8 March 1878, when he arrived in Clarens for an extended stay, Tchaikovsky travelled, mostly in Italy. He composed nothing new, but finished two works he had begun before his marriage, the Fourth Symphony and *Yevgeny Onegin*. Both respond to the events of 1877; both imply a sympathetic view of Antonina.

He had begun the Fourth Symphony around the beginning of May, and had offered the dedication to Meck. New in expression, the symphony nevertheless recalls earlier pieces: the gesturally related outer movements of the First Symphony, the prominent folksong finale of the Second, the intricate first-movement structure of the Third, and the dense textures and virtuoso scoring of *Francesca da Rimini*, extending in the Fourth to the famous pizzicatos of the Scherzo. The striking 'fate' theme, with its ominous fanfares and enharmonic play on A♭ and G♯ suggesting some covert alien factor, its intrusive return to blur the subsections of sonata form in the first movement and its dramatic restatement in the last, repeatedly hint at alarm and tragedy. A programme for the symphony that Tchaikovsky sent to Meck, surely not intended for the dissemination it has received, does little to dispel these connotations, and further obscures an important aspect of the work: the meaning of its finale.

That meaning resides in the ancient folksong Tchaikovsky used in this movement. 'In the field a little birch tree stood' was among the children's songs he was editing at this time: in the springtime a crowd surrounded the tree, broke off twigs to make wreaths, then danced beneath its branches. Both words and setting are significant. The birch tree is solitary, and it is the image of a woman, not only in its verbal gender, but also graphically: its leaves and branches form a female 'curly-haired one'. The wreaths are wedding wreaths, pointed in the refrain, 'Ay, lyulli lyulli', which derives from 'Lel', the name of the pagan god of love. The crowd that gathers is of unmarried women who perform a round dance and then throw their

wreaths into the stream. Those whose wreaths float on the surface of the water will marry; those whose wreaths sink will not.

The relevance of this song to Antonina's situation is plain. Tchaikovsky had received the first letter from her on about 4/16 April 1877, had sketched the first three movements of the Fourth by 3/15 May, and the finale by 27 May/8 June, a week after his first meeting with her and four days after he proposed. He was thinking of Antonina and the little birch tree in the same time period.

The relationship of *Yevgeny Onegin* to Tchaikovsky's courtship is not in doubt: he was already corresponding with Antonina when the idea of writing *Onegin* caught fire. The striking forecast Pushkin's poem makes of Tchaikovsky's life – Onegin the worldly young man spurning a girl who declares her love in a letter – tends to obscure other topical issues the poet raised, such as the death of inspiration when Lensky is shot and the brutality of social convention. But Tchaikovsky's alterations, for which Pushkin gave little or no cue, bring the biographical relevance of the opera into focus. These include an invocation to the muse in the opening duet of Tatyana and Olga, placed with magnificent nonchalance in the background of Madame Larina's chatter with the nurse; giving voice to Triquet and Prince Gremin, who extol Tatyana as their inspiration; and investing the folk with prophecy, when peasants returning from the harvest sing of an attractive young lad with a cudgel crossing a bridge and calling for an innocent maiden on the other side.

One passage from the Letter Scene warrants special attention. Tatyana's striking question, 'Are you my guardian angel or an insidious tempter?', is set off by its own orchestral introduction, then acts as a melodic refrain for the remainder of the scene. Expressed as rhythm, the same line fits Lensky's famous aria in Act 2, 'Where have you fled, my springtime's golden days?'. This likeness confirms the affinity between Tatyana and Lensky, who should have fallen in love with each other but did not, and marks each character's awareness of the coming of death – Lensky's physically, Tatyana's figuratively. Given Tchaikovsky's sensitivity to words, verbal rhythm can be as important an allusion as melody. This rhythm is a special case because, after the initial downbeat, it fits the prosody of a line from the Orthodox memorial service, 'With the saints have rest' (ex.1). Everything in the lives of Lensky and Tatyana has brought them to a critical point, represented by the downbeat, after which the rhythm fits both Pushkin's actual words and this covert echo of the *panikhida*. Tchaikovsky, who composed the Letter Scene sometime before 6/18 June 1877, had proposed to Antonina on 23 May/4 June. The parallels between life and art seem more than random.

Be these interpretations as they may, *Onegin* represents an advance over *Vakula* in all respects. The characterization is deeper and more sensitive, the contrast of mores brighter – between country and city, and between ancient and modern in the scene with Tatyana and her nurse. A new vividness informs Tchaikovsky's animation of the libretto, in the external brilliance of the dance sequences and the subtle depiction of the change of season. The lesson Tchaikovsky had learnt was to eschew trumped up theatricality. There is neither moral nor *coup de théâtre* nor idle posturing in

Onegin. The opera offers no more than what it is, and it does not disappoint.

In February 1878 Tchaikovsky wrote to Meck of his satisfaction with the symphony and the opera, asserting that he had taken significant steps forward. But the man who took up new composition again after this was psychically wounded. That month he described to Anatoly the dissociative feeling of being a different person from the Pyotr Il'yich who had suffered the events of 1877, and who now pressed out of himself 'weak and rotten little themelets', having to ponder every bar. The manifestations of his wound were not so much in productivity as in a loss of deep musical sense and fertility of invention. As a palliative he took refuge in the suite, or in bravura, or in short pieces where texts or titles provided stimulation and coherence. At the same time new elements entered his thinking to mark the divide before and after 1877. Remembrance, belief and fatalism are henceforth more prominent in his music than before.

No sooner had Tchaikovsky announced to Jürgenson his intention to write some children's pieces and a setting of the Liturgy than he began two ambitious works which laid bare his impairment: the Piano Sonata op.37 and the Violin Concerto.

The concerto opens with a movement based on two happily conceived melodies which submit to effective elaboration. Here Tchaikovsky may have been inspired by the company of violinist Iosif Kotek, a former student of whom he had grown fond, who had served as intermediary between him and Meck at the outset of their relationship, and who now played through the concerto as Tchaikovsky wrote it. The point of the movement is the elaboration of these melodies, the lack of trenchant discourse, amid laboured drives to cadence and a solo cadenza placed à la Mendelssohn at the end of the development, being masked by the continuous bravura of the solo part. Mendelssohn comes to mind again in the slow movement, whose introduction forestalls any hint of the principal melody, making the effect of the Canzonetta theme a complete surprise. After a long introduction the dashing finale, a rondo with Slavonic verve, is interrupted in its headlong rush only in the middle section. Here, without warning, Tchaikovsky invokes Tatyana's *panikhida* rhythm in the same instrument (the oboe) that he announced it in the opera. In this totally dissimilar context, it is a gesture of remembrance.

Remembrance of a more unflattering kind is implicit in the Piano Sonata. In contrast to the Violin Concerto its thematic materials are inert and undistinguished, marked by uninventive, possibly unintended allusions to other composers. Of these there is an odd collection: Meyerbeer, Tchaikovsky himself, the *Dies irae*, and perhaps most importantly, Schumann, whose Sonata in F♯ minor may be the source not just of allusion (cf the opening of its first movement with bar 18 of the Sonata), but also of the rondo-like mosaic of sections which constitutes the structure. This is Tchaikovsky's grandest and most derided composition for piano, marked by sterile note-spinning, yet requiring a technique so commanding as to feign artistic merit.

In contrast, the *Album pour enfants* op.39 is an unheralded success. Whereas Schumann's influence in the Piano Sonata was noticeable but

unacknowledged, in the *Album pour enfants* it is explicit but unjustified. The audience for Schumann's *Album für die Jugend* is not clear, as the pieces are tedious and repetitive, their technical demands unsuitable for children. Tchaikovsky's music is altogether more congenial, blending the perfect reckoning of rhythm, texture, hand position and fingering with a kinship of title and musical content to delight young players. He wrote the pieces at Kamenka and dedicated them to his seven-year-old nephew Bob Davïdov, to whom he would later dedicate the Sixth Symphony. Hovering behind the inspiration of setting, dedicatee and possibly Mme de Ségur's *Les malheurs de Sophie*, given the composer's recuperative state at the time, is remembrance – of Votkinsk, Dürbach and his own childhood routine, mimicked in the titles and grouping of these pieces into a diurnal cycle.

The Six Romances op.38, composed between February and July 1878, constitute the composer's occasional diary. The first to be composed, *Lyubov' mertvetsa* ('The Love of a Dead Man'), his only setting of Lermontov, is a gloss on Tchaikovsky's present situation of still feeling human passion from which 'death' did not release him. *Pimpinella* was copied from the performance of an Italian street singer, a postcard from his Italian journey. *To bïlo ranneyu vesnoy* ('It was in Early Spring') and *O, esli b tï mogla* ('O, If Only you Could') are both love songs on the surface, but the first ends with an apostrophe to remembrance and the second juxtaposes present sorrow with past happiness. *Serenada Don-Zhuana* ('Don Juan's Serenade') is about insanity; its terrifying aspect, explicit in the sanguine text, enhanced by Tchaikovsky's unsettling melody in the right hand and the vocal swagger of an idiomatic performance, conveys danger and irrational violence.

Hints of controversy surround Tchaikovsky's sacred music, almost all of which dates from this period: the Liturgy of St John Chrysostom op.41 (1878), the Vesper Service op.52 (1881) and the Nine Sacred Pieces (1884–5). It is in part a controversy over motivation, and why Tchaikovsky took up sacred art in the first place. Recent tragedy is reason enough in 1878 for him to ponder his belief, though he also held St John's liturgical text in high regard and claimed that Orthodox music needed reform, to be purged of Italianisms introduced in the 18th century. The express wish of Aleksandr III motivated some of the Nine Sacred Pieces, yet Tchaikovsky's detractors still faulted his doctrinal pedigree, alleging secularism, scepticism, even atheism.

Legal controversy surrounded the Liturgy of St John Chrysostom. Jürgenson published the music after it passed the ecclesiastical censor, whereupon Nikolay Bakhmetev, Director of the Imperial Court Chapel, invoking that institution's right to approve any sacred music published in Russia, confiscated some 140 copies of the print because Jürgenson had not secured his approval. Jürgenson brought suit, disputing the Chapel's privilege, and ultimately prevailed in a decision whose effect was a resurgence in the composition of music for the Orthodox Church.

Tchaikovsky's sacred music is revered today, but some of his contemporaries faulted its prosody, harmonization and devices thought to be Western. Its predominantly homophonic textures and tendency to frequent, direct, joyful proclamation have no source in European models.

Its occasional imitation or striking chord progression, which appear to refute his reformist ambitions, may be rooted in Glinka's conception of Orthodox style as fundamentally chordal with occasional artifice. When writing the Liturgy, a free composition, Tchaikovsky's effort to revive his recently foundering muse may have affected his commitment to sobriety of style, producing distinctive harmonies and textures. These could be attributed to individual creativity irreverent of the text. Similarly, his use of regular metre in the Liturgy (abandoned in the Vesper Service, which comprised settings of particular chants) may have upset the expected speechlike prosody of traditional choral chanting. Yet Tchaikovsky's sacred style also had its champions, and in time it became a model for other composers.

Tchaikovsky, Pyotr Il'yich, §4: Marriage & its aftermath, 1877–85

(ii) The break with Moscow.

Tchaikovsky left western Europe for Kamenka on 9/21 April 1878, worked on these pieces for a month, then travelled during the summer, briefly to Moscow, then to friends and relatives. Unlike earlier summer holidays, which produced big works such as *Vakula* and *Swan Lake*, this one brought forth only bits and pieces. Rubinstein reproached him for withdrawing his services to the World Exhibition in Paris (where at summer's end he would perform Tchaikovsky's music), while Anatoly devised a complex settlement with Antonina – before she vanished for a time, and with her the best chance Tchaikovsky ever had for a divorce.

As autumn approached he was fretful about returning to work. Writing to Meck from 4/16 to 13/25 September Tchaikovsky made a litany of complaints which persuaded both of them that he must give up teaching. He must live in the country or abroad; the newspapers were attacking Rubinstein and amorous affairs between professors and students at the conservatory, including unprintable ones; even passengers in Tchaikovsky's train were gossiping about his private life. But most of all he craved freedom – a resonant word which Meck affirmed in her response – and predicted, if it be denied, the onset of misanthropy and an aversion to composition. Ostensibly sincere, his complaints seem designed to assure Meck's continued support. When it came he moved decisively, unwilling to stay, as he had agreed, until the end of term. Back from Paris, Rubinstein toasted Tchaikovsky for the prestige he brought to the Moscow Conservatory. But it was too late: Tchaikovsky's last day as a professor was 6/18 October 1878.

The nomadic life for which he had expressed a desire was now his. Some 20 months of the next six years he spent outside Russia, and easily as much wandering within its borders, alighting from place to place for a few weeks at a time. That his departure from the conservatory eased the irritations of obligatory labour is beyond question; that freedom made him a better composer is not so clear. The fluency of inspiration he had enjoyed in his youth would henceforth revisit but occasionally. The disruptions of travel were partly to blame, as were family emergencies not of his making. But freedom and travel did not manifestly hasten his recuperation. In fact, Tchaikovsky's new freedom broaches the hackneyed question of whether great art is linked with anguish in the artist. In light of *Onegin* and the

Fourth Symphony this would seem to be true. Upon reflection it becomes a glib and problematical assumption.

Some things stayed the same in Tchaikovsky's compositions between 1878 and 1885. In opera he continued to cope with a theatrical instinct which sanctioned fundamental lapses in dramatic sense and featured musical externals ever more expert and lavish. His solo songs, notably those of op.47 (1880), continued to offer commentaries on his life – in this case a painful encounter with Antonina – while projecting a nonchalant public face. His programmatic festival overture *1812* (1880) and the *Manfred* symphony (1885) continued to juxtapose music of great beauty with noise and fray. Of these, *1812*, apart from the cannon which make it popular and festive, warrants attention for quoting a liturgical melody (the opening theme) and the national anthems of Russia and France. The brassy statements of 'La Marseillaise' are another mask for personal memory, echoing Litolff's *Ouvertüre zu Maximilian Robespierre*, a favourite work of Tchaikovsky when he was a student.

The focus of new composition in these years was the orchestral suite, which became a musical commentary on the composer's freedom. In April 1884, writing to Meck, Tchaikovsky affirmed that his sympathy for the suite originated in the freedom it offered him from the constraints of tradition, convention and rules. As a personal expression, the suite may represent an artistic rebellion comparable to Tchaikovsky's rebellion against the conservatory, or simply the admission that he had yet to recover from the shocks of 1877. A certain motleyness and the eschewal of personal confession mark the suites and provide a point of departure for critique. Yet the expectation that Tchaikovsky's music always engaged the emotions is itself biassed, disallowing him any penchant for experimentation or for expressing the beautiful, the charming, or the piquant without angst.

In the First Suite Tchaikovsky seemed to be groping to define the genre. The controlling conception is not clear, as the music projects connectivity and discourse in certain movements, and beauty for its own sake in others. In the opening movement, an 'Introduzione e fuga' linked by its title to the Sixth Suite (1871) of Franz Lachner, Tchaikovsky separates the introduction from the fugue proper by a fugal exposition whose motif is then combined with the opening theme. This anticipation of the fugue and the integration of themes suggest purely musical discourse, and establish a premise early in the suite in conflict with those discrete movements whose appeal is more to charm than logic. His quotation of the fugue subject at the end of the last movement, a Schumannesque gesture of unification which operates above or across the separate movements, compounds the confusion. The abandoned titles of the fourth movement, 'March of the Lilliputians' and the Gavotte, 'Dance of the Giants', suggest initial associations of grotesquerie with the new genre. Brass fanfares reminiscent of the motto of the Fourth Symphony in the introduction and the scherzo may be fatalistic personal touches.

For all this mix of features, a new genre was emerging in the distinctive concertante elements, contrasts between the movements, simple formal patterns, the exploitation of the characteristic, and the emphasis on what

Russians would call *prelest'* – the charming, the pleasing – not least in capricious rhythms.

Tchaikovsky's experiment with freedom continued in his next instrumental work, the Second Piano Concerto (1879). Its expansive first movement, with tripartite exposition and lengthy cadenzas, is followed by a striking Andante. Here the piano is joined by solo violin and cello to form a concertino grouping in the manner of a concerto grosso. A rondo concludes the work.

The dedication of the Second Concerto to Nikolay Rubinstein betrayed powerful unspoken sentiments. In it Tchaikovsky seemed to make amends for his abrupt departure from the conservatory the year before, to thank his former colleague for his long advocacy, and to effect a true reconciliation after their differences over the First Piano Concerto in 1874. Homage to Rubinstein, whose interpretation of Beethoven's Fifth Symphony was considered superior to those of Hector Berlioz and Richard Wagner, may have moved Tchaikovsky to make his concerto an answer to Beethoven. A slow movement unique in conception and eloquence heads the list of reconceived likenesses with Beethoven's Concerto in G, which extend in the first movement to subsidiary themes in the same keys as Beethoven, a prominent new theme in the development, and the unexpected importance of C major (in Beethoven as the 'wrong' initial key of the finale, in Tchaikovsky for its emphasis in the first movement). Little doubt of his purpose remains at the close of the slow movement when Tchaikovsky refers openly to the analogous location in Beethoven's Fourth (at bar 286ff). He affirmed his esteem for Rubinstein by rejecting Ziloti's later attempts to mutilate the slow movement. The concertino had to stay, as it was somehow associated with Rubinstein: when he died in March 1881, about a month after the score of the concerto was published, Tchaikovsky apostrophized his memory in a trio for precisely the instruments of this concertino.

Before Rubinstein's death Tchaikovsky had reverted to order and limitation in the Serenade for Strings (1880). A string quintet in texture, it neutralized orchestral colour as an element of form. In contrast to the freely associative coherence of the First Suite, the Serenade holds together by as closely knit a motivic network as Tchaikovsky ever wrote, based on the descending melodic tetrachord at the beginning and on ascending scales, first at bar eight of the Sonatina, which are transformed in the waltz theme of the second movement and the introduction of the third. He also invokes now familiar strategies: the Serenade is an essay in Western/Russian rapprochement which favours Russian at the end, in that the Pezzo in forma di sonatina lacks a formal transition and development, which Tchaikovsky pointedly restores in the finale, reconciling his Russian tune with Western pattern and practice. To progress from an 'imperfect' first movement to a 'perfect' last one recalls Beethoven again, as does the finale's elegant introduction, which effectively elides the last two movements. Tchaikovsky could have drawn this idea from a number of Beethovenian models – 'La Malinconia' of op.18 no.6, op.95, or his final use of this device in op.135.

Rubinstein's memorial, the Piano Trio 'To the Memory of a Great Artist' (1882), combined experiment and conformity in a different way. With no clue except the dedication, the listener senses the music to be topical. Tchaikovsky showed an easy command of sonata-allegro in the first movement, but after a conventional beginning the theme and variations runs to the fanciful. Figural variations and a fugue mix with intonations of the music box, the waltz, the bayan and the mazurka – as if these were personal recollections of Rubinstein. To stem the flood of memory he set apart the weighty final variation, and reprised the opening theme of the first movement as a funeral march at the end.

The Second and Third Suites are musical perorations on freedom. Tchaikovsky wrote the Second between July and October 1883, after four months of enforced residence in Paris during which he helped his niece Tanya Davïdova, morphine addicted, pregnant and unwed, through detoxification and childbirth. These circumstances, of which Modest omits mention in *The Life*, may explain the work's eccentric expression, unusual demands of ensemble and scoring (including four accordions), striking image (a touching 'Rêves d'enfant', which may refer to Tanya's newborn) and blatant contrasts. These components can produce an impression of strangeness, randomness, even vulgarity. The pleasing expression of one movement may not survive juxtaposition with the next – the Scherzo burlesque followed by the 'Rêves d'enfant' followed by a Dargomïzhskian 'Wild Dance'. As the reception of the Second Suite has shown, freedom so unrestrained promotes disinterest and confusion in the listener. This work represents Tchaikovsky's inspiration at its most wilful, its furthest remove from the integral logic of Western models.

By contrast, the Third Suite, drawing on devices used in the Serenade for Strings and the Piano Trio, illustrates the virtues of discipline without abandoning the generic markers of the suite. It is still a miscellany of movements which depend for their effect more on charm than argument. Tchaikovsky continues to avoid the rhetoric of Western music, but favours motivic consistency and colour. The juxtapositions of style in the Second Suite yield here to consistency and intermovement likenesses of pattern and metre, which increase in excitement from movement to movement in anticipation of the finale.

The finale takes its form from the last movement of the Piano Trio: a conventional beginning leads to fanciful variations, and then to an apotheosis set off from the rest of the movement. It draws its expressive arch from the Serenade for Strings, proceeding from a Western perspective to a Russian one. As this happens, the fanciful variations are no less vivid than they were in the Trio, but their connotations are unmistakable even in the absence of verbal clues. By the fourth variation Tchaikovsky has abandoned the Western cliché of consistent figuration over the bass of his theme; by variation seven he has neutralized its original character, in variation eight made a bow to Glinka, and in variation nine adopted the Russian changing background manner. The national identity achieved, he specifies his goal more precisely as courtly and monarchical in variation ten, music for a classical ballerina's solo, and in the apotheosis, variation 12, a polonaise full of pomp and ceremony.

It is tempting to attribute the reception of this vastly successful work to its auspicious première at St Petersburg in January 1885, conducted by Hans von Bülow, and performances by Tchaikovsky himself from St Petersburg to New York. That success, however, may find its origins in Tchaikovsky's curbing the extreme freedoms of its predecessor, in his leavening of novelty with control and accessibility.

The Concert Fantasia for piano and orchestra op.56 (1884) is an offspring of the Third Suite in that themes conceived for that work are used in its second movement, 'Contrasts'. It is Tchaikovsky's last essay in suite-like freedom. Its point is virtuosity, echoing a time when audiences (to paraphrase Laroche) were less concerned about what was played than how. Tchaikovsky takes his themes beyond their potential for elaboration. The solo cadenza is raised to a higher power in the first movement, where it trumps a development section with what could be, in the virtuoso frame of reference, a fantasia on the principal motif of Vasco da Gama's 'O paradis!' from Meyerbeer's *L'Africaine*.

For Tchaikovsky the need to be planning or composing an opera was constant. In this period he wrote *Orleanskaya deva* ('The Maid of Orleans', 1878–9, first performed in 1881), on the life of Joan of Arc, and *Mazepa* ('Mazeppa', 1881–3, first performed in 1884), an episode in the life of that Cossack hetman. In addition, *Yevgeny Onegin* was first produced in 1879, by students of the Moscow Conservatory, and staged in St Petersburg in 1884.

In *The Maid of Orleans* Joan is summoned by an angelic choir to battle for Charles VII, a profligate and cowardly monarch. In combat her mercy towards an enemy knight turns to love. At Charles's coronation, Joan's father turns everyone against her by accusing her of Satanic powers. Banished, Joan exchanges endearments with her lover, he is slain, and she burnt at the stake.

After consulting many sources Tchaikovsky versified this scenario himself, drawing mainly from Schiller, whose idealism is mitigated by prosaic historical fact and operatic convention. Tchaikovsky's portrayal of Charles (who is valiant in Schiller) raises doubt about the wisdom of Joan's allegiance, while ambiguity over the nature of her passion annuls the credibility of the opera's love interest. In Schiller Joan must resist earthly love. In Tchaikovsky she faces no such imperative; she is simply empowered by her virginal purity. When later, Isolde-like, she raises her sword to kill Lionel (who becomes her lover) but forbears when moonlight illuminates his face, her loss of free agency is no more willed than that of Wagner's heroine when her glance meets Tristan's. This precludes any guilt and any justification for her denunciation, and reduces her love, in the absence of Wagner's elaborate philosophizing, to an empty dramatic device. No personal passion or conflict in Joan (who says nothing in her own defence) offsets the grandiose elements of Tchaikovsky's conception, leaving the libretto devoid of the attribute he would later extol as 'intimate character'.

The choice of topic raises questions. Tchaikovsky's fascination with Joan reached back to childhood, but his denunciation of grand opera (to Taneyev on 2/14 January 1878) – decrying its massive stage effects and

mocking the feelings of high and mighty characters – is inconsistent with this project. Explanations advanced for his choice based on the composer's affinity with Schiller's androgynous Joan are probably too limiting; more persuasive is Tchaikovsky's need for reassessment at this juncture of his life, and finding in Joan the outsider 'the liberating artistic vehicle through which he might create such a reassessment' (Kearney, E1998). In this light the opera is less an essay in sexuality than a study in the complexity of human nature and the ambivalence of human relationships.

The Maid of Orleans is a hybrid. The historical subject with religious components, big choral scenes, and elaborate ballet all point to Paris, as do certain particulars (Joan's father is a curmudgeon like Marcel in *Les Huguenots*, and the coronation at which a parent defames a child proclaimed as divine derives from *Le prophète*). Tchaikovsky uses Russian precedents to cleanse preposterous and cynical elements from the French prototype: Joan, like Musorgsky's Boris, is flawed but sincere, and the opera's religious element is meant to be taken seriously. Unlike the assassins in *Les Huguenots*, the people in *The Maid* are socially aware, even if susceptible to malign influence.

The best music in *The Maid of Orleans* overcomes the libretto and Tchaikovsky's practice of composing text and music in tandem. Joan's farewell to the forests, the prayer which precedes it, the engaging Dance of the Jesters, the fleeting duet of Charles and Agnes, the effective orchestral introductions, continued in *Mazeppa* – all these command the listener's attention amid verbose passages which betray the composer's fatigue, remarked in letters, or which illustrate his preoccupation with narrative coherence in a genre which thrives on the lyric elaboration of simple emotions.

Tchaikovsky's initial enthusiasm for this opera was muted by the trials of publication, difficult rehearsals, censorship (the problem of an archbishop on stage), and obligatory modifications. Critics savaged it after the first performance on 13/25 February 1881, and its run was cut short the next autumn by the absence of a singer for the title role. It was nevertheless Tchaikovsky's first opera to be produced abroad (in Prague in July 1882). He recognized the need for revisions, but never made them.

Mazeppa was different. Set to a ready-made libretto, it was less tinkered with in relation to its sources than *The Maid of Orleans*. The wizened Mazeppa, treacherous after many battles, has fallen in love with his goddaughter Maria, and she with him. This scandalizes Maria's parents and Andrey, a young Cossack sore with love for her. Maria's father Kochubey denounces Mazeppa as a traitor to Peter the Great, but Peter, unconvinced, delivers him back to Mazeppa, who sees to his torture and execution. At the Battle of Poltava, represented in the opera by a symphonic picture, Mazeppa does in fact turn against Peter. Fleeing in defeat, he encounters Maria, driven to madness by her father's execution, and Andrey, whom he wounds in a fight. Witless, Maria sings Andrey a lullaby as he dies.

Despite the pairing of old man and young woman, the obligatory Russian genre scenes, and the occasional overblown ensemble, *Mazeppa* is one of Tchaikovsky's great creations. A new eloquence in the orchestra is partly

responsible. Horrors of the narrative notwithstanding, Tchaikovsky's characterization is consistently noble and cantabile, whether in Mazeppa's apostrophes to Maria, or Kochubey's meditations before his death, or the refrain Maria's mother sings as she urges her to intercede with Mazeppa to prevent Kochubey's execution. The shattering effect of Maria's lullaby is unprecedented in earlier Tchaikovsky. Here calm and quiet magnify the tragedy, a device not lost on Stravinsky at the end of *The Rake's Progress*. *Mazeppa* succeeded in Moscow, stalled in St Petersburg after bad performances and a hostile press, and surprised the composer by the brilliant outcome of a production in Tbilisi in 1885.

Tchaikovsky, Pyotr Il'yich, §4: Marriage & its aftermath, 1877–85

(iii) Reception outside Russia.

As the composer focussed inwards, struggling to reaffirm his life and to reignite the fires of his inspiration, the fame of his music began to spread outside Russia (as it continued to grow within) during the last half of the 1870s. After a concert in Moscow in Lent of 1874 Hans von Bülow began learning Tchaikovsky's music, and went on to praise the First String Quartet, *Romeo and Juliet* and other works in a German newspaper later that year. He would become an important mentor, playing the solo part at the première of the First Piano Concerto in Boston in 1875, conducting its German première at Wiesbaden in 1879, and taking up many other Tchaikovsky works in subsequent years.

The next milestone after Bülow's recognition was Hans Richter's conducting of *Romeo and Juliet* in Vienna in November 1876. Tchaikovksy's reception was hampered by the conservative, somewhat eccentric Viennese response to new music (as the reception of Wagner and Bruckner illustrates), and by the hostility of the critic Eduard Hanslick. When the Violin Concerto was played there in 1881 it brought forth a firestorm of insults, of which Hanslick's ('stinking music') is the best known. These condemnations, however, loom small in the general embrace of Tchaikovsky's music outside Russia.

Years before Hanslick's insult to the Violin Concerto, Camille Benoît had sympathetically introduced Tchaikovsky's music to the readers of the *Revue et gazette musicale de Paris* (17 and 24 June 1877). In 1876 the composer himself had approached Edouard Colonne about the use of his orchestra for an all-Tchaikovsky concert, but abandoned the project for lack of money. For its first significant exposure to Tchaikovsky's music Paris awaited the International Exhibition of September 1878, in concerts by Nikolay Rubinstein; two months later Turgenev reported to Tolstoy that Tchaikovsky's reputation had grown as a result. But greater reputation did not bring a rash of performances: in the spring of 1879 Tchaikovsky witnessed the indifferent response of Colonne's audience to his *The Tempest*, and after Meck had sponsored a performance of the Fourth Symphony in 1880, he discouraged her from further adventures of this kind. Only with the advent of a Parisian publisher, abetted by Tchaikovsky's own conducting career in the later 1880s, did his acceptance there gradually increase.

In September 1878 Benjamin Bilse conducted *Francesca da Rimini* in Berlin, the first of many Tchaikovsky performances in that city, which

extended over the next decade to other German venues, notably Leipzig and Hamburg, the headquarters of his German publishers. Meanwhile the beginnings of an energetic following for Tchaikovsky's music had been established in London with a performance of the First Piano Concerto on 11 March 1876. In the United States there had been performances of the first and second string quartets in Boston by January 1876, in the wake of which Bülow reported to Tchaikovsky that in America he was already counted among the five most important contemporary composers, along with Brahms, Raff, Saint-Saëns and Rheinberger – a selection the composer found irritating.

The years 1877–85 were the most complex in Tchaikovsky's life. At first recuperative, they became free with the providential intercession of Nadezhda von Meck. But freedom turned into a ship without an anchor, often bound for Europe. Wandering finally prompted him – possibly in 1881 – to ask where he truly belonged. The failure of *The Maid of Orleans*, Nikolay Rubinstein's death, the assassination of Aleksandr II, Nápravník's resignation from the Russian Musical Society in St Petersburg, the first threat to Meck's fortune, all in that year, reminded him that support for neither his person nor his art was assured. The marriage crisis had eased, the flow of new compositions restored, and the joy of wandering flagged, when Tchaikovsky realized it was time to go home, find a place to live and get a job.

Tchaikovsky, Pyotr Il'yich

5. Return to life, 1885–8.

(i) Biography.
(ii) Works.
Tchaikovsky, Pyotr Il'yich, §5: Return to life, 1885–8

(i) Biography.

Frequent travel had come to mean having no place to go; a home meant escape from the hospitality of others. Knowing this, Tchaikovsky rented a house on 5/17 February 1885 in Maydanovo, one of several residences he would occupy in or near the town of Klin, about 90 kilometres from Moscow, for the rest of his life. His first calendar year of residence, 1885, was the only one between 1869 and his death spent wholly within the Russian empire.

His job was to promote the interests of Russian music. Soon after Nikolay Rubinstein's death Tchaikovsky had resisted offers to return to the conservatory and the Russian Musical Society. His disdain for public life never diminished, but his celebrity (he explained in 1889) obliged him to be involved regardless. In time Rubinstein's death and the difficulty of replacing him must have prompted Tchaikovsky's resolve, which brought him two principal occupations. The first was director of the Moscow branch of the Russian Musical Society. In this capacity he invited in the 1889–90 season a galaxy of international stars to conduct in Moscow, including Brahms, Klindworth, Dvořák, Colonne and Massenet (Brahms declined, Massenet postponed). Once that season, when Rimsky-Korsakov despaired over a lethargic percussionist, Tchaikovsky elected to play the castanets in the *Spanish Capriccio* himself, a strategy that braced the ensemble. He had duties to the Moscow Conservatory as well, but did not

return to teaching; he supported Taneyev as director, attended examinations, and brokered sensitive negotiations with the staff.

His other occupation was conducting. Despite occasional interest in reviving this skill, Tchaikovsky had conducted but once in public for almost 20 years when in December 1885 he agreed to conduct the première of his opera *Cherevichki*. This took place on 19/31 January 1887 after lessons from Hippolyte Altani of the Moscow Opera, and was followed by *Charodeyka* ('The Enchantress') in October. On 15/27 December 1887 Tchaikovsky embarked on the first of many conducting tours. These brought travel (a trip to America was pondered in July 1888), contacts with many important musicians, the dissemination of his music and new publishing outlets. He conducted mostly his own music, but also Mozart, Beethoven (symphonies including the Ninth), Gounod (*Faust*), Anton Rubinstein, Borodin, even Laroche and Heinrich Ernst.

One outcome of Tchaikovsky's labour was to win recognition in high places. In 1884 he had been awarded the Order of St Vladimir, Fourth Class, and an audience with the tsar. In 1886 he revived his correspondence with the Grand Duke Konstantin Romanov, from whom he learnt that the empress wished him to compose something for her. With the grand duke, a poet, he engaged in learned debate on various topics, from Russian prosody to Beethoven. In 1888 Aleksandr III awarded Tchaikovsky a lifetime pension. For the last decade of his life he enjoyed the mentorship of Ivan Vsevolozhsky, director of Imperial Theatres, who eased the way for the production of his theatre works.

The composer's private life during these years was hardly less eventful. Between November 1885 and August 1889 he abandoned Kamenka, his sister's estate where he once planned a permanent home. His relations with Meck cooled and their correspondence slowed; early in 1886 her fortunes suffered another setback. Old friendships made way for new, including the singer Emilia Pavlovskaya and the composer Mikhail Ippolitov-Ivanov.

Diaries survive for most of the period 1886–9, from which we may divine details of his personal life. There were a number of romantic attachments in 1886, some with tragic outcomes. That year marks Tchaikovsky's deep infatuation with his nephew Vladimir Davïdov, known as Bob. Two years earlier, in a diary entry for 23 April/5 May 1884, we find the first occurrence of the letter 'Z' as a code for 'something indefinite', which irritates and angers Tchaikovsky, followed in a few weeks by the less-mentioned and even more inscrutable 'X'. There is no cogent rationale to associate these letters with homosexuality, which would hardly have been 'something indefinite' to Tchaikovsky at the age of 44.

An ominous counterpoint sounds against the successes of this period in Tchaikovsky's health. He was unwell for much of 1886 and 1887, and came to believe that his final illness had commenced. On 29 June/11 July 1886 he drafted a will, and then, for more than a year, wrote diary entries which chronicle his misery. Meanwhile death stalked his loved ones. Iosif Kotek had died late in 1884, and by 1887 the toll was heavy; on the evening of his conducting début Tanya Davïdova died in St Petersburg; her sister Vera would follow before another year. Contemporaries were

expiring of terrible illnesses, including Nikolay Gubert and Nikolay Kondrat'yev, whose demise Tchaikovsky travelled across Europe to attend for six weeks in the summer of 1887.

(ii) Works.

The press of circumstances and more severe self-criticism made Tchaikovsky less productive during this period, a problem mitigated by his new home and his ability to work efficiently when living in it. His work reflects the new Tchaikovsky, his relationship with the highborn and his reflections on death.

Tchaikovsky received many requests for ceremonial pieces: the *Hymn in Honour of SS Cyril and Methodius* (1885), a Jurists' March for the 50th anniversary of the School of Jurisprudence (1885), A Greeting to Anton Rubinstein and the Impromptu in A♭ (1889), celebrating the 50th anniversary of his teacher's artistic activity. He composed the *Dumka* (Russian rustic scene) op.59 (1886), for his Parisian publisher Félix Mackar, and the Valse-scherzo in A major (1889) for the first issue of the journal *Artist* (1889).

In the songs of this period Tchaikovsky is more courtier than diarist. The romances of op.60 are a sampler offered in response to the empress's request; those of op.63, on texts by Konstantin Romanov, are an expression of esteem for his royal friend. In the songs of op.65 the composer is courtier as a troubadour to his lady. Set to French texts, they are dedicated to Désirée Artôt, with whom Tchaikovsky was warmly reacquainted in 1888, almost 20 years after their failed engagement. The poems are both flattering artifice and impassioned declaration.

He wrote some music in times of distraction. The Fourth Suite (*Mozartiana*) occurred to the composer in May of 1884 while he was translating *Le nozze di Figaro*, but was realized only in June and July 1887. Orchestrating four pieces of Mozart with Tchaikovsky's gift for sound was a happy idea. The gigue works best in its new raiment, though lovers of the *Ave verum corpus* as Mozart wrote it might not settle for alternatives, let alone one with Tchaikovsky's *Lohengrinesque* close. The period of his work on the 'Preghiera' is pertinent: he began it under treatment for his own medical problems, and finished the entire suite while attending the dying Kondrat'yev. The *Pezzo capriccioso* for cello and orchestra, a concertante piece in the mould of the *Sérénade melancolique*, was also composed during that visit.

The great orchestral works of this period – *Manfred*, the Fifth Symphony and *Hamlet* – warrant consideration together. *Manfred* was assigned to Tchaikovsky by Balakirev in 1882; Tchaikovsky initially resisted, and composed the work in 1885 merely to fulfil his promise. His resistance lay partly in the mixture of cheek and creative impotence whereby Balakirev, who demanded respect as a composer, generated work for Tchaikovsky that he could not do himself and then badgered him into doing it. Balakirev's eunuch-like control was only one problem: his programme was too blatant, too redolent of the New German School; *Manfred* was a heavy, complex work not well matched with the demands of Tchaikovsky's public

responsibilities; and he was growing cool towards programme music in general.

Objections notwithstanding he proceeded, with mixed results. In the flood of notes irritation – or fatigue – may be detected in allusions to Berlioz and Balakirev, but the central problem with *Manfred* lies in the inability of the programme to inspire. Hence the insubstantial scherzo, a sound picture indebted to 'Queen Mab' that goes on too long, and the Pastorale, an incoherent chain of themes. The finale is unredeemed by the mechanical reprise of the first movement at the end, or by the grand effect of the organ. The first movement, in contrast, nicely conveys the sense of Manfred's brooding, and explains why Tchaikovsky contemplated making it a tone poem, and dispensing with the other movements.

Manfred left its mark on the Fifth Symphony and *Hamlet*, composed in the summer of 1888. It provided structural models and left an intertextual trace on the later works (the fourth movement of the Fifth Symphony, bar 122 from the fourth movement of *Manfred*, bar 151; *Hamlet*, bar 363 from the third movement of *Manfred*, bar 267). In the Fifth Symphony Tchaikovsky clearly wished to show what the motto symphony could do free of troublesome external specifications. To this end, he unified its diverse movements with devices more subtle than the motto theme. These comprise motifs which occur across movement boundaries and a rationale of keys which spans the entire symphony. Moreover, a fine sense of oratory informs the symphony, a flawless reckoning of timing and logic in the immediate succession of ideas, which assures its success despite the occasional blatant effect.

Whether the Fifth Symphony has a programme, and what it is, have generated much discussion. An incoherent sketch about bowing to fate, grumbling, doubt, complaint and reproaches has been attached to the work because the composer wrote it shortly before beginning the symphony. But these words make little sense in relation to the finished work, and came well before the burst of creativity in which most of the symphony was composed. Tchaikovsky wrote to Konstantin Romanov that it had no programme. And yet it submits to narrative interpretation, it projects a lucid sequence of persuasive thoughts, without which its legion of admirers could not be explained. Tchaikovsky, emulating Schumann's Second Symphony, could have written a motto symphony without a programme, but that explanation is too glib for his treatment of the motto, which is radically transformed from movement to movement.

A solution to this enigma may lie in verbal rhythms. Recalling the composer's habit of modifying references slightly in musical allusions, the rhythm of his motto (omitting the pickup to the third beat) corresponds to the prosody of the Orthodox Easter hymn, 'Christ is risen!' ex.2. If that connection was intentional, various aspects of meaning in the Fifth Symphony would be clarified. The triumphal variant of the motto in the last movement would be more than a defeat-to-victory cliché, while the clash between the motto and the worldly intonations of the inner movements would make sense. Attributing meaning to the motto still would not constitute a programme, but it would make the Fifth Symphony consistent with Tchaikovsky's declaration to Taneyev a decade earlier that

symphonies must express sincere feelings. For these, one needs look no further than the tragedies death had recently strewn in Tchaikovsky's path, of which Kondrat'yev's agonizing end would be the most indelible; it produced a sadness on which Tchaikovsky remarked when composing the symphony.

Hamlet was different. It does not, like *The Storm*, follow its literary model; unlike *Romeo and Juliet* or *The Tempest*, it has no composed programme; unlike *1812*, its music is not so obvious as to make a programme unnecessary. Nor does it follow a classical pattern, which would provide coherence independent of external meaning. Tchaikovsky offered only the title to explain five contrasting themes deployed in various keys and oddly articulated, now with pauses, now elided. Other than a periodically affirmed interest in Shakespeare's play and a request for a piece to be played at a charity concert, no stimulus for its composition can be identified. Unless, that is, *Hamlet* is an epigone of the first movement of *Manfred*, the tone poem that movement never became. In sketches Tchaikovsky warned himself not to begin too much like the beginning of *Manfred*. He may have succeeded as to theme, but there is no doubt of likeness as to strategy: what seems initially an introduction turns out to be a first thematic group, followed by bluntly articulated expressive contrasts. The differences are equally telling in devices whose effectiveness in *Manfred* he did not replicate: vividness of idea, and a clear sonata-allegro sharply focussed by omitting the development.

While his reason is not known – it may have been director Vsevolozhsky's persuasion, or the coronation pieces of 1883, or simply personal choice – Aleksandr III showed Tchaikovsky special favour. His support for Tchaikovsky's stage works was exceptional among Russian composers, welcoming the next regardless of its predecessor's fate, and expecting a new composition every year or two. This expectation became a rhythm of Tchaikovsky's life: *Mazeppa* had been staged in two major houses simultaneously, with first performances in Moscow and St Petersburg days apart. Later in 1884 *Yevgeny Onegin* was produced in St Petersburg, then opened the season in 1885 with a new écossaise composed for the revival.

The day after he moved into his own home Tchaikovsky began work on *Cherevichki* (a type of slippers, sometimes ornate, worn by women in the Ukraine). It was a revision of *Vakula the Smith*, of which, since 1878, Tchaikovsky had lamented the excesses of his inspiration. Between 15/27 February and 22 March/3 April 1885 he simplified its harmony, lightened its texture, improved its melodic lines and added numbers. Of these, couplets in Act 3 for an unnamed regal poet may represent Tchaikovsky the courtier paying homage to Konstantin Romanov. Utterly unrelated to Vakula's ride on the devil's back to fetch the Tsaritsa's *cherevichki* for Oxana, their very detachment makes this point.

Cherevichki lasted seven performances, in 1887. The new facture did little to bring out the Gogolesque in the story. Tchaikovsky exempts Oxana and Vakula from ironic scrutiny (which Gogol spared no-one), distancing them from the overtly comical characters, who look eccentric as a result. 450 additional bars did little to quicken the opera's pacing. The lyrical element still prevailed; the work was still more operetta than comedy.

Shortly before revising *Vakula* Tchaikovsky had chosen his next opera, *The Enchantress*, on a play by Ippolit Shpazhinsky, to a libretto by the playwright. The Prince of Nizhniy Novgorod seeks to close a disreputable tavern but instead falls in love with its proprietress, Nastas'ya. His jealous wife learns of this and plots Nastas'ya's death. The Prince presses his suit but Nastas'ya rejects him, as she secretly loves Yury, his son, who comes to avenge his mother. Nastas'ya pleads innocence and confesses her love to Yury, 'enchanting' him. They agree to elope, and are about to flee when the Princess, in disguise, poisons Nastas'ya, and the Prince, in a fit of jealousy, kills his son. The opera ends as the Prince dies, convulsed in guilt.

In proceeding with this scenario, Tchaikovsky disregarded advice, common sense, and any residual theatrical instinct he possessed. The double love triangle of Nastas'ya/Princess/Prince and Nastas'ya/Prince/Yury was promising but hopelessly cumbersome without radical curtailment. Shpazhinsky filled the libretto with unnecessary lines, people and action, thus diffusing characterization, obscuring plot direction, and losing critical emotions and events in a welter of incident. In the course of the opera's long gestation Tchaikovsky came to realize these problems. He resorted to last-minute revisions, but to no avail.

The music speaks where it has the opportunity. Set in 15th-century Russia, the opera made ethnic genre painting a staple rather than a seasoning. As a result Tchaikovsky wrote many effective choruses and ariosos; but as the press of period style wore thin, he slipped from imagined 15th-century into the more congenial sound world of Russo-Western mores in *Yevgeny Onegin*. Accommodating inessential words made *The Enchantress* even more short-winded musically than *The Maid of Orleans*; the listener yearns for expansive soliloquy. *The Enchantress* received its just deserts in the press, ran for 13 performances in St Petersburg and was transferred to Moscow. There, in 1890, it was given one performance.

Tchaikovsky's fortunes in the theatre were about to change. His mentor Vsevolozhsky was a maker of collaborations who aspired to the *Gesamtkunstwerk*. A graphic artist and balletomane, he dreamed of the perfect ballet, with music elevated to the level of artistry his dancers and choreographers had already achieved. When his last official ballet composer retired in 1886, Vsevolozhsky seized the moment: he called a meeting with Tchaikovsky and first balletmaster Marius Petipa. Thus began the greatest collaboration of Tchaikovsky's career.

Tchaikovsky, Pyotr Il'yich

6. Years of valediction, 1889–93.

In this last years, Tchaikovsky's music projected, in its concern for legacy, adherence to the highest standard, and its subtext, a late style rooted in the philosophical distinction between 'of this world' and 'not of this world'. Implicit was a sense of farewell, stimulated by his contemplation of death, and expressed in a range of images from pessimistic to utopian. Farewell had been at issue in the Third Quartet, revisited in Tatyana's anguish and Lensky's death. But after the Fifth Symphony – the closest we can locate this change in his music – valediction became a persistent theme.

It transformed his involvement with the everyday. He still took worldly tasks seriously, accepting more public engagements than ever before and bearing worldly fame and woe as best he could. Fame and woe were much in evidence: celebrating Anton Rubinstein's 50th anniversary jubilee in 1889, resigning from the Russian Musical Society and ending his relationship with Nadezhda von Meck in 1890, journeying to America in 1891, visiting Fanny Dürbach – after 44 years – in 1892, and receiving the honorary doctorate from Cambridge in 1893. But this world was consigned to a separate realm, mitigated by Tchaikovsky's acceptance of mortality as the way of things. When his day came, he would depart this earth with many worldly duties still in prospect.

The everyday was banished from the realm of creativity, where a youthful fluency flowed anew, as if relieved. With peerless skill and seasoned discipline, he accomplished stunning feats, drafting *Pikovaya dama* ('The Queen of Spades') in 43 days, *Spyashchaya krasavitsa* ('The Sleeping Beauty') in about 40, and the Sixth Symphony in about 24.

(i) Late works.
(ii) The last symphony.
Tchaikovsky, Pyotr Il'yich, §6: Years of valediction, 1889–93

(i) Late works.

These accomplishments, notably the theatre works, were not entirely his own doing. Vsevolozhsky recognized that Tchaikovsky's muse could reach extraordinary heights were it not coping with awkward decisions. To the glory of Tchaikovsky's legacy and the relief of his own budget, Vsevolozhsky negotiated the composer's new works, pre-empting Tchaikovsky's errant theatrical judgment. This strategy and Tchaikovsky's late style first came together in *The Sleeping Beauty*, the delayed outcome of meetings with the composer and Petipa in 1886 and the first large work Tchaikovsky created after the Fifth Symphony. With Petipa collaboration was different. Accustomed to lead, Petipa specified his musical requirements for each number. The composer took his advice, worked with him in private, attended rehearsals and made last-minute changes. For his part Petipa braved challenges unprecedented in his own illustrious career by setting music so powerful, diverse and rhythmically complex as Tchaikovsky's. Vsevolozhsky provided the scenario and drew the costume designs.

The tale of a princess who pricks her finger and is cast in a spell for 100 years to be awakened by a handsome prince might seem an unpromising forum for philosophy, especially when so regulated by the medium, so committed to courtiership, so infused with regality. But in the stages of Princess Aurora's life – birth, marriage, death and rebirth – and more profoundly in a fable which tells of overcoming time and evil, transforming evil in the person of Fairy Carabosse from terrifying in the prologue to inconsequential in the Dream Entr'acte of Act 2, Tchaikovsky broaches questions not of this world. His music, invariably *dansante*, ennobling and aptly attuned to the 18th-century pastiche in Act 2, proceeds on a second level untouched by Petipa. Here the contrast in theme between the Lilac Fairy and Carabosse, and the key organization of the entire work, distinguish present and future worlds.

11 days after the première of *The Sleeping Beauty* Tchaikovsky departed for Florence to compose *The Queen of Spades*. No work better illustrates the rejuvenation of his creativity late in life. Comfortably ensconced, free of distraction, he produced his richest, densest composition. It was a pendant to *The Sleeping Beauty*: whereas the ballet contained elements of alarm, its happy outcome was anticipated from the beginning; the opera, exceedingly 'of this world', veers relentlessly towards tragedy.

The reclusive Hermann is in love with Lisa, ward of a rich but aged Countess. The Countess harbours a secret – knowledge of three cards that always win – which Hermann, who abstains from gambling, nevertheless seeks to learn. He confronts the Countess, who dies before giving up her secret but appears to him as a ghost and names the cards. Lisa meets Hermann in the hope that he will affirm his love; when instead he proposes a visit to the gaming hall, she despairs and drowns herself. At the tables Hermann plays the first two cards and wins. He plays the third, and instead of the expected ace, draws the Queen of Spades. The Countess's ghost appears, and Hermann stabs himself.

The libretto, attributed to Modest (with borrowings from others and help from Pyotr), is an expert adaptation from Pushkin which resonates with symbolic meanings and creates a provocative study in ambiguity. Modest rounded out the story by magnifying what in Pushkin were merely hints. From a remark that Hermann is writing his own love notes he built a substantial passion; Lisa's extinguishing a candle generates many references to light and darkness. The celebrant's eulogy at the Countess's funeral that she had lived in preparation for the midnight bridegroom found much service in the opera, from Hermann's meetings with the Countess and Lisa (changed to midnight), to the parable of the wise and foolish virgins in St Matthew, made nearly explicit when Lisa dies, and implicit in many references to sustaining or extinguishing light. This last became a framing metaphor, stated in the opening lines by little girls at play ('Shine brightly, lest the light go out'), a warning unheeded by nature (as a storm overcomes the sunlight, as day gives way to night) and by the principal characters in their ways of death. Late style resides in the opera's treatment of light, symbolically not of this world, of which we are constantly reminded by the darkness.

