The late medieval name for one of the 'irregular' psalm tones, that is, one whose tenor, or recitation tone, changes in pitch after the mediation (in this case from *a* to *g*). It takes its name either from this characteristic or from its association with Psalm cxiii, *In exitu Israel de Aegypto*, the 'Pilgrim's Psalm', which is one of the few texts sung to it. The earliest known reference to the *tonus peregrinus* occurs in the late 9th-century *Commemoratio brevis*, in which it is called the 'Tonus novissimus' (*GerbertS*, i, 218); its development, therefore, may be considered to postdate that of the traditional eight psalm tones.

See Psalm, §II, 7(ii).

Tonwort method.

The original name of the Eitz method.

Took.

See Tuck, tucket.

Tooley, Sir John

(*b* Rochester, 1 June 1924). English administrator. He was educated at Repton and at Magdalene College, Cambridge. From 1952 to 1955 he was secretary of the GSM. In 1955 he went to Covent Garden as assistant to David Webster, being appointed assistant general administrator in 1960 and succeeding Webster as general administrator in 1970; from 1980 to 1988 he was general director. He played an important role in arranging regular meetings between the directors of the leading European and American opera houses in an attempt to stabilize artists' fees and make possible the exchange of productions. He was largely responsible for establishing 'promenade' opera performances at Covent Garden in an attempt to bring in a new and younger audience. He was knighted in 1979.

HAROLD ROSENTHAL/R

Toop, Richard (William)

(*b* Chichester, 1 Aug 1945). English musicologist, active in Australia. He studied at Hull University (1964–70) with Denis Arnold and Graham Sadler and was active as a pianist in contemporary music in the late 1960s and early 70s. He worked as a teaching assistant to Stockhausen at the Staatliche Musikhochschule in Cologne (1973–4) and in 1975 took a position as assistant lecturer at the New South Wales (later Sydney) Conservatorium, becoming senior lecturer (1981), and later head of musicology and chair of the musicology unit. He taught several of the middle generation of Australian composers in the early 1980s (including Gerard Brophy and Elena Kats-Chernin, for whom he wrote the libretto of a chamber opera, *Iphis*, 1997) and has contributed much to Australian musical life with his teaching, his lucid programme notes and radio and other lectures. His publications have been mainly analyses and studies of later 20th-century music, especially of works by Stockhausen and by Ferneyhough, whose collected writings he co-edited with James Boros (Amsterdam, 1995).

ROGER COVELL

Toovey, Andrew (Gordon)

(*b* London, 21 Feb 1962). English composer. He studied music at the University of Surrey (BMus 1984) and composition with Harvey at the

University of Sussex (MPhil 1986). He also took lessons with Finnissy and Feldman. In 1987 he founded the contemporary music group Ixion; during 1993–5 he was associate composer of the Young Concert Artists Trust. He has worked extensively on music education projects in school and community contexts.

Toovey's extreme aesthetic owes much to Finnissy and Feldman, though postwar avant-garde visual art has been equally formative, its example evident in the presentation of musical material in blocks or as inorganic gestures. Typically these occupy registral and dynamic poles, often suddenly juxtaposed. Textures may involve layered, irrational rhythms, but spare, single lines and unison sonorities are also present; pitch content tends towards densely fused atonality or an opposing white-note modality. Toovey's music often appears to be born out of negative states: tragic destruction in *Ātē* (1986); melancholy in *Einsamkeit* (1990); rebellious, anarchic violence in the opera *Ubu* (1991–2). At the same time a current of brightly shining 'images' runs through his work: from the Rothko-inspired *Black Light* (1989) and the stabbing chords of the orchestral *Red Icon* (1995) to the wild ricochet of triads in the outer sections of *Techno Stomp* (1997). The rich glow of *Lux* for eight voices (1999), built out of a dense, Phrygian counterpoint, suggests a turn towards a more contemplative, though no less extreme, style.

MICHAEL ZEV GORDON

Töpfer, Johann Gottlob

(*b* Niederrossla, nr Apolda, 4 Dec 1791; *d* Weimar, 8 June 1870). German authority on organ building, composer and organist. After receiving his first musical training from his father and the local Kantor, he attended the teachers' training college in Weimar (1808–1811), at the same time continuing his musical education with Destouches, A. Reimann and A.E. Müller, who had been Thomaskantor in Leipzig for several years. In 1817 he became teacher of organ and composition at the training college, and was appointed deputy organist of the Stadtkirche St Peter und St Paul. He became principal organist in 1830. He pursued both these activities until his death.

Töpfer is regarded as the greatest German authority on organ building of the 19th century. The crisis in organ building at the beginning of the century, of which he had personal experience during the rebuilding of the organ of the Weimar church (by Trampeli in 1810–12), caused him to pursue his own research and to experiment with organ building over a period of many years. His researches led to the 'Töpfer system', the first scientific study of organ building as a whole. He provided the organ builders of the time, who had many reasons to feel a sense of insecurity, with directions for making almost every single part required in organ building, distributing his theory through many publications and his activities as an expert on organs, as well as his collaboration with leading organ builders of the time. The first two volumes of his major work, *Lehrbuch der Orgelbaukunst* (1855) represent a revision of *L'Art du facteur d'orgue* (1766–78), by Dom Bédos de Celles, while the two following volumes contain the quintessence of his own researches. The 'constant mensuration' he demanded for all pipes in a register acquired particular importance; it corresponded to the ideals of organ sound of the time, and had a great influence on the development of the 'Romantic' organ.

Töpfer's works comprise a few piano, chamber music and choral works, but are mainly organ compositions. If his roots as a composer were in the classical tradition, the major part of his work may be classified as Romantic organ music. He avoided the *galant* organ style of the preceding generation, calling for a return to a manner of writing that would do the instrument more justice, and in particular to obbligato pedal playing. His large works written around the middle of the century represent important contributions to the repertory of Romantic *concertante* organ literature: with Mendelssohn's sonatas, a sonata and a fantasia of his (*c*1845) are among the earliest attempts to find a place for the form of the sonata in organ music. His 20 great fugues, their contrapuntal writing always bound to harmony, are distinguished for interesting subjects, wide-ranging harmonic excursions, and a virtuoso style. The peak of Töpfer's work as a composer is the three great choral fantasias of 1859, with which he – and not, as is often claimed, Reimann or Reger – founded the genre of the Romantic choral fantasia. Taking up formal elements from Mendelssohn and Liszt, he designed a specific form consisting of an introduction that set the atmosphere, *cantus firmus* variations linked by intermediate movements and sometimes interpreting the text, and an extensive closing section, organized in two cases as an augmented fugue. In their expressive nature

and their harmony, these fantasies are among the immediate precursors of Reger's organ style.

DANIEL CHORZEMPA/HANS-PETER BÄHR

Töpfer, Wolfgang.

See Figulus, Wolfgang.

Topham, William

(*fl* 1701–9). English composer. According to the title-pages of several of his publications he held the degree of MA, but he cannot be certainly identified. The *Post Man* of 26–9 November 1709 contains correspondence from him regarding a controversy between the publishers Walsh and Pippard. Of his three sets of six sonatas published in London, op.1 (*c*1701) and op.2 (*c*1706), each for recorder and continuo, follow the usual four-movement pattern, slow–fast–slow–fast (1 ed. in HM, ccviii, 1971; 1 ed. K. Jeans, New York, 1977). Op.3 (*c*1709), 'compos'd in imitation of Archangelo Corelli', is for violins and continuo, the last also having parts for two trumpets; this is probably the work Walsh advertised as 'Tophams Violin Sonatas' or 'Tophams Sonatas, for 2 Violins & a Bass'. His music has some interesting harmonic and rhythmic writing but is heavily dependent on repetition and sequence.

RALPH W. HOLIBAUGH

Topic.

British record company. It specializes in British Folk Revival performers and field recordings of traditional singers and musicians. Its earliest records were issued around 1939 by the Workers' Music Association. Founded in 1936, the WMA was a cultural offshoot of the Communist Party of Great Britain, but with Alan Bush as president and Benjamin Britten and Sir Granville Bantock among its vice-presidents, it received funding from the Ministry of Education between 1945 and 1949 and provided musical resources for a range of left-leaning organizations. Through the Topic Record Club it produced small runs of politically orientated recordings.

Topic's disparate early releases included some folksong, but when Bill Leader became production manager in 1956 a policy of specializing in Folk Revival and traditional performance was instituted. Particularly through the

influence of A.L. Lloyd, its first artistic director, Topic shaped the repertory and performance style of the burgeoning Folk Revival. With Lloyd guiding record content and lending intellectual weight with his disc notes, Topic championed regional voices and industrial folksong and pioneered uncensored versions of erotic folksongs, also linking song from calendar customs with the fresh and vigorous singing of the Watersons, creating a new approach to the performance of English traditional songs. The vocal styles of other Topic performers and their forms of guitar accompaniment were equally influential on solo performance within the Folk Revival; *English Country Music* (recorded 1965, released 1976) provided similar models for instrumental musicians.

Field recordings of traditional musicians from North America and Eastern Europe were a significant part of Topic's output from the 1950s to the 70s. But the label's outstanding contribution to musicology was its collection of songs and music in Britain, such as the travellers' songs recorded on *The Roving Journeymen* (1962). The Voice of the People, a 20-part series drawing on Topic's archive of recordings of British traditional singers and musicians, was released in 1998.

Topic became a separate company in 1958 and achieved a financial base capable of developing its artistic policy. The company produced relatively few records during the 1980s, but the 1990s saw a resurgence of activity associated with the rise of interest in British tradition as an element of roots music. In 1991, Topic founded Direct Distribution, making recordings of traditional music more widely available in Britain.

Topshuur [tobshuur].

Two-string plucked lute used to accompany heroic epics in contemporary west Mongolia. Two-string lutes have been associated with the Mongols since Marco Polo's description of instruments played before battle in the 13th century. There is evidence to suggest that Kalmyk Mongols used a three-string lute during the 17th century and that they were also used to accompany epics.

Topshuur bodies vary in shape according to ethnic and family traditions. The instruments of Baits, Dörbets and Hotons may be small and round (see illustration), shaped like a cup or bowl, rectangular or trapezoidal. Some Altai Urianghais, Baits and Torguts make necked bowl *topshuur* (for further illustration *see* Avirmed, Baataryn). Altai Urianghais prefer to fashion their instruments from juniper in the shape of the wooden *tsatsal* ladle used to offer milk-aspersions to the spirits of nature. It is often named after the shape of its pegbox or table. If the body is shaped like a milk ladle, it is called a *shanagan topshuur*, but if it is in the shape of a *tsatsal* ladle, it is called a *tsatsal topshuur* (for further illustration *see also* Epic). Among

Dörbets, Zakchins and Torguts a spike bowl lute is played; among Baits, Dörbets, Altai Urianghais and Zakchins a spike box lute, similar in construction to the two-string spike fiddle Ikil, may also be used. The strings of both the *topshuur* and *ikil* are tuned to an interval of a 4th. When the *topshuur* is strung with horsehair it may easily be converted into a bowed instrument.

All *topshuur* are handmade. Although in recent times the instrument's body may be covered with goat- or camelskin, traditionally the skin of 'hot-nosed' animals was preferred i.e. those with a kinship relation to humans, such as horses and sheep. The skin table should be as thin as possible and is therefore often taken from the groin of an animal. Among Baits and Dörbets, strings are made from sheep intestines which, after being cleaned and washed several times, are stretched and twisted clockwise and anticlockwise, then dried.

The *topshuur* was traditionally kept in a place of honour within the bard's tent and was allowed to be touched only by him. On the day before the epic performance, the host carried the *topshuur*, in a special box, to his home where its presence was thought to repel danger.

A legend of origin of the *topshuur* explains its use to accompany epics prior to hunting (see Epics illustration). A hunter's unaccompanied performance of the epic prelude *Altain Magtaal* ('Praise-Song of the Altai') was interrupted when one of the many tiny spirit-masters of the Altai mountains, who were sitting all over him including on his face, fell from the tip of his nose on to his top lip. The diviner and hunting companion who witnessed this made an instrument to help the performer to keep a steady rhythm and not spoil the spirits' entertainment (thereby causing dire consequences for the hunt) even in the face of such mishaps.

The instrument has a repertory of tunes called *tsohilt*, comparable to the *huur* repertory (*tatlaga*). These descriptive pieces imitate animals and nature and are sometimes used to accompany the *biy*-dance (*see* Mongol music, §3(i)).

CAROLE PEGG

Toradze, David

(*b* Tbilisi, 14 April 1922; *d* 7 Nov 1983). Georgian composer and teacher. A laureate of the USSR State Prize (1951), he is the father of the pianist Alexander Toradze. He studied composition at the Tbilisi Conservatory with Barkhudarian (1937–9), and then continued his studies at the Moscow Conservatory with Glière. In 1948 he graduated from the Tbilisi Conservatory, teaching orchestration and composition there from 1953 (from 1973 as professor); for a time (1962–8) he was first deputy chairman of the Georgian Composers' Union.

Toradze acquired popularity with his compositions for the variety stage, and his songs for film scores. He underwent a notable transformation in the course of his artistic development: initially writing in a style traditional for Georgian music of the 1940s and 50s, a style based on the distinctive features of Georgian folk music and urban songs of old Tbilisi, in his later compositions he began to be drawn towards generalities in his turns of phrase, towards terse harmonic combinations and colourful orchestration. In keeping with this, the character of his music changed from that of emotional saturation to one of contemplation and decorative imagery. The most popular work of the early period is the ballet *Gorda* (1949) which features more than any other in the repertory of Georgian ballet theatres. The patriotic and the psychological are the two basic lines developed in *Gorda*, and the music – notable for its theatricality and colourfulness – interweaves the epic and the heroic with lyrical and dramatic moments. The work relies extensively on both the classical forms of ballet and folk dances. The early period concluded with the opera *Chrdiloetis patardzali* ('The Bride of the North') of 1957 which centres on the story of the tragic love of the Russian writer Griboyedov for Nina, the daughter of the Georgian poet Chavchavadze. The key work of the second period is the three-movement Second Symphony *Kebatakeba Nikortsmindas* ('In Praise of Nikortsminda', 1968), in which Toradze strived to express his delight in the beauty and the perfection of the architectural forms of the cathedral and his adoration for the unknown builder. The artistic content of the symphony brings together lofty and decorative imagery along with dithyrambic musical ideas which are based on the development and the varying of a single thematic kernel. Toradze reached the peak of his creative career with the Piano Concerto (1982) whose style encapsulates the musical achievements of the 20th century, and Prokofiev and Bartók in particular. The music is characterized by biting rhythms in terse combinations which are contrasted with contemplative episodes of a rarefied texture.

GULBAT TORADZE

Torch [Torchinsky], Sidney

(*b* London, 1908; *d* Eastbourne, 16 July 1990). English arranger, composer, conductor and theatre organist. His early career involved playing for silent films and he soon graduated to the organ, becoming one of Britain's leading theatre organists during the 1930s. He became involved with light orchestral music during his wartime service in the RAF as conductor of the RAF Concert Orchestra. After the war he contributed numerous original works to publishers' mood music libraries, and worked extensively in radio on programmes such as 'Much Binding in the Marsh'. In 1953 he devised the successful formula for BBC Radio's 'Friday Night is Music Night', in which he conducted the BBC Concert Orchestra regularly until his retirement in 1972. Torch presented numerous celebrity concerts particularly, for many years, the BBC's prestigious Light Music Festivals. His *London Transport Suite* was specially commissioned for the 1957 festival. During the 1940s and 50s he recorded many important works in the light music repertory for EMI's Parlophone and Columbia labels, including many of his own cameos, the most famous being his *Shooting Star*.

All Strings and Fancy Free, 1946; Barbecue, 1946; London Playhouse, 1946; Shooting Star, 1946; Going for a Ride, 1947; International Sports March, 1947; My Waltz for You, 1947; On a Spring Note, 1947; Radio Romantic, 1947; Samba Sud, 1947; Wagon lit, 1947; Accent on Waltz, 1948; Fandango, 1948; Meandering, 1948; Comic Cuts, 1950; Shortcake Walk, 1950; Bicycle Belles, 1956; London Transport Suite, 1957; Trapeze Waltz, 1963; Conc. Icognito; Duel for Drummers

DAVID ADES

Torchi, Luigi

(*b* Mondano, nr Bologna, 7 Nov 1858; *d* Bologna, 18 Sept 1920). Italian musicologist. He studied composition at the Accademia Filarmonica in Bologna, with Paolo Serrao at the Naples Conservatory, then in Germany and France, benefiting particularly from the teaching of Jadassohn and Reinecke in Leipzig. At the same time he studied literature in Italy and abroad. In 1884 he returned to Italy, where from 1885 to 1891 he taught music history and was librarian at the Liceo Musicale Rossini at Pesaro. He then moved to the Liceo Musicale at Bologna, where he performed the same duties and also taught composition. From 1894 to 1904 he was editor of the *Rivista musicale italiana*, to which he contributed many scholarly and critical articles.

Many Italian musicologists accorded Torchi a position of pre-eminence beside Chilesotti, particularly for his essays on Italian instrumental music. Yet his methods were primitive, especially in aesthetic criticism, which he also applied to contemporary Italian and German composers. If his attitude to Schumann's *Szenen aus Faust* is tendentious and denigratory, his essays on Martucci's symphonies and Strauss's *Salome* are in many ways excellent. More important, his studies on Wagner were a significant force in the full acceptance and appreciation of that composer in Italy.

DAVID HILEY

Tordesillas

(*fl* early 16th century). Spanish composer. He is probably identifiable with one of two brothers who served in the royal chapels in the early 16th century.

Alonso Hernández de Tordesillas (*fl* 1502–1520) began his service in the Aragonese royal chapel on 23 November 1502 and stayed there until the death of King Ferdinand in 1516. After this he probably moved to his native Tordesillas where he held a benefice at the church of S María la Mayor; in 1520 he petitioned Charles V, asking for a chaplaincy that he held in Soria to be conceded in favour of his brother, but the outcome of his request is not known.

Pedro Hernández de Tordesillas (*fl* 1499–1520) entered the Castilian royal chapel on 1 January 1499 and served there until Queen Isabella's death in 1504. From the beginning of the following year he was employed alongside his brother in the Aragonese chapel, where he stayed until at least 1511. He cannot be identifiable with Pedro Fernández de Castilleja, *maestro de capilla* at Seville Cathedral from 1514, as has been suggested. It is possible that he may be the same 'Pedro Hernandes' to whom a three-voice alleluia, a Sanctus and a song are attributed in the Cancionero Musical de Palacio (*E-Mp* 1335), but there are other, perhaps more likely, candidates for this composer, including the Sevillian *maestro de capilla*.

Comparison of the differently attributed works proves inconclusive. The two songs, *Françeses, ¿por qué rrasón?* ('Tordesillas') and *Cucú, cucú, cucucú* ('P[edro] F[ernández]') are both for four voices and in triple metre (used sparingly in the Cancionero) and share the essentially homophonic idiom common in songs of this period. The composer of the Sanctus attributed to 'Pedro Hernandes' employed a cantus firmus, with a canon in the superius, whereas the setting of the Mass Ordinary (Tordesillas) appears to be freely composed, with successive points of imitation. The Lamentation setting (for Holy Saturday) is based on plainchant and is in the more austere style characteristic of such pieces in settings by other composers working in the royal chapels; the three-voice alleluia is also more homophonic in texture.

Torelli, Gasparo [Guasparri] (i)

(*b* Borgo S Sepolcro [now Sansepolcro], province of Arezzo; *fl* 1593–1613). Italian composer and poet. He was a member of the clergy and was active at Padua by 1593, the date of his first publication. He came from a family of functionaries and intellectuals of Borgo S Sepolcro (a sonnet by his uncle Guasparri, lecturer in law at Pisa in 1561, appears in Vincenzo Galilei's *Fronimo* of 1568), and he maintained contact with his birthplace, which is mentioned on the title-pages of all his printed works. His second book of canzonettas (1594) includes a piece by Pompeo Signorucci, as well as works by the Paduan musicians Luigi Pace and Francesco Sole. The poets represented in his *Brevi concetti d'amore* (1598) include, besides several Venetians, a certain Dottor G.B. Moroni of Borgo S Sepolcro and Torelli's uncle (part of a canzone from his *Rime*, Lucca, 1561), and nine of the texts are by Torelli himself. The poetry consists of madrigals full of conceits (with the single notable exception of an ottava from Tasso's *Gerusalemme liberata*, set to music by Pace). Torelli's settings of his own words include a dialogue madrigal cycle (for Phyllis and a shepherd) that anticipates his best-known work, *I fidi amanti* (1600), a four-voice setting of a complete *favola pastorale* by Ascanio Ordei (a Milanese student at the University of Padua; the text is given in Solerti, 1903). Torelli follows Ordei's division into scenes, each of which is preceded by a brief, explanatory, *argomento* (not set to music); there are also two *intermedi* in dialect. The music is in a predominantly homophonic texture with simple rhythms. In style it belongs with the madrigal entertainments of Orazio Vecchi and Adriano Banchieri, in particular the former's 'comedia harmonica', *L'Amfiparnaso*. Such works, very widely performed at Venice and in the Veneto in the years around 1600, were transparent allegories of a 'golden age' that, from the perspective of the Venetian crisis, seemed attainable only through a return to nature and the simple life.

From 1601 Torelli was a promoter of the Paduan Accademia degli Avveduti: a typical example of its dilettante culture is his *Capitolo in lode della musica* (Padua, 1607), a poem in *terza rima* celebrating with convivial urbanity the customary humanistic theme of Platonic harmony. He is last heard of with a poem in a volume whose dedication is dated 14 May 1613.

LORENZO BIANCONI

Torelli, Gasparo (ii)

(*fl* Imola, 1682). Italian composer. He was a priest and was *maestro di cappella* of Imola Cathedral in 1682, when an oratorio by him, *La caduta di Salomone*, was performed there.

Torelli, Giacomo [Jacopo]

(*b* ?Fano, 1 Sept 1608; *d* Fano, 17 June 1678). Italian stage designer, engineer and architect. He was probably trained as an architect and engineer, but he may also have been a pupil of the stage designers Niccolò Sabbatini and Francesco Guitti. He was working as an engineer in the Venice Arsenal around 1640, when he designed the Teatro Novissimo, Venice's fourth public opera house, built in 1641. He invented a new system of stage machinery which for the first time enabled the whole set to be changed in one operation: the wings were supported on undercarriages running on rails beneath the stage, and were moved by turning a central roller to which the undercarriages were attached by ropes. In the next few years Torelli designed the sets for all the operas staged in the Teatro Novissimo, and occasionally worked for the Teatro di SS Giovanni e Paolo as well. Summoned to Paris in 1645, he installed new stage machinery in the theatres of the Hôtel du Petit Bourbon (1645) and the Palais Royal (1647) and designed sets for the Italian opera troupe. He returned to Fano in 1661, where he designed the Teatro della Fortuna (1677), on a plan much discussed in 17th- and 18th-century treatises on theatre architecture.

The stage techniques pioneered by Torelli are recorded in some detail in the librettos of the Teatro Novissimo. The ability to change the entire setting in a single operation, tested for the first time in Sacrati's *La finta pazza* (1641), considerably enhanced the pace of events on the stage and had a lasting influence on the dramatic construction of operas in the second half of the 17th century.

Torelli's sets created a concrete, clearly defined area which, whatever its symbolic significance, attempted to represent a milieu with a particular character. Such a conception was appropriate to the small ensemble scenes of Venetian opera and met the increasing preference for historical subjects and the realistic tendencies fostered by the growing influence of middle-class audiences. The rhythmic articulation of the stage by the

transverse and longitudinal lines of the sets focussed attention on the acting zone and enhanced the development of the design of interiors. An almost completely enclosed room appeared for the first time in a production of Sacrati's *Bellerofonte* (1642), the starting-point of the architectural visions of operatic production in the late Baroque period.

MANFRED BOETZKES

Torelli, Giuseppe

(*b* Verona, 22 April 1658; *d* Bologna, 8 Feb 1709). Italian composer. He made a major contribution to the development of the instrumental concerto (both concerto grosso and solo concerto) and to the Bolognese repertory for trumpet and strings. He arrived at his mature concerto style through his chamber music, which shows experimental steps towards concerto techniques.

Torelli, Giuseppe

1. Life.

Born in Verona in the parish of S Maria in Chiavica, he was the son of Stefano and Anna (Boninsegna) Torelli. He was the sixth of nine children, of whom the youngest, Felice, became famous as a painter. His father was

a health inspector for the local customs office and supported his family comfortably. Giuseppe's early musical training, if any, may have come from the Veronese musician Giuliano Massaroti, who lived in the same part of the city. On 15 May 1676 he played the violin in a vesper service at the church of S Stefano in Verona, and between summer 1683 and late August 1684 he was a violinist at Verona Cathedral. He was admitted as a *suonatore di violino* to the Accademia Filarmonica in Bologna on 27 June 1684, by a vote of 27 to 3, and moved to that city probably in early September 1684. Padre Martini's *Catalogo degli aggregati dell'Accademia filarmonica di Bologna* lists him as 'Giuseppe Torelli Veronese Compositore Maestro di Cappella del Duomo d'Imola'; he may have served in that capacity between leaving Verona and arriving in Bologna. It is also recorded that he composed several sinfonias for the Accademia's annual patronal feast in 1692–1700, 1703–4 and 1708; probably he had been raised to the rank of *compositore* in 1692.

It is not known with whom Torelli studied the violin (perhaps Leonardo Brugnoli or Bartolomeo Laurenti, both S Petronio violinists), but he is known to have been a composition pupil of G.A. Perti, three years his junior. On 28 September 1686 he was admitted to the regular *cappella musicale* at S Petronio, having been engaged there as extra player the two previous years for the patronal feast on 4 October. The position was advertised as for a violetta player, but Torelli succeeded Geminiano Buosi as a tenor viola player. From 1 January 1687 until 20 November 1689 his name appears in the *mandati mensili* as a regularly paid member of the *cappella*; his salary was increased on 23 March 1688. His presence is also documented intermittently between 1690 and 1695. His frequent absences (altogether about 18 months during a nine-year period), noted with some displeasure in the records, were due to performances in other places such as Parma and Modena, always as a violinist.

Shortly after the disbanding of the S Petronio orchestra for economic reasons in January 1696, Torelli left Bologna to seek employment elsewhere. He is mentioned as having played the violin for two feasts early in 1696 (musicians were engaged ad hoc during this period); evidently he left Bologna shortly afterwards. The castrato Francesco Antonio Pistocchi, whom Torelli had known in Bologna, was then in Parma, and left about this time for Ansbach, where Torelli's former pupil Pietro Bettinozzi was a violinist in the Margrave of Brandenburg's orchestra. Torelli may have gone with Pistocchi or joined him there. Both Torelli and Pistocchi may have gone to Berlin in May 1697 to perform for the Electress Charlotte Sophie: both subsequently dedicated works to her, Pistocchi his pastorale *Il Narciso* and Torelli his op.6. By 1698 Torelli had become *maestro di concerto* for the Margrave of Brandenburg at Ansbach, where Pistocchi was *maestro di cappella*. They remained there until the end of 1699, during which time Torelli conducted the orchestra for an *idea drammatica* by Pistocchi, *Le pazzie d'amore e dell'interesse*. By December 1699 both were in Vienna, according to letters (now in *I-Bc*) from Torelli and Pistocchi to Perti in Bologna. In a letter of 17 February 1700, Torelli reported that he had written an oratorio to be sung in the emperor's chapel on Laetare Sunday (mid-Lent). Pistocchi commented that the piece was 'pretty as a springtime, skilfully written'. The oratorio in question may well be *Adam*

auss dem irrdischen Paradiess verstossen, of which only the libretto survives (*A-Wn*).

During this period Torelli made serious efforts to effect long-overdue recognition of Perti for some cantatas (*Cantate morale e spirituali* op.1) which Perti had dedicated to the emperor in 1688. Torelli located them and had them performed, evidently amid much court intrigue, but had to be satisfied with obtaining for Perti a gold medallion of Leopold I.

By March 1700 Torelli was tired of Vienna and wrote of returning to Italy. He spoke of wishing to make a pilgrimage to Loreto, and of wanting to drink the waters at S Marino 'having been so advised by the doctors here because of my cursed hypochondria and melancholy, which torments me greatly, though I have the look of a prince'. On 5 May 1700 Pistocchi wrote that he and Torelli were returning to Ansbach, hoping to obtain permission from the margrave to return to Italy. Nothing is known of Torelli's travels until February 1701, when he was listed as a violinist in the newly re-formed S Petronio *cappella musicale*, directed by Perti. In the decree marking the end of the suspension of that group, special mention was made of Torelli and Pistocchi, who were to be paid for each function at which they performed when they were in the city rather than being held to regular, continual service. The exception was probably made because of their friendship with Perti, and because both were at the peak of their fame as performers: to try to confine them to regular positions would have been to lose their services altogether.

Torelli died on 8 February 1709 and was buried by the Confraternity of the Guardian Angel, of which he was a member; after eight days the Accademia Filarmonica held its customary memorial service for a deceased member at S Giovanni in Monte. Torelli was well known for his virtuosity on the violin both in and outside Italy, and had many pupils, among them Girolamo Nicolò Laurenti, Pietro Bettinozzi and Francesco Manfredini. He was described by his contemporaries as 'a man not only of docile and humble habits but also erudite and eloquent'.

Torelli, Giuseppe

2. Works.

Between 1686 and 1692, while he was in Bologna, Torelli published five collections of works entitled sonatas, sinfonias and concertos. In spite of this diversity of nomenclature, these works are chamber music, meant for one performer to a part and lacking the tonal contrasts of the later concerto style. Dedicated to noble patrons, the first two sets are written in an unpretentious, conventional style, perhaps to call attention to himself as composer as well as virtuoso violinist. Both appeared in 1686, the year of his entry into the S Petronio orchestra. Op.1 is a collection of ten trio sonatas, of which seven possess the by now standard *sonata da chiesa* arrangement of slow–fast–slow–fast. First movements are chiefly chordal with many suspensions; second movements are imitative, often in a related key; third movements vary between those two textures; and fourth movements are dance-like, in triple or compound metre, often employing imitation. Op.2 (*Concerto da camera à due violini e basso*) follows a *sonata da camera* arrangement of dance pieces in binary form, though Torelli shows a wide variety of style under each dance title. Each suite ends with a

diminutive sarabande, gavotte or minuet. Other dances include allemande, corrente, balletto and *giga*. It is worth noting that Torelli made tentative steps towards a ritornello principle in six of these dances by bringing back snatches of the subject material in its original key towards the end of the second half as well as at its beginning, where it often appears on the dominant.

Op.3 (1687) is entitled *Sinfonie à 2.3.e 4*. This collection is made up of six trio sonatas and *sonate à due* and *àquattro*, generally longer than those in previous collections. Five of the 12 are in a slow–fast–slow–fast arrangement, and the remaining seven have mostly fast movements in various arrangements, with slow movements functioning as brief links between them. Experiments in both form and instrumentation point to early attempts at concerto techniques, though the works remain essentially chamber music.

Op.4 (1688), a curious work dedicated to the Duke of Modena, Francesco II, is entitled *Concertino per camera* and scored for violin and cello without figured bass. If this is indeed its intended manner of performance, the result is the earliest duos for violin and cello by a Bolognese composer. The publication contains 12 sets of dance pieces, most of them preceded by an introductory movement. A significant feature is the expansion of Torelli's harmonic resources, both in the choice of chords and in internal key relationships.

After these four publications Torelli began to interest himself in trumpet music, probably because of the presence in Bologna of an excellent trumpeter, Giovanni Pellegrino Brandi, whose name appears in the payment lists as an extra player for the patronal feast of St Petronius each year from 1679 to 1699 and who undoubtedly inspired the festive sonatas for trumpet and strings by Torelli and his contemporaries Perti, Jacchini, Aldrovandini and Domenico Gabrielli. These works were used to open the celebration of Mass (one such work contains the indication 'Chirie' at the end of the sinfonia). Most of Torelli's solo trumpet works were probably composed during his first Bolognese period; the only two dated works in this genre, in fact, come from 1690 and 1693. The three works for one or two trumpets also come from this period; the works for two trumpets include one dated 1692.

In these works, all unpublished, the titles vary among sinfonia (see illustration), concerto and sonata. Probably because of the disparate timbres of trumpets and strings, and the consequent contrasting ensembles, concerto techniques are more discernible here. The ritornello principle is more clearly defined and the essence of conflict is evident in contrasting tonal levels, rhythms and textures. Many of the slow movements use the solo violin or violins in passages of considerable virtuosity. Although the trumpets imposed certain tonal restrictions, in the movements without trumpets Torelli ventured into tonal areas unexplored in previous works. Since these were intended not for publication but for festive performance at S Petronio, no economic limitations inhibited these experimental steps towards the mature concerto form. He developed the medium already well established by his predecessors, pitting contrasting

timbres and tonal levels against one another to create the tension that made viable the return of previous material.

The contents of op.5 (1692) reflect some of the lessons learnt in the S Petronio repertory. In addition to the six trio sonatas (*Sinfonie à tre*), Torelli added six concertos (*Concerti à quattro*); here he deliberately and publicly turned towards orchestral performance as opposed to chamber music. In his prefatory advice he instructed the performers to multiply all the instruments. Six years later, in op.6, he asked that sections marked 'solo' be played on a single violin; the remaining parts could then be duplicated by three or four instruments. These instructions may be the first of such kind to appear in print; Muffat's similar admonitions were not published until 1701. Here, without the trumpet, he seemed less sure of his way; incipient ritornello–episodic design appears, but either the ritornello is too short or the episodes are too long. Some of the mature concerto elements appear, like the broken triad at the opening, but the design is not yet within his grasp.

By 1698 and the publication of op.6 (*Concerti musicali*, dedicated to the Electress of Brandenburg), Torelli had learnt how to write broader episodes in non-thematic figural patterns, along with more expansive ritornellos, which return midway and at the conclusion. The collection contains two concertos that require solo violin (possibly the first solo violin concertos in 17th-century literature); the remainder are without solo passages, but the same structure applies to both types. During his second stay in Bologna, Torelli prepared for the publication of op.8 (*Concerti grossi con una pastorale*, published posthumously by his brother, Felice) and probably composed op.7, of which no copy has survived. He also wrote some unpublished works including oboes for S Petronio, possibly for Pietro Bettinozzi, his former pupil, who had learnt the oboe in Ansbach and now played in the S Petronio orchestra, introducing the instrument there for the first time. One dated piece for trumpets and oboes comes from 1707. These works, often including dance movements, approach the orchestral suite. All the trumpet concertos including oboe parts (G27-31) can be dated to Torelli's second Bolognese period (after 1701).

The creation of op.8 with its concerti grossi and solo concertos represents the maturity of ideas of design and structure hinted at in earlier works. The concertos follow the three-movement fast–slow–fast order of the Italian opera overture. Here Torelli abandoned traditional Bolognese counterpoint in favour of a dominating top line, an articulated accompaniment, sequential progressions, clear cadences and well-defined tonal contrasts. Ritornellos and episodes are clearly contrasted, and the ritornello functions as both springboard and framework for the mature concerto form.

Torén, Torvald

(*b* Stockholm, 29 Sept 1945). Swedish organist. He studied at the Swedish Royal Academy of Music in Stockholm from 1964 to 1970 (piano with Stina Sundell, organ with Gotthard Arnér), taking the diploma in both disciplines, and continued his studies with Maurice Duruflé in France (1975–6). He was appointed organist at the Hedvig Eleonora church, Stockholm, in 1966 and in 1983 became a teacher at the Royal Academy of Music (and a professor in 1994). At numerous recitals in Sweden and abroad he has won special praise for his interpretation of Romantic and contemporary French organ music, and among his numerous recordings are Tournemire's organ works op.3 and the complete organ works of Duruflé. Erland von Koch's *Toccata festivo* (1990) was dedicated to him. He became a member of the Swedish Royal Academy of Music in 1993.

Torke, Michael

(*b* Milwaukee, 22 Sept 1961). American composer and pianist. At first influenced by Stravinsky and Bartók, he won composition prizes at the Interlochen Academy in 1977 and 1978. He wrote his earliest orchestral work, *Statement* (1979), for the Milwaukee Music for Youth ensemble, in which he played principal bassoon. He entered the Eastman School in 1980 and studied composition with Schwantner, Adler, Benson, Rouse and Schuller, and piano with Burge. Although his exposure to popular music had been limited in high school, he now came under its influence, and began to incorporate pop and jazz elements into his music. *Vanada* (1984) shows the influence of pop music and minimalism with its incessant pulse, repeated rhythmic figurations and instrumentation of electric bass, a pair of synthesizers, electric and acoustic keyboards, percussion and brass. The composer distinguishes several of the sections by colours ('brilliant orange!', 'dark violet' and 'olive mixed with spring green'), a conceit also found in *Ceremony of Innocence* (1983) and later expanded in a series of pieces (recorded by Argo in 1991 under the title 'Color Music').

After graduating from the Eastman School (BM 1984), he studied at Yale, where his teachers were Druckman, Bresnick and Rzewski. While there, he gained instant notoriety for the pop-tinged *Ecstatic Orange* (1985), commissioned by ASCAP and Meet the Composer, and *Bright Blue Music* (1985), for the Youth SO of New York. Foss conducted the Brooklyn PO in the first performances of *Ecstatic Orange* and a year later led the Milwaukee SO in the première of *Green* (1986). Like Torke's previous 'colour pieces', *Green* (originally titled *Verdant Music*) is distinguished by its rhythmic energy, repeated figures and elemental harmonic structure (tonic and dominant chords in E major). He left Yale in 1985 and moved to New York to pursue a composing career unencumbered by academic affiliation. In 1986 he won a Rome Prize Fellowship and signed a publishing agreement with Boosey & Hawkes. The New York City Ballet Director Peter Martins, who became a champion of the composer's work, choreographed *Ecstatic Orange* in 1987 and encouraged the composer to expand it into a three-movement ballet, with *Green* and the new *Purple* (1987) as the other earlier movements. The company also commissioned *Black* & *White* (1988), *Slate* (1989) and *Mass* (1990).

In 1991 Martins choreographed *Ash* (1989), which the St Paul Chamber Orchestra had commissioned. While still characterized by a relentless

pulse, this work has a greater surface affinity to serious music of the early 19th century than to the popular music of the late 20th. It resembles a recalcitrant Beethoven overture and is among Torke's most performed works. He continued his exploration of 19th-century genres with the piano concerto *Bronze* (1990), of which he gave the première, but by 1992, with *Music on the Floor*, *Chalk* and *Monday and Tuesday*, he had returned to a more overtly pop-influenced, process-oriented style. *Run* (1992), commissioned by the New York PO and especially *Javelin* (1994), commissioned by the Atlanta Committee for the Olympic Games and the Atlanta SO, show a growing maturity. The latter work has the propulsive energy and vitality of Torke's earlier pieces, but his influences, whether the dance music of Madonna or the neoclassicism of Stravinsky, have been synthesized and absorbed into a distinct, personal style.

JAMES CHUTE

Torkesey [Torksey], John [Johannes]

(*d* ?Elsham, Lincs., 1340). English theorist. His treatise *Trianguli et scuti declaratio de proportionibus musice mensurabilis* (ed. in CSM, xii, 1966) must have been in circulation before 1372, when the *Breviarium* ascribed to Willelmus (ed. ibid.), which cites it, was catalogued among the books of the Augustinian friars of York. The most likely candidate for identification with the author is the 'Johannes de Torkeseye' who was elected prior of the Augustinian canons at Elsham, north Lincolnshire, on 9 November 1339. He had been a canon at Elsham for some time before his election and remained prior for only a year, as his death occasioned the election of his successor in December 1340. If this identification is correct, it places the treatise perhaps in the 1330s, only a decade or two after the constellation of writings associated with Philippe de Vitry.

Torkesey's *Trianguli et scuti declaratio* is short but was very influential in England in the 14th and 15th centuries. It is an exposition of two geometrical figures: a shield-shaped cartouche (*scutum*) displaying the six principal note-shapes from the *simpla* (semiminim) through to the *larga* (maxima), and a triangular array illustrating the available combinations of perfection and imperfection in the mensural hierarchy. Torkesey employed dots above and below as well as to the right of a note to indicate the perfection of values contained within as well as of the note itself. A parallel array of rests, described in the treatise, is not transmitted with it, but both triangles (expanded to the value of the *largissima*) appear in the *Breviarium* of Willelmus. The numerous copies of Torkesey's *Declaratio* show varying degrees of adaptation; the brief counterpoint text beginning 'Septem sunt species' (ed. in Bukofzer, 136–7) is embedded in one of these, but there seems little reason to believe it is actually by Torkesey.

RONALD WOODLEY

Torlez [Torlès], Balthazard

(*fl* 1742–88). French composer. Music attributed to Torlez may be the work of two different composers. In 1742 he was in Clermont-Ferrand, and produced a divertissement, *Le départ du guerrier amant*. In 1767 motets by a composer of the same name were performed at the Concert Spirituel in Paris and published there; the Parisian *Affiches annonces et avis divers* of 19 April 1769 carried an odd notice by Torlez inviting the commission of various masses, divertissements, *cantatilles* etc., 'for a reasonable sum'. By about 1775 he had become *maître de chapelle* at Tours Cathedral, and in addition taught at the academies of Grenoble and Moulins. The violinist

who played in the orchestra of the Comédie Italienne in Paris (1783–9) and published a number of instrumental works appears to be a different Torlez as the set of duos designated op.1 bear the first initial 'C'.

ROGER COTTE/R

Tormis, Veljo

(*b* Kuusalu, nr Tallinn, 7 Aug 1930). Estonian composer. He is considered by Estonians to be one of their most important composers of the 20th century. His oeuvre is best considered in the context of the strong Estonian choral tradition and the political history of Estonia, both ancient and contemporary, but its appeal has reached far beyond the Baltics. His formal musical education began in 1943 at the Tallinn Music School, but was interrupted by World War II and illness. In 1949 he entered the organ class of Edgar Arro at the Tallinn Conservatory; when Soviet authorities terminated the class, he began to study composition with Villem Kapp. In 1950 he won his first composition prize, for *Ringmängulaul*, on a text by Lea Rummo, who was to become his wife and later a pre-eminent historian and critic of Estonian theatre and dance. His studies continued at the Moscow Conservatory (1951–6), where his teachers included Vissarion Shebalin and Yury Fortunatov. The epic cantata *Kalevipoeg* was his thesis composition. He has taught at the Tallinn Music School (1955–60) and the

Tallinn Music High School (1962–6), and served as a consultant at the Estonian Union of Composers (1955–74). From 1969 he has supported himself through the purchase of his manuscripts by the Ministry of Culture, by frequent prizes for his choral works, and by numerous sojourns at 'houses of creativity' in the Soviet Union.

By the late 1960s Tormis was a celebrated composer; most of his subsequent works were performed throughout the Soviet Union and Eastern Europe, and recorded and published in Tallinn and Moscow. Only during the 'stagnation years' of the late 1970s and the 1980s were his manuscripts not bought and his more overtly anti-Soviet choral works not performed in public. Despite this situation, he was commissioned in 1980 to write one of his major works, the ballet/cantata *Eesti ballaadid*.

Although Tormis has written a well-crafted opera and various instrumental pieces (including film scores), his special voice is heard in his choral works. Almost all of these are based on ancient Estonian folksongs (*regi laulud*), either integrally or derivatively. The works may be divided into three categories: (1) those setting texts by 20th-century Estonian poets; (2) those using traditional Balto-Finnic texts and melodies within a larger compositional framework embodying elements of European art music; and (3) those which are, properly speaking, folksong arrangements, retaining a simple structure, but adding harmony (these include works for children, and settings of Latvian, Russian, Bulgarian, Udmurt, Hungarian and Italian folksongs). His harmonic language is derived from folk melodies, featuring pairs or clusters of 2nds, open 4ths, consecutive major 3rds, and parallel chords. Octatonic pitch organization is audible in *Marjamaa ballaad* and in *Raua needmine*, his most frequently performed piece. Sustained vocables, layered textures, and inventive and expressive vocal orchestration are also characteristic of his style. Although he makes extensive use of repetition, he always modifies repeated material by changes of texture or timbre. Whether delicate, as in sections of *Looduspildid*, or vigorous, as in *Laulja*, his writing remains sensitive to the language of the text. Recognition of Tormis as a master of 20th-century choral music is seen in his recent commissions from the King's Singers, The Hilliard Ensemble, the University of Toronto, and the combined men's choruses of the Universities of Uppsala and Helsinki. Since 1992 eight CDs have been devoted entirely to his music.

Tormo, Antonio

(*fl* late 17th or early 18th century). Spanish composer and monk. An early 18th-century manuscript (*E-Bc*), copied by one of his pupils, contains all his known organ music – over 100 versets and two Italianate toccatas – along with works by Nassarre, Cabanilles and others. Tormo's pieces are brief and of no great merit, but they constitute a kind of compendium of traditional Spanish organ techniques including all dispositions of divided registers, *fabordón*, glosa, cantus firmus and fugal imitation; at the same time the influence of the late Baroque Italian style is evident.

ALMONTE HOWELL

Tornar [Torgh], Roberto [Turner, Robert]

(*b c*1587; *d* Vila Viçosa, on or after 17 July 1629). Portuguese composer and singer of English origin. After studying with Géry Ghersem he was hired as a member of the chapel choir of Dom Teodósio II (7th Duke of Bragança) at Vila Vçosa, Portugal, and began his career there in 1609 as composer of the Christmas *chançonetas*. After six years of service without the title, he was on 8 April 1616 named the Duke of Bragança's *mestre de capela* at the high yearly salary of 60,000 réis, possibly as a reward for being the first music teacher of the duke's son, who was to become King João IV. He continued as *mestre de capela* until 17 July 1629. He probably died then or shortly afterwards and certainly by 1637. Four alternate-verse four-part psalms by him survive (in *P-VV*; 1 ed. in PM, ser.A, xxxvii, 1982). Unlike António Pinheiro, his immediate predecessor as *mestre de capela* at Vila Viçosa, he showed himself responsive to the rules for text underlay observed by Palestrina and never ended runs with new syllables. He occasionally varied the texture with a verse for soloists, but on the whole his psalms are models of sober Vespers polyphony that entitle him to be

compared not unfavourably with such better-known English recusants as Peter Philips and Richard Dering, who also made their careers abroad.

Torner, Eduardo M(artínez)

(*b* Oviedo, 8 April 1888; *d* London, 17 Feb 1955). Spanish folklorist, writer on music and literature, teacher, choral conductor and composer. He began his musical education in Oviedo, studied the piano and composition at the Madrid Conservatory (1907–10), and, after two years in Oviedo conducting research on traditional Asturian music, went to the Schola Cantorum in Paris (1912–14), where he studied composition with d'Indy; he also went to lectures by Tiersot (who had influenced him earlier) at the Ecole des Hautes Etudes Sociales. He was invited by Ramón Menéndez Pidal to work at the Madrid Centro de Estudios Históricos in 1916, and was one of the remarkable group of artists living at the Residencia de Estudiantes which included Bal y Gay, Falla, Turina, Adolfo Salazar, Sainz de la Maza, Lorca, J. Ramón Jiménez, Buñuel and Dali. Later he dedicated to the institution his *Cuarenta canciones españoles* (Madrid, 1924), containing his arrangements of folksongs. In 1928 he became director of the musicology and folklore division at the Centro, as well as director of its Archivo de la Palabra, for which he gathered some 2000 recordings. He taught at the Junta para Ampliación de Estudios and lectured in Cuba and Mexico (1924–5); in Madrid he also played an active role at the Misiones Pedagógicas, whose choruses he directed and for which he wrote his *Metodología del canto y la música* (1935), and in 1932 he was made professor of folklore at the Conservatorio Nacional de Música y Declamación. At the outbreak of the Civil War in 1936, he and his 15-year-old son fled to Valencia and later to Barcelona, carrying the manuscript of the *Cancionero gallego* (published 1973) together with 4000 cards for his intended 'Bibliografía musical española', which were never recovered. He escaped to England and spent his remaining years in London, joined by his wife and daughter in 1947. He taught at the Fundación Juan Luis Vives and the Instituto Español de Musicología, gave radio talks for the BBC and,

among other publications, completed *Lírica hispánica* (1966) a few days before his death.

Torner's pioneering fieldwork, particularly in Asturia, and the resulting publications may be considered among Spain's early contributions to the nascent field of ethnomusicology. His innumerable transcriptions have proved invaluable for comparative tune scholarship and his essay 'La canción tradicional española' (1931) remains the classic overview. In his *Cancionero* (1920), he was the first in Spain to incorporate a study of his collected material from the musical rather than textual standpoint, classifying its melodies and rhythms, and delineating the characteristics of traditional Asturian folksong. Together with Bal y Gay, he collaborated with Menéndez Pidal on the study of the *Romancero* (1928–32), collecting and studying the folk music of Galicia; he also accompanied Schindler intermittently during the latter's Spanish fieldwork. Towards the end of his life he became increasingly interested in the textual material from his vast collection, seeking out parallels and survivals of medieval lyrics; this resulted in a series of articles leading to the publication of *Lírica hispánica* (1966), considered his most important scholarly work.

ISRAEL J. KATZ

Torner [Tornerr, Tournell, Tourner], Joseph Nicolaus [Andreas]

(*b* ?Luxembourg, *c*1700; *d* Trier, 8 May 1762). German organist and composer. He is first heard of in Trier in 1724, when a son of his was baptized and the register states him to have been cathedral organist. Torner supervised the rebuilding of the cathedral organ, 1724–5, and continued as organist until his death. By 1760 he had added to this work that of organist at two local parish churches.

Both Torner's surviving publications are of organ music (that of 1735 is described as 'op.4', which suggests that at least two more are lost). They consist largely of liturgical music – sets of three pieces for the offertory, elevation and communion at Mass – but there are also some toccatas and dance movements. Torner wrote idiomatically for the organ, making use of elaborate passage-work which lies well under the hand and brilliant concerto-like effects; and the central slow (elevation) movements in the Mass 'suites' contain some fine, long-breathed melodies.

From a liturgical point of view, Torner's publications suggest that the musical customs in Trier were rather different from those further south in Bavaria, where the majority of German Catholic church composers worked. For them, the offertory was the place for an extended motet, not an organ piece, and though there was a good deal of instrumental music available to be played at the gradual, little if any organ music was published for use at Mass.

ELIZABETH ROCHE

Tornioli, Marcantonio

(*b* Siena; *d* in or after 1617). Italian composer. On the title-page of his 1607 publication he is described as *maestro di cappella* of Siena Cathedral: it must have been in that year that he succeeded the previous incumbent, Francesco Bianciardi, who died sometime between March and September. His 1617 volume bears no mention of his holding this post. His two surviving volumes are *Canzonette spirituali a tre voci … libro primo* (Venice, 1607[11]) and *Sacrarum cantionum … liber secundus*, for two to four voices and continuo (Venice, 1617[5]); a first book of *sacrae cantiones* is lost. There are two sacred trios by him in a German anthology (RISM 1616[2]) that went into several editions. He was one of many Italian choirmasters of the period who produced conventional, unambitious small-scale music that was no doubt intended mainly for the churches at which they were employed.

NIGEL FORTUNE

Toronto.

City in Canada, the Capital of Ontario and the principal city of English-speaking Canada.

1. The town of York, to 1834.

In 1793 Governor John Graves Simcoe moved the capital of Upper Canada from Niagara to what is now Toronto, then named York. At first the only music was provided by the itinerant fiddlers who entertained at 'logging bees' held during land clearance and members of the militia who played at social functions. The first record of musical activity is an account book entry for '7 Dollars Paid musick By Order' for a ball and supper on the king's birthday, 4 June 1798. Some government officials brought printed music

and a few instruments with them, including a harpsichord, but they seldom intended to settle and did not establish a social setting apt for the growth of music. Moreover York's role as a garrison town was emphasized by deteriorating relations with the USA and the war of 1812.

During the 1820s social and cultural stability increased. Colman's opera *The Mountaineers* and Storace's *No Song, No Supper* were performed at Franks' Assembly Room in 1825 and John Braham's *Devil's Brigade* was given in 1826, and occasionally soloists visited the town. By 1834 the population had reached about 9000 and York was incorporated as the City of Toronto.

2. 1834–1918.

In 1836 the Toronto Musical Society announced its first concert. This group of amateurs and professionals, which included the singer J.D. Humphreys, a prominent musical figure for the next 30 years, was the first of many such groups which often survived only for a couple of seasons. For example the Philharmonic Society, established in 1845 under the direction of James Paton Clarke, was dissolved and reconstituted several times before the end of the century, but in its first years performed music by Beethoven, Mozart, Weber, Auber, Rossini, Méhul, Spontini, Hérold and others.

Among the many prominent choral organizations which were central to Toronto's musical life was the Metropolitan Choral Society, inaugurated in 1858 with a performance of Handel's *Judas Maccabaeus*. The Toronto Mendelssohn Choir, the outstanding organization and the only one still in existence from this era, was founded in 1894 by A.S. Vogt and quickly became one of the greatest choral ensembles on the continent. In 1902 Vogt instituted the practice of bringing orchestras from the USA to participate in major performances: first the Pittsburgh SO under Victor Herbert and later Emil Paur, followed by the Russian SO and the Theodore Thomas Orchestra (Chicago SO) under Frederick Stock. In 1905 the choir first visited the USA and appeared with outstanding success in Buffalo, Chicago, Cleveland, New York, Boston, Philadelphia and Baltimore; World War I prevented a European tour planned for 1915 (an ambition realized only in 1972).

Several halls were built before 1900 of which the most notable, St Lawrence Hall (1850, seating about 500) and Massey Hall (1894, seating 2765), are still in use. In these and other halls great performers from abroad appeared regularly – the pianists Leopold de Meyer, Gottschalk, Thalberg, Anton Rubinstein and Joseffy, the violinists Vieuxtemps, Sarasate, Wieniawski, Ysaÿe and Reményi and the singers Adelina Patti, Jenny Lind, Henriette Sontag, Christine Nilsson and George Santley.

Small touring opera companies with usually one or two principal singers appeared regularly at such theatres as the Royal Lyceum (1848–74) or the Grand Opera House (1874–83). The first full-scale production of an opera, *Norma*, was given in 1853 and conducted by Luigi Arditi with Rosa Devries in the title role. Local productions of opera were less common. In 1843 the Theatre Royal presented *The Miller and his Men* 'with the whole of the original music of Sir Henry Bishop', and in 1853 *Lucrezia Borgia* was given in concert performance. In 1867 the Holman English Opera Troupe leased

the Royal Lyceum as a resident company, and until 1873, when he moved to London, Ontario, Holman presented full seasons of plays and many performances of about 35 operas.

Attempts to establish an orchestra had been made in 1867 by George Strathy and in the 1890s by Torrington and Fisher; the first successful organization was the Toronto SO, founded in 1906 by Frank Welsman, a Toronto musician. For the first time the major symphonic repertory was heard regularly and with outstanding soloists such as Gadski, Rachmaninoff and Flesch. But World War I caused increasing difficulties of finance and personnel, and after 1914 the orchestra was effectively discontinued.

Music and instrument dealers flourished in the second half of the 19th century. Leslie Brothers were the principal suppliers of band instruments and accessories during the 1840s and in 1842 O'Neill Brothers began to manufacture pianos. The construction of pianos, harmoniums, melodeons and organs became a major industry and at least 20 firms were in business at one time or another before 1914. The head of one of the largest, R.S. Williams & Son (established 1854), was also a collector of early instruments, music and autograph letters and presented his collection of some 400 items to the Royal Ontario Museum. In 1860 Theodore Heintzman, a German immigrant to the USA, settled in Toronto and founded the firm which until 1986 was the major piano manufacturer in Canada. Another firm in operation until the 1980s was begun in 1871 by J.G. Mason and Vincent Risch who first dealt in pianos and then (1877) manufactured their own instruments.

An important general music business was begun in 1844 by Abraham and Samuel Nordheimer, who imported both music and fine pianos. As publishers they issued many reprints of popular music originally printed in Europe and the USA, and published ballads and piano music by Toronto composers, including J.D. Humphreys, H. Schallehn and St George Crozier. They later enlarged their interest by manufacturing their own pianos.

Private musical instruction had been available from the 1820s and a few musicians held part-time positions in schools. In 1847 the Ontario Normal School opened for teacher training as part of a plan for general public education, in which music was to have a place. J.P. Clarke was engaged as the first music teacher, and in 1858 Henry Sefton was brought from England to develop a vocal music curriculum for use in the schools.

The University of Toronto (chartered as King's College in 1827) granted the degree of Bachelor of Music to J.P. Clarke in 1846 but did not offer regular instruction in music. The University of Trinity College (affiliated to the University of Toronto in 1904) appointed George Strathy as professor of music in 1853 but had no degree course; it granted a number of external degrees, mostly in England during the 1880s, but abandoned the practice after intense opposition from English schools. In 1886 the Toronto Conservatory of Music (since 1947 the Royal Conservatory of Music of Toronto) was founded by Edward Fisher. In 1888 it became affiliated to Trinity College and in 1896 to the University of Toronto in offering a course of studies for the university's Bachelor of Music examinations. In 1888

Torrington founded the Toronto College of Music which also, in 1890, became affiliated to the university. In 1918 the university created a faculty of music with A.S. Vogt as dean. The conservatories were then disaffiliated, the Toronto Conservatory being administered as a separate institution by the university board of governors until 1991, when it again became fully independent.

3. Since 1918.

In 1923 the New SO gave its first concerts directed by Luigi von Kunits, former leader of the Pittsburgh SO and since 1912 a Toronto violin teacher. In 1926 the New SO acquired the charter and assets of Welsman's earlier orchestra and became the Toronto SO. After von Kunits's death in 1931 the conductor was again a local musician, Ernest MacMillan, who built up an outstanding orchestra. Subsequent conductors were Walter Susskind (1956–65), Seiji Ozawa (1965–9), Karel Ančerl (1969–73), Andrew Davis (1975–88), Günther Herbig (1989–94) and Jukka-Pekka Saraste (from 1994). The orchestra moved from Massey Hall to the new Roy Thomson Hall (2812 seats) in 1982.

The Canadian Broadcasting Corporation has its principal English-language studios in Toronto and produces many recitals and concerts for radio and television. From 1952 to 1964 the corporation had its own major orchestra, the CBC SO, which gave regular concerts in the studio and publicly under outstanding conductors, and recorded with Robert Craft and Stravinsky. In 1992 a new Broadcast Centre opened; it contains a studio-auditorium, the Glenn Gould Studio.

In 1946, as part of the reorganization of the Royal Conservatory, an opera school was set up under the administrative direction of Arnold Walter with Nicholas Goldschmidt as musical director. In 1948 Herman Geiger-Torel joined the staff as stage director and became a dominant figure in the subsequent growth of opera in Toronto. In 1950 the Royal Conservatory Opera Company was formed and presented an opera festival at the Royal Alexandra Theatre; the success of this professional venture led to the formal organization of the Opera Festival Association, which in turn became the Canadian Opera Company with Geiger-Torel as general director. From 1961 the company performed principally at O'Keefe Centre (1960; 3200 seats), which was renamed the Hummingbird Centre in 1996. The school and the company have continued to flourish independently. The company employs staff and performers from Canada with many foreign guests; besides the standard repertory, it produced 19 Canadian works in the years 1966–99, most of them company commissions. In 1982 the company originated the use of surtitles during performance, subsequently widely used elsewhere. The school has given such operas as *Pelléas et Mélisande*, *Dialogues des Carmélites*, *Falstaff*, *Ariadne auf Naxos*, *The Rake's Progress*, *The Mines of Sulphur*, *Kat'á Kabanová* and Searle's *Hamlet* (the North American première). Among the singers it has produced are Victor Braun, Ermanno Mauro, James Milligan, Gino Quilico, Teresa Stratas and Jon Vickers. Since 1969 it has functioned as a department of the University of Toronto music faculty. A Faculty of Fine Arts was established at York University in 1968, and in 1972 a music department,

which has developed distinctive areas of study that draw on ethnomusicological methods.

The Toronto Mendelssohn Choir continued to maintain its early importance; it numbers about 200 voices. After 1918 it brought either the Philadelphia Orchestra under Stokowski or the Cincinnati SO under Reiner to Toronto each season, and since 1935 it has associated regularly with the Toronto SO. The conductors succeeding Vogt were H.A. Fricker (1917–42), Sir Ernest MacMillan (1942–57), F.C. Silvester (1957–60), Walter Susskind (1960–64), Elmer Iseler (1964–97) and Noel Edison (appointed 1999). Iseler was also founder and conductor of the Festival Singers of Canada (1954–79) and the Elmer Iseler Singers (founded 1979) professional choirs which have performed regularly in Toronto and broadcast, recorded and toured widely in Canada and abroad.

The strong sacred music tradition of the 19th century (which led to the foundation of many secular choral societies) was developed in the 20th century by such distinguished organists and choirmasters as Healey Willan. St Michael's Choir School, attached to the Roman Catholic Cathedral and founded in 1937, provides a complete musical education for its students.

Chamber music ensembles have been active since the 1850s; the first to be established was the Academy Quartet (1914–24), followed by the Hart House String Quartet (1923–45), the Parlow String Quartet (1941–58), the Orford Quartet (1965–91) and the St Lawrence Quartet (founded 1989). In the 1930s a set of viols was available at Hart House, University of Toronto, and used in performance under Wolfgang Grunsky. The harpsichordist Greta Kraus settled in the city in 1939 and in the 1950s the cellist Roland Pack devoted himself to early music performance. Notable organizations are the Toronto Consort (established 1972), Tafelmusik (established 1978, an orchestra of period instruments that gives some 60 local concerts each season and tours widely) and Opera Atelier (established 1983), which produces 17th- and 18th-century opera in appropriate musical, scenic and dramatic style. Colin Tilney has been a leading harpsichordist and teacher since his arrival in 1979.

Dance bands, especially in the 1930s and 1940s, acquired local but also national prominence under such leaders as Rex Battle, Bert Niosi, Trump Davidson, Luigi Romanelli and Frank Bogart. Jazz remained essentially peripheral until the 1950s with the appearance of outstanding players and leaders such as Phil Nimmons, Cal Jackson and Ron Collier. At the same time, Collier, Norm Symonds and Gordon Delamont developed the fusion of jazz and art music techniques somewhat in the manner of the 'third stream' in the USA. Influential in the widening popularity of jazz performance was the stage-band movement in music education in schools in the 1970s.

Opera in Concert (established 1974) has given about 70 rarely-heard operas in concert versions, almost all Toronto premières and using primarily local singers. Other concert organizations include the York Concert Society (1953–64), conducted by Heinz Unger, who introduced to Toronto much of the music of Mahler and Bruckner; the Ten Centuries Concerts (1962–7), whose repertory ranged from medieval to

contemporary works; New Music Concerts and Array Music (both founded 1971), devoted to recent works by Canadian and foreign composers; and the Music Gallery, a centre for the avant garde since 1976. The Nexus Percussion Ensemble (established 1971) performs a wide variety of contemporary music and music in non-western styles. The Esprit Orchestra was established in 1983 for the performance of 20th-century music.

CARL MOREY

Torrance, George William

(*b* Rathmines, Dublin, 1835; *d* Kilkenny, 20 Aug 1907). Irish clergyman, organist and composer. He was trained as a chorister in Christ Church Cathedral (1847–51) and afterwards became organist of Blackrock (1851), St Andrew's (1852) and St Ann's (1854) in Dublin. In 1856–7 he studied in Leipzig and in 1859 entered Trinity College, Dublin, to train for the ministry. He graduated in 1864, was ordained in 1865 and served in parishes in Shrewsbury (1865–7) and Dublin (1867–9), and in Australia (1869–97). In 1879 he graduated MusB and MusD from Dublin, and in 1880 received an honorary MusD from Melbourne University. After returning to Ireland in 1898 he continued to hold ecclesiastical office and to compose, and was librarian of St Canice's Cathedral, Kilkenny.

His works include an opera, *William of Normandy* (Dublin, 1858); three oratorios, *Abraham* (1855), *The Captivity* (1864) and *The Revelation* (1882); services; hymn-tunes; and the prize-winning madrigal *Dry be that tear* (1903).

R.P. STEWART,W.H.G. RATTAN FLOOD/R.J. PASCALL

Torre, Alfonso de la

(*fl* mid-15th century). Spanish poet and theorist. He wrote the general treatise *Visión delectable* in about 1440 in the best Spanish scientific prose style of that period, although it was not published until about 1480 (followed by numerous later impressions; a facsimile reprint appeared in 1983). Torre discussed music in the section dedicated to the liberal arts and expounded aesthetic rather than technical themes, keeping well within medieval tradition and the influence of St Isidore. He conceived creation as having a formal constitution in accordance with musical proportions. He regarded as important the relationship between music and the emotional effects it can produce; in suggesting that this was a major function of music, he attributed concord, sweetness and gentleness to the enjoyment aroused by music. At the same time he gave traditional examples of the power of music to stimulate other emotions.

An Alfonso de la Torre who was a singer in Toledo Cathedral died in February 1495.

Torre, Francisco de la

(*fl* 1483–1504). Spanish composer. He was employed as a singer in the choir of the Aragonese royal chapel from 1 July 1483 with an annual salary of 25,000 maravedís; he served for 17 years. Ferdinand V awarded him a half-prebend on 15 July 1488. Torre later returned home to become a curate at Seville Cathedral. On 10 February 1503 he took charge of the choirboys, receiving an increase in salary, but shortly thereafter made them the responsibility of the new Sevillian *maestro de capilla*, Alonso de Alva. His rank on 30 September 1504 was that of *compañero*, beneath that of canon or prebendary. His surviving funerary works, notably the motet *Libera me*, are of great beauty and expressiveness. Of his secular compositions, *Dime triste, coraçon*, which quotes the folia bass, and the three-part instrumental *alta*, based on the *Spagna* bass, are particularly noteworthy. Some of his secular *romances* recall the sober Phrygian polyphony of Juan de Urrede. Torre's *romance*, *Pascua d'Espíritu Sancto* was composed for, or in memory of, the celebrations held on the Feast of Corpus Christi, the date after the surrender of Ronda on 1 June 1485. The text may be a fragment from Hernando de Ribera's versified account of incidents in the wars to recover Granada from the Moors (Knighton, 1992 and 1993).

Torre, Pietro Paolo

(*fl* 1622). Italian composer and organist. He was a monk and was organist of the monastery of S Gieronimo at Castellaccio, near Milan, when he published his only known music, *Il primo libro delle canzonette, madrigali et arie*, for one and two voices and continuo (Venice, 1622). This book contains 13 duets, which include a good deal of effective contrapuntal interplay between the voices, and six solo songs, among which the three canzonettas are the most interesting; one of them, *Dolci miei sospiri* (ed. in Leopold), has piquant contrasts of rhythm.

NIGEL FORTUNE

Torrefranca, Fausto [Fausto Acanfora Sansone dei duchi di Porta e Torrefranca]

(*b* Monteleone Calabro [now Vibo Valentia], 1 Feb 1883; *d* Rome, 26 Nov 1955). Italian musicologist. He took a degree in engineering at Turin (1905) while studying music on his own and with Ettore Lena. He campaigned for the creation of professorships in music history and musical aesthetics at Italian universities, and succeeded in having teaching faculties founded in these subjects. He taught at Rome University (1913) and became a lecturer in music history at the Naples Conservatory (1914), where he was also chief librarian (1915–23), before becoming chief librarian at the Milan Conservatory (1924–38) and lecturer at the Catholic University of the Sacred Heart, Milan (1930–35). In 1941 he was appointed professor at the University of Florence. He was vice-president of the UNESCO International Council of Music; he won the Feltrinelli Prize of the Accademia Nazionale dei Lincei in 1953.

Torrefranca developed an aesthetic viewpoint, partly derived from the philosophical ideas of Benedetto Croce and with a cogent theoretical basis, according to which music predominates over the other arts, because 'a musician's creative activity is a pure expression of his intellect, by the intellect. While the other arts express ideas and draw conclusions from them, music simply expresses, it draws no conclusions' (*La vita musicale dello spirito*, pp.45–6).

His writings particularly stress the historical importance of Italian music, especially of the 15th and 17th centuries. In *Le origini italiane del romanticismo musicale* (1930) he undertook a revaluation of the period from Corelli to Weber, Schumann and Wagner, questioning the accepted polarity of 18th-century Italian and German music in opposition to the views of Riemann. By a thorough re-examination of Platti, Galuppi, Rutini and others, he tried to minimize the ascendancy of the instrumental school of C.P.E. Bach and Schobert, and to demonstrate, for example, that Haydn, Mozart, Couperin and Rameau were all intrinsically 'Italian' composers. Firmly convinced that the origins of modern instrumental music were to be found in 18th-century Italian music, he pursued an investigation intended to assess in particular the importance of Italian influence in the development of the sonata.

His research into 15th-century music was similarly prompted by the conviction that 'not only polyphony but modern melody itself springs from our 15th-century civilization' (*Il segreto del Quattrocento*, p.13). He particularly stressed the significance of the villotta as 'the true source of the 16th-century chanson and of every kind of madrigal' and 'the true musical nucleus of the 15th century', and correspondingly minimized both the importance and the influence of the Flemish school.

Although much of his writing is overstated and dogmatic, his work had the merit of alerting Italian musicologists to the importance of topics that had been neglected in favour of the 19th-century operatic tradition.

FERRUCCIO TAMMARO

Torrejón y Velasco, Tomás de

(*b* ?Villarrobledo, nr Albacete, bap. 23 Dec 1644; *d* Lima, 23 April 1728). Spanish composer, active mainly in Peru. He spent his youth at Fuencarral, the birthplace of his father, Miguel de Torrejón, a huntsman in Felipe IV's employ. In about 1658 he became a page in the household of Pedro

Fernández de Castro y Andrade, Count of Lemos, who in 1667 was appointed viceroy of Peru. Already married, Torrejón y Velasco left Cádiz on 3 March 1667 as one of the viceroy's 113 personal attendants. From 21 November 1667 until 1672 he was superintendent of the armoury at Lima and was then appointed magistrate and chief justice of Chachapoyas province. On 1 January 1676 he was named *maestro de capilla* of Lima Cathedral, a post that he retained until his death. Throughout the rest of his career he received wide acclaim; his villancicos were known as far away as Guatemala, and at both Trujillo and Cuzco his opinions were solicited before crucial musical decisions were taken.

On 11 November 1680 a second grand organ was inaugurated at Lima Cathedral and at the public ceremony 32 musicians performed Torrejón y Velasco's polychoral villancicos, composed specially for the beatification ceremonies. On 26 June 1701 his memorial vespers music for Carlos II was performed and was very well received. On 19 October his opera *La púrpura de la rosa* was mounted at the viceregal palace to celebrate Felipe V's 18th birthday and the first year of his reign. The libretto was first used in 1660 by Juan Hidalgo (i) in an opera performed at Madrid to celebrate Louis XIV's marriage to the Spanish infanta (hence their grandson Felipe V's claim to the Spanish throne). Torrejón y Velasco's opera was commissioned by the Count of Monclova, viceroy of Peru from 1689 until 1705, and is the earliest surviving from the New World. Stylistically the music resembles that by Hidalgo for *Celos aun del aire matan*, in that *coplas* rather than recitativo secco were frequently his means of setting long stretches of narrative text. Quotations from Spanish theatrical music indicate Torrejón y Velasco's familiarity with contemporary music in Madrid. The remainder of his extant music, in archives at Cuzco and Guatemala City, is for church use, even when extremely jaunty and dance-like in character.

ROBERT STEVENSON

Torrelhas [Torrellas], Joseph

(*fl c*1700). Spanish composer. He is known only for some organ works (in *P-Pm* 1577, Loc.B, 5, *Libro de cyfra* …): three sets of variations (called *cançãos* or *canciones*), ten tientos and one *batalla*. His music shows considerable skill and reflects special fondness for the Spanish *medio registro* device, whereby the two halves of the organ manual, divided between *c'* and *c*♯, have separate registration. The works are transcribed in Hudson.

BARTON HUDSON

Torrentes, Andrés de

(*b* Berlanga de Duero, *c*1510; *d* Toledo, 4 Sept 1580). Spanish composer. A cleric from the diocese of Sigüenza, he competed for a position as alto in the choir of Toledo Cathedral on 7 June 1538; in December 1539 he was elected *maestro de capilla*, resigning from this post on 16 March 1545. He resumed his position for a second term, between 16 December 1547 and 26 June 1553, succeeding Cristóbal de Morales, and for a third term, from 29 November 1570 until his death. Details of his activities during the intervening years are not known. During the early part of his career Torrentes enjoyed the protection of Cardinal Juan de Tavera, Archbishop of Toledo (1534–45), and supervised the copying of a series of polyphonic choirbooks for the cathedral choir. The manuscripts, still held in the cathedral archives, preserve important Spanish and Franco-Flemish repertories. All extant polyphony by Torrentes was copied into this series before 1549. Most of his compositions are *Magnificat* settings, psalms and

hymns for *alternatim* performance; they employ standard contrapuntal techniques, including chant paraphrase and cantus firmus. His two masses are indebted to Franco-Flemish traditions: the *Missa 'Nisi Dominus'* is based on a motet by Jean L'Héritier; it is also indebted to the *Nisi Dominus* mass attributed to both Crecquillon and to Manchicourt, and to mass movements by Carpentras.

WORKS

all edited by Noone (1982)

Masses: Missa 'Nisi Dominus', 4vv [on L'Héritier's motet]; Missa de Beata Virgine, 5vv [Ky and Gl only]

Motets: Ave gloriosa Dei, 5vv; O Sapientia, 4vv

Canticles: Magnificat primi toni, 6vv [odd verses]; Magnificat primi toni, 5vv [odd verses, inc.]; Magnificat primi toni, 4vv [even verses]; Magnificat secundi toni, 6vv [odd verses]; Magnificat tertii toni, ?6vv [even verses, frag.]; Magnificat tertii toni, 4vv [odd verses]; Magnificat quarti toni, 6vv [odd verses]; Magnificat quarti toni, 5vv [even verses]; Magnificat quarti toni, 4vv [even verses]; Magnificat quinti toni, 6vv [even verses]; Magnificat sexti toni, 6vv [odd verses]; Magnificat septimi toni, 6vv [odd verses]; Magnificat septimi toni, 4vv [odd verses]; Magnificat octavi toni, 6vv [even verses]; Magnificat octavi toni, 4vv [odd verses]; Nunc dimittis quarti toni, 6vv; Nunc dimittis octavi toni, 6vv

Hymns: Aurea luce et decore, 4vv; Celsi confessoris, 6vv; Christe redemptor omnium, 4vv; Conditor alme siderum, 4vv; Deus tuorum militum, 4vv; Exultet orbis gaudiis, 4vv; Hostis Herodes, 4vv; Haec toletana nobilis, 4vv; Iste confessor Domini, 4vv; Jesu corona virginum, 4vv [also attrib. Boluda]; Nova resultet gaudia, 4vv; Pater superni luminis, 5vv; Sanctorum meritis inclyta, 4vv; Tibi Christe, 4vv; Tristes erant apostoli, 5vv; Urbs beata Jerusalem, 4vv; Veni Creator Spiritus, 4vv

Psalms: Asperges me, 4vv; Eripe me, Domine, 4vv; In convertendo, 4vv; In exitu Israel, 4vv, *E-Tc* 12; In exitu Israel, 4vv, *Tc* 21; Lauda Jerusalem primi toni, 5vv; Lauda Jerusalem secundi toni, 5vv; Lauda Jerusalem tertii toni, 6vv; Lauda Jerusalem quarti toni, 5vv; Lauda Jerusalem sexti toni, 4vv; Lauda Jerusalem octavi toni, 5vv; Laudate pueri primi toni, 6vv; Laudate pueri secundi toni, 5vv; Laudate pueri quarti toni, 6vv; Laudate pueri quinti toni, 4vv; Laudate pueri sexti toni, 6vv; Laudate pueri octavi toni, 6vv; Levavi oculos meos, 6vv; Gloria Patri (Ps. cxvi) primi toni; Gloria Patri (Ps. cxvi) secundi toni; Gloria Patri (Ps. cxvi) tertii toni; Gloria Patri (Ps. cxvi) quinti toni; Gloria Patri (Ps. cxvi) sexti toni; Gloria Patri (Ps. cxvi) octavi toni

Lamentations: Aleph. Quomodo obscuratum, 6vv; Et factum est postquam, 5vv

Torres (Castillo), Allen (Paulino)

(*b* San José, 25 March 1955). Costa Rican composer and trombonist. He obtained his school certificate at the Castella Conservatory. He studied composition at Costa Rica University with Flores Zeller and Benjamín Gutiérrez Sáenz (1982–6) and took master classes with Atehortúa, Ginastera and Paul Winter. He has taught harmony at the Castella Conservatory.

He is considered one of the most talented composers of the new generation. His studies at the Castella Conservatory brought him into contact with other artistic forms, giving him the opportunity to compose numerous theatre and dance pieces. Many of these, including the musical comedy *El delfín del corobicí* and the ballet *Yaga y el hombrecillo de la flauta* (1996), were for groups and productions associated with the conservatory. He was first trombonist for the Castella SO and formed part of some chamber groups. In 1994 he was invited to participate in the Sixth Caribbean Composers' Forum in San José, where he presented his *Variaciones sobre una cimarrona* for brass quintet. In 1988 he was invited by the Soviet Union Composers' Union to attend the Leningrad Music Festival. In 1992 the National SO gave the first performance of his *Tres acuarelas* and in 1996, the Castella SO gave the first performance of his *Gran danza sinfónica*, dedicated to Arnoldo Herrera, who was director of the Castella conservatory. This last work earned him the Ancora Prize from the newspaper *La nación*.

WORKS

(selective list)

Stage and choral: Yaga y el hombrecillo de la flauta (ballet), 1996; El delfín del corobicí (musical comedy); Divertimiento, chorus, wwInst: Scherzo, band, perf. 1987; 3 acuarelas, orch, perf. 1992; Variaciones sobre una cimarrona, brass qnt, perf. 1994; Gran danza sinfónica, orch, perf. 1996; Fantasía costarricense, str; Malabares, vn, pf; Marcha de circo, band; Tesis, band; La tropa del 56, band

JORGE LUIS ACEVEDO VARGAS

Torres (Rocha), Juan de

(*b* before 1596; *d* Salamanca, 6 Aug 1679). Spanish composer. He was *maestro de capilla* of Plasencia Cathedral. After the death of Manuel Correa the Zaragoza Cathedral canons voted on 7 November 1653 to elect Torres as his successor. Three reasons were given for choosing him without requiring a personal examination: report had it that he was the best *maestro de capilla* in Castile, that his music was much more up-to-date than that of his rival, Luis Bernardo de Jalón of Seville Cathedral, and that he was willing to come for a yearly salary of 400 ducats. But after further correspondence he seems to have declined the post, or if he came he left before the end of 1653. In 1654 he became *maestro de capilla* of

Salamanca Cathedral. The 1649 catalogue of the library of King João IV of Portugal records a Lenten motet and four Spanish villancicos by him, all of which are lost. An attractive canción, *Lucinda, tus cabellos*, is credited to a Juan de Torres in the Sablonara Cancionero of 1625 (in *D-Mbs*, ed. in Aroca); if this is the same Torres he outlived every other composer represented in the collection. The La Seo archive at Zaragoza contains a *Salve regina* for seven voices and basso continuo, and two instrumentally accompanied villancicos by Torres.

ROBERT STEVENSON

Torres, Melchior de

(*fl* mid-16th century). Spanish music theorist. He wrote the treatise *Arte ingeniosa de música* (Alcalá de Henares, 1544, 2/1559) while *maestro de capilla* at Alcalá de Henares. It was often cited by later theorists, from which its doctrinal content can be deduced. Technical rather than speculative in character, it gave simple rules for performing plainchant and polyphony. Torres discussed the melodic intervals used in polyphony and aspects of hexachord notation, remaining close to tradition. He also considered the evolution of written notation, and observed a reduced use of the larger note values and increasing division of the smaller notes, as well as the increase of the compass.

Torresani, Andrea

(*b* Asola, 4 March 1451; *fl* 1479–1529). Italian printer and publisher. Active in Venice, he was primarily a publisher rather than a printer after 1495, when he formed a full partnership with his son-in-law Aldo Manuzio. He published two missals with music in 1496 and 1497, using roman chant type. After Manuzio's death in 1515, he took over the Aldine press. During 1521, in partnership with Andrea Antico, he issued sacred music including masses and motets.

Torres Jurado, Antonio de

(*b* La Cañada de San Urbano, nr Almería, 13 June 1817; *d* Almería, 19 Nov 1892). Spanish guitar maker. Around 1835 he became a carpenter in Vera. In 1845 he moved to Seville, where he started making guitars in earnest around 1850; his earliest surviving one is dated 1854. By 1858 one of his guitars had received a bronze medal in Seville. An instrument he built in 1859 was used by Miguel Llobet Soles for many years. Francisco Tárrega's first guitar is reported to have been a Torres of 1864, and Tárrega later owned two more. In the later 1860s Torres returned to Almería and opened a china shop, but by 1875 he was once again building fine, full-size guitars noted for their volume and resonance. From 1883 until his death he made about a dozen instruments a year, among them several 11-string guitars. Although Torres was credited for a time with the almost single-handed invention of the modern classical guitar, evidence now suggests that he merely incorporated extant refinements, in particular the fan-bracing of the table, into a larger and more resonant design. The use and promotion of his guitars by the leading Spanish virtuosos of his day assured his reputation at a moment when the modern instrument, with an attractive new Spanish repertory, was beginning to be noticed in Spain and beyond.

THOMAS F. HECK

Torres Santos [Torres-Santos], Raymond

(*b* Río Piedras, 19 June 1958). Puerto Rican composer. He was born into a musical family, receiving his first instruction from his father, Ramón Torres Olivo. General studies and architectural courses at the University of Puerto Rico (BA 1980) were undertaken concurrently with enrolment at the Puerto Rico Conservatory of Music, where his teachers included Narciso Figueroa (piano) and Amaury Veray (composition). Graduating from both institutions in 1980 (BA and BMus, respectively), he then attended the University of

California at Los Angeles with scholarships extended by the University of Puerto Rico and the Institute of Puerto Rican Culture. He took the MA in 1982 following studies in composition, electronic music, orchestral conducting and film music with Henri Lazarof, Paul Reale, Samuel Kramalnick and David Raksin respectively. With a scholarship from the West German government, he then attended the Institute for New Music at Darmstadt. Following studies with John Chowning and Leland Smith at the Center for Computer Research in Music and Acoustics at Stanford University, he again enrolled at the University of California, Los Angeles, receiving the PhD in 1986.

After occupying teaching posts, visiting professorships and resident composer appointments at California State University (San Bernardino), Stanford University and the University of Padua, he was appointed to the chair of the music department of the University of Puerto Rico in 1993. In 1994 he became rector of the Puerto Rico Conservatory of Music, returning to a teaching post at the University of Puerto Rico in 1998.

Torres has received a great number of awards, commissions and grants from such entities as the Festival Casals, Inter-American University of Puerto Rico, the Puerto Rico SO, the Institute of Puerto Rican Culture, Ballets de San Juan, ASCAP and BMI. His musical style is eclectic, and he recognizes influences ranging from Stan Kenton and John Williams to Aaron Copland and Stravinsky's *Le sacre du printemps*. In the words of an observer, Nicolas Slominsky: 'His works show a powerful rhythmic continuity coupled with a natural and innovative gift for melodic writing'.

Torres' catalogue of works is both extensive and varied, including most of the musical media and genres cultivated internationally in the decades of the 1980s and 1990s.

DONALD THOMPSON

Torres Strait Islands.

Island group in the Torres Strait, north of Cape York peninsula, Queensland, Australia, and south of the island of New Guinea. There is no indigenous term for the region, named after Luis Baez de Torres, the first known European to navigate it in 1606. While the Melanesian peoples of the Torres Strait employ the name 'Torres Strait Islanders', it is more common that they affiliate themselves with a particular island, village and family. Similarly, although an Islander performance can be broadly described in the common creole as in an 'Ailan stail', each performance also references the quite specific traditions and histories of one of the 18 communities in the Strait. The population of these diverse communities is small and is only a fraction of the total 31,000 Islanders, most of whom live on the Australian mainland. Three distinct languages are spoken: Meriam Mir in the eastern islands, Kala Lagaw Ya (and dialects) in the western islands and Torres Straits Broken, the creole language which is spoken throughout the area.

1. Historical background.
2. Music and dance.
BIBLIOGRAPHY

JUDE PHILP

Torres Strait Islands

1. Historical background.

Most Islander traditions recognize a movement of practices and customs from the western islands to the east in the distant past, when legendary heroes with supernatural powers moved from island to island bringing with them songs, dances, natural phenomena and rituals.

At Mabuiag, in the western islands, the exploits of the powerful Kuiam (born from an Aboriginal father and a Mabuiag mother) were celebrated at the island of Pulu, where Kuiam is said to have died. He gave specific

songs and rites to the people of Mabuiag, and his exploits are also remembered through musical performances and stories by people of other islands in the Strait and beyond. Landtman (1927) recorded a song genre from Kiwai known as *Kuiamo pipi* ('Kuiam's war song'), which, like the northern and western island songs it borrows from, is one of the few dance-song genres performed by men and women.

At Mer, in the east, the most powerful ritual cycle of the pre-colonial period (or *bepo-taim*) revolved around the figures of Malu and Bomai. As with many features of pre-colonial life, access to, participation in and knowledge of the ritual cycle was restricted to men and both reflected and gave meaning to the division of the island into clan groups. Each clan had particular responsibilities within the ritual cycle, including the Zagareb le, who were responsible for singing and playing the sacred drums, and members of the Beizam le, who traditionally wore the sacred masks. Similar to other island communities in the Strait, animal or plant totems were a feature of ritual life.

The majority of rituals connected with ceremonial activity involved both song and dance. Both were also a feature of secular life, and certain games, such as making string figures, also had associated songs. Music and dance was a feature of trade encounters, not only as a part of secular life but also as a trade item in itself.

Colonization began with the exploration of the Strait by British scientific expeditions from 1770, when charts for navigation of the region were compiled and expanded, allowing for safer and quicker passage to the new colonies in Australia. By the 1840s considerable numbers of Asians, Europeans, Pacific Islanders and Aboriginal peoples of Australia came or were brought to the region to fish for trepang (sea-cucumber) and to trade in turtleshell. These numbers rose with access to pearl beds in the central and western region. With this increased interest, parts of the Torres Strait were annexed to Queensland State in 1879. Islanders both participated in and were exploited by the new fisheries industries. Their welfare was soon championed by the London Missionary Society, which arrived at the eastern island of Erub in 1871, a day commemorated on 1 July as the 'Coming of the Light'. Employing Pacific Islander teachers, the Society spread across the Strait and into Papua New Guinea, teaching in indigenous languages and rigorously imposing new structures (based around the church) on Islander life. While some traditional practices, notably warfare and indigenous belief systems, were suppressed by the government and church, many secular cultural practices were actively supported. Indeed, Mosby (1997, p.47) has argued that even inter-island warfare continued to a degree through competitive dance competitions between islands and symbolically in dances that employed elaborated fighting paraphernalia and drew from the traditions of warfare.

In 1914 the Society handed administration of the area to the Anglican church of Australia. It was a time of increased white dominance over Islanders' lives, a part of the 'White Australia Policy' that governed the movement of Islanders, controlling their freedom to travel from their home islands and to participate in the fishing industries. Pacific Islanders were forcibly removed from the area unless they could prove familial relations,

and by the beginning of World War II the large contingent of Japanese workers had also been removed. During wartime many men joined the army, while Islanders in the lower western group were evacuated, and the 'outer islands' were left to survive as best they could. The end of the war marked the beginning of new opportunities for Islanders: many left the Strait to work on the mainland, while others worked in the fisheries industries, filling the vacuum left by the Japanese and Pacific Islanders. In 1967 they and their Aboriginal neighbours were 'granted' citizenship, and by 1992 enjoyed equal rights with settlers after winning the first successful land claim against the Australian government.

Historical events have inspired composers and choreographers of the Strait. The cautious first meeting between Islanders and missionaries is re-enacted in 'Coming of the Light' dances by warrior dancers employing the old songs of war (called *pipi* in the northern islands and *kawaladi* in the west). Similarly, songs that draw upon the musical traditions of the Pacific Islanders who came to the Strait tell of the history of inter-marriage and of the period at the height of the fisheries industries. Performances from Badu Island depict the movement of American fighters over their island in World War II, and the stories of their involvement feature the distinctive 'aeroplane' headdresses employed in the accompanying dance (Wilson, 1993, pp.101–2). Songs such as *T.I., My Beautiful Home* (referring to Thursday Island) explore the Islanders' feelings of dislocation as they moved to the mainland for employment after the war.

Torres Strait Islands

2. Music and dance.

In general, these are integrally linked, although there are several musical contexts without dance: incantations, music accompanying certain *bepo-taim* activities (e.g. fishing or games) and songs within storytelling. Islanders classify music according to the history to which it refers, its tempo and harmonic structure, language and the dress of the accompanying dancers. There is little purely instrumental music, although dance songs have instrumental introductions, which are generally the central rhythm of songs repeated while dancers prepare themselves. Certain ritual cycles, such as *Malo-Bomai* include passages of music without singing. Although with some songs there are few changes over several generations, innovation is also important: music of the Torres Strait Islanders has always drawn from the adjacent musical traditions of Papua New Guinea and Australia through long-standing trade and familial relations, as well as incorporating elements of the music entering the region as a result of colonization.

The first detailed European description of Islander performance comes from shipwrecked survivors of the mid-1800s, particularly John Ireland (King, 1838) and Barbara Thompson (Moore, 1979). Thompson described how songs were taken from one island to another as a part of trade which, along with warfare, brought the Islanders together (ibid., p.222–3). Oswald Brierly, who wrote down Thompson's recollections, also attempted to transcribe songs of the Kaurareg peoples of Muralug. One song, the *Ghost Ship Dance*, employed relics of European trade items in the costume and talks of Islanders' expectations of the new European trade (ibid., 199 and

226). Samuel McFarlane, one of the first of the Society's missionaries in the Strait, described performances of games and dances by both Pacific and Torres Strait Islanders at their annual inter-island 'May' meetings in his reports (1872–87).

However, the most detailed analysis of music from the period of colonization comes from the psychologist and amateur musician C.S. Myers, who was part of the 1898 University of Cambridge Anthropological Expedition to Torres Strait. Using technology brought for physiological testing and linguistic analysis, Myers and the Expedition leader, A.C. Haddon, recorded songs and filmed a small excerpt of dances by Meriam and Aboriginal peoples at Mer. Myers theorized that while many songs showed influence both in the distant and more recent past, tunes belonging to their religious ceremonies were not affected by what he viewed as 'contamination' with European music. Importantly, Myers also documented the songs' performers and composers. He argued that in Torres Strait a person may be credited as the composer if they brought a song to an island and were the first to perform it there, citing the example of the singer Boa, who was credited as the composer of a song by the Meriam, although the song was heard by Boa at Tudu and was in fact originally from Muralug (Haddon, 1901–35 [1912], pp.239–41).

Beginning in the late 19th century, the musical influences of colonization brought new styles to the Islander repertory, both secular and religious. Islanders were taught Christian hymns by British missionaries and by Pacific Islanders, and services were reportedly carried out in a mixture of languages: Samoan, Lifuan, Englis and Meriam Mir or Kala Lagaw Ya, depending upon the Islanders concerned and the linguistic ability of the preacher (see Chalmers, 1886–91). From this mixture of styles Islanders began to compose their own hymns, analysed by Beckett as featuring a two-part harmony with lines that move independently, at times in antiphon or overlapping (*Modern Music of the Torres Strait*, 1981, p.2 of accompanying booklet).

Aside from church hymnody, Islanders incorporated other influences in their performances. Haddon noted that a particular dance of the Meriam was inspired by the music and action of a ferris wheel at the administrative island of Thursday Island (1888–9). Army drills also influenced *segur/segul* dances (see below) and inspired the creation of a separate genre, particularly popular in the western islands, where drill band competitions are a part of inter-school competitions. In the 1920s Hurley commented upon Mer Islanders' mimicry of the Thursday Island regiment, employing the stiff gait and repetitive drill motions within a dance (1924, p.36). With increased colonization, other musics (such as Polynesian and Malay genres) entered the Strait, in addition to Western popular musical styles.

Contemporary performance in the Torres Strait combines these elements in a variety of ways. Dances and their accompanying songs that relate to *bepo-taim* are known as *kap kar* (Meriam Mir) or *mina kab* (Kala Lagaw Ya), literally 'real' or 'authentic' dance. Secular or 'play' dancing and its accompanying dance-songs (which emerged strongly at the turn of the 20th century) are known as *segul* (Kala Lagaw Ya) or *segur* (Meriam Mir).

Both these types of repertory are considered 'older style' and are currently maintained separately from other styles.

The musical style of *bepo-taim* is markedly different from later styles. The songs of *bepo-taim* are sung by men, are repetitive in their arcane wording and feature descending pitch; the vocal quality resembles crying. Laade described the framework of *bepo-taim* as anhemitonic pentatonic. Musical instruments consist of shell-trumpets and *kundu* and *warup* hourglass drums which are hollow, single-headed wooden drums (3–4 ft), with a tumpanium at one end and the other left open and played across the musician's lap and beaten with one hand. The *kindu* drum is a long tube with a pinched 'waist' where a handle is attached, while the *warup*, exclusive to the Strait, resembles a curved hourglass and has no handle. The open end of the drum is split and resembles an open 'jaw'. Both are tuned through heating beeswax on the tympanum to tighten the lizard skin (or formerly turtle-bladder, when lizard skin could not be obtained).

As Islanders began to move to the mainland, new styles of worship became popular, notably that of the Pentecost. While Anglican church music is usually accompanied by *kundu* drums and acoustic guitar, Pentecostal songs are accompanied by electric guitars and modern drum kits (Reeves-Lawrence, 1998, p.59). Other innovations in performance include the substitution of modern materials for older ones, for example in dance costumes. Sometimes this extends to instruments: objects such as plastic piping or discarded oil drums have come to replace the bamboo *marap* drums, probably introduced by Pacific Islanders. *Marup* are bamboo tubes around 75 cm long, with the inner nodes knocked out and the two end nodes left; there is no tympanum. These percussion instruments, played by women, are placed horizontally on a stand and beaten with two sticks; more traditional percussion instruments and rattles worn by dancers also occur. *Marap* are used in all genres except *bepo-taim* songs. In the northern islands, *segul* songs are distinctive in their use of guitars; despite this modern influence, however, they are still considered part of the 'traditional' music of the Torres Strait.

Certain occasions are the impetus for the creation of new *segur/segul* songs, such as inter-island competitions, family gatherings, the greeting of visitors and important days in the Torres Strait calendar. The existence of professional performers and troupes also stimulates this creativity.

The diversity of influences in contemporary Torres Straits musical performance is illustrated by performers such as the Mills Sisters, performing from the early 1960s. Drawing on their family's Samoan roots, their strongly harmonic music incorporates ukulele and guitars, with repertory ranging from Islander ballads exploring their Pacific heritage to international pop tunes. Perhaps the most nationally famous artist is the singer and dancer Christine Anu of Saibai Island, whose music draws on mainstream dance and hip-hop styles but also employs segments or samples of Islander songs, with lyrics that mix English, the creole language 'Broken', and her island dialect, Kala Kawaw Ya.

Torres y Martínez Bravo, Joseph [José] de

(*b* Madrid, *c*1670; *d* Madrid, 3 June 1738). Spanish composer, organist, theorist and publisher. He entered the royal chapel boys' school in 1680, when he must have been between seven and ten years old. His training as an organist was almost certainly undertaken at the Daroca school by Pablo Bruna, and he was probably tutored in composition by the then master of the royal chapel, Cristóbal Galán. Torres was appointed organist of the royal chapel on 14 December 1686, and taught at the school there from 1689 to 1691.

The forced exile of the *maestro de capilla* Sebastián Durón, because of his support for the Archduke of Austria in the War of the Spanish Succession, gave rise to a vacancy in the royal chapel which was filled temporarily by Torres from 1708 until his definitive appointment on 3 December 1718. A second chapel functioned from 1721 at La Granja, where the court had moved as a result of the king's melancholy state of mind. It was dissolved in 1724, at the start of Felipe V's second mandate, after the untimely death of his son Luis I, in whose favour he had abdicated. This resulted in the incorporation of the musicians of this chapel, and of their Italian director Felipe Falconi, into the royal chapel in Madrid, which was thereafter headed by two masters, Torres and Falconi, symbols of the musical aesthetics of the day which oscillated between the national style and the new italianizing tendencies.

The fire of 1734 in the old Alcázar of Madrid forced Torres to become more active; along with Antonio Literes he was obliged to compose intensively in an effort to recover and replace the music archive, which had been destroyed. Falconi was not called upon to cooperate in this task. Torres's first marriage was to Teresa de Eguiluz, with whom he had two sons, José and Manuel. He married his second wife, Agustina Enciso y Aguado, just four months before his own death. He was secretly buried in the convent of Carmen Calzado. Falconi had died the previous month.

Torres founded his Imprenta de Música in Madrid, where he published many of the most important music treatises of the time and other earlier ones, such as *El arte de canto llano y de órgano* by Francisco de Montanos, first published in 1592. The first work, published in 1699, was *Destino vencen finezas* by Juan de Navas, and the first musical treatise, Pablo Nassarre's *Fragmentos músicos*, was issued the following year. In 1702 he published his own important treatise *Reglas generales de acompañar, en órgano, clavicordio y harpa* – influenced by Lorenzo Penna's *Li primi albori musicali* (Bologna, 1672) – in which figured bass was for the first time explained in Spanish. A second edition appeared in 1736 with an additional section dealing with the Italian style and introducing the acciaccatura as well as Italian musical terms. In this edition Torres announced his intention of publishing a Spanish translation of Brossard's dictionary, but this he never completed, probably because of ill health. In 1705 he published the *Canciones francesas de todos ayres*, modifying the original so as to group the pieces by key; its main importance lay in the fact that it was the first work published in Spain with basso continuo. Over 30 works were published by the Imprenta de Música, by Sebastián Durón, Joaquín Martínez de la Roca (*Los desagravios de Troya*), Nassarre, Montanos, Antonio Martín y Coll, Diego Fernández de Huete, Pedro Ulloa, Jorge de Guzmán and others. Torres provided the means, within an

exceedingly poor environment, for the regular publishing of musical works in Spain, while in previous centuries works had always been published abroad. The quality of his editions and his tireless work in the field of technical printing innovations won him an exemption from taxes and considerable royal privileges. The Imprenta de Música was sold at auction after his death and thereafter published non-musical works.

Torres's musical output was centred mainly on liturgical music in almost every genre; he also composed secular pieces. Two distinct stages are evident in his work: the period from his early years to his appointment as *maestro de capilla* in 1718; and his mature period, from 1718 onwards. Torres at first followed the traditional Spanish style, using the classical techniques of imitative polyphony, accompanied by a *basso seguente* in works which were not *a cappella*. He employed devices which at the time were virtually obsolete, such as complex canonic forms; they nevertheless serve as evidence of his solid technical base. His *Missarum liber*, published by the Imprenta de Música in 1703, came to serve as a kind of user's manual throughout Spain. Torres's austere style gradually changed, becoming richer in instrumentation with the introduction of violins, oboes and basso continuo, and revealing a certain French influence which he had already shown with the publication of the *Canciones francesas*. In 1712, during this gradual process of evolution towards a more international style, he included in Montanos's treatise a cantata in 'Italian style', using the recitative–aria form which contrasted with the traditional verse and refrain style of the villancicos.

Torres's second period differed from his first in both means and aesthetics. He abandoned the *prima pratica* employed in most Spanish music of the first half of the 18th century, and incorporated devices from the *seconda pratica*. The psalm *Confitebor tibi Domine* (1718) should be considered, according to Levasseur-de-Rebollo, as the cornerstone of this change. He composed works for two or three choirs with orchestra in which the homophonic vocal texture reflected a feeling for polychoral writing typical of Spanish Baroque music. He also introduced Italian terms for dynamics and maintained his use of continuo accompaniment. His works became progressively richer in orchestral terms, especially towards the end, although some of these were later adapted by other composers to the orchestral resources of the time. Occasionally a short orchestral prelude preceded a work, with interspersed solo passages for oboe or violin, as in the mass *Cantemus Domino*. The brevity of their construction and the austerity and intensity of their expression earned Torres widespread recognition in his time, and enabled him to enjoy real prestige, not only in Spain but also in Portugal, Italy, England and Latin America.

In all likelihood Torres y Martínez Bravo is also the author of the keyboard collection *Libro que contiene onze partidos del M[aestr]o D[o]n Joseph de Torres*, presently in the Jesús Sánchez Garza collection in the Centro Nacional de Investigación, Documentación, e Información Musical in Mexico City. Felipe Ramírez Ramírez (in his study of the collection, Mexico City, 1993) has contended, on the other hand, that it is actually the work of Joseph de Torres y Vergara (1661–1727) who was a well-rounded and prominent figure in Mexico in the early 18th-century. Torres y Vergara was a lawyer, deacon, priest, consultant to the Inquisition, school master and

chantre, but there is no record of him being a composer, keyboardist or practising musician. Given the plentitude of Torrres y Martínez Bravo's scores in New World archives and his expertise as an organist, it seems most probable that he, rather than Torres y Vergara, authored the organ pieces in this manuscript.

Torres Zuleta, Luis

(*b* Bogotá, 8 March 1941). Colombian composer. He studied at the Conservatorio Nacional in Bogotá with Antonio Benavides, José Rozo Contreras, González-Zuleta and Olav Roots, graduating with Honours in composition in 1968. His works are often performed by the Colombia SO and he has received prizes for several of them. His *Concertante* for cello and orchestra was awarded the Pegasus Prize and his *Tríptico sinfónico* (1989) for orchestra was recorded on a set of three CDs issued to commemorate the quincentenary of Colombus's voyage to America in 1492. The composer observes that 'there is a double formal intention: one that is based on a tripartite structure, the other deliberately alluding to the multiple forms of expression of the romantic symphony'. In addition to his numerous orchestral works, he has composed various chamber, choral and vocal works, including *Paratonal* no.1 (1977) for organ, brass and percussion and *Paratonal* no.2 (1981) for strings, celesta, harp, piano and percussion, in which 'the general style is contrapuntal and, at the same time, various thematic nuclei are employed, the melodies of which are highly chromatic and reminiscent of 12-note music, but without using serial techniques'. His work is generally of an abstract, contrapuntal nature, reflecting an extremely cohesive structure and remarkable mastery of colour and form.

SUSANA FRIEDMANN

Torri, Pietro

(*b* Peschiera, Lake Garda, *c*1650; *d* Munich, 6 July 1737). Italian composer and organist. He is first mentioned as organist and *maestro di cappella* at the court of the Margrave of Bayreuth in 1684 (though Junker contended that he joined the court as organist in 1667 and succeeded J.P. Krieger as Kapellmeister in 1672). He left the court in 1684 and may have spent the next five years travelling in Italy. In 1689 he joined the court of Max Emanuel II, Elector of Bavaria, in Munich as organist, and the next year his first stage work, *Gli oracoli di Pallade e di Nemesi*, was performed to celebrate a visit by Emperor Leopold I. Thereafter he regularly prepared operas and serenatas for the court theatre.

When Max Emanuel became governor of the Spanish Netherlands in 1692 he brought members of his chapel with him to Brussels and named Torri *maître de chapelle*. In 1696 Torri was guest Kapellmeister at the court of Hanover, and the opera *Briseide*, given in Carnival that year, may be his composition. Agostino Steffani probably extended Torri this invitation, and he may also have recommended Torri to the Munich court in 1689. This tends to support the statement in some contemporary sources that Torri was one of his pupils; the existence of Torri's chamber duets further strengthens this claim, but there is no secure evidence.

With the death of Electoral Prince Joseph Ferdinand in 1689 the Bavarian claims to the Spanish throne lapsed and Max Emanuel returned to Munich. Seeing no chance of replacing the Kapellmeister and director of chamber music G.A. Bernabei, who had remained in the Bavarian capital, Torri asked Steffani to arrange a position for him at the court of Prussia. Torri seems to have returned to Munich, however, and in 1701 he was named director of chamber music with a salary of 1300 gulden.

Max Emanuel had joined the side of France in the War of the Spanish Succession and, with the defeat of his forces by the English at Höchstädt in 1704, he was forced to return to Brussels in exile together with a portion of his chapel, including Torri and E.F. dall'Abaco. No operas were produced in Brussels because of the war, although some of Torri's sacred works and the oratorio *La vanità del mondo* date from this time.

The English seized Brussels in 1706, and Max Emanuel again fled, spending the next nine years in the French-held regions of Saarbrücken, Mons and Namur, taking Torri and most of his chapel with him. P.A. Fiocco, who had been named *lieutenant de la musique de la cour* in 1696, was named *maître de chapelle* of the Brussels court in that year and served in that capacity until his death in 1714. Finally in 1715 Max Emanuel returned to Munich with his court, and Torri, with the title of *Hofkapell-Director* and a salary of 2000 gulden, entered his most creative period, producing nearly an opera a year until his death. Although the scale of his duties was somewhat reduced after 1726 by Max Emanuel's successor, Karl Albrecht, Torri's salary was increased to 2500 gulden on the death of Bernabei in 1732, and he was finally named Hofkapellmeister.

The style of Torri's operas and instrumental music is founded in the late Venetian school, but shows the strong influence of Alessandro Scarlatti. Torri, however, lacked Scarlatti's skill of characterization and (according to Kaul) his coloratura arias lack dramatic accent, and his lyric arias are merely graceful; his ensembles, for the most part, fail to delineate the different emotions of the characters involved. During Torri's first stay in Brussels the operas of Lully were performed with great success under the direction of Fiocco, and their influence can be felt in Torri's late operas which use ballet, accompanied recitative, declamation, instrumentation and chorus in the French manner.

Torri's vocal chamber music, especially his chamber duets, achieved fame throughout Europe, and Hawkins mentioned '*Heraclitus and Democritus*, in which the affections of laughing and weeping are contrasted with singular art and ingenuity'. Like those of his presumed teacher, Steffani, Torri's duets are in an Italian idiom laced with French influences, and vary from homophonic two-part settings with continuo to multi-movement cantata forms and dramatic dialogues.

WORKS

operas

Le peripezze della Fortuna (6), ?Brussels, ?Jan 1695, *D-Mbs* [for wedding of Maximilian II Emanuel and Therese Kunigunde]

Untitled torneo, Munich, Schloss Leuchtenberg, 30 Jan 1702, *Mbs* (pts)

Enone (pastorale), Brussels, ? 12 Oct 1705, *Mbs* (frag.)

GORDANA LAZAREVICH

Torricella, Christoph

(*b* Switzerland, *c*1715; *d* Vienna, 4 Jan 1798). Swiss music publisher and art dealer. He established his business in Vienna in the early 1770s, and on 5 April 1775 advertised the arrival of new copper engravings in the *Wiener Zeitung*. His first dealings in music consisted of imports from England, the Netherlands and Paris, his source for Anton Huberty's publications. In 1781 his own first publications appeared. Initially he was a commission agent for Anton Huberty, who had moved to Vienna and eventually became only an engraver for Torricella, gradually handing over many of his pieces; one of the most important was Geminiani's violin tutor, which Torricella published in a splendid new edition on 16 October 1782. The firm flourished in its early days, but increasing competition from Artaria & Co. culminated in a public auction (12 August 1786), at which most of Torricella's plates were obtained by Artaria (see illustration). He continued to run his art shop until he died, impoverished.

Torricella was a pioneer of music publishing in Vienna, but because of his advanced age his enterprising programmes were never fulfilled. He published several symphonies by Haydn, Mozart's piano sonatas k333/315*c*, 284/205*b* and 454, the variations k398/416*e*, 265/300*e* and 455 and a piano reduction of the overture to *Die Entführung aus dem Serail*, as well as three piano concertos and six accompanied sonatas by J.C. Bach,

Clementi's three sonatas op.10, several works by F.A. Hoffmeister and Leopold Kozeluch, arias by Sarti and Salieri and three caprice-sonatas and seven variations by Vanhal. Works by Georg Druschetzky, Peter Mandrup Lem, Rosetti, Maximilian Stadler and A.F. Titz were also published; these editions are now very rare.

ALEXANDER WEINMANN

Torrijos, Diego de

(*b* Torrijos, province of Toledo, 6 April 1653; *d* El Escorial, 30 Dec 1691). Spanish composer and organist. He was born Diego Díaz de Castro and entered the Hieronymite monastery of El Escorial in 1669 as a choirboy. According to his necrology, he brought to El Escorial an extensive and 'scientific' understanding of music; he played both the organ and harp, and, along with the harpist and composer Juan de Durango and others, was a leading figure in all aspects of music-making at El Escorial. He served for a time as *maestro de capilla*, and taught music and the organ to the choirboys and novice monks. Torrijos's handwriting appears prominently in the archive at El Escorial in copies of his own works and other composers'. In the sacristy altarpiece, *Sagrada forma* by Claudio Coëllo, Torrijos is probably the figure accompanying the choir at a silver organ (a gift from the Emperor Charles V to Philip II).

Torrijos's output is contained in 70 manuscripts at El Escorial and is entirely sacred: works with Latin texts, villancicos with Castilian texts and organ works. His vocal works, like those of many Spanish composers of the period, are a mixture of imitative counterpoint and chordal, polychoral passages. Separate continuo parts for either organ or harp are usually provided for each choir in polychoral works. Imitative counterpoint is more prevalent in his conservative Latin polyphony, while the villancicos tend to be more chordal. His more than 50 Latin works include nine masses, 17 psalms, five hymns, sequences, first and third Lamentations for Tinieblas, music for the Office for the Dead, five *Magnificat* settings and three litanies to the Virgin. His 21 villancicos include six for Christmas, four for Corpus Christi, four for San Lorenzo, four for San Jerónimo and one (in *E-V*) for the beheading of San Juan. 14 of the works are for 8 or 12 voices organized in two or three choirs.

Torrijos demonstrated a fine command of polychoral forces, but sometimes settled too comfortably into simple antiphonal alternation between the choirs and ignored possibilities of textural variety. A typical 12-part villancico for three choirs with a fascinating mixture of textures is *Saluden dulces clarines*, a Christmas work (ed. in Laird, 1986, ii, 154). The text is sung mainly by the first choir, with important phrases treated as irregular refrains for the second and third choirs. As in a number of Torrijos's other villancicos, the text was previously used at another institution, in this case

at the royal Monasterio de la Encarnación in Madrid in 1681 – evidence of Torrijos's awareness of contemporary developments in the villancico. His organ music shows his great ability on the instrument, but his 13 extant compositions are inferior to those of Cabezón, Aguilera de Heredia and Cabanilles. They include three tientos, a *Pange lingua* setting, works whose titles derive from the registration they use and three *versillos de primer tono* (ed. J. Muset, *Early Spanish Organ Music*, 1948, p.31).