Unpredictable events and sudden changes in the characters produce dramatic tension. Whether Hermann is a hypocrite, or the Countess a witch, and whether the heavenly is in control, or the satanic, are questions repeatedly posed. The opera turns on this chaotic ambiguity which makes it, fantastic moments notwithstanding, profoundly realistic.

Tchaikovsky set the text with an array of allusions, from Russian folk laments and dances to Orthodox song, from Grétry to Mozart to Aleksey Kozlovsky to Bizet to French popular tunes. Responding thus to the chaos, he also produced a score which projects a commanding sense of discipline. This paradox is nicely foreshadowed in the introduction, where four unruly themes – some related to the Fifth Symphony – are contained by cadence and rhetorical gesture. He also used style to underscore the ambiguities of the story. Hermann acts like a thief but sings like a lover; the Countess's ghost appears in the wake of emphatic churchly intonations;

even Prilepa and Milozvor in the divertissement re-enact the opera's dark plot in Arcadian pleasantries, to a paraphrase, wry but apropos, of Papageno's 'Ein Mädchen oder Weibchen'.

To promote unity, Tchaikovsky introduced linkages of theme and key. The characters, typically unaware, mimic something which happened earlier, implying an encounter with fate. Hermann first declares his love to Lisa with a melody to which Paulina had earlier sung a lament about death being the outcome of love. Tchaikovsky revisits the key of Hermann's declaration when the Countess dies and again when Lisa dies. The eerie subtext of these connections gives order to the chaos.

Pleased, Tchaikovsky returned home where he composed, in June and July of 1890, the string sextet *Souvenir de Florence*. In letters he never connected the piece with the city, making the referents of its title obscure, though Modest explained that the first theme of the Andante was sketched in Florence. The musical materials – passionate, songful, flirtatious, beguiling – could all be Florentine, remembrances in the literal sense of the word *vospominaniya* in the Russian title. Italianate accents relate the sextet to the Serenade for Strings, to which Tchaikovsky alludes at the outset of the slow movement. If the lack of precise referentiality precludes engagement with the topical aspects of late style, *Souvenir de Florence* belongs to it as a statement about technique, specifically the reconciliation of Tchaikovsky's musical imagination with the limited mass and colour of the string ensemble. Language and medium had produced a tension in his quartets, which he masked in the five-part Serenade by putting several players on a part. Six instruments allowed him orchestral possibilities of doubling for emphasis and multiple stops for bigness of sound, yet challenged him to find suitable alternatives in lighter textures and imitation. Clarity of pattern and unbroken momentum stood in striking contrast here to the fermatas and disjunction of his recent multi-movement works.

In September 1890 Tchaikovsky received Meck's letter, no longer extant, ending their relationship. It was the first of many trials in the coming months. He responded diplomatically to her, then railed at others in anger and shame. The loss of money was hurtful, but more so the implication that he was devoted to her exclusively because she paid him. When after 13 performances (the first on 7/19 December) *The Queen of Spades* was withdrawn in St Petersburg until autumn, Tchaikovsky suspected the emperor's disfavour. This put him out of sorts in the spring of 1891 at Rouen, where he had gone to work on Vsevolozhsky's next project: a double bill, opera and ballet, *Iolanta* and *Shchelkunchik* ('The Nutcracker').

Iolanta, adapted by Modest from Hertz's *Kong Renés Datter* ('King René's Daughter') tells of its blind heroine's sight restored through the revelation of her malady, the treatment of a Moorish physician, and her love for the knight who first tells her of the wonders of light. In *The Nutcracker*, after Hoffmann, young Clara becomes infatuated with a toy nutcracker, a present from her godfather Drosselmeyer. She comes down at midnight to visit the nutcracker, and experiences a fantasy in which all the toys come to life in response to an attack by an army of mice. The Nutcracker defeats the Mouse-King with Clara's deft assistance, whereupon they visit his realm, Confiturembourg. The ballet ends with a divertissement, joined by

the benevolent Sugar Plum Fairy, to celebrate the Nutcracker's safe return home.

Neither opera nor ballet held out the promise of its predecessor. *Iolanta* might have fared better as a cantata, where its lack of drama would count for less. Tchaikovsky was obviously drawn to depicting the utopia made complete by the provision of light and love, while Modest presented the heroine as childlike, moralistic and sentimental, a pre-Raphaelite figure in her finely wrought medieval setting. But the opera is wholly free of tension, and the composer's effort to excite, as when the knight Robert extols the delights of physical love, succeeds only in rending the mood. It ran for 11 performances starting on 6/18 December 1892, separated from the ballet after a month, rarely to be revived. Gustav Mahler produced it in Hamburg in 1893, and remembered it in the finale of his 'Resurrection' Symphony (cf the beginning of no.4).

In Rouen, however, *The Nutcracker* was the greater problem. Never pleased with the scenario, Tchaikovsky named 'Confiturembourg' in a letter to Vsevolozhsky as the most serious problem demonizing his efforts to compose. His anguish, exceptional in the normal run of his complaints and for being addressed to a patron, intensified when the next day he learnt of the death of his sister Sasha, and the day after that set sail for New York to celebrate the opening of Carnegie Hall. The crisis over *The Nutcracker* was never resolved in a manner traceable in letters, nor was the scenario changed, nor did Tchaikovsky complain about the piece again. A diary written on the ship provides a clue to that resolution. As in 1878 after the marriage crisis, he now again felt as if he were someone else, and that thoughts of Sasha were like recollections of a distant past. Just as the *Album pour enfants* may have commemorated a distant past in 1878, Confiturembourg may now have come to signify the past at Kamenka, Sasha's memory personified in the luminous Sugar Plum Fairy. At the beginning of that character's first and only *pas*, Tchaikovsky introduced the rhythm from the *panikhida* he had used in music for Tatyana and Lensky in *Yevgeny Onegin*. If this were his purpose, it counted little in that Confiturembourg was atheatrical and inconclusive on stage; it was now an *otpevaniye*, a 'singing-away' of Sasha's spirit.

Tchaikovsky's American visit in April and May of 1891 was eventful, pleasant within the limits of a heavy schedule, and successful enough for him to consider returning in 1892. One pleasure was the surprise that his music was so well known. By the time Tchaikovsky arrived in New York, *Francesca da Rimini* and the fourth and fifth symphonies had been heard, with *Hamlet* and the First Piano Concerto (again) to follow later in the year, and the suite from *The Nutcracker* in 1892.

Tchaikovsky, Pyotr Il'yich, §6: Years of valediction, 1889–93

(ii) The last symphony.

On 29 October 1889 Tchaikovsky had expressed to Konstantin Romanov his wish to compose a grand symphony, the conclusion of his compositional career, and to dedicate it to the tsar. No mere chauvinism, this remark was early witness to his testamentary frame of mind. The first sign that he acted on it came in sketches from April to June 1891, during his anguish over Confiturembourg and the American journey. Progress was

delayed until 1892, when by 29 May he had composed the first and last movements of a Symphony in E♭. After more delay, he nearly finished the sketches and began to score in October, when newspapers in St Petersburg announced his 'Sixth Symphony' for the coming season. Then in December, with little ado, he decided to destroy the symphony. He didn't, instead transforming one movement into the Third Piano Concerto. Taneyev transformed two others into an Andante and Finale, published as op.79, while Semyon Bogatïryov, in 1951–5, restored and completed the entire work as Symphony no.7.

The Sixth Symphony that we know was composed during February and March 1893 and scored during the summer. In conception it affirms Tchaikovsky's approach to the genre: a first movement of compositional density rooted in classical form and discourse; inner movements more involved with beauty than philosophy, of simple pattern; a striking finale; and continuous richness of connotation in melody, gesture and sonority.

In message the Sixth Symphony is more inscrutable. Before, Tchaikovsky had used musical ideas with explicit meanings – such as folksongs – or motto themes so strongly connotative as to preclude neutrality. By 1893, however, virtually everything in his music was connotative. He acknowledged the existence of a programme in the Sixth Symphony to Bob Davïdov, but claimed that it would remain an enigma. Whether a tease or a challenge, his remark has made this symphony especially susceptible to interpretation, from the allusion to Beethoven's *Sonate pathétique* in its opening bars to the 'lamento' figure at the basis of the finale.

All the same, the popular notion that the Sixth Symphony is rife with confession warrants challenge, as does the idea, worthy of Hollywood, that it predicts the composer's death. There is nothing so pessimistic in the symphony as the outcome of *The Queen of Spades*, and much to belie pessimism in the second movement and the scherzo, which Tchaikovsky described as triumphant and exulting. Meaning in the Sixth Symphony flows from the premises of Tchaikovsky's late style. It shares with every work since *The Sleeeping Beauty* a sense of valediction. It is part of a cycle – which, if the evidence to hand is any indication, would have continued had his death come later – of alternating 'not of this world' with the sadder contrasts 'of this world'. The sequence was systematic: first *The Sleeping Beauty*, then *The Queen of Spades*; next *Iolanta* and *The Nutcracker* – the first an explicit utopia, the second a fantasy one occurring on Christmas night – and then the Sixth Symphony.

This possibility is bolstered by evidence from the music. A quotation of the *panikhida* melody in the development section of the first movement – from whose words Tchaikovsky had taken the rhythm in *Yevgeny Onegin*, the Violin Concerto and *The Nutcracker* – is widely seen as proof of a funereal outlook in the whole. It is, but it merely signals the presence of that enigmatic programme which he reported to Bob Davïdov. Using his well-practised technique of prosodic quotation, Tchaikovsky underlaid every important theme of the first movement with verbal rhythms from the funeral service, and returned to them in the second movement and the finale.

The problem with the Sixth Symphony is not that it gives evidence, but that the evidence it gives is construed to pertain exclusively to Tchaikovsky.

Nothing in this work is necessarily autobiographical, any more than are the religious implications of *The Queen of Spades* or the various elegies from the 1880s. The Sixth Symphony was conceived almost a year, its content fixed seven months, before it was performed. Linking that performance with the composer's death ten days later is rank speculation. In general, accounts of Tchaikovsky's death are flawed by inordinate attention paid to his last days at the expense of causes originating long before. He may have experienced a premonition of death in his last months. If so, it fell within the larger time frame of his late style, and much evidence for it comes after the symphony was composed: setting the melancholy poems of op.73; and losing more friends and colleagues – Konstantin Shilovsky, co-librettist of *Yevgeny Onegin*, Karl Albrecht of the Moscow Conservatory, Vladimir Shilovsky, to whom the composer had once been deeply attached, and Aleksey Apukhtin, his exact contemporary, former classmate and lifelong friend. These events alone would suffice to cause a premonition.

Tchaikovsky conducted the first performance of the Sixth Symphony on 16/28 October 1893; five days later he fell ill; in the morning of 25 October/6 November, after heroic efforts by the best doctors, he died. The cause has never been established. Modest wrote that his brother drank unboiled water, from which he contracted cholera. In 1980 the musicologist Aleksandra Orlova published a theory proposing that he died by suicide, carrying out a sentence passed by a court of honour of his classmates at the School of Jurisprudence: Tchaikovsky's sexual advances to a young man of high birth were about to be made public, and death was nobler than bringing dishonour upon the school.

The polemics over his death have reached an impasse, one side supporting a biographer not invariably committed to the truth, the other advocating something preposterous by the mores of the day. Neither version withstands scrutiny, making all conclusions provisional. Rumour attached to the famous dies hard: Paganini's pact with the devil, Salieri's poison. As for illness, problems of evidence offer little hope of satisfactory resolution: the state of diagnosis; the confusion of witnesses; disregard of long-term effects of smoking and alcohol. We do not know how Tchaikovsky died. We may never find out, any more than we shall learn what killed the composer whose music first filled him with sacred delight.

Tchaikovsky, Pyotr Il'yich

7. Reception.

Tchaikovsky's posthumous reputation differs by locale – within Russia or without – and by the distinction between his music and his person. Outside Russia, his art was debated in discourses from programme notes to books, most aimed at defining his Russianness. These could be simple attempts to locate his style in the welter of modern musical voices, or complex explanations, as from Hugo Riemann or Iwan Knorr or even Hanslick in his later writings, of the multifarious nature of Tchaikovsky's gift – European or Asiatic, dramatic or lyrical, symphonic or operatic.

Inside Russia, the composer's immense stature spawned imitators and performances so numerous as to risk devaluation of the genuine artistic coinage. Yet Tchaikovsky's art, paradoxically, was sustained and renewed by the cultural avant garde. Arkady Klimovitsky (E1995) cites *The Queen of*

Spades as stimulus for a Tchaikovsky cult founded mostly by poets, painters and philosophers for whom Tchaikovsky exemplified a 'Petersburg mythos' which embraced a disparate collection of cultural motifs: phantasmagoria, transformed Western influence, continuity with the 18th century or with Pushkin and the Golden Age of Russian literature, or an interface with Wagner for Russian symbolists. Tchaikovsky excited these tendencies with works such as *The Nutcracker*, with its marionette-like, Harlequinesque figures, and *Iolanthe*, with its audible echoes of *Tristan* (in the english horn solo of the introduction), answering the *Liebestod* in the survival and gratification of the mythic lovers.

Tchaikovsky's reputation among concert audiences is secure. In Great Britain, the United States and many other countries, his music has won a following throughout the 20th century second only to Beethoven's, in contrast to such temporary fashions as Skryabin enjoyed in the 1910s and 20s, and Sibelius through the 1950s. When he was alive, and in the first decades after his death, no significant link was posited between Tchaikovsky's art and life. Innuendo about his personal life in the Russian press was occasional, and virtually non-existent elsewhere, at the same time that his music was described in robust terms. Albert Stanley, introducing the Sixth Symphony to audiences of the Ann Arbor May Festival in 1897, wrote of the virility of Tchaikovsky's music, and described the Serenade for Strings in 1902 as having a 'primal quality' and a style 'of breadth and fervor'. The more widely read James Huneker remarked in 1899 on Tchaikovsky's 'unfortunate and undoubted psychopathetic temperament', referring to the Sixth as the 'Suicide Symphony', yet praised his 'tremendous sincerity' and his 'passionate, almost crazy intensity'.

Linking Tchaikovsky's popularity with the emotional appeal of his music, Western aesthetes disdained it for half a century as vulgar, wanting in philosophy and elevated thought. Then, with the removal of taboos in public discussion of the 1960s and 70s, Tchaikovsky's life was caught up in a discourse, exceptional for its tenacity, linking his music with his sexuality, an indignity that would have caused the composer unspeakable humiliation. When historical factors were brought into play – especially Freud's pathologizing of homosexuality – specialist opinion of Tchaikovsky's music changed accordingly, and dubiously slanted assessments of his music followed suit.

In Soviet Russia, by contrast, Tchaikovsky's sexuality, together with his religious belief and monarchist politics – all aspects of his personality – were largely suppressed. Although his music was part of the canon (Lenin favoured the Sixth Symphony), and it garnered support among advocates of heritage, it came to be criticized through the 1920s as irrelevant to avant gardists in a non-bourgeois, revolutionary society. Detractors claimed that it was ideologically corrupt, that it suffered from a kind of social malaise, and that its emotions were alien to the new Soviet audience. Thus A.N. Ostretsov (C1929), writing a dismissive and tedious account of Tchaikovsky's socialist and musical characteristics in 1929, found him to be a bad citizen: Europeanized, connected his entire life with bureaucratic and landowning circles, detached from the new political reality. The last was killing for his music, which from the 1880s was subjective, unrealistic, and too profoundly personal to manifest any socially redeeming qualities. For

these reasons Tchaikovsky could not be credited with resurrecting Beethoven's symphonic thought – Beethoven the 'active musician-citizen' who conveyed the 'joy of life', striving for the realization of democratic emotions, and for 'bold, collective musical self expression'. Nor did claims of pathology escape the Soviets, though couched in clinical terms and never achieving much notoriety. In 1929 a psychiatrist from Perm (E.R. Klevezal) found clear evidence of *raptus melancholicus* in the Andante cantabile of the First String Quartet: by using muted strings Tchaikovsky transformed the weeping of his soul into a quiet murmur; the monotonous repetition, present in the first phrase and intensified in the second, was characteristic of the melancholic, while the second theme expressed the highest intensity of Tchaikovsky's spiritual pain – the primeval outcry of the suffering soul.

With the advent of Socialist Realism in 1932 these judgments fell silent, and Tchaikovsky's music was affirmed in the mainstream of concert life; in the increasingly muted cultural debate, however, it was emasculated by political expediency. In the 1930s and 40s a new generation of advocates – Al'shvang, Budyakovsky, Kremnev, Zhitomirsky, Yakovlev, Yarustovsky – rehabilitated the composer, writing learned if dogmatic studies about Tchaikovsky which continued to the end of the Soviet era.

In the early 1980s freedom of expression exercised by Soviet emigrés joined forces with modernist criticism (and its penchant for psycho-sexual analysis) and with a politically aggressive gay scholarship to refute stale notions of Tchaikovsky's pathology. Parallel with this development has come a revival of documentary studies (notably by Thomas Kohlhase and Polina Vaydman) which seek to clarify various questions about Tchaikovsky and his music in the post-Soviet atmosphere of openness.

Tchaikowsky, André

(*b* Warsaw, 1 Nov 1935; *d* Oxford, 26 June 1982). British pianist of Polish birth. Having lost his parents during the Nazi occupation, he was smuggled from Poland to Paris, but returned at the age of ten to enter the State Music School in Łódz. In 1948 the Polish government allowed him two years at the Paris Conservatoire, after which he studied the piano and composition at the Warsaw Conservatory (1950–56). In 1957 he attended the American Conservatory at Fontainebleau for further tuition in composition with Nadia Boulanger, and also had private piano lessons from Stefan Askenase. He made his American début in 1957, and introduced himself to London in 1958, settling in England soon afterwards. Tchaikowsky's repertory extended from Bach to 20th-century music (excluding the avant garde) with Mozart as a favourite. Though sometimes over-subjective in music requiring a firm backbone, he was an exuberant natural musician with an intimate understanding of what a keyboard can yield. Composition interested him as much as the piano, and among his main works were a sonata for clarinet and piano (1959), a string quartet (1967), a cycle of Inventions for piano (1960–61), a piano concerto (1966–71) and two song cycles. A notorious eccentric, he bequeathed his skull to the Royal Shakespeare Company for use in the gravediggers' scene in *Hamlet*.

JOAN CHISSELL/R

Tchakarov, Emil

(*b* Burgas, 29 June 1948; *d* Paris, 4 Aug 1991). Bulgarian conductor. He studied at the State Conservatory in Sofia, where he conducted the youth orchestra (1965–72). From 1968 to 1970 he was also conductor of the chamber orchestra of Bulgarian Radio and Television. After winning a prize in the 1971 Herbert von Karajan Competition, he worked as Karajan's assistant at the Salzburg Festival and spent periods studying with Ferrara (1972) and Jochum (1974). In 1974 he was appointed chief conductor of the Plovdiv State PO, and in the following years developed an international career, with a Metropolitan début (conducting *Yevgeny Onegin*) in 1979, appearances at Covent Garden, La Fenice and other major opera houses, and guest engagements with leading symphony orchestras in Europe. In 1985–6 he was musical director of the Royal Flanders PO, and in 1986 he founded the Sofia Festival Orchestra, with which he made a fresh and idiomatic series of recordings of Russian operas. In 1989, two years before his premature death, Tchakarov was appointed permanent guest conductor of the Leningrad PO.

Tcherepnin

(1) Nikolay (Nikolayevich) Tcherepnin

(*b* St Petersburg, 3/15 May 1873; *d* Issy-les-Moulineaux, nr Paris, 26 June 1945). Russian composer, conductor and teacher. He graduated from the University of St Petersburg in 1895 and in 1898 from the conservatory there, studying composition with Rimsky-Korsakov and the piano with K.K. Fan-Arkh. From 1899 he directed the orchestral class at the Court Chapel before returning to the conservatory to teach (1905–18, from 1909 as professor) where he became the first in Russia to give orchestral conducting classes; his pupils included Gauk, Mal'ko, Prokofiev and Shaporin. In 1902 he became the regular conductor of the Russian Symphonic Concerts and later made guest appearances with the Russian Music Society, the Moscow Philharmonic Society, the Siloti Concerts and Vasilenko's Historic Concerts as well conducting at the Mariinsky Theatre (1906–9). A member of the Belyayev circle, he was also involved with the *Kruzhok sovremennoy muzïki* ('The Contemporary Music Circle') and worked with the *Mir isskustva* ('World of Art') movement. He conducted performances of the 1909 *Saison russe* and was later involved in performances by Diaghilev's Ballets Russes in Berlin, London, Monte Carlo, Paris and Rome (1909–14); his ballets *Le pavillon d'Armide* and *Narcisse et Echo* were performed by the company. He lived for a while in Georgia (1918–21), having been asked to direct the conservatory and conduct in the opera house in Tbilisi, before settling in the suburbs of Paris where he lived intermittently until his death. He worked with Anna Pavlova and her ballet troupe as composer and conductor (1922–4) and made concert tours around Europe and the USA but abandoned his concert career in 1933 because of a deterioration in his hearing. He had founded the Russian Conservatory in Paris in 1925 and served as its director for a number of years (1925–9 and 1938–45). In 1926 he became a member of the board of trustees of the Belyayev publishing house and from 1937 served as its president.

Nikolay Tcherepnin's numerous musical activities left a distinctive mark on Russian music of the period. As a composer he represented a link between the somewhat formal nationalism of the Belyayev circle and the forward-looking World of Art movement; described by Asaf'yev as a 'modernist among the Belyayev composers', he was influenced by French Impressionism (and especially its harmonies and orchestrational devices) and the new harmonic sensibilities of Skryabin. Tcherepnin employed modes based on diminished, augmented and dominant chords. Preoccupation with small-scale forms is felt in even his largest works which are often constructed by means of episodic, but organic alternation. On the whole, he adheres to traditional formal designs and combines these rather

eclectically with new melodic and harmonic material. The range of subjects which attracted him is typical of the tastes of the World of Art movement and Symbolism as a whole, with the stylized classical world being reflected in *Narcisse et Echo*, Eastern exoticism in *Iz Gafiza* ('From Hafiz') and the Russian magic fairytale in the symphonic poem *Mar'ya Morevna*. Although he wrote in virtually all genres, he achieved greatest popularity with his vocal miniatures and ballets. His sacred works, which include an oratorio, remain little known. As a teacher, Tcherepnin was noteworthy for his outstanding erudition and sensitivity towards new tendencies, and for this reason he was conspicuous among the predominantly conservative staff of the St Petersburg Conservatory. During his years of emigration he was a uniquely consolidating figure for Russian musicians.

WORKS

Ops: Svat [The Matchmaker] (after N. Ostrovsky: *Bednost' ne porok* [Poverty is not a Vice]), 1930, Paris, 1930; Van'ka-klyuchnik [Van'ka the Steward] (after F. Sologub), 1932, Belgrade, 1933

Ballets: Le pavillon d'Armide (A. Benois, after T. Gautier), 1907, St Petersburg, Mariinsky, 1907; Nartsiss (Narcisse et Echo) (1, L. Bakst, after Ovid: *Metamorphoses*), 1911, Monte Carlo, Casino, 1911; Maska krasnoy smerti [The Masque of the Red Death] (choreodrama, 1, after E.A. Poe), 1915, Brussels, La Monnaie, 1956; Vakkh [Bacchus], 1922, London, Covent Garden, 1922; Russkaya volshebnaya skazka [Russian Magic Fairytale], 1923, London, 1923; Roman mumii [The Romance of the Mummy] (after Gautier), 1924, London, Covent Garden, 1924

Choral: 2 khora, chorus, orch, 1899; Pesn' Safo [The Song of Sappho] (cant., Ye. Zarin), S, female chorus, orch, 1899; Khozhdeniye Bogoroditsï po mukam [The Descent of the Virgin Mary to Hell] (orat, Russ. apocryphal texts), 1934

Orch: Printsessa 'Gryoza' (La princesse lointaine), op.4 [sym. prelude to play by E. Rostand], 1896; Sym. 'Makbet' [Macbeth], op.12 [after W. Shakespeare: *Macbeth*, act 4, scene 1], 1902; Iz kraya v kray [From Land to Land], dramatic fantasy after F. Tyutchev, 1903; Pf Conc., c♯, 1905; Mar'ya Morevna, sym. poem, 1909; Zacharovannoye tsarstvo [The Enchanted Kingdom], sym. sketch, 1910; 6 muzïkal'nïkh illyustratsiy k 'Skazke o rïbake i rïbke' Pushkina [6 Musical Illustrations to Pushkin's 'Tale about the Fisherman and the Fish'], 1917; Sud'ba (Le destin), 3 sym. fragments after Poe, 1938

Chbr and solo inst: Str Qt, 1898; Liricheskaya poèma [Lyrical Poem], vn, pf, 1900; Melodiya, vn, pf, 1902; 5 morceaux, pf, 1904; 6 Qts, 4 hn, 1910; Azbuka v kartinkakh [The Alphabet in Pictures], pf, 1910 [14 sketches after Benois]; Cadence fantastique, vn, pf, 1915

Other works: sacred choral works; romances after K. Bal'mont, Hafiz, Jap. poetry and A.S. Pushkin

Orchestrations: Musorgsky: Sorochinskaya yarmaka [Sorochinsky Fair], Monte Carlo, 1923; M. Sokolovsky: Mel'nik-koldun, obmanshchik i svat [The Miller-Wizard, Cheat and Matchmaker], 1925, Paris, 1929

Tcherepnin

(2) Tcherepnin, Alexander (Nikolayevich)

(*b* St Petersburg, 8/21 Jan 1899; *d* Paris, 29 Sept 1977). Russian composer, pianist and conductor. The son of Nikolay Tcherepnin. Much of his early training was haphazard, but the musical atmosphere of the home was enriched by such visitors as Lyadov, Cui, Rimsky-Korsakov, Stravinsky and Prokofiev. By the age of 14, Alexander had composed many piano pieces, later gathered to form sonatas and other cycles; such is the origin of Tcherepnin's most famous work, the *Bagatelles*, op.5, published in Paris in 1922. Some of these pieces already evidence experiments with bitonality, dissonance and irregular rhythms. A year after the Russian Revolution of 1917, Nikolay moved the family to Tbilisi. The experience of living in Georgia provided Alexander with ideas for scales and harmonies developed in later works. The communist takeover of the region caused the family to move to Paris in 1921. Here Alexander studied piano with Isidore Philipp, who promoted his music.

Tcherepnin increasingly composed large-scale works in Paris, such as the First Symphony (1927) which is remarkable for its dissonance, contrapuntal clarity and soloistic percussion in the Scherzo. The winning of the Schott prize in 1925 for the *Concerto da camera* for violin, flute and chamber orchestra catapulted his compositional career. During this period he wrote several ballets and operas including *01–01* (1924–30) and *Die Hochzeit der Sobeide* (1930), the latter based on a drama of Hugo von Hofmannsthal. The expressionistic and primitivistic music of this period is exemplified by the *Magna Mater* for orchestra (1926–7) and the driving *Message* for solo piano (1926). New musical ideas were provided by tours to the near East in 1931 and to China in 1934. Tcherepnin remained in China and Japan, with intervals in Europe, until 1937, studying Chinese classical music. The resultant interest in pentatonicism is reflected in the *Technical Studies on the Pentatonic Scale* (1936) – which also reveal Tcherepnin's interest in teaching – while the *Cinq études de concert* (1934–6), with the brilliant *Hommage à la Chine*, employ colouristic effects.

In 1938, Tcherepnin married Lee Hsien Ming, a pianist he met in China. In the same year the couple returned to Paris, where Tcherepnin collected his *Anthology of Russian Music* (1938) and composed a series of works for unusual solo instruments, such the elegant *Sonatine sportive* (1939) for solo saxophone and piano. Caught in the German occupation of Paris, he survived the war by making musical arrangements. In 1948, he received an invitation from DePaul University in Chicago to teach composition, analysis and music history; in 1949, he moved his family to Chicago, where they remained for 15 years. The Second Symphony, begun in 1945 and first

performed by Rafael Kubelik with the Chicago SO in 1951, is said to reflect the agony of the war years. Its assured large scale and synthesis of previous styles mark it as a significant transition into the Chicago period.

During the Chicago years, Tcherepnin promoted contemporary music and taught composers such as Robert Muczynski, Gloria Coates, John Downey and Phillip Ramey. These years yielded his most significant orchestral works: the *Divertimento* (1955–7), the Fourth Symphony (1956–7) and the *Symphonic Prayer* (1959). The Fourth Symphony reverses the normal tempo flow by placing its fastest movement (a comic-grotesque Scherzo) in the middle. The third and final movement, based on a Russian chant for the dead, is one of this century's most moving symphonic conclusions. Late works such as the Piano Concerto no.5 (1963) and the Serenade for Strings (1964) employ pointillism and radical contrasts between movements, suggesting new stylistic explorations.

In 1958, Tcherepnin became a citizen of the United States. He retired from DePaul and moved to New York in 1964 to begin a period of international activity as pianist, conductor and composer. His 1967 concert tour to Russia, at the invitation of the Soviet government, was personally important in that it allowed him to visit places associated with his youth. He died in Paris of a heart attack on 29 September 1977. At the time of his death, he was working on two symphonies, one for percussion alone.

Tcherepnin's music is marked by several personal compositional techniques, discussed in *Basic Elements of My Musical Language* which he wrote in New York in 1962 but which has remained unpublished. His 9-step scale results from the combination of minor and major hexachords and is first found in the *Sonatine romantique* for piano (1918). Through transposition and other manipulations, 36 forms of this scale result. The 8-step scale is derived from the Greek chromatic tetrachord and becomes increasingly favoured in later works, such as the Piano Sonata no.2 (1961). These scales together with the major and minor pentatonic combine with Georgian harmonies and Russian liturgical modality to form an expanded tonality. Interpoint (or the interpenetration of melodic lines in the manner of medieval hocket) is also typical and finds its most extreme expression in the Piano Concerto no.3 (1931–2). Alexander Tcherepnin clearly belongs to the Russian tradition, though he also considered himself a 'Eurasian' composer. Conciseness, contrapuntal textures, and strongly articulated structures are typical of his works. His originality also finds expression in the emphasis on percussion, under-used instruments, rhythmic transformations and unusual scales.

Tcherepnin

(3) Serge (Alexandrovich) Tcherepnin

(*b* Issy-les-Moulineaux, nr Paris, 2 Feb 1941). American composer and electronic musical instrument builder of Russian-Chinese parentage, son of (2) Alexander Tcherepnin. As a violinist he played professionally with his

father while in his teens. He later studied composition with his father (after tuition in harmony from Boulanger), at Harvard (1958–63) with Billy Jim Layton and Leon Kirchner, at Princeton (1963–4), and finally in Europe with Eimert, Stockhausen, Nono, Earle Brown and Boulez. A naturalized American in 1960, Tcherepnin participated in the Intermedia Program at New York University (1968–70). While working at the school of music at the California Institute of the Arts (1970–73) he was involved with multimedia experiments with Nam June Paik and the dancer Simone Forti, and undertook research into electronic music. He taught at Dartington in 1979, 1980 and 1988; he collaborated with his father on the tape part of *The Story of Ivan the Fool* for the BBC. In 1986 Tcherepnin moved to France; in 1987, along with Pärt and Volkonsky, he became active in the Kuratoren-Konseil, a foundation dedicated to helping composers from the former Soviet Union gain an audience in the West.

In 1973 Tcherepnin designed the Serge, a modular voltage-controlled synthesizer manufactured from 1974 by his own company, Serge Modular Music Systems, in Hollywood and then in San Francisco. Any number and combination of modules can be assembled in one or more consoles and linked with patchcords; the flexibility of the patching and the interconnections that are possible between modules ensure a large range of sonic possibilities and made the Serge one of the most effective modular systems for live performance. In 1990 the Serge began to be manufactured under licence by Sound Transforms in Oakland, California.

Tcherepnin

(4) Ivan (Alexandrovich) Tcherepnin

(*b* Issy-les-Moulineaux, nr Paris, 5 Feb 1943; *d* Boston, 11 April 1998). American composer of Russian-Chinese parentage, son of (2) Alexander Tcherepnin. He received early training in music from his parents. Naturalized as an American in 1960, Tcherepnin studied with Kirchner and Thompson at Harvard (BA 1964, MA 1969), pursuing further studies with

Stockhausen, Pousseur and Boulez in 1965. After holding teaching positions at the San Francisco Conservatory and at Stanford, he joined the Harvard music faculty in 1972 as an associate professor and director of the electronic music studio, remaining there until his death.

A conductor and lecturer of worldwide experience, Tcherepnin's honours as a composer include grants from the NEA and the Rockefeller Foundation, the 1996 Grawemeyer Award for his Double Concerto (1995) and commissions from bodies including the Merce Cunningham Dance Company and the Oratorio Music Society. He was composer-in-residence at institutions including the Dartington Summer School, the Korsholm Music Festival and the Santa Fe Chamber Music Festival.

In the mid-1960s Tcherepnin began his innovative exploration into live electronic music and multimedia composition. Many of the synthesizers he employed were designed by his brother Serge. Tcherepnin held a deep conviction that the connection between ear and mind is the most important avenue for communication and development available to humans. Keeping this channel open and free of artificial constraints was one of his primary artistic goals. In his work, traditional and revolutionary, old and new, instrumental and electronic were not mutually exclusive. Rather, they co-existed and cross-pollinated, creating new musical life-forms.

Te.

The leading note of a major scale or second degree of a minor scale in Tonic Sol-fa. The name was first introduced by Sarah Anna Glover as a replacement for *si*. John Curwen followed her example in his Tonic Sol-fa, and the same name was later adopted in German, Swiss and Hungarian teaching methods, in which the spelling is 'ti'.

Teagarden, Jack [Weldon Leo; Big T]

(*b* Vernon, TX, 29 Aug 1905; *d* New Orleans, 15 Jan 1964). American jazz trombonist, singer and bandleader. He started learning the piano with his mother when he was five, then turned to the baritone horn, and took up the trombone at the age of ten. He began playing professionally as a teenager, working mainly in the Southwest with local bands. He then went to New York, where he played briefly with Wingy Manone. After working freelance for a while he joined Ben Pollack's band in 1928, though he continued to play and record with other musicians, such as Red Nichols, Louis Armstrong and Eddie Condon. In December 1933 he became a member of Paul Whiteman's band. For one month in 1936 he played after hours at the Hickory House on 52nd Street in New York with his fellow Whiteman sidemen Frankie Trumbauer and his brother Charlie Teagarden, calling themselves the Three T's. Teagarden remained as a star soloist and singer with Whiteman until December 1938. He then set up his own big band, a venture which was successful musically but financially unrewarding, as it ended with his being declared bankrupt in 1946. He led a sextet from late 1946 until he joined the first Louis Armstrong All Stars in 1947, then formed his own dixieland group, also known as the All Stars, in 1951. He continued to lead small groups until his death.

Teagarden is considered by many critics to be the finest of all jazz trombonists, but his style was so personal that he had few followers and founded no school. Significantly, he grew up in rough Southwestern towns containing large black populations, and was far more familiar than most early white jazz players with black spirituals, work songs, and the blues, having experienced them first hand from earliest childhood. As a consequence he was one of the first white jazz musicians to master the blues, and probably the first to make use of blue notes. He usually detached his solo line markedly from the ground beat, weaving lazy arabesques of melody. He tended to play in the upper register of the

instrument, and his cloudy tone, at first relatively rough, grew smoother in his later years. Because of his deceptively simple style, few listeners realized how technically adroit he was; he was particularly skilled in playing lip trills, which became a prominent feature of his style. Teagarden is also considered one of the finest jazz singers. His style was much simpler than that of his highly decorative playing, but characterized by a similar lazy quality, and his husky voice was particularly suitable for the blues. Teagarden's recorded output is very consistent, but especially fine are his performances on *Knockin' a jug* (1929, OK), *Jack hits the road* (1940, Col.) and *Makin' Friends* (1928, OK), the last named including an eccentric solo played with the bell of the trombone removed.

JAMES LINCOLN COLLIER

Tear, Robert

(*b* Barry, 8 March 1939). Welsh tenor. He was a choral scholar at King's College, Cambridge, and made his operatic début in 1963 as the Male Chorus (*The Rape of Lucretia*) with the English Opera Group, for which he created Meshach (*The Burning Fiery Furnace*, 1966), Younger Son (*The Prodigal Son*, 1968), and the title role in Crosse's *Grace of Todd* (1969). At Covent Garden he created Dov in *The Knot Garden* (1970), the Deserter in *We Come to the River* (1976) and Rimbaud in Tavener's *Thérèse* (1976). Tear's many other roles there, revealing his versatility and his gifts as a vivid character actor, included Lensky, Paris (*King Priam*), Jack (*The Midsummer Marriage*), Froh, Loge, Tom Rakewell, Admetus (*Alceste*), Captain Vere, Peter Grimes, David (*Die Meistersinger*), Jupiter (*Semele*), Prince Shuysky, Herod, Monostatos, the Emperor Altoum, Don Basilio, Handel's Samson, the Director (British première of Berio's *Un re in ascolto*, 1989) and Capito (British première of *Mathis der Maler*, 1995). He sang the Painter/Negro in *Lulu* (première of the three-act version, 1979, Paris) and

Aschenbach in *Death in Venice* (1989, Glyndebourne tour). In 1991 he created the title role of Penderecki's *Ubu Rex* at Munich. He continued to sing character parts into his sixties. In concerts he was admired in choral works ranging from Monteverdi, Purcell, Handel and Bach to Britten's *War Requiem* and Tippett's *A Mask of Time* (taking part in the première, 1984); his recital repertory was similarly varied, and he was a notable exponent of English song. Tear's keen mind and clear, highly distinctive voice has illuminated all his work, as can be heard on his numerous recordings. He was made a CBE in 1984.

WRITINGS

Tear Here (London, 1990)
Singer Beware (London, 1995)

ALAN BLYTH

Teatro Colón.

Opera house opened in Buenos Aires in 1908 (preceded by a theatre of the same name that was active 1857–88).

Tebaldi, Renata

(*b* Pesaro, 1 Feb 1922). Italian soprano. She studied at the Parma Conservatory with Carmen Melis and made her début in 1944 as Elena in Boito's *Mefistofele* at Rovigo. In 1946 she took part in the reopening concert at La Scala, under Toscanini, and subsequently sang Mimì and Eva in the rebuilt theatre's first winter season (1946–7). She sang regularly at La Scala from 1949 to 1954; her roles included Maddalena (*Andrea Chénier*), Adriana Lecouvreur, Tosca, Desdemona and the title role of Catalani's *La Wally*. She also made frequent appearances at S Carlo, Naples, and in South America, where she was compared with Claudia Muzio, especially for her interpretation of Violetta.

She made her London début at Covent Garden as Desdemona, on the opening night of the Scala company's London season in 1950, and returned to London in 1955 to sing Tosca. Her American début was in San Francisco in 1950 as Aida. She also sang in Chicago, and became a member of the Metropolitan in 1955, remaining with the company for nearly 20 years. Besides the usual *lirico spinto* repertory, she sang such rarely heard roles as Spontini's Olympia, Pamyre in Rossini's *Le siège de Corinthe*, Cleopatra in Handel's *Giulio Cesare* and the title role of Verdi's *Giovanna d'Arco*.

Tebaldi possessed one of the most beautiful Italian voices of this century; her *mezza voce* singing was a joy to hear. She relied more on her rich, impeccably produced tone and inborn sense of style than on her acting ability to convey character and feeling. She made many recordings, most notably as Aida, Desdemona, Mimì, Tosca, Maddalena, Wally and, perhaps best of all, as Leonora in a live recording of *La forza del destino* under Mitropoulos and on a video from Naples (1958).

HAROLD ROSENTHAL/ALAN BLYTH

Tebaldini, Giovanni

(*b* Brescia, 7 Sept 1864; *d* S Benedetto del Tronto, Ascoli Piceno, 11 May 1952). Italian scholar, composer and conductor. He studied at the Milan Conservatory with Panzini and Ponchielli (1883–5) and with Haller and Haberl at the Kirchenmusikschule, Regensburg (1888). He was *maestro* of the Schola Cantorum of S Marco, Venice (1889–93), *maestro di cappella* of the basilica of S Antonio, Padua (from 1894), director of the Parma Conservatory (1897–1902) and music director at the Santa Casa of Loreto (1902–24). In 1925 he took charge of the courses in Palestrina interpretation at the Naples Conservatory and in 1931 became director of the Ateneo Musicale, Genoa.

Although Tebaldini was active as a historian, conductor and composer (most notably of sacred works, but also of much orchestral and chamber music), he was most important for his long and devoted scholarly research and his promotion of the Cecilian movement for the reform of church music. (He was probably among those who inspired the *Motu proprio* of Pius X on church music in 1903.) He actively supported Gregorian societies and concerts of 16th- and 17th-century sacred and secular music, for which he often prepared performing editions. He gave numerous lectures in Italy and abroad, especially on Palestrina, and contributed to many newspapers and journals, founding one himself, *La scuola veneta di musica sacra* (1892).

SERGIO LATTES

Tebaldini, Nicolò

(*fl* Bologna, 1627–39). Italian publisher. Between 1627 and 1639 he printed four music publications: Costanzo Fabrizio's *Fior novello, libro primo di concerti* (1627); Bartolomeo Guerra's *Il diletto del notturno* (1634; the publication, however, is without the intended music); two books of Ascanio Trombetti's *Intavolatura di sonate per chitarra* (1639). The last-named uses an unusual kind of tablature notation, which, as the author explained in his advice to the reader, incorporates letters of the alphabet and celestial symbols such as the sun to indicate repetitions. The same letter notation but without celestial signs is employed in the *Fior novello*; in this publication each page is printed half in the normal way and half upside-down so that it may be read by a person facing the first performer. All the pages are enclosed in an ornamental frame and every canzona finishes with an elegant frieze. Tebaldini also published Adriano Banchieri's *Lettere scritte a diversi patroni ed amici* (1630).

Tebir.

Sign used in Hebrew Ekphonetic notation. *See also* Jewish music, §III, 2(ii).

Tecchler [Dechler, Decler, Teccler, Techler, Teckler, Tekler], David

(*b* Augsburg, *c*1668; *d* Rome, after 1747). Italian violin maker of German birth. The leading violin and cello maker of the Roman school, he is thought to have learnt the rudiments of his craft in Augsburg before moving to Rome some years before the end of the 17th century. Once settled there he became a prolific instrument maker, particularly of cellos. The only significant makers of bowed string instruments in Rome before Tecchler were Alberto Platner (1642/3–1713), another outstanding German-born maker, and Platner's son-in-law, Joannes Georg Tännigar [Tanigardi, Dangher] (*b* 1664–6; *d* after 1735), who was also renowned for his cellos. In Rome as in other Italian cities, the last quarter of the 17th century saw a sudden demand for violins and cellos, and Tecchler's productions would have found a ready market.

Tecchler was no copyist of Stainer, though the great Austrian maker's work was without doubt a powerful influence in Rome as elsewhere. He seems

to have taken the Cremonese as his main example, though from the beginning he gave a distinct and appealing personal touch to his instruments. In particular the scrolls are handsome in design and deeply and emphatically carved. He is known chiefly for his cellos, many of which are used by leading professional players. With few exceptions they were originally of very large dimensions, and many have been reduced in size to suit the players of the 19th and 20th centuries. He also made some excellent violins, and others which are perhaps less admirable, made in the style of Stainer. He made almost no violas, noting on the label of one made in 1730 that it was only the third he had constructed.

A Tecchler viola dated 1743, now in the Museo Strumentale of the Accademia Nazionale di S Cecilia, Rome, carries a label from which we can work out the year of his birth: 'david techler / Fecit Romae An. Dni 1741 [corrected: 1743] / aetatis suae 73 [corrected: 75]'. Of the violin makers mentioned by Francesco Galeazzi in his 1791 treatise, Tecchler (listed among the 'good', but not the 'best' makers) is the only name from the Roman region. His activity began to decline about 1730.

CHARLES BEARE/PATRIZIO BARBIERI

Tech a Curia, Nikolaus.

See Decius, Nikolaus.

Techelmann, Franz Matthias

(*b* Hof, Moravia [now Dvorce, Czech Republic], *c*1649; *d* Vienna, 26 Feb 1714). Austrian composer of Moravian birth. By 1678 he was active in Vienna, apparently at St Michael. From May 1685 until his retirement in 1713 he held the post of second organist at the Hofkapelle. Together with his colleague F.T. Richter he represents the generation of court organists in Vienna after Kerll and Poglietti, and his music belongs to the Viennese keyboard tradition passed down from Froberger. Two sets of keyboard pieces by him survive in a manuscript presentation copy (*A-Wn* 19167; ed. in DTÖ, cxv, 1966) dedicated to Emperor Leopold I; the title-page describes him as organist at St Michael, and the allemande in the second set is subtitled 'Dell'allegrezze alla liberazione di Vienna', evidently referring to the Turkish siege of 1683. The dances from the second set recur among 14 anonymous suites in another source (*A-GÖ* Kerll 2), but

there is no evidence that the other 13 suites are by him. The two authentic sets resemble Poglietti's *Rossignolo* in format. Each is unified by key, opening with a toccata followed by a canzona and ricercare and ending with a dance suite. The first set also contains an *Aria semplice* with variations. Techelmann used traditional procedures such as sectional design in the canzonas, thematic linking of allemande and courante, and fugato treatment of the gigue. Although the dances are generally simple in style, there is considerable virtuosity in the allemande of the second set as well as in the toccatas and variations. The canzonas mix traditional figuration with advanced harmonic structures.

Techler, David.

See Tecchler, David.

Technitai [synoditai]

(Gk.: 'artists', 'craftsmen'; Lat. *artifices*).

Professional artists incorporated in guilds (*synodoi*, later *koina*), beginning at Athens in the 3rd century bce. They included actors, members of the choruses, solo singers, instrumentalists, dancers, *chorēgoi* and others concerned with the production and performance of tragedy, comedy, epic and other musical genres at the great public festivals. The term *technitai* (pl. of *technitēs*) was used in antiquity as an abbreviation of *hoi peri ton Dionuson technitai* (literally 'the artists around Dionysus'; Lat. *Dionysiaci artifices*: 'Dionysiac artists'); these *technitai* were religious associations led by a priest of Dionysus elected every year by the Assembly (Athenaeus, v, 197c–198c). The various guilds sometimes honoured the Muses and the Pythian Apollo, as well as Dionysus. The *technitai* supplanted the older tradition of the citizen-musician, and their members enjoyed substantial privileges such as exemption from taxation and military duty and unusual freedom to travel. With the expansion of musical activity in the Hellenistic period, their importance increased, and they must have played an important part in the spread of Greek music throughout the Hellenistic world (*see* Rome, §I, 3(iii)) – for example, 3000 artists are reported to have attended the wedding of Alexander the Great at Ecbatana. At first confined

to single cities such as Athens, *technitai* later enjoyed royal and imperial patronage and played a part in the state cults of various provinces, notably Ptolemaic Egypt and Pergamum. Comparable guilds at Rome included the so-called *parasiti Apollinis*; for the various types of musicians' guilds at Rome see Fleischhauer, and Wille (1967, pp.357ff).

Techno.

A form of 20th-century club dance music. As its name suggests, it is mostly electronic and at its genesis was a mix of Chicago house music, funk, early hip hop and electro. The term was first used in 1988 to describe the music of the DJs and musicians Kevin Saunderson, Juan Atkins and Derrick May in Detroit. The style was relatively simple in structure and tempo: like practically all club dance music it was in 4/4, with a pounding bass-drum effect often driving through the music. It was more relentlessly percussive and artificial than the contemporary house music, without which techno, however, would not exist. Beyond the rhythm track and bass line, instrumentation was basic and invariably electronic, a minimalist approach that owed as much to Kraftwerk as to other concurrent dance music. The term soon expanded to take in more mainstream pop such as Saunderson's Inner City, whose approach was more song-based than before. The synthesized artifice of techno developed still further in the early 1990s, so much so that almost any dance music that could not reasonably

be described as house or garage was given the label, from the ambient techno of The Orb or the acid house-influenced music of Baby Ford to the dub reggae-influenced sounds of Andrew Weatherall's Sabres of Paradise.

Tedesca

(It.; Ger. *Teutscher*, *Deutscher*).

A term meaning 'German' or 'in the German style'. It is found applied to dances from the end of the 15th century. In the late 16th century, madrigal-like compositions of a light character with texts mimicking a German accent in Italian were called *tedesche* (*see* Todesca). In the Baroque period the word was sometimes used as an alternative name for the Allemande, an association still evident in Beethoven's use of the term, since the 'Alla danza tedesca' of the Quartet in B♭ op.130 is marked 'Allemande Allegro' in one of the sketches. Beethoven's 'Presto alla tedesca' in the Piano Sonata in G op.79 furnishes another instance. By this time, however, as Beethoven's Bagatelle 'A l'allemande' from op.119 also suggests, the term 'allemande' was associated with quick dances in triple time of which the deutscher Tanz, ländler and waltz were the chief types. Beethoven's 'Alla danza tedesca' therefore means 'in the style of a deutscher Tanz'. *See* German Dance.

MAURICE J.E. BROWN

Tedeschi, Luigi Maurizio

(*b* Turin, 7 June 1867; *d* Cairate, Varese, 1944). Italian harpist and composer. Tedeschi received a degree in natural science but turned to the harp and studied under Angelo Bovio in Milan, and later under Félix Godefroid in Paris. As a composer he was self-taught. From 1890 he toured Europe as a soloist and in 1899 was appointed professor at the conservatory in Venice. In 1902 he became professor of harp at Milan Conservatory, where he gained an outstanding reputation as a teacher; among his pupils were Maria Grossi, Marguerita Hazon and Maria Giulia Scimeca. Ricordi commissioned him to revise the teaching repertory of the harp. Tedeschi became a member of the Commission of Italian and Foreign Artists and received honours from both the Italian and French governments. He composed an opera *Jocely*, which was produced at St Remo in 1908, and about 50 pieces for the harp.

Te Deum.

A chant in praise of God sung at the end of Matins on Sundays and feast days, either after the last responsory (the medieval practice) or in its stead (the modern one). It has also been used as a processional chant, the conclusion for a liturgical drama, a song of thanksgiving on an occasion such as the consecration of a bishop, and a hymn of victory on the battlefield. During the Middle Ages it was widely believed that St Ambrose and St Augustine composed the *Te Deum* as an improvised prayer at the baptism of St Augustine. Some studies have named Niceta of Remesiana the probable author, but the matter remains unsettled.

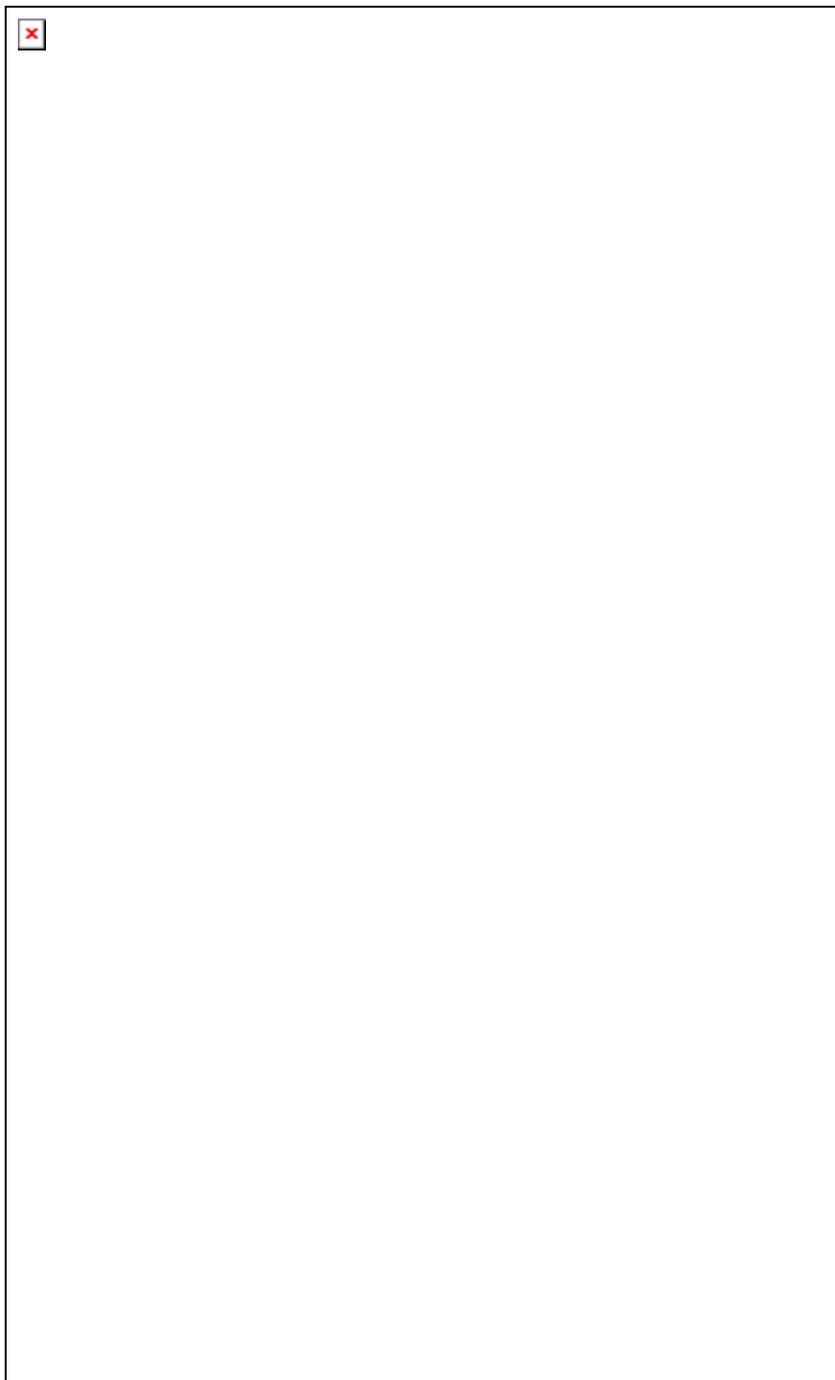
1. Text.

The text of the *Te Deum*, seemingly of Latin origin, consists of 29 verses of prose (or 30, depending on how the last verse is treated). In the first ten, which praise God the Father, parallel construction is the rule: 'Te Deum laudamus, te Dominum confitemur'. The Sanctus of the Mass is quoted in verses 5 and 6; elsewhere the vocabulary and sequence of ideas suggest a connection with the popular hymnody of the 2nd century. Verses 11 to 13 are a doxology and are thought to be a later addition to the basic text. A second section, in praise of Christ, begins with verse 14, 'Tu rex gloriae Christe', and continues to verse 23. (Two verses in this section appear to be later additions: verse 15, 'Tu Patris sempiternus es filius', and verse 19, 'Judex crederis esse venturus'.) The last four verses of this section are a prayer; (verses 22 and 23 are borrowed from Psalm xxviii.9 and form the conclusion of what is now regarded as the principal part of the text, about which the manuscript sources are in substantial agreement). The final section, from verse 24 to the end, consists almost entirely of psalm verses that adapt what has preceded them to daily recitation: 'Per singulos dies benedicimus te', etc. (Psalm cxliv.2.).

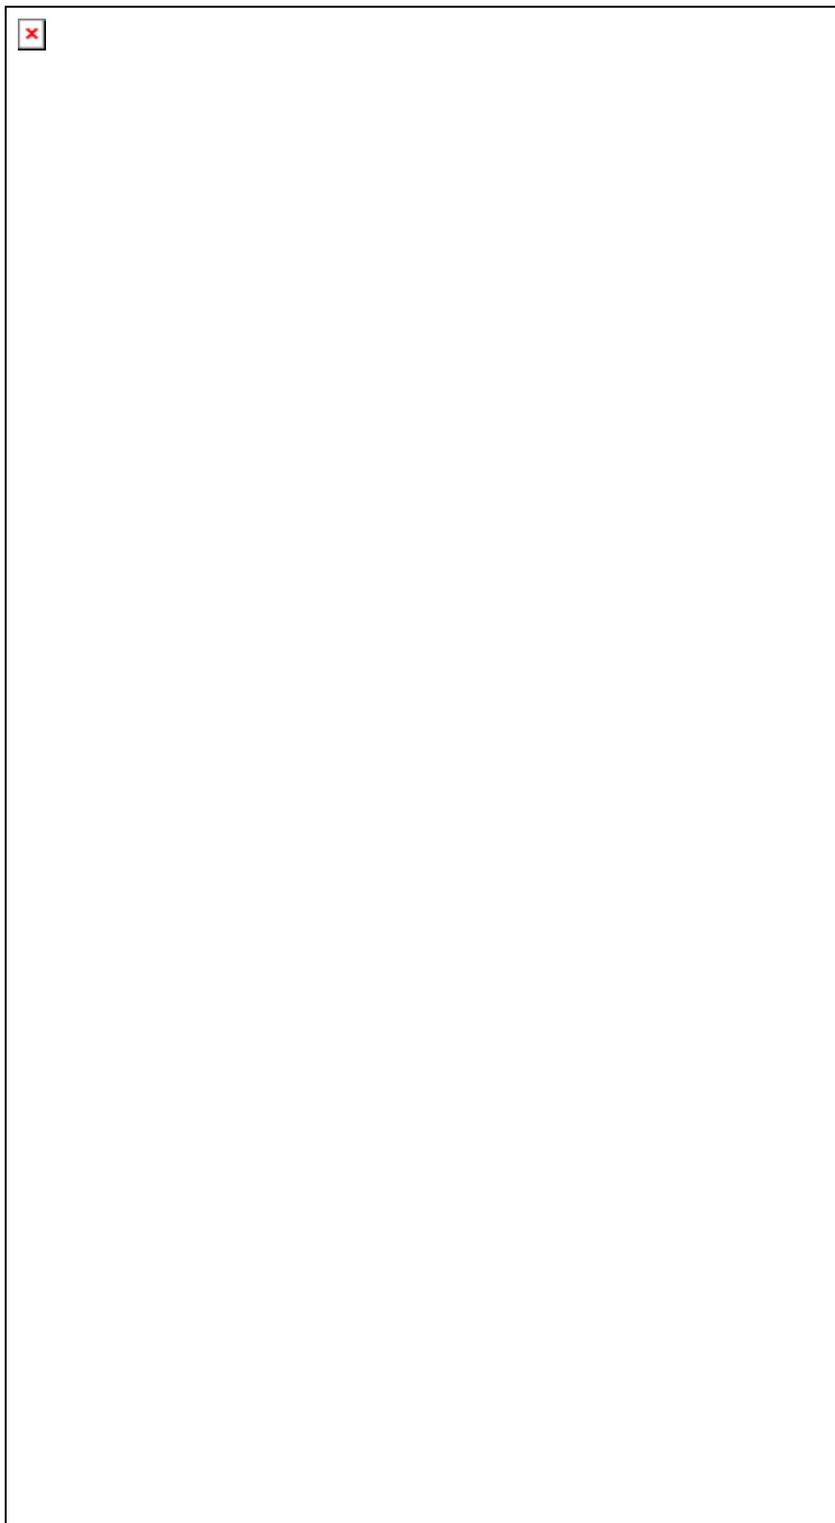
Kähler's exhaustive analysis of the text reveals important similarities between the *Te Deum*'s principal part (vv.1–23) and the formulae of the Gallican and Mozarabic liturgies. He concluded that the hymn originated

before the middle of the 4th century as the Preface, the Sanctus and the prayer following the Sanctus of an old Latin Mass of the Easter vigil, a Mass of baptism. Lending further support to Kähler's argument are the references to the *Te Deum* at Gallican festal Matins mentioned in the two earliest descriptions of the Gallican Office, those by the 6th-century bishops of Arles St Caesarius (534–42) and St Aurelian (547–51). The *Te Deum*'s position at the beginning of the early vigil service in the Ambrosian rite came at a later, though probably still archaic, stage in the canticle's early history.

2. Melody.

The regular place for the *Te Deum* in medieval manuscripts is among the canticles of the Divine Office that are written without musical notation in the appendix to the liturgical psalter. Early manuscripts containing the *Te Deum* melody written precisely are still urgently sought; the earliest source indicated for any of the published transcriptions currently available is of the 12th century. (The transcriptions in the Solesmes editions, the *Liber usualis* and the *Antiphonale monasticum*, are from unspecified sources; Huglo has implied that in at least one respect the version of the *Antiphonale monasticum* is the 'original' one.) There is only one chant melody for the *Te Deum*, and no significant disagreement among the manuscripts concerning its broad outlines up to the end of verse 20. There are discrepancies of detail, such as differentiate the 'solemn tone' and the 'simple tone' of the *Liber usualis*; ex.1 shows how different sources treat the beginning and verse 5 (verses 11 and 13, later additions, begin like verse 5).


Most of the text is chanted to a 4th-mode formula in which the principal reciting note is A. Two versions of the formula are used: the first in verses 1–10 (except for verse 5), the second in verses 14–20. (Omitted from consideration for the present are verses 24–9.) Ex.2 shows these two versions in the *Te Deum* melody of a 12th-century north Italian Carthusian gradual. In a 13th-century manuscript written in France (the musical supplement to *I-Rvat* lat.598, quoted by Wagner, 1907, p.67), the beginning of formula A is simplified as in ex.3, although the rest remains essentially the same. In formula B the intonation of the second half of the line is frequently omitted or condensed, but not that of the first half.

It is interesting to consider the treatment of the second degree of the scale in formula B (it does not appear in formula A). Wagner's Carthusian source gives it as F♮. The Solesmes editions and the Sarum version of the chant (Harrison, 66) avoid it, substituting G, the third degree. Other sources, including an important early one, the *Musica enchiriadis* (which quotes only one verse of the *Te Deum*), clearly indicate a pattern of intervals that would require either notating the second degree of formula B as F♮ or else transposing this part of the chant down a tone, with D as the final and B♭ in the key signature. The 13th-century Worcester Antiphoner (*GB-WO* F.160: PalMus, 1st ser., xii, 1922/*R*, pp.5–6) opts for the latter solution, but runs into difficulties after verse 20. Verses 21–3 are rather like antiphons in style; if Kähler's conclusions concerning the text can be applied also to the music, then they form the original ending of the chant. In the Carthusian version, and in both Solesmes editions, there is reciting on G in verses 21 and 23, which have similar melodies, and in verse 22 the reciting is on F. To preserve these relationships, the Worcester Antiphoner would have had to write E♮ for the reciting note of verse 22; rather than do this it made several changes (see ex.4).


Verse 24 marks the beginning of the later supplement to the chant. It opens with the melody of 'Te Deum laudamus', blending it into formula B, and this continues until the end of verse 28. The final verse is sung to a more elaborate form of the melody of verse 22. The second degree of formula B of the *Te Deum* melody posed a difficult problem for notators and analysts of Gregorian chant during the Middle Ages and the Renaissance, and it was not until the late 17th century, in Paris, that chant books offered the simple, precise solution of ex.5.

3. Polyphonic settings.

The earliest known setting of a part of the *Te Deum* is in the *Musica enchiriadis* (*c*880 or earlier), where the verse 'Tu Patris sempiternus es filius' is used to illustrate various kinds of parallel organum. A number of references from the 10th to 14th centuries suggest that a festive performance of the *Te Deum* was normally accompanied by instruments (in particular organ and bells), the normal concomitant of which would be polyphony of some kind. Nevertheless, such polyphony was essentially improvised; no written settings of the *Te Deum*, apart from the verse just mentioned, are known to have survived from before the early 14th century. From this period comes an isolated setting in an English manuscript (*GB-Cgc* 334) of the final verse, 'In te Domine speravi', with the plainchant in the bass surmounted by two upper parts mostly in parallel movement (*ReeseMMA*, 339). The harmonies are largely a succession of 6-3 chords, interspersed with 8-5 chords at cadences and elsewhere, and an occasional 10-5 and 5-3 also. Such parallel movement is clearly descended from the earliest forms of organum, and may represent in written form a type of singing more readily improvised, such as Faburden).

15th-century settings are rare. The work by Binchois sets every verse in fauxbourdon, the plainchant paraphrased in the upper part throughout. From England there are early 16th-century settings by Taverner and Sheppard, and an anonymous work based on the faburden of the chant (*GB-Lbl* Add.17802–5). Aston set a variant of the text, *Te matrem Dei laudamus*, together with a *Te Deum* Mass based on the plainchant. Another English work based on the plainchant was Taverner's antiphon *Ave Dei Patris Filia*. There are *alternatim* organ settings by Burton, Redford (two) and Blitheman, and from the Continent a setting in Attaingnant's sixth collection of keyboard music (1531). Continental liturgical settings of the polyphonic period include works by G.F. Anerio (two), Festa, Kerle (two), Lassus, Morago, Resinarius, Handl and Vaet; and there is the *Te Deum* Mass by Palestrina. Like the contemporary hymn and *Magnificat*, the *Te Deum* was frequently performed in *alternatim* fashion, plainchant or organ versets alternating with choral polyphony. There are also reports of instrumental ensembles used antiphonally, particularly on festive occasions. At the coronation of Pius III, for example, 'tibia una et tribus tubis contortis quos trombones vulgo appelant' responded in turn to the intonations of the *Te Deum* (C. Mazzi: *La Congrega dei Rossi di Siena del secolo XVI*, Florence, 1882, p.44).

A new tradition of festive settings was inaugurated in the Baroque era with the large-scale works of Benevoli, Lully, C.H. Graun and others, and continued in the later 18th century with the settings by Giuseppe Sarti, Michael Haydn (who wrote six) and the two by Joseph Haydn. Joseph Haydn's second work is a remarkably fine piece from 1800 or shortly before, the first of a number of striking compositions of the 19th and 20th centuries. These include works by Berlioz (written for the Paris Exhibition, 1855), Bruckner (1885), Dvořák (1896), Verdi (1898, Paris) and Kodály (1936, written to celebrate the 250th anniversary of the relief of Buda from Turkish occupation).

After the Reformation, settings of the *Te Deum* in English occupied a regular place in the Anglican Service; there is a modified version of its melody in Merbecke's *Booke of Common Praier Noted* (1550). Luther's

version, *Herr Gott dich loben wir*, also based on the Gregorian melody, gave rise to such widely diverse settings as the six by Michael Praetorius, the organ settings of Scheidt (*Tabulatur-Buch*, 1650), Buxtehude and J.S. Bach, and Bach's four-part chorale version in the edition of C.P.E. Bach.

The tradition of festal settings in English begins with Purcell's of 1694 (for St Cecilia's Day, with *Jubilate*) and continues with those of Handel ('Utrecht', 1713, and 'Dettingen', 1743), Sullivan (1900), Parry (1911), Stanford (B♭; 1898) and Walton (1953). Parry and Stanford also wrote Latin works (1898, 1900) and Parry revised his Latin setting to English words for performance in 1913. Walton's piece, a distinguished contribution to the genre, was written for the coronation of Queen Elizabeth II.

Teike, Carl (Albert Hermann)

(*b* Altdamm, nr Szczecin, 5 Feb 1864; *d* Landsberg an der Warthe [now Gorzów Wielkopolski], 28 May 1922). German composer. From the age of 14 he took instruction on several wind instruments from Paul Böttcher,

bandmaster at Wollin, and for four summers he played in Böttcher's band at the Baltic resort of Misdroy. In 1883 he became oboist in the band of the 123rd Rifle Regiment stationed at Ulm, where he also played in the town's opera orchestra. At this time he composed his first marches, including *Alte Kameraden* which brought him international fame. From 1890 he was a policeman until ill-health forced his retirement to Landsberg an der Warthe in 1909. Besides *Alte Kameraden* Teike composed about 100 marches, including *In Treue fest*, *Treue um Treue* and *Graf Zeppelin*, and also a number of dances. (K.A. Döll: *Alte Kameraden*, Bad Homburg, *c*1965; Eng. trans., 1971)

Teitelbaum, Richard (Lowe)

(*b* New York, 19 May 1939). American composer and performer. He studied at Haverford College and Yale University (MM 1964), where his teachers included Allen Forte and Mel Powell. Fulbright grants enabled him to pursue further study with Nono and Petrassi in Italy (1964–6), where he became interested in the Moog synthesizer and biofeedback music, which uses electronics to orchestrate signals produced by the human body (i.e. breathing, pulse, brainwaves, etc.). While in Rome, he co-founded, with Rzewski and Curran, Musica Elettronica Viva for the performance of live electronic music. He returned to the USA in 1970 for further postgraduate study at Wesleyan University, where he founded the World Band, a multi-cultural collective improvisation group comprised of Asian, Indian, African, Middle Eastern and North American musicians. In 1976, on a Senior Fulbright, he travelled to Japan, where he studied gagaku with Masataro Togi and shakuhachi with Katsuya Yokoyam. *Blends*, for shakuhachi, synthesizers and percussion, was composed during that year. In the early 1980s, he began to use microcomputer systems to control synthesizer keyboards. His teaching appointments include positions at the California Institute of the Arts (1971–2), the Art Institute of Chicago (1972–3), York University, Toronto (1973–6) and Bard College.

JOAN LA BARBARA

Teixeira, António

(*b* Lisbon, 14 May 1707; *d* Lisbon, ? after 1769). Portuguese composer. He was sent to Rome as a royal scholar at the age of nine and remained there until 1728, when he returned to Lisbon and, on 11 June, was elected chaplain-singer of Lisbon Cathedral and examiner in plainchant of all the ordinands in the Lisbon patriarchy. He wrote a few festive cantatas for

members of the aristocracy, including *Gli sposi fortunati*, performed at the house of Antónia Joaquina de Menezes de Lavra during Carnival 1732, and a *Componimento drammatico* to celebrate the wedding of the Marquis of Cascais during Carnival 1738. He also composed the music for two Singspiel-type Portuguese operas by the Brazilian-born lawyer António José da Silva, *Guerras do alecrim e manjerona* and (according to a contemporary diary) *Os encantos de Medeia*. José Mazza, writing at the end of the 18th century, stated that Teixeira composed seven operas and he may therefore have written the music to the remaining librettos of António José da Silva, who was burnt at the stake by the Inquisition in 1739: *Vida do grande D. Quixote de la Mancha e do gordo Sancho Pança*, *Anfritrião, ou Júpiter e Alcmena*, *O labirinto de Creta*, *As variedades de Proteu*, *Precipício de Faetonte* and *Esopaida, ou Vida de Esopo*. These operas, all but two of which are on mythological subjects, were performed by large-size puppets at the Teatro do Bairro Alto in Lisbon between 1733 and 1739. Teixeira's extant theatrical music shows him to be a competent practitioner of the contemporary Italian style. His most important sacred work, a 20-voice *Te Deum* for the church of S Roque, effectively alternates the massive polychoral style of the Roman Baroque with an operatic style in the solo sections. He was probably the same António Teixeira who became a member of the Irmandade de S Cecília on 28 November 1765 and was the composer of sacred works now in the archive of Lisbon Cathedral, one of which is dated 1770.

<div align="right">MANUEL CARLOS DE BRITO</div>

Teixidor y Barceló, Joseph [José] de

(*b* Serós, Lérida, *c*1752; *d* after 1809). Spanish music historian, theorist, organist and composer. He was possibly related to Domingo Teixidor, *maestro* of Lérida Cathedral from 1716 until his death in 1737. By 1774 he was in Madrid, as chaplain and principal organist at the Convent of the Descalzas Reales. Four years later, on 22 June 1778, he won a public competition to enter the royal chapel as *vicemaestro* and deputy rector of the choir school. He competed for posts at the cathedrals of Córdoba in 1781 and Santiago de Compostela in 1784, but without success. On 7 March 1788 he was appointed fourth organist of the royal chapel, and was promoted to third organist on 18 March 1801 and second organist on 6 May 1805. He remained in this post until 1 January 1810, the date on which, as a result of the Peninsular War, the royal chapel was suppressed. Teixidor's refusal to work under Joseph Bonaparte is the reason why we have no precise knowledge of his last years, nor the date and place of his death.

Teixidor's surviving music comprises only a small number of sacred and secular works. More important are his theoretical and historical writings. He was the first to recognize the need for a history in which Spanish music occupied a more important place than it had been accorded by earlier writers. Only the first volume of his *Discurso sobre la historia universal de la música* was published, however; the other two volumes remained in manuscript, but they formed the basis for some 19th-century writings on Spanish music, including those of Soriano Fuertes, Hilarión Eslava and Baltazar Saldoni. Teixidor's work, like Hawkins's *General History*, lays great emphasis on the music of the past, judging works and writers in accordance with the author's own aesthetic criteria. His strong desire to emphasize the importance of Spanish music in Europe anticipated the nationalistic tendency characteristic of 19th-century historians.

WORKS

vocal

5 masses: Eripe me, SSAT, SATB, insts, 1779, *E-Mp*; mass, 4vv, 8vv, insts, *Zs*; mass, 12vv, org, db, *E*; Messe sacri solennis, 12vv, *E*; Soli Deo honor et gloria, SATB, SATB, insts, 1780, *Mp*

6 motetes de difuntos, 4vv, 1806, Barcelona, Seminario: Circundederum me dolores; Credo quot Redenptor; Fuissem quasi nom essem; Peccatem me quotidie; Recogitabo tibi; Tu autem Domine euristi

Letania de nuestra Señora, 8vv, org, bc, *E*; Visperas de santos, SSAT, SATB, insts, 1781, *Mp*; Laetatus sum, ps, 9vv, *VAc* (doubtful); Pange lingua, hymn, 4vv, org, Barcelona, Seminario; Rosario, 1795, La Geltrú, S Maria

2 villancicos, 8vv, vns, bc, 1772, *E*: Pastores alerta; Pastorcillos de belen

Algunas canciones arabes, Barcelona, Seminario

BEGOÑA LOLO

Tejeda [Texeda], Alonso de

(*b* Zamora, *c*1540; *d* Zamora, 7 Feb 1628). Spanish composer. He was the son of Benito de la Torre, but used the name of his maternal grandfather, a royal councillor. After studying at Salamanca, he held successive appointments as *maestro de capilla* at Calahorra (20 April 1572), Ciudad Rodrigo, León (8 February 1591), Salamanca (11 November 1593), Zamora (3 December 1601), Toledo (3 August 1604, confirmed 12 November), Burgos (18 April 1618) and Zamora (1623–8). According to his death notice (discovered by Luis Iglesias), he was over 88 when he died, making him of an older generation of composers than previously thought.

He had also won the post of *maestro* of the royal chapel at Granada on 12 March 1601, but withdrew in favour of returning to Zamora. At Toledo he

argued with the singers whose insults eventually caused him to resign on 27 May 1617; he then briefly dallied with the idea of becoming an Augustinian friar in Madrid. At Burgos too he fell foul of the singers, who complained that his compositions lacked brilliance, and who deliberately made mistakes while singing them. Despite Tejeda's unpopularity with singers, the 17th-century dramatist Lope de Vega ranked him along with Guerrero among the five best late 16th-century composers. Tejeda's 83 motets, extant at Zamora Cathedral, contain four of the earliest examples of Spanish polychoral writing; they stress modal unity and are beautifully crafted, with many of the learned devices favoured by Morales. Tejeda was one of the few composers of his day to write motet settings of nearly all of Christ's words on the cross (*Domine memento mei*, 5vv, ed. in D. Preciado, ii, 1974–7, pp. 375–88). His works are published in *Alonso de Tejeda: Obras completas* (ed. D. Preciado, Madrid, 1974–7).

ROBERT STEVENSON

Tejeda, Eduardo

(*b* Buenos Aires, 25 May 1923). Argentine composer. At the National Conservatory he studied the violin with Emilio Napolitano, harmony with Gilardo Gilardi and counterpoint and fugue with Luis Gianneo. In 1957 he founded the Association of Young Composers and in 1963 he was elected secretary of the Argentine Union of Composers. His awards include two Buenos Aires Municipal Prizes for *3 piezas* (1962) and for *Homenaje a Walt Whitman* (1987–8). He has taught in various institutions including the Teatro Colón's art institute, and has served on the jury of various national and international competitions. In 1970 he moved towards an avant-garde compositional style.

WORKS

VALDEMAR AXEL ROLDAN

Te Kanawa, Dame Kiri

(*b* Gisborne, Auckland, 6 March 1944). New Zealand soprano. Winner of many prizes in New Zealand and Australia, she later studied at the London Opera Centre with Vera Rozsa. In 1969 her singing of Elena in *La donna del lago* at the Camden Festival marked her as a singer of exceptional promise, and this was confirmed with her first major role at Covent Garden, Mozart's Countess Almaviva (1971). In the same year she repeated the role at the Lyons Opéra and in her American début at Santa Fe. Further roles at Covent Garden have included Amelia (*Simon Boccanegra*), Donna Elvira, Violetta, Desdemona, Marguerite, Mimì, Fiordiligi, Manon Lescaut, Arabella and the Marschallin. She made her Metropolitan début at three hours' notice as Desdemona in 1974; she has reappeared there regularly. She sang at Glyndebourne in 1973, with further débuts in Paris (1975), Milan and Sydney (1978), Salzburg (1979) and Vienna (1980). In 1982 she gave her only stage performances as Tosca in Paris. In 1980 she added Elisabeth de Valois in *Don Carlos* to her repertory at Chicago, and in 1991 the Countess in *Capriccio*, sung first at Covent Garden and with greater success at Glyndebourne and the Metropolitan in 1998.

Te Kanawa has also given song recitals in most major cities and appeared with leading orchestras in works such as Strauss's *Vier letzte Lieder*. Her many recordings include most of her principal operatic roles and concert repertory, together with musicals such as *West Side Story* with Bernstein conducting. She was made DBE in 1982, the year after she sang at the wedding of Prince Charles and Lady Diana Spencer, and has been invested with the Order of Australia (1990) and of New Zealand (1995). Her 'Opera in the Outback' concert was a spectacular and imaginative contribution to the Australian bicentennial celebrations of 1988.

Te Kanawa's voice, vibrant but mellow, ample but unforced, impressed from the first with its freshness and warmth. Less remarkable are her interpretative powers, though her stage presence has both beauty and dignity. Her recordings sometimes lack animation, yet many are unsurpassed as examples of the lyric soprano's art.

Tekeliyev, Aleksandar

(*b* Svilengrad, 3 June 1942). Bulgarian composer. At the Sofia State Music Academy he studied composition with Vesselin Stoyanov, graduating in 1968. In 1977 he became professor of composition and orchestration at the city's Vladigerov State Academy. His music is characterized by chromatic harmony and expressive lyricism, though the principal role of his melodic writing is in fact to emphasize polyphony and to connect otherwise awkward harmonic changes. The subjects of many of Tekeliyev's works address philosophical dilemmas facing humanity. Two of his best pieces are the ballet *Syankata* ('The Shade') and *Symphony no.3* (*De profundis 'spiritus'*).

MARIANA BULEVA

Tekler, David.

See Tecchler, David.

Tel-Aviv.

City in Israel. It is the commercial, financial and cultural centre of the country. It was founded in 1910 as an all-Jewish suburb of the Arab harbour town of Jaffa, and the first concert was given the same year, when the violinist Moshe Hopenko, a recent immigrant, practised in front of an open window and all the residents gathered outside on the soft sand to listen. Also in 1910 the singer Shulamit Ruppin founded what was the first music school in the country.

Tel-Aviv became an urban centre during the period of the British mandate (1919–48), when its energetic development inspired a repertory of patriotic songs in folk style. In 1923 the conductor Marc Golinkin founded the short-lived Palestine Opera, in 1924 J. Engel's Yuval Publishing House moved to Tel-Aviv, and in 1925 open-air symphonic concerts attracted audiences of 3000. Of special importance was Bronislaw Huberman's decision to make Tel-Aviv the home of the Palestine Orchestra, which he founded in December 1936. Most of the composers who immigrated in the 1930s also chose to settle there, while the concentration of fine instrumentalists made the city a centre of professional chamber ensembles, with concerts mostly held at the intimate Art Museum. The city also became a centre of instrumental instruction, leading to the foundation of the Academy of Music in 1944 under Laszlo Vincze and later under Oedoen Partos. In 1945 Leo Kestenberg founded the Music Teachers' Training College. The contrast between the cosmopolitan and traditional community of Jerusalem, with its division into culturally self-contained ethnic, national and religious quarters, and the all-Jewish, middle-class extrovert Tel-Aviv soon became conspicuous and is still acknowledged.

With the foundation of Israel in 1948 Jaffa was integrated with Tel-Aviv and thenceforth the city grew, connecting with adjacent towns to form the country's largest metropolitan area. Also in 1948 the soprano Addis de Philippe founded the Israeli Opera, which lasted until 1982. The Palestine Orchestra, renamed the Israel PO, moved in 1957 to its permanent home at the Mann Auditorium (cap.3000), and new ensembles such as the Israel Chamber Orchestra and Rinat Choir, found their home in Tel-Aviv. The auditorium of the spacious new Art Museum became the centre for regular chamber music recitals. In 1985 the New Israeli Opera opened, entering its permanent home in 1995 at the Tel-Aviv Performing Arts Centre, which also houses the subscription series of the Rishon-LeZion SO and chamber concerts by international soloists. Venues in the picturesque old quarter of Jaffa have attracted contemporary music groups, such as Musica Nova. The vast public park on the Yarkon river has frequently been used by local and international rock stars, as well as for yearly summer spectacles by the Israel PO.

The Israeli Composers' League, the performing rights society ACUM and the Israeli Music Institute have their offices in Tel-Aviv. The Israeli

Conservatory of Music provides a full curriculum, and the Academy of Music was integrated in the 1960s into Tel-Aviv University, which launched its musicology department in 1966 with Eric Werner, Herzl Shmueli and Judith Cohen among the founders.

JEHOASH HIRSHBERG

Tel-Aviv Quartet.

Israeli string quartet. It was founded in 1959 and the original members were Chaim Taub (*b* Tel-Aviv, 1 Aug 1925), Uri Pianka, Daniel Benyamini (*b* Tel-Aviv, 17 April 1925) and Uzi Wiesel (*b* Tel-Aviv, 8 Jan 1927). Pianka was replaced in 1963 by Menahem Breuer, who was in turn succeeded by Yefim Boyko (1971–83) and Lazar Schuster (from 1983). Taub was educated in Israel, studying the violin with Oedoen Partos, then at the Juilliard School of Music, New York, with Galamian (1947–51). After an engagement with the Pittsburgh SO he joined the Israel PO in 1959, and soon became its leader. He teaches at the Rubin Academy of Music, Tel-Aviv. Benyamini studied at the Shulamit Conservatory, Tel-Aviv, and then at the Jerusalem Academy. He joined the Israel PO in 1950 and became its principal viola in 1960. Wiesel studied at the Tel-Aviv Academy, in New York, and with Casals in Prades (1954–5). He won the 1953 Piatigorsky Prize. Since his return to Israel in the mid-1950s he has frequently appeared as a soloist and recitalist, and has given the premières of works by Tal, Partos, Sheriff and others. In 1955 he began teaching in Tel-Aviv. In 1962 the quartet toured East Asia and since then has made regular international tours, appearing at leading festivals and making many broadcasts. It has recorded much of the standard quartet repertory, including works by Mozart, Schubert, Brahms and Reger. Its repertory also includes works by Prokofiev, Britten, Bartók and Shostakovich, and it has given the first performances of Tal's String Quartet no.1, Seter's *Ricercar*, Elegy (with the clarinettist Yona Ettlinger) and String Quartet (1975), and quartets by Tzvi Avni, Zeev Steinberg and Yardena Alotin.

WILLIAM Y. ELIAS/R

Teldec.

See Telefunken.

Telefunken.

German record company. It was founded in Berlin in 1903 as the Gesellschaft für Drahtlose Telegraphie and specialized in electro-technical products; Telefunken was the brand name for radio receivers. In 1932 it bought Ultraphon, acquiring its entire stock of about 3000 metal masters recorded over the previous two and a half years. The repertory featured conductors such as Erich Kleiber and included recordings by dance bands, opera singers such as Joseph Schmidt and Michael Bohnen and instrumentalists such as Georg Kulenkampff. From 1933 Telefunken branched out into the production of gramophone records and subsidiaries were founded in Japan, the USA and Sweden. In 1937, after Deutsche Grammophon AG was liquidated, Telefunken and the Deutsche Bank led a consortium which founded a new company, Telefunken-Platte GmbH und Grammophon GmbH; however, Telefunken sold all its shares in the company in 1941. From 1935 to 1939 a cheap, brown-wax label, Telefunken-Musicus, marketed popular music. A special set of Bayreuth recordings was made on location at the Festspielhaus in 1936, while another special label featured recordings made at La Scala.

From 1939 recordings were made in Amsterdam, Paris, Stockholm, Prague, Brussels, Copenhagen, Zürich, Milan and Vienna. Non-Aryan artists were banned from the catalogue from 1933 until the end of World War II, while Peter Anders, Erna Sack, Aulikki Rautawaara, Wilhelm Furtwängler and Willem Mengelberg were recorded prolifically. During the war Telefunken became the leading European jazz label, featuring such artists as Thore Ehrling and Kurt Hohenberger. After World War II pressings from old masters were resumed on a limited scale in Berlin, recording activities started in 1947 and a new factory was founded in Nortorf, West Germany. Bayreuth recordings were resumed in 1951, and the postwar years were also noteworthy for a set of 64 complete operas in stereo. A reciprocal agreement with Capitol Records lasted from 1948 until 1956 when EMI bought Capitol.

In 1950 Telefunken and Decca started a joint venture, Telefunken-Decca (later Teldec). Its most significant series, Das Alte Werk, was begun in 1958 and focussed on early music, later specializing in performances on period instruments. Artists recorded in the series include Nikolaus Harnoncourt and Gustav Leonhardt (who between them directed the first complete recording of Bach's sacred cantatas from 1972 to 1989), Ton Koopman (who recorded all Bach's organ works), Frans Brüggen, Jaap Schröder, Anner Bylsma, Konrad Ruhland with Capella Antiqua of Munich and Thomas Binkley with the Studio der Frühen Musik. Other landmark recordings include those by Harnoncourt of the *St Matthew Passion*, the Brandenburg Concertos and Monteverdi's surviving operas, and Jürgen Jürgens's performance of Monteverdi's Vespers. Teldec was sold to a Swiss company in the early 1980s and was then acquired by Warner Communications in 1988.

Herbert Grenzebach, from Ultraphon, was responsible for the brilliant electrical recordings which were mostly made at the Berlin Singakademie. Telefunken, as the leading manufacturer of record-playing equipment,

experimented with lightweight (30 g) pickups and sapphire styli which could reproduce the Telefunken discs frequency range of 40–14,000 Hz. Most shellac discs of 78 r.p.m. were produced in standard groove, 25 cm and 30 cm diameter, but there were also 17 cm discs for children's repertory. Ultraphon also produced 20 cm and 40 cm discs, but these were discontinued by Telefunken. AEG-Telefunken experimented with tape recordings from 1930, but master tapes for disc records were not common until after World War II. Benefiting from their links with Decca, Teldec started production of 'ffrr' technology LPs from 1951 and stereo discs from 1956. Production of 78 r.p.m. discs ceased in 1955. LPs were gradually replaced by CDs from 1983 and Direct Metal Mastering (DMM) was introduced in 1988.

RAINER E. LOTZ

Teleia.

A sign used as the second of a pair with the *oxeia*, *syrmatikē*, *paraklitikē* or *synemba* in Byzantine Ekphonetic notation.

Telemann, Georg Michael

(*b* Plön, 20 April 1748; *d* Riga, 4 March 1831). German composer, grandson of Georg Philipp Telemann. When his father, G.P. Telemann's eldest son Andreas, who had been a clergyman at Plön, died in 1755 at the age of 40, his grandfather took him to Hamburg, where he brought him up and gave him a musical education. While he was still at school he played accompaniments under his grandfather, and after the old man died he took temporary charge of church music until C.P.E. Bach took over as Kantor in March 1768. In 1770 Telemann matriculated at the University of Kiel. On the title-page of his treatise on thoroughbass (1773) he described himself as a divinity student although by then he had abandoned his university course. After a short spell as a teacher at the Nikolaischule in Hamburg he was appointed as Kantor and teacher at the cathedral school in Riga. He took with him many of his grandfather's sacred vocal works in manuscript, studied them closely, and prepared them for performance; during the period 1776–1827 he was responsible for at least 21 performances of Passions by G.P. Telemann, though he made alterations to both texts and scores. He modified some of the more colourful lines in the librettos and shortened the evangelist's role; to compensate, he added instrumental

interludes, designed to give the audience the opportunity to reflect on the relevant passages in the Gospel text and adopt the correct mental attitude. He also arranged performances of some of his grandfather's funeral cantatas, consecration music and other occasional compositions. Telemann was always careful to acknowledge any alterations, and added his reasons for making them in explanatory notes which accompanied the manuscripts.

Telemann's own compositions are relatively undistinguished. In the preface to his *Beytrag zur Kirchenmusik* (1785) he defends his scoring of only two to three vocal lines with purely supporting scoring for the instrumental accompaniment on the grounds that, first, he had only a small choir at his disposal, and second, he felt it right to make a virtue of necessity, suggesting that over-elaborate middle parts might overshadow the melodic line. The foreword to his *Unterricht im Generalbass-Spielen* hints at an ambitious programme of modernization for the rules of thoroughbass, but the content is based on the textbooks of C.P.E. Bach and Marpurg and is confined to explanatory commentary.

WORKS

MARTIN RUHNKE/STEVEN ZOHN

Telemann, Georg Philipp

(*b* Magdeburg, 14 March 1681; *d* Hamburg, 25 June 1767). German composer. The most prolific composer of his time, he was widely regarded as Germany's leading composer during the first half of the 18th century. He remained at the forefront of musical innovation throughout his career, and was an important link between the late Baroque and early Classical styles. He also contributed significantly to Germany's concert life and the fields of music publishing, music education and theory.

Telemann, Georg Philipp

1. Magdeburg, Zellerfeld, Hildesheim.

The principal sources of information on Telemann's life are his three autobiographies, written during the middle third of his career. The first, dated 10 September 1718, was published in Mattheson's *Grosse General-Bass-Schule* (1731). The second takes the form of a short letter of 20 December 1729 to Walther, furnishing information for inclusion in the *Lexicon*(1732). The third and most comprehensive dates from some time in 1740, and appeared in Mattheson's *Grundlage einer Ehren-Pforte* (1740). A biography published in both German and French in about 1744 is heavily indebted to the *Ehren-Pforte* but also contains additional information that may have been provided by Telemann himself.

Telemann's forebears were upper middle-class; most had received a university education, and many had entered the church. Yet there had not been a professional musician in the family since the late 16th century, when Telemann's paternal great-grandfather, Heinrich Thering, served as Kantor at Halberstadt. The family of Telemann's father, Heinrich Telemann (1646–85), came from the area of Nordhausen, near Erfurt; the composer's grandfather was vicar of Cochstedt, near Aschersleben. Heinrich Telemann attended school in Halberstadt and Quedlinburg, studied at the University of Helmstedt from 1664, and in 1668 was appointed parish priest in Hakeborn before becoming deacon at the Helig-Geist-Kirche in Magdeburg in 1676. In 1669 he married Maria Haltmeier (1642–1711), daughter of a

Protestant clergyman from Regensburg, who, after serving as deacon in Freistadt, near Linz, had become a parish priest near Magdeburg in 1625. Telemann claimed that he inherited his musical talent from his mother, but the only professional musicians in her family were her nephew Joachim Friedrich Haltmeier (1668–1720), Kantor at Verden, and his son Carl Johann Friedrich, organist in Hanover and author of a treatise on thoroughbass published by Telemann in 1737.

After Telemann's father died in 1685 his mother was left with the task of supervising the education of her two sons. The elder, Heinrich Matthias (1672–1746), studied theology and became a clergyman. The younger, Georg Philipp, studied in Magdeburg at the Altstädtisches Gymnasium and at the Domschule, where he was taught the catechism, Latin and Greek, and developed what would become a lifelong interest in German poetry. At the age of 10 he took singing lessons from the Kantor, Benedikt Christiani, and studied keyboard playing with an organist for two weeks; he taught himself the recorder, violin and zither. He learnt the principles of composition by transcribing the scores of Christiani and other composers, and was consequently inspired to write arias, motets, instrumental pieces and, at the age of 12, the opera *Sigismundus* (to a libretto by C.H. Postel). Fearing that the boy's musical precociousness would lead to a career in music, his mother and her advisers forbade him any further involvement with music and confiscated his musical instruments. Yet Telemann secretively continued to compose and to play on borrowed instruments at night or in secluded places. With the hope that different surroundings would put him on the path towards a more respectable and lucrative career, Telemann was sent in late 1693 or early 1694 to school in Zellerfeld, where he was placed under the guidance of the superintendent, Caspar Calvoer. However, Calvoer, a theologian, historian, mathematician and writer with an interest in musical theory, not only supervised Telemann's general education but also introduced him to the relationship between music and mathematics; Telemann supplemented his formal studies by teaching himself thoroughbass and continuing to compose. During this time he provided music for a 'Bergfest', wrote a motet for the church choir almost every Sunday and supplied the town musicians with a variety of instrumental pieces (*Bratensymphonien*).

In 1697 Telemann became a scholar at the famous Gymnasium Andreanum in Hildesheim. The Rektor there, J.C. Losius, asked him to provide songs for Latin school dramas, and may also have commissioned him to write the anonymous songs for the collection *Singende Geographie*, in which Losius's geography lessons are set out in verse form. Telemann's musical talent was also recognized by Father Theodor Crispen, who as director of Roman Catholic church music permitted him to give performances of German cantatas in the Catholic church at the monastery of St Godehard. Through numerous visits to the courts at Hanover and Brunswick, Telemann was exposed to the latest French, Italian and 'theatrical' styles, and became familiar with the characteristics of various instruments; in addition to the recorder, violin and keyboard instruments, he now took up the flute, oboe, chalumeau, viola da gamba, double bass and bass trombone. The works of Steffani, Rosenmüller, Corelli and Caldara served him as models for his church and instrumental compositions. In

spite of his various musical activities, Telemann devoted enough time to his studies to graduate from the Andreanum third in a class of 150.

Telemann, Georg Philipp

2. Leipzig, Sorau.

In autumn 1701 Telemann entered Leipzig University, intending to study law. Whether his decision to renounce music and abandon his 'entire musical household' in Magdeburg was dictated to him by his mother (as he stated in the 1718 autobiography) or motivated by his longing for a university education (in the 1740 autobiography), it was not long before music again won the upper hand, for, by his own account, his efforts to conceal his musical gifts from the other students were confounded when his room-mate discovered a setting of Psalm vi that had somehow found its way into his luggage. Following a performance of this work at the Thomaskirche, Telemann was commissioned by the mayor of Leipzig to write music for the city's two main churches, the Thomaskirche and the Nikolaikirche, every fortnight. His career as a musician now seemed assured. He subsequently founded a 40-member student collegium musicum that gave public concerts, entertained visiting dignitaries and provided music for the Neukirche. In 1702 he became musical director of the Opernhaus auf dem Brühl, whose founder, N.A. Strungk, had died in 1700; there Telemann also employed student singers and instrumentalists, and on several occasions appeared on stage as a singer. During the next three years he wrote at least four operas for Leipzig and as many for the Weissenfels court. Counting the works later sent from Sorau, Eisenach and Frankfurt, Telemann calculated in 1740 that he had written over 20 operas (many to his own librettos) for Leipzig, although there is evidence for no more than five. On 8 August 1704 he successfully applied for the joint posts of organist and music director at the Neukirche (the latter job had since 1699 been the responsibility of the Thomaskantor). He dedicated the church's new organ and performed a *Magnificat* on 7 September; from then, until he left Leipzig, he assigned his fellow students to play the organ.

Telemann's musical activities put Johann Kuhnau, recently installed as Thomaskantor, on the defensive. In his capacity as the city director of music, Kuhnau oversaw the music in all the Leipzig churches and controlled the available performing resources. By using students to increase the quality of performances at the Neukirche and the frequency of performances at the Thomaskirche, Telemann took away an important resource from Kuhnau's choir. Nor was Kuhnau pleased with the students' participation in opera productions at the expense of church music. More than once he petitioned the town council against Telemann's encroachment on his rights, disparaging the younger composer as an 'opera musician'; in the end, the council saw fit only to forbid Telemann to appear on the operatic stage. Long after Telemann left Leipzig, the music director's post at the Neukirche remained in the hands of the student collegium's leaders, and for the rest of his life Kuhnau sought the restoration of his original rights and protested vehemently against the students' introduction of operatic elements into church music. Despite the friction between the two composers, Telemann recalled having learnt much about fugue and counterpoint from studying Kuhnau's music. He was further stimulated in 'melodic matters' through frequent contact with

Handel, whom he first met while passing through Halle in 1701. In 1702 Telemann made the first of two trips from Leipzig to the Berlin court, where he heard Giovanni Bononcini's opera *Poliphemo*.

Telemann left Leipzig by early June 1705 to become Kapellmeister to Count Erdmann II of Promnitz at Sorau, Lower Lusatia (now Żary, in Poland). According to the autobiography of 1740, Telemann had received an invitation from the court in 1704; but it was not until 12 June 1705 that the Leipzig town council noted his resignation from the Neukirche. The Count of Promnitz had recently returned from travels through Italy and France, where he had developed a taste for French instrumental music. That music was especially valued at Sorau is clear from the security of Telemann's position even during two periods of large-scale dismissals of court personnel. Telemann now immersed himself in the French style, studying the works of Lully and Campra. He later reckoned that he wrote 200 'Ouvertüren' in two years at Sorau, probably a reference to the number of French overtures and suites in all scorings, not orchestral suites. In Kraków, and during the court's six-month visit to Pless (now Pszcyna), one of the count's domains in upper Silesia, Telemann was exposed to Polish and Hanakian (Moravian) folk music, whose 'true barbaric beauty' fascinated him. At Sorau he entered into a dispute with the elderly Kantor and theorist W.C. Printz over the relative merits of the old contrapuntal style (favoured by Printz) and the modern melody-dominated style (favoured by Telemann). He also met the reform poet Erdmann Neumeister, who held the positions of superintendent and court chaplain. In 1711 Neumeister stood as godfather to Telemann's first daughter; ten years later, as head pastor at the Jacobikirche in Hamburg, he successfully recommended Telemann for a post in that city. Telemann made trips from Sorau to Berlin in June 1705 for the funeral of Queen Sophie Charlotte and in November 1706 (not 1708, as stated in the 1740 autobiography) for the wedding of Crown Prince Friedrich Wilhelm. In late January or early February 1706 he was forced to flee Sorau ahead of the invading troops of the Swedish King Charles XII. He sought refuge in Frankfurt an der Oder, and did not return to Sorau until some time in June.

Telemann, Georg Philipp

3. Eisenach, Frankfurt.

Precisely when Telemann entered the service of Duke Johann Wilhelm of Saxe-Eisenach remains unclear. On 24 December 1708 he was appointed Konzertmeister of the newly formed court musical establishment, becoming Secretary and Kapellmeister the following August. The violin and dulcimer virtuoso Pantaleon Hebenstreit had begun assembling instrumentalists for the Kapelle in October 1707, and one of Telemann's first tasks as Konzertmeister was to make possible the performance of church cantatas by recruiting singers who could double on the violin. In 1740 Telemann recalled that the Kapelle was arranged in the French manner and surpassed in quality the orchestra of the Paris Opéra, which he had heard in 1737–8. Following the arrival of singers, Telemann, by his own account, wrote large quantities of vocal music: four or five complete annual cycles of church cantatas, in addition to two incomplete cycles; numerous masses, psalms and other sacred works; 20 birthday and nameday serenatas to his own texts; and 50 German and Italian cantatas. Some of this music,

however, is likely to have been sent to the court from Frankfurt after 1712. At Eisenach he was especially prolific as a composer of instrumental music. Early in his tenure he began writing concertos for the orchestra (and performing double violin concertos with Hebenstreit), even though with his 'ears accustomed to French music' he found most Italian concertos to contain awkward writing and to be melodically and harmonically impoverished. At least, he observed in the 1718 autobiography, his own concertos 'smell of France'. Telemann also wrote numerous sonatas in two to nine parts, enjoying the greatest success with his trios.

While at Eisenach, Telemann presumably met J.S. Bach, whose cousin Johann Bernhard Bach was town organist and court harpsichordist there; in 1714 Telemann stood as godfather to C.P.E. Bach. Shortly after being named secretary and Kapellmeister of the court in 1709, Telemann was granted leave of absence and returned to Sorau for his marriage on 13 October to Amalie Louise Juliane Eberlin, lady-in-waiting to the Countess of Promnitz and daughter of the musician Daniel Eberlin; she died only 15 months later, in January 1711, after the birth of a daughter. Telemann later claimed that in Eisenach he not only came of age musically but experienced a religious awakening.