Torstensson, Klas

(*b* Nässjö, 16 Jan 1951). Swedish composer, active in the Netherlands. In his country of birth he studied clarinet, music theory and composition at the Ingesunds Musikhögskola (1969–73) and musicology at the University of Göteborg (1971–3). From 1973 (when he began living in the Netherlands) to 1976 he studied electronic music and computer music at the Institut voor Sonologie in Utrecht. In Amsterdam he came into contact with the Asko

Ensemble, whose strong involvement with contemporary music was unique in the Netherlands at the time. His collaboration with the Asko Ensemble strengthened him in his realization that the capabilities and individual qualities of musicians must be an important factor in the compositional process.

Torstensson stands completely on his own in the Dutch musical world. His aesthetic point of departure is strictly modernistic. Stylistically there is a relationship with Varèse and Xenakis. His compositions, regardless of the strength of the orchestra, are radical explorations of musical boundaries, in which extremes are sought in a detailed manner in terms of dynamics, registers, density, stasis and movement, degrees of dissonance and consonance, and physical and spatial effect. An essential feature of the large form in each case is the contrast, intuitively arrived at, between continuity and discontinuity, which determines the dramaturgy of the musical progress at all levels of composition. The first outline of his compositions is graphic: only the overall progression and the associated stress curves are indicated. In the subsequent phases (Torstensson speaks of 'generations') more and more detailed decisions are taken with regard to timbre, gestures, rhythm, dynamics, articulation and registers.

Torstensson's output is highly consistent. All his works are written for very specific performers, with the sole exception of the orchestral work *Stick on Stick*. 'Families' of compositions, in which an overall compositional idea is elaborated in an increasingly radical way, are also characteristic: *Solo*, *Licks & Brains I*, *Licks & Brains II*; *Hamra*, *Urban Solo*, *Urban Songs*, *Urban Extra*. In his most recent work, including the opera *The Expedition*, live electronics play an important role. There is also a clear trend towards greater lyricism.

ERIK VOERMANS

Tortamano, Nicola

(*b* ?Cosenza, ? between 1580 and 1590; *d* ?Naples, in or after 1627). Italian composer and teacher. Under the name 'L'Errante' he was a member of an academy at Cosenza. In 1613 he was running a music school at Spirito Santo, Naples, and in 1622 he referred to his 'spiritual exercises' there. He saw through the press Pomponio Nenna's first book of four-part madrigals (1613) and published two volumes of sacred music, *Messa, vespere, et hinni a quattro voci, con una messa a due chori … libro primo* (Naples, 1622), and *Messe & mottetti a quattro voci* op.2 (Naples, 1627), which also includes a motet for three voices. A mass and motet from the first volume are reprinted in the second. Some lost responsories for Holy Week by Tortamano are mentioned in a manuscript source (*I-Nn* Brancacciana VII B 3, f.245). (D Fryklund: 'Musikbibliografiska anteckningar', *STMf*, x (1928), 158–203)

KEITH A. LARSON

Tortelier, Paul

(*b* Paris, 21 March 1914; *d* Villarceaux, Val d'Oise, 18 Dec 1990). French cellist and composer. He won a *premier prix* in Gérard Hekking's class at the Paris Conservatoire at the age of 16, playing Elgar's Concerto, and a year later made his début at the Concerts Lamoureux. He continued to study harmony and composition until in 1937 Koussevitzky engaged him as a cellist in the Boston SO with which he played solos. In 1939 he returned to Paris and, in the immediate postwar period, filled a similar position with the Conservatoire orchestra. After solo appearances in Berlin and Amsterdam, he was engaged in 1947 by Beecham to play *Don Quixote* for the Richard Strauss festival in London, which marked his British début and laid the foundation of his international reputation.

Tortelier was in the front rank of soloists. His playing was distinguished by supple and poetic phrasing, an unusual blend of tenderness of expression and muscular virility, and great enthusiasm. His American solo début was in 1955 with the Boston SO at Carnegie Hall, New York; from 1957 to 1969 he was a professor at the Paris Conservatoire and was subsequently professor at the Folkwang Hochschule, Essen (1972–5), and the Nice Conservatoire (1978–80), and honorary professor at the Central Institute of Music in Beijing from 1980 until his death. In 1975 he received an honorary doctorate from Oxford University. Among his notable pupils were Du Pré, Noras and Lamasse. The first of a series of masterclasses for BBC television (1964) established his compelling personality in this medium. His experience as a performer and teacher is recorded in *How I Play, How I Teach* (London, 1975) and his autobiography (with David Blum) *Paul Tortelier: a Self-Portrait* (London, 1984).

He married a cello pupil, Maud Martin, in 1946, and their three children have professional careers: Yan Pascal as a violinist and conductor, Maria de la Pau as a pianist and Pomona as a cellist; they all played chamber music with their father. From time to time Tortelier also conducted, and he composed a number of works. Most are for or with one or more cellos, but they include his *Israel Symphony* (written after a year living in an Israeli kibbutz, 1955–6), *Le grand drapeau*, a choral hymn (text by the composer) dedicated to the United Nations, and *Offrande*, a tribute to Beethoven which also marked Tortelier's recording début as a conductor in 1971. He strongly believed that his experience of composing helped him as a performer, since it enabled him to approach even repertory works in some degree as an act of re-creation. Among Tortelier's most memorable recordings are the concertos by Haydn, Dvořák and Elgar, Strauss's *Don Quixote*, Tchaikovsky's Variations on a Rococo Theme and Beethoven's complete works for cello and piano.

NOËL GOODWIN

Tortelier, Yan Pascal

(*b* Paris, 19 April 1947). French conductor and violinist, son of Paul Tortelier. He studied the piano and the violin as a child and subsequently at the Paris Conservatoire, took harmony, counterpoint and composition classes with Nadia Boulanger and Henri Challan and then studied conducting with Franco Ferrara in Siena. He began his career as a violinist in the Paris Opéra Orchestra, making a London solo début in 1962 in Brahms's Double Concerto; in 1974 he became leader of the Toulouse Capitole Orchestra, of which he was later appointed associate conductor. He made his operatic début in Toulouse with *Così fan tutte* in 1978. In the late 1970s he began conducting more widely, including orchestras in North America, East Asia and Britain. He was principal conductor and artistic director of the Ulster Orchestra, 1989–92, considerably raising its profile among UK orchestras, and in 1992 became principal conductor of the BBC PO, Manchester. In 1993 he conducted the première of David Matthews's *A Vision and a Journey*. He has also conducted for the ENO, Scottish Opera and at the Wexford Festival, as well as in Paris, Lyons and Naples. Tortelier has been much praised for his secure command of tempo and subtlety of instrumental colour, especially in French music. His recordings include atmospheric readings of the complete orchestral works of Debussy and Ravel with the Ulster Orchestra, and music by Hindemith, Dutilleux, Bizet, Chausson and Fauré. In 1992 he published his own orchestration of Ravel's Piano Trio.

SERGIO MARTINOTTI

Tosar (Errecart), Héctor

(*b* Montevideo, 18 July 1923). Uruguayan composer, pianist, conductor and teacher. He studied in Montevideo with Wilhelm Kolischer (piano), Tomás Mujica (harmony) and Lamberto Baldi (composition and orchestration). In 1946 a Guggenheim Scholarship took him to the USA for further composition studies with Copland and Honegger. Among the early works performed there was the Piano Concertino, conducted by Leon Barzin with Tosar as soloist. He studied conducting with Koussevitzky and also attended Columbia and New York State universities. Then he went on a French government scholarship to the Paris Conservatoire, where he had composition lessons with Rivier and Milhaud, and he completed two years in Paris with studies at the Ecole Normale under Honegger (composition) and Bigot and Fournet (conducting). In the mid-1950s his orchestral and chamber works began to be performed in Montevideo, where in 1957 he won a prize at the First Inter-American Music Festival. Since that time his music has been frequently performed at festivals in the Americas, and he has received commissions from the Koussevitzky and Fromm foundations. In 1960 he returned to the USA on a second Guggenheim grant, and he has also made a UNESCO-sponsored tour of the East, giving concerts and studying the music of Japan and India. He has held teaching positions at the Montevideo Conservatory (1952–74; director, 1973–4), the Puerto Rico Conservatory (1961–6), the University of Montevideo (1967–74), the Simón Bolívar Institute, Caracas (1979–81), Indiana University (1981–2) and the Escuela Universitaria de Música, Montevideo (1985–92; director, 1985–7).

Tosar's earlier works (up to about 1960) combine harmonic and contrapuntal structures in free forms that approach the sonata pattern. The music is dramatic, rarely nationalistic. In later works, such as *A 13*, he has been influenced by new ideas in form and instrumentation. Also notable among the compositions of this period is the orchestral *Recitativo y variaciones*, commissioned for the Fourth Inter-American Music Festival (Washington DC, 1968). A freely serial piece, it begins with a highly dramatic recitative based on two short melodic ideas, giving place to a motif of four symmetrical four-note phrases. This motif generates 14 strongly contrasting, free variations, among which the seventh and eighth are based on tango and milonga rhythms respectively, the first and fourth are mirror images of each other, the 13th uses jazz rhythms and the last is an extensive coda returning finally to the recitative theme, now modified and intermingled with themes from the intervening variations. Among his later works are a number for conventional instruments: *Cadencias*, in Caracas in 1980; the Piano Concerto, in whose première he played at the Universidad Nacional Autónoma de México in 1981; and the Septet, also played by the composer at its première in San Francisco in 1990. He also wrote for synthesizer such works as *La gran flauta* and *Música festiva* (both from 1987) and *Voces y viento* (1988).

SUSANA SALGADO

Tosatti, Vieri

(*b* Rome, 2 Nov 1920). Italian composer. He studied with Dobici, Ferdinandi, Jachino and Petrassi at the Rome Conservatory until 1942, and with Pizzetti between 1942 and 1945. He taught composition in Rome from 1966 to 1986, although after 1970 he virtually gave up composing for writing. Tosatti made his début as a composer in the 1940s with works such as the *Canzoni nuziali* for chorus (1942), the *Tre studi da concerto* for

piano (1943) and the *Sonata a due* for two pianos (1943), all of which reveal solid workmanship but lack a personal musical identity. However, in the *Concerto della demenza* for two pianos, speaker and other performers (1946) and the subsequent *Partita e pugni*, cantata for tenor, baritone, speaker, chorus and orchestra, Tosatti displayed a newly characterful taste for biting satire and for almost a sacrilegious sense of musical paradox which brought him to critical attention. From the 1950s on, he became interested chiefly in dramatic music, though on occasion he has returned to traditionally-conceived, well-wrought concert works such as the Viola Concerto (1966), the Requiem (1963) for two soloists, chorus and orchestra and the String Quartet (1968).

Tosatti's theatre music consists of an early work, which he considered a failure, and five others. Though his style was initially eclectic (showing the influence of Wagner, Ravel, Prokofiev, Stravinsky, Puccini and Wolf-Ferrari), he made a step towards a more personal inspiration in *Il giudizio universale* (1955), based on Bonacci. *La fiera delle meraviglie* (composed 1959–61) satirizes artistic practices of the time: two opposing entertainments take place side by side before an audience which is increasingly amused by the failures of both. The components and underlying themes – irony, hallucination, passion – of Tosatti's theatre music come together in his last opera, *Il paradiso e il poeta* (composed 1964–5), in which the leading figure, the Poeta maledetto, may be taken to be Edgar Allan Poe.

Antagonistic towards *verismo*, Tosatti adopted the Wagnerian concept of music drama as the only authentic practice of musical theatre. His work – which seems to embrace the aesthetics of Pizzetti (who championed dramatic continuity in opera) – remained a largely solitary and conservative approach in Italy; it is as far removed from the avant garde as it is from post-*verismo*. Tosatti's last non-stage works, written when his intention to abandon music for literature was developing, include the *Deutsche Sonata* (1970), the *Sette preludi e fughe* for piano (1977) and the *Gedichtkonzert* for female voice and orchestra (1977). They reveal a deliberate, almost polemical return to tradition in their clear rejection of contemporary musical trends.

RAFFAELE POZZI

Toscanini, Arturo

(*b* Parma, 25 March 1867; *d* New York, 16 Jan 1957). Italian conductor. The son of a tailor (who had fought with Garibaldi), he early showed exceptional musical gifts and in 1876 at the age of nine was sent to the Parma Conservatory, becoming a boarder in 1878. For nine years he studied the cello there (with Leandro Carini) and also the piano and composition, graduating in 1885 with maximum marks. Toscanini began his professional life as a cellist (while still a student he had played in the orchestra of the Teatro Regio, Parma), and was second in the cello section for the première of Verdi's *Otello* at La Scala in 1887. But by that time he had already embarked on the career of conductor, for which a prodigious musical memory and ear, insatiable curiosity, great powers of concentration, and a dominating and uncompromising character alike destined him. At the age of 19, on tour in Brazil with an Italian troupe, a series of accidents led to his being promoted from the cellos to take over a performance of *Aida* in Rio de Janeiro (30 June 1886). He conducted, without a score, in masterly fashion, and achieved a success from which there could be no turning back.

For the next ten years he worked in various Italian theatres, and won a growing reputation as a powerful and exacting conductor and the enemy of mediocrity and routine. He became associated with the works of Catalani and with those of the *verismo* school, conducting the premières of Leoncavallo's *Pagliacci* (1892, Milan) and Puccini's *La bohème* (1896, Turin). Above all, he championed Wagner ('the greatest composer of the century'), then still relatively unknown in Italy. He also showed an interest in symphonic music rare in an Italian conductor of that period. In 1895, in addition to being made musical director of the Teatro Regio, Turin (where

he opened with *Götterdämmerung*), he was invited to form a municipal orchestra, with which in 1898 he gave a series of 44 concerts at the Turin Exhibition, including works by Beethoven, Brahms, Schubert, Berlioz, Tchaikovsky and Verdi (Italian première of three of the *Quattro pezzi sacri*). By then he had also conducted concerts with the Scala orchestra, and it was no surprise when Boito and Giulio Gatti-Casazza, the new manager, invited him to Milan to become La Scala's artistic director, at the age of 31. His regime was inaugurated on 26 December 1898 with *Die Meistersinger*.

Toscanini was at La Scala altogether for less than 15 years in a career which lasted for nearly 70. Yet in a real sense La Scala was the artistic focal point of his existence, the symbol of his struggle to realize his ideal of opera as a totally integrated dramatic art. Once he had finally broken with it, he never again entered an opera house to direct opera, except as a guest at the Bayreuth and Salzburg festivals. But to the end of his life he continued to watch over La Scala's fortunes, giving it advice and, on occasion, his services.

Toscanini's repertory during his first period at La Scala was made up of Wagner, Verdi, new works and Italian premières (*Yevgeny Onegin*, *Pelléas et Mélisande*, *La damnation de Faust*, *Euryanthe*). From the first he concerned himself with every aspect of operatic performance, down to the smallest details of staging. He insisted that his singers, even those in minor parts, study and master the whole libretto, and he coached them minutely, bar by bar, setting as much store by inflection and gesture as by tone and musical phrase. The standard of ensemble and dramatic presentation rose strikingly (as even the many enemies whom he had made by his intransigence – among them the house of Ricordi – were forced to admit). Boito's account of one performance of *Falstaff* moved Verdi to thank Toscanini in a famous three-word message: 'Grazie! grazie! grazie!'. But it was a fierce battle, not only to overcome the traditional bad habits of singers and the evasions and economies of administration, but also to educate the audience to a serious attitude towards opera. Toscanini had the house lights lowered, got the ladies to remove their hats, and abolished the practice of concluding an opera performance with a ballet; but it was harder to suppress the demand for encores. It was over such a demand that he walked out, during a performance of *Un ballo in maschera* that he was conducting, on the last night of the 1902–3 season.

He was absent from La Scala for the next three seasons, conducting in Buenos Aires, Bologna and Turin, and touring Italy with the Turin orchestra, with whom he gave the Italian premières of works by Richard Strauss and Debussy. In 1908, after only two more seasons at La Scala, he went to New York as artistic director of the Metropolitan Opera, of which Gatti-Casazza had just been appointed manager. There for seven years Toscanini ruled over one of the most dazzling constellations of singers in the history of opera (among them Caruso, Scotti, Farrar, Destinn and Martinelli) and to a remarkable extent succeeded in imposing his unique discipline on them. Premières, world or US, included *Boris Godunov*, *La fanciulla del West* and Gluck's *Armide*. Once again, however, disagreement with the administration over economies, and impatience with less than ideal conditions and less than complete authority, drove him to resign.

He was influenced by other factors as well: his love affair with Geraldine Farrar, his leading soprano, which reached a crisis at about this time, and his intense patriotism, which made him restless at being abroad when his own country was at war. While at the Metropolitan he had spent his summers in Europe (in 1913 organizing and conducting performances of *Falstaff* and *La traviata* for the Verdi centenary celebrations at Busseto); and in 1915 he returned to Italy. For the next five years he was without a fixed position or a settled income. He directed a short season at the Teatro dal Verme, Milan, gave many concerts gratis for the Italian war effort and formed a military band which he conducted in the front line during the assault on Monte Santo.

In 1920 Toscanini was appointed artistic director of a reorganized Scala, with unprecedented powers. He formed a new orchestra of 100 players (as well as a chorus of 120) and, while the stage and the auditorium, on his advice, were being reconstructed, toured Italy, the USA and Canada with it, conducting 137 concerts in three periods totalling 28 weeks – an average of nearly five concerts a week. Toscanini's regime culminated in 1929, when he took the company on a triumphant tour to Vienna and Berlin. His resignation the same year was due to a number of different factors: La Scala's financial crisis, his own exhaustion, growing defects in the repertory system he had created, and perhaps a final recognition of the impossibility of realizing his ideals in an opera house. He must also have felt the need to provide for his coming exile from Italy, with whose fascist regime he was in increasingly open conflict. Toscanini had been at first attracted to Mussolini's ideas, and in 1919 had stood, unsuccessfully, as a fascist candidate in Milan. Before long, however, he had become a passionate opponent of fascism, on numerous occasions (including the première of *Turandot* in 1926) refusing to conduct the fascist hymn *Giovinezza*. In 1938 Roosevelt had to intervene with Mussolini to have his passport restored (Toscanini never renounced his Italian citizenship).

Politics played a decisive part in Toscanini's career in the 1930s. Having conducted at Bayreuth in 1930 and 1931 (the first non-German to do so), he broke with the festival in 1933 over Hitler's ban on Jewish artists and never returned there. Similarly, his appearances at the Salzburg Festival (1934–7; *Falstaff*, *Fidelio*, *Die Meistersinger*, *Die Zauberflöte*) ended abruptly with the Anschluss; in 1938 and 1939 he went to the Lucerne Festival instead, conducting an orchestra largely composed of refugees from Nazism. His sympathy with Jewish musicians led him to conduct the inaugural concert of the Palestine SO in Tel-Aviv (26 December 1936) and subsequent concerts in Jerusalem, Haifa, Cairo and Alexandria. In 1938 he returned to Palestine for further concerts.

During this period Toscanini was also heard in Paris, Brussels and Scandinavia and, with the BBC SO, in London (1935 and 1937–9, including a memorable Beethoven cycle at Queen's Hall in 1939). But the centre of his activities in the last 25 years of his career was New York. In 1928, after two seasons as guest, then associate conductor (with Mengelberg) of the New York PO, he was put in charge of the amalgamated Philharmonic and Symphony, and he remained there until 1936, taking the orchestra on a brilliantly successful tour of Europe in 1930. In the opinion of many musicians this period was the zenith of his greatness, when he achieved

performances of a clarity, precision and glowing intensity unknown until then.

Less than two years after leaving the New York PO he returned to New York, at the instigation of David Sarnoff and Samuel Chotzinoff, to direct the specially formed orchestra of the National Broadcasting Corporation. This was Toscanini's main instrument during the last 17 years of his career. With it he made the bulk of his recordings. He took it on a tour of South America in 1940, and in 1950 across the USA and back; but New York was to remain his headquarters and his home. However, his roots in Italy were too strong ever to be broken. In 1946 he returned to Milan to inaugurate the rebuilt Scala with a concert of Italian operatic music, and conducted several concerts there in the following years, as well as opening the first postwar Venice Festival. He also gave two Brahms concerts in London at the Royal Festival Hall with the Philharmonia in 1952. His final concert, with the NBC, was on 4 April 1954. After retiring he continued to work on editing the tapes of his recordings almost until his death, two months short of his 90th birthday.

Energy, single-mindedness, impetuosity combined with an inflexible will, fanatical perfectionism, and an almost morbid self-criticism were among Toscanini's most remarkable characteristics. He drove himself as few if any other executive musicians have done; the sheer amount of work he accomplished staggers the imagination. If he was ferocious in his demands on others, and in his criticism of them when they fell short of their best, he was still more dissatisfied with himself, rarely feeling that he had attained the ideal he envisaged. From this, as much as from a naturally dictatorial personality, stemmed the legendary and often terrifying outbursts of rage; as George Marek said, they were 'manifestations of a mind so hotly functioning that when it was exposed to a cold temperature it began to foam, as do two inimical chemicals thrown into the same retort'.

The state of hypertension in which he constantly worked could be adversely reflected in his performances, in a certain relentlessness of tempo and an almost brutal vehemence of attack. This was most evident during the final period of his career, most notably in his interpretations of the Viennese Classical composers; and it is accentuated by the dry, constricted tone quality characteristic of the recordings dating from that period, most of them made in the NBC's notorious Studio 8H. Toscanini's working environment at the NBC (where the orchestra was a small and potentially expendable unit in a vast organization) was generally less congenial than it had been at the New York PO in the 1930s, when his performances – of Beethoven for example – seem to have been a good deal freer and more ample. In any case, the positive and far more significant side of his impatience was the electric intensity of his finest interpretations, which, for all their meticulous care for textural detail, gave the impression of being conceived and carried out as single organic wholes: they seemed in some mysterious way to relive the fiery moment of the music's actual creation. Toscanini had exceptional feeling for large-scale musical architecture, for rhythmic continuity, for the singing line and the wide-spanned arch of melody; and (despite his self-doubts) there was a force in him, unanalysable but irresistible, which exerted a magnetic power over orchestras.

These qualities, together with his uncanny musical memory, his dominating personality and his insistence on the primacy and purity of the musical text, made him one of the great cult figures of his time (though he himself was uninterested in the trappings of fame). For many people he was a god who could do no wrong: Toscanini's way, being the composer's own as set down in the score, was right, and necessarily invalidated other conductors' or at least exposed them as inferior. Toscanini's attitude to interpretation (which was, in fact, more pragmatic than his admirers imagined) had been formed in natural reaction to the shoddy Italian performing traditions in which he grew up, and his example undoubtedly helped to foster the modern spirit of respect for the composer's intentions. But it led in turn to the myth of the objective and therefore faithful interpretation, as opposed to the subjective and wilful one epitomized by Toscanini's rival Furtwängler. Recently there has been a fresh reaction, towards a more flexible conception of interpretation of the printed score, and it is probable that Furtwängler's influence among younger musicians is now greater than Toscanini's. Yet Toscanini's extraordinary genius remains one of the great phenomena of the history of musical performance in the last 100 years, and marks a highpoint in the development of the conductor's art.

During his later years his repertory was criticized for being narrow and in particular for ignoring contemporary works; but by then he was an old man handicapped by failing sight. He was not interested in the music of Mahler (with whom he had shared a season at the Metropolitan Opera in 1908–9) nor in the Second Viennese School or neo-classical Stravinsky. His taste, which was largely formed in the 19th century, was in fact unusually wide. He was a notable interpreter of composers as various as Puccini, Berlioz, Brahms, Debussy, Tchaikovsky and Richard Strauss. But he was at his greatest in the music of his three favourites, Beethoven, Wagner and Verdi; his recording of *Falstaff* (made in 1950) will remain a classic of re-creation and a monument to his vitality and interpretative insight.

Toscanini, who was married to the daughter of a Milanese banker, had a son, Walter, and two daughters, Wanda (who married the pianist Vladimir Horowitz) and Wally.

Toscano [Tuscano], Nicolò

(*b* Monte San Giuliano [now Erice], *c*1530; *d* Monte San Giuliano, 1605). Italian composer and singer. His mother was of the noble Bulgarella family of Erice. About 1545 he entered the Dominican order and was affiliated with the monasteries of Trapani and, later, Erice. He then moved to Messina where his name is registered in a legal deed dated 25 January 1563. On 5 January 1566 he was transferred to the monastery of S Domenico at Palermo. He left Sicily before 1573; in 1584 he was *maestro di cappella* at the cathedral of Giustinopoli (now Capodistine, near Trieste), and in 1588 he was prior of the Dominican monastery of the Congregazione del Beato Giacomo Salomoni, Trieste. Between 1598 and 1603 he was a singer and vicar-capitular at the monastery of S Domenico in Palermo; there, in 1600, he acted as judge in the musical contest between Sebastián Raval and Achille Falcone. According to Mongitore he was highly thought of as a singer. His only extant secular work, the *Canzonette, libro primo a quattro voci* (Venice, 1584), contains 22 strophic compositions; a five-voice madrigal is known to have been included in the lost collection *Infidi lumi* (Palermo, 1603). Until the early part of the 20th century the Dominicans of Sicily still sang the plainsong 'Credo del Toscano Ericino' (in a late manuscript copy in S Domenico, Palermo).

PAOLO EMILIO CARAPEZZA, GIUSEPPE COLLISANI

Toselli, Enrico

(*b* Florence, 13 March 1883; *d* Florence, 15 Jan 1926). Italian pianist and composer. He studied the piano with Sgambati and composition with Martucci and Reginaldo Grazzini. At a very early age he started on a brilliant career as a concert pianist in Italy, the principal European capitals and also in Alexandria and North America. Later he settled in Florence, teaching and composing, while still appearing frequently on the concert platform. His prodigious fame was largely due to the international scandal occasioned by his marriage in 1907 to the Archduchess (and former crown princess of Saxony) Luise Antoinette Marie of Austria–Tuscany, who had several years before deserted her previous husband. Their marriage was not a happy one, and they separated in 1912. Toselli used his fame as the ex-husband of such an illustrious woman to good effect by writing a successful book of memoirs, *Mari d'altesse: 4 ans de mariage avec Louise de Toscane, ex-princesse de Saxe* (Paris, 1913; Eng. trans., 1913).

He wrote an operetta, *La cattiva Francesca* (1912), to a libretto by Luise, and another, *La principessa bizzarra* (1913), to a scenario provided by her, as well as a symphonic poem, *Il fuoco*, after D'Annunzio, but he was best known for his salon pieces for voice and piano. These, typical of the current *fin-de-siècle* style, were based on French taste and full of nostalgic pathos and sugary sentiment with a frequently facile and spontaneous flow of melody. Most famous of them was the *Serenata* ('Rimpianto') to verses by Alfredo Silvestri (Florence, 1900), which was often taken as a reference to

Toselli's unhappy love, although its date of publication makes this impossible.

Toshiba.

Japanese record company, part of the general electrical engineering company Tōkyō Shibaura, founded in 1939. The company entered the record business in 1955, releasing a large number of EMI recordings; in 1969, with an injection of capital from EMI, the name changed to Toshiba EMI. Toshiba had begun, in the mid-1950s, to record contemporary Japanese works, providing a stimulus to Japanese composers as well as bringing their achievements to the attention of the public. Works recorded include the opera *The Black Ships* by Kōsaku Yamada, the opera *The Twilight Heron* by Ikuma Dan, and orchestral works by Akira Ifukube, Yasushi Akutagawa, Yoritsune Matsudaira and Kan Ishii. These recordings were also released overseas, providing a wider forum for Japanese composers and performers, notably the conductors Masashi Ueda and Kazuo Yamada, the Iwamoto Mari String Quartet and the Tokyo SO.

In the 1980s Toshiba EMI began recording in Europe, with issues such as a complete Mahler symphony cycle by the Cologne RSO conducted by Gary Bertini, while at home its recordings won praise for excellent performances in music such as the complete piano works of Satie played by Aki Takahashi. Although the core of Toshiba EMI's classical output has consisted of releases of EMI recordings, the company has contributed to the promotion of classical music and continues to be a leading record label in Japan.

<div align="right">SACHIO MOROISHI</div>

Tosi, Giuseppe Felice

(*b* Bologna, 28 Feb 1619; *d* Bologna, before 14 Dec 1693). Italian composer and organist, father of Pier Francesco Tosi. The description of *Il Celindo* as his 'first musical work' must mean that he came late to composition. He was among the paid musicians (probably as a singer) in S Petronio, Bologna, from 1636 to 1641, which possibly means that he received his musical education there. He was a founder-member of the Bolognese Accademia Filarmonica in 1666 and was elected its *principe* in 1679. He composed a *Dixit Dominus* for the annual celebration of the academy in S Giovanni in Monte on 4 July 1675. From 1680 to 1683 he was *maestro di cappella* of the Accademia della Morte, Ferrara, and in 1682–3 of Ferrara Cathedral as well. In 1686 he served temporarily as *maestro di cappella* of S Giovanni in Monte, Bologna. From 7 July 1692 until early December 1693 he was second organist at S Petronio. The score of *Il Celindo* shows a competent hand, albeit with a trace of

awkwardness in the vocal writing; like many operas of the 1670s it makes prominent use of a solo trumpet in dialogue with the voice. His sacred music is written in typical late 17th-century Bolognese style.

<div align="right">THOMAS WALKER/MARC VANSCHEEUWIJCK</div>

Tosi, Pier Francesco

(*b* Cesena, 13 Aug 1654; *d* Faenza, on or just after 16 July 1732). Italian castrato, teacher, composer and writer. He was the author of a highly influential treatise on singing: *Opinioni de' cantori antichi e moderni* (1723). He was not the son of the Bologna composer G.F. Tosi. He sang in a Rome church, 1676–7, belonged to Milan Cathedral choir from 1681 until his dismissal for misconduct in 1685, made his one recorded appearance in opera at Reggio nell'Emilia in 1687, in Giovanni Varischino's *Odoacre*, and was based in Genoa before going in 1693 to London, where he gave weekly public concerts and taught. From 1701 to 1723 he travelled extensively as musical and diplomatic agent of Emperor Joseph I and the Elector Palatine. From 1724 he again taught in London for some years; sometime before 1681 he had become a priest. A number of cantatas and arias are among his works.

Though Tosi claimed some originality, his treatise codified past teaching and was itself drawn upon by later writers. Opera for him was only one of three types of singing (along with church and chamber) for students to master. They were to practise (untempered) scales, unite chest and head registers, and seek all-round attainment in music, acting and civility. With this went a polemic in favour of expressive pathos and against new-fangled display, but Tosi avoided identifying any eminent singers with either the 'old' or the 'new'; he shared in a 'general compromise by which singers and composers presided over the development of musical trends and tastes which were rejected in theory as much as they were pursued in practice' (Durante). His book in fact has much to say about ornamentation, which he said should be worked out by the singer rather than written down; it is still informative about Baroque performing practice.

Tosi's condemnation of the new taste for *allegro* arias in major keys is reflected in his own music, where due emphasis is placed on the 'pathetick' style and the minor mode. J.E. Galliard, who was responsible for the English translation of the *Opinioni*, thought highly of Tosi as a writer of chamber cantatas and in the preface to his own *Six English Cantatas* (London, 1716) rightly praised his capacity for 'expressing most passionately his Recitative'. Though Tosi's arias often reveal serious weaknesses in harmony and tonal structure, his cantatas as a whole are not without merit as examples of a rather antiquated style.

See also Mancini, Giovanni Battista.

MALCOLM BOYD/JOHN ROSSELLI

Tosone [Tosoni], Marcello

(*b* Genoa, *fl* 1586–93; *d* Genoa, before 1624). Italian composer. He lived in Genoa and was acquainted with the circle of musicians around Simone Molinaro. The dedication of a 1624 madrigal collection (RISM 1624[11]) refers to friendship between Cavaliere Anselmi, the dedicatee, and 'Tosone genovese di che è sempre viva l'onorata memoria'. Tosone's only surviving publication is *Il primo libro de madrigali a 4 voci* (Genoa, 1590). Two more publications, *Il primo libro de' motetti a cinque voci* (Genoa, 1593) and *Madrigali a cinque voci* (Genoa, 1593) are cited by both Fétis and Giazotto: they do not survive. Tosone also contributed one madrigal to a collection of 1586 (RISM 1586[10]). His surviving works are stylistically sophisticated and he tended to isolate one voice from the rest of the texture.

PIER PAOLO SCATTOLIN

Tosti, Sir (Francesco) Paolo

(*b* Ortano sul Mare, 9 April 1846; *d* Rome, 2 Dec 1916). Italian song composer and singing teacher. He entered the Naples Conservatory in 1858, studying the violin under Pinto and composition under Conti and Mercadante. In 1869, illness and overwork as *maestrino* at the college enforced a period of convalescence in Ortano. There he wrote *Non m'ama più* and *Lamento d'amore,* songs which subsequently became popular but which he initially found difficult to publish. Sgambati helped Tosti establish

himself in Rome (where his admirers included D'Annunzio) by composing a ballad for a concert at the Sala Dante which Tosti himself sang in addition to his own works. Princess Margherita of Savoy (later Queen of Italy) was present and immediately appointed him her singing teacher and shortly thereafter curator of the court music archives. Tosti first visited London in 1875, and then made annual spring visits until he settled there in 1880. In the same year he was appointed singing teacher to the royal family, and from 1894 he was professor of singing at the RAM. He became a British subject in 1906, was knighted in 1908, and retired to Italy in 1912.

The songs *Forever*, *Goodbye*, *Mother*, *At Vespers*, *Amore*, *Aprile*, *Vorrei morire* and *That Day* were among his earliest successes in England. He was a prolific composer to Italian, French and English texts, with a graceful, fluent melodic style that quickly found favour among singers of drawing-room songs and ballads; the ballad 'alla Tosti' also found many imitators. His Vocal Albums, the 15 duets *Canti popolari abruzzesi*, and later songs such as *Mattinata* and *Serenata* all enjoyed great success.

KEITH HORNER

Totenberg, Roman

(*b* Łódź, 1 Jan 1911). American violinist and teacher of Polish birth. He studied with Michałowicz in Warsaw and was awarded the gold medal at the Chopin High School. His début was with the Warsaw PO in 1923. Further studies took him to Flesch in Berlin, and to Enescu and Monteux in Paris. He won the 1932 International Mendelssohn Prize in Berlin, and made both his British début in London and his American début in New York in 1935. His tours included joint recitals with Szymanowski (1934–6) and with Rubinstein in South America in 1937. A champion of contemporary music, he gave the premières of Hindemith's Sonata in E (1935), William Schuman's Concerto (1959 version) and Milhaud's *Music for Boston* (1963), and the American premières of Milhaud's Concerto no.2 and Honegger's solo sonata. He gave masterclasses at the Salzburg, Aspen and Tanglewood festivals, and became chairman of the string department at the Music Academy of the West, Santa Barbara, in 1947. He taught at Mannes College (1951–7) and in 1961 was appointed professor of music at Boston University and chairman of its string department. He became director of the Longy School of Music, Newton, Massachusetts, in 1978. His recordings include Bloch's Concerto and sets of Bach and Schumann sonatas. Although he chose to specialize in the flamboyant Romantic-virtuoso repertory, Totenberg was always notable for his refinement of technique, taste and intelligence.

Totentanz

See Dance of death.

Tóth, Aladár

(*b* Székesfehérvár, 4 Feb 1898; *d* Budapest, 18 Oct 1968). Hungarian music critic and aesthetician, husband of Annie Fischer. After learning the piano and composition in Székesfehérvár, he studied in the philosophy faculty of the Budapest Scientific University (1920–24), where he took the doctorate in 1925 with a dissertation on the aesthetics of Mozart's dramatic music. While working as a music critic of the daily newspapers *Új nemzedék* (1920–23) and *Pesti napló* (1923–39) and the literary periodical *Nyugat* (1923–40), he was also on the editorial board of the Hungarian musicological journal *Zenei szemle* (1926–9) and co-editor, with Szabolcsi, of the Hungarian music dictionary *Zenei lexikon* (1930–31). During the 1930s his criticism and studies began to appear in such foreign periodicals as the *Musical Courier, Revue musicale, Melos* and *Pult und Taktstock*. In 1937 he married the pianist Annie Fischer and they emigrated to Sweden in 1940; on returning to Hungary he became director of the Hungarian State Opera House (1946–56). Tóth had to rebuild postwar operatic life in Hungary, a task he achieved with the cooperation of Klemperer, who was engaged at the Budapest Opera from 1947 to 1950.

Tóth was a leading figure of those active in Hungary in the 1920s (e.g. Molnár, Szabolcsi and Major) who followed the example of Bartók and Kodály in laying the foundations of modern Hungarian musicology and writing on music. He worked to create a modern tradition of music criticism in Hungary which did more than inform the public of current musical events. His thorough knowledge of cultural history and music, his brilliant literary style and flawless logic, his shrewdness in promoting culture and his belligerent nature combined to raise the general level of Hungarian musical life and to further appreciation of such composers as Schütz, Bach, Mozart and Verdi, as well as the leading Hungarian composers of his day, Bartók and Kodály. His writings on these two composers (in spite of a certain prejudice against other developments in 20th-century music) constituted a starting-point for later scholarly writings on them, and provided important information on the interwar situation of contemporary music in Hungary. His music criticism was of a standard unprecedented in Hungary. As a director of the opera he pursued the same ideas that informed his criticism, and, with Klemperer, he was responsible for one of the most splendid eras in the history of Hungarian opera.

FERENC BÓNIS

Tottola, Andrea Leone

(*d* Naples, 15 Sept 1831). Italian librettist. The place and date of his birth
are unknown. An agent for the impresario Barbaia and poet to the royal
theatres (reputedly without salary), he began writing librettos in 1802. Most
of these were for Naples; over half were for the Nuovo theatre, with *buffo*
roles in dialect. Tottola collaborated with Rossini in six operas, including
four serious works for S Carlo, *Mosè in Egitto* (1818), *Ermione* (1819), *La
donna del lago* (1819) and *Zelmira* (1822); he also wrote six texts for
Donizetti. He has had a worse press than he deserves; although he wrote
some verse of appalling clumsiness and vacuity and much of his serious
work is monotonous and prolix, his comedies contain sharply observed
situations and witty, theatrically effective dialogue. Given a good subject he
could write a first-class libretto: for instance *Il vascello l'occidente* (Carafa,
1814), *Gabriella di Vergy* (Carafa, 1816), *L'ultimo giorno di Pompei* (Pacini,
1825, for which he received a royal merit award) or, probably his best,
Imelda de' Lambertazzi (Donizetti, 1830). Stendhal referred to the curious
mixture of burlesque and pedantry in his make-up, qualities reflected in the
extraordinary range of his work.

JOHN BLACK

Touch (i).

With reference to keyboard instruments, a term used to describe either the amount of force required to depress a key ('touch weight') or the distance that a key may be depressed ('touch depth' or 'key dip'). Thus a keyboard may be said to have a heavy or a light touch, as well as a deep or a shallow touch. In harpsichords, the touch weight necessary to depress a key and cause two or three sets of jacks to pluck their strings is approximately 60 grams and the touch depth is about 7 mm. In modern concert grand pianos, the force necessary to depress a key to sound *pianissimo* is about 100 grams and the touch depth is about 10 mm. In 18th-century grand pianos, the corresponding figures are about 35 grams and 6 mm. In clavichords, the touch weight may be less than 10 grams. In organs, the weight and the depth of the touch vary considerably and depend in part on whether the action is electric or mechanical. For further information, see M. Cole, *The Pianoforte in the Classical Era* (Oxford, 1998), 292–310.

EDWIN M. RIPIN/JOHN KOSTER

Touch (ii).

As applied to keyboard instruments, a term used to refer to the manner of depressing and releasing the keys. Touch is produced by the motion of the finger, the speed and position of the hand and the use or omission of arm weight. Kullak (1855) stated that touch is the art of producing sound on a keyboard instrument, not just beautifully but correctly according to context, including the demands of the particular instrument.

The clavichord is the only keyboard instrument where the player's fingers have direct control over tone quality because the tangents remain in contact with the strings while they are sounding; the player is accountable for the note not only at the outset but for its entire duration (Troeger, 1987). After the key is struck, the performer can increase or decrease the pressure on the key to alter the pitch or to add portamento or vibrato (*see* Bebung). In terms of touch, clavichord keys are depressed solely by the fleshy part of the fingertips (Sancta Maria, 1565) whereas weight is applied in sustaining the notes. Such playing develops a clear and swift independent movement in the fingers and a strong fingertip from sustaining the notes. At different times in the history of keyboard playing the clavichord played an important role in the influence of touch on the organ, harpsichord and early fortepiano.

The organ, with its rich history and large repertory, has demanded the development of many types of touch. Playing on an organ with mechanical action, as opposed to organs with pneumatic or electric actions first developed in the 19th and 20th centuries, is directly affected by the fact that the organ is really a wind instrument, in which the player opens valves which admit air under pressure to the pipes. Thus touch focusses on the initial resistance of the key as it breaks the air column and the subsequent

lessening of pressure as the key decends, a technique that requires a very strong fingertip, a flexible hand and, in some cases, the transfer of arm weight at the beginning of the keystroke. The speed with which the fingertip depresses and releases the key determines the tone quality (*see* Tonguing for the use of the tongue in playing mouth-blown instruments). Execution depends on such factors as the distance from the key to the pipe, the amount of air pressure and the number of stops required in the registration for the particular instrument. With the development of pneumatic action all keys in all registers became equal in touch and the fingers could not influence the beginning and ending of the sound. Important subtleties of touch were lost.

By the very nature of its plucking action, the harpsichord is *par excellence* the instrument of the fingertip. The basic touch is characterized by playing with the fingers alone, with the forearm floating so that no weight is transferred to the fingertips. This requires strong and flexile finger muscles with suppleness and great sensitivity in the speed of attack and release. The quality of touch is influenced by the height of the attack: from just above the keys, from the surface of keys or from a resting point on the keys with the plectra already in contact with the string (Troeger, 1987). Nuances of touch depend on the location of the balance pin (which affects key depth and heaviness of action) and the quilling of the plectra (which affects resistance to the strings).

C.P.E. Bach (1753) realized that the most important factor in developing touch was playing several instruments rather than specializing in one alone: 'The clavichordist grows too much accustomed to caressing the keys … On the other hand, those who concentrate only on the harpsichord grow accustomed to playing in only one colour'. Thus, the varied and weighted touch of the clavichordist strengthens the harpsichordist's fingertip, while the supple hand of the harpsichordist enhances the elasticity of the clavichordist's touch.

The emergence of the piano, an instrument with the dynamic capabilities of the clavichord and the sheer volume of the harpsichord, placed new demands on the development of touch. Here again, the production of tone-colour depends on the type of instrument being played. The Viennese *Prellmechanik* action (*see* Pianoforte, §I, 3 and 5), with its relatively shallow key depth and strings rich in overtones, required strength and elasticity in the fingertips and a floating arm. The English action, with its higher string tension, heavier hammers, and deeper key depth, produced a richer fundamental tone and greater volume at the expense of delicacy and rapid execution (Hummel, 1828). Thus, touch required greater firmness of the hand and the transfer of more arm weight, features that still characterize modern technique. The invention of the repetition action by Erard in 1821 allowed notes to be repeated without the key returning to its position of rest (*see* Pianoforte, §I, 6), a feature that not only increased the possible speed of the fingers but also allowed for a true legato in the repetition of a note by the same or by another finger.

In the 19th century, musical taste was influenced and reflected by such virtuoso performers as Kalkbrenner, Thalberg, Chopin and Liszt (*see* Pianoforte, §II, 2). Thalberg (1853) stressed the need for tenuto (fingertip

supporting weight) in bringing out the solo voice in imitating the qualities of different vocal timbres in the ever-popular transcriptions of opera and orchestral pieces. In his compositions and approach to teaching, Chopin paid minute attention to the innate density of the individual fingers (as in sketches to his *Méthode de piano*: 'Chaque doigt étant conformé différemment … Autant de différents sons que de doigts') and, in general, laid out a middle ground between the old virtuosity, which stressed playing with the fingertip and a floating arm, and the new, which necessitated playing with substantial arm weight in the fingertip. Liszt's *fortissimo*, bravura style tipped the balance towards a manner of playing emphasizing weight.

At the beginning of the 20th century, Debussy, who was composing for the piano in a new way and developing touch to support his principles of tone-colour, introduced the idea of two different forms of *pianissimo*: full descent of the key and 'demi-enfoncement'. The latter was achieved by striking the key extremely fast from the surface to only halfway down without weight in the fingertip; this produced a translucent tone-colour. Debussy's *fortissimo* chords had to be played from the surface of the keys with great impetus of arm weight in the fingertip, the weight being released immediately while the chord was still held.

Although Ortmann concluded (1925) that in touch 'the only physical qualities … present are pitch, duration and intensity', the finer points of tone-colour and its production will, in truth, always remain a question of the performer's sensitivity in matching the physical demands of the particular instrument to the ephemeral qualities of music.

SARAH MARIA SARGENT

Touch (iii) [toche, touche, towche, tutche]

(after It. *toccare*: 'to touch', and *toccata*: 'a touching').

To draw sound from an instrument; by extension, the music played. In *Sir Gawaine and the Green Knight* (*GB-Lbl* Cotton Nero A.x, lines 118–20; *c*1360) 'towches' describes the playing of nakers, pipes and lute. In *The Merchant of Venice* (Act 5 scene i; 1595) Lorenzo commands Jessica's musicians 'With sweetest tutches pearce your Mistresse eare, and draw her home with musicke'. More explicit is the passage from Massinger's *The Guardian* (Act 2 scene iv; 1655) in which Severino's 'I'll touch my horn, they know my call' is followed by the stage direction 'blows his horn'.

A prelude ascribed both to Byrd (*GB-Lbl* Add.30413) and to Gibbons (*F-Pc* Rés.1186) is called 'A Toutch' in the British Library copy, and a late use of the term is found applied to several florid passages for keyboard dated 1782 headed 'Mr Kelway's touches' (*GB-Lcm* 2097); the music may be by Joseph Kelway, a pupil of Geminiani and champion in England of Scarlatti's keyboard music.

DAVID SCOTT

Touch (iv).

A term used in traditional English Change ringing to denote a period (of unspecified duration) of bellringing.

Touche (i)

(Fr.).

The key (*see* Key (ii)) of a keyboard instrument.

Touche (ii)

(Fr.).

The Fingerboard of a string instrument, and sometimes, especially in the 16th century, a Fret. In string playing, the instruction *sur la touche* is usually given in Italian as Sul tasto.

Touche (iii)

(Fr.).

A 17th-century term, like Tuck, tucket and toccata, for a fanfare or flourish of trumpets.

Touchemoulin [Touchmolin, Dousmoulin, Dousmolin, ?Tusmolé, ?Duschmalui], Joseph

(*b* ?Chalon-sur-Saône, 23 Oct 1727; *d* Regensburg, 25 Oct 1801). French violinist and composer. His birthplace, listed in old lexicons as Châlons, was more likely to have been Chalon-sur-Saône, where the name Touchemoulin is relatively common, than Châlons-sur-Marne, where it is unknown. A notice dated 11 March 1753, the earliest surviving evidence of his activities, announced an increase in his salary as violinist in the orchestra of the Saxon Elector Clemens August at Bonn. He may already have held this post for some time, to judge from the relatively high salary he commanded. Although there is no evidence that Touchemoulin ever visited Paris, one of his symphonies was performed at the Concert Spirituel on the day of the Assumption 1754, and his only printed works, the symphonies op.1 (1761) and concertos op.2 (1775), were published in Paris. On the title-page of op.2 he is called a pupil of Tartini with whom he probably studied in the late 1750s while still under the protection of Clemens August.

On the death of the elector's Kapellmeister Joseph Zudoli late in 1760, Touchemoulin was appointed to that post, over the objections of Ludwig van Beethoven the elder (grandfather of the composer), who thought the job should have fallen to him (several letters arising from this dispute are reproduced in Forbes and Prod'homme). But six months later Clemens August died, and the new elector, Maximilian Friedrich, substantially reduced the young Kapellmeister's salary. Touchemoulin resigned, and was succeeded by Beethoven (16 July 1761). He then moved to Regensburg, where he became first violinist and Kapellmeister to the Prince of Thurn and Taxis. He remained there until his death, playing, composing and conducting to the satisfaction of his associates.

Touchemoulin was known as a fine violinist, although he apparently suffered a stroke which severely reduced his physical capabilities as well as his financial status. His compositions are reputed to have been skilfully written but not notably original. Of his three children, two are known to have been musicians, a daughter who was a pianist, and a son, Egidius or Ludwig (*b* 1759; *d* 14 July 1830), who by about 1777 was a violinist in his father's orchestra and in 1787 became its leader.

See Tuck, tucket.

Toulouse.

Town in southern France, historically the principal city of Languedoc. The capital of the Volces Tectosages was colonized by the Romans at the end of the 2nd century bc. Its first bishop, Saturnin (or Sernin), was martyred about ad 250 and the basilica of St Sernin was built as a shelter for pilgrims travelling to Santiago de Compostela. Having been the chief town of the Visigoths, it was taken by the Franks under Clovis and became the capital of the Kingdom of Aquitaine. From the mid-9th century to the mid-13th it was a centre of troubadour art: Guillaume IX, Duke of Aquitaine and himself a troubadour, attempted to seize the city in 1098 and 1114; later troubadours active in the area included Aimeric de Peguilhan, Folquet de Marseille (Bishop of Toulouse, 1205–31), Peire Vidal and Raimon de Miraval. In 1323 the guild 'Sobregaya Companhia dels VII Troubadors de Tolosa' established a contest in *gaya sciensa* ('amorous poetry'), known as Jeux Floraux, at which prizes were awarded for lyric verse written in

Provençal. French was used from the early 16th century when the institution became known as the Collège de l'Art et Science de Rhétorique; in 1694 it was reorganized by Louis XIV as the Académie de Jeux Floraux, adopting the classical lyrics of the Renaissance, such as odes, elegies and sonnets. Despite the continued preoccupation with lyric forms the competitors appear to have recited their verse without the assistance of musicians (*joglars*). Similarly, at the university (founded in 1229 by Pope Innocent III) practical music remained of secondary importance, although theory was studied as part of the Quadrivium. The theoretical treatises of Johannes de Garlandia, who taught at Toulouse University (1229–32), survive, but little is known of the trumpets and drums that accompanied the ceremonial functions of the *nations* (fraternities based on nationality), or of the instrumentalists, student balls or student songs.

The focal point of music-making in Toulouse has always been the church. In the 5th century the Visigoths followed the Mozarabic liturgy and from the Middle Ages there were choir schools (*maîtrises*) at the Romanesque basilica of St Sernin and at the Gothic cathedral of St Etienne, the choir of which dates from the 13th century; music was probably performed in the late 13th-century Eglise des Jacobins (the mother church of the Dominican order) and at the 14th-century Augustinian monastery (now occupied by the Musée des Beaux-Arts). A polyphonic setting of the Ordinary, known as the Toulouse Mass, survives in a 14th-century manuscript (*F-TLm* 94). Musical life flourished during the second half of the 16th century; musicians active there included Jean de Rangouse, Raimond de la Cassaigne, Antoine de Bertrand and Guillaume Boni, choirmaster at St Etienne. Music at the cathedral reached its zenith in the late 17th century under a succession of distinguished *maîtres de musique*, including André Campra (1683–94), Michel Farinel (1697) and Jean Gilles (1697–1705), who on occasion had 100 singers and many instrumentalists at their disposal. The *chapelle de musique* at St Sernin also employed singers and instrumentalists and during the 18th century continued to favour large-scale Baroque performances under its directors Aphroidise (*c*1684–1706), Dupuy (*c*1753–68) and Clavis.

A theatre has occupied the same site next to the Hôtel de Ville since the 16th century, when it was called the Logis de l'Ecu. Louis XIV was entertained there by a *divertissement* in 1659. The *Mercure galant* mentions performances of ballets during the 17th century; the Jesuits also presented *tragédies en musique*, including *La paix de retour* (1678), *Codre, roy d'Athènes* (1682), *La naissance de Mercure* (1683), *Agrippine* (1685), *Mars guéri* (1687) and Aphroidise's *Les bergers heureux* (1701). Lully's son-in-law Nicolas Francine was authourized to open a new opera house in 1687. The large Théâtre du Capitole opened in 1737 and was rebuilt, after a fire, in 1750–53. Under its directors Prin (1758), Devaux (1763), Louis Granier (1770) and Delainville (1782) the company employed 31 singers and actors and an orchestra of 20; it presented mainly *opéra comique* and *opera buffa*, including Grétry's *La fausse magie* (1777) and Pergolesi's *La serva padrona* (1785). Reconstructed in 1817–18, 1835, 1880 and 1923, the theatre was modernized in 1973 with a larger orchestra pit and smaller auditorium (cap. 1200). Since 1978 operas have also been presented 'in the round' at the Halles aux Grains, a 19th-century cornmarket building transformed into a multi-purpose concert hall with a seating capacity of

3000. Pierre Gailhard, a native of Toulouse, directed the Capitole for a time. After a period of decline the theatre enjoyed a revival under the direction (1948–68) of the tenor Louis Izar, particularly with productions of Wagner's operas with Lorenz, Flagstad, Mödl and Hotter. In 1972 Michel Plasson became artistic director. The company mounts an annual season from October to May with seven or eight operas and five or six operettas. Since 1954 a singing competition has been held annually in the Capitole.

In the mid-16th century instrumental music for public and private functions was organized by waits, such as Jacques Pradas and Mathelin Tailhasson. The family traditions among guild musicians were reflected in the appointment of Gaillard Tailhasson (*d* 1647) as Roi des Violons de France in 1639; he also composed chansons and noëls. Such professional musicians not only performed at municipal festivities but provided oboes, trumpets and drums for ceremonial motets and masses in the principal churches. The learned society known as the Lanternistes, which gave concerts in the mid-17th century, was a precursor of the Académie de Musique (founded 1724) which arranged concerts in the Hôpital St Antoine de Vienne until the Revolution (1790).

The Toulouse Conservatoire, founded in 1820 by Pichon, a cellist at the Théâtre du Capitole, organized orchestral concerts during the 1830s. The Société des Concerts du Conservatoire gave concerts under the direction of Croce-Spinelli (1902–13) and Aymé Kunc (1914–44); these were continued by the Association des Concerts Symphoniques (1944–55). The conservatoire acquired national status in 1966 and offers courses in drama and dance as well as music. Composers born in Toulouse include Pierre Kunc (1865–1941), son of Aloys Kunc (*maître de chapelle* at St Etienne from 1870 until his death in 1895), and Henri Büsser, who studied under Aloys Kunc at the cathedral choir school. There is a symphony orchestra based in Toulouse, as well as a chamber orchestra, an early music group – les Saqueboutiers de Toulouse and several choirs. The municipal library contains some musical treasures, including the Toulouse Mass and manuscripts of Lully's music.

FRANK DOBBINS

Toulouse, Michel de.

See Michel de Toulouse.

Toulouse Mass.