By late 1711 Telemann had apparently grown dissatisfied with courtly life, citing the heavy workload, courtiers' indifference towards music and the ease with which one could fall into disfavour. Not even a lucrative offer from the Dresden court could dissuade him from seeking an environment that offered greater artistic freedom and professional security, though at a lower salary. To this end he applied, between late December 1711 and late January 1712, for the newly vacant Frankfurt post of city director of music and Kapellmeister at the Barfüsserkirche. In his letter of application he stressed his mastery of church and instrumental styles in both theory and practice, as well as his ability to sing as a baritone and to perform on the violin (his principal instrument), keyboard, recorder, chalumeau, cello and calchedon. Installed in his new position on 9 February 1712 and arriving in Frankfurt on 18 March, Telemann's duties included providing and directing the music for the Barfüsserkirche and Katharinenkirche, writing music for various civic occasions, giving private musical instruction to six to eight schoolboys of his choosing, and supervising singing instruction in the Lateinschule. In fulfilling the first duty, he wrote several annual cycles of church cantatas. No longer constrained by the demands of a court position, he took full advantage of his new civic position to enrich Frankfurt's musical life. In 1713 he revived the Collegium musicum of the Frauenstein society, an association of patricians and the bourgeoisie, in order to present weekly concerts; these performances, later reduced to one every fortnight, mark the beginning of Frankfurt's regular concert life. Beginning in May 1712, Telemann also served the society as administrator and treasurer of the Haus Braunfels, administrator of a charitable foundation and organizer of a tobacco collegium, in exchange for a modest salary and free lodgings. On 2 and 3 April 1716 Telemann performed his setting of the *Brockes-Passion* at public concerts in the Barfüsserkirche, and on the following 17 May gave open-air performances of two cantatas and a serenata written to celebrate the birth of Archduke Leopold of Austria. All these works were performed with the assistance of musicians in the employ of the Landgrave of Hesse-Darmstadt, who himself heard the Passion.

On 28 August 1714 Telemann married the sixteen year old Maria Catharina Textor, daughter of a Frankfurt council clerk; of their eight sons and one daughter, none became a musician. This marriage allowed Telemann to become a citizen of Frankfurt, a privilege that he retained in later years by sending church music from Hamburg to Frankfurt every three years until 1757.

In 1715 Telemann began to publish his own compositions, issuing four collections of instrumental music over the next three years. A visit to the Eisenach court in September 1716 may have led to his installation as Kapellmeister *von Haus aus* on 11 March 1717, a position he held until 1730 and which entailed providing an annual cycle of church cantatas every two years, in addition to instrumental and occasional music for the Kapelle. These works were to be newly composed, and remained the sole property of the Eisenach court for two years (though Telemann performed them elsewhere during this period). When, in 1716, Telemann passed through Gotha (perhaps on his way to or from Eisenach) he was offered the vacant position of Kapellmeister. Negotiations with the Gotha court continued during 1717, when there were also moves to make Telemann Kapellmeister to Wilhelm Ernst of Saxe-Weimar and to all the courts in the Ernestine line. In the end, however, he remained in Frankfurt and used the Gotha offer to obtain an increase in salary, which he used to employ extra church musicians. His request to the city council mentions that the shortage of musicians had required him to sing and play various instruments during worship services. Telemann later reckoned that his annual income from all sources at Frankfurt was 1,600 florins – an impressive figure for a musician, and one comparable to the salary of a high-ranking councilman. In September 1719 he travelled to Dresden for the celebrations on the marriage of Crown Prince Friedrich August II to Maria Josepha, Archduchess of Austria.There he heard operas by Lotti, Heinichen and J.C. Schmidt, heard Veracini perform and dedicated a violin concerto to his close friend J.G. Pisendel.

Telemann, Georg Philipp

4. Hamburg.

On 10 July 1721 Telemann received an offer from the Hanseatic city-state of Hamburg to succeed Joachim Gerstenbüttel as Kantor of the Johanneum Lateinschule and musical director of the city's five main churches. His musical connections to Hamburg went back several years before the invitation was issued: his *Brockes-Passion* had been performed there by 1718 (it was repeated in 1719 and 1720); the cantata *Alles redet itzt und singet* was performed at the Hamburg home of B.H. Brockes, perhaps under the composer's direction, on 13 August 1720; the opera *Der geduldige Socrates* was given at the Gänsemarktoper on 21 January 1721; and Telemann contributed music to the performance of the pasticcio *Ulysses* on 7 July 1721. He took up his duties as music director on 17 September 1721, and on his installation as Kantor on 16 October delivered a Latin panegyric on the 'excellentia' of church music.

Telemann now entered the most productive phase of his career (see fig.1). He was expected to provide two cantatas for each Sunday and a new Passion for Lent. Music was required for induction ceremonies and for

church consecrations, and further cantatas had to be written for the city's numerous civic celebrations. Once a year Telemann provided the 'Kapitänsmusik', consisting of a sacred oratorio and secular serenata, for the celebrations of the Hamburg militia commandant. As Kantor he was responsible for instructing the schoolboys in singing, theory and music history four days a week. Such official duties did not prevent his giving public concerts, many of which included sacred and occasional vocal works. Once again he directed a collegium musicum: on 15 November 1721 he initiated a series of weekly public concerts that ran each winter season from November or December until February or March. The popularity of these events caused the 1723–4 series to be expanded to twice-weekly performances, and owing to increased attendance the collegium moved in March 1724 from Telemann's apartment in the Johanneum to the Drillhaus. In April or May 1722 Telemann assumed the directorship of the Gänsemarktoper, where he performed his own operas as well as those by Handel and Keiser, for which he often provided additional material. He found the opera to be in good financial circumstances at first, but declining attendance in the 1720s and 30s forced it to close in 1738; as early as 1732 he wrote to his friend J.F.A. von Uffenbach that the opera had few spectators and that all expenses were paid by one or two patrons.

Telemann's direction of the opera and collegium musicum met with strong disapproval from certain church officials, who complained in July 1722 that such performances incited lasciviousness. Their objections were not acted upon by the city council, many of whose members regularly attended Telemann's performances. From the beginning of his Hamburg tenure Telemann sought to supplement his income by selling printed texts for his yearly Passion. In January 1722 the city printer complained to the council that this encroached upon his rights. Several days later Telemann successfully argued that it was his right as an author to choose the publisher of his works. However, in 1725 the council reversed its decision, allowing the city printer to print and sell the texts for profit; it was agreed that Telemann would receive royalties and a number of free copies. Further disputes in 1739 and 1749 resulted in these terms being applied as well to occasional vocal works performed in church. Telemann finally prevailed in 1757, when the council restored his exclusive right to print and sell his texts. It was probably his early difficulties in Hamburg that led Telemann to apply in 1722 for the post of Thomaskantor in Leipzig, vacant following Kuhnau's death on 5 June. Of the six applicants, Telemann was preferred; he arrived in Leipzig on 1 August and took his audition in the Thomaskirche on 9 August. On 11 August the Leipzig town council voted unanimously in his favour, even though he had refused to fulfil the Kantor's traditional duty of teaching Latin in the Thomasschule. Telemann petitioned the Hamburg city council for his release on 3 September, giving as reasons the favourable working conditions in Leipzig and the absence of good prospects in Hamburg. Still without an answer at the end of the month, he again travelled to Leipzig. On 21 October he indirectly asked the Hamburg council for a substantial increase in salary as a condition for his remaining in the city. This was granted, and he turned down the Leipzig post by 22 November.

With his position in Hamburg solidified, Telemann declined an offer in 1729 to become Kapellmeister to the St Petersburg court. Nevertheless, he took on two ancillary posts. Between 1723 and 1726 he was Kapellmeister *von Haus aus* to the Bayreuth court, which he supplied with instrumental works and an opera once a year. From 1725 to 1730 he was corresponding agent to the Eisenach court, in which capacity he was responsible for supplying news from across northern Europe. In letters to the court he stated that he was acquainted with most of the ambassadors in Hamburg and had correspondents in Paris, London, The Hague, Copenhagen, Moscow, Denmark, Berlin, Poland, Vienna and Hanover.

From his first years in Hamburg, Telemann participated actively in the city's rich intellectual life. Perhaps through his friend Brockes, who as a member of the city council had supported his application for the Hamburg post, Telemann became closely associated with the Patriotische Gesellschaft, a circle of Hamburg intellectuals devoted to improving tastes and morals in the city. Many of Hamburg's leading writers furnished texts for Telemann's vocal works, and these contacts may have reinvigorated his own literary ambitions. Between 1723 and 1738 eight of Telemann's poems and texts for vocal music were published in C.F. Weichmann's Hamburg anthology of north German poetry, *Poesie der Niedersachsen*. Telemann also published sonnets and poems on the deaths of Keiser, J.S. Bach, Pisendel, the musical prodigy C.H. Heineken, the Hamburg mayor K. Widow, Brockes's son Johann Bernhard and Brockes's wife. Two poems were published in Mattheson's *Grosse General-Bass-Schule* (further poems are included in the 1718 autobiography), and Telemann's moving 'Poetic Thoughts' on the death of his first wife, first published in 1711, was anthologized in 1743. Telemann's fascination with language is further illustrated in his use during the Frankfurt and early Hamburg years of the italianate anagram 'Melante', which appears on numerous autograph manuscripts, manuscript copies and printed collections. The earliest known use of the anagram is in the printed textbook for two lost wedding cantatas performed in Frankfurt on 24 May 1712, while its last datable use by Telemann is in the 1733 second edition of the *Lustige Arien aus der Opera Adelheid*.

By the early 1720s Telemann's second marriage had apparently deteriorated, for a Hamburg marionette play of 1724, intended to satirize Telemann, Brockes and Weichmann, alluded to Maria Catharina's affair with a Swedish military officer. Soon after this, rumours spread about her large gambling debts, which eventually amounted to the considerable sum of 4400 Reichsthaler (easily exceeding Telemann's annual income from all sources). In repaying these debts, Telemann was assisted by a collection taken up among his friends in Hamburg. The marriage seems effectively to have ended by 1736, when Telemann reported to his business associate J.R. Hollander that Maria Catharina had left their home. She may have gone directly to the Frankfurt convent where she died in 1775.

In 1725 Telemann embarked on an ambitious programme of publishing his own music. Over the next 15 years he brought out 43 publications (excluding second editions), all but one under his own imprint. Telemann himself engraved the plates – the biography of *c*1744 reports that he could complete nine or ten in a day – and undertook the responsibility of advertising and soliciting advance subscriptions. By 1728 he had

established agents in Berlin, Leipzig, Jena, Nuremberg, Frankfurt, Amsterdam and London; in succeeding years he further expanded his distribution network through booksellers and friends.

In late September or early October 1737 Telemann took advantage of a longstanding offer from several Parisian musicians to visit the French city, where he remained until the end of May 1738. The visit was no doubt motivated in part by a desire to prevent the printing of unauthorized editions of his music, of which a number had already appeared under the imprints of Boivin and Le Clerc. Upon his arrival in Paris, he obtained his own 20-year publishing privilege, with which he printed a collection of canonic duets and the *Nouveaux quatuors*. The latter works, which won him great acclaim at court and in the city, were performed to his enthusiastic approval by Blavet, Guignon, Forqueray and Eduoard. Telemann reported that his setting of Psalm lxxii, *Deus judicium tuum*, was performed twice in three days at the Concert Spirituel by nearly 100 musicians. Apart from this trip, he appears to have spent his entire life in German-speaking lands (there is no evidence to support C.F.D. Schubart's assertion, made in the 1780s, that Telemann visited Italy).

In 1739 Telemann became the sixth member of the Correspondirende Societät der Musikalischen Wissenschaften, founded by Lorenz Mizler. Although his ambivalence towards Mizler and the society eventually caused him to consider resigning his membership, he contributed the *Neues musicalisches System* in 1742 or 1743 (published by Mizler in 1752) and the cantata *Weint, weint, betrübte Augen* in 1754. On 14 October 1740 he offered for sale the engraved plates for 44 of his publications. The biography of *c*1744 claims that this step was motivated by Telemann's desire to devote his remaining years to the writing of theoretical treatises. Indeed, he appears now to have settled into semi-retirement: although he continued to fulfil his official duties in Hamburg, his musical output fell sharply between 1740 and 1755. Relatively little church music survives from this period apart from the two annual cycles of cantatas published in 1744 and 1748–9, and few instrumental works were written after the Paris trip. Telemann took up the popular Hamburg pastime of gardening, requesting and receiving rare plants from various friends, including Handel and Pisendel. But he also remained alert to the latest musical innovations. Throughout the 1740s and 50s he exchanged letters and compositions with the younger generation of composers working in Berlin, including C.P.E. Bach, Quantz, Franz Benda, C.H. Graun and J.F. Agricola. Following the death in 1755 of his eldest son, Andreas, Telemann undertook the responsibility of raising his grandson, Georg Michael (1748–1831); in later years Georg Michael was to serve as Telemann's amanuensis and deputize for him during church performances. The year 1755 also marks an important turning-point in Telemann's career. Inspired at the age of 74 by the new generation of German poets that included K.W. Ramler, F.G. Klopstock, J.A. Cramer, J.F.W. Zachariä and J.J.D. Zimmermann, he turned with renewed vigour to the composition of sacred oratorios.

Telemann was probably in good health for most of his life. In May 1730, however, Andreas informed the Eisenach court that his father had been stricken with a 'severe paroxysm'. This was probably the illness that Telemann claimed to have barely survived in the dedicatory preface to his

Zwo geistliche Cantaten, dated 19 December 1730. He took three cures at the mineral water springs in Pyrmont before 1734 (in 1731 he performed there with the Arolsen Hofkapelle), and made further visits in 1736, 1742 and 1751. As he entered his 80s, Telemann began to complain of physical ailments: weakness in his legs made walking and standing difficult, and, as he reported with characteristic good humour in a poem written on the autograph score of the 1762 *St Matthew Passion*, his eyesight was deteriorating. It is clear from this manuscript that he now had difficulty writing for long stretches, as his unsteady hand often gives way to those of copyists. Although relatively few compositions were completed after 1762, Telemann remained sharp-witted – J.W. Hertel recalled that during a 1765 visit the elderly composer engaged him in an intense discussion about musical theory and the latest musical styles – and was still capable of producing music of great distinction, as the cantata *Ino* (1765) makes clear. Telemann died in his apartment of a 'chest ailment' on the evening of 25 June 1767. He was buried on 29 June in the Johannisfriedhof. Obituaries and poetic eulogies were published in several Hamburg newspapers and journals, but the *Staats- und Gelehrte Zeitung des Hamburgischen unpartheyischen Correspondenten* stated simply that 'his name is his eulogy'.

Telemann, Georg Philipp

5. Influence and reputation.

In refusing to allow the scope of his musical activity to be limited by the nature of his official position, Telemann helped to redefine the role of the professional musician. Through his public concerts he gave music lovers the opportunity to hear all kinds of music, including works that were originally composed to mark ceremonies attended by a select few. Here, as in the long struggle to secure his prerogative to print and sell sacred vocal texts, he set an important precedent for regarding music as the intellectual property of its creator. In publishing the first German music periodical, *Der getreue Music-Meister*, Telemann provided student and amateur musicians with vocal and instrumental works in scorings suitable for domestic music-making. Most of the music was his own, but he also included works by J.S. Bach, Zelenka, Pisendel, Weiss and other leading musicians. Telemann typically avoided extremes of technical difficulty in his music so as to encourage the widest possible dissemination, and in fact many of his publications found favour both in private homes and at Germany's courts, where they were performed by some of the leading musicians of the day. Perhaps a by-product of his efforts to enrich German musical life was his adoption from 1733 of German tempo, dynamic and expression markings in vocal works. One of the first composers to make extensive use of such markings, he used many more German terms than there were standard Italian terms.

18th-century critics were virtually unanimous in counting Telemann among the best composers of his time. It is noteworthy in this respect that he was compared favourably both to composers of his own generation (such as J.S. Bach and Handel) and to those of the succeeding generation (such as C.H. Graun and Hasse). Leading German theorists such as Mattheson, Scheibe, Quantz and Marpurg frequently held up his works as compositional models, and Marpurg dedicated the first volume of the

Abhandlung von der Fuge (1753) to him. Two published subscription lists demonstrate that Telemann's music was admired not only in German-speaking lands, but also in Holland, Switzerland, Belgium, France, Italy, England, Spain, Norway, Denmark and the Baltic lands. For the *Musique de table* (1733) 52 of the 206 subscriptions came from abroad, 33 of them from France. Handel sent an order from London, and in several subsequent compositions he borrowed and reworked many themes from the collection. The *Nouveaux quatuors* (Paris, 1738) attracted 294 orders (not 237 as is usually stated), including one from J.S. Bach and no fewer than 155 from France.

In his 1729 autobiography Telemann gave a concise summary of his stylistic development up to that point: 'What I have accomplished with respect to musical style is well known. First came the Polish style, followed by the French, church, chamber and operatic styles, and [finally] the Italian style, which currently occupies me more than the others do'. During the 1710s and 20s Telemann played a leading role in establishing the style that became known as the German mixed taste, a blending of the German contrapuntal idiom with the French, Italian and Polish styles. Telemann's reference to his preoccupation during the late 1720s with the Italian style is most likely an acknowledgment of his increasing adoption of the *galant* style, with its characteristic triplet, Lombardic and *alla zoppa* rhythmic figures, uncomplicated textures, sharp motivic contrasts, drum bass lines and slow harmonic rhythm; these characteristics are all to be found in Telemann's music by the early 1730s. Yet to characterize him as a *galant*, Rococo or early Classical composer, as some commentators have, is misleading. Virtually every major musical style cultivated during the first two thirds of the 18th century is represented in his output, and although Telemann's music changed with the times, certain elements of his style – most notably a melodic idiom reminiscent of German folksong or popular dance types, rich harmony, elegant counterpoint and idiomatic vocal and instrumental writing – remained immutable. Indeed, Marpurg praised him for infusing the *galant* style with contrapuntal rigour. While Telemann adopted many features of the mid-century Italian style during his later years, he appears not to have approved of the general tendency towards harmonic simplification: in 1751 he complained to C.H. Graun about the blandness of harmony in contemporary music.

Telemann's influence on younger generations of composers can be gauged only partially by those known to have been his composition pupils (J.W. Lustig, J. Hövet, Christoph Nichelmann, J.C. Schmügel, K.D. Krohn, Jean Du Grain and G.M. Telemann). Graupner, Pisendel and Heinichen all performed under his direction at Leipzig, while Fasch and Stölzel became acquainted with Telemann's music there when they joined the collegium musicum under his successor, Melchior Hoffmann. Fasch recalled modelling his earliest orchestral suites on those of Telemann, and Quantz's quartets were inspired by the older composer's works. Various Leipzig pupils of J.S. Bach, including W.F. Bach, C.P.E. Bach and J.F. Agricola, were exposed to Telemann's music from an early age. In the 1740s and 50s Telemann's published songs strongly influenced the composers of the Berlin lieder school.

As the only musician among Telemann's heirs, the composer's grandson Georg Michael inherited a large number of autographs and manuscript copies of vocal works. The rest of Telemann's musical estate – including Passions, oratorios, Kapitänsmusiken, occasional vocal works and printed collections, but apparently no church cantatas – was sold at a Hamburg auction on 6 September 1769. Much of this material has since disappeared, and the auction catalogue does not survive. During his time as Kantor at Riga (1773–1831) Georg Michael gave numerous performances of his grandfather's sacred vocal works, often in his own arrangements that entailed substantial revisions of the musical text. Despite the fact that many of these revisions were entered directly on to the autographs, Georg Michael was for the most part an honourable guardian of his grandfather's legacy: his arrangements were intended to present Telemann's music to later generations in the best possible light, and he planned to publish some of the church cantatas, motets and letters. Following Georg Michael's death, Telemann's manuscripts were acquired by the music collector Georg Poelchau, who bequeathed them to the Königliche Bibliothek in Berlin.

During the last third of the 18th century Telemann's music, especially his late oratorios and certain instrumental chamber works, remained known to many musicians. Performances of vocal works, some directed by Telemann's successor C.P.E. Bach, were given regularly in Hamburg until 1776, then sporadically during the 1780s and 90s; further performances are known to have taken place in Frankfurt, Meiningen, Lübeck, Ludwigsburg, Pszcyna, Brasov, Gdańsk and Zagan. In Paris and London reprints of the instrumental works were still being sold in the 1760s and 70s. Vocal and instrumental works were advertised by Breitkopf between 1761 and 1780, and the Hamburg firm of J.C. Westphal offered numerous sacred and secular vocal works between 1772 and 1799. Yet by the early years of the 19th century, knowledge and appreciation of Telemann's music was in rapid decline; an 1832 revival of *Der Tod Jesu* in Vienna was apparently the last major performance of Telemann's music until the 20th century. In 1894 Salomon Kümmerle could observe that "lost and forgotten!" has long been the fate of the entire enormous mass of Telemann's works'.

The 19th century's general ignorance of Telemann's music is reflected in the reliance of most lexicographers on the 1770 assessment by the Hamburg professor Christoph Daniel Ebeling, filtered through Gerber's *Lexicon* article of 1792. Ebeling criticized the prominence of obbligato instruments in arias, the musical depiction of individual words or natural sounds rather than an overall affect, obsolete declamation in arias and the use of inferior or mediocre texts in all but the latest church compositions. Undoubtedly the most severe, and as it turned out most influential, criticism was the remark that 'in general, [Telemann] would have been greater had it not been so easy for him to write so unspeakably much. Polygraphs seldom produce masterpieces'. Telemann as 'polygraph' or 'Vielschreiber' and addicted word-painter are themes that run through most 19th-century accounts of his life and works. It is therefore ironic that Ebeling, like many of his late 18th-century contemporaries, actually found much to praise in Telemann's music. When, in the second half of the 19th century, the music was unfairly judged according to the very different aesthetic standards of

J.S. Bach's, it was considered to be merely 'fashionable' and lacking in religious fervour. In their Bach biographies Spitta and Schweitzer denigrated Telemann's church cantatas while praising works attributed to Bach that have since been shown to be by Telemann. A growing interest in Telemann's music around the turn of the 20th century culminated in the biographical accounts of Schneider and Rolland, which gave a rational, balanced view of his creativity and led to more intense study of the man and his music. Several dissertations written between the two world wars, together with the publication of numerous performing and scholarly editions, paved the way for Bärenreiter's selected critical edition begun in 1950. The appearance of thematic catalogues during the 1980s and 1990s allowed the first accurate survey to be made of Telemann's output of well over 3000 works.

Telemann, Georg Philipp

6. Sacred vocal music.

During his extraordinarily long career as a composer of church music Telemann wrote at least 20 complete annual cycles, a dozen of which survive more or less intact. Many others, some almost totally lost, must have constituted a patchwork of new and old compositions. Of the 1700 cantatas for which his authorship is reasonably certain, about 1400 are extant. This enormous output resulted largely from the fact that Telemann had to supply a steady stream of annual cycles to Eisenach (one every two years) and, after 1721, to Frankfurt (one every three years) as well; before 1730, most of his cycles appear to have been intended in the first place for Eisenach, with parallel and subsequent performances occurring in Frankfurt and Hamburg. Telemann's productivity served him well in managing the heavy workload at Hamburg: whereas only one cantata was heard on Sunday in Frankfurt, in Hamburg Telemann had to supply a cantata before the sermon, another after the sermon, and concluding music at the end of the service (often an aria followed by a chorale). To meet these demands he often repeated cantatas from earlier Eisenach, Frankfurt and Hamburg cycles and took the concluding music from one of the cantatas composed for that Sunday. Although few composers of the time published church cantatas, in Hamburg Telemann brought out four complete cycles and published the arias from a fifth. The post-sermon cantatas for 1725–6 appeared as *Harmonischer Gottes-Dienst* (fig.2). This cycle's limited scoring (voice, melody instrument and continuo) and restricted scope (two da capo arias separated by a recitative) made it suitable for churches with small musical establishments and for domestic worship; the *Fortsetzung des Harmonischen Gottesdienstes* of 1731–2, for which we also possess expanded versions in copyists' manuscripts, differs only in requiring two melody instruments. In the published cycle of 1727 Telemann included only the arias from the pre-sermon cantatas for 1726–7, arranging them for voice and continuo and rewriting the bass line to include thematic material played originally by the strings. The published cycles of 1744 (written by 1741–2) and 1748–9 have larger scorings, but make limited use of the full instrumental forces. Telemann's cantatas, both published and unpublished, circulated widely during his lifetime: in 1758 Johann Ernst Bach claimed that there were few German Protestant churches in which Telemann's cantata cycles were not performed.

Although most of Telemann's earliest cantatas appear to be lost, a Hildesheim or Leipzig origin for a number of works surviving in manuscript copies is suggested by their stylistic proximity to the late 17th-century central German tradition, rather than to the 'madrigalian' type of cantata established in 1700 by Erdmann Neumeister. From the beginning of his career, Telemann strove for maximum stylistic and formal variety between cycles and from cantata to cantata. Most cycles acquired titles during Telemann's lifetime: the 'Geistliche Singen und Spielen' (Eisenach, 1710–11), Telemann's earliest cycle to survive complete, is one of the first attempts at writing church music in the style of contemporary secular cantatas and operas; the 'Französischer Jahrgang' (Eisenach and Frankfurt, 1714–15) makes use of poetic rondeau forms and stresses certain aspects of French musical style; the two overlapping 'Concerten-Jahrgänge' (Eisenach and Frankfurt, 1716–17 and 1720–21) are in a predominantly Italian style; and the 'Sicilianischer Jahrgang' (Eisenach, 1719–20) features song-like movements in triple meter and an overall pastoral idiom. Beginning with the Eisenach period, all of Telemann's cantata texts were written specifically for him by Neumeister and others. The rich scoring of many cantatas is enhanced by Telemann's imaginative handling of vocal and instrumental colour, especially evident in arias with obbligato instruments. Despite the fugal textures of many choruses and the sometimes elaborate accompaniments to arias, Telemann's counterpoint maintains a characteristic transparency, a quality highly valued by his contemporaries.

Most of Telemann's cantatas for church consecrations and funerals are products of his Hamburg years, and call for appropriately opulent scorings. Yet one of his most effective instrumentations occurs in the funeral cantata *Du aber Daniel, gehe hin*, probably composed in Eisenach or Frankfurt. In the soprano aria the accompaniment consists of a solo oboe in dialogue with the voice, two violas da gamba in unison providing a delicate contrapuntal filigree, and pizzicato strings reinforced by recorder and continuo. The printed texts give no indication of the performance of motets or masses in Hamburg's churches, and indeed most of the surviving examples appear to have been written during the early stages of Telemann's career. Several masses and psalm settings, a Latin *Magnificat* and a Sanctus can be assigned to the Leipzig period. The psalm settings embrace an especially wide range of styles, forms and scorings; among them the brilliant *Deus judicium tuum*, written for Paris, is notable as an important contribution to the French *grand motet* tradition.

Telemann's numerous oratorios can be divided into four categories: liturgical oratorio Passions, non-liturgical Passion oratorios, sacred oratorios for the Kapitänsmusik and sacred oratorios intended primarily for public performances. Half of the 46 liturgical Passions Telemann composed for Hamburg between 1722 and 1767 are extant, and only one of these parodies an earlier work. Following contemporary practice, nearly all Telemann's liturgical Passions mix biblical prose texts with chorales (given relatively straightforward harmonizations to facilitate singing by the congregation) and interpolated poetry sung by unnamed or allegorical personages. In keeping with Hamburg tradition, Telemann chose his texts according to the order in which the four evangelists appear in the New Testament; thus, starting in 1722 he wrote a *St Matthew Passion* every four

years. The Passion oratorios to freely written librettos employ a more colourful, theatrical musical language and tend to call for a larger orchestra than the liturgical Passions. Of these the *Brockes-Passion*, *Seliges Erwägen* and *Der Tod Jesu* enjoyed the greatest popularity during the 18th century. The *Seliges Erwägen*, written to Telemann's own text modelled on Brockes's, was performed in Hamburg's concert halls and smaller churches almost every year from 1728 until the beginning of the 19th century. Although Telemann's setting of *Der Tod Jesu* was eventually overshadowed by C.H. Graun's, his music is in many respects the richer and more dramatic. Of the 36 Kapitänsmusiken Telemann wrote between 1723 and 1766, only nine complete oratorio–serenata pairs and a few separate pieces have survived. The ten extant sacred oratorios, intended to be performed in the secular setting of the Hamburg Drillhaus, are populated almost exclusively by allegorical characters. Among the most highly praised of Telemann's compositions during the middle and late 18th century were the sacred oratorios written for public concerts in the 1750s and 60s. Characteristic of these works, and of Telemann's late vocal music generally, are the adoption of a progressive, mid-century Italian style also cultivated by Graun and Hasse, the increased use of accompanied recitative, an emphasis on homophonic textures in choruses (a particularly effective example is the opening chorus of the first part of *Die Donnerode*, written to commemorate the Lisbon earthquake of 1755) and the frequent supplanting of da capo form by more flexible, dramatic structures. Telemann's final contribution to the genre, *Der Tag des Gerichts*, combines these features with vivid musical pictorialism and considerable dramatic force.

Telemann, Georg Philipp

7. Secular vocal music.

In his 1740 autobiography Telemann claimed to have written 'several and twenty' operas for Leipzig, 35 operas for Hamburg (a figure that probably includes a dozen prologues) and several other stage works for the courts at Weissenfels, Bayreuth and Eisenach. Thus Telemann may have written 50 or more operas over three decades. Documentary evidence exists for 29 works, of which only nine survive complete. Despite the loss of so much music, Telemann can be considered, next to Keiser, the most important composer of German-language opera in the first half of the 18th century. He was especially gifted as a composer of comic opera, and Hamburg tastes encouraged him along these lines. Six of the surviving stageworks are comedies or include comic elements: *Der neumodische Liebhaber Damon* (1719/1724) and *Der geduldige Socrates* (1721) are full-length comedies, *Pimpinone* (1725) is an italian-style intermezzo, *Don Quichotte auf der Hochzeit des Comacho* (1761) is a one-act comic 'serenata', and both *Sieg der Schönheit* (1722) and *Emma und Eginhard* (1728) have comic subplots. It is telling that in Hamburg, Telemann chose to publish only the 13 comic arias and duets from the otherwise lost Bayreuth opera *Adelheis* (1724). Comic plots often revolve around sharp critiques of the social order, placing lower-class characters in positions of power (as in *Pimpinone*) or revealing them to have higher morals than their social superiors (as in *Emma und Eginhard* and *Don Quichotte*). Whether an aria is set in *seria* or *buffo* style, or something in between, often depends on the social standing of the characters. *Pimpinone*, first heard between the acts

of Handel's *Tamerlano* and subsequently pulished by Telemann, shows his mastery of the Italian intermezzo idiom – with its parlando style, repetitions of short motifs and characterization through orchestral accompaniment – eight years before Pergolesi's *La serva padrona*. Musically, the comedic high point is reached in Pimpinone's aria 'So quel si dice', in which bass and falsetto ranges are mixed in order to relate a conversation between two women. Elements of *buffo* style are already strongly evident in *Socrates*, which is also notable for its especially rich scoring and large number of duets and ensembles.

The surviving serious operas, and the music for *seria* roles in comic operas, have an italianate style not unlike that of Handel's contemporary works. If *Sieg der Schönheit* and *Emma und Eginhard* break with the conventions of *opera seria* by including comic characters, *Miriways* (1728) and *Flavius Bertaridus*(1729) are relatively pure examples of the genre. Exceptional among the surviving operas is *Orpheus* (1726), a cross between *tragédie lyrique* and *opera seria*. Here the French-style choruses have French texts, while the arias vary between Italian, French and German styles and texts, corresponding to the language of the text. Such a mixture of languages and styles was not uncommon in Hamburg: nearly all the librettos to Telemann's Hamburg operas combine German recitatives with arias in both German and Italian (fig.3). Although the demise of the Gänsemarkt Opera in 1738 brought Telemann's operatic activities to a halt, he clearly followed later developments leading to the genesis of the German Singspiel. Among the most significant early examples of the Singspiel is his *Don Quichotte*, with its lied-like arias and ensembles, parodies of *seria* style and touches of local colour.

Telemann's secular cantatas and serenatas form a large and diverse repertory. Those commissioned for civic and private ceremonies range in scale, subject and style from the allegorical and moralizing serenatas for the Kapitänsmusiken and the opulently scored cantatas (*Auf Christenheit, begeh ein Freudenfest* and *Auf ihr treuen Untertanen*) and serenata (*Germania mit ihrem Chor*) for the birthday celebration of Archduke Leopold of Austria in 1716, to the *Trauer-Music eines kunsterfahrenen Canarienvogels*, commissioned by a bereaved pet-owner to commemorate the death of a canary. The majority of the cantatas, including the 19 works that Telemann published, are for solo voice with modest instrumental accompaniment. In the two sets of published cantatas to moralizing texts (1735–6 and 1736–7) Telemann turned to the format of his earlier sacred cantata collections (aria–recitative–aria) and to the tuneful melodic idiom of his songs. Among the most important cantatas from Telemann's last decade are *Die Tageszeiten* and *Ino*. The former is actually a cycle of four solo cantatas on the popular mid-century theme of a cyclical progression through the hours of the day. In it Telemann employs the effective programmatic device of successively deeper voice types (soprano for 'Morning', bass for 'Night'). *Ino* is the outstanding masterpiece of Telemann's later years. Essentially a dramatic *scena*, this cantata contains some of his most expressive accompanied recitatives and ariosos. The melodic grace and symmetrical phrasing of the final two arias show Telemann, at the age of 84, to be fully at home in the early Classical style of the 1760s.

Through his published songs (lieder and Oden), Telemann helped to revive interest in the genre during the 1730s and 40s. His first collection, the *Singe-, Spiel- und Generalbass-Übungen* (1733–4), appeared before those of Sperontes (*Singende Muse an der Pleisse*, 1736) and Gräfe (*Samlung verschiedener und auserlesener Oden*, 1737). In the preface to the *24 theils ernsthafte, theils scherzende Oden* (1741) Telemann wryly criticized the melodic simplicity and poor text-setting of contemporary lieder, and considered that a song should be vocally comfortable (avoiding extremes of register and virtuosity), accurately express the sense of the text and fit each verse. By setting poetry by such figures as Brockes and F. von Hagedorn, Telemann established high literary standards for the genre. His approach to melodic writing and text-setting directly influenced J.V. Görner's *Sammlung neuer Oden und Lieder* (1742) and probably inspired C.G. Krause's *Von der musikalischen Poesie* (1752), the manifesto of the Berlin lieder school. It is significant in this regard that Krause's and Ramler's 1753 collection of *Oden mit Melodien* contains lieder only by Berlin composers and Telemann, who was a generation older than the others.

Telemann, Georg Philipp

8. Instrumental music.

Telemann is known to have composed approximately 125 orchestral suites, 125 concertos (for one to four soloists or without soloists), several dozen other orchestral works and sonatas in five to seven parts, nearly 40 quartets, 130 trios, 87 solos, 80 works for one to four instruments without bass and 145 pieces for keyboard (excluding two collections containing 50 menuets apiece). This list indicates not only the considerable size of Telemann's instrumental output, but its generic diversity. In publishing his instrumental works Telemann concentrated on the smaller scorings appropriate for domestic music-making: only ten orchestral suites and three concertos appeared in print, compared to half of the trios and quartets and the majority of the solos and unaccompanied works. Although it is certain that almost all of Telemann's instrumental music was composed before 1740, the near total absence of autograph manuscripts has until recently hindered the establishment of a more precise chronology for the works surviving in manuscript sources.

There is probably some truth to Scheibe's claim that Telemann popularized the French-style orchestral suite in Germany. Fasch recalled that Telemann's suites were already well known in Leipzig by 1707, and some of the surviving works are undoubtedly products of the Leipzig, Sorau and Eisenach years. French influence is evident not only in the suites' style, scoring and structure, but also in their frequent use of programmatic titles for entire works or individual movements (for example 'Hamburger Ebb und Fluht', 'Burlesque de Quixotte'). Among the programmatic movements are representations of emotional states, mythological and other personages, nations, natural phenomena and historical epochs; dramatic scene types, such as the sommeil and tempête; and even an account of the Parisian stock market crash of 1720 (twv 55:B11, 'La Bourse'). Perhaps none of these subjects finds more vivid musical expression that the 'concertizing frogs and crows' of twv 55 F:11, depicted ingeniously and amusingly through oboes, bassoons and horns. In several works, the titles of the

stylized dance movements following the overture provide a continuous narrative. Many of Telemann's suites can be considered 'Concertouverturen' (Scheibe) by virtue of their concertante parts for wind or string instruments. A subset of such works features one or more concertante instruments taking a leading role throughout (as in the well-known suite in A major for recorder and strings, twv 55:a2); these concerto-suite hybrids may be the earliest of their type. The idea of blurring distinctions between the two genres is taken to an extreme in the suite from the second 'Production' of the *Musique de table* (1733). Here an oboe, a trumpet and two violins function as soloists in the overture and the following 'airs', most of which are in fact concerto movements.

Telemann's concertos represent virtually a history of the genre in Germany during the first half of the 18th century. The earliest surviving works (including several concertos for violin, two violins or oboe, and perhaps some of the ripieno concertos and the concertos for six instruments and continuo) date from Telemann's Eisenach period, and their style suggests that they were written before his contact with Vivaldi's concertos. Fast movements in the Eisenach concertos often feature sonata-like imitative or antiphonal textures which, along with a restricted motivic palette, tend to minimize the distinction between solo and tutti. Early ritornello structures resemble those found in roughly contemporary works by Torelli and Albinoni, but during the 1710s Vivaldian ritornello form gradually became an important structural principle for both fast and slow movements. Compared with the Eisenach concertos, those written in Frankfurt and Hamburg show a greater diversity in the choice of solo instruments, larger overall dimensions, stronger articulation of the tutti–solo opposition, and richer motivic and rhythmic content. Throughout his career, Telemann favoured a four-movement plan, often with a dance-based finale in binary or rondeau form. Among the most significant works from before 1720 are the concertos 'alla francese' for pairs of treble instruments, which strongly 'smell of France', and the oboe concertos, notable for their effective solo writing, harmonic and textural boldness, and instrumental recitatives. Many concertos from the later 1720s and 30s, such as the concerto for flute, oboe d'amore and viola d'amore, twv 53:E1, the concerto for two flutes, violin and cello, twv 54:D1, and the three works published in the *Musique de table*, are remarkable above all for their formal complexity and imaginative use of instrumental colour. Telemann's comment in the 1718 autobiography that he was no great lover of concertos should probably be interpreted as a distaste for the ostentatious display of virtuosity in some Italian concertos; indeed, virtuosity for its own sake seems to have interested him far less than innovations in scoring, style and structure. His claim that he 'clothed' the Polish style 'in an Italian dress' is borne out by numerous concerto and sonata movements with the rhythmic and melodic characteristics of the polonaise or mazurka (for example, the finales to the E minor concerto for flute and recorder, twv 52:e1, and the A minor concerto for recorder and viola da gamba, twv 52:a1).

A similarly broad range of styles and approaches to form characterize Telemann's sonatas, which Quantz and Scheibe considered paradigmatic. The earliest works, again probably written at Eisenach, show the clear influence of Corelli and the post-Lullian generation of French composers, while works such as the trio for two violins and continuo in the *Musique de*

table anticipate the mid-century *Empfindsamkeit*. The mixed taste, entailing alternations between Italian, French and Polish styles from movement to movement or within a single movement, appears by the *Six trio* (1718), and the *galant* style is already strongly evident in the 12 solos and 12 trios of the *Essercizii musici* (1740, but apparently written in the 1720s). In the *Sonates corellisantes* (1735) the mixed taste encompasses a blending of two italianate styles, the old (Corellian) and the new (*galant*). Telemann's scorings are often strikingly original: the *Six quatuors ou trios* (1733) are effective as either quartets or trios, and the obbligato keyboard trios of the *Essercizii musici* and the *Six concerts et six suites* (1734) are among the earliest such works. He may also have been the originator, in Germany, of what Scheibe called the 'Sonate auf Concertenart', a sonata (usually in trio or quartet scoring) adopting certain stylistic and structural features of the concerto. Perhaps Telemann's most original contribution to the history of chamber music came in his quartets for three melody instruments and continuo. These works feature colourful instrumentations (usually a mixture of strings and winds), intricate motivic interplay and kaleidoscopic shifts of texture among the upper parts. With the publication of the *Quadri* (1730) and *Nouveaux quatuors* (1738), the genre reached its peak. The fantasies for unaccompanied flute (1732–3) and violin (1735), as well as the sonata for unaccompanied viola da gamba (1728), demonstrate Telemann's mastery of compound melodic lines and idiomatic writing, while the several sets of duets are models of two-part counterpoint. Telemann's keyboard music is most notable for its progressiveness: the fantasies (1732–3) employ incipient sonata forms, and the *Fugues légères* (1738–9), described by Telemann as 'Galanterien-Fugen', incorporate fugal textures into the *galant* style.

Telemann, Georg Philipp

9. Theory.

Telemann's longstanding fascination with problems of music theory led him to plan a series of treatises, none of which appears to have been completed. In a letter to Mattheson (1717) he proposed to write a treatise on the most common instruments and how composers could best exploit their characteristics. In 1728 he planned a translation of Fux's *Gradus ad Parnassum*, going as far as to list its price in a published catalogue. That same year he announced in the preface of *Der getreue Music-Meister* that, time permitting, he would occasionally include analyses of his compositions in future instalments. A 1731 newspaper item stated that Telemann was writing a treatise on composition entitled *Theoretisch-musicalischer Tractat*. The 1733 printed catalogue of Telemann's works lists a *Traité du récitatif* among his forthcoming publications, while a 1735 announcement solicited advance subscriptions for a *Theoretisch-practischer Tractat vom Componiren*, in which Telemann would combine elements from the writings of Fux and Heinichen with some of his own discoveries. Shortly after the Paris trip he proposed to publish his musical impressions of the city. According to the biography of *c*1745, he was planning to publish serially a treatise called *Musicalischer Practicus*. In the preface to the cantata cycle *Musicalisches Lob Gottes* he said that he had intended to write on several issues relevant to the works at hand – the application of the theatrical style to church music, the composition of German recitative and the use of dissonance – but in the end he made only a few observations on the

figuring of thoroughbass, a subject that he promised the *Musicalischer Practicus* would treat in greater detail. Finally, in 1759, he proposed to Breitkopf the serial publication of a Passion, to which he would append his thoughts on composing vocal music, especially the setting of German text to italianate melodies. His dual interests in theory and publishing intersected in his editions of treatises by Haltmeier, Kellner and Sorge.

Telemann's strong pedagogical leanings are evident in his autobiographies and in many of his publications. Detailed directions for continuo realization and part-writing are given in the *Fast allgemeines evangelisch-musicalisches Lieder-Buch* and in the *Singe-, Spiel- und Generalbass-Übungen*, while the prefaces to *Harmonischer Gottes-Dienst* and the *Fortsetzung des Harmonischen Gottesdienstes* lay out rules for the composition and performance of recitative. The 'Avertissement' to the *Nouveaux quatuors* introduces a new bass figure for the diminished triad; in his *Versuch*, C.P.E. Bach endorsed the use of this figure, which he called the 'Telemannischer Bogen'. Invaluable documents of early 18th-century ornamentation practice are provided by the opening slow movements in the *Sonate metodiche*, *Continuation des sonates méthodiques* and *III trietti methodichi*. Many of Telemann's publications, most notably the *Essercizii musici*, *Musique de table* and *Der getreue Music-Meister*, are conceived as encyclopedic surveys of contemporary genres and styles.

Telemann's only completed theoretical project unconnected to his compositions is the *Neues musicalisches System*, written for the mathematically orientated Societät der Musikalischen Wissenschaften. Concerned with a theoretical demonstration of chromatic and enharmonic relationships, Telemann divided the octave into 55 commas: six whole tones comprising nine commas each (C–B), with the last tone including an extra comma (the distance between B and C). Each interval might then be described as having four degrees: smallest, small, large and largest (for example, those of the second would be C–D♭, D♯, D and D). Telemann had not contemplated developing a new keyboard temperament and, indeed, he intended the system's intervallic relationships to be applicable only to 'unrestricted' instruments, such as the cello and violin. The system inspired both praise (Sorge) and criticism (Christoph Schröter) from members of the society. In a letter of 1750 to Telemann, Scheibe expressed surprise that his own interval system, published in the *Abhandlung von den musicalischen Intervallen und Geschlechtern* (1739), was becoming known under Telemann's name. In 1773 Scheibe again claimed priority for discovery of the system, although he admitted having discussed the details of the *Abhandlung* with Telemann before publication. He also revealed that the *Critischer Musikus* had been planned as a joint project with Telemann, who, before leaving for Paris in 1737, had read and approved the first 15 issues before they appeared in print.

That Telemann gave much thought to questions of style and text declamation is clear from his extensive correspondence during the 1750s with C.H. Graun, in which the two composers discussed the relative merits of French and Italian recitative. For Graun, who was then steeped in the conventions of Italian *opera seria*, French recitative was illogical, unnatural, rhetorically weak and opposed to the rules of poetic scansion. In particular

he objected to the frequent changes of metre in French recitative, and attempted to show that they were unnecessary, demonstrating in the process his imperfect understanding of the French language. Telemann countered by acknowledging the value of both recitative styles, and admitted to using both in his own compositions. To strengthen his point that despite frequent metrical changes 'everything flows continuously like champagne' in French recitative, he provided examples from his 1746 St Matthew Passion, in which he applied shifts between duple and triple metres to recitative in German.

Television.

The purpose of this article is to outline the history of music in television and to examine the influence of television on musical life in terms of the dissemination and composition of music.

I. Television and music
II. Concert and recital relays and recordings
III. Opera and musical theatre relays and recordings
IV. Television opera
V. Documentaries
VI. Incidental music

Television

I. Television and music

Music in television falls into a number of categories: 'pure' (presented in its own right: concerts, serious or light, and recitals); 'applied' or supportive (operas and music theatre); features of many kinds, including quasi-educational programmes; and incidental music.

1. Pure music.

The presentation of pure music is the most contentious and poses the most practical problems. As was the case with earlier mechanical means of reproduction (first gramophone recording, then radio), the advent of

television was initially greeted with some hostility by conservative musicians and music lovers; and television executives, concerned with audience size in a mass medium (especially where competition has existed), have always tended to view the presentation of pure music with scepticism. The argument was frequently advanced that diffusion of such material would be better left to radio – unmindful that, until the development of mechanical means, music could not be experienced other than 'live' (i.e. in the visible and audible presence of those making the music). In his *Chroniques de ma vie* (1935–6) Stravinsky cogently expressed the counter-argument:

> Obviously one frequently prefers to turn away one's eyes, or even close them, when the superfluity of the players' gesticulations prevents the concentration of one's faculties of hearing. But if the players' movements are evoked solely by the exigencies of the music, … why not follow with the eye such movements … , which facilitate one's auditory perceptions? … Those who maintain that they only enjoy music to the full with their eyes shut do not hear better than when they have them open, but the absence of visual distractions enables them to abandon themselves to the reveries induced by the lullaby of its sounds, [which] is usually what they prefer to the music itself.

The camera, like the observer's eye whose proxy it is, directs its gaze on whichever part of an orchestra is of most interest at the moment: a fixed centre-stalls position would become intolerably unselective and monotonous, and unless the camera were high enough it would see little but the backs of music stands and the tops of players' heads. A fundamental tenet about the relationship between sound and image is that they should always reinforce, never contradict, one another. Most obviously, this means that the camera should not be looking at orchestral instruments which are not playing, or, when one has a solo of significance, at some other. But in more subtle ways the two elements need to correspond; and in the course of time a grammar of presentation has evolved.

Fewer changes of image accord with the tempo and mood of slow-moving music; quicker changes can underline the excitement or agitation of fast movements. These changes of shot should take place only where the musical structure allows, never in mid-phrase: camera cuts are appropriate at starts of clean-cut phrases (in which case they need to be made with precision, neither too early nor – even worse – too late); but, if the music is fluid, dissolves correspond better (slow lingering cross-fades, however, only draw attention to the technique employed); after a series of mixes, a cut can have the effect of a sudden *sforzando*. A camera tracking in usually suggests an increase in tension or a crescendo, as does a panning or tracking shot across a section of the orchestra (as for a Rossini build-up); quick zoom-ins look melodramatic and should be used only in exceptional circumstances; a zoom-out, at whatever speed, is better avoided, as it gives the impression of retreating or fleeing from the music. Superimposition of images of instruments is usually undesirable musically except, for example, in ostinatos such as in Ravel's *Bolero* or Holst's

'Mars'. Some emphasizing of the structure of, for example, a sonata form movement can be achieved by adopting for the recapitulation the same image sequence as in the exposition. All this of course necessitates the director's planning his or her camera treatment from the score. All shots should be musically motivated: those made purely for pictorial effect, or cutaways to members of the audience, detract from concentration on the music and suggest that the director has lost interest in it. Works with colourful orchestration (e.g. Rimsky-Korsakov's *Spanish Capriccio*) and concertos are the musical forms most adaptable to television, the interplay between soloist, orchestra and conductor in the latter offering quasi-dramatic interest.

A glimpse of the composer's manuscript at the beginning of a performance may help to establish an atmosphere, but otherwise showing lines or a page of the score is of limited value, since a large part of the mass audience will be unable to read musical notation. Associating extra-musical images with a performance calls for the nicest judgment; and juxtaposing reality and pictorialism – two different conventions – produces uncomfortable results. Overtly programmatic works like Dukas' *L'apprenti sorcier* or Strauss's *Don Quixote* are rare; and although stock 'mood' film could accompany less specifically illustrative music (such as Respighi's *Pini di Roma*, Smetana's *Vltava* or Borodin's *In Central Asia*), the length of the pictorial sequences would need to be matched with that of the musical phrases; and one must be wary of transgressing a composer's intentions (for example, Mendelssohn deprecated any attempt at pictorializing his overture *Die Hebriden*). The imposition of irrelevant representational images on an abstract work like a symphony or a Bach cello suite merely irritates true music lovers.

Increases in costs and pressure on studio usage have had the effect of diminishing the number of orchestral concerts mounted in studio conditions (where, in any case, the acoustics of all-purpose studios have needed to be adapted by ambiophony or other means); these have largely been replaced by relays of public concerts, whose sense of occasion is preferred by ratings-conscious executives. Solo and chamber recitals, on the other hand, are more easily accommodated in the studio. The smaller scale involved also permits the artists' personalities to emerge; and there is much less need to isolate one artist pictorially from his or her partner(s) except, for example, in a fugato in a string quartet, a solo passage from one member of a sonata duo, or a piano interlude or postlude to a song. Mixing between two different angles on the same performer is nearly always upsetting: superimposing the two is gimmicky and unpleasing. Human interest shots (focussing on an artist's physical exertions, grimaces or perspiration) should not be allowed to override artistic considerations.

2. Applied music.

While drama on television has long since freed itself from mere relays from the theatre and has developed ways of presentation idiomatic to the new medium, economic constraints and technical considerations have, at the present time, forced a regressive treatment of opera. Arguments that once flourished about studio productions – whether they should be live or mimed to a playback of a pre-recorded performance (either by the cast in vision or

by other singers) – are now largely academic. Only opera on film now escapes the confines of the proscenium arch.

To conservative minds, this demotion to reportage from the stage represents only acceptance of a fundamental dichotomy: operas (except those few written specially for television) were conceived for performance in a large building, for which singers had to project their voices with some power and adopt acting techniques meaningful to spectators at some distance from the stage; television, on the other hand, essentially an intimate medium, allows singers a greater range of vocal nuance and calls for a more subtle type of acting. Apart from the necessity for physically plausible casting – generously built, well-nourished women, for example, however lovely their voices, are not acceptable as frail or consumptive young heroines – the close range of television demands smaller gestures, more facial expression, lighter make-up and more mobility. Modern zoom lenses with their formidable telephoto capabilities, as now used in opera house relays, often reveal uneasy compromises in this respect. The limitations of positioning on the stage, too, ensuring that singers can see the conductor in the orchestra pit, do not exist in studio production, where monitor screens can be placed at various points to meet the singers' eye-lines – although the experience of television has now led many opera houses to follow suit and install monitors in the wings. Stereophonic sound has added to the restrictions imposed by stage relays: the left–right sound spectrum is contradicted by anything other than frontal shots.

The screen's immediacy involves viewers more closely in the action or in the characters' emotions; but for this the work, particularly if it is a comedy, needs to be performed in the audience's own language (subtitles, besides dividing the viewer's attention, are inevitably only summaries lacking textual subtleties) and clarity of enunciation becomes a top priority. Television's ability to focus closely on small but important details of the action, such as Michele lighting his pipe in *Il tabarro* or the Count pricking his finger on a pin in *Le nozze di Figaro*, increases their significance.

There are of course difficulties. Singers need to modify their normal vocal projection without sacrificing quality; balance between voices and orchestra calls for sensitive adjustment in the closer perspectives of the studio; and whether from studio or stage, while some ensembles of perplexity (as in Rossini) permit the camera to move from one character to another, reflective and static ensembles (often highpoints musically, as in *Fidelio* or *Die Meistersinger*) cannot rightly be disturbed, although they militate against the normal pace of the television medium.

3. Features and incidental music.

Programmes about, rather than of, music offer television far greater scope, attract fringe viewers who may not be willing to listen to performances as such, and so tend to outnumber programmes in the categories mentioned above. They are of considerable diversity. There have been biographies or studies of individual composers or artists, combining film or still pictures and the relevant background, examples of the music or music-making, and spoken commentary – the last being most effective when the presenter has a charismatic personality; instrumental or vocal lessons either aimed at teaching the viewers themselves or observed at public masterclasses;

programmes of solo artists or conductors and orchestras (when unions have not raised objections) in the act of rehearsing, leading to the performance itself; national and international competitions; music quizzes and discussions; and so on. But in all these the mainspring surely needs to be the music itself, and frustration is caused in educated viewers if it is so insensitively handled as to become a background, is faded down under speech or is faded out entirely in mid-phrase.

Apart from its purely utilitarian adoption for programme identifications and signature tunes (e.g. for news bulletins), however, the most extensive use of music in television is indeed in a background, almost subliminal, capacity. It has long been recognized that, without any words intervening, the addition of music can create a particular mood or atmosphere for an image or sequence of images: indeed, a common routine in film and television training schools is to evoke completely opposite emotional responses to the same pictorial sequence by attaching first a lighthearted, then a grave, music track. But in an age when, in general, silence seems abhorrent and music of a sort has become increasingly inescapable everywhere, television programmes – nature programmes, travelogues and features of all kinds, even some plays – have practically incessant music foisted on them, regardless of the fact that it often obscures the narration or dialogue. Much as this relegation of music to aural wallpaper may be deplored, the practice now seems ingrained; producers could, however, set an example by reversing the trend and helping to restore to music something of its true value.

II. Concert and recital relays and recordings

The BBC inaugurated the world's first public high-definition television service on 2 November 1936. The pioneer years before the outbreak of World War II in 1939 saw the creation of the BBC Television Orchestra, a 21-piece studio ensemble based at the Alexandra Palace studio in north London. The orchestra worked 24 hours a week; the best players declined to sign up for a permanent engagement because of the lucrative freelance work on offer in London. The conductor was Hyam Greenbaum. The first substantial postwar development occurred in the USA, where as early as 1931 the New York PO's annual contract with CBS had allowed for the eventual televising of its broadcast concerts. On 20 March 1948 the NBC TV network began quarterly transmissions of Arturo Toscanini's long-running concert series, which NBC's radio network had produced since the 1930s. Toscanini's television concerts continued until 1954, when his health and memory began visibly to fail; NBC's cancellation of the series caused considerable offence to the aging conductor and his admirers. The hour-long telecasts (transmitted simultaneously by radio, with commercial announcements between the musical selections) were initially broadcast from NBC's Studio 8H in the Rockefeller Center, New York City, and subsequently transferred to the acoustically more sympathetic Carnegie Hall.

The traditional rivalries of the big networks had sparked off a race to be first in the field once an agreement had been struck with the American Federation of Musicians. CBS trumped NBC by arranging a telecast with the Philadelphia Orchestra under Eugene Ormandy just 90 minutes before Toscanini's television début. But the Italian made the more lasting impact. Although he was then in his eighties, his vigour and rhythmic vitality remained undiminished. Howard Taubman of *The New York Times* observed that 'the music welled out of him with a force that he seemingly could not brook, and one could see him humming, chanting and almost roaring' and added perceptively, 'Watching him on television gave you the illusion that a new medium had been found for your comprehension of the music'.

Another great orchestra, the Boston SO, made its television début in December 1949, when Leonard Bernstein conducted a United Nations Human Rights Day concert, also at Carnegie Hall. From the 1950s onwards, the United Nations Organization itself became a regular promoter of televised concerts from its General Assembly Hall. UN Day concert programmes, featuring orchestras and conductors of the first rank, were televised on a worldwide basis until financial restraints and diminishing demand forced their termination in 1992.

Concerts of classical music remained a regular if infrequent feature on American television throughout the 1950s. When, in 1950, the New York PO inaugurated television relays from its outdoor summer season at the Lewisohn Stadium, *Variety* noted that the new medium was capable of handling 'cultural longhair programming' as well as 'horror-whodunnit'

shows; the close-up shots of Nathan Milstein's bowing and fingering in Brahms's Violin Concerto 'added to appreciation of the music'. Television, the article added (enjoying the paradox), offered the same benefits as at a prize fight: 'viewers had a better seat for the proceedings than did ringsiders in the stadium'. In 1958, CBS started national telecasts of Young People's Concerts, four a season, under the dynamic leadership of the New York PO's newly appointed music director, Leonard Bernstein. At the peak of their success, in the early 1960s, they were watched by 25 million Americans (many of them far from young), but televised music was never again to enjoy such popularity.

In Britain, an early postwar BBC telecast (in September 1948, when the potential total viewing audience numbered under 200,000) featured the Vienna PO conducted by Wilhelm Furtwängler in Beethoven's 'Eroica' Symphony, direct from the Royal Albert Hall. But the excessively high light level needed by the early cameras precluded regular outside broadcasts at public events, and most music was performed at Alexandra Palace. There was more classical ballet than music in the early schedules, but such popular works as Mendelssohn's Violin Concerto and Chopin's Second Piano Concerto were performed in the two tiny studios, with reduced orchestrations. For several years the BBC preferred to take its cumbersome Outside Broadcast equipment (usually, as in the USA, a unit of three cameras) into the Studio 1 sound studio at Maida Vale in west London for Sunday afternoon symphony concerts.

In the early 1950s BBC TV moved to larger premises at the Lime Grove film studios in Shepherd's Bush (also in west London), expanding later in the decade to the custom-built Television Centre nearby at White City. It became possible to mount more ambitious and elegant studio-based music programmes, among them 'International Concert Hall', first transmitted in 1960, in which a conventional repertory of overtures, symphonies and concertos was performed by distinguished soloists and conductors. Middle-brow classical tastes had been catered for since 1951 by Eric Robinson's potpourri 'Music for You' and (in the 1970s) by 'André Previn's Music Night', but the BBC never devised a programme to match the ratings appeal of the American 'Ed Sullivan Show', in which leading stars of the pop and classical worlds received equal billing.

Studio production of classical music programmes, a genre that flourished during the 1960s and 70s, encouraged a more fluid visual presentation. Viewers were no longer offered a restricted view of the proceedings: the studio director had at his or her disposal five or six cameras, some mounted on mobile cranes or dollies (wheeled trolleys) that moved alongside the orchestra and could even swoop over it, providing a cubist or multi-angled vision of the performers. The introduction of zoom lenses in the 1960s, replacing the four-lens turret cameras, increased the range of instrumental close-ups, while more sophisticated lighting techniques allowed individual instruments to be spotlit and encouraged the use of different lighting conditions to underline the prevailing mood of the music. Slow movements could be low-key, finales were usually bright and cheerful. The advent of colour television in the late 1960s provided another extra-musical element. For a production of Walton's First Symphony, mounted for the composer's 75th birthday in 1977, the director (Rodney

Greenberg) assigned a different colour to each movement; in the Scherzo, marked *presto con malizia*, a brilliant red was reserved for the percussion, green for the strings and purple for the brass. Split-screen technology provided the impetus in the same era for a visually fascinating performance of Bach's Third Brandenburg Concerto, directed for television by Barrie Gavin, in which the screen was divided into nine smaller screens, one for each string part.

Although developing interactive technology may allow future viewers to make their own decisions about what to look at during televised performances, an agreed protocol of camera scripting for complete performances has long been in place. Following a detailed study of the score and (where possible) attendance at rehearsals, the director sets out to visualize ('story-board') in advance every moment of the forthcoming performance. Descriptions and instructions are written into the score as a series of numbered shots, which are then transcribed by the director's assistant and passed on to the individual camera operators in the form of annotated cards attached to the cameras next to the viewfinders. Some shots will be static, showing the conductor or soloist alone, or an instrument in close-up; others will involve pans and zooms from one instrument to another or from a group of instruments to the conductor; for climaxes the architecture of the entire studio, hall or cathedral nave may be shown. As many as 1000 of these separate visual events will be incorporated in the camera script for a large-scale symphonic work. The precise moment when one shot succeeds another on the screen is decided at the control panel by the vision mixer ('switcher' in American usage), who works either from the director's score or to his or her verbal instruction, selecting the shots from a bank of preview monitors, one for each camera. (In the pioneering days this function was carried out by the director.) As each shot occurs, its number is identified over the intercom by the director's assistant, who also 'readies' the next shot.

The music director's interpretative craft is to mirror in images the salient points of the music, its ebb and flow. There are basic rules of visual grammar, such as the need, with cameras positioned all round the orchestra, to avoid 'crossing the line': shots should not succeed each other in such a way that conductor and instrumentalists appear to be facing in the same direction. There are also aesthetic criteria concerning the creation of a harmonious sequence of pictures, alternating wide angles with close-ups. But inevitably the director's script treatment is largely subjective, depending upon visual taste as well as musical knowledge. The conductor is often the dominating element in a script. Images of the conductor, full length, mid-shot or close up (the baton in movement, or the conductor's hands, convey the music's pulse and can be as expressive as the face) are intercut with various aspects of the orchestra, which can be represented either in a wide-angle tutti, showing the complete ensemble, or by groups of instruments and by individual players. The conductor will be shown setting and modifying the tempos, providing the players with instrumental cues and with emotional inspiration: the eloquence of a conductor's body language is often the key to a successful transmission. (Bernstein and Karajan had mesmeric camera appeal; Carlos Kleiber and Simon Rattle were among the most charismatic conductors of the late 20th century.)

An effective camera script for a music telecast is one in which the viewer is unaware of the director's visual interpretation; in terms of perceptive priority the eye should never do more than gently reinforce the ear, since otherwise the basic musical purpose of the telecast will have been undermined. The director's dilemma is encapsulated in an essay by W.H. Auden published in *The Dyer's Hand* (1962): 'The ear tends to be lazy, craves the familiar and is shocked by the unexpected; the eye tends to be impatient, craves the novel and is bored by repetition'. Occasionally repertoire with an extra-musical dimension is selected, a notable example being a 1965 performance, directed by Walter Todds, of Strauss's *Don Quixote* in which Paul Tortelier's interpretation was illustrated by Gustave Doré's etchings of the Cervantes classic. More recently a film of Handel's *Messiah* directed by William Klein (France, 1999) cut tellingly between specially filmed studio performance, documentary scenes of violence and suffering, a Spanish Passion day and a painting by Bosch.

From its beginnings, televised classical music had a serious drawback: the dry, unflattering acoustic of the studio. Recognizing the problem, BBC engineers invented 'ambiophony', a regulated degree of artificial reverberation, but musicians from Benjamin Britten downwards claimed they could never give their best under studio conditions. The poor quality of the loudspeakers in most home television receivers was a further stumbling-block, although simulcasting and, more recently, the advent of stereophonic television, have reduced this problem. As a response to it, types of programme unique to television were developed (mostly by the BBC) in which performance was amalgamated with preliminary exposition in the form of rehearsals, interviews and biographical essays. The veteran director Philip Bate began as early as 1939 with an occasional series, 'The Conductor Speaks'. In 1953 the conductor and entertainer Vic Oliver offered popular analyses of Tchaikovsky's *Romeo and Juliet* and *Francesca da Rimini* overtures. From the long tradition that developed may be cited the six-part BBC series 'Six Pieces of Britain' (1999), which featured documentation and complete performances of 20th century works such as Walton's *Belshazzar's Feast* and Britten's *Serenade*. (See also below, §V.)

Chamber music performances including song recitals transfer more comfortably to the small screen than symphony orchestras. In the 'golden age' (from the 1950s to the 70s) there were many distinguished programmes, including cycles of the quartets of Beethoven and Bartók, the piano sonatas of Beethoven played by Barenboim and Strauss lieder sung by Kiri Te Kanawa, accompanied by Solti. Subtitles enhance the pleasure of foreign language art songs.

Until the 1980s the regular performance of classical music on BBC TV was supported by a well-disposed central management. But such music-loving administrators as Huw Wheldon, David Attenborough, Aubrey Singer and Brian Wenham were eventually succeeded by a generation of programme controllers with new agendas. Ratings took precedence over cultural responsibilities: cooking, travel and above all sport were given more air time. In the 1980s, when at least 25% of BBC output had to be handed over to small independent companies, production of classical music programmes in multi-camera studios was wound down in favour of relays

of concerts from the summer Promenade season and, exceptionally, from other public venues with satisfactory acoustics, such as the Barbican Hall in London and Symphony Hall, Birmingham. There is undeniably a greater sense of occasion at public events, but the opportunities for creative camera work are severely limited.

Classical music has lost the regular weekly transmissions which it previously enjoyed on BBC-2. In the 1960s the premières of important new works by, for example, Britten and Shostakovich were televised as a matter of course, but today there is little evidence of positive editorial policy towards music, and the busy life of Britain's regional festivals and its major concert halls is no longer reflected by either of the BBC's terrestrial television channels. Concerts are rarely shown on the culturally-orientated Channel 4 (established in 1982), being restricted to an occasional gala event such as Simon Rattle's farewell concert with the CBSO in 1998.

Other nations with long traditions of televising classical music are experiencing similar cultural changes. In the USA, the only surviving regular concert season on network television is that of the Boston Pops. On PBS, the 'Great Performances' series schedules only a handful of concerts each year. Austrian Television still produces its world-renowned New Year's Day concerts, which are transmitted to over 50 countries, and it still has a regular slot for classical music, albeit relegated to late evenings. In Germany the second national network, ZDF, has renewed its relationship with the Berlin PO, and promises concert broadcasts as well as 'more unconventional music productions', but its output – only 45 programmes in the past 30 years – is very small.

Practitioners argue that television restores the visual element to the perception of musical performance. Until the advent of radio and recordings the listener was always in the same space as the musicians: unless one kept one's eyes shut, one was willy-nilly taking in the performance visually as well as aurally. Stravinsky is credited with the statement that one listens to music with the eyes as well as the ears. The general music-loving public of today, however, seems not to have accepted this proposition. Audience research measuring the number of viewers of existing programmes suggests that there is no large demand for music on television; nor has the sale of classical music videos, now readily available, been remotely on a par with those of sound-only CDs. The medium itself is no longer widely acknowledged as an important method of transmitting musical experience, despite its immense importance as a historical source for future generations. Conditions may change with the adoption of digital broadcasting, which permits – at least in theory – many more specialist channels, but, for all its considerable past achievements, classical music on television is at present unquestionably a Cinderella among the performing arts.

Television

III. Opera and musical theatre relays and recordings

13 days after the newly formed BBC began its television service in November 1936, selected scenes from Albert Coates's *Mr Pickwick* became the first opera transmitted on television, in a specially prepared studio production. These excerpts, acting as a preview for the work's première at the Royal Opera House a week later, generated little comment. Only one reviewer mentioned the work, referring to it as 'televised opera'. He did not describe the production because, he admitted, without a television he was unable to see the broadcast.

From the start, the BBC regularly featured opera in its schedules. In 1936 Stephen Thomas, Dallas Bower and Desmond Davis were engaged as directors for opera on television. Together with Hyam Greenbaum, the conductor of the BBC Television Orchestra, and members of the British Music Drama Opera Company, they formed a group that presented 29 operas until broadcasting was suspended in 1939. The relationship between music, drama and television was one planned in aspiration and conditioned by existing technology. The initial repertory was ambitious. In 1937 the BBC presented 14 operas, all in English, most cut to approximately 30 minutes. All were performed live, but in the case of *Hänsel und Gretel* and Act 2 of *Tristan und Isolde* (subtitled 'A Masque to the Music of Wagner'), singers performed in one studio, while the television cast, making no pretence of singing, performed a type of pantomime for the television cameras in an adjacent studio.

During World War II the USA began its own experiments in presenting opera to what was still a largely élite constituency, those able to afford a television. In 1943, WRGB, the General Electric station in Schenectady, New York, presented the first complete opera telecasts in the USA, broadcasting a double bill of Offenbach's *Le mariage aux lanternes* and

Menotti's *The Old Maid and the Thief* (originally commissioned in 1939 by NBC for radio). Of the principal American networks, NBC was the most progressive, forming its own opera company in 1949 and, in 1950, inaugurating a programme of operas composed specifically for television. Samuel Chotzinoff was appointed as music director, Peter Herman Adler as conductor and Kirk Browning (who in 2000 continued to direct the Live from Lincoln Center series) as director. Their first complete opera was Kurt Weill's one-act folk opera *Down in the Valley*, which both Weill and Lotte Lenya helped to revise as a television production. In contrast to the earlier BBC productions, whose style was characterized by adopting sets and backdrops from the theatre, NBC based its sets on the type used in films. Even its earliest productions used several full- and half-sets.

After World War II, television companies around the world began not only to relay opera from the theatre but to create opera productions specially for television and, in many cases, to commission operas for television. While the USA and the UK both committed more resources and produced more operas than other countries, activity extended across Belgium, Italy, the Netherlands, Austria, Poland, Canada, Ireland, France and Japan. Politics and media combined, for a time, to provide a potentially fascinating archive in the form of the many operas both produced and composed for the state-owned television stations in former East Germany, Czechoslovakia, Yugoslavia and the USSR. But television archives throughout the world are characterized by the absence of material that was either never recorded or, having been recorded, was subsequently destroyed. This is particularly the case where political upheaval has altered the relationship between television and the individual, and these Eastern bloc productions are now remembered only through contemporary accounts or in personal recollection.

From the earliest experiments with opera on television, there was a choice, one that is still encountered today: should the cameras move to the opera house and relay a stage production, or should opera move to the television studio to take full advantage of television's resources? A further choice, the filmed opera, has antecedents dating back to the turn of the 20th century, with entirely different techniques reflecting film industry technology. In the beginning, television defined itself as quite separate from film and able to do many things that film could not. In particular, television could present current, topical programmes, broadcast live from the studio. Early efforts to broadcast opera from the opera house were not deemed successful. With the television lights bleaching the lighting design, and the cameras (which often occupied several of the best seats) positioned never quite near enough to the stage, patrons vacillated between being annoyed at the intrusion and pleased to be involved in (and perhaps telecast by) the new technology. A money-making venture in the USA, which encouraged the public to 'subscribe' to opera, by watching live opera relays projected directly on to their local cinema screen, foundered for lack of public interest. There was soon a strong sense within the television industry that the studio production would be the most successful format. As Herbert Graf (director of productions at the Metropolitan Opera House, 1936–60, and the director of the first live relay from the Metropolitan, *Otello*, 1948) wrote in 1951, 'Of the three ways of telecasting [live relay, studio or film], studio production offers the best chance of realising both virtues of television:

participation of the spectator in the actual performance and the use of new artistic and technical methods inherent in the new medium'. Crucial to Graf's reasoning, however, was the live transmission; most of the earliest televised operas had the cast, orchestra and conductor working in the same studio, transmitting live performance. For these productions, generally three or four large cameras, each weighing over 355 kg, remained largely stationary, while different lenses were flipped over the eye of each camera to depict an establishing shot, mid-shot or close-up. The director planned in advance which camera would relay the scene at any one time. An orthicon monitor filmed the results, taking the picture from an in-house television; this would provide a record, though not of broadcasting standard, for the network. Any repeat production required the cast and orchestra to be reassembled, with further rehearsals followed by performance. In short, it observed the production procedure of the theatre, combined with the intimate interplay of characters that the television cameras could provide.

Where American television was concerned, a boycott by the Musicians' Union unwittingly began to dismantle live music on television. Increased use of recorded music during televised programmes made professional musicians fear redundancy. The Petrillo Ban, enforced between 1945 and 1948, asked musicians to boycott the provision of live instrumental music for televised broadcasts, while negotiations tried to establish suitable royalty rates. As no live opera was possible on the US networks, television turned to pre-recorded soundtracks as a temporary solution; in many dramas, comedies and game shows the link with live music was permanently severed.

After the invention of video recording in 1958, television relied increasingly on taped or filmed programmes. This allowed producers not only to pre-record the programme for transmission at a later date, but also to record several takes of the same scene and choose the best. In addition, a production could run any number of cameras (usually four to six) simultaneously from different angles and edit the different tapes at a later stage. While this was undoubtedly an advance for drama, its impact on opera and music theatre was more dubious. For studio productions in Europe, which had always based their production methods on film, this had less impact. Italy had shown an early penchant for pre-recorded soundtracks. During the production itself, the singers would mime to their own voices. This method accords visual freedom but introduces incongruity since, even with sophisticated digital editing, lip-synching remains erratic; the visible illusion of singing robs televised opera of much of its intensity. Germany, following the film industry's predilection for casting famous actors to portray visually roles sung by well-known opera singers (as in the 1953 film of *Aida*, with Sophia Loren on screen and Renata Tebaldi providing the soundtrack), went a step further, withdrawing the voice from a particular singer and reinvesting it in the body of an actor.

Only the UK and the USA remained obdurate, continuing from the early 1950s to the mid-60s to produce their operas as live broadcasts or live studio recordings. Many within the television industry observed that video recording, with its potential for editing and retakes, did not necessarily improve the quality of performance, but rather ensured a fail-safe

mechanism for the viability of the production. Tensions arose between the rival demands of sound musical practice and effective television. Such television producers as Lionel Salter for the BBC and Kirk Browning for NBC mourned the loss of the live, single-studio production. So too did Benjamin Britten, who, despite his ambivalence towards television, involved himself in several television productions of his operas, from 1952 until his death. Even after the arrival of video recording Britten experimented with the two-studio system (orchestra and conductor in one, linked to the performers on set in another), before taking a firm stand in 1966 that any further operas must be recordings on video of performances in the Maltings at Snape. In doing so he not only replicated the single studio of the earliest days of live television but in effect created television productions that were relayed, if not from an opera house, from a concert hall with fine acoustics.

Given the quality of work that has been achieved by single- and two-studio productions (Basil Coleman's 1966 two-studio production of *Billy Budd* for the BBC is an outstanding example), it is surprising that, since the 1970s, the practice of miming to a pre-recorded soundtrack has become standard. Musical works presented on television are increasingly filmed using a single-camera set-up, an approach adopted from films made for the cinema. This method requires a pre-recorded soundtrack, with scenes filmed entirely out of sequence. The BBC's 1992 adaptation of Marschner's opera *Der Vampyr* as a mini-series (winner of the 1993 Italia Prize), and five of the six operas commissioned by Channel 4 in 1989 and broadcast in 1994 were produced in this way. Trevor Nunn's 1993 filmed version of Gershwin's *Porgy and Bess* required the singers to lip-synch to a recording the cast had made five years earlier. Nonetheless, there are exceptions: in a 'real time' relay in 1993 of *Tosca*, directed by Brian Large, microphones were hidden in costumes and wigs, while the singers performed live on location. This amalgamation of film, television and stage techniques suggests a further method of collaboration between opera and television.

In 1975 John Culshaw, Head of Music Programmes at the BBC (1968–75), reiterated the television industry's belief that opera and music drama made in a television studio produced a far more innovatory, technically assured broadcast than opera relayed from the theatre. He did not live to see the technical advances involved in broadcasting opera from the theatre, including infra-red cameras, built-in trunking to hide numerous camera cables, and computerized recording equipment. The newly refurbished Royal Opera House in London has included fibre-optics, point-to-point wiring and telephone cables to assist its telecasts. These advances combine to create high-calibre transmissions that, like the earliest studio recordings, retain the live performance. Increasingly, performances such as the 1999 ENO production of Handel's *Semele* and the ROH production of Verdi's *Falstaff*, both broadcast live from the opera house with a simultaneous radio broadcast, point the way forward in combining increasingly refined technology with the fundamental musical values of opera and music theatre.

Television

IV. Television opera

The first opera commissioned for television was announced by the headline 'Menotti tells us about his video opera commission by NBC-TV', a reminder that at that time in the USA the words 'video' and 'television' were used interchangeably. Olin Downes, in his review of *Amahl and the Night Visitors* in the *New York Times* (30 December 1951), was the first to use the term 'television opera' specifically to denote an opera commissioned for television. In his article 'Menotti's *Amahl* is historic step in development of new idiom' he described *Amahl* as the 'first television opera' and predicted that it would claim a place in 'the annals of video'.

In 1971, 20 years after the transmission of the first opera commissioned for television, the BBC presented the world première of Benjamin Britten's television opera, *Owen Wingrave*. During the years following *Amahl*, the genre Olin Downes claimed would enhance both opera and television was perceived differently. The producer of *Owen Wingrave*, John Culshaw, and several reviewers stressed that it was not a 'television opera' but an 'opera for television'. Between 1951 and 1971, and with over 100 operas commissioned for television worldwide, many came to perceive these works as a group of operas dominated by television techniques. A year after the première of *Owen Wingrave*, the music-media historian Jack Bornoff argued (*Music and the Twentieth Century Media*, Florence, 1972) that the decisive factor between an 'opera for television' and a 'television opera' was that the latter should be a work 'which could not, under any circumstances, be adapted for the stage'. According to that definition, neither *Amahl and the Night Visitors* nor *Owen Wingrave*, the only two operas commissioned for television to enter the repertory, would qualify.

Both migrated from the television screen to the theatre, a move that has allowed them to build a performance history.

Nonetheless, Bornoff's criteria continued to preoccupy, if not composers, then certainly those in charge of television programming. In 1989, when Channel 4 decided to commission six one-hour television operas, only operas that could not be transferred to the stage were considered.

Throughout nearly 50 years of operas commissioned for television, a distinct subplot has emerged. In the early 1950s a group of young American writers began to define what sort of material worked best on television. The name they chose to describe their ideal material was borrowed from the theatre: 'realism'. By 1955 Paddy Chayefsky, a champion of contemporary realism on television, could not only prescribe what writers should write, but warned against indulging in other styles: 'Lyrical writing, impressionistic writing and abstract expressionistic writing are appalling in television'. Television's version of realism was not only an ideological but also a pragmatic development as, to begin with, all programmes were broadcast live from the studio. However, the earliest television operas eschewed realism. Between 1951 and 1956, NBC and BBC produced five operas commissioned for television: *Amahl and the Night Visitors* (Menotti, NBC, 1951), *What Men Live By* and *The Marriage* (Martinů, NBC, 1953), *Griffelkin* (Lukas Foss, NBC, 1955) and *Mañana* (Arthur Benjamin, BBC, 1956). None of the composers chose a contemporary subject, nor did their operas subscribe to elements of realism as preferred by television. Musically, the operas allied themselves with traditional rather than innovatory structures; each involved set pieces, arias, ensembles and recitatives. However, two aspects of realism remained: the story line was linear and direct and the presentation, governed by the technical resources of the time, was simple. In short, while the operas themselves were not concerned with realism, the camera work presented them in a straightforward, realistic style.

The arrival of video recording in 1958 created new possibilities, in response to which composers of television operas began to choose contemporary subjects, often incorporating electronic music. In keeping with the new technology, a highly experimental style was adopted in the visual presentation. When Salzburg hosted the first International Congress for Music in the Technical Media (1956), a triennial prize for the best television opera was inaugurated. Paul Angerer was awarded the first Salzburg TV Opera Prize for *Die Passkontrolle* (ÖRF, Austria, 1959), concerning the freedom of the individual. In 1968, Yusushi Akutagawa was awarded the Merit Prize for *Orpheus in Hiroshima* (NHK, Tokyo), an opera about nuclear war, while in 1977 Raymond Pannell won the TV Opera Prize for *Aberfan* (CBC, Canada), based on the 1966 mudslide in Wales which killed 144 children and adults. Each opera's subject matter could be described as contemporary realism, yet their production styles were experimental and often surreal, invoking television's newest technological advances. Other composers rejected topical material and chose dramatic episodes from the Old Testament : Arthur Bliss's *Tobias and the Angel* (BBC, 1960) and Stravinsky's *The Flood* (CBS, 1962) each included scenes that required the latest television technology, while Menotti's bizarre allegory about death,

Labyrinth (NBC, 1963), was the only opera the composer wrote solely for television, to be presented solely on television.

Inevitably, there was a reaction. By the late 1960s and early 70s the television opera returned to realism. During this period certain television commissions stipulated that only a contemporary subject presented in a straightforward style would be acceptable. In 1966, the BBC commissioned a television opera from Christopher Whelen. *Some Place of Darkness*, a sombre domestic drama set in the present, exemplified all that television required. Yet the composer later allowed that his first idea had been a historic drama, but 'a BBC edict – crisp and clear – "contemporary plot and modern dress"', had forced him to abandon his original concept.

Between 1979 and 1988 scarcely any television operas were commissioned in Europe or East Asia, while none was commissioned in the USA and the UK. When, in 1989, Channel 4 announced its intention to commission six television operas, four of the five production companies decided to use film and filming techniques. In effect, they did not develop the relationship between television and opera at all, but returned to a far older species, the opera film. The genre as envisioned in the 1950s, live opera produced in the vernacular, in a television studio, has gradually disappeared. Technological advances have served to enhance a sense of artifice in an alliance that was intended to dispel the charges of opera's élitism and inaccessibility.

While confidence and interest in television opera is waning, there may be cause for optimism. Television is currently reinstating itself as an unique form of communication, able to provide entertainment, news and documentaries quite separate from any other medium. Realism is at the root of the renaissance, but practitioners have revised the original principles. In recent years, several television dramas have removed themselves from their quasi-film-set glamour and returned to the confines of the studio. The camera work is *faux-naïf*: long takes, abrupt transitions and intentionally jerky panning all create the impression of spontaneity, the drama as a parallel universe. The clues to successful collaborations between commissioning bodies and composers today are found in the television operas of the past. The present generation of composers, whose view of life has been, if not defined, at least informed by television, will bring a further dimension to the genre, readily combining film, television and the most recent innovation, the Internet. Television opera was created to bring opera to a mass audience. It would seem likely that, in the future, what was once a passive 'mass' will increasingly involve a collection of individuals gathering to exchange ideas and ideologies. The significance of new technology for the visual arts and music will depend on the interdisciplinary contributions of all involved, whether composers, producers, technicians or inventors.

Television

V. Documentaries

Music documentaries cover a wide variety of television programmes, including biographies and profiles of composers and performers; fly-on-the-wall impressions of such institutions as opera houses and orchestras; travelogues; competitions; workshops; analyses of works (or specific aspects of them); extended surveys of particular periods, and even an overview of the history of music in the Western world.

The dividing-line between documentary and reportage is difficult to define. A true music documentary requires the intervention of a director bringing to the task a critical eye and an interpretative idea, a flair for selecting the musical material, and the desire to tell a story by imposing a non-musical structure on musical material – in short, to provide an authorial voice. Given the collaborative nature of film and television, creativity is usually pooled by a team in which camera operator, writer, researcher, editor and producer each have a part to play alongside the director.

1. Early history.

The infant BBC TV service transmitted an occasional didactic series entitled 'The Conductor Speaks', directed by Philip Bate, as early as 1939. Postwar development of programmes about music (as opposed to pure performance) did not receive priority in the UK until the end of the 1950s, when the arts magazine 'Monitor' (1958–65) included classical music in its remit. Films varied in length from 15 to 50 minutes; the disparate subjects included the life of a string quartet, the general atmosphere of such festivals as Britten's at Aldeburgh and Menotti's at Spoleto, and a satire on the record industry ('Hi-fi-fo-fum', with a script by Robert Robinson, directed by John Schlesinger). American television had been quicker to exploit the educative possibilities of the new medium: as early as 1952 Leopold Stokowski gave an illustrated talk on Musorgsky's *Pictures From an Exhibition* in the Ford Foundation's innovatory weekly 'Omnibus' series. In 1954 that series carried an illuminating 30-minute essay by Leonard Bernstein on Beethoven's sketches for his Fifth Symphony. The first page of the score was painted on the studio floor, with each player standing on the appropriate musical staff. Bernstein proved an inspirational communicator who commanded audiences numbering many millions; he contributed a further 25 essays between 1955 and 1962, among them 'The Art of the Conductor', 'The World of Jazz', 'The Creative Performer' (with

Glenn Gould and Stravinsky) and 'American Musical Comedy'. After a further decade in which he gave illustrated lectures in the Young People's Concerts, Bernstein returned to adult education in the 1970s, delivering repeat performances on PBS of his series of Harvard lectures on musical semantics, entitled 'The Unanswered Question'.

2. Expansion in the 1960s: composer and performer profiles.

The horizon for music documentaries was extended by numerous technological advances, among them more portable cameras which needed less light, and by the advent of a generation of directors and programme editors who believed that the medium could be used to make programmes about music, rather than aping such 'bio-pics' as the Hollywood treatment of Chopin's life, *A Song to Remember*. In British television the most significant directorial figure was Ken Russell, who worked for the arts magazine 'Monitor' from 1958 to 1964. He began by making imaginative short films that used actors in specially shot scenes interwoven with photographs and contemporary newsreel footage. Russell's documentaries were narrated in forceful style by his editor, Huw Wheldon, the leader of a new school of documentary who had inherited the mantle of John Grierson (1898–1972), the founder of British documentary film making. Among the composers profiled were Prokofiev, Bartók and Elgar, all figures of recent memory. Russell eschewed the use of eyewitnesses and experts (the norm in subsequent decades), preferring to tell his own story; he chose actors with a physical resemblance to his subjects and used silent-film techniques without spoken dialogue. Although scrupulously researched, the early films did not claim to be biographies in the literal sense, but they communicated nonetheless a poetic perception of the composer and were warmly received by the public. A recurring musical thread in the Russell's Elgar portrait (1962) was the use of the *Introduction and Allegro* over shots of the composer's beloved Malvern Hills, accompanying scenes showing various stages of his life, from boyhood to old age. Seen by three million viewers and many times repeated, 'Elgar' sparked off a revival of interest in the then neglected composer's music that has continued unabated.

Early in the 1960s, 'Profiles in Music', narrated by John Freeman, offered portraits of leading performers including Yehudi Menuhin. This type of programme has become a staple of long-running television arts series such as 'The South Bank Show' (ITV) and 'Omnibus' (BBC-1). An early feature on BBC-2 was 'Mr Copland Comes to Town' (1964, directed by Barrie Gavin); and Michael Tippett collaborated with another pioneer director, Walter Todds, over the best way to televise one of his compositions. Tippett later spoke powerfully about his pacifism as well as his music in 'One Pair of Eyes' (1972, directed by Mischa Scorer). Leslie Megahey's film about György Ligeti, 'All Clouds are Clocks' (1977), and Barrie Gavin's study 'Thirteen Steps Around Toru Takemitsu' (1983) are outstanding examples of films made in collaboration with their subjects. Undoubtedly the most prolific director in this field has been Tony Palmer, who has 100 documentaries to his name as well as feature films about Wagner and Shostakovich. In the late 1970s and early 80s, the twilight of the golden age of music on television, Palmer won the Italia Prize three times, for compelling studies of Britten, Walton and Stravinsky.

The later television music films of Ken Russell moved into the realm of documentary drama. A study of Debussy (as a lecherous faun) had a script by Melvyn Bragg; a later film about the domestic life of Richard Strauss, to Russell's own script, had the energy of an iconoclastic comic strip: it was amusing, irreverent and occasionally embarrassing. Relatives of both composers complained after the screenings and the films were withdrawn, never to be aired by the BBC. Russell's last film before departing to concentrate on cinematic projects (all his films look well on the big screen) was by general consent his television masterpiece. 'A Song of Summer' was a dramatization of Eric Fenby's moving account of the closing years of the life of Frederick Delius. The film had the truth of documentary, provided by Fenby's authentic dialogue, allied to the insight of an exceptionally gifted and sympathetic director.

By general consensus Britain led the field in music-documentary making for some decades, but among notable profiles from elsewhere may be mentioned 'Goethe and Ghetto: Viktor Ullmann' (Sweden, directed by Peter Berggren, 1966), 'Händels Auferstehung' (Germany, Klaus Lindeman, 1980), 'Gustav III: Farewell to a Player King', on the historical reality behind *Un ballo in maschera* (Sweden, Inger Åby, 1983), 'My War Years: Arnold Schoenberg' (Canada, Larry Weinstein, 1992), 'Gesualdo: Death for Five Voices' (Germany, Werner Herzog, 1995), 'Richter: the Enigma' (France, Bruno Monsaingeon, 1997) and 'Edvard Grieg and his Landscapes' (Germany-Norway, Thomas Olofsson, 1999).

3. Other types of documentary.

A different type of music documentary flourished in the 1960s as a result of technological improvements. With the introduction of 16 mm film, costs were reduced while a new generation of more sensitive outside broadcast electronic cameras made it possible to film musical activities on location at rehearsal rooms, studios and even opera houses. Videotape superseded film telerecording, and the director was able to record for an hour or longer without having to disrupt rehearsals by changing reels; performers became less selfconscious, and a new naturalism evolved. Hybrid programmes combining film and tape were developed to take advantage of these improvements. One of the first, 'The Golden Ring' (BBC-1, 1964), videotaped the sessions in Vienna for Decca's recording of *Götterdämmerung* while a film camera caught the atmosphere backstage. A comic exchange between Georg Solti and his soprano, Birgit Nilsson, developed after a real horse was led into the ballroom studio at the moment when Brünnhilde calls for her horse Grane. Documentaries about recording sessions have been criticized for their lack of critical edge. Some were undoubtedly made with publicity in mind, but no punches were pulled in a later example of the genre, 'The Making of West Side Story' ('Omnibus', BBC-1, 1984), which revealed increasing tension between the composer and his leading tenor.

A substantial body of work in this field has been made by the independent producer Christopher Nupen, who was trained in the radio features department of the BBC and used his flair for reportage and editing to build up vivid portraits of some of the brilliant young musicians who became prominent in the 1960s. 'Double Concerto' documented the preparations

for a performance of Mozart's two-piano Concerto k365/316*a*; the ebullient soloists, seen forging a personal friendship as well as an artistic partnership, were Daniel Barenboim and Vladimir Ashkenazy. Barenboim appeared in several other Nupen films, most notably those on Elgar's Cello Concerto (played by Jacqueline du Pré) and Schubert's 'Trout' Quintet (with Itzhak Perlman, Pinchas Zukerman, du Pré and Zubin Mehta).

In a separate development in the 1960s the innovatory arts magazine 'Monitor' broke new ground with a studio-based conducting competition in which Boult, Giulini and Klemperer served as judges, and with such features as 'Do my ears deceive me?', an investigation of modern music with Hans Keller and Tippett; Colin Davis conducted the LSO. With the advent of BBC-2, in 1964, producers were allocated more air time to develop new programme strands which placed greater emphasis on education. 'Workshop' was similar in scope to the innovatory programmes for adults about symphonic music that Leonard Bernstein had pioneered for CBS in the Lincoln and Ford Hours a few years earlier. For BBC viewers, the scholar H.C. Robbins Landon spoke about Haydn and the symphony; the critic Martin Cooper explored the many treatments of Paganini's 24th Caprice; and the conductor Bernard Keeffe orchestrated some of Beethoven's sketches for the 'Eroica' Symphony.

A further important strand in music documentary is the 'blockbuster' series. The most ambitious and expensive project to date was made by Granada TV for Channel 4 in the 1980s. 'Man and Music' was intended to extend over 100 episodes but, sadly, was abandoned before a quarter had been completed. Conceived by the television executive Denis Forman and planned in detail by the music historian Stanley Sadie, the series explored the art of music in its historical context. Six films were on classical Vienna, and four on composers and the courts to which they were attached: Mantua, Versailles, Eszterháza and Weimar. Three programmes each were devoted to Renaissance and Baroque Rome, Georgian London and Vienna at the turn of the 20th century. Each programme was presented by an expert in its subject. A personal overview, inevitably less detailed, and conceived from a more anthropological standpoint, was provided by Yehudi Menuhin in 'The Music of Man' (1979), an eight-part series produced by CBC. In 1982 James Galway presented 16 programmes entitled 'Music in Time' (directed by Derek Bailey). Over two decades, beginning in 1965, Pierre Boulez made more than 20 programmes on contemporary music for BBC-2 under the title 'The New Language of Music' (directed by Barrie Gavin). Other distinguished conductors have examined more specific subjects; examples from the 1990s include Solti's anatomy of the symphony orchestra, Michael Tilson Thomas's demonstration of the evolution of the concerto, and Simon Rattle's six-part study of the 20th century, 'Leaving Home' (all on Channel 4). Two important series on BBC-2, 'Great Composers' (1998) and 'Six Pieces of Britain' (1999), admirably combined biography, analysis and performance; the latter was notable for the quality of its camera work and for its imaginative use of lighting.

More concerned to entertain than to edify is the musical travelogue. Among the earliest examples of the genre were two by the celebrated film maker Richard Leacock. In 'A Musical Journey to Israel', made for the American 'Omnibus' series, Leonard Bernstein is seen conducting the opening of the

Frederic R. Mann auditorium in Tel-Aviv in 1957. Ten years later, 'Journey to Jerusalem' showed him conducting Mahler's Second Symphony on the slopes of Mt Scopus after the Israeli victory in the Six Day War. Isaac Stern was accompanied by a film camera when he made a historic visit to China: *From Mozart to Mao* (1981, director Alan Miller) was shown first in cinemas, and won an Academy Award. The BBC got to China first however, with 'The Red Carpet' (directed by Geoff Haydon) an account of the LPO's 1973 tour when the cultural revolution was in full swing. A decade earlier David Attenborough had directed 'Orchestra to the Orient', a spirited account of the LSO's 1964 tour in Japan. For the Mozart bicentenary in 1991, André Previn retraced the composer's musical journeys around Europe in 'Mozart on Tour', directed by Robin Lough. Judged by box-office standards, the most successful of all such films was François Reichenbach's 'L'amour de la vie' (1969), an affectionate study of Artur Rubinstein. More recently the growth of interest in traditional and non-Western musics has been reflected in travelogues including the three-part 'Music Journeys' (Channel 4, 1998) and a feature on the Afro-Cuban All-Stars (1998).

Two notable documentaries among Tony Palmer's achievements outside the realm of classical music are the 'Omnibus' film 'All my loving' (1968), which placed rock and roll in the social context of the late 1960s, and the 17-part history of American popular music 'All you Need is Love'.

Televised masterclasses, rehearsals and competitions might more usefully be defined as documents rather than documentaries. Great teachers like Jascha Heifetz and Paul Tortelier both entertained and edified musically minded viewers in the early 1960s; other notable television teachers have included Daniel Barenboim, Julian Bream, Jacqueline du Pré, Carl Ebert, Geraint Evans, Yehudi Menuhin and Elisabeth Schwarzkopf. In the 1990s the masterclasses given by the judges of the Young Musician of the Year and Cardiff Singer of the World competitions were equally illuminating. Although watching a video can never replace individual tuition, masterclasses and conducting lessons are an educational tool of lasting value for students. The competitions themselves became regular features of the BBC TV landscape in the last two decades of the 20th century and are also shown or imitated in many other countries.

Television

VI. Incidental music

Incidental music in television fulfils the same functions as in film and the theatre, even if the effect has to be achieved through musical shorthand. Thus television music can establish atmosphere as well as time and place, or delineate character, push the action forward, accompany scene changes, add to the dramatic impact and the emotional intensity of a scene, or provide continuity across edits.

Many film composers born since the 1920s developed their craft working in television, including Jerry Goldsmith (e.g. 'The Twilight Zone') and John Williams ('Wagon Train', 'Checkmate', 'Lost in Space'). While composing music for television and for the cinema are broadly similar activities, there are significant differences brought about by television's smaller budgets, tighter production schedules, shorter programme durations and poorer sound replay. These conditions have several effects on the music track. Although stereophonic and 'surround sound' systems are beginning to become popular in the home, the composer has to be aware that the sound quality of television is inferior to that of the cinema, especially in terms of bass response and overall clarity. This can either be countered by careful scoring or be remedied in the recording and mixing process.

Modest productions tend to demand smaller ensembles, often combined with or supplanted by samplers and synthesizers. While the result can often be a 'cheaper' sound, the dramatic imperative does not always demand a large orchestra. Christopher Gunning demonstrated this point to great effect in his music for Dennis Potter's *Karaoke* (1996), which features a solo saxophone with an accompaniment of sampled instruments. Small budgets often lead to the use of 'production music' (sometimes referred to as 'library music' or 'mood music'), comprising pre-recorded cues appropriate to certain types of action, atmosphere or setting. This is not dissimilar to the approach exemplified in Ernő Rapée's *Motion Picture Moods for Pianists and Organists* (1924), an anthology of ready-made moods for the silent-movie accompanist. However, it is often even cheaper to clear rights to existing recorded music, classical or pop, rather than commissioning an original score from a composer.

Television intensifies the narrative compression already observed in the cinema in comparison with the theatre. For instance, the short opening titles and closing credits of television programmes present a particular challenge to the composer attempting to establish an appropriate atmosphere through music. The medium of television also demands the creation of appropriate signature tunes at these points, as well as the short 'hooks' derived from them which are used to punctuate episodes, not only in terms of dramatic action and scene structure, but also for the purposes of advertising breaks on commercial channels. In the cinema and theatre the audience is expected to be seated and attentive throughout, but television demands immediately identifiable themes to call viewers to their armchairs. Memorable signature tunes of this kind include those for 'The Avengers' (Laurie Johnson), 'Bonanza' (Jay Livingston and Ray Evans), 'Hawaii Five-0' (Leith Stevens), 'The Persuaders' (John Barry), 'Thunderbirds' (Barry Gray), 'Mission Impossible' (Lalo Schifrin), 'The Untouchables' (Nelson Riddle), 'Batman' (Neal Hefti), 'Dr Kildare' and 'The Man from U.N.C.L.E.' (Jerry Goldsmith), 'Star Trek' (Alexander Courage), 'Dr Who' (Ron Grainer), and 'Agatha Christie's Poirot' (Christopher

Gunning). The signature tunes for the more frequently broadcast soap operas, situation comedies and news and current affairs programmes have their own equally recognizable qualities.

As in the cinema, there has been an increased use of popular music in television programmes and advertising in recent years; while this provides both entertainment and ready-made socio-cultural references (and leads in turn to increased sales of the recorded music so used), it inevitably reduces the range of musical expression.

The convergence of sound and music is evident in television, just as sound design in the cinema is increasingly subsuming the music track. This, together with the trend towards one-stop production houses that offer clients the whole range of digital audiovisual services, is changing the patterns of commissioning music for television, and traditionally trained freelance composers may find fewer work opportunities in the medium as a result.

Telfer [née Lindsey], Nancy (Ellen)

(*b* Brampton, ON, 8 May 1950). Canadian composer and choral conductor. She attended the University of Western Ontario (1968–72, 1977–9), earning the BA in music education and the BMus in music theory and composition. Her teachers there included Deral Johnson and Kenneth Bray. After initial employment as a public school teacher she began to compose full-time in 1979, prompted by a steady stream of commissions. She is particularly well known for her choral works, each of which is carefully crafted both to suit and to challenge the choir for which it was intended. This goal applies whether the choir be from a junior school, a small church, or a large professional organization. Many of her works are inspired by the outdoors, as are a number of the varied texts which she has set. Neo-romantic in her approach to form and timbre, she imaginatively manipulates compositional techniques in an effort to fully illuminate the text. For example, *This Holy Time*, for choir, recorder ensemble and keyboard, provides a myriad of possible sonorities and textures as individual groups are combined. The choir has unison, canonic, dialogue,

unmetred and homophonic passages, used to express words and images. Telfer's books on choral conducting and sight-singing have been translated into Spanish and Korean. (*Contemporary Warmups*, Beaudoin, 1985; *Successful Sight-Singing: A Step-By-Step Creative Approach*, Kjos, 1990; *Successful Warmups*, Kjos, 1995)

ELAINE KEILLOR

Telford, William

(*b* Warwickshire, 1809; *d* Dublin, 1885). Irish organ builder. He established himself as William Telford, Organ Builder, in 1830, with the name of the firm changing in 1847 to Telford & Telford, and in 1870 to Telford & Sons. The firm built a number of organs during this period, ranging in size from the 47-stop instrument for St Peter's College, Radley, to small church barrel organs. Other important organs include those for Trinity College, Dublin (1838), Killala Cathdral, Co. Mayo (1838, still in original condition), the church of St Malachy, Belfast (1847), and St Eugene's Cathedral,

Londonderry (1872). While the bulk of his work was in Ireland, Telford was known and respected in England and abroad. He was a close personal friend of the French organ builder Aristide Cavaillé-Coll, having attended the inauguration of the organ of Ste Marie-Madeleine in Paris in 1847. Two organs were built by Telford for churches in New Zealand. He was awarded the gold medal of the Royal Dublin Society in 1847 for his work and in 1851 he was one of the adjudicators of musical instruments at the Great Exhibition held at the Crystal Palace, where the first prize was awarded to the young and talented organ builder Henry Wills.

Telharmonium [Dynamophone].