A 14th-century mass composition in three voices. This incomplete setting of the Ordinary was added to blank spaces in the plainchant missal *F-TLm* 94 around 1400 (Kyrie, ff.145*v*, 147; Credo, f.1; Sanctus, ff.225*v*–26; Agnus Dei, f.226; Ite missa est, f.147*v*). The mass lacks a Gloria, and the fragmentary Credo, which includes only the tenor voice from the word 'Crucifixus' to the end, must be completed from the concordances found in *F-APT* 16*bis*, *SERc*, *I-IV*, and in the Barcelona Mass. The Agnus, which is also found in a manuscript in the Gerona Cathedral library, may likewise have connections with the repertories of southern Avignon. The Sanctus and Agnus were entered together in the manuscript, and an annotation following the Agnus tells where to find the Ite missa est; these indications suggest that the mass was intended as a unit.

The style of the mass, like that of other 14th-century polyphonic cycles, varies from one movement to the next. The Credo, Agnus and Ite are composed in the manner of solo song: an active upper voice is supported by a slower, untexted tenor and contratenor. The Kyrie and Sanctus, by contrast, look like motets, with the two upper lines moving at about the same rate. These two latter movements also differ in detail: the Sanctus frequently uses voice pairing, while the Kyrie rarely employs it. Both contain hocket passages, however, in contrast with the remaining movements. The Agnus is troped with 'Rex immense pietatis', and the Ite with 'Laudemus Jesum Christum'. The final word ('gratias') of the Ite hints that the movement may have been intended as a Benedicamus domino trope. The mass is edited in Harder (1953); in PMFC, i (1956); and in CMM, xxix (1962), pp.8, 89, 118, 130, 138.

A type of turn. *See* Ornaments, §7.

Tourdion [tordion]

(Fr.; It. *tordiglione*, *dordiglione*; Sp. *turdión*).

A lively 16th-century dance in triple metre, popular as the most usual afterdance to the *basse danse commune*. Although literary references to the tourdion date from the 15th century (e.g. in *La grant danse macabre*, Lyons, 1499), the earliest description of the dance is in Antonius de Arena's macaronic treatise *Ad suos compagnos* (1519). His description includes a syllabic representation of the step-unit's rhythm, and he stated that 'for the tordion there are no precise rules; there is no preliminary and no conclusion'. Arbeau (*Orchésographie*, 1588) described the tourdion as a dance like the Galliard, but lighter and faster, because the feet were kept close to the ground. Like the galliard, the tourdion had as its main step-unit the Cinque pas, consisting of five steps executed to six beats (e.g. two triple-metre bars or one compound duple bar), with a leap on the fifth beat; the main difference between a galliard cinque-pas pattern and that of a tourdion was that in the latter dance the *saut majeur* on the fifth beat was replaced by a smaller movement, the *saut modéré*. The tourdion's usual choreographic structure, like that of the galliard, began with the dancing couple's bow and promenade, followed by various sequences danced alternately by the woman and man, 'until the musicians stopped playing'.

Music for the tourdion usually consists of two or three repeated strains, each consisting, in turn, of four six-beat motifs that match the phrases of the dance. The earliest surviving tourdions are printed as afterdances to

the basse danses … in Attaingnant's *Dixhuit basses danses* for lute and *Neuf basse danses … a quatre parties* (both 1530); a few were reprinted in later anthologies. Several tourdions are also included in Moderne's dance collection *Musicque de joye* (*c*1544)...\Frames/F006715.html

Italian dictionaries from the late 16th century onwards invariably define the word 'tordiglione' as equivalent to the French dance 'tourdion'. The choreographic and musical structures of the Italian and French forms are similar; however Caroso (*Il ballarino*, 1581/*R*) and Negri (*Le gratie d'amore*, 1602/*R*), unlike Arbeau, wrote down their choreographic variations for the tordiglione, and used numerous ornate step-units rather than the *cinque pas* described by Arbeau. The tordiglione music in Caroso and Negri, consisting of four six-beat motifs oddly barred in duple metre (ex.1), are minimal scores, no doubt meant to be varied by the musicians during the 20 or more playings needed for the dance.

See Basse danse.

Touré, Ali Farka

(*b* Niafounke, Mali, 1949). Malian guitarist. He is known as the 'Bluesman of Africa'. His first instrument was a *n'jarka* (one-string Malian chordophone). Touré's guitar playing style combines elements of the American blues tradition and Arab-influenced Malian traditional music. After Mali's independence, he served as director of the Niafounke artistic troupe from 1962 to 1971. With the troupe he performed for the first time in Europe, appearing at a 1968 international festival in Sofiya. Touré was influenced by blues musicians such as John Hooker in the 1970s, and he found the North American guitar playing style to be similar to Malian string playing traditions. He recorded extensively in France during the 1970s and began returning to his roots in the 1980s with a series of collaborative efforts, working with Taj Mahal on *Source* and Ry Cooder on *Talking Timbuktu*. The inspiration which Touré draws from his Malian heritage can be heard in his *n'jarka* playing in *Sega* ('Grass Snake') on the *Talking Timbuktu* album.

GREGORY F. BARZ

Tourel [Davidovich], Jennie

(*b* Vitebsk, Belarus, 9/22 June 1900; *d* New York, 23 Nov 1973). American mezzo-soprano. A refugee with her family from the Revolution, she eventually settled in Paris, where she studied with Reynaldo Hahn and Anna El Tour (in later years Tourel denied that her stage name was chosen as an anagram of her teacher's). She made her American début at the Chicago Civic Opera in Ernest Moret's *Lorenzaccio* (1930) and subsequently sang at the Opéra-Comique in Paris as Carmen (1933) and, later, Cherubino and Charlotte (*Werther*). Her career at the Metropolitan was brief: she made her début as Mignon in 1937 and appeared for a few seasons in the 1940s as Rosina, Adalgisa and Carmen.

Tourel's career was dominated by international appearances in recital and concert, and as an interpreter of French music she was considered virtually without rival. Her other specialities included the Italian coloratura mezzo-soprano repertory and the music of Leonard Bernstein, with whom she became closely associated. She gave the first performances of many songs by Poulenc and Hindemith (notably the revised *Marienleben* cycle, 1949). In 1951, in Venice, she created Baba the Turk in *The Rake's Progress*. She taught at the Juilliard School and at the Aspen Music School. Her reputation, supported by many recordings, rests on her enormous versatility, both musical and linguistic, her stylistic elegance, her sensitivity to textual nuance and tone colour, and a remarkable technique.

MARTIN BERNHEIMER/R

Tourjée, Eben

(*b* Warwick, Rhode Island, 1 June 1834; *d* Boston, 12 April 1891). American music educator, choral conductor and organist. He studied academic subjects at East Greenwich Seminary and music at Providence. About 1854 Tourjée opened at Fall River, Massachusetts, a music school of about 500 students which was based on the conservatory or class system of instruction, perhaps the first of its type in the United States. In 1855 he moved to Newport, Rhode Island, where he was an organist and private music teacher.

In 1861 Tourjée became music director of the East Greenwich Seminary, and during 1863 he studied music for a short time in Germany. From 1867 Tourjée lived in Boston. In this year he and Robert Goldbeck established the New England Conservatory of Music, which remains one of the leading conservatories in the United States.

Tourjée helped to organize the mammoth choruses for the 1869 and 1872 peace jubilees in Boston. Through his initiative the first national conference of music teachers met at Boston in 1869, as the National Music Congress.

When the Music Teachers National Association was organized in 1876 he served as its first president. An active Methodist and YMCA leader, he also led in church music development, compiling sacred music collections and encouraging congregational singing. Nason credited him with originating in 1851 the praise-meeting, a service combining scripture and song which Benson regarded as contributing to the prominence of gospel hymnody in American revivalism. Tourjée directed a choir of about 2000 singers during the 1877 Moody and Sankey revival in Boston.

On the establishment of Boston University in 1873 Tourjée became dean of its college of music. An honorary DMus had been conferred upon him by Wesleyan University in 1869.

HARRY ESKEW

Tournai Mass.

A three-voiced mass composition in six movements from the first half of the 14th century. The work survives in a manuscript from Tournai (*B-Tc* A27 anc.476, ff.28*r*–33*v*) which also includes sacred monophony for the Virgin Mary. The differing notational styles of the movements suggest that the work is a compilation, rather than a unified cycle. The Kyrie, Sanctus and Agnus Dei appear to be the oldest layer, using 13th-century modal rhythm,

while the Gloria, Credo and Ite missa est employ newer Ars Nova conventions in terms both of notation and of rhythm. The Credo and Ite, which are found in several southern European sources (Credo in *F-APT 16bis*, *E-BUhu* and *Mn* Va.21.8; Ite in *I-IV* and *F-SERc*), may have connections with the Avignon circle of manuscripts. The Kyrie, Gloria, Sanctus and Agnus are unica.

The mass has been linked to a foundation by Jean des Prés, Bishop of Tournai, who established a daily Mass for the Virgin at a side altar in the right transept of the cathedral in 1349 (Dumoulin, 1988). Because the tenor of the Ite is taken from a chant from the feast of the Annunciation, this movement, along with the rest of the mass, may also be related to the Annunciation play that was performed in Tournai from about 1231. The Ite, moreover, is a bilingual motet. Its triplum, written in a northern French dialect, has an amatory text, while the Latin motetus admonishes the rich not to ignore the poor. The Annunciation play, which was often performed in informal settings outside a church, offers a plausible explanation for the inclusion of these rather profane texts (Robertson, 1995). A facsimile and edition of the mass are given in Dumoulin, 1988; earlier editions appear in C.-E.-H. de Coussemaker, *Messe du XIIIe siècle* (Tournai, 1861); in PMFC, i (1956); and in CMM, xiii (1957) and xxix (1962).

ANNE W. ROBERTSON

Tournebout

(Fr.: 'turned end').

(1) A French name for the Crumhorn used by Mersenne (1636–7) and subsequent writers including Diderot (1765), whose engraving of a *tournebout* (fig.1) is copied from Mersenne. The word is found only in theoretical sources.

(2) The name given to a number of instruments in modern collections (Brussels Conservatory; Musikhistorisk Museum, Copenhagen; Gemeentemuseum, The Hague; Metropolitan Museum of Art, New York; Musikmuseet, Stockholm), superficially similar to the crumhorn (fig.2). These lack any wind cap, have a very wide bore and are covered in black leather. Sachs (1920) and Kinsky (1925) considered them to be examples of the French 17th-century Cromorne (i). Weber (1977) showed that they can be made to play only when treated as bladder pipes, using a single reed; it is most unlikely that such instruments would have been played at the French court. Their close similarity to the *pifia ricoperta in pelle* illustrated in Franciolini's catalogues (see Ripin, 1974) suggests that they are late 19th-century creations based on Diderot's engraving of a crumhorn (*tournebout*).

Tournell, Joseph Nicolaus.

See Torner, Joseph Nicolaus.

Tournemire, Charles (Arnould)

(*b* Bordeaux, 22 Jan 1870; *d* Arcachon, 4 Nov 1939). French composer and organist. After early studies at the Bordeaux Conservatoire, he transferred to the Paris Conservatoire at the age of 16, where he studied the piano with Bériot and harmony with Taudou. In 1891 he won a *premier prix* in Widor's organ class; he admitted that he had learnt useful organ technique from Widor despite a mutual lack of sympathy. But of all his teachers Franck was to prove the most influential; it was in Franck's last year at the Conservatoire (1889–90) that Tournemire joined his organ class, inheriting a spiritual, mystical motivation for composition and for organ improvisation. After a brief spell at St Nicolas-du-Chardonnet, he was appointed organist of Ste Clotilde.

Twice he aspired to the organ professorship at the Conservatoire; though never awarded the post, he was nonetheless an influential teacher to Duruflé, Langlais, Daniel-Lesur and others. Messaien, who acted on occasion as his *suppléant* at Ste Clotilde, revered his works. In 1919 he became professor of the instrumental ensemble class at the Conservatoire. His organ improvisations were second to none: Duruflé's transcription of the *Cinq Improvisations* (recorded at Ste Clotilde in 1931) bears witness to their matching of logic and spontaneity. Tournemire's own philosophy of improvisation is described rhapsodically in his book on Franck.

Tournemire achieved his first major recognition as a composer by winning the *concours musicale de la ville de Paris* with *Le sang de la sirène* (1902–3), a choral work based on a Breton legend and set on the island of Ouessant which became for him a special source of inspiration. The style is lucid and redolent of Debussy, but by the later works his musical language had developed beyond recognition: works such as the *12 préludes-poèmes* for piano (1931–2) provide a fascinating link between the harmonic worlds of Debussy and Franck on the one hand and Messiaen on the other.

His best known work is *L'orgue mystique* (1927–32), a cycle of 51 organ suites, one for every Sunday of the church year, each based on the appropriate plainsong. The cycle thus aims to provide for the Catholic liturgy what Bach had accomplished for the Protestant. Whether in the organ or the orchestral works, Tournemire's themes are invariably modal; in the later works, such as *Sept chorals-poèmes* (1935) and the two organ symphonies (1935 and 1936), Hindu modes are widely used.

The development of Tournemire's musical language is shown to particular effect in his symphonies, notable for their extravagant orchestration and, in the early ones especially, stylistic eclecticism. Only the first five symphonies were heard during his lifetime, although all eight have since been performed and recorded. Each possesses a structural logic in addition to its programmatic dimension: the Second Symphony (1908–9) is a tone poem inspired by Ouessant; the Third (1912–13), stimulated by a visit to Russia and subtitled 'Moscou (1913)', concerns the abandonment of the Russian gods with the advent of Christianity. The legend that the pagan gods died at the birth of Christ was a recurring inspiration to Tournemire, and the subject of *Les dieux sont morts* (1910–12), the only one of his operas to have been performed (Paris, 1924). The Symphony no.5 'De la

montagne' (1913–14) charts a spiritual journey from a deep gorge towards the light. Only by the Sixth (1915–18), a large choral symphony, does inventiveness of language and structure match visionary power. Written during World War I, the work portrays the emergence of spiritual light out of anguish and struggle using texts drawn from the Old Testament prophets. From a germinal motivic cell develop plainsong-like ideas, often tantalizingly fragmentary and exotically harmonized. The Seventh Symphony (1918–22) was originally conceived as a ballet, hence the subtitle 'Les danses de la vie', while the Symphony no.8 'La symphonie du triomphe de la mort', completed in 1924, is dedicated to the memory of his first wife (who died in 1920) and reflects the cathartic emergence of joy out of grief.

From the late 1920s, Tournemire retreated increasingly from the musical establishment, immersing himself in a variety of 19th-century French mystical writers (such as Hello, Huysmans and Péladan) as well as in medieval architecture and early Christian spirituality. Long periods were spent composing in a small windmill on Ouessant, a location which inspired his opera *La légende de Tristan* (1925–6), and at a remote house near Arcachon. Chamber works, such as the *Sonate-poème* for violin and piano (1934–5) and the string quartet *Musique orante* (1933) are among the more accessible works of these years: Tournemire's highly individual musical language, now at a stage of ripe development, is ideally suited to conveying a timeless, ethereal atmosphere. His major works of this late period are driven by an increasingly private mysticism: *Apocalypse de St Jean* (1932–6), *La douloureuse passion du Xrist* (1936–7), based on the meditations of the German nun and visionary Catherine Emmerich and the huge *Trilogie*, inspired by Faust, Don Quixote and St Francis of Assisi. Although much of this work is concerned with narrative episodes in the characters' lives, the music portrays their spiritual evolution, that of St Francis being held up as the ideal. St Francis was also the inspiration for *Il poverello di Assisi* (1937–8), Tournemire's final work (based on a text by Péladan) and an evocation of spiritual perfection.

WORKS

(selective list)

NICHOLAS KAYE

Tourner, Joseph Nicolaus.

See Torner, Joseph Nicolaus.

Tournes, Jean de

(*fl* Lyons 1564–85, then Geneva 1585–1615). French humanist printer, son of Jean de Tournes (*fl* 1542–64). His musical output has long been underestimated. He undertook music printing with the cooperation of Claude Goudimel (who had formerly worked with Nicolas Du Chemin in Paris between 1551 and 1555), and printed in Lyons from 1572 works by Orlande de Lassus, Claude Goudimel (both under the pseudonym Jean Bavent), Cornelius Blockland, Gilles Maillard and Jacques Arcadelt. After fleeing to Geneva when Protestants were banished from Lyons, apart from reprinting works by Blockland and Arcadelt he printed pieces by Lassus and Johann Tollius for Jerome Commelin (a bookseller in Heidelberg), and the first three of the four books of psalms set by Sweelinck for Hendrik Barentsen (an Amsterdam bookseller, also a visitor to the Frankfurt fairs). Comprising 17 volumes, his output is meticulous and typographically varied, two-thirds of it being devoted to a Protestant repertory. His son, Jean, printed three books of music by Blockland and Claude Le Jeune in

Geneva from 1617 to 1627. (L. Guillo: *Les éditions musicales de la Renaissance lyonnaise*, Paris, 1991)

LAURENT GUILLO

Tourney

(Fr. *tournoi*; Ger. *T(o)urnierspiel*; It. *torneo*, *torneamento*).

A musical introduction to a tournament as well as music for the tournament itself. The genre was cultivated particularly in the 17th century at the ducal courts of northern Italy and at Paris, Munich and Vienna. The tournament was presented in a highly stylized form amounting to little more than ballet, usually by small squadrons of horsemen. Some tourneys, however, were for individuals and some (e.g. *Il torneo a piedi*, 1631, Ferrara) were performed on foot. The performance often celebrated a royal wedding or birthday, with members of the family taking part, and was an occasion for lavish pageantry and feasting.

The quasi-operatic introduction to the 17th-century tournament appears to derive from the *divise* ('devices') of the medieval tournament. The word 'divisa' denoted not only a heraldic device but also a short phrase or sentence in poetry or prose (perhaps originally the motto of the knight or his family), declaimed or sung as he entered the arena. During the 15th century the *divise* grew longer and more complex and gradually were welded into a quasi-dramatic whole; in a *giostra* ('joust') at the court of Queen Giovanna II at Naples in 1423 they are known to have been sung. At the same time the combat degenerated into a pre-arranged contest with the semblance of a plot which it was partly the purpose of the introduction to explain.

These trends continued in the 16th century, real combat disappearing altogether after the fatal accident to Henri II of France in 1559. One of the most important landmarks in the history of the genre was the tourney at Ferrara two years later (*Il castello di Gorgoferusa*) to celebrate the elevation of Luigi d'Este to the purple. It included all the ingredients of the normal Baroque tourney – an introduction set to music; a pre-arranged contest, in an arena surrounded by spectators, between a number of squadrons on horseback accompanied by many supernumeraries, possibly in chariots or carriages; a raised stage with movable scenery; music and musicians, some in costume – and was the model for countless later tourneys in Italy and elsewhere.

In the 17th century the contest became increasingly stylized and developed into the equestrian ballet. The word 'torneo' denoted either the introduction plus the contest or the contest only, and was often replaced by terms such as 'ballo' or 'balletto a cavallo', 'festa a cavallo' and 'carossello' (carousel). It is clear from the librettos, which often include plates of the performance, a list of the riders' names and occasionally their coats of arms, that the most important ingredients were extravagant spectacle and skilled horsemanship. The riders were almost invariably members of the nobility, especially in Germany, and sometimes included women.

Various types of subject were used – allegorical, classical, mythological, fantastic – but they were alike in providing a symbolic arena for a dispute over the relative merits of the contestants, who might represent, for example, the four seasons (*La gara delle quattro stagioni*, 1652, Modena), childhood, adolescence and youth (*I trionfi di virtuosa bellezza*, 1668, Munich), or a number of different colours (*I colori geniali*, 1669, Munich). The libretto was normally divided into short scenes or 'azioni' which were performed by groups of musicians, actors and dancers as the contestants made their way into the arena. Other scenes might be inserted later in the 'contest' or at the end. In *La gara de gli elementi* (1660, Parma), for example, the 'contest' was followed by a sung conversation between Pace and Discordia (victor and vanquished, respectively) and a number of dances, including a 'ballo de' Cavaglieri', before Pace finally led the knights in procession out of the arena.

The music for tourneys, of which little seems to survive, appears to have been of two main kinds: music for the introduction and similar scenes, and music for the 'contest' or ballet. To judge by Francesca Caccini's *La liberazione di Ruggiero* (1625, Florence), the former was virtually indistinguishable in style from early opera. The libretto of *La gara de gli elementi* suggests that solo recitatives and arias, the dialogue mentioned above and choruses were included in the performance, and says that Benedetto Ferrari composed the music. The difference between this and the 'contest' or ballet music is illustrated by the libretto of *Erote ed Anterote* (1686, Munich), which indicates that Apollo was accompanied by 'varij stromenti alla mano' and the horsemen by trumpets and drums. These instruments provided the carousel music at the court of Louis XIV, and it seems safe to assume that they were the normal accompaniment elsewhere, especially since the horses were accustomed to respond to their sounds for military purposes. It should be noted, however, that the music for a *Rossballett* ('carousel') at Vienna in 1667 calls for antiphonal 'clarin.' and 'violin.', and Cesare Tinghi (see *SolertiMBD*, p.183) said that the 'ballo a cavallo' that followed *La liberazione di Ruggiero* was performed by 'viole et violini et canto'. If he was right and no other instruments were used, the ballet music was more lightly scored than the introduction, which calls for, among other things, four trombones, and may have been barely audible above the noise of the horses' hooves and tackle.

There is evidence that some tourneys were performed indoors, possibly, as in the case of Monteverdi's *Combattimento di Tancredi e Clorinda* (which, however, is not a tourney), with the aid of hobby horses. The 'gran balletto et torneo' at Turin in 1621 was given in the Salone delle Feste, and operas at Vienna were often followed by an equestrian ballet on stage (e.g. the 'Dantz der römischen Ritter zu Pferd' that followed a performance of Antonio Draghi's *Curzio* in 1679). Full-scale tourneys on real horses were of course performed out of doors, in the town square or palace courtyard or garden, but many tourneys are said to have taken place in a 'teatro' or 'palazzo', which might have been indoors or out. The 'torneo a piedi', however, was not a tourney on hobby horse and seems normally to have been performed out of doors.

The tourney appears to have been cultivated most assiduously, in the early 17th century, at Turin and Florence. The success of the form at Turin may

be attributed to a long tradition of horsemanship, the high favour in which ballet was held and the exertions of the indefatigable Count filippo d'Aglié. Florence was the setting for a number of important tourneys, including the *Ballo e giostra de' venti* (1608), the *Guerra di bellezza* (1616), with music by Jacopo Peri, a 'festa a cavallo' in 1637 for the wedding of Grand Duke Ferdinando II and Vittoria della Rovere, Princess of Urbino, and *Il mondo festeggiante*, with music by Domenico Anglesi, for the wedding of the future Cosimo III and Marguerite Louise d'Orléans in 1661. *La liberazione di Ruggiero* was anticipated by a *Ruggero liberato*, with music by Girolamo Giacobbi, at Bologna in 1620, and the wedding of Duke Odoardo Farnese to Margherita de' Medici was celebrated by *Mercurio e Marte* (1628, Parma), a 'torneo regale' with music by Monteverdi. Of the other Italian courts, the most important appear to have been Ferrara, where the tourney had an enthusiastic champion in Pio Enea II degli Obizzi (1605–74), Modena (two tourneys in 1652) and Milan (1669).

In France the tourney fell completely under the influence of the ballet and became the carousel. The first great carousel at the French court took place at the Hôtel du Petit-Bourbon, Paris, in 1605. The form quickly established itself as a favourite with the Bourbon monarchs, who mounted tourneys on an increasingly lavish scale. Among the most extravagant were the carousel in the Place Royale for the wedding of Louis XIII in 1612 and that in the Place du Carrousel in 1662. Soon after this, performances were moved to the more spacious grounds of Versailles, where the most sumptuous carousels were those of 1683 and 1686. For the latter Lully composed a suite for four oboes, in addition to the normal four trumpets and drums, consisting of a prelude, minuet, gigue and gavotte; the work epitomizes the ballet-like character of the French carousel.

The tourney in Germany and Austria was inevitably modelled on that in Italy and France. Although the main centres were Munich and Vienna, it was also cultivated at other courts (e.g. Dresden and Prague) in the 16th and especially in the later 17th century. The rise of this form, as of opera, was assisted by the many Italian librettists, architects and musicians, as well as French dancing-masters, who emigrated to Germany after the end of the Thirty Years War. At Vienna the tourney and *Rossballett* were cultivated side by side. The most important tourneys appear to have been the magnificent *Contesa dell'aria e dell'acqua* (1667; libretto by Francesco Sbarra, music by J.H. Schmelzer and Bertali; see illustration) and *La Germania esultante* (1667; Sbarra and Antonio Cesti). The music of two *Rossballette* of the same year consisted of suites of dances and indicates the extent to which the form had been influenced by the French carousel. The tourneys at Munich were, if anything, more numerous than at Vienna and adhered more closely to the Italian *torneo*. The tournament was more often a stylized 'contest' and might be tightly integrated with the introduction. There were at least ten tourneys between 1666 and 1690, the heyday of the form, written by court librettists (Domenico Gisberti and Ventura Terzago) and set by court composers (J.C. Kerll, Ercole and G.A. Bernabei, Steffani and Pietro Torri).

The tourney became virtually extinct in the early 18th century, but the carousel presumably continued to flourish in France until the death of Louis XIV, and there was a *Rossballett* at Vienna in 1708, a *torneo* at Munich in

1702 and a carousel there (the only one recorded) in 1722. There is little evidence of later tourneys, but Beethoven's music for a *Ritterballett* at Bonn in 1791 suggests that equestrian entertainments were given, on and off, throughout the century. The bicentenary of the royal Piedmont cavalry regiment was celebrated by a *torneo* at Turin in 1892, and the last Bolognese 'maggio' took place in 1920. The *torneo* may be said to have survived in Britain in the shape of the Royal Tournament and the Edinburgh Royal Tattoo.

COLIN TIMMS

Touront [Thauranth, Toront, Thourot, Tonrroutt], Johannes

(*fl c*1450–75). Composer. Despite the number and quality of the works attributed to him, it has not yet been possible to identify either who he was or where he worked. Two musicians who have been suggested must be discounted because their dates are too early: Matthaeus Thoronte, a 'tenorista' employed in the papal choir in 1417, and Johannes van Tourhout (*d* 1438), a singer at the church of Our Lady, Antwerp. A Johannes Tirion was named in 1439 as a young chorister in a funeral motet for the Emperor Albrecht II, but there is no further evidence concerning him (see Leverett, 1990). Suggestions that the name may originate from Tours, where many important composers began their careers at this time, remain uncorroborated. It is also pure supposition to link him, on the basis of the attribution of two of his compositions to 'Cecus' (only in *I-PEc* 431), with one Giovanni Orbo (= 'blind') mentioned in Italian sources at the end of the 1460s. A perplexing inscription 'Ergo Johannes et paulus turunt' on a flyleaf of a Roman manuscript from the 1470s (*Rvat* S.Pietro B80) deserves consideration, but could be a reflection of the canon rubric for Josquin's four-voice version of *De tous bien* in Petrucci's *Harmonice musices odhecaton A* (1501; no.15; *Petruse Joannes curraut in puncto*).

The style of Touront's music and its transmission have contradictory implications for his place of origin. The compositions have strong western European characteristics, possibly indicating that he was trained in France or the Netherlands, while with the exception of a few widely disseminated 'hits' – notably the song-motet *O gloriosa regina* – his works are found mainly in central European sources from Bohemia, Moravia, Bavaria and Trent dating from the mid-1450s to the 1480s, concentrated in the years 1460–65. If it should prove possible to resolve the open questions surrounding Touront's life and work, it may result in the attribution to him of music hitherto regarded as anonymous.

The 'peripheral' distribution of sources causes problems in the evaluation of Touront's music: for example, secular works in the vernacular were regularly copied in this region as contrafacta, often in disregard of poetic form, not only because knowledge of foreign languages was lacking, but also to make them suitable for other purposes (e.g. for use in confraternities). *Chorus iste* might thus be truly a song-motet, but it is significant that this text is found in only one source, and strong evidence suggests that it is actually a contrafactum of a rondeau. The last lines, 'sit pax bone voluntatis nobis in Boemia', therefore cannot be taken as implying that Touront worked for a time in Bohemia. It is similarly unclear whether most of his shorter compositions that survive with Latin texts ought to be regarded as chansons, lieder or motets. Firm evidence for a link with

the French chanson repertory can be found in his *Missa 'Monyel'*, an early example of a parody mass, which may have served as a model for the German lied mass. This mass, ambitious in its use of compositional techniques and its length, is based on the three-part ballade *Mon oeil est de tendre tempure*, which can be reconstructed from the quotations in the mass. The other masses by Touront may have been based on similar models, but the identifications remain problematic.

Touront's compositions are characterized by extensive imitation (in up to three parts), ingenious canon techniques, and the shaping of the melodic line using modus and sequential motifs. Characteristic of this period of stylistic change – if not dependent on the above-mentioned transmission – is the use of a low contratenor in the masses and a few other works. Complete mastery of a variety of musical idioms marks him as an outstanding contemporary of Ockeghem's, to whose works there are stylistic and compositional references; Reynolds has emphasized the stylistic proximity to masses by Caron and Busnoys as well as the anonymous cycle of six *L'homme armé* masses (*I-Nn* VI-E-40).

WORKS

all for 3vv unless otherwise stated

Missa 'Monyel', 4vv, *I-TRmp* 89; ed. in Gottlieb, Mitchell; on all 3vv of anon. ballade Mon oeil est de tendre tempure

Missa sine nomine, *CZ-Ps* D.G.IV 47; ed. in Gottlieb

Missa [tertii toni], *I-TRmp* 89; ed. in Gottlieb, Mitchell

Magnificat sexti toni, *CZ-Ps* D.G.IV 47 (anon.), *I-PEc* 431 (attrib. 'Cecus'), *TRmp* 89 [1376] (T only; anon.); ed. in Snow

Pange lingua … corporis, hymn, 4vv, *CZ-HKm* II A 7, *Ps* D.G.IV 47 (with text of 2nd stanza, Nobis natus, nobis datus), *D-Mbs* Mus.ms.3725 (kbd tablature; ed. in EDM, 1st ser., xxxviii, 1958), *I-TRmp* 88; ed. in DTÖ, liii, Jg.xxvii/1 (1920/*R*)

Nova instant cantica, *CZ-Ps* D.G.IV 47; ed. in Snow; acrostic 'Nicholaus'

O castitatis lilium, *CZ-HKm* II A 7 (textless), *I-TRmp* 89, *PL-Kj* (formerly Berlin, Preussische Staatsbibliothek, Mus.ms.40098) (with text Advocata libera); ed. in EDM, 1st ser., lxxxv (1981)

O florens rosa, *CZ-Ps* D.G.IV 47, *D-Mbs* Cgm 810 (inc.), *I-TRmp* 88; ed. in DTÖ, xv, Jg.vii/2 (1900/*R*)

O generosa, O gloriosa nata David, *CZ-HKm* II A 7, *Ps* D.G.IV 47, *I-Bc* Q16 (with incipits O generosa and Je suis seulet), *MC* 871 (index only), *TRmp* 89 (with text Conpangant omnes), *TRmp* 91 (inc.); 1p. ed. G. Haberkamp, *Die weltliche Vokalmusik in Spanien um 1500* (Tutzing, 1968)

O gloriosa regina mundi, *CZ-HKm* II A 7 (with text O lucis alme s[alv]ator mundi), *Ps* D.G.IV 47, *D-Mbs* Clm 5023, *Mbs* Mus.ms.3725 (kbd tablature; ed. in EDM, 1st ser., xxxviii, 1958), *E-Sco* 5-1-43, *F-Pn* fr.15123, *Pn* Vm⁷ 676 (headed Laus Virginis Mariae), *I-Bc* Q16 (with incipit O gloriosa domina), *Fr* 2356, *Fr* Pan 27, *PEc* 431 (attrib. 'Cecus'), *Rc* 2856, *TRmp* 91, *VEcap* DCCLVII (textless), *SA-Csa* Grey 3.b.12; ed. in DTÖ, xv, Jg.vii/2 (1900/*R*), RRMMA, ix–x (1978); model for masses by Vincenet and anon. (*I-Bsp* A.XXXVIII); music used for Feo Belcari's *laude* O gloriosa regina del mondo

O preclare Jesu, *CZ-HKm* II A 7, *Ps* D.G.IV 47 (with text Ave virgo gloriosa); ed. in Thesaurus musicae Bohemiae, ser.A

Recordare virgo mater, 4vv, *CZ-HKm* II A 7 (with 2nd text Sacerdotes incensum Domini), *Ps* D.G.IV 47, *I-TRmp* 89, *PL-Kj* (formerly Berlin, Preussische Staatsbibliothek, Mus.ms.40098); ed. in EDM, 1st ser., lxxxv (1981); troped offertory text

Virgo restauratrix, 4vv, *D-Mbs* Cgm 810; mirror canon between T and 2nd Ct

Chorus iste, pie Christe, *CZ-HKm* II A 7, *Ps* D.G.IV 47 (textless); ? contrafact rondeau; ed. in Thesaurus musicae Bohemiae, ser.A

[Textless ?ballade] *CZ-Ps* D.G.IV 47, *D-Mbs* Mus.ms.3725 (kbd tablature; ed. in EDM, 1st ser., xxxviii, 1958); ed. in Snow

[Textless ?lied] *D-Mbs* Cgm 810

[Textless ?rondeau] *D-Mbs* Cgm 810

[Textless ?rondeau] *D-Mbs* Mus.ms.3725 (kbd tablature); ed. in EDM, 1st ser., xxxviii (1958)

doubtful work

Missa 'Rozel im Gorten' [formerly misidentified as 'O florens rosa'], 4vv, *CZ-Ps* D.G.IV 47, *I-TRmp* 88; surrounds O florens rosa in *TRmp* 88, so attrib. Touront by Gülke (*MGG1*) and Strohm (1989), but anon. in both MSS and probably not by him

MARTIN KIRNBAUER

Tours.

City on the Loire in central France. A bishopric was founded there about 250 ce, and the first cathedral was built by St Lidorius a century later. St Martin was bishop of Tours in 374, and after the invasion of the Visigoths in 473 the town was incorporated into the Frankish empire under King Clovis, and subsequently prospered under the Merovingians. Church councils were frequently held there between 452 and 573, when St Gregory

became bishop; during this period the town's churches followed the Ambrosian chant repertory. Charlemagne appointed Alcuin as abbot of a monastery in the suburb of Martinopolis (known as Châteauneuf after the Norman invasions, 853–903); Alcuin established a public school for philosophy and theology there. During the Middle Ages Tours became an important artistic centre, and music flourished at the Cathedral of St Maurice, later renamed St Gatien after the first bishop of Tours, and at the collegiate church of St Martin, which in the 14th century had a choir with ten boys and eight men. Between 1456 and 1459 King Charles VII appointed Ockeghem as *trésorier* at the abbey of St Martin, a position the composer held until his death. Louis XI and Charles VIII spent long periods at the châteaux of Pléssis-les-Tours and Amboise, and thus the French court was frequently present during the second half of the 15th century. Busnoys, Regis and Jehan Fresneau spent some time in the city, and in the 16th century Jean Le Saintier (1513), Guillaume Le Heurteur (1545) and Richard Crassot (1581) were active at St Martin's (1545), with Pierre de Manchicourt at St Gatien (1539).

The cathedral organ, installed by François des Oliviers about 1550, was damaged by the Protestants in 1562 and restored by André Delahaye in 1585 and Guillaume Lefebvre in 1593. It was modified by Jacques Girardet in 1611 and by Victor Lefebvre between 1619 and 1622. Further renovations were made in 1771–3 and 1780 for the organist L.A. Guichard. Guillaume Bouzignac may have been at Tours in the mid-17th century as a manuscript collection of his works, with several motets related to the local liturgy, is preserved in the Bibliothèque Municipale (*F-TOm* 168). René Ouvrard was *maître de chapelle* at St Gatien from 1679 to 1694. He obtained a privilege to publish a history of music in 1677, but the work (*La musique rétablie depuis son origine*) remained unpublished and survives in a manuscript at the Bibliothèque Municipale (*TOm* 820–22). Le Sueur was appointed *maître de chapelle* at St Martin in 1783, but he soon moved on to Paris.

An Académie de Musique, founded in 1724, organized concerts for its members during the 18th century. A Société philharmonique established in 1837 involved 120 performers, while the cathedral choirmaster P. Rastier organized regular concerts between 1858 and 1897. The Grand Théâtre, in the rue de la Scellerie, was converted from the Franciscan friary church (Les Cordeliers) in 1796 and presented an impressive list of plays and operas during the early 19th century. A new theatre on the same site commissioned by the city council and designed by Léon Rohard was inaugurated in 1872 with a performance of Victor Massé's *Les noces de Jeannette*. After serious damage by fire in 1883 a larger theatre with four galleries seating 1300 was built behind the existing façade and inaugurated in 1889. As well as accommodating touring drama companies, orchestral concerts and its own ballet, the opera house presents several operas and operettas at weekends during a season running from October to May. Annual music festivals include the Fêtes Musicales en Touraine (initiated by the pianist Sviatoslav Richter and others in 1964) and the Florilège vocal de Tours which runs an international competition in choral composition and performance.

A music school established by Adolphe Grodvolle in 1871 became a national conservatory in 1884. Music education is now organized under the aegis of the Conservatoire National de Région de Musique Francis Poulenc and is included in the curriculum of the Université François Rabelais. The Centre d'Etudes supérieures de la Renaissance, which includes a department of musicology with an important library and database of bibliographical and iconographical sources of the Renaissance period, publishes collections including the Corpus des luthistes français (Paris, CNRS), Ricercar (Paris, Champion) and Epitome Musical (Paris, Klinksiek). The Centre de la Musique Ancienne organizes concerts and conferences on early music, publishes practical editions (Paris, Salabert and Klinksieck) and sponsors groups such as the Ensemble Jacques Moderne. The Académie Francis Poulenc directed since 1997 by François Le Roux offers annually courses on French song.

FRANK DOBBINS

Tours, Berthold

(*b* Rotterdam, 17 Dec 1838; *d* Hammersmith, London, 11 March 1897). English composer, organist and violinist of Dutch birth. He received his early musical training from his father, Barthélemy Tours (1797–1864), organist of St Laurens, Rotterdam, and from the Dutch composer and conductor Johannes Verhulst. He later studied at the conservatory in Brussels and, from 1857, at the conservatory in Leipzig. He lived in Russia from January 1859 to April 1861 in the service of 'the music-loving prince' Yury Golitsïn, who enjoyed conducting choirs of Russian peasants. Later in 1861 Tours emigrated to London, where he remained until his death (although retaining his Dutch citzenship). In London, he composed and taught, and played the violin, at first in the orchestra of the Adelphi Theatre, then (in 1862), through the influence of the violinist and conductor Prosper Sainton, at the Royal Italian Opera. He held the post of organist at St Helen, Bishopsgate, 1864–5, at St Peter, Stepney from 1865 to 1867 and at the Swiss Church, Holborn from 1867 to 1879, where he founded a choir in 1873. In 1872 he became an assistant musical adviser and editor at Novello, Ewer & Co., and in 1877 was appointed Novello's chief musical editor. At Novello, he arranged and edited vocal scores and piano accompaniments for many operas, oratorios and masses, including

Beethoven's Mass in C, Mendelssohn's *Elijah*, Gounod's *La redemption* and several Gilbert and Sullivan operettas. He also composed a widely popular primer for the violin and one for the viola, as part of Novello's instrumental primer series.

A prolific composer, he wrote for the piano, the organ and other instruments, and composed a large number of songs, some of which, including *Forget-me-not* (1868) and *L'alouette* (1869), achieved great popularity. However, his services, anthems and hymn tunes for the Anglican church, including the Easter anthem *God hath appointed a day* (1878) and the Service in F (1887), are among his best work.

His son Frank Edward Tours (*b* Hammersmith, 1 Sept 1877; *d* Los Angeles, 2 Feb 1963) worked in England for some years conducting musical comedies for George Edwardes; he collaborated with Paul Rubens on *The Dairymaids* (1906) and was sole composer of *The Dashing Little Duke* (1909). He developed a reputation as a composer of ballads, beginning with a setting of Kipling's *Mother o' Mine* (1903). He later emigrated to the USA, where he worked for Ziegfeld and George M. Cohan on Broadway and in later life became an orchestral consultant to Hollywood film companies.

WORKS

most published in London by Novello

Sacred: *c*10 services, incl. Mag and Nunc, F, 4vv (1887); 18 anthems, incl. God be merciful (Ps lxvii), 8vv (*c*1870), God hath appointed a day (1878), O saving victim, S, chorus (1881); other works

Other vocal: The Home of Titania (cant., S. Wensley), female vv (1893); 13 partsongs, 2vv, 4vv; *c*125 songs (most for 1v, pf, some with addl/opt. insts), incl. Forget-me-not (Petite fleur) (W. Pétavel), romance (1868), L'alouette (The Skylark) (Eng. trans. by N. Macfarren) (1869)

Orch, chbr: Gavotte, C, orch (1882); 2 pieces for military band: Gavotte moderne (1881), Hymn to the Angels (Mélodie religieuse) (1898); Romance for vn or vnc and pf (1896); albums and single pieces for vn, pf, incl. arrs. of Sullivan operettas; other chbr pieces

Kbd: *c*8 works for pf 4 hands, incl. 2 suites (1872, 1873); *c*12 pieces for org, incl. Fantasia, C (1885), Menuetto (1885), Postlude (1885); Intermezzo (1870); Gavotte moderne (1873); *c*50 salon pieces for solo pf

Pedagogical: primers for violin (1879) and viola (ed. A. Gibson, 1903)

JENIFER RAUB

Tourte.

French family of bowmakers and luthiers. It comprised Nicolas Pierre Tourte and his sons Nicolas Léonard and François Xavier and perhaps Charles Tourte, son of Nicolas Léonard. In addition, at least two channelled

(*canalé*) bows dating from about 1750–60 exist bearing the brand-stamp A.TOURTE.

(1) Nicolas Pierre Tourte [*père*]
(2) (Nicolas) Léonard Tourte [*l'aîné*]
(3) François Xavier Tourte [*le jeune*]

PAUL CHILDS

Tourte

(1) Nicolas Pierre Tourte [*père*]

(*d* Paris, 1764). Described in legal documents as a luthier, he was probably the maker of a known violin bearing the label 'Pierre Tourte, Paris 1747'. Oral tradition holds that Tourte *père* was a bowmaker whose shop was the training-ground for his sons.

Tourte

(2) (Nicolas) Léonard Tourte [*l'aîné*]

(*b* Paris, 20 Jan 1746; *d* Paris, 11 Sept 1817 or 11 Sept 1807). Bowmaker, son of (1) Nicolas Pierre Tourte. He perhaps deserves at least equal credit with his illustrious younger brother for the development of the modern bow. From about 1770 he made Cramer-type bows (and perhaps others as well). Among the 'Cramer' bows a few are known which, in addition to his brand-stamp of TOURTE·L, bear the second brand-stamp AUX 15 VINGT, indicating that he had a *dépendance* (including a work space) at that institution, a hospice for the blind and those with seeing disorders. His privileges there had probably ended by 1780, and from around that time he produced bows in various styles and from different types of wood. Some of these were almost certainly intended for string instruments other than those of the standard orchestral string family.

A church parish document from 1803 (another dates from 1821, after his death) describes Léonard as an 'artiste', the term perhaps indicating that he was active as a musician. Bows with his brand-stamp also emanate from this time and perhaps for some few years afterwards. Throughout his career his bows have round sticks, and their frogs are usually 'open-trenched', less so in the later works. Collaboration with another maker or makers is suggested by certain features in the making of some bows, most markedly in the frogs of the later bows. Léonard Tourte used pernambuco wood of excellent quality in many of his Cramer-type bows and in some late bows. Otherwise he availed himself, perhaps experimentally, of various species of hardwood, for the frogs as well as for the sticks. He seems to have begun using ebony for frogs only in his later work.

Tourte

(3) François Xavier Tourte [*le jeune*]

(*b* Paris, 1747 or 1748; *d* Paris, 25 April 1835). Bowmaker, son of (1) Nicolas Pierre Tourte. He has often been called the Stradivari of the bow. Fétis stated that he was apprenticed at watchmaking for eight years before entering fully-fledged into bowmaking. This is supported by the lack of bows that can be positively attributed to him during the time (*c*1770–80) when his brother Léonard produced 'Cramer' (and perhaps other) bows.

On the other hand, an argument can be made for his participation in the creation of some of these bows, specifically the extremely well-made ones. Although François Tourte did not normally brand his bows, a few from the early 1800s bearing the brand-stamp TOURTE have in recent years been attributed to him. This brand-stamp is identical with that of his brother (minus the '·L'), and it is reasonable to conclude that the initial had been simply filed away. The existence of a cello bow bearing the TOURTE·L and known to be a mature work (*c*1815) of François' strongly suggests a partnership or collaboration of the two brothers during Léonard's last years.

That François Xavier Tourte was well established as the pre-eminent bowmaker by the early 1800s is born out by L'Abbé Sibire, who wrote in *La chélonomie, ou Le parfait luthier* (1806) that 'the famous Tourte (le jeune)' had begun perfecting the bow 20 years earlier. Although Sibire's writings occasionally border on the fantastic, the notion that François' development as a bowmaker was independent of Léonard's and other bowmakers from an early stage cannot be dismissed entirely.

Attempts have been made in the past to assign Tourte's work to one of three or, more recently, two chronological periods. Both of these proposed divisions, however, fail to take account of his earliest work, which has still not been clearly defined. The first of the two periods covers the 'transitional' and the early 'modern' bows, whereas the ensuing 25–30 years encompass a prodigiously rich and varied output which in artistry and invention dwarfed Tourte's contemporaries and the bowmakers who followed him.

The transitional and early modern bows have round sticks of pernambuco, often of the finest quality, this latter usually of a dark chocolate brown colour. They are in general slightly shorter than those that are termed Tourte's mature work. Their heads are rather gentle in contour and fairly rounded (when viewed in profile), but many possess the tension and statuesque qualities so evident in his mature and late work. Violin-bow heads of this early work usually have silver head-plates. The frogs are rather long, often short in height, with a narrow ferrule and full-length pearl slides; most have plain sides. The rare open-trenched frog is mated with an ivory button, but otherwise the buttons are of silver on ivory, and the earliest buttons of the three-piece form are also found.

Probably about 1800 Tourte began making octagonal sticks as well as round ones. The former would come to dominate his production. The facets of these sticks were often left off the plane, and some resultant chatter is seen. The length of violin bowsticks was settled, for the most part, at about 72·5 cm (excluding the button); variants tend to be longer, up to about 73·1 cm. The heads are somewhat bolder and more angular, anticipating the great 'hatchet' heads which would soon follow. There is little evidence, however, of a constant evolution of the models of the heads, Tourte creating as his inspiration took him. The heads also begin to exhibit the individual working mannerisms that connoisseurs look for to establish authenticity. These include the 'travelling', almost meandering, ridge down the head's front; the angular disruptions to the curve of the back of the head (when seen in profile); and the remarkably individual chamfers, which are usually quite exposed. The violin-bow heads now have ivory head-

plates as a rule, but the cello bows are found more often than not with silver head-plates. The latter are mostly octagonal and the most common model of head is the 'hatchet' with a distinctly inclined front. Other cello bows have heads akin to violin bow models and, very rarely, 'swan heads'.

The frogs of the violin bows made after the transitional and early modern bows are not as long and, as well, are taller and commonly have a mother-of-pearl eye in each side. The dimensional changes reflect Tourte's continuing quest to refine the playing characteristics of his bows. At the same time there is a satisfying stylistic congruency both in the elements of the frogs and in the frogs' relationship to the head. The mountings now have heel-plates as well as ferrules, and most of the small heel-plates (adjacent to the pearl slide) have three pins. The frogs of the cello bows are usually rather tall, with rounded heels and sometimes, rounded ferrules. An occasional cello frog will feature the 'Parisian eye' (a smaller mother-of-pearl eye encircled by a silver ring) and these are certainly some of the earliest bows fashioned with this detail.

Buttons are always in three-piece form, normally with two pins in each ring, with those from the earliest part of this so-called second period diverging strongly one from another in their silver-ebony-silver proportions. The silver parts of the frog and button are of thicker gauge than was used by Tourte's successors and in most of the work of his contemporaries.

Viola bows, rarely encountered, are similar to violin bows in models and lengths of sticks, and their frogs have square heels.

At some point during his mature years of bowmaking, Tourte began to make the occasional frog of tortoiseshell and gold. The buttons complementing these frogs have mother-of-pearl facets between the gold rings. The precision of this work is held in high esteem by today's makers.

Tourte's only known working address was 10 quai de l'Ecole, where he remained until his move in 1833 to 38 rue Dauphine. In all likelihood the change of address marked his retirement from bowmaking, as he was listed in the professional register, Bottin's *Almanach du commerce de Paris* up to 1833. Oral tradition holds that in 1824 Tourte made a few bows into which he inserted a small parchment label stating that the bow had been made by him in 1824 at the age of 77.

Bowmaking was without question raised by Tourte to the status of a fine art. His genius lay in crafting tools that not only made an invaluable contribution to string musicians and their music but were in themselves works of art, veritable sculptures in pernambuco.

Toutouna.

A name used in the Basque region for the Tambourin de Béarn.

Touvron, Guy

(*b* Vichy, 15 Feb 1950). French trumpeter. He studied with Maurice André at the Paris Conservatoire from the age of 16, winning *premiers prix* for cornet and trumpet in 1968 and 1969 respectively. He won first prize in the international competitions in Munich (1972), Prague (1975) and Geneva (1976). Touvron served as principal trumpeter in the Orchestre National de Lyons (1969–71) and the French Radio PO (1971–4), and in 1973 founded the Guy Touvron Brass Ensemble. He was professor of trumpet at the Lyons Conservatoire from 1974 to 1990, and in 1990 was appointed to the Conservatoire National de Région in Paris. An important international soloist, Touvron has made many recordings and has given the first performances of several trumpet concertos including those by Charles Chaynes (Second Concerto, 1997), Ivan Jevtic, Jacques Loussier, Jérôme Naulais, Tolia Nikiprowetzky and François Rauber.

EDWARD H. TARR

Tovar, Francisco

(*b* Pareja, Andalusia; *d* ?Granada, 22 May 1522). Spanish theorist. Besides Catalonia, where he was active, he claimed also to have been to Zaragoza, Sicily and Rome. In 1510 he was attached to Barcelona Cathedral, and that year he was appointed *maestro de capilla* at Tarragona Cathedral where he stayed until 1516. A Francisco Tovar was in Seville in 1518, and was in the same year a *cantor* at Granada Cathedral, becoming *maestro de capilla* there in 1521. The theorist's *Libro de música práctica* (Barcelona, 1510; ed. S. Rubio, Madrid, 1978), despite its title, contains important theoretical material; it is influenced notably by Podio and remains closely allied to Boethian tradition, ignoring the theories of Ramos and Martínez de Bizcargui. Tovar related the Gregorian modes to the planetary system, as was usual at that time, and was particularly old-fashioned in his study of notation; in this respect he approached the French practice of the mid-15th century, particularly in his view of proportional theory. Unlike other writers, he did not oppose the hexachord system. He objected to the traditional distinction between perfect and imperfect intervals on the grounds that all musical intervals were acceptable, and proposed instead a classification by type of perfect intervals; in this, however, he was not entirely consistent.

F.J. LEÓN TELLO

Tovey, Sir Donald (Francis)

(*b* Eton, 17 July 1875; *d* Edinburgh, 10 July 1940). English music scholar, composer and pianist. Son of an Eton master, the Rev. Duncan Crooks Tovey, he was educated, both musically and generally, by Sophie Weisse, who trained him for the career of a pianist. (Later he had advice and help from Deppe, but was never his pupil.) As a schoolboy Tovey already had a vast knowledge of the classical repertory and he had begun to compose at the age of eight. He received instruction in counterpoint from Walter Parratt and subsequently studied with James Higgs and Parry. In June 1894 he was elected Lewis Nettleship scholar at Balliol College, Oxford, where he graduated in classical honours in 1898, more than satisfying the examiners in philosophy and ethics but making no impression at all in ancient history.

In 1894 began his association on the concert platform with Joachim, with whose quartet he appeared as pianist until 1914. In the early 1900s it seemed as if his career would incline towards that of pianist and composer. His own works were performed in London, Berlin and Vienna with some success. He played his piano concerto himself in 1903 under the conductorship of Henry Wood and repeated it under Richter in 1906. With such artists as Robert Hausmann and Lady Hallé he took part in concerts at the Chelsea Town Hall and in those of the Classical Concert Society, but his attempts to educate the public by analytical notes for intellectually demanding programmes met with some hostility.

In July 1914 he was appointed to the Reid Chair of Music at Edinburgh University, which to some extent resolved the conflict that had gradually been developing between his various activities. But he never came to regard himself as a scholar, disliked the company of mere musicologists, and looked upon most of his writings as the work of a popularizer. In 1914–15 he promoted a series of historical concerts at the university and in 1917 he founded the Reid Orchestra which soon played and has continued to play a notable part in the musical life of the city. It was for the Reid concerts that the extensive series of programme notes were written which subsequently achieved a more permanent form as *Essays in Musical Analysis* (1935–9). The penetrating insight of many of these essays gives some idea of his qualities as a teacher, for which he was revered by his pupils. Teaching, lecturing and editorial work consumed most of his time after World War I, but he appeared as a pianist in the USA in 1925 and in 1927–8 and performed in Edinburgh with many of the finest executants of the time whom he numbered among his friends – Joachim, Casals, Suggia, the Buschs, Jelly d'Arányi, Julius Röntgen and others. However, the Edinburgh public took comparatively little notice of the opportunities he created for such artists to be heard.

Tovey had composed prolifically during his Oxford days and in the years immediately following, but after 1918 the only major works he produced

were the opera *The Bride of Dionysus*, which had occupied him since 1907 and was eventually performed in 1929, and the Cello Concerto of 1935 for Casals. He was knighted in 1935.

Tovey was a brilliant conversationalist, something that gained him many distinguished friends. But he could be an acid critic and this earned him enemies and made some of his work in Edinburgh less fruitful than it might have been. His personal life was marred by a tragically unhappy relationship with his first wife and the domineering influence of Sophie Weisse. He was a superbly equipped musician with a natural gift for composition, but he never developed any real individuality or escaped from the overpowering influence of German music, to the understanding of which he contributed so much. As a conductor he brought great insight to the works he directed, but his performances with an orchestra were spoilt by his technical ineptitude in the art of conducting. In his editorial work he made useful comments on every aspect of a composition – it is for their commentaries that his editions of Beethoven's Piano Sonatas (with H. Craxton; London, 1931) and Bach's *Das wohltemperirte Clavier* (with H. Samuel; London, 1924) are still valued – yet his approach to textual problems was often unsatisfactory and he placed too much reliance on the work of others. He defended as subtle a reading in Bach's F♮minor prelude (*Das wohltemperirte Clavier*, ii), though a glance at the autograph would have shown that it was not what Bach wrote but merely the product of a slip by an earlier editor whose work he accepted without question. He nevertheless regarded his completion of Bach's *Die Kunst der Fuge* (London, 1931) above anything else that he did of this kind.

Tovey was defeated by his own too varied talents, yet he remains one of the great musicians of his period. His essays, the most valuable part of his work, did much to create new standards in English writing about music. They are not, as is sometimes maintained, totally free from obscurities, and their reverence for the classics of German music from Bach to Brahms now seems excessive. But at their best they are magnificent, the product of a broadly stocked mind of acute sensibility and rare insight.