An electromechanical keyboard instrument developed in Washington, DC, and Holyoke, Massachusetts, between 1894 and 1911 by Thaddeus Cahill (*b* Mount Zion, IA, 18 June 1867; *d* New York, 12 April 1934). Three instruments were completed, none of which fully embodied the construction specifications contained in Cahill's five American patents. Cahill applied for a patent in 1895 and began to construct the first model of the Telharmonium, a small prototype (weighing 6·35 tonnes) for the later versions. The sound-generating system was based on the tone-wheel principle: a rheotome – a rotor with alternate conducting and insulating sections – in contact with metal brushes. The rheotomes were mounted on 12 shafts, one for each note of the octave. Each shaft bore rheotomes that would produce the fundamentals and various harmonics of one note of the scale over several octaves. The shafts were powered by belts driven by a constant-speed motor. A large dynamo supplied current directly into the mainframe. The current travelled through the pitch shafts into the conducting sections of the rheotomes, so that the brushes received interrupted electrical signals. The harsh waveforms thus produced were filtered by transformers and combined into a composite signal, which was transmitted along telephone wires to receivers fitted with large horns. The instrument was played from a keyboard. A hammer mechanism, dependent on key velocity, controlled volume by moving a transformer coil.

In 1903 Cahill moved to Holyoke and began to construct the second Telharmonium, a much larger commercial model intended to supplant orchestral instruments. The rheotomes were replaced by 145 alternators, or dynamos, which generated smoother waveforms and yielded greater current output. The alternators were mounted on eight steel shafts, permitting the instrument to play in only eight keys. For timbre control, switches and rheostats controlled the volume of the harmonics (some of which also served as notes of the scale for the missing four shafts). The 670-kilowatt output of this musical power plant could fill many rooms with sound. The three five-octave, 153-key manuals allowed operation in equal

temperament and just intonation. The apparatus weighed 200 tonnes and cost $200,000.

The instrument was completed in 1906 and installed in Telharmonic Hall, New York, on Broadway at 39th Street, where four daily concerts drew large crowds. The output, fed into a cable along Broadway and Fifth Avenue, supplied the music to receivers in restaurants, theatres and homes (Mark Twain was the first residential subscriber). Before long the inventor Lee de Forest was broadcasting the music in his early radio experiments, but it was of unsatisfactory quality: the players (often two performed together) had little opportunity to practise at the awkward keyboard but were obliged to give daily performances. Technical imperfections included a reduction in volume as voices were added, an exaggerated staccato, a 'growling' effect in the bass and a constant tone quality that was said to be highly irritating. Financing dried up with the Panic of 1907, and the programmes turned into musical freak shows to sustain interest. The hall closed in 1908, but Cahill returned to New York three years later with the third Telharmonium, which was installed on West 56th Street; a cable was run to a hotel on Columbus Circle and down Broadway to Carnegie Hall. Lack of public interest stemmed from growing awareness that the development of wireless was rendering the Telharmonium obsolete, and no commercial service was established. In 1914 Cahill's company went bankrupt. There are no known surviving artefacts or recordings. The first instrument was kept by the inventor's brother in New Jersey for many years. His attempts to find a home for it were unsuccessful, and it is likely that it was scrapped on his death in 1962. The second Telharmonium had been shipped back to Holyoke in 1908 and scrapped in 1911. The third was probably sold for salvage in 1918 when the West 56th Street premises were vacated. The Telharmonium was a precursor of the Hammond organ (1934), which used small rotating magnetic generators similar to Cahill's tone wheels. The Telharmonium marked the beginning of comprehensive musical synthesis, for Cahill understood and utilized many of its basic principles: additive synthesis to create timbre, a touch-sensitive keyboard to control volume, envelope control, dynamic control, filtering and mixing.

REYNOLD WEIDENAAR

Tellefsen, Arve

(*b* Trondheim, 13 Dec 1936). Norwegian violinist. He began playing the harmonica at four and made such progress that two years later his parents enrolled him in the Trondheim Music School, where he studied the violin with Arne Stoltenberg. At ten he began playing with the local university student orchestra and at 18 he entered the Royal Danish Conservatory in Copenhagen to study with Henry Holst. The following year he won the Princess Astrid Prize and he graduated with maximum marks. He then studied with Ivan Galamian in New York and made his Oslo début in 1959. In 1962 he won the Harriet Cohen Award, in 1969 the Norwegian Critics' Prize and in 1973 the Grieg Prize. Meanwhile he furthered his studies in Italy with Joseph Szigeti. From 1970 to 1977 he was leader of the Swedish RSO and from 1977 to 1980 he held a similar post with the Vienna SO. Since then he has pursued a solo career as the first Norwegian violinist since Ole Bull to make an international reputation. In 1973 he was appointed professor of violin at the conservatory in Oslo. In 1989 he founded the Oslo Chamber Music Festival – he plays in the Grieg Festival Piano Quartet with Leif Ove Andsnes, Lars Anders Tomter and Truls Mørk. Among his recordings are many of the major concertos, as well as those by Catharinus Elling, Tor Aulin, Fartein Valen, Lars-Erik Larsson, Berwald, Nielsen, Sinding and Svendsen; and beautiful accounts of the Grieg sonatas with Eva Knardahl at the piano. He plays a 1739 Guarneri del Gesù violin.

TULLY POTTER

Tellefsen, Thomas (Dyke Acland)

(*b* Trondheim, 26 Nov 1823; *d* Paris, 6 Oct 1874). Norwegian pianist and composer. He studied in Trondheim with his father, the organist Johan Christian Tellefsen, and with O.A. Lindeman, and gave his first public concert in his home town when he was 18. In the following year he went to Paris, where he became the pupil of his compatriot Charlotte Thygeson, and later attended some of Kalkbrenner's classes. During the years 1844 to 1847 he was taught periodically by Chopin (approximately two years in all), who also became his personal friend and had considerable influence on his musical taste, style of playing and compositions.

After his extremely successful Paris début in 1851 Tellefsen soon became regarded as one of the outstanding pianists of his time, and he was especially admired as an interpreter of Chopin's music. He attracted many pupils, particularly among the upper classes, and after Chopin's death also took over some of his teacher's pupils, including Jane Stirling. Until the early 1860s he gave a number of concerts in Paris, Honfleur, London, Stockholm, Christiania, Bergen, Trondheim and other cities. He stayed in London on several occasions both for concerts and teaching. When not travelling he lived mostly in Paris, where he taught, composed and held

frequent concerts and social gatherings in his large house. From the early 1860s his declining health gradually forced him to reduce his activities.

Tellefsen composed chiefly for the piano; among his most important works are two concertos (1852, 1854), 16 mazurkas, Norwegian dances, a piano trio (1861), a sonata for two pianos (1870) and two violin sonatas (1856). Although there is an obvious resemblance to the music of Chopin, Tellefsen's is generally more conservative, having mostly diatonic melodies, with only occasional chromatic interjections. His use of ornamentation is far less prominent than with Chopin, but his style is typically Romantic in its sudden modulations and harmonic shifts. The mazurkas contain some of his most original ideas, as well as the frequent borrowing of material from Norwegian folk music also found in his other works.

Tellefsen's published output comprises 44 works, most of them first published by Richautt in Paris. There are also some manuscript compositions in the Oslo University Library and in the Ringve Museum in Trondheim.

KARI MICHELSEN

Teller, Florian Johann.

See Deller, Florian Johann.

Teller, Marcus

(*b* Maastricht or Vaals, nr Aix la Chapelle, *c*1668; *d* Maastricht, bur. 22 Oct 1728). Dutch composer. He spent his youth in Münster, where his father was an army officer, and he probably received minor ordination there. In 1710 he became a violinist in the orchestra of Onze-Lieve-Vrouwekerk, Maastricht. After a conflict with the Chapter of the church he moved, in 1715, to St Servaas. Five years later, however, he was deprived of his priestly office. From May 1727 he was no longer able to practice his profession, probably because of illness. Teller's music has much in common with that of the Liègian church composers from the last quarter of the 17th century. It is expressive, mostly homophonic and simple in style.

See Cymbals.

Tello, Aurelio

(*b* Cerro de Pasco, 7 July 1951). Peruvian composer, musicologist and choral conductor. He studied the piano, musical pedagogy, composition and choral conducting at the Lima National Conservatory. On finishing his studies he taught theory at the same institution, and later conducted the choir there. He founded numerous choral ensembles in universities and institutions, a particular success being the choir of the Capilla Virreinal de Nueva España, with which he has extensively promoted the colonial Latin American repertory abroad. He conducted the Latin American première of the first colonial opera, *La púrpura de la rosa* by Torregón y Aparacio. In 1974 Tello's participation in the Taller de Investigación Musical at the National Music School was to prove decisive for his career as a musicologist. He subsequently moved to Mexico, in 1982, where he has carried out important research for the National Documentation and Information Centre attached to the Institute of Fine Arts. Among his major works are the three-volume *Tesoro de la música polifónica de México*; *El archivo musical de la catedral de Oaxaca*; *Salvador Contreras* (1987); *Vida y obra, cantadas y villancicos de Manuel de Sumaya* (1995); *Sor Juana Inés de la Cruz y los maestros de capilla catedralicios* (1996); and numerous essays in specialist journals.

As a composer, Tello has contributed in the main to instrumental and vocal chamber music. His language has evolved from an international contemporary vocabulary into one at once personal and Latin American, combining indigenous melodic, rhythmic and formal roots with complex structures of unusual vigour.

WORKS

Dramatic: La casita bonita (musical comedy, after L. Tolstoy), 1977; El rey Pomposo (musical comedy, S. Joffré), 1978; Asedio y liberación del ciego y la parturienta (incid music, J.B. Adolph), tape college, 1979; Constante (incid music, C. de la Barca), 1990

Orch: 3 piezas, str orch/str qt, 1972; Acuarelas infantiles, 1978 [orch of pf piece by C. Sánchez Málaga]; Dansaq III, str orch, 1986; Otro elogio de Falami, str orch, 1991

Vocal: Poema y oración de amor (C. Belli, J. Gelman), Mez, perc, 1974; Epitafio

para un guerrillero, mixed speaking chorus, 4 perc, 1974; Nekros (N. Santa Cruz), mixed speaking chorus, 1976; Ichuq Parwanta (anon. from Cuzco) 2 S, fl, 1980, rev. Mez, fl, pf, 1989; Trifábula (A. Corcuera), mixed chorus, 1982; Poema 9 (J. Eielson), mixed chorus, 1987; Drik Begí y todas las rondas para volar por encima del universo (C. Toro Montalvo), mixed chorus, 1988; Algunos poemas de Brindisi (F. Ruiz Granados), Mez, cl, vn, vc, pf, 1994

Chbr and solo inst: Sicalipsis I, fl, 1972; Música para violín, 1973; Toro torollay, pf, 1973; Movimiento ingenuo en forma de sonata, cl, pf, 1974; Meditaciones I, 2 pf, 1974; Meditaciones II, str qt, 1974; Sicalipsis II, fl, 1975; Dansaq I 'Homenaje a Manuel Enríquez', vn, 1984; Dansaq II, str qt, 1985; Sonqoy, fl, ob, cl, vn, vc, pf, 1987, rev. for fl, a fl, b fl, vn, vc, pf, 1987; Jaray Arawi, fl, a fl, b fl, str qt, 1988; Elogio de Falami, cl, bn, pf, 1991; Las premoniciones de Añada, fl, ob, cl, bn, tpt, vn, va, vc, 1993

ENRIQUE ITURRIAGA

Tello, Rafael (Julio)

(*b* Mexico City, 1872; *d* Mexico City, 1946). Mexican composer. He studied the piano with Ricardo Castro and Julio Ituarte and made his début in 1888 performing Field's Second Piano Concerto. He was director of the Mexican National Conservatory (1914–15), where he also lectured in piano and composition, teaching among others Silvestre Revueltas. He was also director of the Free Conservatory (1917–30). His output consists of about a hundred works, including a *Tríptico mexicano* for orchestra and the symphonic poem *Patria heroica*. His *Sonata trágica* was the Mexican work chosen for the inaugural concert of the Orquesta Sinfónica Mexicana in 1928, conducted by Chávez. He was one of the first Mexican composers to realize the need for a distinctive national opera free from the heavy influence of Italian and French Romantic models. His ideas led him to the creation of his most important opera, *Nicolás Bravo*, based on the life of the hero of the Independence war of 1810–21 who was also president of Mexico during several short periods. The opera was first performed in 1910 as part of the celebrations of the first centenary of independence. The libretto, by Ignacio Mariscal, a well-known politician and writer who made the first Hispano-American translation of Poe, centres on the time when Bravo takes command of the Mexican army during the last stage of the war. Other operas include *Juno* (1896), still unperformed, *Due amori*, produced in 1916 and *El oidor* (1924), set during the years following the Spanish conquest. Tello's music remains largely in manuscript because of a ban on publication established by his family after his death. His style has been described as rhapsodic and discursive and if his first works betray a major influence of pre-Impressionistic music, his later ones show a move towards a more modern language, often of a desolate nature. When dealing with national and historical subjects, Tello used elements of folklore to lend an air of authenticity to his operas and symphonic poems. Rather complex harmonic textures and marked dynamic contrasts at climactic points also characterize his work.

RICARDO MIRANDA-PÉREZ

Telmányi, Emil

(*b* Arad [now Oradea, Romania], 22 June 1892; *d* 12 June 1988). Hungarian violinist and conductor. He made his début at the age of ten and studied the violin (with Hubay) and composition at the Budapest Academy, winning the Reményi Prize in 1906. In 1911 he attracted international attention with his Berlin début, when he gave the first performance in Germany of Elgar's Concerto. Admired for the fluency and vitality of his playing, he also acquired a reputation as a conductor after his début in 1919 at Copenhagen, where he later formed and conducted a chamber orchestra. Telmányi married Anne Marie, younger daughter of Nielsen, in 1918, and eventually settled in Denmark. He made his London début in 1923 on a visit with Nielsen, of some of whose works he has given premières as a soloist or conductor. He was assistant conductor with the Göteborg SO (1925–6) and in 1926 conducted *Don Giovanni* and *Il trovatore* at the Hungarian State Opera House in Budapest. His second marriage in 1936 was to the pianist Annette Schiøler and from 1956 they performed and recorded with their three children as a quintet. Telmányi was also active as a teacher, arranger and a writer.

Telmányi's interest in problems of performing Baroque music led him to bring about the construction of a special violin bow (named the 'Vega' bow in 1954) with a curved back and a mechanism for instantly tightening or loosening the hairs. He used this in his recordings of Bach's solo violin music, and demonstrated it widely in 1955. It was favourably received as a means of playing true chords across the strings softly as well as loudly, avoiding the usual arpeggio effect, but its use did not become widespread.

Temianka, Henri

(*b* Greenock, 19 Nov 1906; *d* Los Angeles, 7 Nov 1992). American violinist and conductor of Scottish birth. Born of Polish parents, he studied with Blitz in Rotterdam (1915–23), with Hess at the Berlin Hochschule (1923–4), with Boucherit in Paris (1924–6), and with Flesch and Rodziński (conducting) at the Curtis Institute, Philadelphia, from which he graduated in 1930. He made his début in New York in 1928, followed by recitals in Paris and London in 1932. He was leader of the Scottish Orchestra (1937–8) and the Pittsburgh SO (1941–2), but he devoted himself mainly to an expanding career as a soloist. In 1935 he was a prizewinner at the Wieniawski Competition in Warsaw and was invited to play in the USSR, where he returned in 1936 and 1937. In 1946 he founded the Paganini String Quartet, so named because the four instruments used by the players were once owned by Paganini, and under his leadership the quartet achieved international success until it disbanded in 1966; it gave premières of works by Castelnuovo-Tedesco, Milhaud and Lees, among others. In 1961 Temianka founded the California Chamber SO. He held masterclasses at state universities, and among his professorial appointments were those at the University of California at Santa Barbara (1960–64) and California

State University at Long Beach (1964–76). He made a number of educational films and published an autobiography, *Facing the Music* (New York, 1973), and numerous articles; he also edited several quartets in collaboration with members of the Paganini Quartet. As a violinist Temianka was known for his flawless mastery of his instrument, a pure and expressive tone and forceful yet elegant interpretations. He combined the best elements of the French tradition and the Flesch school. His quartet performances were distinguished by strong leadership and a modern approach, projecting with brilliance while preserving musical values. Among his finest recorded performances are Beethoven's Razumovsky Quartets.

BORIS SCHWARZ

Temirkanov, Yury

(*b* Nal'chik, 10 Dec 1938). Russian conductor. He studied the violin at the Leningrad Conservatory school for talented children, and then conducting at the conservatory, graduating in 1965. He began conducting at the Malïy Opera Theatre, Leningrad, making his début with *La traviata*. After winning the Soviet All-Union Conductors' Competition in 1968 he became music director of the Leningrad SO the next year. From 1977 he was artistic director and chief conductor of the Kirov Opera and Ballet Theatre in Leningrad, and he made his Covent Garden début with the Kirov company in 1987, conducting his own productions of *The Queen of Spades*, *Yevgeny Onegin* and *Boris Godunov*. In 1980 he became principal guest conductor of the RPO in London and in 1988 principal conductor of the Leningrad (later St Petersburg) PO (in succession to Mravinsky), and of the RPO from 1992. Temirkanov has drawn adverse comment for his balletic conducting style and his fondness for bold instrumental colours; but he has given vital, powerfully emotional performances of both operatic and symphonic repertory. He has declared his uncompromising mistrust of 'producer's opera' as an encroaching threat to the lyric theatre. His recordings, mainly of Russian music, include idiomatic interpretations of the Tchaikovsky symphonies, and Stravinsky's *Petrushka* and *The Rite of Spring*.

NOËL GOODWIN

Teml, Jiří

(*b* Vimperk, Bohemia, 24 June 1935). Czech composer. In the 1960s and early 70s he took theory and composition lessons with Bohumil Dušek and Jiří Jaroch. He began his professional career in 1976 as producer and head of music at Plzeň Radio; in 1980 he joined Czech Radio in Prague as producer of classical music programmes. As a composer his first critical success came in 1972 where he took third prize at the Prague Spring Festival with *Fantasia appassionata* for organ. Initially his compositional style was influenced by Stravinsky, Martinů, Janáček and Kabeláč. In the 1970s, after studying techniques of composers of the Polish school and of Ligeti, Teml adopted a musical language dominated by consideration for colour and for contrasts between sections; he employed motivic development and controlled aleatorism. Representative of this later style are *Čtyři invence* ('Four Inventions', 1977), the Violin Concerto (1979) and especially the *Fantazie* for violin, harp and orchestra (1983). His music also betrays influences of Czech folk music, on which he is a particular expert; for many years he has collaborated with the Plzeň Radio folk ensemble.

KAREL STEINMETZ

Temmingh, Roelof (Willem)

(*b* Amsterdam, 28 Sept 1946). South African composer of Dutch birth. He is the son of an organist, and his brother is also a composer. The family emigrated to South Africa in 1958, settling near Cape Town. Temmingh studied composition with Fagan at the University of Cape Town (master's degree in composition, 1970). After working for short periods as a university lecturer in Port Elizabeth and Pretoria, he was appointed lecturer in musicology and composition at the University of Stellenbosch in 1973, becoming associate professor in 1992. He completed his doctorate there in 1976. In 1972 he attended Darmstadt and he also spent six months in Utrecht studying computer music (1979). He has won all the major composition prizes in South Africa.

Although his earlier works reflect all 20th-century styles, Temmingh's initial reputation rested primarily on his avant-garde compositions. Ligeti's influence is present in many of them, most notably in Music for Two Pianos. Other characteristics include the use of technology, electronic as well as *concrète* sound generation (frequently coupled with conventional instruments), collage, extensive use of quotations, aleatory techniques, eroticism, minimalism and stage acting by performers. His works of a more conventional style exhibit the influence of Bartók and Shostakovich (the Oboe and Organ Concertos). Temmingh has composed exlusively in this more accessible style since about 1987, and works from this mature period (*Drie Sonnette*, Piano Concerto) largely overshadow his earlier output. They are marked by the rediscovery of tonality, inspired melody, a keen sense of harmony and exceptional skill in orchestration, and have established Temmingh as one of the foremost South African composers of his generation.

WINFRIED LÜDEMANN

Tempérament égal

(Fr.; It. *temperamento equabile*).

See Equal temperament.

Temperaments.

Tunings of the scale in which some or all of the concords are made slightly impure in order that few or none will be left distastefully so. Equal temperament, in which the octave is divided into 12 uniform semitones, is the standard Western temperament today except among specialists in early music. This article traces the history of temperaments in performing practice and in relation to the main lines of development in the history of harmony; for additional technical and historical details *see* Tuning, Pythagorean intonation, Just intonation, Microtone, Mean-tone, Well-tempered clavier, Equal temperament and Interval, especially Table 1.

1. Introduction.
2. Quasi-Pythagorean temperament.

<div align="right">MARK LINDLEY</div>

Temperaments

1. Introduction.

Since the 15th century, tempered tuning has characterized keyboard music and in Western culture the art music of fretted instruments such as the lute. Its prevalence is due mainly to the fact that the concords of triadic music – octaves, 5ths and 3rds – are in many cases incommensurate in their pure forms. Three pure major 3rds (e.g. A♭–C–E–G♯) fall short of a pure octave by approximately one fifth of a whole tone (lesser diesis); four pure minor 3rds (G♯–B–D–F–A♭) exceed an octave by half as much again (greater diesis); the circle of twelve 5ths, if the 5ths are pure, does not quite cumulate in a perfect unison; and, most important of all in the context of Renaissance and Baroque music, the whole tone produced by subtracting a pure minor 3rd from a pure 4th (C–F–D) is about 11% smaller than the whole tone produced by subtracting a pure 4th from a pure 5th (C–G–D). These discrepancies are summarized in Table 1.

Not all timbres, however, are equally conducive to temperament. In general, it is only when the component overtones of the timbre (together with the fundamental tone of the note) form a virtually pure harmonic series that consonant intervals will sound sufficiently different in quality from dissonant ones for the need for tempering the concords to arise. A pronounced degree of inharmonicity in the timbre, as in a set of chimes or a xylophone, eliminates the qualitative difference, except in the case of a unison or octave, between the sound of a pure concord and that of a slightly impure or tempered one. (An artful exception to this general rule is mentioned in the last paragraph of §6 below.)

Moreover, theorists are obliged to contrive specific mathematical schemes for tempering the scale only when the medium of performance allows little or no flexibility of intonation, for only then does the incommensurability of pure concords have to be dealt with systematically by the tuner rather than ad hoc by the performer. A singer or violinist will inflect certain intervals depending on their immediate context; but this does not produce thereby a specific temperament because at different moments the performer will represent each note of the scale by different shades of pitch within a fairly narrow band (about half as wide again, perhaps, as the vibrato). On most keyboard instruments and the harp, however, the complete lack of such flexibility obliges the tuner to impose a specific temperament, while on fretted instruments, the clavichord, and many wind instruments, the tuner

or maker establishes a certain model of intonation, albeit one that an ingenious player can modify significantly during performance.

For present purposes four main types of temperaments may be distinguished: equal temperament, mean-tone temperament, irregular temperaments and quasi-Pythagorean temperament. This article will describe primarily the history of their use, but some plain and easy arithmetic is necessary here to distinguish one from another.

For a series of twelve 5ths or 4ths to produce cumulatively a perfect unison and so comprise the 'circle of 5ths', each must be tempered by an average of 1/12 of the Pythagorean comma (hence about two cents) – 4ths larger than pure, 5ths smaller. If three major 3rds are to reach a full octave they must average about 14 cents (1/3 of the lesser diesis) larger than pure, while four minor 3rds, in order not to exceed a pure octave, must average about 16 cents (1/4 of the greater diesis) smaller than pure. In equal temperament, which is modelled on these averages, the major 3rds are thus tempered seven times as much as the 5ths, and the minor 3rds and major 6ths eight times as much. Historically this is nearly as important an aspect of equal temperament as the well-known fact that it divides the octave into 12 equal semitones. As a harmonic interval the major 3rd *f–a* at modern concert pitch, for instance, beats seven times per second – too fast for the ear to trace, even subliminally, the rise and fall of each beat, and fast enough to cause an intermittence of tone that is likely to strike an unaccustomed ear as unpleasant in many contexts.

To avoid such heavily tempered 3rds and 6ths, Renaissance and Baroque keyboard musicians tempered their 5ths two or even three times as much as in equal temperament. This choice entailed 'breaking' the circle of 5ths, a fact reflected in traditional pitch notation and nomenclature with their enharmonic distinctions between flats and sharps. If all the good 5ths in such a tuning are diminished the same amount, the result may be called a regular mean-tone temperament, although some writers restrict the term 'mean-tone' to that scheme in which 5ths are tempered so as to produce exactly pure major 3rds. In any mean-tone temperament the diatonic semitones are larger than the chromatic (for instance, D♯ is lower in pitch than E♭).

Certain irregular keyboard temperaments, in which different 5ths are tuned differently but none rendered unserviceable, were favoured during the late 17th century and the 18th because they enabled the more frequently used 3rds to be tempered less than those used infrequently, and because the various keys thereby gained a diversity of intonational shading that was highly valued by connoisseurs and formed a prominent aspect of 18th-century musical thought. In 17th-century France an irregular scheme midway between a regular mean-tone and a typical 18th-century irregular temperament seems to have played a role in the contemporaneous development of the French keyboard style. Yet another, very different kind of temperament – 'quasi-Pythagorean' – can be derived from the fact that the sum of two major 3rds each of which is larger than pure by a syntonic comma (for example, A♭–C–E when the 5th and 4ths A♭–E♭–B♭–F–C–G–D–A–E are all pure) falls short of an octave by almost a pure major 3rd (in this case E–G♯).

The word 'temper' and its derivatives were originally applied to music in a broader context than they now denote. Carter's *Dictionary of Middle English Musical Terms* (1961) indicates that the adjective 'temperate' was once used in a general sense to mean 'musically controlled', as in a reference (1398) by John of Trevisa to a 'swete voys an temperate sowne'. But the verb 'temperen' and its past participle 'tempered' referred in Middle English unequivocally to tuning, albeit pure tuning as well as tempered tuning in the modern sense; and this meaning was still encountered in 1593: 'Whereupon M. Barleycap tempered up his fiddle, and began' ('Temper', *OED*). In the writings of Zarlino, the eminent 16th-century Italian theorist and musician, 'temperamento' was closely associated with the term 'participatio' by which, according to Gaffurius in 1496, Renaissance organists referred to their use of 5ths diminished 'by a very small and hidden and somewhat uncertain quantity'.

Temperaments

2. Quasi-Pythagorean temperament.

Late 14th- and early 15th-century keyboard instruments that were fully chromatic, that is, with 12 notes in the octave, were normally tuned with 11 pure 5ths among the naturals and hence automatically with one sour 5th, a comma smaller than pure, which was, by most accounts between B and F♯ (the evidence for this comes mainly from Italy and southern France: Dijon, Liège, Padua, Mantua, Parma, Ferrara, Milan, Florence, Urbino). Such a tuning happens to yield virtually pure 3rds between the naturals and sharps (D–F♯–A–C♯–E–G♯–B–D♯) and much less nearly pure 3rds, a comma larger or smaller than pure, among the naturals (D–F–A–C–E–G–B–D) and between the naturals and flats (D♯–F–A♯–C–E♯–G–B♯–D). The apparent consequences in some extant early to mid-15th-century keyboard music are discussed in Pythagorean intonation. The kind of triadic harmony which was involved – wherein, among the major triads, those on D, A and E are treated as distinctly more euphonious and stable than those on B♯, F, C and G – can be found also in non-keyboard compositions by Matteo da Perugia, Andrea dei Servi and, in his earliest songs, Guillaume Du Fay (Lindley and Boone).

Singers can hardly be expected to have maintained the distinction between pure and impure triads; if they could manage a fairly pure triad at one place in the music, they would most likely be unwilling to produce on purpose a distinctly impure one somewhere else. However, the notion that a chain of 'perfect' concords (5ths, 4ths) yields 'imperfect' ones (3rds, 6ths) which are so euphonious that they serve as stable sonorities in the harmony, as in ex.1 and ex.2, is a hallmark of temperament. And the fact that even in these vocal works, only triads containing a sharp were treated as stable (see ex.19 and the discussion in §11) suggests that some kind of keyboard instrument, perhaps the clavichord if not the organ, was used as a help in composing them. The theoretical amounts of tempering – less than 1/4 of a cent for each 5th – are so small that no-one at the time noticed; and indeed Helmholtz in the 19th century tempered in this way the intervals on his 'justly intoned harmonium' with 24 different pitches in each octave (*see* Just intonation, §2).

Temperaments

3. Regular mean-tone temperaments to 1600.

In the last chapter of his *Musica practica* (Bologna, 1482) Bartolomeo Ramis de Pareia indicated that mean-tone temperament was in common use on keyboard instruments of his day. Earlier in the book he had presented a new, mathematically simple scheme which he said even young singers could use for a monochord to provide a model scale for plainchant. In that scheme the wolf 5th was ostensibly between G and D. But his elaborate and comprehensive rules, in the last chapter, for avoiding 'bad' intervals on fully chromatic instruments ('instrumenta perfecta') leave no doubt that in general practice G–D was perfectly serviceable and the wolf 5th was between C♯ and A♭. This is corroborated by his lists of 'good' and 'bad' semitones, whole tones, and major and minor 3rds, and by the pattern of his nomenclature for the sharps and flats. Ramis expressed particular concern that only 'good' major 6ths and 3rds be used in cadential progressions. There is confirmation that 'good' did not mean 'Pythagorean' in a letter (published in 1518) from his disciple Giovanni Spataro to Franchinus Gaffurius. Criticizing Gaffurius for saying that the syntonic comma was an insignificant intervallic quantity, Spataro argued, on behalf of Ramis, that for practical music the harsh Pythagorean monochord had to be reduced and smoothed for the ear ('el duro monochordo pythagorico … riducto in molle al senso de lo audito'). Gaffurius, although a strict Pythagorean in his mathematical calculations of intervals, acknowledged in 1496 that organists tempered their 5ths, while his chromatic monochord of 1518 (reprinted in 1520) indicates that G♯ and D♯ differed from A♭ and E♭. Ramis's discussion of 'good' cadential 6ths and 3rds mentions the device, which later became widespread in Italy on keyboard instruments designed for mean-tone temperament (see Barnes, 1971, and Dupont, 1935), of doubling the accidentals A♭ and E♭ to provide their enharmonic neighbours G♯ and D♯; and the 1480 contract for the cathedral organ at Lucca appears to refer to such a device. The use of regular mean-tone temperaments had probably evolved from ad hoc alterations of certain earlier 15th-century untempered schemes in which, as in Ramis's own pedagogical monochord, the wolf 5th was placed ostensibly among the naturals (Lindley, 1975–6). Perhaps the oldest known keyboard composer whose music requires a mean-tone temperament for its proper effect was Conrad Paumann. His use of triads, as in ex.3, suggests that he regarded them as solid vertical sonorities, more so than they would in fact be in Pythagorean intonation. The use of triads in contemporary vocal music (e.g. Ockeghem, Busnoys and late Du Fay) is similar in this respect.

No particular shade of mean-tone temperament on keyboard instruments – such as 2/7-comma, 1/4-comma or 1/5-comma (*see* Mean-tone) – was favoured exclusively at any time during the Renaissance. The earliest mathematically specific formula was Zarlino's scheme of 1558 for 2/7-comma mean-tone, in which major 3rds are very slightly smaller than pure. But Lanfranco's keyboard tuning instructions of 1533 are unequivocally for some form of mean-tone, such as 1/5-comma or 1/6-comma, with major 3rds slightly larger than pure (and with the wolf 5th lying between G♯ and E♭ instead of between C♯ and A♭ as Ramis suggests). The same can be inferred from other writers, and not just those who cited Lanfranco. Schlick had implied in 1511 that some organists would prefer such a tuning to his

own irregular scheme (see §4 below). The clavichord tuning instructions published by Tomás de Santa María in 1565, although clearly for some form of mean-tone, do not specify the exact quality of the major 3rds; but when Pietro Cerone copied these instructions in 1613 he added a few words to specify major 3rds slightly larger than pure and declared that this was the method most used by master organ builders ('es manera mas usada de los Maestros de hazer Organos'). An approximation of 2/9-comma mean-tone (with major 3rds very slightly larger than pure) was described in 1590 by Cyriacus Schneegass, who may have confused it with 1/4-comma mean-tone.

Meanwhile Zarlino in 1571 described 1/4-comma mean-tone, which has pure major 3rds, in mathematically clear terms. He said it was new ('un novo Temperamento & … una nova Participatione'); but Francisco de Salinas implied in 1577 that he had been using it in the 1530s. Many scholars attribute 1/4-comma mean-tone to Pietro Aaron in his harpsichord tuning instructions of 1523, but an equally legitimate interpretation of Aaron's text suggests that while he would not have faulted regular 1/4-comma mean-tone, neither did he specify it. Salinas's 1/3-comma mean-tone (1577), with its pure minor 3rds at the expense of major 3rds distinctly smaller than pure, does not seem to have been used much, even though it is very easy to tune. Zarlino described it in 1571 as less sonorous than 1/4- or 2/7-comma mean-tone, and added in 1588 that 'it seems to me a bit more languid' ('anzi al mio parere è un poco più languido'). Its intervals are virtually identical, however, with those produced by an equal division of the octave into 19 parts, and in that guise it may have been familiar to Guillaume Costeley (Levy, 1955), as well as to Salinas himself and, later, Jehan Titelouze.

Evidently, then, all the forms of mean-tone temperament for which the essential mathematics were worked out by an anonymous early 17th-century Dutch colleague or disciple of Simon-Stevin (Lindley, 1984) – namely 1/3-, 2/7-, 1/4- and 1/5-comma mean-tone – had been in use, although 1/3-comma probably least and 2/7-comma, which is difficult to tune precisely, perhaps less than 1/4-comma or some shade of mean-tone with major 3rds slightly larger than pure. No doubt most tuners, rather than trying to exemplify any particular mathematical model, merely sought to achieve sonorous 3rds and 6ths without making any 5th or 4th (other than the wolf) beat obstreperously. The instructions of G.B. Benedetti (1585), E.N. Ammerbach (1571) and G.P. Cima (1606), as well as those of Aaron and Santa María, reflect a certain freedom in this respect. Yet some of the best tuners may have sought a fairly precise regularity in the tempering of their intervals, if only for the sake of craftsmanship.

Musical evidence cannot show that any specific shade of regular mean-tone was exclusively favoured by any composer, but certain compositions benefit particularly from certain shades. The sprightliness of the sharps and B♭ in ex.4, the first strain of an alman by John Bull, is better served by 1/5-comma than by 1/4- or 2/7-comma mean-tone. Ex.5, the opening of a toccata by Giovanni Gabrieli, gains a certain warmth and dignity in 2/7-comma mean-tone, while the relatively untuneful style of the entire toccata minimizes the dull melodic effect of the rather large diatonic semitones of 2/7- or 1/4-comma mean-tone. In 1/4-comma mean-tone the contrast

between pure major 3rds and tempered minor 3rds prevents that effect of banality which in equal temperament would afflict the middle bars of ex.6, the opening of an organ verso by Antonio Valente; and in a more elaborate way the same kind of contrast – but involving tempered 5ths as well – is a positive delight when ex.7, the opening of a Cabezón tiento, is played in 1/4-comma mean-tone.

The possible use of regular mean-tone on 16th-century fretted instruments is discussed in §9 below.

Temperaments

4. Irregular keyboard temperaments to 1680.

Perhaps the earliest suggestion of an irregular keyboard temperament is an anonymous English prescription for organ pipes of about 1373 ('Incipit mensura', transcribed by K.-J. Sachs, 1970) instructing the builder that the correct pipe length for a chromatic note will halve the difference between its diatonic neighbours that form a Pythagorean whole tone ('Ubicumque vis habere semitonium, semper fistulam inferiorem et superiorem in duas divides'). In the wake of the Renaissance revival of Euclidian geometry, Henricus Grammateus published in his arithmetic book of 1518 a simple diagram (fig.1) showing how the geometrical mean between two pipe lengths in the ratio 9:8 could be determined by drawing a semicircle on the sum of the lengths 9 and 8 taken as diameter, and then measuring the perpendicular from the juncture of the two lengths. By this means the Pythagorean whole tone would be, in theory, divided into two musically equal semitones. Grammateus referred to these as 'minor semitones', and other theorists later used that term to designate equal semitones on the lute (see §9 below); but the context of the prescription leaves no doubt that he intended his 'amusing reckoning' ('kurtzweyllig rechnung') to be applied to organ pipes. Such a temperament would make both B–F♯ and B♭–F sour, however, and even Barbour (1951), although ideologically attracted to it, described it as an organ tuning which 'may have been used in practice but hardly by anyone who was accustomed, like Schlick, to tune by ear'. Nor does any extant Renaissance organ music avoid B♭–F as well as B–F♯.

The irregularities of a number of other schemes similarly deserve scant attention from the student of keyboard performing practice because they are only trivially different from regular schemes (e.g. Aaron, 1523), or quite incompetent (Reinhard, 1604) or of such limited historical and geographical scope (Douwes, 1699) as to be no more important for the history of musical style than the survival, to this day, of Pythagorean intonation as a provincial keyboard tuning method. Also relatively inconsequential, insofar as normal keyboard instruments are concerned, were expert and elaborate irregular schemes for the *arcicembalo* such as those of Vicentino (1555) and Trasuntino (instrument of 1606). However, irregular temperaments of musical consequence were published by Arnolt Schlick (1511) and Marin Mersenne (1635–6 and 1636–7).

Schlick's temperament was an artful variant of regular mean-tone with major 3rds slightly larger than pure. The ten 5ths forming a chain from E♭ to C♯ were tempered more or less alike yet not all quite the same, for the

major 3rds among the naturals were to be tempered less than those involving an accidental. Implicitly, B–D♯ was not obliged to be serviceable at all, nor was the 5th from C♯ to G♯ or A♭. But to gain a G♯ that could be used (if camouflaged by ornamentation or treated warily as in ex.8) to cadence on A, Schlick advised tempering the 5th A♭–E♭ larger than pure. The result was to render E–G♯ more or less Pythagorean and A♭–C (as in ex.9) more or less as in equal temperament (Husmann, 1967, and Lindley, 1974). Schlick remarked that some patrons would prefer to have an unequivocally serviceable G♯ and no A♭ at all, but he considered that arrangement an impoverishment of the harmonic resources of the organ; and he disapproved also of splitting accidentals to gain both enharmonic forms in a euphonious intonation. It is not known how widespread the use of Schlick's tuning ever became, but his intended readership encompassed the Holy Roman Empire under Maximilian I.

The context of Mersenne's step-by-step tuning procedure of 1635–6, and his subsequent acknowledgments of errors in the organ instructions, indicate that he had intended merely to prescribe regular 1/4-comma mean-tone (for the organ on pp.364–5 and for the spinet on pp.108–9) where an ambiguity would allow an equivalent error to be inferred by a hasty reader. This error, concerning the 5ths down from F to B♭ and thence to E♭, was evidently due to the fact that Mersenne had not tuned a keyboard instrument himself but was transmitting instructions from someone else (perhaps Jean Denis): hence he did not adequately clarify the fact that when one tempers an ascending 5th, for instance by tuning a G to a C, one makes the note G lower than pure in order to make the interval in C–G smaller than pure, but when one is tempering B♭ to F one must tune the note B♭ higher than pure in order to produce the same kind of interval, namely a 5th tempered smaller than pure. Virtually every set of step-by-step instructions for mean-tone temperament includes an awkward sentence or two about this point (Praetorius devoted nearly half a page to it). In Mersenne's treatise the awkwardness was aggravated into succinct confusion. At one point he did specify that 'il faut tenir la note de dessouz [B♭ or E♭] un peu forte'; but elsewhere he gave a contrary impression, and in the instructions for tuning the spinet he said ambiguously: 'Cette quinte doit estre augmentée au lieu que les précédentes ont esté diminuées'. The likelihood that some 17th-century readers – particularly musicians using the instructions without reading all the accompanying theory – interpreted this passage as a prescription for irregular temperament is shown by Chaumont's 'Méthode d'accorder le clavessin' (in his *Pièces d'orgue,* 1695) which indicates explicitly that E♭ and B♭ were treated, by various tuners, as 'foible ou forte'. It happens that Mersenne's inadvertent novelty was musically opportune because the cumulative lowering of E♭ would more than achieve, on behalf of D♯, that which Schlick's temperament had achieved on behalf of G♯, albeit at the cost of rendering E♭–G slightly 'darker' than the A♭–C of Schlick's temperament. It may further be argued that Louis Couperin's use of E♭ and even B♭ (as in ex.10) differs from that of his teacher Chambonnières (ex.11), the older man's music requiring a regular mean-tone temperament while the younger found an opportunity for chiaroscuro in the kind of tuning inadvertently implied by Mersenne. Thus

Couperin's long G minor Passacaille, with its recurring bass line G–F–E♭–D, may gain a dimension of structure as well as expressiveness when G–B♭ beats about eight times per second but 'resolves' to a pure or nearly pure F–A, and then E♭–G, beating about ten times per second, likewise yields to a more euphonious D–F♯; and this would represent a significant stylistic departure from Frescobaldi's music in the same genre, which was known to Couperin. But when inferences are thus drawn beyond what can be proved by documents, a careful assessment – in this case requiring the use of accurately reconstructed 17th-century instruments – must be supplied by impartial judges.

In 1697 Andreas Werckmeister suggested that organists unwilling to adopt his circulating temperament (see §7 below) or to install a split key with separate pipes for E♭ and D♯ might compromise by tuning E♭ down to serve for both notes. Composers like Samuel Scheidt (1587–1654) and his contemporaries used D♯ enough to tempt any organist without the split key at his disposal perhaps to consider such a makeshift adjustment of the temperament.

Temperaments

5. Equal temperament to 1735.

Although no Renaissance keyboard musician is known to have advocated or adopted equal temperament, it appears to have been used on fretted instruments such as the lute and viol at least since the early 16th century (see §9 below). A line of theorists from Vicentino (1555) to Mersenne and beyond took for granted that fretted and keyboard instruments were incompatible because of their distinct styles of intonation. The development of methods for calculating or approximating the intervals of equal temperament has been traced in J.M. Barbour's dissertation (1932) and summarized in *Tuning and Temperament* (1951), where he wrote, 'The simplest way … is to choose a correct ratio for the semitone and then apply it twelve times'. The ratio 18:17, familiar to theorists from well before the Renaissance and recommended by Vincenzo Galilei in 1581 for equal temperament on the lute, corresponds mathematically to a semitone of 99 cents, virtually indistinguishable from the 100-cent semitone of equal temperament. Therefore the theoretical refinements of a Zarlino (1588) or a Stevin (*c*1600) may have had less bearing than one might imagine on the historical status of equal temperament in musical practice: an essentially equal temperament was feasible in practice before those theoretical refinements were achieved, and such compositions as Adrian Willaert's famous *Quid non ebrietas* (published in 1530) or Francesco Orso's setting (1567) of Petrarch's *Il cantar nuovo* indicate that some 16th-century composers appreciated the enharmonic advantages of equal temperament (see §11 below) which its advocates have always emphasized. In 1603 G.M. Artusi attributed to the unnamed opponent whom he criticized for certain modern tendencies (Monteverdi) a mathematical theory of intervals approximating to equal temperament and justifying the use of diminished 4ths and 7ths in vocal music (Lindley, 1982). The practical history of equal temperament, then, is largely a matter of its refinement in various respects and its gradual acceptance by keyboard musicians from the late 1630s,

when Frescobaldi endorsed it, to the 1870s, by which time even the conservative English cathedrals were won over.

Zarlino in 1588 attributed the following prophetic arguments to Girolamo Roselli, abbot of S Martino delle Scale in Sicily:

> This way of dividing the diapason or octave into 12 equal parts … could alleviate all the difficulties of singers, players and composers by enabling them generally … to sing or play … DO–RE–MI–FA–SOL–LA upon whichever of the 12 notes they wish, touring through all the notes, making, as he [Roselli] says, a circular music; hence all the instruments will be able to keep their tuning and be in unison, and organs, as he says, will be neither too high nor too low in pitch.

About 50 years later an 'old man in rags', who had spent most of his life in Sicily and Calabria and knew 'nothing except how to play the harpsichord', retired to Rome and made a stir by advocating equal temperament on the harpsichord and even inducing Frescobaldi, with the aid of 'frequent and gratuitous beverages', to recommend it for the organ in Bernini's new apse at S Lorenzo in Damaso. The malicious details of this story are due to G.B. Doni (in his book of 1647 and in a letter to Mersenne of February 1640), who prevailed upon Cardinal Francesco Barberini to ignore Frescobaldi's advice. The renovated apse, with 'doi bellissimi organi' in mean-tone, was inaugurated in August 1640 (and witnessed, towards the end of the century, performances by Corelli under the patronage of Cardinal Ottoboni). But already in April 1638 Doni had written to Mersenne that Frescobaldi failed to grasp the difference between major and minor semitones ('ne scait pas ce que c'est semiton majeur ou mineur') – an unlikely accusation to make of a former pupil of Luzzaschi and yet perhaps a fair indication of Frescobaldi's attitude towards niceties of intonation. Whether his magnificent *Cento partite sopra passacagli* (1637) were intended for equal temperament or for a harpsichord with split accidentals for D♯/C♭ as well as G♯/A♭ and D♯/E♭; the influence of Frescobaldi's acceptance of equal temperament is apparent in the later keyboard music of Froberger, who was his pupil in Rome when the old Sicilian harpsichordist was there.

Froberger was not the first north European to use equal temperament on keyboard instruments. In 1637 Mersenne said that the engineer Jean Gallé had 'accommodated this tuning to the organ and spinet'. By 1645 Gallé or someone else 'very learned in mathematics' had persuaded some 'honest men' in Paris to use equal temperament, and the instrument maker Jean Denis had been told, to his dismay, that perhaps he would not disapprove of it on the harpsichord so vehemently if he were accustomed to the sound.

It was not mere conservatism that prompted most Baroque keyboard musicians to resist or ignore the suggestions of a Stevin or a Mersenne that they consider adopting equal temperament, but rather their appreciation of the virtues of the feasible alternatives: regular mean-tone in the early 17th century, certain irregular temperaments thereafter. The same interest in timbre and sonority that nourished the Baroque refining of wind and string instruments must also have nourished an interest in the sensuous qualities of relatively subtle tunings. Some representative early

18th-century views are summarized in the following passage from Neidhardt (1732):

> Most people do not find in this tuning that which they seek. It lacks, they say, variety in the beating of its major 3rds and, consequently, a heightening of emotion. In a triad everything sounds bad enough; but if the major 3rds alone, or minor 3rds alone, are played, the former sound much too high, the latter much too low. … Yet if oboes, flutes & the like, and also violins, lutes, gambas & the rest, were all arranged in this same [tuning], then the inevitable church- and chamber-pitch would blend together throughout in the purest [way]. … Thus equal temperament brings with it its comfort and discomfort, like blessed matrimony.

In the late 17th century and early 18th, however, a circle of German theorists became interested in equal temperament, including Werckmeister, Meckenheuser, Neidhardt and Mattheson. The wave of interest that they represent never thereafter lost momentum, although most of the best German organ builders are said to have resisted until after the generation of Gottfried Silbermann and Wender (Mattheson, 1722–5). In England the builder Renatus Harris, wishing to discredit the use of split accidentals by his competitor 'Father' Smith, induced John Wallis to publish in the *Philosophical Transactions* of 1698 an article 'On the Imperfections of the Organ' (Williams, 1968). Though admittedly 'little acquainted' with the instrument, Wallis said that equal temperament had been 'found necessary (if I do not mistake the practice)' on organs. This exaggerated claim appears to indicate that equal temperament in any case was no longer unthinkable for organs. And when Brossard in 1703 remarked on the existence of two schools of opinion regarding temperament in practice, he did not, as so many had done before him, associate equal temperament with fretted instruments and its alternatives with keyboard instruments.

Special comment is warranted by the fact that equal temperament is often particularly associated with the name of Werckmeister, or with John Bull's long *Ut-re-mi-fa-sol-la* in the Fitzwilliam Virginal Book (no.51). Bull's piece does use all five sharps in some sections and all five flats in others, but never both a sharp and a flat in the same section; it was most probably conceived for *arcicembalo*. Werckmeister's attitude at the end of his life is summarized in a book published posthumously (1707) where in effect he apologized for not having included equal temperament among the various circulating temperaments for which he had earlier published a monochord diagram. (The incompetent engraver, he said, had complained about dividing the narrow space of a comma into 12 parts.) He quite approved of equal temperament, yet was willing 'to have the diatonic 3rds left somewhat purer than the other, less often used ones', a procedure for which he had expressed clear preference in his earlier writings (see §7 below).

Temperaments

6. Regular mean-tone temperaments from 1600.

The late Renaissance system of church modes or tones was suited to the harmonic dimensions of a 12-note mean-tone palette (from E♭ to G♯ in the

chain of 5ths) as long as V–I cadences were not required in the Phrygian mode (E minor) and as long as the Dorian, with its often flattened sixth degee, was not transposed more than one place down in the chain of 5ths to G minor. Cadences to E could be accommodated by the use of a split accidental on the keyboard to provide D♯ as well as E♭; and a split accidental for A♭ and G♯ was also often provided (*see*, for instance, Compenius). But the growing popularity, from the late 17th century, of more expansive modulations rendered regular mean-tone temperaments musically problematical well before the end of the Baroque era, although the old tunings remained familiar on many organs.

Michael Praetorius in his *De organographia* (1618) prescribed exclusively 1/4-comma mean-tone for keyboard instruments, a tuning later referred to by German theorists as the 'Praetorianische Temperatur'. In France Mersenne, relying heavily upon Salinas's *De musica*, also neglected to mention any shade with major 3rds larger than pure; he described 1/4-comma mean-tone as 'la manière d'accorder parfaictment les Orgues ordinaires'. The pre-eminence of these authorities and Zarlino caused 1/4-comma mean-tone to be regarded by many subsequent writers as the exemplary ideal of mean-tone temperament and even of Renaissance and Baroque keyboard tunings in general. An indication of its use on 17th-century German organs lies in Werckmeister's assertion (1697) that an instrument would be converted to his circulating temperament, in which the 5ths C–G–D–A are tempered 1/4-comma, by resetting only some of the pipes. In the late 17th century and the 18th the increasing popularity of tierce ranks in mixture stops promoted the brilliance of 1/4-comma mean-tone, with its pure major 3rds, on the organ.

But mean-tone temperament with major 3rds larger than pure also flourished. Cerone attributed it in 1613 to master organ builders. Lemme Rossi (1666) described 1/5-comma and mentioned 2/9-comma mean-tone. The instructions of Jean Denis (1643), a professional harpsichord tuner, specify no particular shade of mean-tone, prescribing only 'good' 3rds together with 5ths tempered by 'un poinct'; but in 1707 and 1711 the acoustician Joseph Sauveur, using an elaborate monochord to compare 1/4-, 1/5- and 1/6-comma mean-tone, reported that organ and harpsichord makers adhered more closely to 1/5-comma mean-tone than to the other two forms, even though 'les musiciens ordinaires' used 1/5-comma mean-tone. W.C. Printz in 1696 described the same three shadings and also 2/9-comma mean-tone, which he said was 'even earlier' ('noch eher') than 1/4-comma. Loulié in 1698 said that 1/5-comma mean-tone was 'better and more in use' than any other temperament. Sorge in 1748 attributed the use of 1/6-comma mean-tone to Gottfried Silbermann (and a posthumous book of Sorge (1773) confirmed the presence on two 'especially good' Silbermann organs of a 'horribly large beating 5th, G♯–D♯, along with four unbearably barbaric major 3rds'). J.-B. Romieu in 1758 expressed preference for 1/6-comma mean-tone because he liked the relative amount of tempering that it allots to 5ths and 3rds. The same criterion led Giordano Riccati in 1762 to give preference to his own 3/14-comma system (among regular temperaments).