MICHAEL TILMOUTH/R

Tower, Joan

(*b* New Rochelle, NY, 6 Sept 1938). American composer, pianist and conductor. She spent her childhood in South America, where she developed interests in rhythm and percussion. She returned to the USA to study at Bennington College (1958–61) and Columbia University (MA 1965, DMA 1978). For 15 years she performed as a pianist with the Da Capo Chamber Players, an ensemble she founded in 1969 and which won a Naumburg Award in 1973. After her appointment to Bard College in 1972, she won a Guggenheim Fellowship (1977) and numerous commissions

from the Koussevitsky, Fromm, Jerome and Naumburg foundations. At Leonard Slatkin's invitation she served as composer-in-residence with the St Louis SO (1985–7), after which she returned to Bard to assume a professorial chair. Her *Third Fanfare for the Uncommon Woman* (1991) inaugurated the gala concert in celebration of the centennial of Carnegie Hall, New York. Other honours have included a 1990 Grawemeyer Award for *Silver Ladders* (1986), the Delaware SO's Alfred I. DuPont Award for Distinguished American Composers (1998) and membership in the American Academy and Institute of Arts and Letters (1998).

Tower's oeuvre is comprised exclusively of instrumental compositions. Her works of the 1960s are serial, influenced by contemporaries such as Babbitt and Wuorinen. With *Black Topaz* (1976) she moved towards a style influenced by the music of Messiaen and Crumb. Compositions written for the Da Capo Chamber Players, such as *Hexachords* (1972), *Platinum Spirals* (1976), *Amazon I* (1977), *Petroushskates* (1980) and *Wings* (1981), are informed by and reflect her experiences as a performer accustomed to close interaction with a small chamber group. Many works have been composed with particular performers in mind; Music for Cello and Orchestra (1984), for example, was written for André Emelianoff and *Night Fields* (1994) for the Muir Quartet. She has also completed five concertos for solo instruments and a Concerto for Orchestra (1991), a joint commission from the St Louis and Chicago SOs, and the New York PO.

Among Tower's principal orchestral works are *Sequoia* (1981) and *Silver Ladders* (1986), one-movement pieces that can be described as accessible, rhythmic and full of colourful orchestral gestures. *Sequoia* suggests themes of balance and contrast, and explores the textural and dynamic range of the orchestra, emphasizing rhythmic drive and colouristic effect. *Silver Ladders*, a three-part work, is notable for its motivic development, chamber-like solos, rhythmic and dynamic contrasts, and prominent use of percussion. Other works pay homage to Tower's favourite composers; these include the Piano Concerto no.1 (Beethoven), *Petroushskates* (Stravinsky), *Fanfare for the Uncommon Woman* (Copland), *Night Fields* (Shostakovich) and *Très lent* (Messiaen). The evocative titles of many works suggest the imagery that informed compositional choices, rather than an overt programme.

WORKS

Tower of Power.

American soul and funk band. It is based on the core unit of Emilio Castillo (vocals and saxophones), Stephen Kupka (baritone saxophone) Greg Adams (vocals and trumpet) and Rocco Prestia (bass). Since its formation in 1967 in Oakland, California, it has been complemented by many session musicians and transient members, including rock's leading brass players, who have worked as sessions musicians for Santana, Little Feat, Elton John, Aaron Neville, David Sanborn, Michelle Shocked and others. The band has released around two albums each year since the early 1970s. *East Bay Grease* (San Francisco, 1970) portrayed a funky James Brown style on tracks such as 'Knock yourself out'. By *Ain't Nothin' Stoppin' Us Now* (Col., 1976), their sound had developed into a lighter, more soulful blend, as shown on 'Because I think the world of you'. Their profile was raised in the late 1990s with the use of their music (including *So Very Hard to Go*) in the US sitcom, 'That 70s Show'. A double album, *What Is Hip?* (Edsel, 1986), comprised tracks from throughout their career, including their 1970s hit *You're Still a Young Man*.

IAN PEEL

Townsend, Douglas

(*b* New York, 8 Nov 1921). American composer and musicologist. He became interested in composition while a student at the High School of Music and Art, New York, and taught himself composition, counterpoint and orchestration; in 1941 he began studying composition privately, with Tibor Serly, Stefan Wolpe, Aaron Copland, Otto Luening and Felix Greissle, among others. He taught at Brooklyn College, CUNY (1958–69), Lehman College, CUNY (1970–71), the University of Bridgeport (Connecticut; 1973–5) and SUNY, Purchase (1973–6). From 1977 to 1980 he was editor of *Musical Heritage Review*. Townsend's research into 18th- and 19th-century music has resulted in editions, recordings and performances, most notably of a Czerny overture and a mass by Sigmund Neukomm. He has been awarded research grants from the Martha Baird Rockefeller Fund (1965) and the New York State Council on the Arts (1975).

Townsend's scholarly interests are reflected in his music, which is for the most part securely tonal and written within traditional forms. A fine sense of timbre and idiomatic writing is characteristic, as is a sense of humour; the fugal section of the Fantasy on Motives of Burt Bacharach, for example, juxtaposes melodic ideas from Bacharach's *Raindrops keep Falling on my Head* and Paganini's Caprice no.24; the introduction musically spells out Bacharach's name.

Toy [toye].

An unpretentious piece for lute or virginals, simple in form and light in texture. More than 50 examples survive in English sources from about 1590 to about 1660. Named composers of toys include, for keyboard, Bull, Gibbons and Tomkins (but not Byrd), and, for lute, Dowland and Francis Cutting. Most, however, are anonymous in the sources. There are over a dozen such toys in Jane Pickering's Lutebook (1616; *GB-Lbl* Eg.2046), and of the five pieces called 'toy' in the Fitzwilliam Virginal Book, three are anonymous. Another large keyboard manuscript (*US-NYp* Drexel 5612; written *c*1620–60) includes 12 toys, eight of them anonymous.

Many toys have the character of the shorter dances of the period such as the alman, coranto and jig. Indeed, one keyboard piece by Gibbons (MB, xx, 1962/*R*, no.34) is called in four different sources Toy, Aire, Maske and Alman; another, by Bull (MB, xix, 1963, 2/1970, no.97), is variously called *The Duchess of Brunswick's Toy*, Coranto and *Most sweet and fair*. Others are no more than simple statements of popular tunes: for example, one in Jane Pickering's book (f.24) is a version of the tune *Barafostus' Dream*. Almost all toys are very straightforward in style, with melodies regular in phrase structure and with a minimum of contrapuntal elaboration. An interesting exception is Tomkins's *A Toy: made at Poole Court* (MB, v, 1955, 2/1964, no.67). The first section consists of an attractive four-bar tune in the usual style, but the second section breaks off from this and 'toys' in mock-academic fashion with two rather conventional imitative points. This perhaps was intended as a gentle parody, like that of Giles Farnaby's *His Humour*. In *Musick's Monument* (1676) Thomas Mace wrote that '*Toys*, or *Jiggs*, are *Light-Squibbish Things*, only fit for *Fantastical*, and *Easie-Light-Headed People*; and are of any sort of *Time*', but by that date they are not found in sources of keyboard or lute music, and Mace himself wrote none.

ALAN BROWN

Tōyama, Kazuyuki

(*b* Tokyo, 4 July 1922). Japanese writer on music. He graduated at Tokyo University in 1944 and took up music criticism in 1946, writing for *Mainichi*, a daily newspaper, for half a century. In his early writings he was critical of excessive intellectualism in the avant garde and of musical commercialism. In 1951 he went to study in Paris, staying for six years; he was much influenced by his teachers, developing a particular interest in French music after 1800 and its cultural background. On his return he established the Tōyama Music Foundation in 1962 and opened a private music library specializing in medieval and Renaissance music as well as contemporary music; later he donated the early music material to Keio University, as the Tōyama Collection, while the contemporary materials (including autograph manuscripts of Japanese composers) went to the Documentation Centre of Modern Japanese Music, which he founded in 1987.

Tōyama is a strong supporter of cultural activities. He has been chairman of the Japan Music Competition (1981–95) and of the Japanese section of the IAML (1979–94), director of the Tokyo Metropolitan Festival Hall (1983–96) and of the Kusatsu Summer International Music Academy (from 1980), president of the Tokyo Music Pen Club (from 1983), the Japan Christian Art Centre (from 1980) and of the Tōhō Gakuen College of Music (1995–6), and vice-director of the New National Theatre (from 1993). His study of Chopin won the Mainichi Art Prize in 1977. He was appointed *officier* by the French government (1980) and honoured by the Japanese government with a Purple Ribbon (1986). He was a co-editor of the Japanese editions of *Larousse de la musique* (1989) and *The New Grove* (1993–5).

MASAKATA KANAZAWA

Toye, (John) Francis

(*b* Winchester, 27 Jan 1883; *d* Florence, 31 Oct 1964). English critic and writer on music. He was intended for the diplomatic service but turned to music, publishing some songs and a musical novel, *Diana and Two Symphonies* (1913), and writing and producing masques with his younger brother Geoffrey for private performance. In 1922 he joined the *Daily Express*, first as leader writer, then as music critic. He became music critic to the *Morning Post* in 1925 and remained with that newspaper until its amalgamation with the *Daily Telegraph* in 1937. In 1939 he became director of the British Institute in Florence, but after the outbreak of war he

went to Rio de Janeiro as representative of the British Council. He returned to Florence in 1946 and settled there, though he always maintained strong links with England. He is best known for his pioneering studies of Verdi and Rossini.

H.C. COLLES/ANDREW PORTER

Toye, (Edward) Geoffrey

(*b* Winchester, 17 Feb 1889; *d* London, 11 June 1942). English conductor and composer, brother of Francis Toye. After studying at the RCM he conducted in London theatres, and gave the first performance of Vaughan Williams's *A London Symphony* at Queen's Hall in 1914. After war service he conducted three seasons for the D'Oyly Carte Opera Company between 1919 and 1924. He was musically responsible in 1921 for the first revival since 1887 of *Ruddigore*: the rewritten overture and other alterations are Toye's work, although not acknowledged in the edition of the vocal score published in association with that revival.

From 1925 Toye was associated with Lilian Baylis at the Old Vic as conductor and a member of the governing body; he became her co-director at Sadler's Wells Theatre, 1932–4, where the opera and ballet came to be located. He shared with Constant Lambert the conducting of Vic-Wells Ballet performances, including the fledgling company's first foreign tour to Copenhagen in 1932. The same year he wrote the music for Ninette de Valois' ballet *Douanes*, but he achieved his greatest success as a composer in 1935 with his score for *The Haunted Ballroom*, a ballet by the same choreographer. In 1935 Toye also became managing director of the Royal Opera House Co. Ltd, which had acquired the lease of Covent Garden; but his insistence on engaging the Hollywood singer Grace Moore for *La bohème* there resulted in a quarrel with Beecham (as artistic director) and to his departure later the same year. He renewed his

association with the D'Oyly Carte company, and was adapter-producer as well as conductor for the film version of *The Mikado* first shown in 1939. His own works include an operetta, *The Red Pen* (A.P. Herbert), broadcast in 1927.

<div align="right">ARTHUR JACOBS</div>

Toy instruments.

This term is used both of simplified or scaled-down versions of conventional instruments, mostly wind and percussion, and of special instruments and sound devices made by and for children. Toy instruments have existed since the earliest times, and until recently were often made from local plant and animal materials and stones; the knowledge of the construction and use of such home-made instruments still to some extent forms part of children's private lore.

1. To 1900.

A number of toy instruments from the second half of the 18th century have become well known because they were used as a concertante group, with a chamber orchestra, in several anonymous 'toy symphonies' composed at Berchtesgaden near Salzburg (a manufacturing centre for toy instruments at that time); these works include a cassation, three movements from which are better known as the Toy Symphony attributed to, among others, Leopold Mozart and Michael Haydn. The instruments themselves, cuckoo and quail calls, small duct flutes, wooden trumpet, toy bugle and french horn, ratchets, rattle, triangle and drum, are now in the Museum Carolino Augusteum in Salzburg (see illustration). Toy instruments similar to most of these continue to be made, and have been featured in many subsequent toy symphonies, including those by A.J. Romberg, Ignaz Lachner, Carl Reinecke, Malcolm Arnold and Joseph Horovitz.

In the second half of the 19th century toy instruments began to be mass-produced, including glockenspiels and pianos, zithers and autoharps, violins, drums, bugles, mouth organs, kazoos, bells, jew's harps, musical boxes, frog-shaped clickers and birdcalls (blown, rubbed, whirled or operated by clockwork). At this time, too, sounding elements, such as small bells and squeakers (consisting of a reed operated by a miniature bellows), were first added to dolls and other toys; a squeaker was even incorporated into a Victorian Christmas card. Dolls were also made to speak. One of the first people to succeed in this was J.N. Maelzel (inventor of the Panharmonicon mechanical orchestra and perfecter of the metronome), who around 1822 in Paris produced a doll with a bellows-operated set of reeds that said 'Bonjour papa' and 'Bonjour maman'. Animals, such as dogs and lions, were also given voices, which were similarly activated by pulling a cord; the children's book *Le livre d'images parlantes* incorporated the cord-operated voices of the elephant, ass, cow, goat, cuckoo and cockerel. (A related but simpler mechanism, in which a small bellows forces air past a reed and along a convoluted tube, is now used in the small cardboard cylinders that, when shaken or inverted, imitate the sounds of sheep, monkeys, cats and cows.) One of the earliest commercial applications of Thomas Edison's cylinder phonograph of 1877 was in

talking dolls (from 1887); small plastic gramophone discs continued to be used in dolls until the end of the 20th century, but have now been superseded by microchips.

Elaborate musical automata, such as the figures (often life-size) devised by the engineers Hero of Alexandria (*fl* 62 ce), al-Jazari (13th century) and Vaucanson (18th century), have long been the toys of wealthy people. With the mass-production of clockwork devices from the beginning of the 19th century, wind-up musical clockwork toys, such as drummers, guitarists and violinists (often animals – monkeys were particular favourites), and singing birds became popular (*see* Mechanical instrument.

2. After 1900.

The mass-production of toys of all sorts greatly increased in the 20th century. Today toy instruments are frequently made of plastic and are increasingly manufactured in East Asia; among the commonest are single and double duct flutes, ocarinas, nose flutes, swanee whistles, sirens, whistles (including edible sweet ones) and water-filled nightingale calls (*see* Bird instruments, §3); free-reed wind instruments include various sorts of mouth organ, such as the end-blown, two-octave, keyed Melodica (made by Hohner) and the similar Pianica made by Yamaha, and devices containing a single reed of metal or plastic, such as the party toys in which a paper tube unfurls like a chameleon's tongue and instruments in which the reed is housed in a non-functional imitation trumpet, horn or saxophone. The Kazoo is found in various forms and is sometimes used in children's marching bands and, formerly, in working men's bands. Some toy instruments continue to be made of metal, including the hand-cranked Musical box, cymbals, the triangle, the sistro, and a miniature Nail violin with a suspended beater, housed inside a plastic animal or other shape, which is sounded by rocking the toy on its curved base. A tin drum features in Günter Grass's eponymous novel *Die Blechtrommel* (1959). In spite of the popularity of plastics, many toy instruments are still made of traditional materials such as wood, bamboo, paper and string: for example, duct and notched flutes, panpipes, swanee whistles, pop-guns, whirled drums with cog-operated beaters, tambourines and ratchets. Crude versions of folk instruments are made for sale to tourists; these include many of the types already mentioned as well as ceramic drums, barrel drums, pipes of different sorts, nightingale calls such as the South American 'silbador' pot, ocarinas, maracas and wind chimes made from bamboo, sea-shells and metal tubes. A true folk instrument, the String drum, may still be seen in European street markets, where it is usually demonstrated as producing the clucking of a chicken; under the name 'Waldteufel' it is used in street celebrations at Carnival time in Germany. Whistling cups and bowls, such as the miniature Japanese *saké* cups with a whistle that functions when the drinker inhales, are found in various parts of the world. In East Asia small soundmakers are often attached to kites.

An unexpectedly popular toy, introduced around 1970, is the 'whirler tube' (it seems to have no standard commercial name – Peter Schickele uses one under the title 'lasso d'amore' in one of his 'P.D.Q. Bach' compositions): a length (approximately 90 cm) of coloured corrugated plastic tubing (probably derived from the conduit used since the 1960s to

carry bunches of electrical wiring) is whirled round the player's head, producing increasingly higher overtones the faster it is whirled. Many composers and improvisers, including David Bedford, Mauricio Kagel (*Der Schall*, 1968) and Sarah Hopkins (as the 'whirly'), have made use of this instrument, and a New York ensemble has played melodies on a collection of them, each member contributing a very limited number of pitches in the manner of handbell players. Similar tubing has also formed part of the Corrugahorns of Frank Crawford and Richard Waters. The toy piano has been featured in John Cage's *Suite for Toy Piano* (1948) and *Music for Amplified Toy Pianos* (1960) and included in works by George Crumb, Renaud Gagneux, Mauricio Kagel, Louis Roquin, Zygmunt Krauze, Leonid Aleksandrovich, Grabovsky and others, and compact discs with specially-commissioned – primarily solo – works have been released in the United States (Margaret Leng-Tan) and in Germany (Bernd Wiesemann). Improvisers, notably Steve Beresford and Pascal Comelade, have specialized in performing on a wide range of toy instruments. Toy instruments figure prominently in several compositions by Peter Maxwell Davies and single works by Lejaren Hiller, Kagel, John Beckwith, David Borden, Keith Humble, Anthony Gilbert, Dubravko Detoni and H.K. Gruber (*Frankenstein!!*, 1976–7); Joe Jones often incorporated toy instruments played by electric motors in his work. Tom Jenkins has built special humming tops, and very large tops, constructed by Floris Guntenaar and Rob Van de Poel, are used in Peter Schat's composition *To You* (1972). Susan Rawcliffe, Sharon Rowell and others have made many ceramic wind instruments, including pipes, flutes, whistles and ocarinas (including double and triple versions), often in ornate shapes and with unusual tunings.

Since about 1970 a number of electronic toy instruments have appeared, starting with the Stylophone (1968). This and several later instruments, including one model of Michel Waisvisz's Kraakdoos, the Suzuki Omnichord, Mattel's Optigan, Synsonics Drums, Synsonics Rhythm Maker and Magical Musical Thing and many Bontempi, Casio and Yamaha keyboard instruments (some of which have narrow keys for small hands and incorporate musical ear-training games) have also been used in concerts of rock and contemporary music. The Gmebogosse is a synthesizer designed for use by small groups of children. Electronic sounds, of the kind that are increasingly heard in all kinds of machines from digital watches to electronic games, are also incorporated into toys, such as imitation plastic guitars with push buttons along the neck instead of strings. Smallest of all are the diatonic Echo Piano and the chromatic Rhythm Pocket Piano, manufactured anonymously in East Asia, which have even been incorporated into song books for younger children. Since the 1980s the increasing complexity of the electronic circuitry contained within microchips and the corresponding reduction in power requirements (often needing only a single miniature 'button' battery as developed for pocket calculators and digital watches) meant that they could be incorporated in ever smaller toys and everyday objects, even such slim items as birthday and Christmas cards; originally restricted to sound synthesis, by the early 1990s cheap chips could store several sampled sounds, giving many toys their own voices, while some books for small children have incorporated a panel of up to a dozen or more pictorial touch plates that individually triggered appropriate sounds. From 1999 even small

toy figures were enabled to 'speak' by using a hand-held receiver that also supplies power to the circuitry.

Many sound sculptors and inventors of new instruments have received enthusiastic responses from children to exhibitions and demonstrations of their work. This has led some of them, for instance the Baschet brothers, Michael Waisvisz and Akio Suzuki, to invent musical toys or simple instruments or to design special versions of existing instruments for children. Several artist-designed toys have been marketed, especially by the Exploratorium in San Francisco, including Robert Deissler's Zube Tube or Power Tube (containing a long resonant spring) and Reinhold Marxhausen's nail violin-like Stardust. Bill and Mary Buchen, Hugh Davies, Max Eastley, Peter Phillips and others have run sessions at which children and adults can invent and build their own instruments. Educational instruments, used mostly by children, have been designed by Carl Orff, a team including Davide Mosconi, and the Baschet brothers, among others. The group Echo City has specialized in building instruments for childrens' playgrounds. A few instrument makers have used their inventions for therapy with emotionally disturbed, handicapped and under-privileged children, and in tactile exhibitions for the blind: several Baschet instruments have been used since 1967 by the National Theater for the Deaf in the USA; in Vancouver John Grayson constructed the permanent Environment of Musical Sculpture for Exceptional Children; and some 140 of Alfons van Legelo's foot-operated pentatonic Dance Chimes have been installed in public places worldwide since the mid-1970s, including for mentally handicapped children. The small Kraakdoos synthesizer and various Japanese electronic keyboard instruments have also been therapeutically effective.

Many books of instructions for building simple instruments have been published, a large number of them intended for use by children in school. Only a small selection of those available is listed in the bibliography below, but they have been chosen in many cases because they cover less common, often non-Western instruments.

HUGH DAVIES

Toy stop.

A colloquial term used to refer to the various 'sound effects' stops on cinema organs (e.g. sleigh bells, Chinese block, snare drum, klaxon, marimba, etc.). In the 20th century the term also came to be applied to the accessory stops of Renaissance and Baroque organs, such as birdcalls (*Vogelgesang*), drums (*Pauke*), *Zimbelstern*, *Glockenspiel*, etc. *See under* Organ stop.

Tozer, Geoffrey

(*b* Mussoorie, Uttar Pradesh, India, 5 Nov 1954). Australian pianist. A child prodigy, he made his first concerto appearance with the Astra Chamber Orchestra, Melbourne, at the age of eight and his début at the Proms in London (with Colin Davis and the BBC SO) in 1970, at the age of 15. He studied with his pianist mother, then with Eileen Ralf in Tasmania, Keith Humble in Melbourne, Maria Curcio in London and Theodore Lettvin in Ann Arbor, Michigan, also gaining experience playing at the National Opera Studio, London. His rapid mastery of difficult and extended works helped to make his repertory of unusual or little-known music unusually large. In 1986, the centenary of Liszt's death, he played more than five hours of Liszt's music from memory in Canberra in consecutive recitals. By 1998 Tozer had recorded 24 CDs for the Chandos label, including an award-winning set of Medtner's three concertos, Tchaikovsky's Third Piano Concerto and works for piano and orchestra by Rawsthorne, Respighi and Liszt. He was also the soloist in the first recording of the Piano Concerto of Roberto Gerhard. In recital he sometimes improvises in given styles, after the manner of 19th-century virtuosos.

ROGER COVELL

Tozzi, Antonio

(*b* Bologna, *c*1736; *d* Bologna, after 1812). Italian composer. He studied with Padre Martini and became a member of the Accademia Filarmonica di Bologna in 1761; in 1769 he was elected a *principe* of the academy. His first operas, *Tigrane* and *La morte di Dimone, o sia L'innocenza vendicata*,

were performed in Venice in May 1762 and autumn 1763. *La morte di Dimone*, Bertati's first libretto and an early *opera semiseria*, is an extravaganza involving 16 characters, including four deities. It incorporates multiple ensembles, chorus, dance, magical transformations, sudden scene changes and scenes involving a *deus ex machina*. In 1764 Tozzi was invited to conduct opera at the court of Carl I, Duke of Brunswick, in association with the Venice-trained Kapellmeister J.G. Schwanenberger. Tozzi's wife, Marianna Bianchi, sang in his *Andromaca* (1765, Brunswick) and *Zenobia* (1773, Munich). In 1774 Tozzi was appointed Hofkapellmeister at Munich, where seven performances of his opera *Orfeo ed Euridice* were given between 9 January and 27 February 1775. His liaison with the Countess von Törring-Seefeld caused a scandal which resulted in his leaving Munich shortly before 1 March 1775, when Leopold Mozart wrote to his wife: 'You may tell everyone the story of Tozzi and Countess Seefeld, so that people may realize that Italians are knaves the world over'. By late spring Tozzi was back in Venice for the première of his *Rinaldo*, another spectacle opera whose libretto was to be the principal textual source for Haydn's *Armida* (1784). In February 1776 he headed an Italian company hired to perform at the Reales Sitios (Carlos III's seasonal homes around Madrid). From 1781 he directed opera performances in Barcelona, conducting local premières of works by Paisiello, Cimarosa, Martín y Soler, Guglielmi, Anfossi and others, and his own compositions, including *I due gemelli Castore e Polluce*, which celebrated the birth of twins to the future Carlos IV. He spent the 1790–91 season in Madrid conducting at the Academias Místicas (similar to the Parisian Concert Spirituel). His cantata *El triunfo de Venus* was performed in October 1802 to welcome the royal court to Barcelona, and he was often termed the leading local composer in the *Diario de Barcelona*. He left Barcelona in 1805 and returned to Italy.

Tozzi was a gifted melodist with a strong sense of drama. His orchestrations often involve full four-part textures in which each string part plays a separate role, such as marking the beat with repeated notes, providing support with motivic figures, doubling the voice, moving in parallel 3rds, or supplying a countermelody or melodic elaboration. He used chromaticism sparingly, achieving emotional expression instead through the use of wind instruments, modal and dynamic contrasts, and appropriate vocal and instrumental gestures.

WORKS

operas

Tigrane (os, 3, C. Goldoni, after F. Silvani: *La virtù trionfante dell'amore e dell' odio*), Venice, S Angelo, 19 May 1762, *I-Bc*

La morte di Dimone, o sia L'innocenza vendicata (serio-giocoso, 3, G. Bertati, after J. von Kurz), Venice, S Cassiano, aut. 1763

Andromaca (os, 3, A. Salvi), Brunswick, Hof, spr. 1765, *D-Bsb*, *Wa*, *I-Nc**

Arcifanfano (dg, Goldoni), Brunswick, ?1766–7

Il re pastore (os, P. Metastasio), Brunswick, ?1766–7, *D-Wa*

Siroe (os, Metastasio), Brunswick, ?1766–7, *Wa*

Adriano in Siria (os, 3, Metastasio), Modena, Ducale, 17 Jan 1770

Il paese della cuccagna (dg, 2, Goldoni), Bologna, Formagliari, carn. 1771

Zenobia (os, 3, Metastasio), Munich, Hof, Jan 1773, *Mbs*, *F-Pn*

Orfeo ed Euridice (tragedia, 3, M. Coltellini, after R. de' Calzabigi), Munich, Hof, 9 Jan 1775, *B-Bc*, *D-DS*, *Mbs*, *F-Pn*

Rinaldo (os, 3, after Bertati, J. Durandi and F. de Rogatis), Venice, S Salvatore, Ascension 1775, *A-Wgm*; (Venice, 1775; lacks simple recits)

Le due gemelle (dg, 3, G. Tonioli), Madrid, Real Sitio de S Ildefonso, sum. 1776

La serva astuta (dg, 2), Munich, Hof, sum. 1776

I due gemelli Castore e Polluce (favola), Barcelona, 8 Dec 1783

Lo scherzo della magia, ossia La casa incantata (dg, 3), Barcelona, *c*1785, MS in Palacio Liria, Madrid

La caccia di Enrico IV (ob, 3, G. Palomba), Barcelona, S Cruz, 4 Nov 1788

Zemira ed Azor (dg, 3, L. da Ponte), Barcelona, S Cruz, 4 Nov 1791

El amor a la patria, o sea Córdoba liberada (os, 2), Barcelona, S Cruz, 21 Jan 1793

I due ragazzi savoiardi (ob), Barcelona, S Cruz, 27 Jan 1794

Angelica e Medoro (dramma eroico-pastorale, 2, G. Sertor, after L. Ariosto), Barcelona, S Cruz, Jan 1805

ROBERT STEVENSON/MARITA P. McCLYMONDS

Tozzi, Francesco.

Italian composer, son of Vincenzo Tozzi.

Tozzi, Vincenzo

(*b* ?Rome, *c*1612; *d* Messina, ?1675, certainly before 8 April 1679). Italian composer. In 1640, according to Pitoni, who stated that he was then about 28, he left the service of Cardinal Vincenzo Costaguti in Rome to become choirmaster to the city of Messina. He is known to have held this post from 1649 until at least 1664, probably longer. Members of two literary academies of Messina, the Abbarbicati and the Accademia della Fucina, provided texts for at least two of his works: *Le gare di Natura e di Fortuna*, for the birth of the heir to the Spanish throne, and *I pasticcieri*, two intermezzos. The 25 pieces in his *Concenti ecclesiastici* (Rome, 1662) generally have three to five short sections in contrasting tempos and metres; phrases, each ending with a suspension and cadence, are transposed and repeated both within and across sections. Tozzi's son Francesco served the royal chapel at Messina in various capacities from at least April 1679 to 1722; he was *maestro di cappella* from 1720. He published a four-voice serenata at Messina in 1721. Two Sicilian dialect songs ascribed simply to 'Tozzi' exist in manuscript (*I-Vnm* 11562).

WORKS

sacred

Il primo libro de concenti ecclesiastici, 2–5vv (Rome, 1662)
Motet, 1649[2]
4 motets, *I-Nf* (2 dated 1644, 1646), *S-Uu*

secular

I pasticcieri, ints, Messina, 1650, lost; pubd lib, text also in *Il duello delle muse* (Naples, 1670)
Il ratto d'Elena, Messina, 1657, lost
Annibale in Capua (N. Beregan), Malta, 1664, lost; pubd lib, *I-Lg*
Le gare di Natura e di Fortuna (P. Sapone), lost; text in *Festosi presagi* (Venice, 1659)
3 pastoral dialogues (C. Musarra), lost; texts in *Le stravaganze liriche* (Naples, 1661)

KEITH A. LARSON

Trabaci, Giovanni Maria

(*b* Monte Pelusio [now Irsina], *c*1575; *d* Naples, 31 Dec 1647). Italian composer and organist. He was appointed a tenor at SS Annunziata, Naples, on 1 December 1594. In 1597 he was invited to test the new organ of the Oratorio dei Filippini, Naples, and for a time served as organist there. On 30 October 1601 he was appointed organist of the royal chapel of the Spanish viceroys in Naples. The second organist from 1602 was Mayone, and the *maestro di cappella* was Macque. Trabaci succeeded Macque as *maestro* on 1 November 1614 and held the position for the rest of his life; in addition he was again organist of the Oratorio dei Filippini between 1625 and 1630. From 1603 to 1611 he was also attached to the Neapolitan family of Capoa di Balzo, 'in whose house the splendour of music shines brightly' (to quote the dedication of his volume of keyboard music of 1603).

Trabaci dedicated no fewer than five volumes to the Virgin Mary, the others to Neapolitan nobility and the Spanish viceroys. Dedicating his volume of 1635, he said that from the viceroy 'I have learnt a new style of composing the Passion' (the parts of Jesus and Judas are in recitative style). He also addressed himself to performers in prefaces and other notes; in the book of 1615 he labelled numerous musical devices (e.g. 'riversi', 'moti contrarii', 'inganni') as they appeared and also provided a 'table of the most notable passages'.

Trabaci's output was large and varied. His known music comprises 169 sacred vocal works, including masses, motets, psalms, antiphons, *Magnificat* and Passion settings, hymns, lauds and *rithmi* (a form based on exact metrical repetitions); 60 secular vocal works (madrigals, villanellas, dialogues and arias); and 165 keyboard works, also suitable for instrumental ensemble (ricercares, canzonas, capriccios, versetti, pieces based on cantus firmi, *partite*, galliards, toccatas, *durezze e ligature*, *consonanze stravaganti* and intabulations).

The book of motets of 1602 is similar to Gesualdo's *Sacrae cantiones* of 1603 which it could have influenced through its chromaticism and unusual modulations (as in, e.g., *O dulcissimae filiae Sion*). On the whole, though, Trabaci's sacred music is conservative. It is generally in a simple, chordal style; the eight-part motets are invariably for two opposing choirs. *Sylvae armonicae* contains arrangements for solo voices of some of his earlier motets, as well as several pieces that call for unusual combinations of voices. Of particular interest are the four Passions published in 1635 in which solo voices are contrasted with a narrator's part written for three voices and turba choruses in *falsobordone* style. The secular vocal music is less interesting and emotionally intense than Gesualdo's, but there is more emphasis on vocal virtuosity. The madrigals of 1611, however, are less florid than those of 1606 and more adventurous in their chromaticism. In its smooth vocal line and triple metre the *Aria di Venere* in the *Breve*

racconto anticipates the suave, rounded style soon to prevail in Italian arias and cantatas.

Trabaci's keyboard works boldly foreshadow Frescobaldi's in their chromaticism, thematic transformations and sectional discontinuity. The toccatas in particular, with their modulatory harmonies and abrupt rhythms, are among the earliest keyboard works that can be termed 'Baroque'. The books of both 1603 and 1615 begin with ricercares in all 12 modes, based on one to four subjects (as also are Frescobaldi's fantasias of 1608). The subjects undergo various transformations, especially by means of 'inganni' (i.e. changes of melodic shape while the hexachord syllables remain the same). His *partite* on Ruggiero, *Fidele* and *zefiro* are characterized by extreme deviations from the original harmonic schemes, and Trabaci also altered the basic phrase lengths. His canzonas surpass all earlier examples in the subtlety of their thematic transformations and in their discontinuity. In the 1615 book the *Toccata Terza & Ricercar per il cimbalo cromatico* is the first true composition for chromatic harpsichord. The *Gagliarda Quinta Cromatica* (although not designated specifically for chromatic harpsichord) also modulates to distant keys.

WORKS

sacred

[21] Motectorum, 5–6vv, 8vv, cum … [8] rithmis, 5vv, liber primus (Naples, 1602); 12 motets and 2 masses ed. in IMi, v (1934)

ROLAND JACKSON

Trabattone.

Italian family of musicians.

(1) Egidio Trabattone
(2) Bartolomeo Trabattone
(3) Giovanni Battista Trabattone

JEROME ROCHE

Trabattone

(1) Egidio Trabattone

(*b* Desio, nr Milan; *fl* 1625–42). Composer and organist. He became a priest and was organist of Varese Cathedral in 1625 and *maestro di cappella* there in 1628. He reverted to being organist in 1632 and held the position until 1638, when he became organist of S Vittore, Seregno. Like many church composers in northern Italy at the time, he composed mainly small-scale concertato motets, together with Mass and Office music for four or more voices. In the *Concerti* of 1629 there is a contrast between the rather stereotyped ornamentation in 4/4 sections and the stronger melodies found in the triple-time sections. The ornamental style in Trabattone's motets becomes more complex with the general rise of vocal virtuosity during the 1630s and 40s: thus the trio *O anima fidelis* (in RISM 1668[2]), which is probably a late work, has difficult semiquaver runs though always with a strong melodic outline. A modern feature in this piece is the 6/4 time signature for a lilting triple-time episode.

WORKS

Messe, motetti, Magnificat e falsi bordoni, 4–6vv, et nel fine le Letanie della Beata Virgine, 4vv, 2vv ad lib, bc (org) (Milan, 1625)
Primo libro de concerti, 1–4vv, bc (Milan, *c*1627)

Liber secundus missarum, motectorum, una cum canticis Magnificat, 4–5vv …
Litaniae BMV, necnon sanctorum ritu ambrosiano, 5vv, bc, op.3 (Milan, 1628)

Concerti, 2–4vv, bc, libro II, op.4 (Venice, 1629)

Il terzo libro de concerti, 1–4vv, bc (org), op.5 (Milan, 1632)

Messa e salmi con le Letanie della madonna, 5vv, bc (org), op.6 (Milan, 1638)

Il quarto libro de concerti, 2–5vv, con 2 messe et Magnificat, 4–5vv, bc, op.7 (Milan, 1642[3])

5 motets, 1620[2], 1648[3], 1649[1], 1653[1], 1668[2]; 2 motets, *GB-Cfm*

Mag, 1645[4]

Trabattone

(2) Bartolomeo Trabattone

(*b* Varese; *fl c*1635–75). Composer and organist, possibly nephew of (1) Egidio Trabattone. He was for a time organist of Varese Cathedral. His posthumously published op.1 is in the smooth, flowing style of much Italian vocal music of the mid-17th century.

WORKS

Theatro musicale: opere postume … 2–4vv, bc: motetti sacri, op.1 (Milan, 1682)

Theatro musicale … motetti, messa, salmi per Vesperi, Litanie della Beata Virgine con brevità, 4vv, bc, op.3 (Milan, 1683)

2 motets, 1649[1], 1653[1]; 8 works, 1642[3]; 1 ps, 1638[3]; 1 work, Egidio Trabattone's Messe (1625)

Trabattone

(3) Giovanni Battista Trabattone

(*fl* 1632–64). Composer, almost certainly related to (1) Egidio and (2) Bartolomeo Trabattone. In 1632 he was *maestro di cappella* of the Savoy court in Turin. His only surviving works are three motets (in RISM 1664[1a]).

Tracey, Andrew (Travers Norman)

(*b* Durban, 5 May 1936). South African ethnomusicologist, son of Hugh Tracey. He was educated at Exeter College, Oxford (1957–9), where he gained the MA, and was awarded an honorary DMus from Natal University, Durban (1995). He held a position as musicologist with the International Library of African Music (1969–77) and became the director in 1977. He is the director of African Musical Instruments Ltd, a manufacturer of African musical instruments, and as a performer he has toured the world with the group *Wait a Minim*. The areas of his research and writing focus primarily on African music, particularly the Shona/Sena music family of the Zambezi valley and the Chopi of southern Mozambique.

<div align="right">GREGORY F. BARZ</div>

Tracey, Hugh (Travers)

(*b* Willand, Devon, 29 Jan 1903; *d* Krugersdorp, Transvaal, 23 Oct 1977). South African ethnomusicologist of British birth, father of Andrew Tracey. He farmed in Southern Rhodesia (now Zimbabwe) from 1921. In 1929 he began to make recordings of indigenous songs and from 1931, with the support of a Carnegie Research Scholarship and on the advice of Holst and Vaughan Williams, he devoted himself to recording traditional music from sub-Saharan Africa and also began his career as a broadcaster; he was regional director for Natal of the South African Broadcasting Corporation (1935–47). In 1947 he was co-founder with Winifred Hoernle of the African Music Society, serving as its secretary and editor of its newsletter (1948–53) and of the annual journal *African Music* (1955–71). With a grant from the Nuffield Foundation he established the International Library of African Music, Roodepoort, in 1954. Under his direction it acquired an important collection of instruments, music and recordings, largely through his own field trips; he also edited a series of over 200 commercial records from its holdings. He lectured at over 50 universities in the USA, Britain and Africa, and was awarded an honorary doctorate by the University of Cape Town in 1965. His publications and broadcasts were largely concerned with the role of African music in African education, and in the growth and understanding of modern African society. In *Chopi*

Musicians, the authoritative work on the subject, he analysed in detail the complex musical structures of the Chopi xylophone orchestras.

LUCY DURÁN

Tracey, Stan(ley William)

(*b* London, 30 Dec 1926). English jazz pianist and composer. He was largely self-taught, and first worked as a professional musician at the age of 16. As the house pianist at Ronnie Scott's club from 1960 to 1967 he worked with a large number of visiting American soloists, notably Zoot Sims, Sonny Rollins and Ben Webster. Up to the mid-1960s Tracey had performed as a pianist (and occasionally as a vibraphonist), apparently influenced by the work of Thelonious Monk and Duke Ellington, but at this point it became apparent that he was not only a remarkable soloist – his style pungent, percussive and harmonically daring – but also an

exceptionally original composer. In 1964 he established a quartet which included Bobby Wellins, and the following year, with this ensemble, he recorded his suite based on Dylan Thomas's *Under Milk Wood* (1965, Col.), a work generally considered a masterpiece of British jazz. The same year he wrote the score for the film *Alfie* (except for the title song, which is by Burt Bacharach). Thereafter Tracey wrote a number of suites for big band, notably *Alice in Jazzland* (1966, Col.), *Seven Ages of Man* (1969, Col.) and *Genesis* (1987, Steam). He also made arrangements of some of Ellington's compositions (recorded on the album *We Love You Madly*, 1968, Col.). For much of the early 1970s he composed for and played in small groups, and during a short period improvised in the free-jazz manner, although his work retained its highly individual harmonic character. From 1976 to 1985 Tracey led an octet, and in 1979 he formed a sextet, later known as Hexad; he has also worked regularly in duos, with his quartet and with his orchestra. He has taught at Goldsmiths' College and the GSM. In 1986 he was awarded the OBE.

CHARLES FOX/DIGBY FAIRWEATHER

Tracker.

A flexible strip, usually of wood, exerting a pulling action (cf Dutch *trekken*) (as opposed to a Sticker); as such it is part of the mechanism or action connecting the key of an organ with its Pallet or valve (*see* Organ, §II, 5). The term itself has an uncertain history, being presumably used by builders long before theorists; James Talbot (MS, *c*1695, *GB-Och* Music 1187) used 'trigger' and 'ribs'; 'trigger', with the dialect 'tricker', seem to have been current throughout the 18th century.

'Tracker organ' is a relatively recent term used loosely to denote an organ with mechanical action. It seems to have originated as a derogatory usage at a time when the advantages of pneumatic or electric action were being extolled, or the supposed shortcomings of historical organs exposed (see G.A. Audsley, *The Art of Organ Building*, 1905).

PETER WILLIAMS/MARTIN RENSHAW

Tract

(Lat. *tractus*: 'drawn out'). A chant replacing the alleluia of the Mass on a limited number of occasions.

JAMES W. McKINNON

Tract

1. Definition.

The tract is a solo chant of considerable melodic elaboration that follows the gradual in the Masses of several penitential occasions. It thus occupies the same position as does the alleluia on all non-penitential dates of the liturgical year. *Ordo romanus I* (*c*700), which has the earliest unequivocal reference to the tract, describes the relationship of the three solo chants of the Fore-Mass as follows: 'After the subdeacon has finished reading [the Epistle], a cantor holding a cantatorium ascends [the ambo] and sings the gradual [*responsum*]. If it be the season to sing the alleluia, then yes; if, however, not, then the tract; if neither, then only the gradual'. If the tract and alleluia appear to be subject to analogous assignment according to the liturgical season, the tract was the chant used much more selectively; in Rome it was sung only on the Sundays of the Lenten season, on Good Friday and Holy Saturday, and on an additional handful of penitential ferias and Lenten sanctoral dates. It thus has a much smaller repertory than other chants of the Mass Proper.

The tract is distinguished from the gradual and alleluia in its manner of performance, being sung neither responsorially nor antiphonally but directly (*in directum*), that is, its verses, generally derived in order from a psalm, were sung one after the other by a soloist without intervening choral responses. Amalarius of Metz (*d c*850) cites this as the single characteristic that separates the tract from the gradual: 'hoc differtur inter reponsorium, cui corus respondet, et tractum, cui nemo' ('this is the difference between the responsory, to which the chorus responds, and the tract, to which no-one responds', *Liber officialis*, iii.12). A further distinguishing feature is its great length; two tracts in particular, *Qui habitat* for Quadragesima Sunday and *Deus Deus meus* for Palm Sunday are by far the longest chants of the entire Mass Proper. They are among the five chants the singing of which Bishop Angilram of Metz (768–91) specified as worthy of extra payment. The meaning of the word 'tract' has given rise to considerable discussion over the centuries, but the most obvious conjecture is surely the most likely: the Latin noun *tractus* derives from the past participle of the verb *trahere*, to 'pull', 'draw' or 'extend'; *tractus*, then, meaning 'drawn out' or 'extended' appears to be no more than a reference to the chant's length.

Finally, the tract is noteworthy for its confinement to two Roman finals, D and G, and two corresponding Gregorian modes, 2 and 8 (in the following discussion the respective tracts will be referred to as 'D-2' and 'G-8' chants). Considerable melodic relationship exists among the tracts of each type (see §3 below).

2. Repertory.

If the core repertory is defined as those chants that were transmitted from Rome to the Carolingian realm in the second half of the 8th century, the core repertory of tracts comprises 16 chants, five D-2 and 11 G-8. The repertory and its Roman liturgical assignments are given in Table 1, with certain omissions and additions. Omitted are the assignments of the Vigil of Pentecost, which are identical to those of the Easter Vigil, and the assignments of *Laudate Dominum* to Saturday of the Pentecost week Ember Days and to the feast of the Annunciation. Two chants are assigned twice: *Laudate Dominum* on the Saturday of the Lenten Ember Week and the Easter Vigil; and *Qui habitat* on Quadragesima Sunday and as a second tract on Good Friday. The four canticles of the Easter Vigil are shown in brackets; they appear in the Roman sources only as mode 8 Gregorian chants and would therefore seem to be Frankish additions (see §4 below). The Franks also added one mode 2 tract, *Eripe me*, using it to replace the Roman *Qui habitat* on Good Friday. Thus the 9th-century Frankish repertory expanded to a total of 21 tracts, six mode 2 and 15 mode 8. Three of the mode 2 tracts, *De necessitatibus*, *Domine exaudi* and *Domine audivi*, are treated as graduals in the Frankish sources (see §4).

The 9th-century Frankish assignments extend to only a handful of liturgical occasions beyond those of Rome, but in subsequent centuries both the Gregorian repertory and its assignments expanded considerably. Most notably *Domine non secundum* was sung on Mondays, Wednesdays and Fridays of Lent and a number of new sanctoral tracts were fashioned for post-Septuagesimal dates. *Effuderunt sanguinem* came to be sung on the feast of the Holy Innocents and *Absolve Domine* at the Requiem Mass (the Roman Mass for the Dead simply adopted *De profundis*). An 11th- or 12th-century Aquitanian or Italian gradual might have about 30 tracts and a late medieval gradual several more. The majority of later tracts were of the mode 2 type.

3. The D-2 and G-8 melody types.

Melismatic passages occur less frequently in tracts than in graduals, and the melismas are on average not quite so long. The tonal range of tracts is also narrower than that of graduals, particularly the gradual verses with their high tessitura; the D-2 tracts confine themselves for the most part to the hexachord *c-a* with occasional extensions downwards to A and upwards to b♮; while the G-8 tracts generally stay within the pentachord *f-c'*, with fairly frequent inclusion of *d'* and, less often, *e'* above.

The melodic feature of tracts most often singled out in the musicological literature is their formulaic character, a trait that has tempted some scholars to think in terms of variation technique or of an elaborated psalm tone. However, the inclusion of 9th- and 10th-century additions to the original repertory within most of the published systems of analysis has resulted in somewhat exaggerated estimates of the tract's melodic homogeneity, because later tracts are generally more stereotyped in their formulaic usage. Nevertheless, even if observations are confined to the 16

core repertory chants, much remains to be said about the musical interrelatedness of tracts, both in their Roman and Gregorian versions.

The most remarkable trait of the D-2 tracts is the succession of phrases cadencing on D, C, F and D. Of the 41 verses of the five D-2 tracts the series is present in no less than 28. Yet the clarity of the pattern is frequently obscured by additional cadences; there are just 16 verses where the D–C–F–D pattern exists in its pure four-phrase form. More significant perhaps is the persistence of the C cadence (ex.1), which generally serves to divide the verse into two half-phrases; it is missing from only two of the 41 verses. The figures given here are taken from the Gregorian tracts, but the Roman and Gregorian versions consistently maintain the same cadential points within the D-2 tracts.

If the placement of cadences is the most regular musical characteristic of D-2 tracts, the melodic homogeneity of the cadential figures is also considerably more consistent than that of the complete phrases. The final D phrase of all five tracts, however, is nearly invariable. As for the opening phrases (ex.2), the Gregorian use of the distinctive figure at the beginning of all five tracts might create an initial impression of uniformity, but the continuation of the phrase differs significantly, except in the two tracts that open with the word 'Domine'. The Roman opening phrases, on the other hand, while appearing to vary because of adjustments made to accommodate differing syllabification, have the same closing melisma, except in the case of *De necessitatibus*. For phrases other than those that open and close an entire chant there is much melodic variety. There is an especially large number of opening phrases for the verses, no less than ten, and at least five for the closing phrases; the interior phrase cadencing on F, however, is considerably more regular. It should be noted that *De necessitatibus* has little in common melodically with the other tracts apart from its opening figure (see ex.2) and concluding phrase.

The 11 G-8 tracts of the core repertory, generally shorter than D-2 tracts, have a total of 36 verses. These verses fail to display a cadential pattern comparable to the D–C–F–D series of their D-2 counterparts, but 23 of them have an interior F cadence (ex.3) which is melodically similar to the C cadence of the D-2 tract (see above, ex.1) and frequently plays a similar role in defining the structural mid-point of the verse.

As for melodic formulae, all 11 G-8 tracts conclude with the same G phrase, but five different G phrases are used to begin the chants. At least nine other G phrases are employed throughout the verses, but one of them is used six times to open verses, thus contributing to an impression of melodic homogeneity. The fact that there are only four different F phrases, one of which is used 12 times, strengthens this impression. The Roman and Gregorian versions generally cadence at the same points in the text and on the same pitches, but on first examination it would seem that the Gregorian melodic formulae are maintained with more regularity than the Roman. An obvious instance of this is the G phrase used to open five of the Gregorian tracts. If, for example, the Gregorian *Laudate Dominum* and *Jubilate Dominum* are compared with their Roman counterparts (ex.4), the two Gregorian phrases appear to be melodically identical while the Roman ones vary noticeably from each other. However, if differences of

syllabification are taken into account, it will be seen that the melodic formulae of Roman G-8 tracts are used with remarkable regularity (Nowacki, 1986). Thus certain portions of a melodic formula are omitted to accommodate a lesser number of syllables in the text and others are added to match extra syllables. The Frankish cantors, however, appear to have forced the text into conformity with the melodic formula. (The conclusions reached above in connection with ex.2 suggest that Nowacki's findings for the G-8 tracts may also apply to the D-2 chants.)

Those scholars who see an elaborated psalm tone in the verses of the tract compare the quadripartite phrase structure of the verses to an intonation, mediation, continuation formula and termination. However, an alternative explanation (Hiley, 1993) is equally plausible: 'the conventions of articulation (starting phrases, terminal melismas) are a natural response to the need to mark off major breaks in the text, found in very many chant genres and not necessarily deriving from simple psalmody'. It should be added, too, that only a minority of tract verses have precisely four phrases, some 29 of 77 in the Gregorian versification (which differs occasionally from the Roman). Yet there remains the persistence of the C cadence in the D-2 tracts and the F cadence in the G-8 tracts. Not only do these cadences frequently create the feel of a bipartite structure, but they occur generally at the mediating point of the psalm verse. It is wholly reasonable to suppose that the chant's melodic characteristics were 'an essential part of the tract from the start' (Hiley, 1993), yet it is still possible to imagine that the psalm tone model might somehow have figured in the creation of the genre.

Tract

4. Historical considerations.

A number of exceptional features about the tract, both musical and liturgical, have prompted a variety of fascinating and controversial positions on the history of the genre. (However, no attempt has been made to pass definitive judgement on the views outlined in the following discussion.)

It is not surprising that the tract, with its tendency towards an underlying cadential structure and a variety of differing but related melodic formulae, played a part in the thinking of Leo Treitler (1974) when he advanced the notion of a cantor reconstructing a chant from year to year, changing its melodic detail while maintaining the broad melodic conventions and characteristic formal features of the genre to which it belonged. Nor is it surprising that Cullin (1989–96) has seen the multiple verses of the tract, with their psalm-like structure and broad melodic similarity, as one of several indices for the view that the tract represents a later manifestation of the original mode of psalmody – psalmody *in directum* – which predated the responsorial psalmody of the late 4th century. The gradual, according to this view, evolved from the tract, and evidence of the original tract can still be seen in the multiple verses of the Easter week *Haec dies*.

Conversely, a number of scholars, including Peter Wagner (1901) and Apel (1958) maintain that all mode 2 tracts are in reality graduals. The view stems from the fact that three of these tracts, *De necessitatibus*, *Domine audivi* and *Domine exaudi*, are labelled 'Resp.Grad.' in the early Frankish graduals. Hucke (1967) concluded that at least two of them, *Domine audivi*

and *Domine exaudi*, shared the same musical characteristics as the other mode 2 tracts, and that these characteristics, moreover, were peculiar to tracts and not to graduals. The one exception he allowed was *De necessitatibus*, a chant consisting of three verses, of which the second and third (closely related to each other melodically) arguably partake of the special musical character of the gradual verse. There are liturgical arguments suggesting that all five D-2 tracts were indeed originally looked upon as such at Rome: they maintain the normal placement of the tract after the gradual (save for *Domine exaudi* in Good Friday's generally exceptional liturgical configuration), and they are called tracts in the Roman manuscripts, suggesting that the labelling of the three 'Resp.Grad.' in the Frankish manuscripts might have been done so mistakenly.

Perhaps the most intriguing question involves the four Easter Vigil canticles, *Cantemus Domino* (*Exodus* xv.1–2), *Vinea facta* (*Isaiah* v.1–2), *Attende caelum* (*Deuteronomy* xxxii.1–4) and *Sicut cervus* (Psalm xli.2–4). The first three are in fact canticles, figuring in each case as a final verse of three Old Testament readings, while the fourth consists of three verses of Psalm xli sung *in directum* during the procession to the baptismal font. The texts of all four appear in the early unnotated Frankish graduals, and the mode 8 tract melody appears with all four in the earliest notated Gregorian graduals. However, in the Roman graduals the four are not set in the Roman version of the G mode melody, as might be expected, but in the Gregorian version. Actually, the earliest Roman appearance of the chants is not in the Roman graduals but in a mid-11th-century lectionary (see Boe, 1995), which also gives the Gregorian melodic version. This, together with with the fact that neither the earliest Roman lectionaries or *ordines romani* make reference to the four chants, suggests that it was the Franks who singled out these four texts and treated them as discrete solo chants, applying to them the mode 8 melody of the Easter Vigil tract *Laudate Dominum*. The putative status of the four in 8th-century Rome calls for somewhat more venturesome speculation: perhaps the three canticles were simply recited by the lector as conclusion to their respective readings, and perhaps *Sicut cervus* (chanted in its entirety) was a psalm associated for so long a time with the baptismal rite of the Easter Vigil that there was no need to make mention of it in the earliest documents. Augustine had already cited *Sicut cervus* in connection with baptism (*In psalmo xli*, 1).

A final controversial question on the history of the tract involves its antiquity. Chant scholars since Wagner (1901) have assumed it to be among the most ancient of Mass Proper items, a view that Hucke (*Grove6*) was one of the first to dispute, no doubt persuaded by the obviously incomplete state of the tract's 8th-century Roman repertory.

Tractulus

(from Lat. *trahere*: 'to draw out').

In Western chant notations a neume signifying one note, usually drawn as a short horizontal line; its precise significance is not always clear. In some manuscripts it is the form used for a *punctum* (single note usually lower in pitch than those on either side). For neumes such as the *climacus* (several notes in descending order) where several *puncta* appear side by side, the *tractulus* in some manuscripts alternates with the more usual form of *punctum*, a dot, with no more significance than as a reading aid (e.g. in

GB-Lbl Harl.4951, from Toulouse, and later Spanish sources). But the *tractulus* may also have been used to represent a longer note in performance (e.g. in *F-Pn* lat.1118, from Gascony). (For illustration *see* Notation, Table 1.)

Trad jazz.