Mean-tone with major 3rds smaller than pure seems to have disappeared from normal practice, although Cerone reproduced Zarlino's instructions of

1558, and Cima's instructions (1606) confused it (even more plainly than Aaron's of 1523) with 1/4-comma mean-tone. Lemme Rossi, Mersenne and Printz described it, and in the 18th century Henfling (1710) and Smith (1749) advocated it as an innovation. More recently Kornerup sought to champion it in the 1930s, and in 1948 A.R. McClure published a good account of its sound. According to Mersenne, Titelouze had a harpsichord with 19 notes per octave tuned in equal microtones – the equivalent, as it happens, of 1/3-comma mean-tone. Salinas had published tuning instructions for 1/3-comma mean-tone applicable to such an instrument, but it is not certain whether the 19-note harpsichord built by Pesarese for Zarlino or the one built by Elsasz for Luython and described by Praetorius were tuned thus. Costeley published in 1570 a *chanson spirituelle*, *Seigneur Dieu, ta pitié*, which he had composed as an exercise in the use of the 19-note scale (Levy, 1955). In the 20th century interest in the 19-note equal division was developed by, among others, Yasser (1932), Handschin (1927) and Mandelbaum (1961).

For various shades of mean-tone the corresponding schemes of dividing the octave into equal microtones were worked out, with the aid of logarithms, during the 17th century. The correspondence between 1/4-comma mean-tone and the 31-part division was described clearly in publications by Lemme Rossi (1666), Joseph Zaragoza (1674) and Christiaan Huygens (1691). Zaragoza also equated the 19-part division with 1/3-comma mean-tone. Joseph Sauveur (1701) matched the 43-part division (which Zaragoza had mentioned) with 1/5-comma mean-tone, and the 55-part division (illustrated in a circular diagram by António Fernandez in 1626) with 1/6-comma mean-tone. This kind of theoretical speculation continued in the 18th century. By 1637 Gallé had properly reckoned the intervals of just intonation in terms of the 53-part division, similarly favoured by Isaac Newton in 1665 and Nicolas Mercator in the 1670s.

When an 18th-century writer advocated one of these schemes he is much more likely to have been referring to a general theoretical model – a shade of mean-tone (the French term was *ton moyen*) regarded as an ideal of intonation – than to an experimental keyboard instrument. In this sense the 55 division, corresponding to 1/6-comma mean-tone, was particularly eminent. Not only did Sauveur attribute it to 'ordinary musicians', but Mattheson (1722–5) was familiar with it and Sorge (1748) labelled it 'Telemann's system'. In this scheme the whole tone comprises nine 'commas'; but not every reference to that feature necessarily implies the 55 division, as the same feature characterizes the nearly Pythagorean 53 division, which happens to contain virtually pure 3rds as well as 5ths and which had been referred to in a Pythagorean context by Italian theorists since the 15th century (e.g. Anselmi, 1434). Neither Praetorius (1618) nor Nassarre (1723–4) had in mind 1/6-comma mean-tone when referring to the whole tone as made up of nine commas, and one may entertain doubts in the case of other writers, like Brossard (1703) or Tosi (1723), who were not specialists in the theory of microtonal scales. The status of 1/6-comma mean-tone in performing practice might better be confirmed by systematic research into 18th-century woodwind instruments that survive unaltered. Certainly the expressive semitones and harmonic 3rds and 6ths in ex.12, the opening of Lully's overture to *Bellérophon* in a 17th-century keyboard transcription, are ill-served by 1/4-comma mean-tone

Some scholars have assumed that Baroque harpsichordists habitually retuned wholesale the accidentals on their instruments in order to produce various dispositions of regular mean-tone for music in various keys (Barbour and Kuttner, 1958; Rayner, 1969). But no Baroque musician or theorist other than Cima (1606) is known to have described this procedure; and evidently the standard 17th-century 12-note disposition (E♭–G♯) was used by some late 17th-century and 18th-century musicians as if it were a circulating temperament. Apparent references to this practice can be found in the writings of Christiaan Huygens (?1670s), Werckmeister (1700), Romieu (1758) and Bédos de Celles (1766–78), in the fourth edition of the *Encyclopaedia Britannica* (1810) and elsewhere. As late as 1847 I.F. Holton in New York wrote:

> In Unequal Temperament some of the chords are very good, while the aggravated dissonance of others, called by tuners the WOLF, imparts a peculiarity to the keys in which it occurs, much admired by certain musicians … These predilections … must be chiefly attributed to fancy and prejudice. Some inequality of temperament may be preferable, but no key ought to he made so bad as to give it a character for harshness.

Similar opinions had been expressed throughout the 18th century.

Extant specimens of Baroque carillon are said to be tuned to some form of mean-tone; in view of their inharmonic timbre this is a remarkable indication of the precision in tuning and control of timbre achieved by the Hemonys and other master bellfounders.

Temperaments

7. Irregular temperaments from 1680.

The most characteristic type of 18th-century keyboard tuning was an irregular temperament with no wolf 5th but with the 3rds in the C major scale tempered lightly, more or less as in some form of mean-tone temperament; most of the 3rds in 'modern' keys (such as B major, A♭ major or F minor) were thereby rendered distinctly more impure than in equal temperament. As a modulation of triadic harmonies moved about the circle of 5ths the amount of tempering in the 3rds would thus change, in a fairly unabrupt fashion, according to whether one was closer to the front or back of the circle as shown in fig.2. The degree and exact pattern of the differences might vary to suit taste and circumstance without forfeiting this principle; in fact different instruments require different quantities to achieve equivalent results. But there is occasional evidence of a tendency for the E major triad to be tuned approximately as in equal temperament. Concomitant to variously tempered 3rds were diverse sizes of semitone, the largest being E–F and B–C and the smallest C–D♯ and perhaps F–G♯ (or E♭–F♯). Hence the major keys with few sharps or flats had the most resonant and limpid triads but the least keenly inflected leading notes. In minor keys the effects were more intricate, E minor for instance having a sharper leading note but a less harsh tonic triad than F minor, a key often remarked on (e.g. by M.-A. Charpentier, *c*1692; Mattheson, 1713; Rousseau, 1768; Gervasoni, 1800) for its dark qualities.

Routine sequences as in ex.13 (from a sonata of G.B. Platti) gain savour in this kind of tuning, and more elaborate sequential manipulations are enhanced. In lieu of an extensive discussion of key character (see Steblin, 1983), ex.14 (the opening of an organ prelude of J.C.F. Fischer) may represent the fact that in the key of A♭ major, D♭ is often a particularly tender note by virtue of its low intonation and its affinity in part-writing to C (which is inflected high in relation to A♭ and D♭). Shadings of this sort lend an unimaginable dimension of beauty to such lavishly flat-laden pieces as J.S. Bach's chorale prelude *O Mensch, bewein'* or the Adagio of Beethoven's 'Pathétique' Sonata. Qualities of nuance in various keys created by this kind of tuning contributed much to the beauty of the Baroque French harpsichord and its music by such masters as d'Anglebert and François Couperin, who according to J.-J. Rousseau 'proposed and abandoned' equal temperament ('Tempérament', in the *Encyclopédie*, 1768). Handel's harmonically daring recitatives are also brilliantly enhanced, and the static tendency of the harmony in some of his arias (compared with Bach's) is rendered more logical. William Croft (1700) was evidently the first English keyboard composer to exploit the resources of this type of intonation (Meffen, 1978).

Except for Werckmeister's harpsichord tuning instructions of 1698 (summarized by F.T. Arnold, 1931), no Baroque prescription in German is known to have called for any 5ths larger than pure or, consequently, any 3rds less pure than Pythagorean 3rds. In German tunings the 5ths among the naturals averaged a heavier degree of tempering than those among the accidentals, the latter tending in fact to be pure. Some German writers characterized as 'good' any temperament well suited to harmony involving all 24 major and minor keys, thereby including equal temperament; but others regarded equal temperament as distinctly less 'good' than irregular temperaments of the type described here (*see* Well-tempered clavier).

French tuning instructions characteristically required two or three 5ths at the back of the circle of 5ths to be tempered slightly larger than pure (most probably A♭+E♭+B♭+F; see §4 above), thus producing a more pronounced difference in size and quality between the 3rds D♭+F–A♭+C and the 3rds among the seven diatonic notes. This kind of tuning was often referred to by 18th-century French musicians as the 'ordinary' or 'common' temperament, although some occasionally confused it with regular mean-tone (e.g. Bédos de Celles, 1766–78) or with some tuning similar to the irregular temperament described in §4 above (e.g. Corrette, 1752). Hence it is difficult to be certain exactly what shade of temperament Ozanam had in mind when he wrote in 1691:

> Whatever precaution we might take in tuning our instruments to render all the chords equal, there is always left therein some inequality that causes us to notice a je-ne-sais-quoi of sadness or gaiety, of the melodious or the harsh, which [in turn] makes us distinguish one key from another by ear.

Yet Ozanam's distinction between 'natural' and 'transposed' modes confirms that the inequalities in question were distributed not at random but in a pattern consistent enough to allow the keys to be identified by ear according to their intonational inflections. Rousseau also wrote, in 1768,

that the keys could thus be identified by ear, in the course of discussing a circulating form of the 'ordinary' temperament as described by Rameau in 1726. Rameau's instructions were accompanied with the following remarks:

> The excess of the last two 5ths and the last four or five major 3rds is tolerable, not only because it is almost insensible, but also because it occurs in modulations little used – except for when one might choose them on purpose to render the expression more keen etc. For it is good to note that we receive different impressions from intervals in keeping with their different [degree of] alteration. For example the major 3rd, which [in its] natural [state] excites us to joy, as we know from experience, impresses upon us ideas even of fury when it is too large; and the minor 3rd, which [in its] natural [state] transports us to sweetness and tenderness, saddens us when it is too small. Knowledgeable musicians know how to exploit these different effects of the intervals, and give value, by the expression they draw therefrom, to the alteration which one might [otherwise] condemn.

In 1737 Rameau changed his views (see §8 below); but in that respect d'Alembert (1752) took a neutral position in what had evidently become a controversial matter. Remarkably lucid comments on the relation between irregular temperaments and modulation (in virtually the modern classroom sense of the term) appeared in the *Histoire de l'Académie royale des sciences* at Paris in 1742. The preference of some composers for the 'transposed modes' had been discussed in an equally urbane article in the *Mémoires de Trevoux* (1718) which suggested that while it was arbitrary to give specific affective labels to particular keys, the extreme keys were, because of their tuning, comparable with a ragout with more vinegar and spice than an ordinary one or one conducive to good health.

Mattheson in 1720 published a book of reflections on this article and mentioned favourably the work of Neidhardt, who soon became the most elaborate technician of subtle shades of 'good' temperament (1724 and 1732). Later French and English advocates of a fairly subtle irregular tuning included Mercadier de Belesta (1776), Suremain-Missery (1793), Thomas Young (1800) and Jean Jousse (1832). Sorge (1744 and 1746) and J.H. Lambert (1774) also described such tunings, but were themselves content with equal temperament. These finer tunings are usually the most appropriate for late 18th-century music. F.A. Vallotti, *maestro* at S Antonio, Padua, from 1730 to 1779 and a highly regarded church composer and organist, designed a moderately subtle tuning (with the six 5ths among the diatonic notes each tempered by 1/6-comma) which is one of the simplest of its type (Lindley, 1981), although Werckmeister's equally simple scheme for the organ (in which the 5ths G–D–A–E and B–F♯ are each tempered by 1/4-comma) sounds more fitting in some late 17th- and early 18th-century German organ music.

There is evidence, however, that a less subtle degree of inequality in some Italian and English as well as some French tuning, persisted in the 18th century. Giordano Riccati, a physicist who corresponded extensively with Vallotti, published in 1762 a scheme which he suggested was in keeping

with current practice, and in which A♭–E♭ was larger than pure by some 2/5 of the Pythagorean comma. (The six diatonic 5ths were each tempered 3/17; of the syntonic comma, while E♭–B♭–F and B–F♯–C♯–G♯ were as in equal temperament.) A contemporary set of manuscript instructions preserved at the Conservatory of Padua refers to the sequence of 4ths B♭–E♭–A♭ as tempered smaller than pure, and that of E–B–F♯–C♯ as pure. Metastasio referred in a letter of 1770 to the use of one 5th, 'which they call *allegra*', tuned larger than pure by ear. In England, irregular schemes of similar crudity were prescribed by Arthur Wood (*c*1730), J.C. Petit (*c*1740) and William Hawkes (1805).

Among the late 18th- and early 19th-century Italian and English accounts of irregular temperaments may be mentioned those of Gervasoni (1800 and 1812), Barca (1809), Serassi (1816), Asioli (1816), William Jones (i) (1784), Cavallo (1788 and 1803), Robison (1801), Stanhope (1806), Kollmann (1806 and 1823) and Callcott (1807). The *American Journal of Science* began publication in 1818 with an account of the attempt by Alexander Fisher, a Yale mathematician, to derive an ideal model of temperament from a statistical reckoning of the use of different key signatures in 1600 compositions, and of the use of each major and minor triad in 200 compositions 'taken promiscuously from all the varieties of music for the organ'. Fisher acknowledged, but made too little allowance for, the crucial fact that 'making the aggregate of dissonance … the least possible … [would] render the harmony of the chords very unequal … a disadvantage'.

More important than the work of such theorists is the evidence, which can be outlined here only briefly, that none of the masterworks of late Baroque and Classical German keyboard music was in fact created in a prevading ambience of equal-tempered intonational sameness among the various triads and keys, although some forward-looking composers did tend, like C.P.E. Bach (see §8 below), to think in such terms. In 1697 Werckmeister had written:

> Now if all semitones, tones, 3rds, 5ths, etc. had the same size and [equivalent] beating, people would take little pleasure in transpositions: for example, if the Dorian is transposed a second into either C or E: such transpositions produce notable alterations and excitement. This is brought about not so much by the change in pitch level as by the reordering of the tones and semitones, and also the [varied] beating of the concords.

Heinichen in 1728, while ridiculing Mattheson's propensity to 'assign specifically to this or that key the affect of love, sadness, joy, etc.', acknowledged that

> in general it may well be said that one key is more fitting than another for expressing affects [at large]; and in today's good temperaments (I am not referring to old organs) the keys with two or three flats or sharps in their signatures emerge, especially in the theatrical style, as the most beautiful and expressive. For this reason I would not even support the

invention of the long-sought clavier in just intonation were it to become practicable.

Kirnberger held that a good temperament 'must not injure the variegation of the keys' (1776–9), and his disciple (in this regard) Tempelhof in 1775, while acknowledging that any key could express any affect, held nonetheless that in a good temperament each key would do so in its own particular way ('auf eine ihnen angemessene Art') and that without such expressive resources music would be 'nothing more than a harmonious noise that tickles the ear but leaves the heart slumbering away in a disgusting indifference'. In 1780 the polymath J.J. Engel, in a book dedicated to Reichardt, placed the choice of key before melody and harmony as a resource of musical portrayal, and said that among the major keys, C and A♭ differed most since the steps of their scales differed most.

In 1784 Cramer's *Magazin der Musik* reported that Clementi used a tuning in which C–E was tempered 'ein klein wenig hoch schwebend' ('beating, slightly high'), E–G♯ 'sehr hoch' ('very high') and A♭–C 'noch höher' ('even higher'). In 1785 Mozart's pupil Thomas Attwood recorded in his notebook that G♭ was a note which 'the Harpsichord has not, but all other instruments have' (Chesnut, 1977). According to A.F. Schindler (1860), Beethoven in his last years maintained a keen interest in the expressive characteristics of different keys and suggested that they were most apparent in piano music. It is unclear to what extent Beethoven may have attributed the differences to acoustical factors, but his piano music does in fact benefit from an 18th-century unequal temperament (Lindley and others, 1997, chap. 5).

In 1826 the leading champion of Viennese Classical music in Italy, Peter Lichtenthal, wrote that equal temperament 'cannot subsist' or else the keys would lose their character and 'one could equally [well] compose a nocturne in A minor or a military blare in A♭' – an opinion that was excised, however, in Dominique Mondo's French translation 13 years later. Yet the late Baroque associations of different qualities with different keys cast their shadows far into the 19th century. This legacy warrants investigation. A good point of departure is that Schubert's piano music benefits from an unequal well-tempered tuning if the nuances are subtle enough that C–E is tempered more than half as much as in equal temperament (rendering E suitable to such melodious uses as shown in ex.15) and D♭–F is no nearer in size to a Pythagorean 3rd than to an equal-tempered one (since Schubert used very freely the key of D♭ major). Equally telling is the curious fact that D minor, the most eminent of keys in Baroque keyboard music and one that to a large extent retained its old mean-tone-like sound in the 18th-century irregular temperaments, was the key least favoured by Chopin, except in the last and most magnificent of his 24 preludes.

Temperaments

8. Equal temperament from 1735.

In his *Génération harmonique* (1737) Rameau endorsed equal temperament and, by way of retracting his own views of 11 years before, introduced a new argument in its favour:

He who believes that the different impressions which he receives from the differences caused in each transposed mode by the temperament [now] in use heighten its character and draw greater variety from it, will permit me to tell him that he is mistaken. The sense of variety arises from the intertwining of the keys [*l'entrelacement des Modes*] and not at all from the alteration of the intervals, which can only displease the ear and consequently distract it from its functions.

Distracting the musical ear from its proper functions is an unpardonable fault in a tuning. Rameau's argument might well have applied more palpably in France than in Germany, if French unequal tunings were, as they generally appear to have been, less subtle than their German counterparts. Rameau's authority as a musician was such that the 1749 register of the Paris Académie Royale des Sciences could state, 'M. Rameau assures us that experience is not opposed to the temperament that he proposes; and in this regard he has earned the right to be taken at his word'. Equal temperament continued to be identified with his name throughout the 18th century in France and occasionally in Italy as well.

In Germany J.N. Ritter, perhaps the most important organ builder in Franconia at the middle of the century, is said to have used equal temperament. Among theorists advocating it Barthold Fritz is especially important, despite the crudeness of his tuning instructions, because in the preface to the second edition (1757) of his *Anweisung* (1757: the title may be translated as 'Method for tuning claviers, harpsichords and organs, in a mechanical way, equally pure in all keys'), he reported that C.P.E. Bach had found 'in my few pages everything … that was necessary and possible' for a good tuning. C.P.E. Bach's own advice (1762) for improvising a fantasia mentioned temperaments: on the organ, he said, 'one must restrain oneself in chromatic passages; at least they should not be advanced sequentially, because organs are seldom well tempered. The clavichord and the piano are the most fitting instruments for our fantasia. Both of them *can*, and *must*, be tuned pure'. For Marpurg and others 'rein' ('pure'), which C.P.E. Bach himself here distinguished from 'gut' ('good' or 'well'), became a catchword in arguments favouring equal temperament (or at least not a purposefully unequal one). Fritz's title shows how it came to serve in that capacity; once equal-tempered 3rds were considered acceptable, then a tuning with certain 3rds tempered more heavily could be described as relatively impure. Since C.P.E. Bach was sufficiently concerned to give not only a warning about the limitations of mean-tone but also emphatic advice about the tuning of the clavichord and piano, the fact that he did not recommend exploiting the inflections of a circulating unequal temperament in a genre which, by his own definition, 'modulates into more keys than is customary in other pieces' suggests an indifference to those inflections. When C.P.E. Bach spoke of 'remote' keys, he meant keys remote from the tonic key, not keys remote from C major or D minor. His compositions, for instance the great rondos from the collections *für Kenner und Liebhaber*, reflect this neglect of the concept expressed in fig.2 above; and his favourite instrument, the clavichord, was the least likely of all normal keyboard instruments to display to much advantage the niceties of an irregular temperament. If the music of any leading 18th-century German

composer ought to be performed in equal temperament, C.P.E. Bach is the best candidate.

No unequivocal conclusion can be established as to the attitude of his father, J.S. Bach, towards the relative merits of equal temperament and a mildly unequal one. On the basis of evidence such as applied above to C.P.E. Bach, Barbour showed (1932) that J.S. Bach would probably not have held a dogmatic opinion (a view rejected by Rasch, 1981). Barbour's later statement (1951, p.196) that 'much of Bach's organ music would have been dreadfully dissonant in any sort of tuning except equal temperament' is a silly exaggeration, due perhaps to the fact, which he mentioned in a letter of 1948 to A.R. McClure, that Barbour had never heard any keyboard temperament other than equal temperament. John Barnes (1979) investigated the '48' in a fairly subtle type of irregular temperament (*see* Well-tempered clavier, table 1) and found that the peculiarities of the various keys in that tuning are nicely suited to or accommodated by the music. According to Marpurg (1776), Kirnberger scrupulously reported that Bach, his teacher, had instructed him to tune all major 3rds larger than pure – thus ruling out any unsubtle irregular temperament (such as used by Kirnberger himself). One could readily believe that Bach sometimes exploited the qualities of a particular key as inflected in a typical irregular temperament, sometimes merely accommodated what he knew was likely to be the kind of tuning his published music would be played on, and sometimes – for instance, in the concluding ricercar of the *Musical Offering* – ignored completely the possibility of intonational shadings.

The most vigorous and articulate late 18th-century champion of equal temperament seems to have been F.W. Marpurg, whose *Versuch über die musikalische Temperatur* was published in 1776 but who had already advocated equal temperament in his *Principes du clavecin* (1756). Although capable of meretricious reasoning, he presented, in greater detail than Rameau, numerous forceful arguments, some of which were rendered so valid by historical circumstance that during the 19th century equal temperament became the standard keyboard tuning and, in the West, a widely followed norm of intonation in general. Marpurg (1776) knew that a composer might select a key for reasons 'that have nothing to do with temperament'; and he saw (as did Tiberius Cavallo in 1788) the advantages of equal temperament in ensemble music, where

> so long as not all the instruments playing together, and the vocal parts as well, are intoned in the most perfect agreement in one kind of [irregular] temperament, the composer must obtain the character of his piece, the building up of an emotion, and the strength of expression, from sources quite other than the creative powers of the tuning hammer or cone.

His encounters with the tuning schemes of Kirnberger and C.L.G. von Wiese (see Eitner), as well as his knowledge of the writings of Werckmeister, Neidhardt, Lambert and others, showed him that:

> There is only one kind of equal temperament but countless possible types of unequal temperament. Thus the latter opens up to speculative musicians an unstinting source of modifications, and since every musician will readily invent

one, the result will be that from time to time we shall be presented with a new type of unequal temperament, and everyone will declare his own the best.

In short, he gave equal temperament decisive preference on both of the counts envisaged by Fontenelle, who had written in 1711: 'After these motley combats, one system will become victorious. If fortune favours the best system, music will gain thereby a real advantage; and in any case it will at least profit from the convenience of having the same ideas and the same language accepted everywhere'.

D.G. Türk (1802) extended Rameau's argument of 1737 cited above by suggesting that a sameness of quality among the various keys would contribute to unity of character in a composition. Influential musicians supported equal temperament in Italy (Asioli, 1816) and England (Crotch, 1812 and, invoking J.S. Bach, 1833). Hummel's *Anweisung zum Piano-Forte Spiel* (1828) concluded with a discussion of tuning that justified ignoring the old, unequal temperaments on the grounds that they presented, particularly for the many novice tuners brought into the trade by the popularity of the piano, greater difficulties than equal temperament and that these difficulties were aggravated critically by the burden of tuning, on modern pianos, three heavy strings for each note instead of two thin ones as on older instruments. Jousse, in a book on piano tuning (1832) dedicated to W.F. Collard, expressed preference for a subtly unequal temperament, but Claude Montal (1834) gave instructions solely for equal temperament on the piano. In the 1840s Alfred Hipkins persuaded the Broadwood firm to tune their pianos in equal temperament, which he must have used when tuning for Chopin in London in 1848. Cavaillé-Coll (in his maturity) and contemporary German organ builders used it; almost all the English organ builders resisted until after the Great Exhibition of 1851, but their notebooks show that from the mid-1850s until the 1870s, rebuilt or reconditioned church organs were usually raised to the current concert pitch and converted to equal temperament (see Mackenzie, 1980).

A relatively late development was the widespread use of more refined tuning procedures than those of Rameau or Fritz, in order to guarantee uniformity among the 3rds and 6ths. (In reality this can seldom be achieved by tempering all the 5ths and 4ths alike or by matching unisons with a monochord. *See* Equal temperament and Tuning.) Sorge's method (1749, republished by Marpurg, 1756, Roesner, *c*1765, and Bossler, 1782) was to temper a chain of major 3rds (C–E–G♯/A♭–C) before tempering any of the 5ths, and after setting the 5ths in three chains of four each (rather than one chain of 12), to check whether all 12 major triads, ascending chromatically, 'are equally sharp to one another'. A sufficiently exact yardstick for 'equally sharp' gained currency during the 19th century – that each major 3rd or 6th should beat no slower than the one below and no faster than the one above.

Equal temperament in this more exact sense is virtually considered an inherent characteristic of the modern concert piano. Indeed the ideals of sonority in the acoustic design of the modern piano and in all but the more radical forms of modern pianism are as intimately bound to the acoustic qualities of equal temperament as any previous keyboard style ever was to

its contemporary style of intonation. The enharmonic facility of Brahms or Fauré, the hovering sonorities of Debussy, the timbral poise of Webern, the slickness of the most urbane jazz chord progressions, all rely implicitly on the hue of equal temperament as much as on the other normal characteristics of the instrument's tone. An 18th-century tuning usually sounds as inappropriate for this music as the piano would seem visually if its glossy black finish were replaced by an 18th-century décor.

Temperaments

9. Fretted instruments.

Insofar as the relation between performing practice and compositional style is concerned, the history of temperaments on fretted instruments in Western art music since the mid-16th century has been simpler than on keyboard instruments, for two reasons: the placing of the frets and tuning of the open strings does not impose an exact intonation of the scale on the player as definitively as the harpsichord or organ tuner's handiwork does; and the use of distinctly unequal semitones in the fretting scheme is likely to be problematical as each fret runs under all the strings at once.

Lute and viol strings were traditionally made of gut (although from the late 17th century the lowest strings were likely to be overspun). Inconsistencies in this material are greater than in carefully drawn wire for harpsichord strings. Even Hubert Le Blanc acknowledged, in his enthusiastic *Défense de la basse de viole* (1740), that 'the rules for gut strings are variable. Two strings of the same thickness [*grosseur*], as clear as rock crystal, make the 5th at a considerably different degree forward and back'. Practical considerations of this kind tend to overshadow the embodiment of any precise model of a tempered scale to a greater extent than on the harpsichord (where imperfections in the strings are less telling) or the organ. Moreover, all the mathematical schemes for determining the position of the frets were based on measuring off certain portions of the neck, as if an alteration in string length were the only effect produced when the player presses the string against the fret: but the concomitant increase in the string's tension is significant enough to reduce even the most precise geometrical division to a mere preliminary. Several Renaissance and Baroque musician-theorists who discussed fret placing remarked that one must make, or that players did make, further adjustments by ear.

Thus a mathematical procedure for determining the position of frets on a lute or viol had a rather different kind of significance from that of a monochord prescription. Monochord schemes often embodied a precise model of intonation which the performer or instrument maker or tuner was supposed to transfer into practice by whatever techniques were appropriate. The fact that Renaissance and Baroque theorists developed the use of irrational numbers in their monochord schemes is, in large part, evidence of this precise intention. Formulae for marking where to tie a fret on the neck of a lute or viol often involved exclusively rational numbers. The reason is not only that an accomplished player, a person often of quite different educational and social background from many music theorists, would be less likely to know or care about irrational numbers, but also that for the player the numerical measuring was but the first stage in determining the intonation of the instrument. Its function was merely to help

place the frets close enough to their final position so that the player could go on to the next stage, that of tuning the open strings by ear and concurrently making slight adjustments in the frets. The intonation of the notes might then be further shaded ad hoc during performance.

In this light one may distinguish four kinds of late Renaissance fretting prescriptions: those with exclusively Pythagorean ratios (e.g. Finé, 1530); those that embody a precise mathematical model of equal temperament but are too elaborate to be of much practical use (e.g. Zarlino, 1588); those that seem to betray by their complexity an erudite intention, but fail to embody precisely any feasible model of intonation (notably Dowland, 1610; see Poulton, 1972, appx 1); and those simplified for practicability. Among the last type, equal temperament is best represented by Vincenzo Galilei's rule – that the ratio 18:17 should be used for placing each successive fret down the neck of the instrument – a rule that Mersenne said was used by many instrument makers. A less exact approximation, but perhaps adequate for its purpose, could be gained by dividing the 9:8 whole tones of a Pythagorean diatonic scheme into 18:17 and 17:16 semitones, a rule given by theorists as late as Nassarre (1723–4). Ganassi's equally simple viol prescription (1542–3) would have produced, from the nut to the eighth fret, the ratios 24:22²/₃:21¹/₃:20:19:18:17:16:15, had he not specified that certain frets be shifted up or down by their own width or by half that amount. His accompanying remarks not only emphasize the need for refinements by ear but also refer to the tempering of 5ths for the sake of distinguishing major and minor semitones and for a better sound in chords and in ensemble music. There are corroborating indications that before the second half of the 16th century, approximations of mean-tone temperament may have competed with equal temperament on fretted instruments, and a distinguished modern lutenist (see Dombois, 1974) has found them musically advantageous in some instances. The historical evidence is inconsistent but suggestive.

In mean-tone temperament as in Pythagorean intonation there is a distinction in size between diatonic and chromatic semitones (A–B♭, for example, being larger than B♭–B♮ in mean-tone temperament, but smaller in Pythagorean intonation). The inconvenience of maintaining this distinction on fretted instruments is illustrated by the fact that most 16th-century lute music requires the first fret on the third lowest string to provide the note a chromatic semitone above the open string (G♯ on the G string on a lute with the highest string tuned to *a'*) but calls on the same fret to provide a diatonic semitone above the fourth open string (C on the B string).

It would have been difficult for early Renaissance theorists to recognize or approve of the use of equal semitones because until the publication in Latin of Euclid's *Elements* in 1482, the myth that a whole tone could not be divided into two equal parts was virtually unchallenged among scholars. To demonstrate this premise, theorists would sometimes explain that if a whole tone of ratio 9:8 were divided into two semitones of ratio 18:17 and 17:16, then obviously one of the semitones (18:17) would be smaller than the other. The fact that an 18:17 semitone amounts to 99 cents, virtually the same as the semitone of equal temperament, might give particular significance, however, to certain early 16th-century assertions such as that

of Spataro (1521) that 'the lute has minor semitones [for] all its frets' ('el leuto ha tuti li soi tasti semitonii minori'; see Lowinsky, 1956) or of Martin Agricola (1545) that 'almost the majority of lute and viol players make all the frets equal to one another … a fret produces the minor semitone':

> … fast das gröste part
> Der Lautnisten und Geiger art
> Alle bünd machen gleich von ein
> … ein bund
> Der semiton minus/thut kund

Yet Agricola's statement implies that in his day some players of fretted instruments did not use equal semitones. Arnolt Schlick (*Tablaturen etlicher Lobesang und Lidlein*, 1512) and, for the most part, Milán Luys (*El maestro*, 1536) seem to have avoided those combinations of fingerings that would render inconvenient the use of unequal semitones. The only one of Schlick's 15 extant lute pieces that uses the first fret on the third string (*Nach lust hab ich*) does so on no other, while in other respects his music accommodates a fretting with the following succession of semitones as one ascends from the open strings: diatonic, chromatic; diatonic, chromatic; diatonic; diatonic, chromatic; diatonic. (Above each string the intervals provided are: minor 2nd, whole tone, minor 3rd, major 3rd, perfect 4th, diminished 5th, perfect 5th, minor 6th; see fig.3.) To judge by his organ tuning instructions, Schlick's ear was probably extraordinarily perceptive of such intricacies; he might well have sought to accommodate the use of a mean-tone temperament in his lute compositions.

Milán Luys did not avoid using the first fret to provide G♯ on the G string, but he did exercise circumspection: whereas he would use the second fret for the A in ex.16*a* or the fourth fret for the G♯ in ex.16*b*, the first fret would not be required to provide G♯ in any context more conspicuous vertically than that shown in ex.16*c*. It is true that occasionally (see ex.16*d*) he required the fourth fret to provide not only the B shown in fig.3 but also an E♭ (instead of the D♯ in fig.3), and similarly with regard to C♯ and F at the sixth fret. Yet a rejection of equal temperament, in which major 3rds are the same size as diminished 4ths, is indicated by the prefatory instructions to one of his fantasias (1536, p.30) to 'raise the fourth fret a little so that the note of that fret will be strong and not feeble'. It is difficult to be certain just what 'raise' and 'strong' meant in this instance; but a clearer inference can be drawn from the instruction to adjust the same fret 'up towards the pegs' in his setting of *Con pavor recordo el moro*, in which the fret is used exclusively for notes a major 3rd above the open string. This inference is confirmed obliquely by an instruction of Enríquez de Valderrábano (1547, f.74*v*) to move the fourth fret 'slightly down towards the rose', indicating unequivocally that the pitch of the notes affected, which in this case are all a diminished 4th above the open string, was to be higher than if they had been a major 3rd above the open string: the major 3rd, one may thus infer, was a smaller interval than in equal temperament. Evidently, however, Valderrábano did not consistently reject the use of equal semitones, as some of his duets require the two vihuelas to be tuned a minor 3rd apart from each other, an arrangement for which the use of unequal semitones in the fretting would be bound to entail some sour unisons.

Bermudo's comments (1555, ff.103–9) on fret placement and intonation reflect a confusion – which is evident elsewhere in his book and which he shared with Gaffurius, Aaron, Lanfranco and a number of other early 16th-century theorists – between mean-tone temperaments in practice and Pythagorean intonation in theory. Bermudo indicated unmistakably, however, that rather than using equal semitones many vihuelists would set some of the frets at a slant or else 'not press down the finger equally' when playing. The latter technique had been referred to ten years earlier by Aaron (1545, f.35*v*): 'the [intonation of a] lute can be aided with the finger of the player, by the *intensione* and *remissione* of a minute space for the reintegration of its consonance'.

Well before the end of the 16th century it became a commonplace of Italian musical writings that the use of equal temperament was normal for fretted instruments while keyboard instruments were tuned with unequal semitones (i.e. in some form of regular mean-tone temperament); and this distinction was carried on through most of the 17th century. Mersenne wrote, when discussing the characteristics of equal temperament, that musicians called the lute the charlatan of instruments 'because it passes off as good [*il fait passer pour bon*] that which, on good instruments, is bad'. The legerdemain in question, however, may often have been of the kind referred to by Bermudo and Aaron: a matter of left-hand artfulness to draw chords more resonant than those of equal temperament from instruments fretted in equal semitones. Every modern viol consort of any degree of finesse does this, and Marin Marais (1689) implied the use of such a technique on the solo viol when he said that his compositions in F♯ minor would, to their detriment, sound less 'piercing' ('perçant') if the viol were tuned up a semitone (taking its F♯ from the harpsichord's G) for the benefit of an accompanist unfamiliar with that key. In all probability equal temperament was, then as now, a theoretical norm from which players departed flexibly for acoustical reasons – much as Renaissance keyboard musicians, confronted with instruments of rigid intonation, departed from the theoretical norm of just intonation for reasons of practicability.

Two potential sources of systematic data on the spacing of frets in old instruments are the surviving, unaltered specimens of the cittern and the like, in which the frets were usually inlaid as they are on a modern guitar; and depictions in works of art where the artist can be shown to have treated such minutiae with sufficient care to give the rendition documentary value.

Temperaments

10. Difficulties in interpreting theoretical writings.

A casual reading of Renaissance and Baroque treatises will yield misleading clues as to contemporary practices. The prestige of the traditional, neo-Pythagorean concept of music as 'sounding number' led quite a few writers who were not musicians – for instance, mathematicians like Henricus Grammateus (1518), Stevin (*c*1600), Caramuel (1667–70), Wallis (1698) and Euler (1739) – to describe theoretical schemes that one should beware of taking as a mirror of contemporary musical norms. Other, more musicianly writers, who may have been alert to very fine nuances of

current tuning, were ill-equipped mathematically to describe them in a quantitatively coherent and accurate way.

Some 15th- and 16th-century music theorists regarded 'the comma' as an indivisible quantity, and Gaffurius in 1518 attributed to the syntonic comma a 'remarkable power to wander about', adding itself to and subtracting itself from the various intervals of the scale. (This is feasible if a computer is interposed between a keyboard and some tone-generators, but one can hardly credit Gaffurius with predicting that possibility.) Several 16th-century theorists, including Aaron (1545) and Bermudo (1555) as well as Gaffurius, confused the non-identity of enharmonic 'twins' (such as D♯ and E♭) in Pythagorean intonation, where the sharp is theoretically higher than the flat, with their non-identity in a mean-tone temperament, where the flat is higher than the sharp.

Because of the logarithmic relation between musical intervals and the corresponding string-length distances on a monochord, theorists who wrote about tempered tuning before the development of logarithms in the 1620s may be regarded, with hindsight, as having been mathematically handicapped. When Artusi in 1603 criticized Monteverdi's theory of tempered intonation in madrigals, he said that in any case the science of music could not embrace irrational ratios. (But in fact such ratios are proper to monochord schemes for tempered scales.) Some later theorists who were just as naive as Artusi in this regard were Thomas Salmon (1705), who would divide the 5:4 major 3rd into 20:19:18:17:16 semitones, and Kirnberger (1776–9), who designed his musically very crude temperaments exclusively in terms of integer ratios, dividing the 81:80 comma into two parts as 162:161:160 and going on from there. Bédos de Celles was more charmingly naive when he said (1770, p.430) that the octave is divided into 58 commas of four different sizes, which, however, he would not specify, because 'that is useless to our purpose'.

Even the 18th-century theorists who dealt in detail with subtle nuances in a 'good' style of unequal temperament often failed in their calculations to distinguish between the syntonic and Pythagorean commas. Vallotti in his theoretical scheme (*see* Well-tempered clavier, fig 1*b*) proposed to temper the six 5ths among the diatonic notes, F–C–G–D–A–E–B, smaller than pure by 1/6-comma and make the other six pure. This obviously refers to the Pythagorean comma (the wrinkle in the circle of 5ths; see table 1); but also said that the diatonic major 3rds would thereby be made larger than pure by 1/3-comma, which would be true only if his 1/6 and 1/3 were taken as fractions of the syntonic comma (the amount by which two pure 5ths minus two pure 4ths exceeds a pure major 3rd). Werckmeister, Neidhardt and Sorge (in his earlier writings) also used this approximative kind of reckoning.

Modern scholars have often sown worse confusions. Because Bermudo (1555, ff.103–9) discussed not only Pythagorean intonation but also an approximation to equal temperament, it has been inferred (Ward, 1953, p.33) that in equal temperament 'the *mi* frets were a comma higher than the *fa* frets'. Several early theorists have been misinterpreted as having advocated equal temperament, among them Werckmeister (mainly because he designed temperaments with no wolf 5th), Salmon (because of

his 20:19:18:17:16 semitones), Lanfranco (because he said to temper the major 3rds larger than pure), Grammateus (because he would divide each of the five 9:8 whole tones of the traditional diatonic monochord into two equal parts, thereby leaving sour 5ths at B♭–F and B–F♯ and Ramis de Pareia (because his ideas were new, his name occurs in the title of Barbour's doctoral dissertation, and Barbour favoured equal temperament). According to one scholar (Fose, 1992), Ramis's placing of the wolf 5th was radically mistaken and all his other advice as to which intervals must be avoided in practice was based merely on 'notational spellings' unrelated to their sound. In reality his choice of notational spellings was due to his having observed that certain intervals which looked promising on the keyboard sounded sour. Since there was, for example, a euphonious major 3rd above A but a sour one below F, he called A–C♯ good and C♯–F bad. Another scholar has argued that non-keyboard musicians are 'beyond temperament' and hence 1/6-comma mean-tone temperament was the norm in 18th-century music (Haynes, 1991). There is also Kellner's alleged discovery (patented in 1975) of Bach's 'secret' tuning from clues in the design of his seal and in elaborate anagrams; he argues that since Bach was a musician, the fact that the seal has seven points and five dashes conveys a musical message, and the message is not that the keyboard has seven diatonic and five chromatic keys in each octave, but that there are seven untempered and five tempered 5ths (even though Marpurg said in 1756 (p.5) that 'the best of the unequal temperaments in use' had seven tempered ones).

One should not arbitrarily infer a rigid scheme from an altogether non-mathematical description in an old treatise. Schlick's account of organ tuning has been subjected to an exact reduction (Lindley, 1974), and the same thing has been done to Rameau and other 18th-century theorists (Asselin, 1984). An over-exact interpretation should not be imposed upon a rough rule of thumb. Sorge said (1748, pp.32f) that Gottfried Silbermann tempered the 5ths twice as much as in equal temperament and Praetorius three times as much. But since Praetorius had clearly meant 1/4-comma mean-tone temperament (in which the 5ths are tempered 21/4 as much as in equal temperament), it is imprudence to assign, on the basis of Sorge's remark, an exact fraction of this or that comma to 'Silbermann's temperament'. Sorge was only saying that it was a regular mean-tone temperament intermediate in quality between 1/4-comma mean-tone and equal temperament.

One has always to distinguish between speculative calculations, innovative proposals and descriptive references to current practice. It is instructive to compare Werckmeister's novel monochord schemes with his non-mathematical account (1698) of good keyboard tuning; when he said that an organ could be reset to his temperament by adjusting only some of the pipes, he was clearly referring to his best-known scheme (*see* Well-tempered clavier, fig.1*c*), which Huygens, Sorge and Marpurg also tell us was the one he advocated, and allotting to a lesser practical status his own mathematical schemes involving 5ths tempered by the unhealthy amount of 1/3 comma or based on mystical virtue in the number 7. Neidhardt's method of presentation was to describe a long series of speculative possibilities and then specify three or four as being of practical value (musicians close to J.S. Bach praised Neidhardt as a theorist of tempered

tuning without ever referring to any one of his schemes in particular). Marpurg, championing equal temperament and irritated by the inept schemes of Kirnberger ('which some [people] praised so much but nobody used') and von Wiese, printed in 1790 a number of new schemes of unequal temperament, none of which favoured the diatonic 3rds and none of which he intended for use.

These difficulties are aggravated by the fact that, perhaps because fine shades of tuning are subtle and yet sometimes aesthetically telling, writers on the subject have often been involved in quarrels emitting more heat than light. Some well-known examples are associated, one way or another, with Ramis, Vicentino, Doni, Rameau and Kirnberger – who went so far as to say (1781, p.3) that in a 'good' temperament, not a single piece by J.S. Bach, C.P.E. Bach, Handel 'and other composers' could be transposed to any other key without making it 'unpracticable'.

A sensible but very time-consuming way to overcome the most significant difficulties is to combine a careful study of the treatises with musical probings using historically suitable repertory. The revised neo-Baroque temperaments of the 1990s (*see* Well-tempered clavier, table 1) were arrived at in this way.

Temperaments

11. Temperament and harmony.

From time to time there have been disagreements as to where the limit between 'heavily tempered' and 'sour' may lie for this or that interval. Such discussions show that a tempered interval is not the same as an out-of-tune one. Even stronger proof is the fact that tempering the chromatic scale somehow or other has for more than 500 years been a fundamental, albeit distinctive (until the 20th century) premiss of Western harmony. Using terms like '5th' and '3rd' for relations between pitch-classes rather than between specific pitches (thus taking '5th', for instance, to mean the relation of any G to any C, of any D to any G etc.), one can say that a basic purpose of tempering is to obtain, physically and therefore conceptually, one or both of the following two kinds of equation, which would otherwise, in the raw world of untempered keyboard scales before the advent of the computer (*see* Just intonation, §2), be unobtainable: *(1)* a chain of 5ths acceptably in tune = a consonant 3rd acceptably in tune; *(2)* a chain of consonant major 3rds or minor 3rds acceptably in tune = a pure unison.

The mean-tone temperaments satisfy the first but not the second type of equation. A chain of three or four 5ths (such as C–G–D–A or C–G–D–A–E) makes a good consonant 3rd, but then three major 3rds (such as A♭–C–E–G♯) do not make a unison, nor do four minor 3rds (although they would if three major ones did, since the minor 3rd in a triad is the difference between a 5th and a major 3rd). One consequence of this is that mean-tone temperament is inimical to *double entendre* between a sharp and a flat. There is no sense of identity between, for instance, the E♭ and the D♯ in ex.17; instead, they are distantly related pitch classes which, although approaching each other in pitch more closely than by a semitone, cannot together take a pivotal role in intertwining of keys – as they do in ex.18,

which is by a lute composer and was conceived in terms of equal temperament.

As equal temperament gradually came into widespread use on keyboard instruments during the late 18th century and the 19th, enharmonic modulations (such as in ex.18) gradually became less 'experimental' and then finally, in the music of composers like Wagner and Franck, perfectly routine. Nuanced well-tempered tuning was not inimical to such modulations and they can be found occasionally in the keyboard music of composers like Haydn (e.g. in the Fantasia, hXVII:4, bar 303) and even Rameau (in his *L'Enharmonique*, composed a few years before he endorsed equal temperament), yet the nuances did to some extent direct the composer's attention away from the possibilities of enharmonic modulation. This was one cause of the profound difference between Schubert's uncanny sensitivity to all sorts of non-enharmonic relations between keys and Liszt's apparently daring but, to a modern ear, relatively insipid exploitation, in equal temperament, of ambiguous diminished 7th chords (e.g. in the opening section of his *Prometheus*).

Schubert was, on the other hand, more at home in formerly 'remote' keys like D♭ major than has been composers like Bach whose musical formation went back to the days of mean-tone temperament when, because there was no circle of 5ths, notes such as D♭, G♭, A♭ and E♭ were regarded as inherently remote. Their mitigated remoteness in the 'good' unequal temperaments was due to the fact that not all the imperfect consonances were equally euphonious in those tunings. A composer sensitive to the nuances would therefore tend to use the various leading-notes and triads in various more or less subtly different ways. A proper understanding of late-Baroque and Classical tonal structures must take this into account.

Without such nuances, mean-tone temperament had provided the basis for the high-Renaissance and Baroque transformation of the medieval 'church modes', which had originally been monophonic, into vehicles of triadic harmony (see §5 above). Some curious byways in an early 15th-century phase in the development of triadic harmony are due, however, to the fact that in a quasi-Pythagorean temperament, a chain of three or four acceptably tuned 5ths does *not* yield a 3rd tuned acceptably for a stable triad such as the D- and A-major chords in ex.1 and ex.2. Some apparent musical consequences of this can be observed in one of Du Fay's earliest songs, *Belle, plaissant et graciese*, where the first three phrases, comprising the first of the two main sections of the piece, cadence on open 5th sonorities based on F, C and A respectively, and in the second section the main voice-part, the tenor, returns from A to F through a series of rising 4ths and falling 5ths (A–D–G–C–F) and then emphasizes again A as well as C (see ex.19), and yet no F major triad ever occurs as a vertical sonority, nor a C triad as a stable sonority (presumably because on a keyboard instrument familiar to Du Fay, the 5ths F–C–G–D–A–E were untempered and so the 3rds F–A–C–E–G were impure by an entire comma). Du Fay's somewhat later music, however, routinely includes stable triads on F and on C (as well as on G, B♭ etc.); he evidently participated in a 15th-century probing (see ex.1) and subsequent abandonment of quasi-Pythagorean temperament. At stake was not how

keys might be intertwined as in 18th- and 19th-century modulations, but how triads might be used within one key.

Temperley, Nicholas

(*b* Beaconsfield, 7 Aug 1932). English musicologist. After attending Eton College (1945–51), he studied for a year at the RCM, London (ARCM 1952), before reading music at King's College, Cambridge (BA 1955, MusB 1956). He took the doctorate there in 1959 with a dissertation on 19th-century instrumental music in England. He was a postdoctoral Fellow at the University of Illinois (1959–61) and returned to Cambridge as an assistant lecturer (1961–6). He became successively assistant professor at Yale University (1966–7), associate professor at the University of Illinois (1967–72) and professor (1972–96) and chairman (1972–5, 1992–6) of the musicology department there.

Temperley has done much to promote a reassessment of English 19th-century music in its social and historical context; he has edited Loder's opera *Raymond and Agnes* (given at Cambridge, 1966), piano music, songs and liturgical pieces. His other areas of research include European music from the mid-18th century to the mid-19th and American music before 1800. He has also worked on Anglican music of all periods, culminating in his substantial study of parish church music, as well as psalmody in Britain and the USA, and in particular the development of the English metrical psalm; his study on Playford's publications of these psalms is valuable both for its insight into the musical climate of the time and for its masterly analysis of the publications. The same meticulous approach marks his edition of Berlioz's *Symphonie fantastique* in which 14 versions are collated.

DAVID SCOTT/R

Temple, Hope [Davies, Alice Maud, ('Dotie')]

(*b* Dublin, 27 Dec 1859; *d* Folkestone, 10 May 1938). English composer. After private education in Ireland, she came to England at the age of 12 where she studied piano with John Francis Barnett and harmony and counterpoint with Edouard Silas. An early waltz for military band was performed by the 24th regiment while it was stationed at Dover. At the age of 17, abandoning hopes of becoming a pianist after injuries to her left arm, she embarked, with the encouragement of Isidore de Lara, on a career as a songwriter, publishing her work under the pseudonym Hope Temple. In the early 1890s she studied in Paris with André Wormser and André Messager. She is credited with assisting Messager in the composition of his operetta *Mirette*, produced in London in 1894, and became his second wife in 1895. An avid sportswoman, she also became known as a society hostess at the turn of the century.

Temple concentrated her compositional efforts almost entirely on songwriting, exceptions including a waltz for piano (1885) and an unpublished violin piece which attracted media attention in 1889. In the late 1880s and early 90s, her songs became very popular in London and were heard regularly at the Ballad Concerts and her own annual concerts. Her operetta *The Wooden Spoon* was performed in London in 1892 and 1893 and published by Boosey in their 'Operettas for the Drawing Room' series (1892). Her favourite texts were sentimental lyrics by Fred Weatherly and Clifton Bingham, for which she provided effective, if somewhat pedestrian, music.

WORKS

(selective list)

Stage: The Wooden Spoon (operetta, 1, G. Burgess) (1892)

Pf: A Summer Dream (1885)

*c*44 pubd songs, incl. 'Tis all that I can say (T. Hood) (1880); She walks in beauty (Byron) (1881); An Old Garden (H.M. Burnside) (*c*1886); A Golden Argosy (F.E. Weatherly) (1889); Love and Friendship (J. Muir) (1889); Rory Darlin' (Weatherly) (1892); Two Songs (H.W. Longfellow and F. Langbridge) (1893); The Scent of the Mignonette (C. Bingham) (1897)

SOPHIE FULLER

Temple, Richard [Cobb, Richard Barker]

(*b* London, 2 March 1847; *d* London, 19 Oct 1912). English bass-baritone. Following several amateur singing appearances, he made his professional début as Rodolfo in *La sonnambula* in the inaugural production at the Crystal Palace Theatre, London (31 May 1869). He was first engaged by Richard D'Oyly Carte to play Sir Marmaduke Pointdextre in Gilbert and Sullivan's *The Sorcerer* (1877). For the next decade he was intimately identified with D'Oyly Carte's opera company, appearing in the principal bass-baritone roles from *HMS Pinafore* (1878) to *The Yeomen of the Guard* (1888). He then withdrew from the stage, but returned several years later in operatic roles at Covent Garden and several West End theatres; he later appeared in musical comedy.

Temple's voice was of a higher calibre than was usual in comic opera, and he was praised for the dignity and versatility of his acting, particularly for his 'suave and oily Mikado' (E. MacGeorge: *The Life and Reminiscences of Jessie Bond*, London, 1930). In 1910 he was appointed to the RCM, where he directed many student productions. In about 1902–3 he recorded

several light operatic numbers for the Gramophone and Typewriter Company.

<div align="right">FREDRIC WOODBRIDGE WILSON</div>

Temple blocks [wooden fish]

(Fr. temple-blocs; Ger. Tempelblöcke).

Western name for spherical slit-drums, often ornately carved, especially in the abstract shape of a fish (they are classified as idiophones: percussion vessels; *see also*Slit-drum). The instrument is known as *muyu* in China, *mokugyo* in Japan and *mokt'ak* in Korea, where it is used especially to accompany Buddhist chant. Temple blocks are usually made of camphor wood and brightly painted, with the maker's initials often carved on the top; they vary in size from 8 cm across to 80 cm or more, the sound of the larger instruments resembling that of a muffled tom-tom. The smaller instruments, which have a softer and rounder tone than ordinary woodblocks, entered Western music in early jazz and ragtime bands, where they were usually used in groups of four to seven. Although regarded as unpitched instruments, they have an element of pitch and in the late 20th century were made in chromatic sequences: Kolberg has manufactured a series of over two and a half octaves (*a–f‴*). However usually the pitch is unspecified. Tippett called for five notes in *The Knot Garden* (1966–9) and *The Ice Break* (1973–6). Henze required four temple blocks in *El rey de Harlem* (1979) and one and a half octaves (*c′–g*″) in his Requiem (1990–92). George Benjamin wrote for a single large temple block in *At First Light* (1982), and his *Sudden Time* (1989–93) requires two groups of them: one of three and the other of six.

See also Woodblock.

<div align="right">JAMES HOLLAND</div>

Templeton, John

(*b* Riccarton, nr Kilmarnock, 30 July 1802; *d* New Hampton, nr London, 2 July 1886). Scottish tenor. He studied music theory with Blewitt and singing with Welsh, De Pinna and Tom Cooke. After appearances in the provinces (1828–30), he made his London début at Drury Lane on 13 October 1831 as Belville in William Shield's *Rosina*. In 1832 he sang Raimbaut in the British première of Meyerbeer's *Robert le diable* and the following year appeared as Don Ottavio in an English version of Mozart's *Don Giovanni*. In 1833 he sang with Malibran in Bellini's *La sonnambula* and he performed with her until her death in 1836; these appearances included the first performance in English of Beethoven's *Fidelio* (1835) and the première of Balfe's *The Maid of Artois* (1836). He took the leading tenor roles in early performances in English of Auber's *Le cheval de bronze* and Hérold's *Zampa* (both 1836), and in the first performances in English of Rossini's *Le siège de Corinthe* (1836), *Die Zauberflöte* (1838) and Donizetti's *La favorite*

(1843). In 1842 he visited Paris and, accompanied by Balfe, sang to Auber. The last years of his professional career were chiefly devoted to the concert room; in the 1845–6 season he visited the principal American cities with his 'Templeton Entertainment', consisting of English, Scottish and Irish folksongs. He retired in 1852.

University in Philadelphia. It has had a school of music since 1913; *see* Philadelphia, §6. It held an annual music festival at Ambler, near Philadelphia, from 1967 to 1980.

Tempo

(It.: 'time'; Fr. *mouvement*; Ger. *Zeitmass*).

Literally, the 'time' of a musical composition, but more commonly used to describe musical speed or pacing. Tempo may be indicated in a variety of ways. Most familiar are metronomic designations that link a particular durational unit (usually the beat unit of the notated metre) with a particular duration in clock time (e.g. crotchet = 80 beats/minute). Also familiar are conventionalized descriptions of speed and gestural character – *andante*, *allegro*, *langsam* etc; (*see* Tempo and expression marks). There are also looser associations between metric notations and tempo, a vestige of earlier mensural practice, where, for example, 3/2 is sign of relatively slow tempo, 3/4 of moderate tempo and 3/8 of relatively quick tempo. Similarly, we retain a sense of the distinction between the half-circle (common time) and the crossed half-circle (*alla breve*), with the latter theoretically twice as fast (*see* Alla breve, Notation, §III, 3–6, and Proportional notation).

While tempo necessarily involves a determination of the appropriate durations for the various rhythmic units given in score, there is more to tempo than simply indexing crotchets and quavers to some amount of clock time. Epstein observed that 'tempo is a consequence of the sum of all factors within a piece – the overall sense of a work's themes, rhythms, articulations, "breathing", motion, harmonic progressions, tonal movement, contrapuntal activity. … Tempo … is a reduction of this complex Gestalt into the element of speed per se, a speed that allows the overall, integrated bundle of musical elements to flow with a rightful sense' (*Shaping Time: Music, the Brain, and Performance*, New York, 1995, p.99). A true sense of tempo, then, is a product of more than the successive note-to-note articulations; it involves the perception of motion within rhythmic groups and across entire phrases. Finding the 'right' tempo within and between sections of a piece is one of the subtlest and most difficult tasks facing the performer.

Changes in surface durations do not necessarily give rise to a change of tempo, as the augmentation or diminution of durational values may have little effect on the rate of the perceived pulse. Bona fide tempo changes may of course occur, either abruptly or gradually (via *accelerando* or *ritardando*) over the course of a composition, often rather dramatically. But it is worth noting that even within passages that seem to be in stable tempo, the beat rate is not mechanically constant, save in performances that involve electronic or mechanical means of articulating beats and rhythms. Rather, in normal performances tempo systematically fluctuates within the bar and the phrase.

Tempo is intertwined with our sense of pulse and metre, for without a regular series of pulses it is difficult to imagine any sense of tempo whatsoever. In a metric context, our sense of tempo is what allows us to distinguish subdivisions from beats and beats from downbeats (*see* Rhythm, §1, 4). The entire metric hierarchy, from the shortest subdivisions to the broadest levels of hypermetre, plays a pivotal role in establishing the 'complex Gestalt' of tempo.

See also Notation and Tempo and expression marks; for bibliography, *see* Rhythm.

Tempo and expression marks.

Words and other instructions in musical scores used to define the speed and specify the manner of performance.

1. Introduction.
2. Taxonomy and taxonomies.
3. The language.
4. Considerations in establishing the tempo.
5. Early history of performance instructions.

DAVID FALLOWS

Tempo and expression marks

1. Introduction.

Tempo and expression marks may be the most consistently ignored components of a musical score. Musicians who know the key, pitch, phrasing and perhaps even the first page or so of the precise scoring of the *Figaro* overture, for instance, are rarely able to name the tempo and opening dynamic of this most popular of all scores. (In fact Mozart himself got it wrong in his *Verzeichnüss*, putting *Allegro assai* for *Presto*.) That is partly because only the notes are objective facts, but also because musicians tend to look first at the music, only later checking the markings to see whether they agree with initial impressions; the markings without the music say very little. By a bizarre paradox, concert programmes and radio announcements often give the tempo mark as the only information about a particular movement; but that odd convention is really just a means of

orientation, guiding the listener as to which sections are faster than others. For the present purposes it should perhaps be taken as axiomatic that staff notation is relatively precise for what it is equipped to express whereas verbal or implicitly verbal instructions are employed for the dimensions that cannot be expressed in such simple and unambiguous form. To distinguish between correct and incorrect performance of pitches and rhythms is a relatively simple matter whereas tempo and expression are far more subjective.

The responsibility lies less with physical qualities – musical volume and time can be analysed and defined with complete scientific objectivity – than with the nature of Western music and its instruments. Dynamics are contextual, not only within the musical gradation of a phrase and within the voicing of a chord (let alone the size of the room and of the ensemble) but also within the instrument itself: the difference between the loudest and softest tones on a trombone or a violin is far greater than on an oboe or a flute and suggests that some of the attempts in the 1950s to serialize dynamics may have been a little out of touch with reality. And while the metronome has been available for nearly two centuries, there has been considerable resistance to its use, both among composers who have found that their metronome marks simply could not be made to work in all conditions and among performers who look with suspicion on anything that seems to reduce them to the level of an automaton. Part of the reason in both cases, as Rudolf Kolisch pointed out (C1943), is that in expressive playing there are rarely any two consecutive bars or even any two consecutive beats at precisely the same tempo, so metronome numbers are often hard to give and even harder to follow.

There is a further problem with tempo. Evidence suggests that increasing familiarity with a work leads audiences and musicians to prefer slower performances: the surviving early and apparently authoritative metronome marks, such as those by Beethoven for his own works (see Kolisch, C1992, and Stadlen, C1967, C1982) and those by Hummel for Mozart (see Münster, C1962–3), tend to be substantially faster than the fastest times taken in the 20th century before the days of a programmatic return to 'authentic' tempos. Moreover the composer's attitude can change: the three recordings Boulez has made of his own *Le marteau sans maître* over a mere 15 years show a remarkable slowing down.

This same imprecision and variability of meaning has led to a relative lack of formal research. Metronome marks have been studied extensively, and with the increasing availability of recordings of the same work by different artists at widely divergent tempos this study will continue; but its bearing on the question of tempo marks is almost exhausted with the simple observation that it is impossible to provide as much as an approximate metronome equivalent for any tempo mark even within the works of a single composer, for many other considerations must be taken into account (see §4 below). As a historical study, tempo and expression marks present a front so slippery that few have ventured to tackle this area in which conclusions are so subjective, facts so difficult to establish or check, and the available data in many cases not at all carefully considered by the composers when they wrote them. Consequently the fullest studies of individual tempo and expression marks are still those in the dictionaries of

the 18th and early 19th centuries: here there was an attempt to show how different composers had used a mark with different intentions and in different contexts at different points in their lives. So the rigorous study of the subject today would (like Siegele, D1974) begin from there. The study of the introduction and early use of tempo marks in the 17th century has been outlined with remarkable thoroughness and perspicacity by Herrmann-Bengen (D1959); but few attempts have been made to establish the traditions in which particular marks were used. Thus it has been shown that Beethoven normally used the word Assai to mean not 'very' but 'rather', and it has also been shown that Brossard (A1703), whom Beethoven is not likely to have read, gave that meaning for the word; but nobody has attempted to show a tradition of *allegro assai* running through the 18th century used in that way. Many similar examples could be given.

Study of the subject is made particularly difficult by the eagerness with which many 19th-century editors added tempo and expression marks to scores. Even today the nature of traditional music typography is such that it can be hard for even the most conscientious editor to indicate clearly which directions are original and which editorial; indeed, a consistent practice in this was really established only in the critical complete editions that have appeared since the 1950s (Mozart, Haydn, Schubert, etc.). But even here there are intractable problems: marks added to early performing scores (printed or professionally copied) often stand a good chance of carrying the composer's authority. Anyone who has compared a few internationally orientated performing editions of the Schubert songs or Wagner's later operas will see how the original German directions were not merely translated but rejected and replaced with often thoroughly inappropriate pseudo-Italian markings inserted by anonymous editors. This is just the most conspicuous tip of the iceberg which makes the whole study of tempo and expression marks extremely hazardous.

In a sense, these editions are a function of a development most clearly visible in music since about 1800. In 1826 Beethoven wrote to Schott: 'We can hardly have any *tempi ordinari* any more, now that we must follow our free inspiration': the Romantic search for individuality had made the obvious tempo something to be despised. In 1817 he had written to Hofrat von Mosel saying that he wished to discard the 'four principal tempos' (*allegro*, *andante*, *adagio* and *presto*) and to use a metronome for tempo, but added: 'the words that indicate the character of a piece are another thing … these terms refer actually to its spirit, which is what I am interested in'. The individuality that he represented and that was to become the hallmark of 19th-century music led to an extraordinary proliferation of tempo and expression marks, a significant increase in a development which had been going on since the middle of the 17th century. Such words are rare in earlier music and entirely absent from all other music traditions in the world: in those a knowledge of the tradition was normally sufficient to establish the correct tempo and playing style. But of course the same is true for a fairly large proportion of 19th-century music in which, therefore, the tempo and expression marks are often largely superfluous – which perhaps explains why they are so often ignored.

Tempo and expression marks

2. Taxonomy and taxonomies.

Although verbal instructions have several quite separate functions in scores it is hard to establish a watertight division of these functions. *Spiccato* is not merely an instruction to use a particular bowing technique but also a request for a particular kind of sound. *Vivace* in 19th-century scores can be a tempo designation, a modification of another tempo designation or an indication of mood alone. But a relatively simple and workable taxonomy is implied by the layout and typography of most published performing scores circulating today. It is offered here as being the current practice whose very familiarity and relative consistency solve many of the inevitable problems of rationalization.

(*a*) The tempo designation and similar instructions concerning the entire ensemble appear at the top in bold roman type.

(*b*) Dynamics are notated below each staff, separately for each performer or voice, in bold italic. Normally only the traditional letter-abbreviations are used: *p*, *mp*, *ff*, etc., together with *sfz* and similar accent marks. *Crescendo* and *diminuendo* cannot be expressed in this abbreviated form and are therefore taken in under category (*c*).

(*c*) Marks of expression are printed in normal italic: *espressivo*, *zart*, *markig*, *con voce cupa*, etc. In this category also belong qualifications to the dynamic (*cresc.*), or even sometimes to the tempo (*slentando*, *stringendo*, *accelerando*) – presumably because small adjustments to the tempo are constantly to be expected in music of the later 19th century.

(*d*) Technical instructions are printed in small roman: arco, senza sord., Schalltrichter auf!, getheilt, am Steg, baguettes de bois, etc.

There are obvious dangers in the conceptual use of such an analysis. Beethoven's letter to Hofrat von Mosel (cited above), shows that he saw clear and essential divisions within the first group; several of the terms appear in different categories in modern printed scores according to context or the whim of the editor; and the implicit application of the modern system to 18th-century scores in 20th-century editions has led to substantial misinformation. More important, terms have changed their functions over the years (*see* Andante) or even between one composer and the next (*see* Dolce (i)). The early history of the whole topic is particularly fraught: there are suggestions that, in the 17th century, a *piano* section should often also be slow, and that in several cases, Adagio is not a tempo but a style of playing (e.g. in Frescobaldi), and so on.

A further division is more important. Some marks have traditions associated with them and others do not. On the whole the dividing-line here is between Italian and non-Italian, or perhaps between words used internationally (like *martelé* or *Flatterzunge*) and those whose use is confined to the vernacular. *Adagio*, for instance, has a history of its own, much more than *langsam* or *slow*; not that the vernacular forms never caught on (they did, often) but merely because their selfconsciously vernacular position tended to prevent their developing the kind of purely musical tradition that *adagio* acquired all over Europe. There is a long and respectable tradition of composers using their own vernacular in verbal directions, but the history to be drawn there would be of the fact of using

the vernacular, not of the shades of musical meaning within the words themselves.

This raises a related matter: the distinction between traditional use and vernacular use of Italian by composers who happened to be fluent in Italian. At the beginning of *La bohème*, Puccini marked all the parts *ruvidamente* ('roughly', 'harshly'), but its meaning here is simply its literal meaning, and it is most unlikely that Puccini would have had any earlier musical uses of the word in mind as he wrote it, even less that in doing so he was specifically recalling them. Nor should all the verbose markings of Vivaldi be so carefully categorized: he made free use of all kinds of fascinating instructions, but there is no reason to list them all or to think that their meanings went any further than the literal. The reader of such scores would be better equipped with a pocket Italian dictionary than a dictionary of musical terms.

Tempo and expression marks

3. The language.

Italian music – and indeed Italian culture in general – so strongly dominated the European scene during the years 1600 to 1750, the years in which tempo and expression marks were not only introduced but developed into a system, that the international vocabulary for these words inevitably became Italian. There is no evidence of any particular power struggle: German and English words appear occasionally in 17th-century music, and both Praetorius and Purcell implied a little frustration with the idea of such instructions being more acceptable when put in Italian, but they accepted the growing convention and nothing systematic developed in either language. In the early 18th century, a system of French words evolved with almost as much range and coherence as the German-language system of the later 19th and early 20th centuries, but the influence of French music was not sufficient to present any significant challenge to the supremacy of Italian, the language known to most musicians. By the time the later German system evolved, the Italian system had 200 years' advantage. So although most composers of the 19th and 20th centuries have at some point in their career preferred to use their own language for tempo and expression marks, whether for reasons of precision, more direct communication with their anticipated readers or mere impatience with the assumption that Italian should dominate musical scores, many have subsequently regretted and reversed this decision both because the Italian terms are the only ones adequately understood by musicians all over the world and because usage and tradition have given the Italian markings depths of meaning and accrued implication far beyond their dictionary definitions.

Musicians' Italian is a kind of lingua franca, several of whose central components have musical meanings only loosely related to their literal meanings (*adagio*, *andante*, *allegro*), many of whose commoner words do not appear in current spoken Italian (*adagietto*, *andantino*), and whose larger vocabulary is mostly current Italian but includes some weird byways, both in terms of improbable instructions (*andante ed innocentemente*, Haydn; *allegro cristiano*, Rossini, etc.) and pseudo-Italian constructs (*glissando*, *leggieramente*). In a curious way this language has acquired at

least a patina of precision, although the wide divergence of tempos on recordings hints at a much deeper problem which Beethoven had evidently taken to heart when he added longer and longer tempo designations to his works, such as the *Andante con moto assai vivace quasi Allegretto ma non troppo* with which he opened his C major Mass op.86.

A casual approach is also noticeable. The expanding range of instructions in the 19th century coupled with the receding general importance of Italian to the educated musician resulted in some extraordinary manifestations, especially among marks added by arrangers and editors. *Poco adagio* (literally 'rather uncomfortable'; *see* Poco) and *poco allegro* ('unhappy') acquired a currency sufficient to cause considerable alarm to Eric Blom, for instance, many of whose articles on tempo marks in *Grove5* are entirely linguistic in content and framed with a view to correcting some of the more startling errors. The full study of the subject in the future will need to take account of these eccentric usages and concentrate on what they mean rather than whether they are correct: grammatical and illiterate alike, they belong to 'musicians' Italian'.

There are of course distinctive and important uses of languages other than Italian. 'Long', 'slow' and 'away' appear in English sources (the earliest being *GB-Och* 732–5, early 17th century), as do 'brisk' and 'drag' in the later years of the 17th century; and it is a measure of the influence of the Italian trio sonata that Purcell used Italian tempo marks for his *Sonnata's* of 1683. J.S. Bach's use of French in certain works has reasonably been construed as directing that a French performing style should be used. Liszt, Kodály and Bartók used the Hungarian *lassan* (slowly) and *friss* (fast) for music in the folk style, drawing attention, as tempo and expression marks generally do, to particular traditions within which the pieces belong.

Long and elaborate instructions have more recently been confined to prefaces which in some cases occupy more pages than the music; but they can still occasionally be found taking up rather more space than seems justifiable within the score itself. Schoenberg's instruction at bar 12 of his Prelude op.49 reads: 'Immer ohne Vibrato und Portamento nach Hollywood-Art; auch grosse Intervalle dürfen nicht durch Gleiten verbunden werden sondern, wenn nötig, durch Ausgreifen. Dieses Gleiten ist abscheulich sentimental', which is really less a performance instruction than a declaration of musical beliefs. Poulenc's instruction in the orchestral version (1962) of *L'histoire de Babar*, 'excessivement prétentieux alla Callas', combines the charms of topicality, entirely clear macaronic usage and superfluous irrelevance.

Tempo and expression marks

4. Considerations in establishing the tempo.

Before the advent of the metronome – a device whose very precision is often considered artistically counter-productive – there were several ways of indicating tempo without recourse to the Italian terms (*see also* Tempo). They are enumerated here not only because they explain the late and slow development of the Italian terms within the history of Western music, but also because most of them remain valid for more recent scores.

(i) Time signatures or mensuration signs.

From the mid-15th century on, C was theoretically twice as fast as C: the stroke denoted diminution by half. But there is considerable evidence that in practice it was rarely taken so literally but merely implied a somewhat faster tempo, or perhaps nothing at all (Bent, D1996). Binchois, for instance, would direct that a Kyrie movement (*c*1430) in mensuration should be repeated in , but it seems musically unlikely that the addition of a stroke here indicated a doubling of speed. If any sign was consistently used for a doubling of speed it was C2 or 2. Studies of the mensural practices of Du Fay (C. Hamm: *A Chronology of the Works of Guillaume Dufay*, 1964) and Isaac (P. Gossett: 'The Mensural System and the Choralis Constantinus', *Studies in Renaissance and Baroque Music in Honor of Arthur Mendel*, 1974) seem to indicate that proportional relationships were not necessarily precise but that certain mensuration signs did indeed imply the use of a faster or a slower tempo. Michael Praetorius stated in 1612 (*Terpsichore*) that he had used mensuration signs to denote tempo; later he used the Italian words which 'bei den Italis im vollen Gebrauch seyn' (*Polyhymnia caduceatrix*, 1619), but finally (*Puericinium*, 1621) settled on an equivalence table:

> C id est lento: tardè: langsam
> C id est presto: velociter: geschwindt

In 1752 Quantz still included the time signatures as a major consideration when defining the tempo implied by the various tempo marks. Zaslaw (D1972) pointed out that when Mozart wrote to his father in 1783 describing Clementi as a charlatan for playing too slowly he had to quote both tempo mark and time signature to make his point clear: one without the other would have been insufficient.

(ii) Note values.

Nicola Vicentino (*L'antica musica*, A1555, f.42) gave a characterization of the different note values, associating each with a tempo and making a special issue of the point that he was not discussing merely the relative lengths of the notes (which had been described earlier) but rather showing how different note values could be used to produce pieces of different speeds. The *maxima* was used for 'moto tardissimo', the *longa* for 'tardo', the *brevis* for 'moto naturale che non sarà ne presto ne tardo', the *semibrevis* for 'moto mediocre', the *minima* for 'più che mediocre', the *semiminima* for 'moto presto', the *croma* for 'veloce' and the *semicroma* for 'moto velocissimo'. In 1725 Fux (*Gradus ad Parnassum*) implied the same when he presented a single passage in two different note values labelling one *presto* and the other *adagio*. But after the earlier years of the 17th century the relationship between note value and tempo became complex, as it still is: its study belongs more in the realm of musical perception than in that of tempo marks. Suffice it to say here that note values obviously affect the musician's choice of tempo and that they do so most clearly when they bring to mind other pieces, particularly within a single tradition (such as certain kinds of 12/8 implying a gigue, and 3/2 sometimes implying a sarabande or a chaconne; see §(v) below). Logically this suggests that the reduction of note values in any modern edition is likely to obscure vital information.

(iii) Physical considerations.

The shortest note value or the longest is obviously a relevant factor, whether in relation to the player's capabilities or the instrument's characteristics. Many Baroque treatises (and indeed more recent ones) instruct the performer to take note of these factors in selecting a tempo. But this consideration is a timeless commonplace and should perhaps not be given the importance attached to it by some writers.

(iv) 'Tempo giusto'.

The concept of a normal or correct speed for music is surely the main reason why the Italian tempo marks arrived so late in history. As a concept it appears, defined or implied, throughout the early literature on the Tactus (*see also* Conducting, §1). To some extent the concepts of normal and correct tempo are separate. The normal is the main issue of *tactus*, whether it is defined in terms of the heartbeat (from Ramis de Pareia, *Musica practica*, 1482, through to Quantz, *Versuch*, A1752), of walking (Buchner, *Fundamentum*, *c*1520), of breathing (Gaffurius, *Practica musicae*, 1496), of vegetable chopping (Hermann Finck, *Practica musica*, 1556), or whatever else. But the term Tempo giusto was used by Frescobaldi and many later writers down to Leopold Mozart, who included its understanding as one of the fundamental requirements for a complete musician: 'and it is this', he wrote, 'by which the true worth of a musician can be recognized without fail'. It should be borne in mind that he wrote this at a time when most music was provided with tempo marks: without an understanding of *tempo giusto*, he seems to have been saying, you will never understand the instructions written on the score. (*See also* Tempo ordinario.)

(v) Traditions.

Obviously the identification of a piece as a gavotte or as a minuet directly affects the choice of tempo even if the information provided by such identification is neither precise nor accurate. Many Elizabethan galliards are of a complexity that makes the full dancing tempo unlikely, but even so the mood and spring of a galliard can be retained at the slower tempo and remain relevant to the performance of the piece. At the other end of the scale, the symphonic minuet of the late 18th century departed from the court minuet; and even if the stateliness of the model was lost there was a rich tradition of fast minuet movements which would directly influence the choice of tempo even after composers had begun to give such movements the more rational title of 'scherzo'. Indeed to this day the reference to a particular musical tradition is often far more useful and precise than the use of one of the standard terms.

(vi) Text content.

Vicentino (A1555, f.94*v*) stated that compositions should be performed 'with their *forte*, *presto* and *tarde* in accordance with the words'; Dahlhaus (D1959) pointed to several examples of singers in the later 16th century being instructed to allow the meaning of the text to guide the ebb and flow of their performances; and the instructions given by Giulio Caccini (*Le nuove musiche*, A1601/2) may be construed in the same light. In general tempo marks were avoided in *stile antico* sacred music down to the end of the 17th century, partly of course because here there was a stronger

tradition and the *tempo giusto* was more easily established, but also because the meaning of the words left less danger that the music might be misunderstood by the performer.

All these considerations continue to operate to some extent even when there is a tempo indication of some kind; and the addition of a metronome mark does not instantly wipe away all the accumulated tradition of European music and its codes. Musicians will continue to regard metronome marks with caution; and it is remarkable how rarely they will actually use a metronome to verify a tempo unless they are trying to demonstrate its correctness to somebody else. For the film composer, to whom split-second timing is important, the metronome is indispensable; but for much of the musical profession it is a mixed blessing. Berlioz told the following story (*Memoirs*, trans. D. Cairns, 1969):

> One day, when I spoke of the metronome and its usefulness, Mendelssohn said sharply, 'What on earth is the point of a metronome? It's a futile device. Any musician who cannot guess the tempo of a piece just by looking at it is a duffer'. I could have replied that in that case there were a good many duffers, but I held my peace … One day he asked to see the score of the *King Lear* overture, which I had just composed in Nice. He read it through slowly and carefully, and was about to begin playing it on the piano (which he did, with incomparable skill) when he stopped and said, 'Give me the right tempo'.

But a surprisingly large proportion of the scholarly literature concerning tempo marks centres on metronome marks: absolute figures are rather less difficult to discuss than the vaguer (but infinitely more rich in meaning) Italian terms. Such discussions give rise to certain questions and doubts which may be expressed as follows.

(*a*) Did Beethoven's (or Schumann's) metronome work correctly? It now seems arrogant to assume that practically all early metronomes were deficient: the story of Schumann's incorrect metronome has, thankfully, been discarded (see Kämper, C1964); musicians of the experience of Kolisch (C1943) have declared Beethoven's metronome marks playable; and the timings of such figures as Hummel, George Smart and Crotch have been subjected to the most careful analysis. Very few practising musicians have been inclined to adopt those tempos before the 1990s, but it is generally agreed that most of them were probably considered acceptable at the time.

(*b*) Did Beethoven (or whoever) know how to use a metronome accurately? Did he ever try playing or conducting those tempos with the metronome ticking at the same time? The very regularity of the metronome is so anti-musical that it is difficult to feel a piece of music sensitively or effectively while the machine is going; and there is much to be said for believing that many composers, even today, prefer to sit at their desk conducting a piece and then estimate the metronome mark from their own beat rather than from the metronome itself. This may explain some of Schoenberg's absurdly fast metronome marks; and Bartók changed many of his markings when he had acquired a simple tape-pendulum. Only the advent of the

synchronized film score has forced on composers a chronological accuracy which their forerunners did not find necessary.

(*c*) Did composers who used metronome marks for some of their works and then either withdrew them or changed them do so because of a considered decision that it was counter-productive? Tempo was not the only feature about which composers have allowed themselves second thoughts. Reorchestration, the cutting of a whole section, changes of harmony, and re-sequencing of events are among the revisions often made by the most professional of composers during rehearsals, after the first performance and in some cases even 20 or 30 years later. So it is perhaps in relation to Wagner's constant tampering with the *Tannhäuser* score until the very end of his life that one should interpret the following passage from his *Über das Dirigieren* (1869):

> To speak from my very own experience, I should say that I
> filled my earlier publicly performed operas with really verbose
> tempo indications and fixed them precisely and infallibly (I
> thought) by adding metronome numbers. Consequently when
> I heard a stupid tempo in a performance, of my *Tannhäuser*
> for example, a conductor would protect himself against my
> recriminations by saying that he had followed my metronome
> indications most conscientiously. I understood from this how
> unsure mathematics must be in relation to music and
> thereafter not only omitted metronome numbers but also
> contented myself with giving the main tempos in very general
> indications, taking care only with modifications of this tempo.

That may have been a mistake, if one is to judge from the Bayreuth timings kept for all performances since 1882. But Wagner should not have been particularly surprised to learn that his works are now performed at quite different tempos, for he himself had observed in the preface to the first volume of *Bayreuther Blätter* (1878):

> Why, only 18 years after Weber's death, and at the very place
> where for many years he himself had led their performance, I
> found the tempos in his operas so falsified that nothing but
> the faithful memory of the master's widow, then still living,
> could assist my feelings about it.

Yet the fear of killing his work with numbers kept Wagner from adding any precise indications. Brahms felt similarly, and there is some discussion of the point in his correspondence with Clara Schumann while they were preparing the complete works of Robert Schumann for the press. In February 1878 Brahms wrote:

> To give metronome marks immediately for dozens of works,
> as you wish, seems to me not possible. In any case you must
> allow the work to lie for at least a year, and examine it
> periodically. You will then write in new numbers each time
> and finally have the best solution. Consider well also that
> nobody can have the choral and orchestral works played for
> this purpose – and on the piano, because of its lighter tone,
> everything happens faster, much livelier and lighter in tempo.

> I advise you to steer clear of this, because intelligent people
> will hardly respect or make use of your conscientious work.

But Clara Schumann's metronome numbers are helpful so long as it is remembered that they are not Robert Schumann's, nor necessarily more accurate than his, that Clara was noted as a pianist who liked to show off with extreme tempos, and that Robert had even expressed dissatisfaction with her performances for precisely that reason (see Kämper, C1964). Perhaps the sanest approach to metronome marks, however, is the healthy discontent of Schoenberg, who prefaced most of his scores after op.23 with the instruction: 'Die Metronomzahlen sind nicht wörtlich, sondern bloss als Andeutung zu nehmen' (the metronome marks should be taken not literally but merely as an indication) – a comment curiously reminiscent of that offered by François Couperin in relation to his verbal indications two centuries earlier: 'So having not thought up signs or characters to communicate our particular ideas, we attempt to remedy this by marking at the beginning of our pieces by means of a few words, like *tendrement*, *vivement*, etc., more or less what we would like to be heard'.

Perhaps the fairest answer to the question would be in the observation that many composers (e.g. Chopin and Elgar) have been described as being quite unpredictable in the tempos they took for their own music, and in Wasielewski's testimony (*Schumanniana*, 1883) that Mendelssohn was far more consistent in the tempos he adopted for other people's works than he was for his own.

Tempo and expression marks

5. Early history of performance instructions.

Verbal instructions in musical scores probably made their earliest appearance in the form of 'canons', directions for the interpretation of some obscure notational gimmick which was incomprehensible without instructions. The history of such devices includes the instructions on the Reading rota (13th century), on Baude Cordier's *Tout par compas* (*c*1400) and the most elaborate instructions on Lloyd's Mass *O quam suavis* (*c*1500). But these amount to no more than an attempt to make the performer's role more difficult by putting into words instructions that would far more easily have been expressed in notes.

The earliest performance instructions designed to help the performer took the form not of words but of letters. The Romanus letters (*litterae significativae*) found particularly in St Gallen chant manuscripts of the 11th century are mentioned by Notker, Johannes Afflighemensis and Aribo: *c* is used to mean *cito* or *celeriter*, *t* for *trahere*, *tarde* or *tenere*, etc. But in each case the letters are placed above individual notes, never added to concern a whole piece: they may be considered part of the development of a mensural notation and no more belong in a category with tempo and expression marks than do the 'Guidonian letters' denoting pitch names.

Even though the 10th-century *Commemoratio brevis* (*GerbertS*, i, 213), the *Musica enchiriadis* (ibid., 166) and other treatises of the following years mention that some pieces should be performed *morosus* (sad), *cum modesta morositate* (fairly sadly), *cum celeritate* (with speed), etc., no tradition of specific instructions in musical scores began until the 16th

century. The first serious attempt seems to be that of Luis de Milán, who in his vihuela book *El maestro* (Valencia, 1536) included a short paragraph of playing instructions immediately before each piece. He described the nature of the piece, its tonality, its place within his pedagogical pattern and its tempo, normally expressed in the form: 'se ha de tañer con el compas algo apresurado' (it must be played with a fairly hurried beat). Other tempo words used by Milán include *espacio* (slow), *apriessa* (swift) and *mesurado* (measured). He also gave more detailed instructions in his preface, that for certain fantasias the musician should 'play all *consonancias* [intervals or chords] with a slow *tactus* and all *redobles* [ornaments or diminutions] with a rapid *tactus* and pause a little in playing each *coronada* [high point]' (trans. Jacobs, D1964). But although similar hints also appear in the publications of Hans Neusidler (1536) and Luys de Narváez (1538) the idea took longer to catch on than might be expected. Dahlhaus (D1959) has shown how theorists from the middle of the 16th century urged performers to introduce freedoms similar to those mentioned by Milán and which today would be described as rubato; and the increasing need for affect in the age of mannerism in the figurative arts was perhaps the crucial stimulus for Giovanni Gabrieli to introduce the marks *piano* and *forte* into his instrumental pieces (1597); but even the prefaces of Caccini (*Le nuove musiche*, A1601/2) and Frescobaldi (*Toccate e partite*, 1615), while including much of the same matter as Luis de Milán, were exceptional in their precise instructions as to the manner of performance the composers thought appropriate for their works.

Early uses of tempo and expression marks in scores are isolated. Monteverdi used some in his 1610 vespers publication, and in the next year Banchieri included elaborate markings in the 'Battaglia' of his *L'organo suonarino*. Thereafter the words were used by Praetorius (1619), Jelić (1622), Priuli (1618), Marini (1617) and others. Schütz used them from 1629 on, as did Frescobaldi in his *Fiori musicali* of 1635, not to mention Carlo Farina in the elaborate 'Capriccio stravagante' from his *Paduanen* of 1627. The words very quickly became established, so that by the end of the century Corelli, for instance, marked everything he published though retaining a limited vocabulary; in the next generation Vivaldi and François Couperin made the most elaborate use of words and texts to make the expressive content of their music clearer. From then on, the degree of 'tempo and expression editing' (W.S. Newman's phrase) done by composers depended very much on their own preferences, the range of styles they used, the distance their music was expected to travel and their faith in other musicians; but the marks had become an integral part of every formal score.

By and large it is true to say that in the early years *lento*, *tarde* or *adagio* were introduced as interruptions to an assumed *tempo giusto* and that *allegro* or *presto* were used to denote a return to the normal speed (see Kolneder, B1958). So also, *piano* (or occasionally *echo*) was used for dynamic contrast whereas *forte* denoted a return to normal dynamics: even in Corelli, *forte* does not appear except when preceded by *piano*. Two further considerations about the early use of these terms point towards the nature of their position. First, *adagio* and *piano* remarkably often appear together and are followed by *allegro* and *forte*, also together; that is, sudden slowness and quietness often went hand in hand, so in 17th-

century music the appearance of the one may very often be taken to imply the other as well. Secondly, the indications are found most often in instrumental music where there is no text to hint at inherent moods and changes: repeated references in the theorists suggest that in vocal music, particularly in the madrigal, changes of tempo and dynamic were entrusted to the sensitivity of the performers.

It did not take long for the Italian words to be accepted in the other European countries. As early as 1619 Michael Praetorius (*Polyhymnia caduceatrix*) could write that *tutti*, *forte*, *piano*, *presto* and *lento* or *adagio* were 'bei den Italis im vollen Gebrauch' and introduced them into his own north German publications. In 1653 J.A. Herbst (*Musica moderna prattica*, Frankfurt) defined *largo*, *lento*, *adagio*, *tardo*, *presto* and *tutti* with the annotation 'Dieweilheutiges Tages, hin und wider die italienischen *termini musici*, bey den Componisten sehr gebräuchlich sind' ('these days now and then the Italian musical terms are very common among composers'). And in 1683 Purcell included them (with definitions) in his *Sonnata's of III Parts* because, he said, they were already international.

Historically speaking, dynamic instructions fall into two distinct categories: contrast and gradation. Of these the contrast was the simplest to identify and the first to be notated. Giovanni Gabrieli's introduction of *forte* and *piano* (1597) was merely a way of notating an echo effect and was just an outgrowth of the polychoral tradition found in northern Italy throughout the 16th century. Echo effects of this kind are written or implied in many works of Gabrieli's time and later: some are notated as such (because it was easy to do so); others are not (because it was superfluous).

More gradual changes of dynamic first appeared in prefaces and in theoretical works from the second half of the 16th century. Zacconi (*Prattica di musica*, 1592) mentioned them with particular care, but they also appear in the earlier treatises of Vicentino (A1555), Ganassi (1535) and even Petrus de Canuntiis (*Incipiunt regule florum musices*, Florence, 1510). While it was once thought that Hermann Finck (1556) gave evidence of a 16th-century preference for unchanging dynamics, Meier (B1977) has shown that the text should be construed in precisely the opposite way. Elaborate descriptions of *crescendo* and *decrescendo* appear in the preface to Caccini's *Le nuove musiche* (A1601/2) and in Fantini's *Modo per imparare a sonare di tromba* (1628). So although terraced dynamics are perhaps appropriate on instruments such as the harpsichord or organ where nothing else was possible, this was by no means the general practice except in the case of echo effects. The famous crescendo of the Mannheim orchestra in the mid-18th century may have seemed astonishing to its contemporaries, but there is very little in the scores that cannot also be found in those of Vivaldi: the novelty at Mannheim was probably rather more in unanimity of execution and a conscious striving for effect than in any new musical or conceptual basis. On the other hand it may be significant, as Cahn pointed out ('Retardatio, ritardando', D1974, *HMT*), that the late 18th century saw the introduction of gerund forms into verbal instruction: *ritardando*, *calando*, *smorzando*, all began at that time. Whether this is symptomatic of an actual new preference for gradual changes or of a desire to designate and rationalize

existing practice more precisely is difficult to tell, but the words themselves seem curiously characteristic of *Empfindsamkeit*.

It seems that the earliest extensive listing of tempo and expression marks was that in Sébastien de Brossard's *Dictionaire* (A1703) containing a wide range of internationally current Italian words which were from then on used liberally in scores all over Europe. Brossard also served as the prime source for the entries in many of the other 18th-century music dictionaries until that of Jean-Jacques Rousseau (A1768), who still used Brossard heavily but made a serious attempt to establish a logical conceptual basis for such a study, particularly in the article 'Mouvement'. Longer discussions appear in the later dictionaries, particularly those of H.C. Koch (A1802) and Gustav Schilling (1835–42 [*SchillingE*]). After that tempo and expression marks almost ceased to be a topic for discussion (as opposed to brief definition) in dictionaries until the Sachteil of *Riemann Musiklexikon* (12/1967), which contains many thoughtful articles (mostly by Carl Dahlhaus and drawing, as do those in this dictionary, on the work of Herrmann-Bengen, D1959). Dictionaries of musical terms constitute an enormous and rather different category of literature stretching back, for these purposes, to the anonymous *A Short Explication* (A1724), but their entries are mostly little more than translations: their lists of words rarely provide information that would not more clearly be derived from a study of the scores; and although their graduated lists of tempo marks are usually provocative in some respect, these dictionaries are on the whole remarkably uninstructive and contain very little that could not be found in a pocket language dictionary.

Tempo di gavotta

(It.).

Title used for gavotte-style movements in instrumental works of the first half of the 18th century. James Grassineau wrote that the title means that 'the time or movement of a gavotte is imitated, without any regard had to the measure or number of bars or strains' (*A Musical Dictionary*, London, 1740; trans. from Brossard, *Dictionaire de musique*, Paris, 1703). A famous example is in J.S. Bach's Partita in E minor for keyboard which may be considered an improvisation on the 'gavotte idea', in a moderate tempo and with the predominant movement or beat in minims. Other examples may be seen in Corelli's sonatas opp.2, 4 and 5. *See* Gavotte.

MEREDITH ELLIS LITTLE

Tempo di minuetto [tempo di menuetto]

(It.: 'In minuet time').

A tempo direction often used as a movement heading beginning in the 18th century. It implies a recognized understanding of minuet tempo, which however was not standardized in the 18th century, so the direction is inherently ambiguous; it is sometimes qualified by more specific tempo indications (e.g. in Beethoven's *Gratulations-Menuett* [WoO 3], the marking is 'Tempo di menuetto [*sic*] quasi allegretto'). As a movement type, tempo di minuetto is associated in particular with the minuet finale, but it is also used for dance movements (*see* Minuet).

TILDEN A. RUSSELL

Tempo giusto

(It.: 'just time', 'strict time').

(1) The abstract concept of a 'correct' tempo for a piece. Frescobaldi (preface to *Toccate e partite*, 1615) wrote that 'Nelle partite si pigli il *tempo giusto e proportionato*'; Rousseau (1768, article 'Mouvement') stated that each basic measure had an ideal tempo called in Italy the *tempo giusto*; and Kirnberger (1776), following Rousseau's lead, explained all the tempo marks in relation to a *tempo giusto* which was 'determined by the time signature and by the shortest and longest note values contained in a piece'.

(2) As a tempo designation (also *a tempo giusto*) actually affixed to a piece it is rarer, but found particularly in Handel. 'Egypt was glad', 'He led them out of the deep', 'Thy right hand' and 'The horse and his rider' from *Israel in Egypt* are all *tempo giusto*; and Handel originally marked the *allegro moderato* in the *Messiah* overture as *a tempo giusto* before changing it to the present marking. It was presumably in the same sense that Stravinsky used *tempo giusto* to open his 'Dumbarton Oaks' Concerto. But when Chopin used it for some of his waltzes (though scarcely elsewhere in his work) he was indicating that the traditional waltz tempo should be adopted. In 1800 William Crotch wrote to the *Monthly Magazine* observing, among other things, that '[*tempo ordinario*] varies with the fashion of the age, [*tempo giusto*] with the fancy or judgement of the performers'.

(3) A direction to return to strict tempo after a deviation. It is found particularly often in Italian Baroque opera and described by Brossard (1703, article 'Tempo'); but its use continued through the 19th century, for instance in Liszt, who normally used it to mark the end of an *a piacere* section.

For bibliography *see* Tempo and expression marks.

DAVID FALLOWS

Tempo ordinario

(It.: 'common time').

(1) The Italian name for common time, 4/4, as explained by Brossard (1703, article 'Tempo') and many subsequent writers.

(2) As a tempo designation (also *a tempo ordinario*) it is found particularly in Handel, who used it, for instance, in 'Lift up your heads' and 'Their sound is gone out'. But, like Tempo giusto, it was evidently in fairly current use as a concept to describe the ordinary, non-committal tempo that required no tempo designation. It was presumably in this sense that Beethoven wrote to Schott on 18 December 1826, saying: 'We can hardly have any *tempi ordinari* any more, now that we must follow our free inspiration'.

For bibliography *see* Tempo and expression marks.

DAVID FALLOWS

Tempo primo

(It.: 'first pace').

After a change of tempo in the course of a composition, the indication *tempo primo* directs that its opening pace is to be resumed.

Temporale (i)

(It.: 'storm').

A term used to describe the storm scenes common in 19th-century Italian opera, in particular the operas of Rossini (e.g. *La Cenerentola* and *Il barbiere di Siviglia*). It is sometimes applied to Verdi's storm scenes (e.g. in *Rigoletto*) although he did not use the term. In musical style *temporali* appear to show a debt to the fourth movement of Beethoven's Pastoral Symphony.

Temporale (ii)

(Lat.: 'Proper of the Time').

Temptations, the.

American soul and rhythm and blues vocal group. They came together in Detroit in 1961 when Eddie Kendricks (1939–92) and Paul Williams (1939–73), formerly of the Primes, joined forces with Melvin Franklin (1942–95), Otis Williams (*b* 1941) and Eldridge Bryant of the Distants. They were signed to Motown as the Elgins (their name was quickly changed to the Temptations by Berry Gordy); most of their recordings were released on the subsidiary label Gordy records. Between 1962 and 1994 the group had an astonishing 82 singles in the American rhythm and blues chart, 52 of which also entered the pop charts. In 1963 David Ruffin replaced Bryant, forming the Temptations' classic line-up. Ruffin possessed a gruff baritone that was juxtaposed by their producer, Smokey Robinson, with Eddie Kendricks's sweeping falsetto. The results were such classic records as *The Way You Do the Things You Do* (1964), *My Girl* (1965) and *Get Ready* (1966). In 1966 Norman Whitfield began writing and producing for the group and, in combination with lyricist Barrett Strong, he placed the Temptations in a harder-edged southern soul idiom, leading them to even greater success with such hits as *Ain't Too Proud to Beg* (1966), *(I know) I'm losing you* (1966) and *I wish it would rain* (1968). In early 1968 Ruffin was replaced by a former member of the Contours, Dennis Edwards. Heavily influenced by the funk pioneers Sly and the Family Stone, in late 1968 Whitfield once again recast the Temptations, this time in the psychedelic soul idiom with such masterpieces as *Cloud Nine* (1968), *I can't get next to you* (1969), *Psychedelic Shack* and *Ball of Confusion (That's what the world is today)*, both released in 1970. After more personnel changes from 1973 onwards the group recorded a series of increasingly funky singles with Edwards taking most of the lead vocal parts. The best of these were *Papa was a rolling stone* (1972) and *Shaky Ground* (1975).

In 1975 the group lost its producer when Whitfield left Motown and from then on the Temptations had some success in the rhythm and blues charts but their creative prime had passed. Nonetheless they remain the most successful vocal group in black music history.

Tenaglia [Tanaglia, Tanaglino], Antonio Francesco

(*b* ?Siena, *c*1612–20; *d* Rome, Oct 1672). Italian composer, keyboard player and lutenist. Nothing is known of his early years but a Francesco Tenaglia of Siena renewed his licence as a schoolteacher in Rome on 5 November 1645. According to Prunières, Tenaglia entered the service of Cardinal Antonio Barberini in September 1644; the cardinal left Rome shortly after the election of Pope Innocent X on 15 September 1644. In 1648 Tenaglia was in Brussels, according to a letter from the castrato Giovanni Battista Mocchi to Carissimi dated 21 March of that year. The letter states that Tenaglia was complaining unjustly of having been badly treated by Count Palatine Philipp Wilhelm of Neuberg-Düsseldorf. Ademollo writes that Tenaglia returned to Rome in 1651; he was certainly there in 1653 when Florido de Silvestri published two three-part madrigals by him in his volume *Florido concento di madrigali*. In 1654 Elpidio Benedetti, Cardinal Mazarin's agent in Rome, spoke highly of Tenaglia, recommending him for a possible engagement in Paris. On 8 September 1654 A.M. Abbatini engaged him as a harpsichordist at S Maria Maggiore for the mass at the Feast of the Blessed Virgin.

For Carnival 1656 Tenaglia's *Il giudizio di Paride* was performed at the Palazzo Pamphili, Rome, in honour of Queen Christina of Sweden. He probably succeeded Carlo Caproli in the service of Prince Ludovisio Pamphili, nephew of Pope Innocent X, but the date of his engagement is unknown. While in the prince's employ he met Domenico Mazzocchi, the organist Francesco Muzi, the soprano Domenico Dal Pane and the violinist Francesco Manelli. On 15 January 1661 he left the prince's household and was appointed organist of the Basilica S Giovanni in Laterano, Rome. His last salary payment at S Giovanni in Laterano is dated October 1672.

Tenaglia's cantatas, his only surviving compositions, seem to have been widely known and much appreciated in his day, for they are mentioned as prime examples of the genre, together with those of Carissimi and Luigi Rossi, by both Christoph Bernhard (*Tractatus compositionis*) and Angelo Berardi (*Ragionamenti musicali*, 1681). Far fewer can at present be attributed to him than to Rossi, Carissimi, Caproli, Marazzoli and Savioni: it is not unlikely, however, that a good many of the enormous number of anonymous manuscript cantatas are also his. The extant cantatas demonstrate how powerful and audacious was his creative imagination and how extraordinary his musicality. Among their impressive features are the intensity and freedom of their expression, the animation and humour of some of the arias (those in 6/8 and common time) and the tender lyricism of others, the eloquence of the recitatives, and the remarkably active and melodic bass line: interplay between the vocal and continuo lines is more characteristic of his cantatas than of those of his contemporaries.

Among the 67 solo cantatas (all for soprano) and eight duets and trios one finds primarily works in a varying number of sections, with or without refrains and with no clear overall structure. There are works in binary, ternary and rondo form. The last is the most frequent, but not in its simple strophic form: Tenaglia preferred rondos with long, differing strophes between the recurrences of the refrain and/or with an abbreviated version of the refrain occurring within the cantata, the complete restatement being reserved for the close. Other characteristics of his style include the often improvisatory, virtuoso quality of the music, the sequential repetition of an opening phrase, the frequent change of metre and the bold use of unsynchronized cadences. Tenaglia also made beautiful use of the Phrygian cadence, closing a few cantatas with it in the manner of Rossi. He differed from Rossi, however, in his more frequent choice of major tonalities and common time and in his habit of beginning a cantata with a short phrase for continuo alone.