A style of traditional jazz current in Britain between the mid-1950s and the early 1960s. The term was applied to a particularly commercial and simplified form of revivalist jazz which was modelled on the serious attempts of Ken Colyer and Chris Barber to re-create New Orleans styles. Trad bands followed the instrumentation of New Orleans groups (trumpet, trombone, clarinet, banjo, double bass and drums); the principal and most influential were those of Barber, Acker Bilk and Kenny Ball. Their repertory was bland, ranging from jazz interpretations of popular songs and nursery rhymes (such as Barber's *Bobby Shaftoe*, 1954, Decca) to cloying, sentimental clarinet solos, notably those of Monty Sunshine (with Barber) and Bilk, whose greatest hit was his theme music for the television series 'Stranger on the Shore'. The brief vogue for trad resulted in part from shrewd marketing techniques, which featured such anachronistic touches as the association of Bilk's band with bowler hats and Victorian waistcoats. A number of bands were formed to exploit the commercial potential of trad, but they proved short-lived, and after riots at the Beaulieu Festival in 1961 and the rift between supporters of traditional and modern styles of jazz, the repertory lost popularity. Some elements of the style have remained in use in continental Europe (notably in West Germany and the Netherlands), but trad in its strict sense was a spent force by 1965.

ALYN SHIPTON

Traditional jazz.

A term that arose in polemical writings of the late 1930s to distinguish New Orleans jazz of the 1920s from the swing style of the 1930s; it was later applied to the music of New Orleans revival groups, and is now used almost exclusively in that sense. Beginning in 1938, four forces led to a revival of a supposedly authentic New Orleans style: first, several nationally prominent black jazz musicians (Sidney Bechet, Jelly Roll Morton and Jimmie Noone) were recorded playing a purportedly traditional repertory using traditional instrumentation; second, a significant number of white musicians, both in the USA (Turk Murphy and Lu Watters in San Francisco) and elsewhere, turned to recordings of the 1920s New Orleans jazz for models; third, a number of older black New Orleans musicians who had never or rarely played outside Louisiana were recorded by white aficionados; finally, older dixieland jazz musicians, many of whom had retired to New Orleans, were recorded from the mid-1950s, often under the auspices of the New Orleans Jazz Club. The music of the third group (beginning with the recordings made under Kid Rena's leadership in 1940 and continuing with those of Bunk Johnson and George Lewis) has come to be regarded as the authentic bearer of the New Orleans tradition of jazz, which is thought to continue in the music still played at Preservation Hall, New Orleans. However, this revival style was a locally evolved idiom that responded to market forces (an appetite for folklore, nostalgia and primitivism) rather than a resurrection of a type of music that was originally more cosmopolitan and technically demanding. Whatever the case, the traditional jazz movement has a very large and devoted audience and many active performers, especially outside of the USA, with an eclectic repertory and performing style.

LAWRENCE GUSHEE

Traeg, Johann

(*b* Gochsheim, nr Schweinfurt, 20 Jan 1747; *d* Vienna, 5 Sept 1805). Austrian music publisher and copyist. The son of Johann Veit Traeg, a musician, he moved to Vienna before 1779 and established a music copying business, branching out into music publishing in 1794. His son Johann Traeg the younger (*b* 15 Sept 1781; *d* after 1831) acquired the firm by decree of the town council on 12 February 1808.

Johann Traeg the elder began working as a music copyist in the early 1780s. His first advertisement in the *Wiener Zeitung* on 10 August 1782 announced that all genres of music could be purchased from him. The undertaking subsequently developed into the most prominent copying workshop in Vienna. Between 21 December 1782 and 15 January 1794 frequent advertisements in the *Wiener Zeitung* announced new manuscripts, and also mentioned items for sale by other publishers. On 16 May 1789 Traeg opened a music shop. His printing concern was launched with the three quartets op.1 by Eybler, published on commission on 9 April 1794, though until 1800 it pursued a somewhat hesitant course. Manuscript copies continued to be sold as well as items from foreign firms; from 16 June 1798 Traeg was an agent for Breitkopf & Härtel. By 1803 the business was firmly established, and on 22 October was renamed Johann Traeg und Sohn. This period ended on 7 August 1805 when three short masses by Kajetan Freundthaler were published with the imprint 'Giovanni Traeg' (i.e. the son). After the father's death, the official permit being still valid, publications with the imprint 'Johann Traeg und Sohn' continued to appear until the beginning of 1808. The firm subsequently prospered and by 1818 had reached publication no.604; growing competition from other firms led to a gradual decline in activity and to bankruptcy which enforced the sale of the majority of the publications to Artaria & Co. (July 1817). The bankruptcy was, however, unexpectedly cancelled two years later (20 August 1819). The final liquidation of the firm took place on 27 July 1820, the rest of the current publications passing to Cappi & Diabelli and Pietro Mechetti. Johann Traeg the younger was registered as an art shop bookkeeper in October 1823; in April 1831 he was living in the Leopoldstadt suburb of Vienna.

The early years of the publishing house were most significant. Its publications included the first edition of Haydn's Piano Trio h XV:31 and some of his lesser pieces and arrangements; the first editions of Mozart's k174, 298 and 608 and early editions of the quartets k387–465; and the first editions of Beethoven's opp.9 and 66 as well as woo65, 69, 70, 72, 77, 83, 123 and 124, and several arrangements. Among the other composers represented in Traeg's catalogue are C.P.E. Bach, Cherubini, Cramer, Dussek, Eybler, E.A. Förster, Gyrowetz, Michael Haydn, Hummel, Krommer, Johann Mederitsch, Pleyel, Alois Anton Polzelli, Antoine Reicha, Franz Ries, Pierre Rode, Friedrich Starke, Steibelt, Vanhal and Wölfl. The firm also published music by Johann the elder's brother Andreas (*b* Gochsheim, 2 Dec 1748).

ALEXANDER WEINMANN

Traetta, Filippo.

See Trajetta, Filippo.

Traetta [Trajetta], Tommaso (Michele Francesco Saverio)

(*b* Bitonto, nr Bari, 30 March 1727; *d* Venice, 6 April 1779). Italian composer. He was trained between 1740 and 1750 at the Conservatorio di S Maria di Loreto, Naples, where his teachers were Porpora (until 1741) and Durante. His *Stabat mater*, probably written around 1750, shows contrapuntal mastery and a penchant for sombre, chromatic choral writing. In accordance with local custom, he presumably proved his talents for the stage by writing comic operas for the smaller Neapolitan theatres before receiving a commission to write *Il Farnace* for S Carlo in 1751. He continued to write both serious and comic opera throughout his life. In Rome and Naples during the early 1750s he came into contact with the commanding figure of Jommelli, to the production of whose *Ifigenia in Aulide* at S Carlo in 1753 he contributed five arias. In 1757–8 he had no fewer than five Metastasian operas performed in Rome and northern Italian cities including Venice, which became his base.

The crucial phase of Traetta's career began with his appointment in 1758 to the court at Parma, where the intendant Du Tillot proposed to unite some features of French *tragédie lyrique* with the reigning ideals of Italian aria opera, and to this end had the text of Rameau's *Hippolyte et Araicie* translated and adapted by the court poet C.I. Frugoni. The work was conceived in part as a vehicle for the prima donna, Caterina Gabrielli, who inspired Traetta to his best efforts here and on several later occasions. Frugoni introduced choruses and spectacle into *Ippolito ed Aricia* but was unable to integrate them with the drama. He was also hard pressed to extract suitable scenes and aria texts from the model, so he used Racine's *Phèdre* as well. The result, for all its weaknesses, was deemed epochal, even by Algarotti, who corresponded with Frugoni during the genesis of the opera; in a letter to Voltaire he called it the best spectacle seen in Italy for some time. Within six months Ignaz Holzbauer, who probably saw the

production at Parma, took the libretto back to Mannheim and set it, thus presaging the day when Traetta himself would be called to Mannheim. During 1760 Frugoni reworked French models for the texts of *I Tindaridi* (after *Castor et Pollux*) and a wedding serenata *Le feste d'Imeneo*.

Although in a letter to Mattia Verazi, court poet in Mannheim, Traetta denied having seen Rameau's music for *Hippolyte*, he did have Rameau's scores at his disposal when composing these works; this is evident from his occasional borrowings, which are restricted to dance music and, more rarely, pictorial effects such as the storm music in *Hippolyte*. What he did not borrow is more significant. Whereas Rameau had set the scene around Castor's urn as a choral *tombeau*, grief being expressed through descending chromatic lines in imitation, Traetta made it a solo scene for Telaira (sung by Gabrielli). During the scene's initial obbligato recitative the orchestra depicts several phases of emotion: grief, terror, resignation and consoling hope. The set piece that follows, a cavatina addressed to the shade of the departed, is a tender Andante in E♭, a type of Italian opera aria to which Traetta gave a new degree of sensuous expression. The writer J.J.W. Heinse declared that this scene alone was worth an entire opera; with audiences in 1760 unprepared for more than a few scenes of such intensity, they were used sparingly. These scenes placed Traetta in the vanguard of the young opera composers who, following Jommelli's example, increasingly extended the range of orchestral colour and developed an arsenal of effects for the dramatic ballets, melodramas (in the specific sense) and other peculiarly *Sturm und Drang* phenomena that came to flourish in Germany during the 1770s.

Parma broadened Traetta's view of the dramatic possibilities of musical theatre; writing for Gabrielli strengthened his already powerful gifts as a melodist. Pleased with the fame of his *maestro di cappella*, the duke allowed him to fulfil commissions for other courts and between 1760 and 1763 he composed operas for Turin, Vienna and Mannheim. *Armida* (1761, Vienna) again involved Gabrielli in the title role; the libretto, adapted by the intendant Durazzo and the court poet Migliavacca from Quinault's *Armide*, was designed to display her talents. Although the score is full of marches, choruses, ensembles and dances, *Armida* is still dominated by the da capo aria in the longwinded Neapolitan style of the mid-century. The orchestra is skilfully used to depict Armida's turning from hatred to pity, then to love in the scena and aria 'Mori, si mori' (Act 2 scene ix) – the very point in the drama about which Rousseau and Rameau had disagreed, the one attacking and the other defending Lully's setting. As with the Parma operas, many of the recitatives are orchestrally accompanied, and Traetta often took pains to connect them not just to the beginnings of the set pieces, but also, by means of transitions, to their endings. He was evidently intent upon building large scene complexes, and began to take more account of tonal planning.

Sofonisba (1762, Mannheim) carried these advances further. The commission brought Traetta again into contact with Jommelli, who then directed opera at the neighbouring court of Stuttgart. Verazi, Jommelli's frequent collaborator, provided the libretto. Apparently the event was an attempt by the Elector Palatine Carl Theodor to outshine Carl Eugen of Württemberg in lavishness of spectacle and brilliance of musical effect.

With the famous Mannheim orchestra at his command, Traetta wrote the most symphonic of his operas, and certainly his best operatic sinfonia. He himself wrote the ballet music. The pomp of ancient Rome comes to life in such scenes as the gladiatorial games, a ballet with chorus in the middle of Act 1, and the march and obbligato recitative for the equestrian procession and entry of Scipio. The ways of achieving grand scenic effects learnt from Rameau had more scope here than in the Parma operas; but it was again the heroine of the piece who inspired Traetta to his highest achievement. Sophonisba was played by the young Dorothea Wendling, the future Ilia of Mozart's *Idomeneo*. Heinse commented at length on Sophonisba's suicide and the final quintet of lament, likening them to classical tragedy.

Goldschmidt underestimated *Sofonisba*, although he chose to prepare an abridged edition of it. His judgment was swayed by a mistaken dating of Traetta's second Viennese opera, *Ifigenia in Tauride*, which he assigned to 1759 instead of 1763. The earlier dating is historically and stylistically implausible, whereas if the later date is accepted *Ifigenia* can be seen to follow and intensify the bold advances made in *Armida* and *Sofonisba*. The text was the most direct, uncluttered and 'classical' that Traetta had yet been given. The opera was written one year after Gluck's *Orfeo ed Euridice* and for the same forces, and profited much from its predecessor. The castrato Gaetano Guadagni, for whom the role of Orpheus had been created, was the first Orestes, and his scene with the Furies compares favourably with, and is indebted to, Gluck's similar scene in *Orfeo*. Artistic relations between the two composers went further: Gluck directed a performance of Traetta's *Ifigenia* at Florence in 1767, and he had not forgotten its music when he came to write his own *Iphigénie en Tauride* at the end of his career. When Burney visited him in 1772 Gluck had his niece sing arias by Traetta which he accompanied. Traetta was stimulated by Gluck's dramatic vision. The impression made on him by *Orfeo* is evident in his *Antigona* (1772), particularly in Antigone's lament and invocation of the Furies at the beginning of Act 2; the structure and versification of the text are themselves derivative. In his late comic opera *Il cavaliere errante* Traetta paid Gluck the compliment of parodying 'Che farò'.

With his Viennese *Ifigenia* (1763) Traetta had gone further in the direction of classical tragedy than would have been possible on any other operatic stage outside Paris. For his setting of the people's compassion for Orestes ('O come presto a sera', Act 1 scene v), emboldened not only by Gluck's example but also by Rameau's chromaticism in the laments for Castor, Traetta returned to the sombre colours of his early *Stabat mater* for a long and difficult chorus, producing an effect of grandeur which equalled Gluck's highest aspirations and achievements. *Ifigenia* became Traetta's best-known serious opera and was frequently revived; Haydn chose to stage it (with his own additions) as late as 1786.

Declining enthusiasm and lack of funds for opera at Parma made it expedient for Traetta to accept the post of director of the Conservatorio dell'Ospedaletto at Venice in 1765. This position gave scope to his talents for sacred music and prompted the oratorio *Rex Salomone* for women's voices. He also wrote two comic operas which were later widely appreciated during his Venetian stay: *Le serve rivali* and *Amore in trappola*. His serious operas for the public theatres of Venice incurred no financial

risk for their promoters; they were conventional aria operas after the Metastasian formula. The tragic opera he was capable of writing was possible only at court theatres, and then only when directors like Durazzo and Du Tillot or princes like Carl Theodor and Carl Eugen enforced their wills, whereas Maximilian III Joseph of Munich commissioned and received from Traetta a perfectly ordinary setting of Metastasio's *Siroe* (1767).

In 1768 Traetta accepted another court position, as successor to Galuppi in the service of Catherine II of Russia, arriving at St Petersburg late in the year. Besides giving singing lessons to his princely patrons (a task he had fulfilled in his previous posts as well), he became musical director of the opera. At first he revived some of his conventional aria operas, embellishing them with a few choruses and with arias reorchestrated to take advantage of newly fashionable instruments such as the clarinet. He must have felt the need to test reactions at a court that was accustomed to hearing operas in the best Italian tradition – a tradition that Galuppi had maintained. But in 1772 he produced a major new work, *Antigona*, stimulated by his reunion with the librettist Coltellini, a refugee from Vienna, and with Caterina Gabrielli. The opera has been considered his masterpiece ever since Heinse acclaimed it; Goldschmidt pronounced it the culmination of *opera seria*. In dedicating the libretto to Frederick the Great, Coltellini claimed that he had eliminated sententious comparisons (referring to Metastasio) and substituted the real 'pity' and 'terror' of his classical model, Sophocles' drama, at the king's suggestion (advice which saw strangely little application at Berlin). In fact the libretto has some dramatic ineptitudes and banal dialogue, which is however mitigated by the force of Traetta's music, especially in the scenes dominated by the heroic central figure and in the great choral pantomimes. *Antigona*, like *Sofonisba*, is flawed by having to serve too many singers. If its creators had gone one step beyond eliminating simile arias and had eliminated all but the three central characters, they could have avoided anticlimactic scenes such as the one at the end of the first act. Traetta partly compensated for an excessively prolix drama by concentrating on a few emotions and restricting his tonality to a few constantly recurring keys. The most effective tonal shock of the opera is that of the E minor choruses of Act 3, which powerfully challenge the flat keys of the neighbouring solo scenes; they suggest the futility of the struggle by trapped individuals against tragic destiny. Traetta was particularly conscious here of building scene complexes through tonal planning. He also advanced beyond the most adventurous aspects of his earlier tragedies by the repeated use of a few easily identified motifs, such as rushing ascending and descending scales to suggest the Furies of Hell, and the sobbing figure at the beginning of Act 2, which appears many times later, most impressively to introduce Antigone's final aria in E♭ (the figure is also used within the aria). Research may show that such motivic repetition was an operatic commonplace of the early 1770s; certainly it anticipates techniques used by Benda in his melodramas from the middle of the decade, and by Mozart (in *Idomeneo*) at its end.

Traetta left Russia in ill-health during the summer of 1775 and settled again in Venice. He tried his fortunes for a time in London, among other places, with a serious opera, *Germondo*. Burney related that the great English success of Sacchini at the time prevented Traetta from becoming popular.

In 1777 he was briefly in Paris, where he presumably sought new opportunities, just as Mozart would the following year; *Il cavaliere errante* was given posthumously at the Opéra in 1779. In autumn 1777 he returned to Venice, where his son Filippo (also a composer) was born; his last two completed works were comic operas for the Venetian carnivals of 1778 and 1779. By the latter date he was already suffering from his final illness. He was a celebrated man at his death, and was buried with honours near the Ospedaletto. Arteaga summed up his achievements by speaking of the 'talents and the learning of the always beautiful and sometimes sublime Traetta'.

Tragédie en musique [tragédie lyrique]

(Fr.).

The most important species of French opera in the period from Lully to Rameau (1673–1764). In its organization and musical character it shares many features with lesser genres such as the *pastorale-héroïque*. It is nevertheless distinguished by its five-act structure (others usually had fewer acts) and by a greater dramatic intensity and seriousness of tone. In the later 18th century the *tragédie en musique* profoundly influenced the operatic reforms of Jommelli, Traetta and, above all, Gluck. In their turn the French tragedies of Gluck, Piccinni, Sacchini and Salieri, produced in the 1770s and 80s, represent a transformation and final flowering of the genre.

Tragédie en musique

1. Terminology.

During the greater part of the Lully–Rameau period, the term 'tragédie lyrique' is rarely encountered. For the first 85 years of the genre's existence, this expression was scarcely ever employed by librettists or composers. Almost without exception, librettos printed before 1760 use the terms 'tragédie' or 'tragédie en musique'. On printed scores the same terms are found with similar consistency, together with such variants as 'tragédie mise en musique' or (after the mid-18th century, when old librettos began to be recycled) 'remise en musique' (e.g. Dauvergne's *Enée et Lavinie*, 1758). Le Cerf de la Viéville is typical of his time in referring to 'nos Opéra que nous appelons des Tragédies en Musique' (*Comparaison de la musique italienne et de la musique françoise*, 1704–6, iii, 3). During the 18th century, as other genres grew in stature and popularity, writers found the need to invent additional makeshift terms (e.g. 'tragédie-opéra', 'opéra tragédie').

It was in literary circles, and not until the mid-18th century, that the expression 'tragédie lyrique' first became fashionable. Rémond de Saint-Mard (1741), for example, uses 'tragédie lyrique' and 'tragédie en musique' interchangeably; Cahusac (1751, 1754) is more consistent in employing the former to distinguish lyric from spoken tragedy. During the 1760s the new term is found sporadically on title-pages (e.g. Dauvergne's *Hercule mourant*, 1761). But only in the following decade, particularly after the arrival in Paris of Gluck's operas, does it appear at all frequently in this context.

For much of the 20th century 'tragédie lyrique' was the preferred term. Yet present-day scholars are increasingly following Girdlestone's lead in returning to the terms used by librettists and composers, at least for the Lully–Rameau period.

Tragédie en musique

2. History, 1673–1773.

A year after seizing control of the Académie Royale de Musique and hence acquiring a monopoly of French opera, Lully produced his first *tragédie*, *Cadmus et Hermione* (1673). Thus was born the genre that was to dominate the composer's output and bear his imprint for many years to come: between them, Lully's 13 completed *tragédies*, all but two to librettos by Philippe Quinault, set the dramatic and in some respects the musical tone of the genre for almost a century.

The *tragédie en musique* emerged more or less fully fledged. Although various developments may be traced through Lully's subsequent works, *Cadmus* already includes most features characteristic of the genre. The Lullian *tragédie* is, in fact, an extraordinary amalgam of pre-existing elements. From the tragedies of Corneille and Racine come the five-act structure and the use, if no longer exclusive, of alexandrines, while the 'déclamation enflée et chantante' of the *tragédienne* C.C. La Champmeslé

influenced Lully's conception of recitative. From the *ballet de cour* and elsewhere come the panegyrical prologues, stage spectacle, dances, *symphonies* and choruses. From the *tragédie à machines*, the *pastorale* and pre-Cornelian tragedy, the *comédie-* and *tragédie-ballet* come other elements, both musical and dramatic. Lully's supreme achievement is to have synthesized all these into an art-form in which everything – music, drama, dance, staging – was subservient to an overriding dramatic unity: a true *Gesamtkunstwerk* 'avant la lettre'.

This eclectic mixture proved astonishingly popular at all levels of society, from Louis XIV down. Having created a taste for the *tragédie en musique*, Lully used his monopoly to ensure that only his operas could satisfy that taste. In any year after 1673, audiences could see a new Lully *tragédie* (they appeared at the rate of about one a year) and at least one revival of his existing operas, but no others. Given that devotees could buy season tickets and that the season lasted most of the year, it is hardly surprising that audiences got to know these works by heart; there are, indeed, reports of their joining in with the actors.

Lully's unexpected death in 1687 left something of a vacuum. Because of his monopoly, few French composers had first-hand experience of composing opera. (M.-A. Charpentier was a rare exception, having written music for various private productions, including biblical operas for the Jesuits.) To fill the vacuum, the practice of reviving Lully's *tragédies* continued, reinforcing their dominant position. Many went on to be revived for 60, 70 or 80 years after their creation; *Thésée* lasted an astonishing 104 years, until 1779.

Such new works as appeared in the remaining years of the 17th century were almost all *tragédies* in the Lullian mould. Among the composers were Lully's son, Louis, and former colleagues or pupils, Collasse, Marais and Desmarets. The works of these years are not without originality or musical interest. Indeed, Charpentier's *Médée* (1693) is one of the finest in the repertory. But almost all were judged unsatisfactory by comparison with the works of the revered Lully – Charpentier's because of its too-adventurous harmonic idiom, others because they seemed pale imitations. Only Collasse's *Thétis et Pélée* (1689) enjoyed a success comparable with the master's.

Almost half a century separates the last of Lully's completed *tragédies* (1686) and the first of Rameau's (1733). During that time several librettists emerged, among them Danchet, Lamotte and Roy, who came near to equalling the great Quinault without deviating much from his style. Yet even composers of the calibre of Campra, Destouches, Marais and Montéclair seldom managed the musical ingredients in a manner that carried dramatic conviction. Such men often seemed more comfortable in the lighter genres. The gaps between successful *tragédies* became steadily wider: Destouches' *Omphale* (1701), Campra's *Tancrède* (1702), Desmarets and Campra's *Iphigénie en Tauride* (1704), Marais' *Alcyone* (1706), Gervais' *Hypermnestre* (1716), Montéclair's *Jephté* (1732). By the late 1720s, indeed, the Opéra had become 'a veritable graveyard of the *tragédie lyrique*' (Anthony).

Yet for Rameau the *tragédie* remained the most esteemed genre. In all, he devoted to it about a third of his operatic output. Few others now showed the same commitment. In the 20-year period 1739–58, the Académie Royale de Musique presented only six new *tragédies*. (A similar period between 1718 and 1737 included three times as many.) If Rameau's first operas initially appeared controversial, that was not through any radical break with tradition: most elements of his style are at least hinted at in 'pré-ramiste' operas of the 1720s and early 30s. The Lulliste–Ramiste dispute had more to do with the complexity and intensity of Rameau's idiom. Once audiences had accepted this, they readily placed *Castor* and *Dardanus* on a level equal to, or even higher than, Lully's masterpieces.

From its beginnings, the *tragédie en musique* had been inseparably linked with the court and the Académie Royale de Musique (whose entrepreneurs inherited Lully's monopoly), and thus identified with the political and social hierarchy. Inevitably, therefore, the genre found itself attacked in the 1750s by the anti-establishment intellectuals of the new Enlightenment, prominent among them F.M. Grimm and J.-J. Rousseau. The resulting Querelle des Bouffons, as much political as artistic in its motivation, succeeded in undermining the whole aesthetic basis of serious French opera and hastened the search for alternatives. There were those who clung to the *tragédie*: if anything, the Querelle led to an upsurge of activity. Between 1758 and 1773 a dozen new *tragédies* appeared, including such anticipations of Gluck as F.-A.D. Philidor's *Ernelinde* (1767) and Gossec's *Sabinus* (1773). Dauvergne's *Enée et Lavinie* (1758) is one of several to take the hitherto unthinkable step of re-using librettos from the golden age; Mondonville (1765) even had the temerity to reset Quinault's *Thésée*. Yet few were successful enough to merit a revival, and it was gradually conceded that the genre was moribund. Moribund but not dead, for the arrival of Gluck's operas in Paris in 1774 was to provide a massive and invigorating transfusion. Gluck's work was 'at once a blow to French opera and a renewal of it' (Einstein, *Gluck*, 1936, p.138).

Tragédie en musique

3. Dramatic and musical characteristics, 1673–1773.

Opera in France emerged at a time when the native spoken theatre was at its peak. This fact, and the fact that the 'classic' French theatre of Corneille and Racine was governed by a strict code of rules explains many characteristics of the *tragédie en musique*. Yet although the new genre shares features with spoken tragedy (most obviously the five-act structure), it was never conceived of as merely an adaptation of the existing one. Spoken tragedy, it was widely believed, had reached a state of perfection: to graft music on to it would be inappropriate. Far better that lyric tragedy should aim at a perfection equal to that of Corneille or Racine without directly imitating it. Indeed, lyric tragedy came to be seen not only as the counterpart but also the inverse of spoken tragedy.

The inversion applies first to the subject matter. Whereas spoken tragedy preferred to treat historical figures, such subjects were considered inappropriate for opera. What rational mind could tolerate the idea of a Brutus or a Pompey expressing himself solely through singing? But if opera restricted itself to a world inhabited by gods and allegorical or legendary

figures, the problem disappeared. Hence the preponderance of *tragédies* based on classical myth or legend (Lully, *Alceste*; Rameau, *Castor et Pollux*), Italian epic (Lully, *Armide*; Campra, *Alcine*) or Spanish romance (Lully, *Amadis*; Destouches, *Amadis de Grèce*). For the same reasons, librettists turned very occasionally to the Old Testament (Montéclair, *Jephté*) or other ancient religious sources (Rameau, *Zoroastre*).

Almost by definition, then, opera made extensive use of supernatural elements, collectively known as *le merveilleux*. In spoken tragedy this had been marginalized; certainly it rarely played a part in the dénouement. In the *tragédie en musique*, conversely, the supernatural was considered not only desirable but essential. Indeed, for many writers *le merveilleux* was the key feature – 'la pierre fondamentale de l'édifice' (Cahusac, 1751) – that distinguished lyric from spoken tragedy. If it was pointless to imitate what spoken tragedy did perfectly, Cahusac argued, lyric tragedy was bound to explore what the theatre was forbidden from doing. In this way *tragédie en musique* became the antithesis of its spoken counterpart. *Le merveilleux* provided justification for this inversion. Where spoken tragedy eschewed stage machinery, the supernatural happenings in opera cried out for elaborate effects. Where violent events in spoken tragedy were perforce enacted offstage, they happened in full view in lyric tragedy (compare the treatment of the sea monster in Racine's *Phèdre* and in Rameau's *Hippolyte*). Where dance was seldom required in spoken tragedy, it was justified within the supernatural milieu of opera in the same way that music was. Even the balance of elements in the plot was inverted: whereas love interest in the theatre was usually secondary to themes of a political nature, overtly political themes were generally thought ill-suited to opera. Rather, the typical *tragédie en musique* adopted one of a number of formulae involving a pair of lovers and one or more rivals.

Similar inversions may be seen to apply to the Cornelian unities. In lyric tragedy, unity of place was routinely ignored: it was usual for each act to be set in a different location, and individual acts might include further scene changes. Such infringements were positively encouraged by La Bruyère ('il faut des changements') though discouraged by the Abbé de Mably. Unity of time was likewise generally ignored. As for unity of plot, the episodic nature of a genre so devoted to divertissement and spectacle made this difficult to respect, although the comic subplots in Lully's early operas are avoided in all later ones.

The object of both lyric and spoken tragedy was, in Aristotle's phrase, to excite pity and terror. Yet this was never the sole or main aim of the *tragédie en musique*. The prevailing tone, at least until the time of Rameau, was more elegiac than tragic. Any pity and terror engendered was quickly dissipated by scenes of calm and joy.

For La Bruyère, indeed, the essential characteristic of the genre was not so much to plumb the depths of human experience as 'to hold the spirit, the eyes and the ears in an equal enchantment'. This was a view echoed many times in the 18th century to justify the mixture of drama, spectacle, singing and dancing. In order to accommodate the competing demands of these elements, Lully and Quinault established a convention whereby the action would give way at some point in each act to a *fête* or divertissement.

Whereas the dramatic *scènes* would be declaimed predominantly in recitative, the *fêtes* would involve airs, choruses, ballet and spectacle in continuous sequences that between them might make up a third of the whole work or more.

Fêtes could nevertheless help further the action: the goddess Cybèle uses a dream-sequence to apprise Atys of her love and warn him of the consequences if he spurns her (*Atys*, Act 3). Moreover, *fêtes* were often effective in preparing for what Aristotle calls *peripeteia* – unexpected reversals of fortune. It is during pre-nuptial rejoicings that Roland learns with horror of the betrothal of Angélique to his rival Médor (*Roland*, Act 3). Such *fêtes* may even generate a degree of dramatic irony, where the audience knows that the celebrations are premature (e.g. *Hippolyte et Aricie*, Act 3 and 4). Significantly, the contrast between action and *fête* is often reflected in a work's tonality, which will be in a state of flux during the former but static during the latter.

In Lully's day the *scènes* consisted largely of declamatory, French-style recitative, with painstakingly notated rhythms, fluctuating metres and active bass lines. This was periodically relieved by binary or rondo *petits airs* usually expressing some sententious maxim, or – less often, and only in passages of high emotion – by accompanied recitative, elegiac monologues or laments. During the 18th century the recitative changed remarkably little: Rameau could genuinely claim to have taken as guide 'la belle déclamation & [le] beau tour du Chant qui regnent dans le Récitatif du Grand Lully'. Steadily, however, the proportion of recitative to set piece decreased, while that of accompanied to unaccompanied recitative grew. Likewise there was greater musical involvement in the *scènes*: accompaniments of *petits airs* became more elaborate, while the monologue, in the hands of Destouches, Campra and, above all, Rameau, could generate an intensity undreamt of by Lully. Nevertheless, the primacy of the action outside the *fêtes* was seldom forgotten: however intricate the accompaniments, the vocal line remained predominantly syllabic and the transition from recitative to set piece flexible. Monologues often lack a final ritornello, so that the ensuing recitative immediately follows the singer's last words; they are usually placed at the beginnings of acts so as not to interrupt the action.

Indeed, the principal differences between Lullian and Ramellian *tragédie* have little to do with dramatic structure and much more with musical expansion. Campra may have thought Rameau's *Hippolyte* contained enough music to make ten operas; but Campra himself, with Destouches, Montéclair and others, had contributed much to this expansion. It affected every aspect, including choruses, dramatic *symphonies*, dances and *ariettes*. These last, unknown to Lully, were fully developed da capo arias, the only movements to allow extensive solo vocal display. Characteristically, though, their role was purely decorative. As such, they were confined to the *fêtes* and, in many *tragédies*, limited to a single example. The *ariette* was French Baroque opera's most obvious debt to Italian opera; yet in the course of the 18th century the *tragédie* gradually succumbed to the general influence of italianate music even if most composers contrived to disguise it with a French accent.

For the first 75 years of its existence, the *tragédie en musique* was prefaced by a prologue, roughly the length of a single act. In Lully's day the prologue had a political function – to focus attention on the monarch: Louis XIV's achievements, real or imagined, were allegorized in a brief action usually independent of the ensuing *tragédie*. During the 18th century, and especially after Louis' death in 1715 when such panegyric became unfashionable, the subject matter of prologues varied widely: some (for example that in Campra's *Idomenée*) act as general introductions to the ensuing drama; others (*Hippolyte et Aricie*) justify the treatment of the source material; one (Campra's *Achille et Déidamie*) even makes a polemical point in the Lulliste–Ramiste dispute. With Rameau's *Zoroastre* the prologue was, with rare exceptions, abandoned. In his preface, the librettist Cahusac argued that the time devoted to the prologue would be better spent on the main plot; instead, 'the overture serves as prologue'. Indeed, for some time (and several decades before Gluck) Rameau had been experimenting with ways of linking overture and drama.

Tragédie en musique

4. Reform and regeneration.

When Gluck published his preface to *Alceste* (1769), many of the reforms he advocated for Italian *opera seria* had long been established practice in France – not just the integration of the overture but the avoidance of excessive vocal display, irrelevant ritornellos, da capos, superfluous ornament, too sharp a contrast between recitative and aria. In fact, Gluck's librettist Calzabigi (possible author of the *Alceste* preface) had long appreciated the potentiality of French opera. Meanwhile, Diderot, D'Alembert and other Encyclopedists advocated a simplification and humanizing of the *tragédie* and the adoption of an international musical language. Thus Gluck, disappointed with his lack of success in Vienna, was well aware of the advantages of moving to Paris. His six French *tragédies* (*Iphigénie en Aulide*, *Orphée et Euridice*, *Alceste*, *Armide*, *Iphigénie en Tauride* and *Echo et Narcisse*) exactly capture the ideals of all those reformers and others, among them Algarotti and Noverre. In these works he preserves the best of French practice – the structural flexibility and the subordination of aria, ballet, chorus, *symphonie* to the requirements of the drama – but subjects it to a rigorous simplification. Although *le merveilleux* is not eliminated, it is never allowed to detract from the sincere expression of human feelings. The traditional French musical idiom was now decisively abandoned; Gluck's claim that 'I have found a musical language fit for all nations, and hope to abolish the ridiculous distinctions between national styles of music' (*Mercure de France*, February 1773) was to some extent justified.

There were many who nevertheless found such operas too severe. As a rival to Gluck, the Italian composer Piccinni was brought to Paris and championed by the librettist Marmontel. Piccinni's 'tragédies lyriques' have the structural flexibility and even something of the musical style of Gluck's French operas; insipid as they now seem, they integrate the ballet, chorus and spectacle in a way that would satisfy the Encyclopedists. Piccinni's scoring is fuller than Gluck's, and he no longer confines long arias to soliloquy. Works like *Roland* (1778) and *Atys* (1780) are based on Quinault librettos, albeit 'Marmontelized' (Grimm's term) into three acts; they thus

make extensive use of the supernatural. In the subsequent development of *tragédie lyrique* by Lemoyne, Gossec, Sacchini, Salieri, J.C. Bach and others, it was usually Piccinni rather than Gluck who was taken as a model. As well as further resettings of Quinault and other venerable old librettos, operas of the 1780s include adaptations of Corneille (e.g. Sacchini, *Chimène*, 1783), Greek tragedy (Lemoyne, *Electre*, 1782; Salieri, *Les Danaïdes*, 1784) and historical subjects (Sacchini, *Arvire et Evelina*, 1788).

Tragōidia

(Gk.: 'tragedy').

An ancient Greek musical-dramatic form in which a mythical or, occasionally, an historical story is treated in a serious (as opposed to comic) manner in dialogue, song and dance. The most acclaimed composers of ancient Greek tragedy were Aeschylus, Sophocles and Euripides, all of whom lived in Athens in the 5th century bce. Although major developments in the form and conventions of tragedy are associated with the Theatre of Dionysus in Athens, and the authors of the surviving tragedies are Athenian, there is no reason to suppose that tragedy originated exclusively in that city. The ancient writers who commented on the origins of tragedy attribute important innovations to poets from other parts of the Greek world. For example, Arion of Methymna is credited in the *Suda* with developments in early drama, although such developments also appear to be bound up with early dithyramb; and Aristotle (*Poetics*) noted that the practice of composing plots reportedly came from Sicily.

Despite a lack of clarity surrounding its origins, classical commentators nevertheless agree that the genre arose out of choral performance. The word *tragōidia* is derived from *tragōidoi*, which originally signified the members of a chorus in a tragedy and later came to mean, variously, all the performers, the tragic performance or contest as a whole, or tragic poets. Moreover, Aristotle reported that tragedy was originally all choral and that Thespis was the first to add an actor; Aeschylus later added a second actor and then Sophocles a third (Themistius, 26.316d). The higher proportion of choral music in the earlier tragedies also supports choral origin. Over time, however, as dramatic and musical possibilities opened up (the presence of two or three actors on the stage at a given time created new opportunities for action and dialogue between characters), speech and monody gradually increased, the number of choral segments diminished, and the main action also tended to shift away from the chorus, which would sometimes function as spectator and commentator rather than as a real participant in the drama. In fact, from the late 5th century bce, the choral interludes (*stasima*) of authors such as Agathon and his imitators were unconnected with the plot; known as *embolima*, these interludes could be transferred from one play to another. The number of choral portions also diminished as melodic and rhythmic complexity increased. It appears that the changes in musical style affecting other genres originating in the later 5th century bce also found their way into tragedy. Complex melodies are more easily sung by single professional actors than by amateur choruses. Nevertheless, the choral portions were not wholly unaffected by this new style of music. Much of the evidence for musical change survives in the comments and discussions of philosophers such as Damon, Plato and the author of the Hibbeh Papyrus. Agathon and Euripides are two names often mentioned with regard to the new style of music in tragedy.

In the tragedies that survive complete or virtually so, the cast would usually consist of two or three actors, an aulos player to accompany the musical portions and a chorus of between 12 and 15 performers. The limited number of actors did not mean that there were only two or three speaking characters in the drama, but rather that two or three would be on stage at any given time. A single actor might play the parts of two or more characters, the use of masks precluding the possibility of confusion of identity. The leader of the chorus, the *koruphaios*, was responsible for the rhythm of the chorus and for giving the first note (*endosimon*). Sometimes

the *koruphaios* or the chorus might be treated almost as an extra character and exchange dialogue with main characters. There were also various kinds of non-speaking character (attendants, captives etc.), as individual dramas required.

The following is a basic outline of the structure of a Greek tragedy. The drama would often begin with a prologue, consisting of monologue or dialogue, that provided a background to the action. The chorus, led by the aulos player and performing in a marching rhythm (usually anapaestic), would then make its entrance (*parodos*) and take up position, in square formation, within the *orchēstra* (i.e. the performing area; *see* Theatron). A lyric ode was sung immediately afterwards. The bulk of the dramatic action took place in a series of episodes, which were not usually set to music but were composed in iambic trimeters (considered closest to the natural rhythm of speech). The episodes were separated by choral *stasima*, of which a typical tragedy would include at least three to five. The word *stasimon*, despite its derivation (from *histēmi*: 'to stand'), does not indicate that the performers were standing still but that they were performing 'in position' rather than entering or exiting the performing area. The lyrical metres of *stasima* suggest dance rhythms, in contrast to the marching rhythm of the *parodos* and *exodos*. The usual metrical structure of a *stasimon*, in which a strophe and its exactly corresponding antistrophe are followed by an epode, indicates that the performers probably danced as well as sang, repeating the music and steps of the strophe exactly in the antistrophe. Unfortunately, ancient writers provide few details about the specific dances (*emmeleia*) or dance steps used in tragedy. Normally the chorus sang and danced as a whole, but it was sometimes divided into two semichoruses. There may have been other variations: for example, the third stasimon of Euripides' *Hippolytus* is thought by some to have been performed antiphonally by a main chorus of women and an extra chorus (*parachorēgēma*) of men. At or near the end of the play, the chorus departed, again led by the aulos player, while singing the *exodos* ('exit'). As with the *parodos*, the *exodos* was set to a marching rhythm (anapaestic). Playwrights sometimes made the same *exodos* serve more than one play, perhaps indicating that the audience had begun to leave their seats before the play was quite over.

There was a greater variety of types of musical number than the foregoing general description might suggest. Actors often performed in recitative or lyrical monody (solo singing), such as in songs of lament or celebration; and the singing of a *stasimon* or other lyrical segment might alternate between character(s) and chorus rather than being confined to one or the other. As for the music itself, the few extant examples from ancient Greek tragedy, including fragments of Euripides' *Orestes* and *Iphigenia in Aulis* plus some unidentified and uncertain later fragments, provide but a few intriguing hints. The fragment from *Orestes* is in the enharmonic genus and Dorian or Phrygian mode; that from *Iphigenia in Aulis* is in the enharmonic genus and probably the Mixolydian mode. The musical scales found in these fragments are consistent with classical descriptions of the modes and genera predominant in 5th-century tragedy.

<div align="right">DENISE DAVIDSON GREAVES</div>

Trăilescu, Cornel

(*b* Timişoara, 11 Aug 1926). Romanian composer and conductor. He studied with Drăgoi, Hoinic and Vasile Ijac at the Conservatory and Arts Institute in Timişoara (1945–9). The disestablishment of the Conservatory for political reasons prompted Trăilescu to continue his studies at the Bucharest Academy (1949–53), where his teachers included Andricu (composition), Rogalski (orchestration) and Silvestri and Georgescu (conducting). He began his career as musical assistant at Opera Româna, Timişoara (1946–9), then moved to Opera Româna in Bucharest where he became chorus master (1951), conductor (1955), principal conductor and director general. He led the company on tours to European centres including Vienna. Possessing the characteristic features of late Romanticism, his works are marked by their expression and melodic effusiveness, their sense of symmetry and clarity and the effectiveness of their orchestration. The operas, his primary compositional achievement, are based on historical or traditional themes, and often quote from old ballads and popular songs.

Trajetta [Traetta], Filippo [Philip]

(*b* Venice, 8 Jan 1777; *d* Philadelphia, 9 Jan 1854). Italian-American composer and teacher, son of Tommaso Traetta. He was sent to a Jesuit school to prepare for a military career, and was also taught by Fenaroli and Perillo. In 1799 he went to Naples to study with Piccinni, an ardent republican; having joined a patriot army, he was captured by the French and imprisoned for eight months, then was surreptitiously provided with a German passport and smuggled aboard an American ship bound for Boston. He arrived there late in 1799 and together with Graupner and Mallet in 1801 founded the American Conservatorio, where Uri K. Hill was among the students; here he taught singing and performed as a violinist. In about 1802 he went to Charleston, South Carolina, possibly as an impresario, but soon moved to New York, where Hill's father published some of his compositions. He remained in New York from 1808 to 1817 and re-established his Conservatorio. After four years in Virginia he settled permanently in Philadelphia in 1822, where once again he set up the Conservatorio.

Trajetta, Tommaso.

See Traetta, Tommaso.

Trajetti, Lorenzino

(*b* Rome, 20 July 1590). Italian lutenist, active in Rome. The son of Franciscus 'Gallus Belgicus'. *See* Lorenzino.

Trajković, Vlastimir

(*b* Belgrade, 17 June 1947). Serbian composer. He graduated from the postgraduate composition class of Mokranjac at the Belgrade Academy of Music (1977). He attended the Darmstadt summer course in 1972, and in the following year he studied 16th-century polyphony in Saint Maurice. In 1977–8 he worked under Messiaen in Paris. Trajković's works resemble the Impressionism and exoticism of Debussy while betraying the influence of modes devised by Messiaen. In its repetition of confined musical materials, his music bears the hallmarks of the 'new simplicity'. Additionally, it displays characteristics of jazz and rock music.

ROKSANDA PEJOVIĆ

Trako, Konstandin [Konstantin]

(*b* Boboshtica, nr Korça, 10 Feb 1919; *d* Tirana, 12 March 1986). Albanian composer, choral conductor and teacher. He attended the Ciprian Porumbescu Conservatory, Bucharest (1936–42), where his teachers included Constantinescu, Chirescu and Jora, while also studying Byzantine liturgical music at the Bucharest Academy of Religious Music. After returning to Tirana he taught music in secondary schools and, in 1943, formed the first Albanian mixed chorus. Its first concert was banned by the Italian occupying forces; Trako subsequently joined the partisans, and he later claimed to have transcribed over 2000 Albanian folksongs during his time with them. In the summer of 1944, by order of the Communist party, he formed the Antifascist Youth Chorus, which took part in the liberation concert in Tirana in December that year. In 1946 Trako became the first director of the Jordan Misja Art Lyceum, Tirana, serving until 1948. He was also deputy director and later artistic director (1949–52) of the Albanian Philharmonia and, from 1962, conductor of the chorus at the Tirana Conservatory, where he taught choral and orchestral conducting.

Trako was one of the pioneers of Albanian musical life after 1944, especially in the field of choral conducting. His compositions, though they featured little in concert programmes towards the end of his life, are of undeniable historical significance. He was well known for his mass songs and choruses, many composed in honour of the socialist state and its leader Enver Hoxha. He is also widely credited with having written the first Albanian tone poem, *Atdheu im* ('My Fatherland', *c*1954–5), and the first Albanian oratorio, *Partia* ('The Party', 1953). The latter, which celebrates the triumph of the Albanian people over fascism, has an inventiveness and sense of drama which enables it to transcend its immediate political purpose.

GEORGE LEOTSAKOS

Trambitsky, Viktor Nikolayevich

(*b* Brest, 31 Jan/11 Feb 1895; *d* Leningrad [now St. Petersburg], 13 Aug 1970). Russian composer. He studied the piano with Treskin in Vilnius and in 1915 became a pupil of Kalafati in Petrograd (from 1917 at the conservatory). Subsequently he worked as an editor and concert organizer with the music section of the People's Commissariat for Education (1917–19) and as a conductor and pianist with travelling theatres (from 1919, in the Urals from 1925); he then became an editor at Sverdlovsk Radio (1930–33) and joined the staff of the Sverdlovsk Conservatory, where he was appointed successively theory lecturer (1936), professor (1939) and director of theory and composition (1944). He settled in Leningrad in 1961.

DETLEF GOJOWY

Tramessa [tramezzo].

See Intermedio.

Tramote, Montri

(*b* Suphanburi, Thailand, 1900; *d* 1995). Thai musician and scholar. He was drawn to music as a boy and moved into the home of his teacher by the time he was 13. During the mid- to late 1920s, he studied with Luang Pradit Phairau and played supporting *ranāt thum* (xylophone) in his teacher's *pī phāt* ensemble. He was a court musician during the reigns of Rama VI and VII (1917–35) and then moved immediately into a position of importance in the newly formed Department of Fine Arts. By then he was already known as a prodigious composer and he eventually wrote about 200 works in the classical Thai style; he was also trained in Western music styles and notational practices, and he wrote many pieces in *phlēng Thai sākon* ('Thai music in the Western style'), using Western harmonic practices. Unlike many composers, he was also an accomplished poet and wrote most of the lyrics for his pieces; these are in a variety of traditional Thai verse forms and are much admired.

He was named the head of the Thai Music Division at the Department of Fine Arts in Bangkok in 1940 and served in this position for several decades. An avid music historian, his major books (all in Thai) include *Thai Music History* (1938), *Thai Entertainment* (1954), *Music Terminology* (1964) and *Explanations of the History and Meaning of Thai Musical Pieces*; his numerous essays have been extensively republished. He contributed to the journal *Sinlapakon* ('Fine Arts'), including in nearly every issue a piece transcribed into Western notation and accompanied by historical information and analysis. He retired from the Department of Fine Arts in 1962 but held a special position as 'Thai Music Expert' until his death. In 1985 he was named one of the first National Artists. His son, Silapi Tramote, continues to work in the Thai Music Division at the Department of Fine Arts.

DEBORAH WONG

Trampeli [Trampel].

German family of organ builders. It consisted of Johann Paul (*b* Oberlauterbach, 16 Jan 1708; *d* Adorf, 7 Sept 1764), described as 'kunsterfahrner Orgelbaumeister und Instrumentmacher', his sons Johann Gottlob (*b* Adorf, 22 Nov 1742; *d* Adorf, 18 March 1812) and Christian Wilhelm (*b* Adorf, 16 March 1748; *d* Adorf, 26 Feb 1803), and the son of the last-named, Friedrich Wilhelm (*b* Adorf, 23 Feb 1790; *d* Adorf, 2 Nov 1832). The 'i' was added to the family's surname by Johann Paul's sons. It appears that about 1734 Johann Paul took over the workshop of Adam Heinrich Gruber, the distinguished organ builder and organist, at Adorf (the birthplace of J.C. Kerll); he built about 50 organs there. The most important member of the family was Johann Gottlob, an intimidating person of uneven temper. He and his brother built *c*100 organs, including those for the Nikolaikirche, Leipzig (1790–94; his largest, with three manuals, 49 stops), and the Reinoldikirche, Dortmund (1805; three manuals, 40 stops). Others survive at Plauen-Oberlosa (1784–8); Hohndorf, near Elsterberg (1788); and Rothenkirchen, Vogtland (1798–1800). Christian Wilhelm worked entirely in partnership with his brother, and was regarded as 'a first-class mechanic' ('vollkommener Meister des Regierwerks'). Friedrich Wilhelm's work included the large organs in the Stadtkirche at Weimar (1813; three manuals, 44 stops) and St Johannis at Plauen (1815; two manuals, 31 stops). Organs of his survive at Auma, Thuringia (1816–18); Windischleuba, near Altenburg (1821); and Landwüst, Vogtland (1822).

The Trampeli family were the dominant organ builders of their time in Saxony. It is thought that they owed their special knowledge of organ building to a manuscript with which they became familiar while working on the Silbermann organ at Reichenbach; in any case it is clear that they modelled their work on that of Gottfried Silbermann. Friedrich Wilhelm's instruments at Plauen and Weimar were strongly criticized, but it is reasonable to suppose that this criticism only arose because the wind supply of Trampeli organs was still designed for the older, contrapuntal style of playing, not for the harmonic style of the subsequent period, with its thicker textures. In any case, the Trampelis were highly regarded by their

contemporaries, and this opinion is confirmed by the quality of their surviving instruments.

HANS KLOTZ/FELIX FRIEDRICH

Trampler, Walter

(*b* Munich, 25 Aug 1915; *d* Port Joli, Nova Scotia, 27 Sept 1997). American viola player of German birth. He was taught by his father, and then attended the Akademie der Tonkunst in Munich until 1934. He made his début as a violinist in Munich in 1933, playing Beethoven's concerto. His début as a violist was in Mozart's Sinfonia concertante in Berlin in 1935. He was first solo violist with the Deutschlandsender (1935–8), and emigrated to the USA in 1939, where he became a member of the Boston SO (1942–4) and the symphony and opera orchestra of the City Center, New York (1946–8). He was a founding member of the New Music Quartet (1947–56), and has also played with the Budapest, Juilliard and Guarneri quartets and with the Beaux Arts Trio. For 20 years he participated in Alexander Schneider's concerts at the New School. From 1969 to 1994 he was a member of the Chamber Music Society of Lincoln Center.

As a soloist, Trampler gave some 40 first performances, including those of works by Hans Werner Henze, Perle, Persichetti, Berio (*Sequenza VI*, *Chemins II* and *Chemins III*, which he recorded), Neikrug and Simon Bainbridge. He recorded the Mozart and Brahms quintets with the Budapest Quartet as well as the Brahms piano quartets with the Beaux Arts Trio. He also made solo recordings of works by Reger, Stravinsky, and Hindemith, and was the soloist on a recording of Berlioz's *Harold in Italy* with the London SO and Georges Prêtre.

Trampler was an outstanding violist, commanding a virtuoso technique equal to the demands of the entire repertory. His remarkable musicianship and charisma won new audiences for his instrument. He taught generations of violists who have acquired distinction as soloists, as members of major orchestras and as performers in quartets. He served on the faculties of the Juilliard School (1962–72), and Peabody Conservatory (1968–70), the Yale School of Music (1970–72), Boston University (1972–82), the New England Conservatory (1982–95) and the Mannes College (from 1993). Trampler played a viola built especially for him by Samuel Zygmuntowicz of Brooklyn, an instrument notable for its beauty of sound.

WATSON FORBES/DENNIS K. McINTIRE

Trance.

A sub-genre of House music, especially popular in Europe. It began in the late 1980s as an offshoot of the rave scene, but was equally inspired by the early Ibiza sounds of 'Balearic beats' and the later German ambient house sounds of 'Teutonic beats'. The best works of early trance are noted for their use of soft electronic percussion and repetitive synthesizer pads combined with a fast tempo. Examples include Jam & Spoon's *Stella* and its subsequent remix by them as Age of Love's *Age of Love (Watch Out for Stella Mix)*, most early work by Sven Vath and, more commercially, Dance 2 Trance and the output of Logic Records. By the mid-1990s, it had become more of an underground style and assumed a darker feel, as in the many compilations from Rising High records (*The Secret Life of Trance*, volumes 1–4) and the Platipus label. In the late 90s trance experienced a revival, aided by UK clubs such as Gatecrasher, leading international DJs such as Paul Van Dyk and Tall Paul, and the renewed popularity of the Ibiza scene. This enabled trance to cross over into the commercial arena again with hit singles for the likes of ATB, Salt Water and Chicane.

IAN PEEL

Tranchell, Peter (Andrew)

(*b* Cuddalore, India, 14 July 1922; *d* Bishops Waltham, 14 Sept 1993). English composer and teacher. Educated at King's College, Cambridge (BA 1946, MusB 1949, MA 1950), he returned to teach at the university in 1950, serving as Fellow and director of music at Gonville and Caius College from 1960 until his retirement in 1989. For the students there, he made a large number of arrangements and editions, mostly of choral music; in addition he wrote a great deal of church music, including settings of 17 psalms with inserted commentaries from other books of the Bible. Tranchell composed a large quantity of dramatic works, among them six 'concert entertainments' written for performance in Cambridge during the May Week celebrations. Among his operatic ventures, *The Mayor of Casterbridge* was praised by Eric Blom as 'an English stage work of exceptional quality' when performed in Cambridge in 1951, while *Zuleika* had a brief run at the Saville Theatre, London, in 1957. His music is direct, eclectic and often harmonically adventurous.

WORKS
(selective list)

dramatic

Ops: The Mayor of Casterbridge (3, Tranchell, P.S. Bentley, after T. Hardy), 1951; Zuleika (musical comedy, J. Ferman, after M. Beerbohm), 1954; Bacchae (Euripides), 2 S, SA, taped orch, 1956; Troades (Seneca), S, A, SA, taped chorus and orch, 1957; Antigone (Sophocles), male vv, taped orch, 1959
Ballets: Fate's Revenge, 1951; Images of Love, 1964
Concert entertainments: Daisy Simpkins (H.C. Porter), solo vv, SATB, 2 pf, 1954, rev. 1989; Murder at the Towers (Tranchell, after E.V. Knox), solo vv, SATB, 2 pf,

1955, rev. 1986; Aye, aye, Lucian! (Tranchell, after Lucian of Samosata: *Vera historia*), male vv, male chorus, pf, 1960; The Mating Season (Tranchell, after P.G. Wodehouse), solo vv, male chorus, pf, 1962, rev. 1969; His First Mayweek (Tranchell), solo vv, male chorus, 2 pf, 1963; The Robot Emperor (Tranchell), male vv, male chorus, orch, 1965

other works

Orch: Decalogue, brass, perc, org, 1956; Scherzetto, 1960; Eclogue, 1962; Festive Ov., 1966; Conc. grosso, 1972, rev. 1977

Inst: 7 Pieces in 'Alphabetical' Order, pf, 1947, rev. 1960; Friendly Grotesques, pf duet, 1953; Sonata, org, 1958; Sonatina, fl, pf, 1966; Sonatina, org, 1968; Waltz and Calypso, 2 ob, 2 cl, 2 bn, 2 hn, 1977; Mazurkas, 2 vn, vc, 1982; Movements, fl, va, bn, hpd, pf, 1987

Choral: This Sorry Scheme of Things, Bar, SATB, SA, pf/hpd duet, 1952; The Joyous Year (W. Wordsworth), SATB, orch, 1961; Thackeray Ditties, 1962; 3 Poems of Po Chü-i, Bar, TTBB, orch, 1964; Mag and Nunc, G, TTBB, org, 1967; 17 pss, 1/2/3vv, org, 1962–9; Soul's Successor (Tranchell), male vv, male chorus, melodicas, 5 perc, org, 1969; Mag and Nunc, C, ATBarBB, org, 1970, rev. 1988; TeD, in B, ATBarBBB, tpt, org, 1973; TeD, E, AATBarBB, 2 vn, org, pf, 1974; No More of Thee and Me (O. Khayyam: *Rubaiyat*, adapted E. Fitzgerald), AATBarBB, pf, 1978; Ye Shall Be Holy, SSATB, org/pf/hmn, 1982; Mag and Nunc, B, AATBarBB, org, 1982; Fortunare nos, SATBarBB, org, 1986; Cantantibus organis, S, T, B, SATBarB, org, 1987

Tranovský, Juraj [Tranowský, Jiřik; Třanovský, Jiří; Tranoscius, Georg]

(*b* Těšín, 27 March 1592; *d* Liptovský Mikuláš, 29 May 1637). Czech poet and composer. After studying at Wittenberg he held positions as a Protestant minister and schoolmaster at Prague (1612), Holešov (1613) and Meziříčí (1615). In 1622, during the Thirty Years War, he fled into exile to avoid persecution for his Protestant beliefs, but he returned a year later. When the emperor banished all Protestant clergy in 1624 he was again obliged to leave. After staying at Těšín and Bielsko he resumed pastoral duties, first at Orava castle, Slovakia, in 1628 and then at Liptovský Mikuláš in 1631.

Tranovský's *Cithara Sanctorum, Apoc. v. Pjsné Duchownj Staré y Nowé* (Levoča, 1636) immediately replaced the Czech hymn collections of Ján Silván (1571) and Vavrinec Benedikt of Nedožery (1606), which were in normal use in Slovakia at that time, and it was accepted as the basic Protestant hymnbook. Nine more editions appeared during the next 60 years, and by 1872, 66 editions had been printed. The first edition contains 402 hymns, but Tranovský composed only a few of the melodies; he adapted many Czech hymns, translated Lutheran chorales and may have

provided as many as 92 original hymn texts. His fame rests on this work, which earned him the nickname 'the Slavonic Luther', but his *Odarum sacrarum, sive Hymnorum … libri tres* (Bregae, 1629) has greater musical significance. It contains 150 four-part odes (4 ed. in Osuský; 2 ed. in Rybarič; 1 ed. in *Cantica sacra: Zborová tvorba zo Slovenska*, Bratislava, 1993), in which the ancient metres of the poems are reflected in the rhythms of the music. Several are based on chorale melodies, which generally appear in the tenor part. The odes have a somewhat archaic dignity and strength because the voices move together in uniform rhythm and Tranovský relied almost entirely on 5–3 chords.

Transatlantiques.

French firm of music publishers, founded in 1947 by the song and film composer Marc Lanjean as the classical department of Editions Ray

Ventura. In the course of the 1950s and 60s Editions Transatlantiques published works by Françaix, Jolivet, Milhaud, Rivier, Bondon, Daniel-Lesur and Wiener, as well as some classical works (Vivaldi, Devienne, Rameau, Hummel, Leclair etc.), songs (e.g. *Maladie d'amour* by H. Salvador), and film music: *Napoléon* (director Sacha Guitry), *La Princesse de Clèves* and *Le Pickpocket* (director Robert Bresson) and *Jeux interdits* (director René Clément). Transatlantiques became completely independent in the early 1970s, and has been directed since 1974 by the composer Patrick Marcland, son of the firm's founder. He has developed the catalogue considerably by bringing in such composers as Ballif, Murail and Y. Taïra, and by building up important guitar and pedagogic collections.

JEREMY DRAKE

Transcription.

Transcription is a subcategory of notation. In Euro-American classical studies, transcription refers to copying of a musical work, usually with some change in notation (e.g. from tablature to staff notation to Tonic Sol-fa) or in layout (e.g. from separate parts to full score) without listening to actual sounds during the writing process. Transcriptions are usually made from manuscript sources of early (pre-1800) music and therefore involve some degree of editorial work. It may also mean an Arrangement, especially one involving a change of medium (e.g. from orchestra to piano).

In ethnomusicological transcription, music is written down from a live or recorded performance, or is transferred from sound to a written form by electronic or mechanical means (*see*, for example, Melograph). Use of the term in ethnomusicology stems from the work at the turn of the 20th century by key figures such as Alexander J. Ellis (1814–90), Carl Stumpf (1848–1936) and eric m. von Hornbostel (1877–1935) and is quite different from its use in other disciplines. Theories and methods of ethnomusicological transcription have challenged the assumption that music is the product of natural laws leading to the evolution of Western harmonics and Helmholtz's seemingly objective support of harmonic universalism (1863). Benjamin Ives Gilman, a Harvard music psychologist, distinguished (in his transcriptions of Zuñi (1891) and Hopi (1908) songs) between transcription as a 'theory of observations' reconstructed from repeated performances, and as 'facts of observation' in a recording of a single performance (1908), later to be distinguished by Charles Seeger (1958), as 'prescriptive' and 'descriptive' notations. The prescriptive corresponds to ethnomusicological use of the term 'notations' and descriptive to ethnomusicological 'transcriptions'. Gilman also anticipated Seeger in suggesting that automatic mechanical-graphic transcriptions might provide more objective and accurate notations.

Hornbostel and Abraham (1909) synthesized these two approaches by proceeding from observation of recorded performances but at the same time using transcription as a tool for discovery of musical intent by treating it as 'text'. They created a musical International Phonetic Alphabet, a philological model for a comparative method in musical studies for 'comparative musicology'. In choosing a modified European symbol system, however, sounds foreign to their system had to be adjusted to its

representational logic making it just as reductionist as harmonic analyses. Seeger's challenge to the notational basis of Hornbostel's paradigm with its objectivist-discovery orientation and European-notation transcriptional methodology, led to the proposal of 'three solutions' by mantle Hood (1971), that is the adaptation of traditional notations of various cultures to their own musics, use of the melograph and development of a musical equivalent of Labanotation. The linguistically derived distinction between 'phonetic' and 'phonemic' transcriptions, corresponding to more or less detailed transcriptions and 'outsider' and 'insider' perspectives (cf. Pike, 1954), has been used since the 1950s (e.g. Nettl, 1956). A preferable label is Ellis' distinction between 'narrow' and 'broad' transcription (Ellingson, 1993).

Franz Boas (1858–1942), a professionally trained physicist, recognized after returning from his first Inuit (Eskimo) fieldwork in the 1880s that linguistic trancriptions were strongly influenced by sounds expected and misperceived by fieldworkers on the basis of their European cultural conditioning (1889). Comparisons of transcriptions of the same music by different transcribers were made by Boas and by projects in the US (SEM 'Symposium on Transcription and analysis', 1964), in Japan (Koizumi and others, 1969) and France (Rouget, 1981). The results highlighted individual difference and subjectivity.

In later years, Hornbostel himself produced graphic representations of music based on theoretical rather than discovery models. As the 20th century developed, other methodologies, such as the investigation of social, political, economic and symbolic factors in musical systems, gained precedence. A quiet revolution in transcription has occurred with a new interest in non-European viewpoints. For instance, Western notation transcriptions of gamelan music were gradually replaced by Javanese number notation (e.g. Becker and Becker, 1981; Vetter, 1981; Sutton, 1985); African music began to generate new transcriptional alternatives; and pitch-time graph transcription of the fluctuating tone contours of Tibetan *dbyangs* has demonstrated their variability within and between performances (Ellingson, 1986).

In the late 20th century, transcriptional alternatives were explored. Conceptual transcriptions, which are neither prescriptive nor descriptive, give a graphic-acoustic embodiment of the essential concepts and logical principles of a musical system. Rather than exhaustively notating all objective features of musical sound, the transcription attempts to acoustically embody the musical concepts essential to the culture and music. Further modifications of European notations, including equidistant time horizontal spacing and equidistant pitch lines spaced according to actual intervals, have been proposed (Reid, 1977). Alternatives to European notation are beginning to be explored, for instance, solfège notation (Kara, 1970) or the use of high-mid-low vocal tone accents derived from Vedic chant notation (Ellingson, 1979). Multidimensional composites for transcription are being used, for instance Bonnie Wade's equidistantly spaced Indian *sargam* solfège syllables and melodic contour lines together with Western notation. Many different types of graph notations have been produced (Jones, 1959; List 1961; Reck, 1977; Zemp, 1981; Koetting, 1970; De Vale, 1984). Complex displays have been used, such as Judith

and Alton Becker's (1981) circular depictions of rhythmic cycles and Bernard Lortat-Jacob's (1981) spiral notation of structural development. New dimensions have been admitted to musical transcription suggesting that 'the music itself' is more than the sound we hear (e.g. Kubik, 1969; Blacking, 1973; Sumarsan, 1975). Some transcribers have attempted to include extra-acoustical elements of music in transcriptions, for instance, showing relationships between musical structure and cosmology (Becker, 1981) or using 'videographs' to show the effects of audience interaction on performances (Qureshi, 1987). Some ethnomusicologists are experimenting with non-print forms of transcriptions, as in Hugo Zemp's use of computerized animation to create graph transcriptions, transferred to film, whose lines develop in synchronization with the musical soundtrack. And some are involving the musicians themselves in the transcription process, such as Simha Arom in using stereo recording and audio playback techniques in the field to facilitate transcription of complex polyrhythmic compositions from the Central African Republic, and Richard Widdess's (1994) collaborative approach to the transcription and analysis of *Dhrupad*.

TER ELLINGSON

Transformation, thematic.

A term used to define the process of modifying a theme so that in a new context it is different but yet manifestly made of the same elements; a variant term is 'thematic metamorphosis'. With Cyclic form and the desire for continuity between movements, the process became a favourite method in 19th-century music of giving greater cohesion both between and within separate movements of multi-movement works. It was also widely used in opera. Great ingenuity was devoted to changing the rhythm, melodic detail, orchestration or dynamic character of a theme to adapt it to a different purpose, often for programmatic reasons. Thematic transformation is no more than a special application of the principle of variation; yet although the technique is similar the effect is usually different, since the transformed theme has a life and independence of its own and is no longer a sibling of the original theme.

Dance pairs of the early 17th century provide notable cases of thematic transformation at a time when variation form was also coming into favour for larger musical structures. In his keyboard dances, Bull frequently derived the melody of the galliard from that of the pavan, with free modifications, so that neither is strictly a variation of the other, but they might be said to be obverse to one another. In the later Baroque period, thematic treatment of this kind was channelled into either fugue, by means of such techniques as augmentation and diminution, or variations, rather than into the balancing of varied couples on the basis of a single thematic idea. Bach at least showed no enthusiasm for building preludes and fugues out of shared material. Mozart used thematic transformation for occasional dramatic effect, as in the quartet in Act 2 of *Così fan tutte*, where the music is hurried out of a *grazioso* 6/8 into a *presto* 4/4. In his Symphony no.103 (the 'Drumroll') Haydn transformed the Adagio introduction at the end of the Allegro.

Thematic transformation belongs above all to the 19th century, when composers exploited through it the possibilities that arose from giving themes dramatic or human significance in instrumental or vocal music. At the opening of Beethoven's 'Pathétique' Sonata op.13, a process of transformation turns the taut dramatic figure of the first bar into the sweeter version in the relative major which appears at the fourth bar; dynamics, accompaniment and harmonic simplification all contribute to the growth of the initial idea (exx.1*a* and *b*). In the finale of his Ninth Symphony, a large variation scheme provides a prototype of many 19th-century thematic transformations, when the 'Joy' theme is transformed from its normal 4/4 metre in D into a 6/8 Alla marcia in B♭ for a heroic passage in the text. The four-note figure that pervades the last four string quartets can be seen subtly transformed, above all in the *Grosse Fuge* op.133, where it provides a wide variety of fugal textures, starkly contrasted.

There are other examples in Beethoven in which transformation is used as a formal symphonic technique. With the addition of programmatic significance it featured prominently in unifying large-scale Romantic works. Berlioz's *Symphonie fantastique* (1830) led the way in demonstrating the dramatic strength of a theme that recurs in all movements (the Idée fixe)

and is transformed in each movement according to its context. The same theme could thus represent the flux of passion, the elegance of a ball and the grotesque dance of a witches' sabbath while at the same time transferring a fixed image from the mind of the composer to that of the listener. Berlioz was later to use other thematic transformations with great subtlety, particularly in *La damnation de Faust* (1845–6).

The practice of thematic transformation is particularly associated with Liszt, who applied it as a thoroughgoing source of musical development. In *Eine Faust-Symphonie* (1854–7) the Mephistopheles movement is built out of transformations, symbolizing negations, of the themes of Faust and Gretchen presented in the first two movements. *Les préludes* (1848) shows the glorification in full orchestral dress of the somewhat hesitant theme of the opening. In the Piano Sonata in B minor (1852–3) Liszt achieved one of his most miraculous metamorphoses of musical character when a diabolic figure that appears in the bass near the beginning becomes a theme of infinite sweetness and longing (exx.2*a* and *b*).

Such processes became a regular part of later 19th-century music, especially in the hands of Liszt's followers. The Russians made particular use of them: there are good examples in Tchaikovsky's Fifth Symphony and *Swan Lake*, in both of which a minor theme is transformed into a triumphant major theme at the close. Perhaps the most far-reaching application of thematic transformation occurred in Wagner's treatment of the Leitmotif, for the motifs, especially in the *Ring*, are combined, adapted, extended and altered in shape, rhythm and colour to reflect the dramatic action at all points; examples include the majestic version of Siegfried's horn call that rings out in his funeral music in *Götterdämmerung*, and the apprentices' spiky version of their masters' noble theme in the prelude to *Die Meistersinger*. In addition, many of Wagner's motifs stand in relationships to each other that gradually become clear during the course of a work and in which transformation merges with symphonic development.

Not even Brahms escaped the general acceptance of thematic transformation as a standard technique in the late 19th century, although he showed much less interest in it than his contemporaries. His clearest use of it is in the Intermezzo in E minor op.119 no.2, a case which makes plain the distinction between variation technique, so common in Brahms, and a single transformation, which is comparatively rare.

While the naive type of transformation (turning a joyful melody into a sad one by putting it into the minor, for example) lost favour in the 20th century, more sophisticated types, combined with more general thematic development, are to be found in music of all kinds, particularly that which accepts wholeheartedly the symphonic heritage of the past.

HUGH MACDONALD

Transient.

Any part of the signal associated with a vibration or sound wave in which a significant feature of the signal is changing with time. It is impossible to make an acoustical system such as a stretched string or an air column start vibrating instantaneously with a steady amplitude; after the initial excitation is applied, the resonant modes of the system gain energy at a rate which depends on the properties of the resonances and also on the nature of the attack. The part of the signal corresponding to this initial development of the vibration is known as the starting, onset or attack transient; in a sustained note it is followed by the steady-state portion of the signal. After the input of energy ceases, the mode amplitudes fall to zero during the decay transient. The starting transient is often the most recognizable feature of a particular instrument's sound. The illustration shows a set of frequency spectra measured during the starting transient of a treble recorder playing the note *d*''. It can be seen that the harmonic components increase at different rates. The presence of inharmonic components at relatively high frequencies in the first few milliseconds corresponds to the 'chiff' at the start of the note.

Transition

(Ger. *Durchgang*).

Any passage in a piece or movement which, rather than having a particular thematic identity of its own, seems to lead from one well-defined section to another, for instance the 'bridge passage' between the first and second subjects of a movement in Sonata form. It is usually applied to passages in which a modulation from one key to another is systematically worked out, though it is also used for sudden changes of tonality, as well as for passages in which there is a 'modulatory digression' but no actual key change (Beethoven, Sonata op.111, second movement, bars 106–30).

Transmission.

This refers to the means by which musical compositions, performing practices and knowledge are passed from musician to musician. Though in principle applicable to all musical traditions, transmission as an analytical category has been mainly deployed in studies of European and European-derived folk (traditional), art and popular music.

Music transmission has at least four dimensions: the technical, the social, the cognitive and the institutional. Of these, the technical dimension (the manner in which music is transmitted) has received the most attention from musicologists. Ethnomusicologists, music psychologists and music educators have studied the other dimensions, though often not under the rubric of transmission.

The technical dimension of transmission traditionally concerns the distinction between oral and written traditions, a distinction originating in the study of literature. In particular, Milman Perry's and Alber B. Lord's seminal study of Yugoslav oral epic singers for insight into the compositional processes of the Homeric epics (before they were written down) has been influential in musicology (Lord, 1960). Perry and Lord found that would-be epic singers learn how to structure and create long epic texts rather than memorizing them, using textual 'formulas' to realize easily remembered epic 'themes'. Perry and Lord then analyzed the written Homeric texts for evidence of formulas, the verbal 'thriftiness' they contain, and thus their once orally transmitted, originally non-written character. Leo Treitler applied these ideas to Gregorian chant, uncovering in notations evidence of the oral transmission that preceded their written form. He argued that the general constraints exhibited by variant chants in the same melodic mode, such as 'consistencies from verse to verse with respect to the details of movement within each phrase … the centrality of the recitation tones in all phrases, and the fixed order of the cadential tones', are analogues of the 'formulaic system' of oral epics. Consequently, they represent evidence for the kind of knowledge that singers possessed in order to sing chants during the period before the 9th century when they were orally transmitted (Treitler, 1974, p.352).

At one level, the distinction between oral and written transmission of music is obvious. Written transmission depends on some form of notation. Writing and musical notation are techniques that seem to fix compositions and allow them to be transmitted over vast geographical and temporal distances. By registering their names on their compositions, composers and writers can be known, remembered and evaluated even though they no longer need be present to recreate their work in performance. The techniques of oral transmission, on the other hand, are memory and performance. Since memory is presumed to be faulty, it is often assumed that compositions cannot be fixed but are subject to constant variations, intended and unintended. In some traditions, like Vedic chant or African drumming, mnemonic devices such as inverting text syllables or the use of drum syllables help to reinforce memory. In others, such as jazz, Middle Eastern music and Hindustani music, variability is made into a virtue and improvisation (composition at the instance of performance) is favoured over the repetition of fixed compositions. As music passes from musician to musician, the difference between the composer and an interpreter in the chain of transmission is obscured, and often the composer is forgotten or irrelevant.

In literature, the difference between the ephemeral, performative, social, seemingly variable nature of oral traditions and the concrete, textual, disembodied, seemingly fixed nature of written traditions appears clear-cut. For music, however, the distinction between oral and written transmission,

while widely used and seemingly obvious, is often murky. For example, in many instances oral and written modes of transmission exist together in the same tradition. Common-practice Western art music seems on the surface to be a written tradition whose compositions have been transmitted for centuries by a well-understood notation that captures details of pitch, rhythm, instrumentation, and the polyphonic organization of parts. However, some aspects of the tradition are not (or not always) recorded in notation: instrumental technique, timbre, details of tempo and dynamics, ornamentation, articulation, the combination of these into something called expression, and (where indicated) improvisation. These details, crucial to effective performance of notation, exist in oral tradition and are taught in formal, somewhat ritualized private music lessons and school classes.

Important issues in the transmission of written tradition arise when the link provided by oral transmission is broken and the details of performing practice are no longer known to living musicians. For so-called early music before the common-practice period, historical research on performing practice has been used to reconstruct these crucial details. Another important area of research into written musical traditions concerns the accuracy of notations, giving rise to a branch of scholarship on editions and editing practices. The existence of variants among notations calls into question the fixity of written tradition, variants caused by 'corruption … through miscopying; degeneration through accidental omission of detail; distortion … through deliberate alteration; correction … of obvious errors; revision by the composer himself; amplification by supplementary performance indications not previously written down; variation of standard melodic figures where a variety of possibilities was acceptable in performance; faulty memorization of a piece, written out without an exemplar at hand; [and] notational changes not intended to affect the sound in any way' (Cooper, 1994, p.547)

Oral transmission, on the other hand, is presumed to characterize so-called folk or traditional music, where musicians never perform from notation and were once incorrectly presumed to be illiterate. However, the study of European traditional music, in particular, has revealed the extent to which musicians and singers have written down tunes and texts from the oral tradition in order to aid memory and (from the 17th to 19th centuries) to sell, in the form of inexpensive broadsides and chapbooks. Also tunes and texts from written tradition have, through frequent performance, passed into the oral tradition and been transmitted there, perhaps in a manner analogous to the way aphorisms from the works of Shakespeare or the Bible have become well-known proverbs and truisms in oral tradition, their sources forgotten.

Music and its study have added at least two important notions to the distinction between oral and written transmission. Firstly, a distinction is made between oral and aural transmission. Oral implies transmission by mouth in the medium of words, and in literature refers to the artistic medium itself and its spoken quality. In music, oral transmission refers to instruction in words, such as 'play this passage louder' or 'breathe at the end of this phrase'. Aural transmission, on the other hand, refers to learning music by ear from the sound itself, without the aid of words, which is done in both written and oral traditions. Secondly, for more than 100

years music has been recorded and transmitted in ever-proliferating media such as the phonograph record, radio and television, audio-cassette, compact disc and the internet. In this sense, the term transmission refers to the broadcasting of sound waves over long distances. Such media transmission partakes of the features of both oral and written tradition, and adds important new qualities to both. It preserves a record of musical composition (as does notation in written tradition) but it goes beyond notation to preserve and metaphorically textualize an actual performance, thus moving the details once transmitted (orally and aurally) in intimate settings between teacher and student into the widely accessible, disembodied, physical form associated with notation and written tradition. Media also facilitate aural learning, but by providing a permanent record of a performance in oral tradition, they allow aural transmission to continue over the kinds of distances (both temporally and spatially) usually associated with written traditions. By fixing improvised forms, however, some scholars worry that media transmission may encourage the copying of performances rather than the learning of the cognitive skills necessary to create them.

The social dimension of musical transmission has mainly been of interest to ethnomusicologists, who want to know what groups play music and what groups it is transmitted to. The answer varies significantly from society to society. For example, some societies, such as the Venda of South Africa, believe music to be a fundamental human behaviour and all participate in it and learn it to some extent. Perhaps more typically, music, or particular genres of music, are characteristic of one or another social group and transmitted almost exclusively within that group. The groups may be defined by ethnicity, social role (for example, professional musician), kinship, class, age and gender. For example, Amerindians have mainly refused to transmit their sacred, powerful songs to other Amerindian groups or to non-Amerindians. Rom (Gypsy) musicians in Macedonia are professional musicians who play the *zurla* (oboe) and *tapan* (drum) for weddings and celebrations of the majority Slavic population and transmit the tradition within families specialising in one or another of these instruments. So-called classical forms of music in Europe, the Middle East and Asia were historically transmitted only within elite or educated circles, while farmers and peasants had their own repertories rarely transmitted outside a particular village. In Europe, children's game songs are mainly transmitted by children among themselves and then largely forgotten when they become adults. In many societies the performance and transmission of certain genres of music have been circumscribed by norms of appropriate gendered behaviour. Some African groups restrict the playing of drums to women, while others allow only men to play them. Traditionally in Europe men have played musical instruments in public. However, there are notable exceptions: in Norway, for example, mothers have transmitted an instrumental tradition to their sons by singing tunes to them (Hopkins, 1986).

The cognitive dimension of transmission concerns the process of learning music. A few music psychologists and music educators have studied the development in children of cognitive abilities necessary for the acquisition of music (Serafine, 1988). However, few ethnomusicologists have examined the process of learning music in the many oral traditions they

study. Though they routinely point out that children in many traditions learn by imitation, often without the aid of lessons and through a process of trial and error, there are only a few studies that document the learning process in any detail (Berliner, 1994; Rice, 1994; and Brinner, 1995).

The institutional dimension of transmission concerns the organization of musical transmission. In many oral traditions music is not taught in any formal manner whatsoever, but is learnt by children who observe adults or older children singing, playing and dancing in social and ceremonial occasions and then participate in these activities alongside adults. In Bulgarian villages before World War II, boys practised what they had observed while herding animals in distant pastures, while girls attempted to repeat tunes and words as they cleaned house and tended the family garden. In parts of Africa and the Pacific adolescents are taught the adult repertory at initiation schools, during which they are taken away from the village for some weeks and adult knowledge of many cultural domains, including music, is imparted to them. In families of professional musicians, such as the Macedonian Rom (Gypsy) *zurla* players, young boys learn in informal lessons at home and then accompany their father or other male relative by playing a drone during paid performances, which gives them ample opportunity to listen to and absorb the repertory. Sometimes youths and amateurs form their own clubs or associations to pursue interest in particular style of music, for example, the garage band, a time-honoured means of learning music in the jazz and rock traditions. Formal, private music lessons are found in many literate and non-literate traditions around the world. Among the most ritualized are the Japanese guilds or schools (*ryu*) in which all students are expected to maintain the details of playing style with absolute fidelity throughout their lives. School, conservatory and university music training is a relatively recent phenomenon compared to these other centuries-old practices. Virtually every kind of music from every corner of the globe is available for study in such institutions, aiding the transmission of repertories and styles over vast geographical and temporal distances.

Transposing instruments.

Instruments for which the music is not notated at the actual pitch of the sound, but is transposed upwards or downwards by some specific musical interval. Transposition is traditionally reckoned relative to the pitch C; an instrument 'in C' is non-transposing (or transposing by an exact number of octaves), and an instrument, for example, 'in F', sounds F when C is notated. The intention is to maintain the relationship between notation and execution (fingering etc.) among instruments of a similar kind but of different pitch. The music is therefore written in a transposition whereby a player may read it in the same manner for each instrument in the group. (*See* Instrumentation and orchestration.)

1. Strings and organ.

During the Renaissance and Baroque eras, before the modern concepts of absolute pitch and a universal standard of performing pitch had developed, some instruments – particularly harpsichords and organs – were capable of rendering the same piece of music at two or (occasionally) more pitch levels without altering its relation to the pattern of the keyboard (*see* Transposing keyboard). In one sense these may be called transposing instruments, but not in the specific modern sense of departing from a standard relation between notation and pitch level. Rather, their purpose was evidently to allow the performer a choice between options of equal status, no one pitch level being deemed the 'real' one by which the others were judged 'transpositions'. Even so, on an instrument not tuned in equal temperament this would have been, at best, a stopgap measure, as the pitch relationships at the second level would have differed from those at the first unless (as was frequently the case) extra strings or pipes were provided.

Transposing instruments in the common sense of the term have not been common among bowed instruments, although the double bass sounds an octave below the written notes (in order to sound an octave below the cello when both read from the same part). The violino piccolo, usually tuned a 4th above the violin, is likely to have its part written a 4th below the actual sound so that the player may read the part as though written for the normal violin (e.g. in the cantata *Es ist ein grosser Gewinn* by Johann Michael Bach, Altbachisches Archiv, ii). In some music of the late 18th and 19th centuries cello parts written in the treble clef are to be read an octave lower. On fretted instruments a Capo tasto permits music to be transposed upwards by one or more semitones without altered fingering.

2. Woodwind.

A typical woodwind transposition is illustrated by the english horn, which is generally played by a musician whose primary instrument is the oboe. The

english horn is pitched a 5th below the oboe, so that each fingering produces on the english horn a sound a 5th lower than that given by the same fingering on the oboe. The english horn part is therefore notated a 5th higher than it will sound so that the player can read it with oboe fingering. This practice was introduced early in the 18th century but did not become standard until later in the century. Bach, for example, wrote for the oboe da caccia (a curved tenor oboe with an open bell) in a C clef at sounding pitch, as had been the practice with the straight tenor oboe (*taille*) at the end of the 17th century (for further information on the notation of tenor oboe parts, *see* Oboe, §III, 4). In some works by Bach the woodwind parts are written in a different key from the organ part in order to allow lower-pitched woodwind instruments to play with a higher-pitched organ; this is not strictly a matter of transposition, as neither pitch level was standard.

Clarinet transpositions are reckoned against the model of clarinet on which the fingering (in the principal register for Classical music, i.e. the upper register) matches that of the oboe in the actual pitches produced. This is the 'clarinet in C', so termed because it sounds at written pitch. The B♭ clarinet, a longer instrument, sounds a major 2nd lower when played with the same fingerings; its music is accordingly notated a major 2nd higher than it is intended to sound. Music for the A clarinet is written a minor 3rd higher than the sound. Clarinet parts must be headed 'in B♭' or 'in A' (etc.) so that the player can select the correct instrument. Where there exist two instruments pitched an octave apart, conventional nomenclature prevents ambiguity: 'clarinet in E♭' is understood as the small clarinet pitched a minor 3rd above the C clarinet (the part notated a minor 3rd below the sound) while 'alto clarinet in E♭' denotes an instrument pitched a major 6th below the C clarinet (the part written at this interval above the sound). The bass clarinet is normally understood as being 'in B♭' (or occasionally 'in A'), and the part is written a major 9th (or minor 10th) above the actual sound. Wagner, however, wishing to assist the conductor by making the part look more 'bass', notated it an octave lower, i.e. a major 2nd or minor 3rd above the sound, causing the parts to lie mainly in the bass clef. Various composers have followed this practice, though it obliges the player to become accustomed to an otherwise unfamiliar octave transposition and so interferes with the basic purpose of transposing instruments. The basset-horn pitched in F is usually notated a 5th above the sound, but passages involving the lowest notes are frequently written an octave lower in the bass clef (as in traditional notation for the horn), thus appearing on paper a 4th below the actual pitch. In the late 18th century B♭ clarinet parts were sometimes notated in the tenor clef an octave below sounding pitch; such parts could be easily played by imagining the clef to be the treble and adjusting the key signature.

Under the influence of clarinet nomenclature ('in B♭' etc.) members of the oboe and flute families have often been described in similar terms. The english horn is 'in F', and the non-transposing instrument of the family, the oboe, is said to be 'in C'. The oboe d'amore is 'in A' (notated a minor 3rd above the sound); bass oboes and the bass heckelphone are 'in (low) C' (written an octave higher). Flute transpositions are reckoned against the ordinary flute (usually in C): the piccolo is notated an octave below its

sound, the 'alto flute in G' (in some scores 'bass flute in G') a 4th above. The tierce flute (*Terzflöte*) often found in older music, especially military, is pitched a minor 3rd above the ordinary flute, with the parts written at this interval below the sound; it is therefore a 'flute in E♭' and is so described on the Continent. In Britain, however, it was long a traditional practice to describe the ordinary flute as 'in D', because in its early days D was its lowest note (similarly, the pitches of recorders are often given in terms of the lowest actual note, with the treble recorder, which in the USA is called 'alto', thus being said to be 'in F'). By this terminology the piccolo is 'in D' (rather than C), and the tierce flute is in F and in Britain called 'F flute'. Although this did not affect the interval of transposition when writing the parts, it can confuse score-reading of British band music. Similarly, a semitone-transposing flute may be known as 'in D♭' or 'in E♭'. The correct transposition can be found by inspecting the whole score, except where doubt arises over the octave. This also applies to early 18th-century scores with transposed parts for *flauti piccoli* etc., as in Handel's *Water Music*, where these parts are written a 4th above the violins for small recorders pitched a 5th above the treble recorder and fingered as the latter (ex.1).

Saxophone transpositions are similar to those of the clarinet, being reckoned against a 'soprano saxophone in C'. Parts for all saxophones are notated in treble clef at the interval above the actual sound that is equal to the interval by which the instrument is pitched below the soprano 'in C'. Thus the 'E♭ alto saxophone' is written a major 6th higher; the 'B♭ tenor', a major 9th higher; and the 'E♭ baritone', an octave and a major 6th higher (with these last two a score-reader may prefer to imagine tenor and bass clefs respectively, and adjust the key signature accordingly). Sarrusophones are treated in the same way, apart from the 'contrabass in C', for which parts are written in the bass clef sounding an octave lower (as are double-bassoon parts). Among other bassoons a few transposed parts exist for small instruments from the 18th century (see H.J. Hedlund, 'Ensemble Music for Small Bassoons', *GSJ*, xi, 1958, pp.78–84).

3. Brass.

For most brass instruments the basic convention is to write the notes of the harmonic series (in the case of valve instruments the 'open notes', i.e. those produced without lowering a valve) always in the key of C, whatever key the instrument actually sounds in. This practice arose in Germany in the 17th century with trumpet parts (the associated timpani sounds always being correspondingly written C and G) but became standard only during the course of the 18th (it had been used regularly from the beginning of that century for the horn, which from the first was played in a considerable number of tonalities). As technique on a natural brass instrument was based on producing the correct harmonics one after another, the player required a notation that expressed harmonics rather than absolute musical pitches. The notation fixed in C provided this and has remained in use even with valved instruments. Two distinct schemes of C notation eventually

arose: the original scheme for the trumpet (still used with the horn), in which middle C (*c'*) denotes the 4th harmonic; and a later scheme, used for bugles, cornets, modern trumpets and brass band instruments, in which middle C denotes the 2nd harmonic. For example, in the earliest days of the B♭ valve trumpet in Germany its parts were notated a minor 7th below the sound (written *c'* sounding *b♭*; the 4th harmonic); but later parts have been notated a tone above the sound (written *c'* sounding *b♭*; the 2nd harmonic of the same instrument). Octave ambiguity occurs among parts in the older notation written for trumpets or horns in times when these instruments were used with crooks that put them into the tonality required. The most familiar case is that of horn parts from the Classical period marked simply 'in B♭', because this can be understood either as 'B♭ alto' (sounding a major 2nd lower) or 'B♭ basso' (sounding a major 9th lower). In such instances the correct solution must be found by inspecting the tessitura of the parts (those with many high notes probably being 'basso') or the score as a whole; even so the correct alternative cannot always be decided with certainty.

For score-reading purposes, the following particulars about brass instruments may be helpful:

(i) Horn.

For parts in 'C alto' there is no transposition, but those in 'C basso' (implied by 'in C', unqualified) sound an octave lower; parts in 'B♭ alto' sound a major 2nd lower, in 'B♭ basso' a major 9th lower; those 'in A' sound a minor 3rd lower, and so on down to D♭ sounding a major 7th lower, except for parts in 'A♭ basso' (e.g. in Verdi), which sound a major 10th lower. Traditionally, passages written in the bass clef sound higher than written, instead of lower (e.g. *c* written in the bass clef sounds the same as *c'* written in the treble clef etc.). There was a move during the 20th century to abolish this irrational system and use the bass clef in continuation of the treble as in other music. But, quite apart from tenacity of tradition, it would be impractical to reprint the existing body of horn music – scores as well as parts – to comply. An instruction is often printed to indicate the reformed bass-clef notation; otherwise it has to be discovered by context. Some 18th-century works use the bass clef as a visual trick: parts for horns in E♭ (in Germany 'ex Dis') are notated in bass clef an octave lower than the actual sound with the key signature of E♭; and as E♭ falls in the bass clef where C falls in the treble clef, the player reads the part by imagining the treble clef. Similarly, D and F horn parts occasionally appear in alto and mezzo-soprano clefs respectively (but in the correct octave), the player again imagining the treble clef.

(ii) Trumpet.

For parts 'in C', there is no transposition; those 'in B♭' sound a major 2nd lower, 'in A' a minor 3rd lower, 'in A♭' generally a major 3rd lower (in some early 19th-century scores, however, parts 'in A♭' sound a minor 6th higher through use of the older notation of harmonics). Beginning with parts 'in G', trumpets (including the modern small trumpets from 'in D' up to 'in G')

sound higher than written: those 'in G' sound a 5th higher, and so on down to D♭ sounding a semitone higher. Parts written expressly for A or B♭ 'piccolo' trumpets also sound higher.

(iii) Bass trumpet.

Parts 'in E' sound a minor 6th lower, and so on down to 'in B♭' sounding a major 9th lower (in some early 19th-century military music, parts 'in B♭' sound only a major 2nd lower than notated).

(iv) Cornet.

For parts 'in C' there is no transposition; those 'in B♭' sound a major 2nd lower (as do the bugle and flugelhorn in B♭), 'in A' a minor 3rd lower and so on down to 'in E♭' sounding a major 6th lower (as in the fifth movement of Berlioz's *Symphonie fantastique*). Parts for 'soprano cornet', however, sound higher than written, so that 'in E♭' is a minor 3rd higher (in some early brass band compositions, 'in E♭' or 'in D' should be read higher than written, though 'soprano' is not stated).

(v) Other band instruments.

Parts for the E♭ tenor horn (American 'alto horn'), E♭ mellophone etc. sound a major 6th lower than notated. The B♭ baritone and euphonium, when written in treble clef, sound a major 9th lower (as does the tenor or B♭ trombone in brass band parts), but in the bass clef there is no transposition. Parts written in the treble clef for the E♭ bass (tuba) sound an octave and a major 6th lower, and B♭ contrabass (BB♭ bass) two octaves and a major 2nd lower (*see also* Wagner tuba).

A number of 20th-century composers, notably Schoenberg, advocated the abolition of transposed notations, and in scores of atonal music all the parts are often written at sounding pitch (usually with an instruction to that effect). Clarinettists find no difficulty in reading complex parts 'in C', and trumpeters are so accustomed to transposing and re-transposing (e.g. to play parts for trumpet 'in B♭' on C trumpets of their own choice) that writing for trumpet 'in C', at sounding pitch, is in many ways the most convenient for the players. If horn parts are written at pitch, there is need for constant shifting from the treble clef to the bass, confusing the visual flow of the part. A C clef would be apt, but totally strange to most players. Standard notation for modern horn, therefore, continues to be 'in F', sounding a 5th lower than written.

<div style="text-align: right">ANTHONY C. BAINES/JANET K. PAGE</div>

Transposing keyboard.

One that enables the performer readily to play music in a different key from that in which it is written, generally for the purpose of enabling the music to sound at a different pitch (usually to accommodate a keyboard accompaniment to the fixed or preferred pitch of other instruments or singers) or to permit the playing of music in a 'difficult' key while using the

fingering of an 'easy' key. There are two principal ways in which this may be accomplished. In one, the keyboard simply slides sideways relative to the jacks, hammers, stickers, strings etc. of the instrument of which it is a part. In the other method, there are two keyboards which are displaced from each other by a certain fixed interval.

The latter method is known principally from the standard two-manual harpsichords made by the Ruckers family in the late 16th-century and the first half of the 17th. In these, the upper keyboard sounds at normal pitch, while the lower keyboard, which plays the same strings as the upper keyboard, is positioned so that it sounds a fourth lower. The lower-manual *f'''* key, for example, is aligned with the upper-manual *c'''* key and acts on the same strings. O'Brien (1990) has suggested that a harpsichord by Joannes Ruckers, 1612 (in Fenton House, Hampstead), might originally have had a different arrangement, with the two keyboards a whole tone apart. Although there is no known evidence of organs with transposing keyboards like those in Ruckers harpsichords, there are occasional accounts of organs which included separate keyboards with their own pipework at a different pitch from the main instrument. In 1513 a second small organ, tuned a whole tone higher, was appended to the main organ in the church of St Jacobi, Innsbruck; the organ in the Hohenstiftskirche, Halberstadt, made by Heinrich Herbst in 1718, had two divisions with separate keyboards placed to the side, one tuned to 'Chorton' (choir pitch), presumably about a semitone below modern pitch), the other at 'Cammerton' (chamber pitch), presumably two or three semitones lower. Somewhat more frequently, in Germany during the 17th and 18th centuries, organs tuned to choir pitch would include, on one of the regular manuals, one or more stops at chamber pitch.

Transposing instruments with shifting keyboards have generally been more common than those with fixed keyboards. The earliest surviving examples include a harpsichord by Hans Müller of Leipzig (1537; Museo degli Srtumenti Musicali, Rome; for illustration *see* Harpsichord§2 (ii), fig.4) and a chamber organ by Michael Strobel (1559; Schloss Churburg, Sluderno, Italy). In both instruments the keyboard can be shifted by a whole tone, a transposition that Arnolt Schlick (*Spiegel der Orgelmacher und Organisten*, 1511) stated was particularly useful on the organ and which, he said, was possible on two instruments that he knew.

The utility of transposing keyboards was limited when unequal temperaments were prevalent. The Strobel organ, for example, is tuned in 1/4-comma mean-tone temperament, and when the keyboard is shifted to the right from its 'home' position the pattern of usable keys is also shifted. Thus, for example, the A and C♯ keys play a pure third in the lower position of the keyboard but when shifted up they play pipes tuned in the home position to B and E♭, a dissonant diminished fourth. The problem was less severe in harpsichords, in which the tuning could easily be adjusted. Even so, the Ruckers provided doubled strings for the note which on the upper keyboard is played by the E♭ key and on the lower keyboard by the G♯ key, so that the former could be tuned pure to the upper-manual G key and the latter pure to the lower-manual E key. Otherwise, the lower-manual interval E–G♯ would sound a diminished fourth, i.e., the interval played by the

upper-manual B and E♭ keys. Other problems are inherent in transposing keyboards with short octave tunings in the bass. In the Strobel organ, the pipes follow the standard *C/E* short-octave arrangement for the keyboard in the lower position, but this is disrupted when the keyboard is shifted upwards. In Ruckers harpsichords the strings follow the short-octave arrangement of the lower-manual keys, and the rear portions of three of the bass key levers in upper manual are cranked to the left to reach the appropriate strings (see illustration). Eventually, both of these problems were obviated when equal (or nearly equal) temperaments were used and when keyboards with chromatic bass compasses were made.

During the 17th and 18th centuries instruments with shifting keyboards were made occasionally, although they never became very common. Extant examples include an early 18th-century Thuringian harpsichord (in the Bachhaus, Eisenach) with a keyboard shifting over the interval of a minor third, presumably from deep chamber pitch (about a whole tone below modern pitch) to choir pitch, and two grand pianos made in the 1740s by Gottfried Silbermann, with keyboards shifting a semitone. Burney (1771) described two transposing instruments that he saw in 1770: a square piano, made in Berlin, in which, 'by drawing out the keys the hammers are transferred to different strings', and a harpsichord with a shifting keyboard made in Spain for Farinelli. A 'false keyboard' that could be installed over the functional key levers of an instrument was patented in Great Britain in 1801 by Edward Ryley with the express purpose of permitting 'any piece of music wrote in the natural key of C … [to be] transposed throughout all the keys of music without the aid of flats or sharps' and making possible 'a new mode of playing, which requires the aid of one major and one minor key'. A surviving square piano made by Broadwood in 1808 (now in a private collection, USA) possesses this mechanism. A separate false keyboard that could be applied to any piano was invented in France by August Wolff in 1873. Although the radically reformed keyboard patented by Paul von Janko in 1882 does not shift, its keys are arranged so that the player's hands may shift over it and perform in any key without changing fingerings.

During the 20th century, several pianos with shifting keyboards (including one by Weser Bros., New York, 1940, now in the Smithsonian Institution, Washington, DC) were made for the American songwriter Irving Berlin, who could play only in the key of F♯. Many modern harpsichords are equipped with shifting keyboards allowing them to play both at 'modern' (*a'*=440) pitch and at 'baroque pitch' a semitone below. Contemporary electronic keyboard instruments and electronic play-back systems applied to pianos or other instruments are often provided with a switch or other mechanism to allow automatic transposition to any key.

Distinct from the foregoing instruments, which transpose by the intervals of conventional Western harmony, are certain Microtonal instruments, which may be considered to 'transpose' by increments smaller than a semitone. Among these was a 'clavicymbalum universale' with 19 keys in the octave, made in Vienna about 1590 and described by Michael Praetorius (*Syntagma musicum*, ii, 1618, 2/1619), which, presumably by means of a sliding keyboard, could be set to any of seven pitch levels within the interval of a major 3rd. In the late 19th and early 20th centuries some

quarter-tone pianos and reed organs were made with two conventional keyboards tuned a 1/4-tone apart.

Transposition.

The notation or performance of music at a pitch different from that in which it was originally conceived or notated, by raising or lowering all the notes in it by a given interval. Transposition is often applied when pieces are performed on different instruments from those specified in a particular scoring: for example, Bach's Cello Suites are transposed up an octave when played on the viola. Vocal music is often transposed in performance, and songs are sometimes published in alternative transposed versions for 'high voice', 'middle voice' and 'low voice'.

See also Chiavette; Transposing instruments; Transposing keyboard.

JULIAN RUSHTON

Transverse flute

(Fr. *flûte traversière*; Ger. *Querflöte*; It. *flauto traverso*, or simply *traverso* or *traversa*).

An older name for the flute (*see* Flute, §II), used to distinguish it from the end-blown Recorder. Transverse flutes from earlier periods are often known today by the name Traverso.

ARDAL POWELL

Transverse grand pianoforte

(Ger. *Querflügel*, *Querhammerflügel*, *Querpianoforte*, *Traversflügel*).

A small piano of the late 18th century, shaped like a spinet. An example by Christian Gottlob Hubert is in the Germanisches Nationalmuseum, Nuremberg.

Trân Van Khê

(*b* Binh Hoa Dong Village, My Tho Province, Vietnam, 24 July 1921). Vietnamese ethnomusicologist. After studying medicine in Hanoi (1941–3) and political science in Paris (1951–3), he followed the courses of E. Gaspardone in historical research at the Collège de France (1954–7) and of Schaeffner in organology and Chailley in musicology in the Faculté des Lettres (1952–8); he took the doctorate in 1958 with a dissertation on traditional Vietnamese music. In 1959 he entered the CNRS, where he was director of research from 1971 to 1987. He was director of the Centre d'Etudes de Musique Orientale (1959–88), where he taught the performing practice of Vietnamese instruments. In 1968 he was appointed lecturer at the Institut de Musicologie at the University of Paris, giving courses on musical traditions in Asia and general ethnomusicology. In 1975 he was awarded an honorary doctorate by the University of Ottawa. His chief musicological interest is in the systematic and comparative study of the music of Vietnam and neighbouring countries.

Trapp, Max

(*b* Berlin, 1 Nov 1887; *d* Berlin, 31 May 1971). German composer. From 1905 to 1911 he studied composition with Juon and the piano with Dohnányi at the Hochschule für Musik in Berlin. Trapp taught the piano at the same institution from 1920 until 1934; he also led the masterclass in composition at the Dortmund Conservatory from 1924 to 1930. He became professor at the Berlin Hochschule in 1926, and in 1929 he was elected to the Prussian Academy of Arts, where in 1934 he began to direct the masterclass in composition. During the last years of the Weimar Republic, Trapp became a supporter of the National Socialists and joined Alfred Rosenberg's Kampfbund für deutsche Kultur, directing its serious music programme from 1932 to 1934. His work achieved considerable prominence during the 1930s and was frequently promoted by such conductors as Furtwängler and Böhm. In 1936 the regime honoured Trapp with the award of the Beethoven Prize, and four years later the composer received the National Music Prize. After the war Trapp taught at the Berlin Conservatory in the early 1950s and was elected to the Berlin Academy of Arts in 1955. During this period his music was rarely heard, although in 1967 the conductor Eugen Jochum performed one of his later symphonies with the Berlin PO in honour of his 80th birthday.

Trapp's early compositions were strongly indebted to the late Romantics, in particular Strauss and Reger. Although by the mid-1920s the composer had adopted a more neo-classical rhythmically propulsive style, his music remained strongly diatonic and eschewed the modernisms favoured by some of his younger contemporaries.

Traquenard

(Fr.: 'trap', 'ambush').

A late 17th-century dance. Dances bearing this name occur in instrumental ballets by composers such as Erlebach, Johann Fischer, Kusser, Georg Muffat and A.A. and J.H. Schmelzer. They are rhythmically and structurally identical with gavottes: there are phrases of eight minim beats with a caesura after the fourth beat, the time signature is C, and they begin with either a half-bar or a full bar. Furetière described the traquenard as 'a kind of dance involving special movements of the body', which may have been connected with the usual meanings of the word given above; thus, although Nettl regards it as a separate variety of dance, the term may simply be a title for a mimed dance using gavotte music.

ERICH SCHWANDT

Trasenier.

See Trazegnies family.

Trasuntino.

The name of two apparently unrelated 16th-century Italian harpsichord makers, active in Venice, who also worked on organs, Alessandro (*b* Bergamo, *c*1485; *d c*1545) and Vito [Guido, Giulio, Vido] (*b* Treviso, 1526; *d* after 1606). Although several spellings of the surname are known, original inscriptions give 'Trasuntini', or 'Trasuntinis'. A 'Gio. Francesco Trazentinus' is recorded by a faked inscription on a virginal made by Bruneto Pontoni in 1532, and a 'Bernardinus de Trasuntinis' is known only from an inscription, probably not original, on a harpsichord. Vito's family name was Frassonio, but he used Alessandro's surname, probably on account of the reputation attached to it. Fioravanti recorded that 'Guido Trasuntino' was 'in the art of making *arpicordi*, harpsichords, organs and regals a man of such learning and experience that everyone marvels on hearing his instruments, since the sound and harmony surpasses that of all others'.

No new organs by Alessandro or Vito are known, but Lunelli records repairs made by them and that Vito was called upon to judge the work of other builders. Only three harpsichords can be firmly identified as by Alessandro, from 1530, 1531 and 1538, but two others and a virginal may have been made by him. Several instruments, including clavichords, have faked inscriptions. Vito's work is represented by two authenticated harpsichords of 1560 and 1572 respectively. An Arcicembalo (1606) by Vito, called 'clavemusicum omnitonum' in its inscription, was built with 31 notes in each octave, similar to the harpsichord in Nicola Vicentino's *L'antica musica* (Rome, 1555; *see* Enharmonic keyboard, fig.2). Another harpsichord can be plausibly ascribed to Vito (in the Händel-Haus, Halle), but others have faked inscriptions. All the Trasuntino harpsichords, with the exception of the *clavemusicum omnitonum*, have the typical 16th-century Venetian specification of 1 x 8' and 1 x 4', with a compass of *C/E–f'''*. They were strung in iron wire at about *a'* = 415 Hz, although Vito's 1560 harpsichord was pitched a whole tone higher.

Trattner, Johann Thomas, Edler von

(*b* Hungary, 11 Nov 1717; *d* Vienna, 31 July 1798). Austrian publisher of Hungarian birth. He was the leading music publisher and retailer in Vienna between 1770 and 1790. He arrived there in 1739, and worked as a journeyman in Van Ghelen's printing office before buying J.J. Jahns's business in 1748. Subsequently he became court bookseller (1751) and court printer (1754). The numerous privileges resulting from the Empress Maria Theresa's patronage and his own efficiency and business acumen helped his firm to flourish. The house he bought in Alt-Lerchenfeld in 1759 was transformed into a 'typographical palace'; in 1773 he bought the Freisingerhof on the Graben and built the new Trattnerhof there in 1777. His standing is strikingly demonstrated by the fact that the future Emperor Joseph II learnt printing from him.

Trattner started advertising music in the *Wiener Diarium* in 1756, but only on a small scale before 1764; the firm's *Catalogus universalis liborum* (1765) and further catalogues (1776, 1777, 1780, 1784) indicate increased activity. His fame as a music publisher rested particularly on the scores of two works by Gluck, *Alceste* (1769) and *Paride ed Elena*(1770). He was also responsible for the *Missale romanum* of 1758. Mozart lived in the Trattnerhof from 23 January to 29 September 1784, and taught Trattner's second wife, Theresia, to whom he dedicated the Fantasy and Sonata k475 and 457. He gave three concerts in Trattner's concert hall.

In 1793 Trattner made his grandson Johann Thomas Trattner the younger a partner; the latter carried on the business after Trattner's death. In 1805 the printing office was sold to the manager Georg Überreuter and the bookshop to Josef Tendler. Überreuter's press has become part of the Viennese firm of Salzer.

ALEXANDER WEINMANN

Tratto

(It.: 'drawn out'; past participle of *trattare*, to pull, stretch).

An indication whose most famous use is perhaps that in the finale of Beethoven's Quartet in F op.135: *grave ma non troppo tratto*. Related forms include *trattenuto* ('held back'; past participle of *trattenere*, to restrain, detain, but evidently often understood as a portmanteau word of *tratto* and *tenuto*), a direction used normally for only a single phrase, not, like *ritenuto* or *rallentando*, for lengthy passages.

See also Tempo and expression marks.

DAVID FALLOWS

Traubel, Helen (Francesca)

(*b* St Louis, 20 June 1899; *d* Santa Monica, CA, 28 July 1972). American soprano. From the age of 13 she studied singing with Vetta Karst. She made her concert début in 1923 in St Louis, but refused an offer to sing at the Metropolitan in 1926, returning instead to St Louis for further study. Her Metropolitan début was in Damrosch's *The Man without a Country* (1937); but her first important role was Sieglinde (1939), which initiated her career as the foremost American Wagnerian since Nordica, with whom she was frequently compared. When Flagstad left the Metropolitan in 1941 Traubel became her successor, as Brünnhilde, Elisabeth, Elsa, Kundry and, above all, Isolde. Her statuesque presence, vocal grandeur and expressive warmth made her unrivalled in Wagner until Flagstad's return. The two sopranos shared the *Ring* cycles for one season (1951), and Traubel added the Marschallin to her rather limited repertory. In 1953 she left the Metropolitan after a disagreement with Bing over her appearances in night-clubs. At the time, despite some loss of freedom at the top, her voice was virtually unimpaired. Thereafter she concentrated on films and television, and appeared in a Broadway show, *Pipe Dream* (1955). Although she had sung in South America, Mexico and very briefly in London, Traubel remained essentially an American phenomenon. Her Wagner recordings, including a complete *Lohengrin* recorded at a Metropolitan performance in 1950, display the strength and security of her singing.

MARTIN BERNHEIMER

Trautonium.

A monophonic electronic instrument, the name of which is derived from that of its inventor, Friedrich Trautwein. It was first exhibited in Berlin in 1930, and a number of composers wrote for it: Hindemith learnt to play the instrument and in 1931 wrote a concertino for trautonium and string orchestra; other solo works with orchestra were composed by Genzmer (two concertos), Hermann Ambrosius and Julius Weismann, and Strauss, Egk, Josip Slavenski and Oskar Sala also used it. Sala (*b* Griez, Thuringia, 18 July 1910) became the trautonium's sole virtuoso and, besides assisting Trautwein in the development of a domestic version (manufactured by Telefunken between 1932 and 1935), he constructed his own radio (1935) and concert (1938) trautoniums, and the Mixtur-Trautonium (1949–52), all of which had two fingerboards and featured sub-harmonic timbres. In 1952–3 Trautwein produced a simpler, two-manual version known as the Elektronische Monochord. The Mixtur-Trautonium was first used in compositions by Orff, Henze, Dessau, Jürg Baur, Sala and others, including a concerto by Genzmer (1952), but in 1958 it became the permanent mainstay of Sala's electronic music studio (which produced the music for Alfred Hitchcock's film *The Birds*, among others). A digital Mixtur-Trautonium was designed and built in the early 1980s as a series of student projects at the Fachhochschule der Deutschen Bundespost, Berlin.

The trautonium has a fingerboard consisting of a resistance wire, stretched over a metal rail, and coupled to an oscillator. The performer, on pressing the wire against the rail, completes the circuit and the oscillator is heard through the instrument's loudspeaker. The position of the finger on the wire determines the resistance controlling the oscillator's frequency and thus the pitch of the note heard. The three-octave range of the fingerboard can be transposed by means of a switch. A set of filters varies the timbre and non-harmonic partials (*Hallformanten*) can also be added by selective filtering to produce a distinctive and unusual timbre. Volume is controlled by a pedal.

RICHARD ORTON/HUGH DAVIES

Trautwein, Friedrich (Adolf)

(*b* Würzburg, 11 Aug 1888; *d* Düsseldorf, 20 Dec 1956). German engineer and acoustician. He studied electrical engineering (1906–8) and law

(1908–11), and received the doctorate from Karlsruhe (1921) before working in the radio industry. In 1930 he was appointed lecturer and in 1935 professor of musical acoustics at the Berlin Musikhochschule. His experiments in electronic music resulted in several instruments, including an amplified harpsichord (1936, in collaboration with Hanns Neupert), electronic bells and, most importantly, the Trautonium, developed in 1930 and used by, among others, Hindemith, Höffer, Genzmer and Julius Weismann, all of whom wrote concertos for it, Egk and Strauss. In the late 1940s Trautwein worked in Paris in aviation research; he then set up a school of composition in Düsseldorf which in 1950 became part of the Robert Schumann Conservatory. He published a trautonium method (*Trautoniumschule*, 1936) and many articles on acoustics and electronic music in technical and musical periodicals.

Travenol, Louis-Antoine

(*b* Paris, 1698/1708; *d* Paris, 1783). French violinist, composer and pamphleteer. He gave both 1698 and 1708 as his date of birth. The son of a dancing-teacher, he learnt the rudiments of the violin from his father and claimed also to have studied with Clérambault and Senaillé. He had to earn a living at an early age, though it is only known that at some time before 1735 he was employed as first violin and as *maître de la musique* of the King of Poland at the court of Lorraine at Lunéville. By 1739 he had joined the orchestra of the Paris Opéra.

Endowed with a contentious character and some literary talent, he made his mark on history primarily through his disputes with several illustrious figures in 18th-century France, including Voltaire, Rousseau and Mondonville. As a result of Travenol's reprinting, in 1746, of a libellous document by Baillet de Saint-Julien directed against Voltaire and occasioned by the latter's election to the Académie Française, Travenol and Voltaire became entangled in a lengthy legal dispute, further complicated by a case of mistaken identity, which resulted in the

imprisonment of Travenol's 80-year-old father. In 1753–4 Travenol entered the Querelle des Bouffons with the publication of two pamphlets directed against Rousseau, *Arrest du conseil d'état d'Apollon* and *La galerie de l'Académie royale de musique*. The *Mémoires de Trévoux* remarked that the latter pamphlet would 'probably be one of the last and at the same time one of the best which has been published against the famous *Lettre sur la musique française* by J.-J. Rousseau'. Troubled by ill-health, Travenol was retired from the Opéra on 1 April 1758. This sparked another series of recriminatory publications, one of which, *Mémoire pour le sieur Travenol*, was directed primarily at Mondonville, then one of the directors of the Concert Spirituel. Most of Travenol's publications are of a polemical nature, the *Histoire du théâtre*, undertaken in collaboration with Durey de Noinville, being a notable exception; according to Fétis much of the material was compiled from earlier manuscript sources.

Travenol's bizarre literary output overshadows his activity as a performer and composer, though he was more than competent in both spheres. He furnished both the music and the text for his cantata, and the *Suitte de simphonies* was probably the composition performed on 31 March 1750 at the Concert Spirituel, which the *Mercure de France* reported 'merited the commendations of the listeners'.

LAUREL FAY/ELISABETH COOK

Travers, Henry

(*d* ?Exeter, ?1679). English composer. It is possible that he was a chorister at Exeter Cathedral before the Civil War; in 1663 he was appointed a lay vicar there. The following year he was sent to London to buy 'shagbutts and Cornetts … for the use of the Church' at a cost of £19. He was made one of the priest vicars in 1676, and was replaced (presumably on his death) in 1679. A score of his anthem *Shall we receive good* survives (*GB-Cu*) and gives evidence of a capable if conservative technique. An *Anthem upon the Martyrdome of King Charles the first*, by 'Henry Trevors', may also be by him (*LF*).

IAN SPINK

Travers, John

(*b* ?Windsor, *c*1703; *d* London, June 1758). English organist, composer and music copyist. The son of Joseph Travers, a shoemaker in Windsor, he was probably a chorister at St George's Chapel there and in 1719 was apprenticed to Maurice Greene, in which capacity he copied many of Greene's works from about 1722 to 1728. On the expiration of his articles, Travers became an intimate of J.C. Pepusch, from whom he seems to have acquired a keen interest in old music. During the 1730s and 40s he was much involved in the activities of the Academy of Ancient Music, and for them he not only composed music, but also copied a good deal of 16th-century (and earlier) repertory, including items from the Eton Choirbook.

On 24 November 1726, with the backing of the Duke of Bedford, Travers became organist of St Paul's, Covent Garden, and later also of Fulham parish church. In the subscriptions list to Handel's *Admeto* (1727) he was described as sub-organist of St Paul's Cathedral, a post that did not then officially exist. On 10 May 1737 he succeeded Jonathan Martin as one of the organists (with Greene) of the Chapel Royal, soon after which he

relinquished the Fulham post. In May 1739 he was one of the first subscribers to the Fund for the Support of Decay'd Musicians and their Families (later the Royal Society of Musicians). Of his later life little is known except that he continued his close personal association with Pepusch, who bequeathed him part of his library and certain personal effects. According to Travers's will, all this was subsequently left to his pupil, Thomas Barrow, the chief copyist of the Chapel Royal from 1746 until his death in 1789; Hawkins, however, states that it was sold for 'a very inconsiderable sum' at an auction held in July 1766. William Jackson of Exeter was also briefly a pupil. Travers was succeeded as Chapel Royal organist by William Boyce on 23 June 1758.

As a composer, Travers was a sound craftsman who took a delight in the solution of various somewhat recondite technical problems, as witness his 12 canons on the *Miserere* (*GB-Lgc*) and certain other of his more contrapuntal pieces, some of which are strictly modal. Most of his music, however, is more straightforward, and some (the canzonets in particular) has a winsome grace which has not yet lost its power to charm. The Service in F, making few demands on either singers or listeners, was long a favourite with Anglican cathedral choirs; so too the verse anthem *Ascribe unto the Lord*, which is still occasionally performed.

WORKS

sacred

Anthems [25 listed in Foster]: 20 in *GB-H*; 2 (incl. Ascribe unto the Lord) in Cathedral Music, ed. S. Arnold (London, 1790); 1 in Harmonia Sacra, ed. J. Page (London, 1800)

Traversa

(It.; Fr. traversière).

Transverse flute. *See* Flute, §II.

Traversflügel

(Ger.).

See Transverse grand pianoforte.

Traverso

(It.: presumably an abbreviation of *flauto traverso*).

A term used by some modern revivalists of early types of Flute to distinguish them from the modern instrument. The English noun is apparently borrowed from the modern Dutch school of Baroque flute playing: like the term Piccolo the Italian word was originally an adjective qualifying *flauto*. The feminine form of the noun, *traversa*, was used by Bach, Handel and others. For further information see A. Powell: 'Traverso or Traversa?', *FoMRHI Quarterly*, no.57 (1989), 19–22.

ARDAL POWELL

Travesty

(It. *travesti*: 'disguised').

An operatic role played by a member of the opposite sex. The term is most commonly applied to men who sing female roles; for women playing male roles, Breeches part is more usual. Such parts, often depicting elderly, amorous women and having an inherently comic or derisive element, are frequent in early Venetian opera: for example, the Nurse (alto or high tenor) in Monteverdi's *L'incoronazione di Poppea* (1642) or Alcesta in Cavalli's *Erismena* (alto in 1656, tenor in 1670). The later period of Zeno and Metastasio banished such parts as distasteful, but the custom persisted in early Neapolitan comic operas. French opera offers an example in the title role of Rameau's *Platée* (1745), an ugly marsh-nymph, for Haute-contre. A rare instance in 19th-century Italian opera is Mamm'Agata (baritone) in Donizetti's *Le convenienze teatrali* (1827), the hectoring mother of a seconda donna. In Britten's *Curlew River* (1964), one of the monks relating the story plays the leading role of the Madwoman (tenor). Although this example differs from the preceding in that the travesty is acknowledged within the opera, it offers an important 20th-century example of unusually raw emotional power.

A related but distinct tradition also making use of travesty involves the castrato voice in Baroque opera. On the one hand, in Rome and elsewhere, where women were barred from singing on the stage at many periods of the 17th and 18th centuries, castratos sang the roles of young

princesses and lovers *en travesti*. On the other hand, given the vocal range of male castrato roles, male characters could sing disguised as women within the context of the plot, like Achilles in Handel's *Deidamia* (1741). It is within the tradition of treble male roles that breeches parts for women also became common, a convention that has continued more actively in practice than travesty. Situations in which male characters dress as women but do not sing so disguised derive from the comic tradition of travesty. Examples are Cherubino, a treble breeches part, in Mozart's *Le nozze di Figaro* (1786) and Falstaff (bass) in Nicolai's *Die lustigen Weiber von Windsor* (1849). (C.E. Blackmer and P.J. Smith: *En travesti: Women, Gender Subversion, Opera*, New York, 1995).

JULIAN BUDDEN/ELLEN T. HARRIS

Travis, Merle (Robert)

(*b* Rosewood, KY, 29 Nov 1917; *d* Tahlequah, OK, 20 Oct 1983). American country singer-songwriter and guitarist. He spent his formative years in Kentucky's mining region, experience which informed two of his most famous songs: *Dark as a Dungeon*, a powerful protest against mining conditions, and *Sixteen tons* (both from *Back Home*, Cap., 1957), which contained a line that has passed into common currency – 'another day older and deeper in debt'. He began performing in the mid-1930s, busking (with, among others, Ike Everley, father of the Everley Brothers) before being hired by WLW Radio in Cincinnati. After a spell in the Marines, he settled in California, working with Tex Ritter among others. In the 1950s and 60s he appeared widely on radio and television, writing scripts for Johnny Cash and joining the cast of the celebrated 'Grand Ole Opry'. There was also a memorable cameo as a guitar-picking GI in *From Here to Eternity* (1953). In 1977 he was elected to the Country Music Hall of Fame. A hugely influential figure in country music, Travis was emblematic of the country lifestyle: whisky and drugs rendered him an unreliable performer. Nevertheless, his guitar style – picking out a rhythmic bass line with his thumb, while his fingers embellished the melody line – demonstrated that Travis was an accomplished instrumentalist. Chet Atkins and Scotty Moore are two players who have acknowledged their debt to him. Significantly, Travis also developed what was effectively a template for the solid-body electric guitar, later developed by Leo Fender.

LIZ THOMSON

Travlos, Mihalis

(*b* Piraeus, 7 July 1950). Greek composer and teacher. He studied harmony and guitar at the National Conservatory, Athens (1969–72), and also briefly took counterpoint lessons with Y.A. Papaïoannou. He then went to the Berlin Akademie der Künste, where he studied composition with Yun and orchestration with Szalonek. After his return to Athens he taught at the Hellenic Conservatory (1980–82), the Nikos Skalkottas Conservatory (1982) and the Contemporary Conservatory, Athens (1987–96), establishing a reputation as one of the finest pedagogues in theory and composition since Papaïoannou.

Though well acquainted with developments in composition since 1950, Travlos has resisted adherence to any specific tendency. Rather he has painstakingly forged a distinctly personal style, descended more from Szymanowski than Skryabin. Essentially melodic, his music incorporates aspects of both Eastern and Western traditions. While there are often hints of modality and tonality, elsewhere microintervals are exploited, always with an acute sense of their effect on the overall harmonic context. His works are sensitively orchestrated and often explore solo–tutti oppositions (Concerto for oboe, piano, strings and percussion, 1986–7; *Apoechoi* ('Echoes'), 1988). An austere personality who shuns easy publicity, Travlos nonetheless ranks among the most prominent Greek composers after Christou.

WORKS

(selective list)

Op: O faros [The Lighthouse] (1, M. Sfakianaki), Iraklion, 24 Aug 1986

<div align="right">GEORGE LEOTSAKOS</div>

Traxdorf [Drassdorf, Drossdorf], Heinrich

(*fl* Mainz, *c*1440–44). German organ builder. He built three organs in Nuremberg between 1440 and 1443: the large organ for St Sebaldus (the modified case was destroyed in 1945) and two (medium and small) for the Frauenkirche. In 1444 he made an organ with *Rückpositiv* and 'lödiges' positive (probably with tin pipes) for St Peter, Salzburg. Traxdorf's organs consist of one manual, Positive or *Rückpositiv* and Pedal. Traxdorf was one of the first to depart from the gothic *Blockwerk* organ by dividing the chests and separating the front stops into Flute (Principal) and Octave (Quoika termed this the 'Nuremberg type'). The range of the manual was *B* to *d*″ and that of the Pedal *A* to *b*.

GODELIEVE SPIESSENS

Trazegnies

(1) Gummarus Franciscus [Gommaire-François] de Trazegnies (i)

(*b* ?Lessines, before 1658; *d* Antwerp, 1 Oct 1739). Organist, teacher and dealer in keyboard instruments. In 1685 he was organist at St Pierre in Lessines, and then moved to Grammont and to Antwerp, where in 1702 he became organist at the 'Beggaarden' church and in 1703 organist and singing master at the St Elisabeth's, Gasthuis. He was probably the 'Tresoniers' who played double bass in 1720 and organ in 1722 at St Walburgis. He also taught the harpsichord and was active as a dealer, repairer and tuner of keyboard instruments.

Trazegnies

(2) Christiaen Balthazar [Chrétien-Balthazar] de Trazegnies

(bap. Grammont, 5 Jan 1691; *d* Antwerp, 22 Sept 1757). Organist, teacher and dealer in keyboard instruments, son of (1) Gummarus Franciscus de Trazegnies (i). Between 1700 and 1706 he was a choirboy, in 1714 a harpsichord teacher and in 1725 organist at St Jacobskerk, Antwerp; in 1724–5 he sang tenor at St Andries. In 1727 he was engaged by the cathedral to play the great organ and that of the chapel of the Holy Sacrament; he later became organist of the Keizerskapel. He also dealt in music and the repairing and tuning of keyboard instruments. In 1737–8 he served as dean of the musicians' guild.

Trazegnies

(3) Gummarus Franciscus [Gommaire-François] de Trazegnies (ii)

(bap. Antwerp, 23 Dec 1717; bur. Antwerp, 12 June 1786). Organist and teacher, son of (2) Christiaen Balthazar de Trazegnies. In 1736 he was appointed continuo organist and in 1756 organist of the Lady chapel in the cathedral. In 1739 he succeeded his grandfather as organist of the St Elisabeth's, Gasthuis, and in 1756 he followed his father at the chapel of the Holy Sacrament. He was an expert on organs and also taught the harpsichord. His son Matthias (bap. Antwerp, 1750; *d* Lokeren, 1834) and grandsons Josephus (*b* Lokeren, 1787; *d* Lokeren, 1816) and Augustinus (*b* Lokeren, 1804; *d* Lokeren, 1846) were also musicians; Matthias was organist at St Laurentiuskerk, Lokeren, from 1783, and Augustinus held the same post briefly in 1837.

Trazegnies

(4) Adriaan Balthazar de Trazegnies

(bap. Antwerp, 26 April 1742). Organist, son of (2) Christiaen Balthazar de Trazegnies. He was appointed organist at St Salvator's or Peter Pots Abbey in 1757, and succeeded his father at the Keizerskapel the following year.

Trazegnies

(5) Franciscus Josephus [François-Joseph] de Trazegnies

(bap. Antwerp, 26 Jan 1743; *d* Antwerp, 20 Jan 1820). Organist and composer, son of (3) Gummarus Franciscus de Trazegnies (ii). In 1763 he was appointed organist of St Walburgis, Antwerp, and in 1786 he succeeded his father at the Lady chapel in the cathedral. In 1802 he was also made organist of the chapel of the Holy Sacrament, and in 1803 he was appointed to the great organ in the cathedral. From 1803 to 1817 he was organist at the St Carolus-Borromeuskerk. He was also an expert on organs and a composer; his three published volumes of harpsichord pieces attracted some famous musicians and organ builders as subscribers. They consist of small-scale pre-Classical sonatas in three movements, most of them in monothematic sonata form. In compositional technique and style they are indebted to the Italian 18th-century harpsichord sonata and to J.C. Bach. Intended for pupils and amateurs, they are light and charming, but conventional and with little melodic inspiration. Trazegnies is one of the last Flemish composers to represent the *galant* harpsichord style at a time when, in Vienna, Haydn and Mozart were already composing their mature bithematic sonatas.

WORKS

VI divertissemens, hpd, op.1 (Liège, *c*1767)
Six divertissements, hpd, op.2 (Paris, *c*1772)
Concentus musicus sex clavicymbalo accommodati, op.3 (Antwerp, n.d./*R*) [2 sonatas ed. X. van Elewijck, *Collection d'oeuvres composées par d'anciens et de célèbres clavecinistes flamands*, ii (Brussels, 1877)]

Trazegnies

(6) Augustinus Josephus Hyacinthus de Trazegnies

(bap. Antwerp, 3 July 1783; *d* Zevenbergen, 19 Dec 1863). Organist and teacher, son of (5) Franciscus Josephus de Trazegnies. In 1809 he was organist at the Onze-Lieve-Vrouwekerk in Bergen op Zoom. By 1817 he

was established as a music teacher in Etten-Leur, but in that year he returned to Antwerp as organist of the St Carolus-Borromeuskerk, and remained there until 1842. He then went back to Etten-Leur and finally settled in Zevenbergen, probably as a music teacher. A lost book of piano preludes by him is said by Grégoir to have been undistinguished. His son Adriaan Leopold Antoon (*b* Antwerp, 1832) and grandson Adriaan Petrus Joannes (*b* Zevenbergen, 1861) were also teachers and minor composers of piano music.

Trebelli, Zélia [Gillebert, Gloria Caroline]

(*b* Paris, 1838; *d* Etretat, 18 Aug 1892). French contralto. She studied with Pierre François Wartel, and made her début in 1859 in Madrid, singing Rosina (*Il barbiere di Siviglia*), Azucena (*Il trovatore*), Arsaces (*Semiramide*), Urbain (*Les Huguenots*) and Duchess Federica (*Luisa Miller*) during her first two seasons. In 1860 she sang at the Berlin Court Opera and in 1861 at the Théâtre Italien, Paris. She made her London début at Her Majesty's Theatre in 1862 as Maffio Orsini in *Lucrezia Borgia*, and returned to London regularly for the next 25 years. She sang Siebel in *Faust* (1863), Taven in *Mireille* (1864) and Preziosilla in *La forza del destino* (1867), all first London performances. At Drury Lane from 1868 to 1870 she sang Cherubino (*Le nozze di Figaro*), Maddalena (*Rigoletto*) and Frederick in the first London performance of Thomas' *Mignon* (1870); she first appeared at Covent Garden in October 1868. In 1878 she toured the USA with Mapleson's company. Her Metropolitan début was in 1883 as Azucena, and in the same season she appeared in *Mefistofele*, *Carmen* and Flotow's *Martha*. She retired in 1888, after her final season at Covent Garden. Her voice, which could easily encompass both mezzo-soprano and contralto roles, had a range of over two and a half octaves, and was particularly strong and resonant in the lower register. She was a fine actress and at the age of 50 was still convincing in the travesty roles which had won her fame throughout a long career. She was married to the tenor Alessandro Bettini, who also sang in London between 1862 and 1880.

ELIZABETH FORBES

Treble

(Old Fr., from Lat. *triplus*: 'threefold').

A high voice, especially of a boy or (less commonly) girl; a high vocal or instrumental part. As a musical term the word dates back at least to the

early 14th century (Carter) in England; it was also known in Burgundy by the middle of the century. In the 14th and 15th centuries it referred to the top voice of three-part polyphony or, in some four-part compositions, to the second highest part (in which case the fourth part was a 'quatreble'). 'Treble' remained in use after 1500 alongside such Latin terms as 'superius', 'cantus' and 'descantus'. In his translation (1609) of Ornithoparchus's *Musicae activae micrologus* (1517) John Dowland studiously held to the original Latin 'discantus', but in one instance (p.82) discarded it for 'treble'; similarly Morley used 'cantus' and 'descant' in the first two sections of his *Plaine and Easie Introduction* (1597) but gradually adopted 'treble' in the third.

Since the 18th century 'soprano' has gradually displaced 'treble', except in reference to children's voices and to certain older instruments such as the treble viol and the treble recorder. The G (or violin) clef has long been called the 'treble clef' in the English language; Morley, for example, spoke of it as 'the clef which is commonly used in the treble or highest part'.

OWEN JANDER

Trebor

(*fl c*1380–*c*1400). Composer, probably French. Six French-texted ballades by him survive in the Chantilly Manuscript (*F-CH* 564); he is therefore one of the most prominently named composers in the manuscript after Solage, who is represented by 12 works. The texts of four of Trebor's ballades reveal connections with southern European courts. *En seumeillant m'avint une vision* refers to the Aragonese expedition to conquer Sardinia and can thus be dated to 1388–9; *Se July Cesar, Rolant et roy Artus* is a tribute to Gaston III (Febus), count of Foix (*d* 1391); while *Se Alixandre et Hector fussent en vie* honours Gaston's nephew and heir Mathieu and probably dates from about 1393. *Quant joyne cuer en may est amoureux* praises a powerful king whose heraldic colours, red and gold, are specified in the refrain. Various candidates have been proposed, including Charles III of Navarre (reigned 1387–1425) and Juan I of Aragon (1387–96), but the latter can probably be eliminated since the text sets its scene in May when 'Jupiter makes his … stay in the palace of Gemini'; this astronomical event occurs only every 12 years and during this period it fell in 1384, 1396 and 1408. The song may have been intended for Juan's brother and successor, Martin of Aragon (1396–1410). Indeed, documents dated 1407–9 indicate that among Martin's chapel singers was one 'Johan Trebol' (also 'Triboll' or 'Treboll'); perhaps this was the same man who composed another work in *CH* 564, the virelai *He, tres doulz roussignol joly* attributed to Borlet (an anagram of Trebol). Otherwise, 'Trebor' may have been an inversion of the name Robert, and records dated 1397–9 indicate that among the chapel singers of Charles III of Navarre was a Jehan Robert (or Roubert), who had previously served Charles VI of France. It is possible that Robert, Trebor,

Trebol and Borlet were one and the same person, but such conclusions must be treated with caution, since Jehan Robert is a common name. Perhaps, like certain other known composers from the Chantilly Manuscript, Trebor may have been a minstrel rather than a chapel singer, perhaps the Triboul who was a minstrel of Charles VI of France in 1387, or Tibaut Tribolet who worked at the court of Navarre in 1390.

Trebor was clearly well acquainted with the literary and musical scene of the French courts and papal Avignon. Two of his chansons engage in the popular contemporary practice of citation: the refrain text of *En seumeillant* appears in two poems by Deschamps, one of which survives in a setting by Andrieu, also in *CH* 564, while *Passerose de beaute* reveals textual connections with three anonymous rondeau settings and its refrain text is identical to that of *Dedens mon cuer* by Grimace, another composer also known from *CH* 564. In addition, *Passerose* shares musical and textual material with the ballade *Rose et lis* by the Avignon composer Egidius; the two works appear in close proximity in *CH* 564 and it has been proposed that both were composed for the wedding in 1389 of Jean, Duke of Berry and Jeanne of Boulogne (a protégée of Gaston Febus). An alternative suggestion, that Egidius's work was composed in 1380 for the marriage of Juan I of Aragon to Yolande de Bar and Trebor's piece for the tenth anniversary of this event, seems improbable given the parallels between the two composers' styles. Like Egidius and Solage, Trebor exploits an unusually low tessitura in two of his songs and makes frequent use of melodic and rhythmic sequence. Trebor's melodic style is often angular and features some use of displacement syncopation, a hallmark of the Ars Subtilior style. The refrain may be given strong rhetorical emphasis by means of sustained chords, a device shared with other works in *CH* 564, notably Cuvelier's *Se Galaas*, also written for Febus. Trebor demonstrated a concern for unity typical of his generation: in several of his ballades material heard early in the song is reworked at the close of one or both main musical sections. *Passerose* is especially noteworthy for its economy of musical material.

WORKS

all for 3 voices; all ed. in CMM, lxiii/1 (1970) and in PMFC, xviii–xix (1981–2)

En seumeillant m'avint une vision; Helas! pitie envers moy dort si fort; Passerose de beaute, la noble flour; Quant joyne cuer en may est amoureux; Se Alixandre et Hector fussent en vie; Se July Cesar, Rolant et roy Artus

Trede, Yngve Jan

(*b* Völksen, nr Hanover, 17 Dec 1933). Danish composer, harpsichordist and pianist. After studies at the Staatliche Hochschule für Musik in Hamburg, he took the diploma in music theory and composition (1960). From 1966 he taught music theory at the Royal Danish Conservatory (as professor from 1973 to 1995), while remaining active as a pianist and harpsichordist, from 1974 as a member of the ensemble Musica Danica. He became a Danish citizen in 1970.

Trede's first musical encounters were with Bach, Buxtehude and Stravinsky, and his early works, such as the Organ Concerto (1955) and the Symphony in F (1959), testify to his solid grounding in compositional technique. In works such as the First String Quartet (1967), Trede sought a synthesis between dodecaphonic and extended tonal thinking. However,

the inspiration of Baroque music, sustained by his performing activities, is apparent in much of his work, most overtly in his attempt at a completion of Bach's *Art of Fugue*. Especially noteworthy among his many accomplished works are the orchestral nocturnes *Nachtlandschaft* (1977), the Viola and Cello Concertos (1985 and 1988) and the two operas, the later of which, *Mirandolina* (1984), leans towards a late Romantic style.

ERIK H.A. JAKOBSEN

Tregian, Francis

(*b c*1574; *d* London, bur. 11 Aug 1617). English recusant, often credited with the copying of an important group of manuscripts containing nearly 1900 vocal and instrumental compositions, many of them unique. His father, Francis Tregian senior (*c*1547–1608), was convicted of recusant crimes in 1579, deprived of his Cornish estates and held in the Fleet Prison for over 20 years. For most of the time, however, he lived in considerable comfort, maintaining his contacts with the outside world. His wife was allowed to live with him and move about freely, attending court. She was apparently acquainted with William Byrd's brother, John, and it is likely that Byrd himself, a near contemporary of her husband's with many recusant connections, would have known the family. Tregian was released in 1601 and emigrated to Portugal in 1606.

Francis junior, his eldest son, received a Catholic education abroad, probably first at the English College at Eu, and then at Douai College. He was employed by Cardinal Allen in Rome from 1592 to 1594, in which year he was described as an intelligent 20-year-old, proficient in philosophy, music and Latin. In 1603 he was in Brussels, and is first heard of back in England in 1606. The next year he managed to buy back the family estates by means of loans, only to forfeit two thirds of them again in 1608 as a penalty for recusancy. For the next few years he was constantly engaged in a variety of transactions in order to raise money, but about 1614 was incarcerated in the Fleet, apparently for debt. Like his father before him he seems to have lived there in some style, with his own library of hundreds of books. He died in 1617 and was buried at St Bride's, Fleet Street.

The first manuscript to be associated with the Tregians was the Fitzwilliam Virginal Book (*GB-Cfm* 32.g.29 [Mu. MS 168]). It contains seven references of varying probability to the Tregian family. Among a number of dedicatees named is Katherine Tregian, a daughter of the elder Francis (or possibly his mother). Two pieces, by Byrd and Peter Philips, have 'Trego' attached to their titles (see illustration); a second Byrd piece has 'Ph. Tr.' (another Tregian daughter was called Philippa); and a third has 'F. Tr.' against it in the margin. In addition, an arrangement of a piece sometimes known as Prince Edward's Pavan and associated with Thomas Wyatt's poem *Heaven and earth and all that hear me plain* is attributed to 'Fre.', which was construed as a contraction of 'Francis Tregian', and the initials S.T. in an obscure marginal note were taken to be those of Sybil Tregian, another daughter.

On these slight foundations William Barclay Squire advanced the idea, most fully developed in the preface (1899) to the printed edition of the complete manuscript, that the younger Francis Tregian copied it, probably while in prison. In his subsequent accounts of the book Squire omitted any mention of this theory, having presumably lost faith in it, but it became widely accepted elsewhere. Moreover, it was extended to embrace three more manuscripts copied in the same distinctive general style: two large score books (*GB-Lbl* Egerton 3665 and *US-NYp* Drexel 4302) and a set of partbooks (the second layer of *GB-Och* Mus.510–14). Two of these manuscripts contain no Tregian references, but the Egerton book includes a Philips piece headed 'Allemanda Tr.' as well as two compositions ascribed to 'F.' and 'F.T.', both of which were assumed to be by the younger Francis (Schofield and Dart, 1951).

At about the same time a signed document was discovered for which two claims were made (Cole, 1952): that it was in the younger Tregian's hand, and that it matched that of the manuscipts, thus finally proving that he was the copyist. These claims have been convincingly refuted on a number of counts (Thompson, 2001): (i) only the signature on the document is Tregian's, (2) a more probable autograph document exists, and (3) the script of neither corresponds to those in the manuscripts, any resemblances being attributable to features common at the time.

The four manuscripts are linked in various ways. They employ between them only three main types of paper, all rare and expensive makes from Basle and Strasbourg. Comparable Swiss and Alsatian papers are found in

England in no other music manuscripts, but exclusively in fair copies and presentation documents connected with court circles. The folding and preparation for copying has been carried out very professionally in a lavish manner, without apparent regard to cost. Despite the impression of uniformity there are variations in the copying that suggest the work of a scriptorium rather than of a single individual.

The 'Treg.' and 'Tr.' references in the Fitzwilliam and Egerton manuscripts are hard to interpret. Some may imply dedications; if so, the fact that they are not supported by any of the known concordances suggests that these pieces were copied from sources supplied directly or indirectly by the Tregians. Proof that Francis junior composed any of the three pieces that have been claimed as his would establish for him a secure place among those who provided the compilers with repertory.

O.W. NEIGHBOUR

Trehou [Treschault, Trechoven, Trechovius, Trechoffuet], Gregorius

(*b* Antoing, *c*1540; *d* Elsinore, before 20 June 1619). Danish composer of Flemish origin. He may have received his first musical training as a choirboy at S Pieterskerk, Antoing (Spiessens). For a short time in 1573 he was apparently a singer at S Bavo, Ghent before going to Bruges, where between 26 October 1573 and December 1576 he was choirmaster at the collegiate church of S Salvator. On 28 December 1576 he was appointed *sangmester* at S Jacobskerk, also in Bruges, where he remained until the middle of 1578, when he moved to Antwerp. Here he was a schoolmaster (granted citizenship 8 October 1579) until at least September 1584, perhaps longer. On 1 March 1590 he was appointed to the post, vacated by Bonaventura Borchgrevinck in 1587, of director of music to the Danish court. He travelled to the Netherlands to recruit singers (among them Nicolas Gistou) in 1598. He was given a house in Elsinore in 1601 and in 1606 was granted a canonry of Roskilde Cathedral. He was dismissed from

his court appointment at the outbreak of the Kalmar War in 1611 with a pension deriving from a prebendary of Århus Cathedral, with the obligation of residence there.

He is first encountered as the composer of a six-part motet, *In dedicatione templi* (in RISM 1568[4]; ed. Kongsted, 1988). Presumably dating from his time in Denmark are an eight-part mass (abbreviated and therefore possibly intended for or adapted to Lutheran use) and a six-part motet *Laudate Dominum in sanctis ejus*; of these only a single voice part is transmitted in *DK-Ou*, Herlufsholm collection R134 but three parts of the latter also survive in *S-VX* Mus ms 2c–e. Trehou is furthermore known, together with Waelrant, Pavernage and Verdonck, to have composed some works for the (now lost) *Boeck der Liefden/Amours* by Ronsard.

Recently, a collection of 12 works by Trehou has turned up in the Biblioteca Apostolica Vaticana, Codex Pal. Lat. 1878. The manuscript, which contains a series of dedication-compositions by various composers, comes from the court in Heidelberg; the works by Trehou comprise three Italian motets, eight French motets and a Latin motet. The Italian compositions in particular shown an advanced style, whereas the French works are more traditional. The texts of the latter are by Clément Marot or Théodore de Bèze and the melodies are all known from the Huguenot psalter. The discovery of this manuscript, at one time located in Germany and containing works in Italian, supports the idea already suggested by the inclusion of his motet in the 1568 collection dedicated to the Emperor and printed in Venice, that he may have spent some time travelling and/or studying in Germany and Italy. If so, he must have done so either before 1573 or after about 1585, when the changes resulting from the Spanish accession of Antwerp may have forced him to leave the city for religious reasons. His career seems to indicate that he was originally Catholic but later developed Protestant sympathies.

Trehou enjoyed a considerable reputation already in his own lifetime; in the poem *Belgica* by Jan de Maes of Antwerp (1583) he is named on equal terms with Waelrant, Pevernage and Verdonck as one of the most important composers of the time. He appears furthermore to have contributed to the extension of the hexachord with the introduction of the seventh tone *si* (Hans Mikkelsen Ravn, *Heptachordum danicum*, 1646). His significance in this regard was perhaps not, as previously supposed, restricted to Denmark.

JOHN BERGSAGEL, OLE KONGSTED

Treiber, Johann Friedrich

(*b* Osthausen, nr Arnstadt, 21 Aug 1642; *d* Arnstadt, 15 April 1719). German composer and writer. He was headmaster of the Arnstadt Lyceum. For two generations his family had been friends and acquaintances of the Bach family. He wrote on philosophy and jurisprudence, but only two published musical works by him are known: *Preces et hymni Lycei Schwartzburgi Arnstadtiensis, cum melodiës et numeris musicis* (Arnstadt, 1694), a collection of prayers and 19 polyphonic hymns for use in his school; and *De musica Davidica, itemque discursibus per urbem musica nocturnis* (Arnstadt, 1701). A few other educational pieces by him survive in manuscript (in *D-ARsk*). He probably composed jointly with his son, Johann Philipp Treiber, the 'operetta' *Die Klugheit der Obrigkeit in Anordnung des Bierbrauens* (Arnstadt, 1705).

For bibliography *see* Treiber, Johann Philipp.

JOHN D. ARNN

Treiber, Johann Philipp

(*b* Arnstadt, 26 Feb 1675; *d* Jena, 9 Aug 1727). German composer, theorist and writer, son of Johann Friedrich Treiber. In addition to music he studied philosophy, theology, medicine and law. Branded as a heretic and atheist, he was prosecuted on several occasions and wandered from place to place; he was once imprisoned at Gotha for six months. He finally settled at Erfurt, converted to Catholicism and eventually became a successful professor of jurisprudence. All we know about his musical training is that he studied composition with the Arnstadt Kapellmeister Adam Drese. He produced numerous theological and philosophical writings, some of them under the pseudonym 'Dionysius Trebellianus'. Of his few musical works, *Sonderbare Invention* and *Der accurate Organist im General-Bass* both reveal a penchant for presenting a single main musical idea in many different ways. According to its full title the former is an aria consisting of a single melody using all the notes and chords as well as every metre. The latter, a thorough-bass manual, concentrates on two chorales, whose bass lines are given in almost all the keys with many possible combinations of harmonies as well as the most comfortable positions for the right hand. He probably collaborated with his father on the so-called operetta of 1705,

whose title in translation runs: 'The Wisdom of the Authorities in the Management of Brewing'. At the time Arnstadt boasted six municipal breweries and 130 private brewing-houses. In this work, dialogues usually consisting of alexandrines are interlaced with short recitatives and strophic arias in the tradition of the simple lied. Some of the 30 characters speak in dialect, thus enhancing the local colour and conveying the unsophisticated, rough quality of the burgher's life. On the strength of a pencil note in a copy of the printed libretto, it was previously assumed that it was by the young Bach, who was then organist at Arnstadt. This conjecture – which in the 19th century even provided the impetus for a novel by E. Marlitt (Eugenie John), *Das Geheimnis der alten Mamsell* (translated into English by 'E.H.' as *The Old Mam'selle's Secret*) – was discredited by, among others, Spitta, who associated the Treibers with the work.

WORKS

Die Klugheit der Obrigkeit in Anordnung des Bierbrauens, operetta (Arnstadt, 1705), music lost; authenticity uncertain, lib ed. in Bitter, iv (2/1881), 52–87
Serenade, perf. Erfurt, after 1706, lost

JOHN D. ARNN

Treibmann, Karl Ottomar

(*b* Raun, Vogtland, 14 Jan 1936). German composer. He studied at the University of Leipzig (1954–9, DPhil 1966), the Leipzig Musikhochschule (1967–70), where his teachers included Fritz Geissler, and the DDR's Akademie der Künste (1974–5) with Paul Dessau, among others. In 1981 he was appointed professor at the University of Leipzig. He has described his compositions as *Ereignispakete* ('packages of events') in which meanings are conveyed through various 'communication models'. While he favours a tonal language, he employs tonal, modal and dodecaphonic procedures in his works, some of which show the influence of minimalism or folk music.

In his instrumental compositions Treibmann characteristically employs new sounds and structures within old forms. He first achieved international recognition in 1973 when his Third Symphonic Essay, based on the principle of action and reaction, was performed at the Warsaw Autumn Festival. The Fifth Symphony, first performed at the Leipzig Gewandhaus as the DDR was collapsing in November 1989, ends with a 12-note song of rejoicing. His operatic works, *Der Preis* (1978), *Scherz, Satire, Ironie und tiefere Bedeutung* (1986) and *Der Idiot* (1987), comment on situations relevant to the DDR. Later works, such as *Losungen I–III* (1992–4) and the orchestral sonata *Klangwanderungen* (1997), continue to explore new tonal combinations within emotionally gripping contexts. He is the author of *Strukturen in never Musik: Anregungen zum zeitgenössischen Tonsatz* (Leipzig, 1981). (*KdG*, U. Liedtke)

ULRIKE LIEDTKE

Treichlinger, József

(*b* Vienna, 1807; *d* after 1866). Hungarian music publisher. From 1828 he made regular public appearances as a solo violinist and in a formal letter he described himself as a 'musician, honorary member of several

philharmonic societies at home and abroad, conductor, committee member and archivist of the Pestbuda Society of Musicians'. In 1844 he took over Vince Grimm's publishing house in the city of Pest, thus becoming the last owner of the Kunst- und Industrie-Comptoir (founded in 1801). He published mostly dance music that aimed to serve average tastes, and occasionally also piano scores of operas (Ferenc Erkel's *Hunyadi László*, György Császár's *A kunok*, Franz Doppler's *Benyovszky* and *Vanda*). He kept plate numbering in exemplary order, with only rare instances of duplication. More than 400 of his publications are known. Surprisingly, the plate numbers 1–105 are missing; his first known plate number is J. T. 106. There are, however, some unnumbered specimens, and some with only alphabetical markings. According to present information it may be assumed that his alphabetically marked plates date from before 1850; numbered and unnumbered plates appear to be characteristic of the entire span of his activities. In 1866 he handed over the firm to his son József Treichlinger, who sold it to Rózsavölgyi és Társa in 1874.

ILONA MONA

Treitler, Leo

(*b* Dortmund, 26 Jan 1931). American musicologist of German birth. He studied music history and composition at the University of Chicago, where he worked with Grosvenor Cooper, taking the BA in 1950 and the MA in 1957. At Princeton University his teachers included Oliver Strunk, Arthur Mendel and Roger Sessions; he took the Master of Fine Arts in 1960 and the PhD in 1967. He taught as an instructor and assistant professor at the University of Chicago from 1961 to 1965, then at Brandeis University; he was dean of the College of Arts and Sciences there from 1971 to 1973, and in 1973 he was appointed professor of music. He became professor of music at the SUNY, Stony Brook, in 1975; in 1987 he was named distinguished professor of music, University Center and Graduate School, CUNY.

Treitler specializes in the music of the Middle Ages and the Renaissance, especially Gregorian chant, early polyphony and non-liturgical monody, and the history of modality. He has also written about music historiography, the theory and practice of music criticism, musical notation, and the aesthetics and philosophy of music. His investigation of the improvisatory traditions in Gregorian chant, using the technique of formulaic analysis first devised by Milman Parry for the study of the Homeric epic, has challenged widely held views.

Treitler's theoretical writings have drawn on developments in the philosophy of history in a sustained campaign against a prevailing trend in musical interpretation, which has construed a musical work of the past

primarily as a moment in a historical process, and a contemporary work as a solution to a problem set by the momentary state of the art. He has argued that historical schematisms are merely interpretive hypotheses, not causal explanations; that works can and should be analysed in themselves, as well as in relation to their past and future and to their contemporary historical contexts; that the finest works are those which sustain their interest through a variety of interpretative schemes; and that the greatest works of all are achievements that in historical terms appear not inevitable, but improbable, even impossible.

PAULA MORGAN/F.E. SPARSHOTT

Treitschke, Georg Friedrich

(*b* Leipzig, 29 Aug 1776; *d* Vienna, 4 June 1842). German librettist and translator. He went to Vienna in 1800 to pursue a career as an actor at the court theatre, and two years later became poet and stage manager of the court opera. During the French invasion of 1809 he took over the management of the Theater an der Wien, and he was also active at the Kärntnertortheater.

Treitschke wrote, translated and revised many opera and Singspiel librettos for performance in Vienna. In 1814, Beethoven asked him to revise the libretto of *Fidelio* for the opera's revival; Treitschke not only agreed to perform this task but also left a substantial written record of the collaboration, which he published in 1841 in *Orpheus*. His changes shift the emphasis away from the personal drama of Florestan and Leonore and strengthen the opera's universal moral dilemma. Beethoven claimed in a

letter (Anderson no.469) that Treitschke's improvements had inspired him 'to rebuild the desolate ruins of an old castle'. Treitschke translated many French operas into German for performances in the Habsburg capital, including Cherubini's *Les deux journées* (as *Der Wasserträger*) and *Médée*, as well as works by Spontini, Isouard and Boieldieu; he also made German translations of Mozart's *Idomeneo* (1806) and *Così fan tutte* (as *Die Zauberprobe*, 1814). Beethoven contributed music for two of his Singspiele, *Die gute Nachricht* (1814) and *Die Ehrenpforten* (1815), and set his poem, *Ruf vom Berge* (woo147).

K.M. KNITTEL

Tremain, Ronald

(*b* Feilding, 9 Oct 1923; *d* Niagara-on-the-Lake, Canada, 17 July 1998). New Zealand composer. A music graduate of the University of Canterbury, he took the doctorate in music at the University of London (1953) and followed this with study at the RCM, London, and the Conservatorio di S Cecilia, Rome. His principal teachers were Lilburn, Howells and Petrassi. He was senior lecturer in music at the University of Auckland (1957–67), visiting professor at the University of Michigan, Ann Arbor (1967–8), visiting professor at the SUNY, Buffalo (1968–9), senior lecturer at Goldsmiths' College, London (1969–70) and professor of music and chairman of the music department at Brock University, St Catharines, Ontario (1970–89). He intensively promoted 20th-century music in New Zealand – he was also a pianist and conductor – and he founded with Ronald Barker and Jim Collinge the Auckland section of the ISCM. His music was widely performed, notably at the 1952 ISCM Festival and the 1963 UNESCO Composers' Rostrum. Particularly attracted by composing for strings, he wrote skilfully and lyrically for them, with or without voice, particularly in the Theme and Variations for two violins, the Three Mystical Songs for mezzo-soprano and string orchestra, and the tautly constructed Four Medieval Lyrics for mezzo-soprano and string trio, which he considered his most successful vocal piece. His works also include a Mass for choir and organ, an Allegro for strings, Five Epigrams for 12 solo strings, Nine Studies for

violin and viola, Three Fantastic Pieces for piano, songs, choral pieces and incidental music for radio and the theatre. In his music he combined fine craftsmanship with stylish vigour and elegance.

<div align="right">J.M. THOMSON</div>

Tremais, de [first name unknown]

(*fl c*1728–51). Composer and violinist, possibly French. He is believed to have studied the violin under Tartini in Padua some time after 1728. His first published music appeared in 1736. His name is last mentioned in 1751 in a list of composers for whom the publisher Leclerc had renewed publishing rights. Tremais does not seem to have held any positions as a professional musician.

Seven collections of works (of which four survive) and one violin concerto by Tremais are listed in 18th-century catalogues, although the numbering system reaches op.10. Most of his violin music demands advanced technical ability: he made considerable use of multiple stops, extremely high notes, trills, tremolos, extended staccato passages and lengthy phrases to be played in a single bow; rapid alternation between plucked and bowed notes is a technical tour de force that he may have learnt from Tartini. He often used scordatura. Most of his solo sonatas have four movements, but those for two violins generally have three. The thematic material contains much figuration in the form of broken chords, chains of triplets and arpeggios, often supported by sustained harmonies; the harmonic progressions are occasionally unusual and often interesting.

Tremblay, George (Amedée)

(*b* Ottawa, 14 Jan 1911; *d* Tijuana, Mexico, 14 July 1982). American composer and pianist of Canadian origin. He had early training with his father and studied composition with Schoenberg (1936) and David Patterson. In the USA, where he settled in 1919 and became a citizen in 1939, he won a reputation as a performer and improviser. From 1965 until the end of his life he taught privately in Los Angeles, concentrating on the discovery and advancement of new serial techniques. Many of his students, including André Previn, Quincy Jones, Johnny Mandel, Pat Williams, Roger Kellaway and Richard Markowitz, went on to prominence in film and television. In his work Tremblay employed a 'definitive cycle' that yielded an ever-expanding systemic process of serenity and strength from the integrated structures, for instance in *Modes of Transportation* (1939). The technique is explained in his book *The Definitive Cycle of the 12-tone Row and its Application in all Fields of Composition, including the Computer* (New York, 1974). The proposed second volume never appeared. (*EwenD*; *VintonD*)

BARBARA A. RENTON

Tremblay, Gilles

(*b* Arvida, PQ, 6 Sept 1932; *d* Tijuana, 14 July 1982). Canadian composer. After completing his studies at the Montreal Conservatoire with Champagne he studied at the Paris Conservatoire (1954–61) with Messiaen (analysis), Loriod (piano), Andrée Vaurabourg-Honegger (counterpoint) and Martenot (ondes martenot), also working in the Groupe de Recherches Musicales. In 1962 he was appointed professor of analysis and composition at the Montreal Conservatoire. He spent several months

in East Asia in 1972, particularly in Bali, studying the music native to that region. In 1973 he received the Canadian Music Council medal.

Always present in Tremblay's music is a poetic symbolism which, in *Champs II: Souffles* (1968), manifests itself as an opposition between 'souffle' (duration) and 'fulgurance' (instantaneity). The piece begins with the wind players breathing into their instruments. Just as they attain an instrumental sound they return the timbre to breath. In addition Tremblay's music is often monodic, demonstrating great rhythmic and timbral subtlety; rarefied textures facilitate the perception of such effects as the echo of a resonant cymbal pitch by an ondes martenot. His forms are frequently mosaic-like, with sections marked by sharp contrasts of pitch, dynamics and density. In some subdivisions performers choose from given pitches, rhythmic cells, attacks, dynamics and pauses, and introduce the principle of 'réflex', requiring one player to react to the material of another. Also notable in *Champs II* are solos reminiscent of plainchant, punctuated by staccato echoes, and a layered structure featuring low chords in the piano and double bass, muted brass in the middle register and torrents of grace notes above, played by the xylophone, glockenspiel and piano.

Solstices (1971) is in 12 connected 'fields' paralleling the months of the year. Each season gives prominence to a particular instrument: winter (horn) is music of silence and slow evolution coloured by discreet metal percussion sounds; spring (flute) is lively, various and melodic; summer (clarinet) is full of percussion and insect sounds; the music of autumn (double bass) is filtered, stormy and, again, marked by silences. The point at which any performance begins is determined by the hour, and the work's character changes with the season during which it is performed: in a summer performance the parenthetic pitch material in the spring, autumn and winter sections is played with the rhythmic, melodic and timbral characteristics of the summer music. Interplay between the instruments is principally dependent on 'réflex'.

BRUCE MATHER

Tremble.

Term found in English Baroque music for a type of bow vibrato. *See* Ornaments, §6.

Tremblement

(Fr.).

A term used to denote particular kinds of trill. *See* Ornaments, §7(i) and (ii)(b).

Tremblent mineur

(Fr.).

See Flattement.

Tremoletto

(It.).

A type of ornament, variously a trill or a mordent. *See* Ornaments, §8.

Tremolino

(It.).

A repeated-note ornament. *See* Ornaments, §4.

Tremolo (i)

(It.: 'quivering', 'trembling').

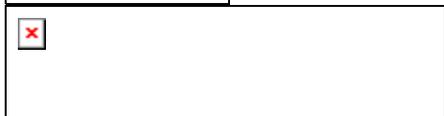
A term now most strictly used to denote a rapid reiteration of a single note or chord without regard to measured time values. Early name-forms include the German *Schwärmer* (W.C. Printz, 1689) and *Rauscher* (D.G. Türk, 1789), as well as the Italian *bombo* (*see* Bombo (i)). The word 'tremolo' has had several different meanings and is also used for an accessory Organ stop (tremulant).

Girolamo Diruta, in *Il transilvano* (Venice, 1593), divided ornaments into five categories: *minuta*, *tremoli*, *groppi*, *clamationi* and *accenti*. Of these the tremolo was an alternation of a note with its upper neighbour and lasted half the written time of that note. His is the clearest definition among a whole series of descriptions ranging from Vicenzo Capirola's lute manuscript of about 1517 ('tremolo s'un tasto solo') through Tamás de Santa María's *Arte de tañer fantasía* (Valladolid, 1565, using the word 'quiebros') and Zacconi's *Prattica di musica* (Venice, 1592). In *Opera intitulata Fontegara* (Venice, 1535) Ganassi dal Fontego gave a list of fingerings for tremolos on the recorder, describing the various characteristics of each according to whether the interval of alternation was a semitone, a tone or a 3rd. In lute music, and occasionally elsewhere, the tremolo seems to have been more the equivalent of the modern mordent than the modern trill.

In the preface to his eighth book of madrigals (1638) Monteverdi described the repeated-note tremolo, one of the most striking characteristics of the *stile concitato*; and he specifically mentioned 16 semiquavers in a bar. There is every reason to believe that he expected each of those 16 notes to be heard and that he wished for a clearly articulated sound, not a shimmering effect, thus using the tremolo merely as a notational shorthand, comparable with the modern practice of notating repeated semiquavers as in ex.1. In Venetian music, earlier uses of the tremolo to mean repeated notes may be found in Biagio Marini's op.1 (1617), where the cantus has the instruction 'tremolo con l'arco' and the basso 'tremolo col strumento', and in G.B. Riccio's *La pichi* (1621). In 17th-century sources the abbreviation 't' or 'tr' is ambiguous: it can mean either 'trillo' or 'tremolo', both of which can denote repeated notes or alternated notes. In the 18th century the word 'tremolo' was often used to signify vibrato (sometimes denoted with a wavy line).

In vocal music the repeated-note effect appeared as an ornament with the name 'trillo', in Caccini (*Le nuove musiche*, 1601/2) and in Praetorius (*Syntagma musicum*, iii, 2/1619), who pointed to its use by Monteverdi. In modern usage some singers distinguish between vibrato, a fluctuation in pitch, and tremolo, a fluctuation in dynamics.

It is a convention of modern notation that ex.1 is normally played as precise semiquavers whereas ex.2 would be an unmeasured repetition to produce a shimmering sound on bowed strings or a roll on the drums. A similar effect can be produced on the piano only by an alternation of harmonically compatible notes, as in ex.3. It is often used as a colouristic device in piano

music of the decades around 1900, and is found particularly in piano arrangements of orchestral music to reproduce both the sustained notes and the tremolos of the orchestra.


Tremolo is rarely designated for wind instruments, but an equivalent effect can be produced by harmonic trills (as in ex.3), by a very close trill ('fingered tremolo'), or by flutter-tonguing. Piston wrote: 'A trill with a harmonic interval larger than a major second is a fingered tremolo'.

(*F-SERRANT*). *See* Sources, MS, §VII, 1.

Tremulant

(Fr. *Tremblant*; It. *Tremolo*; Sp. *Temblor*).

An important accessory stop found in organs of all sizes since the early 16th century, although it is not always mentioned in early contracts, and is sometimes referred to by other names (e.g. 'shaking stop' in Tudor England). By slightly disturbing the wind supply, it causes an undulating or *tremolando* effect in the music, somewhat like a vocal vibrato. Two types were known to 17th and 18th century organ builders, and it is not known which is of the greater antiquity. The external tremulant (*tremblant fort*, *tremblant à vent perdu*, *Bocktremulant*; see fig.1*a*) consists of a balanced and adjustable sprung valve which allows intermittent pulses of wind to escape. The internal tremulant (*tremblant doux*, *Schwebung*; see fig.1*b*) consists of a sprung and weighted flap or gate within a wind-trunk, which momentarily interrupts the flow of wind to the chest. Unlike the external tremulant, the internal type is affected by the flow of wind, and behaves differently when a large or small number of stops is drawn. When not in use, the plate of the internal tremulant is pushed up against the side of the wind-trunk, and the bellows of the external tremulant is fixed in a closed position. As the names imply, the external tremulant produced a stronger and less subtle effect than the internal type.

The external type was favoured in northern Europe by the 18th century, while the internal type was occasionally used in southern Germany, and often used in England and America into the early 19th century; some organs, particularly in France but sometimes also in Spain, included both. With changes in chest and action design in the late 19th and early 20th century, various versions of the external tremulant came to be used almost exclusively, and in the latter half of the 20th century some can be found where the rate of beat is adjustable from the console. The 20th century also saw the introduction of new types of tremulant which either acted directly on the wind system by pulsing a small reservoir-bellows, or on the pitch of the pipes by rotating a flat board above them. With the increase of interest in historical styles during the 1970s and later, the use of the internal tremulant was revived, especially in organs based on the French or Silbermann traditions.

See also Organ stop (*Tremulant*).

BARBARA OWEN

Trend, J(ohn) B(rande)

(*b* Southampton, 17 Oct 1887; *d* Cambridge, 20 April 1958). English writer on Hispanic literature, life and music. He was educated at Charterhouse and Cambridge University, where he was taught by Dent while reading for the natural sciences tripos, and was a freelance journalist and author until 1933, when he was given his first academic post as the first professor of Spanish at Cambridge. An excellent popularizer of Hispanic culture, rather than a scholar, he nevertheless did useful work in archives in Spain, some fruits of which may be seen in his catalogue of the Biblioteca Medinaceli,

Madrid, and in unpublished papers (now in *GB-Cfm* MU 4/5 and *GB-Cpl*). Of his essays on Iberian music, *Luis Milán and the Vihuelistas* (London, 1925) and *The Music of Spanish History to 1600* (London, 1926/*R*) are still worthy of attention. He also made singable translations of vocal works by Falla and Gerhard.

JACK SAGE

Trent

(It. Trento; Ger. Trient).

City in northern Italy. The earliest documentation of liturgical singing in the city dates from the 6th century, in the form of a mosaic inscription which names a certain Laurentius as a cantor. This confirms a tradition of music consolidated in the construction of the early Christian basilica of S Vigilio in the 6th century. Sacramentaries dating from the 11th and 12th centuries with German neumatic notation, and the institution of a *schola* in the 12th century provide evidence of the daily practice of *cantus planus*, accompanied by the organ from the 15th century. Polyphony was increasingly cultivated from about 1400; over 1500 polyphonic compositions are collected in the seven 15th-century codices put together by the organist Johannes Lupi and the *rector scolarum* Johannes Wiser, and still preserved in the city. The collection represents the most important body of polyphonic music of its time.

Trent was chosen as the meeting-place of a council (1545–63) convened to deal with abuses that were felt to have crept into the liturgy. The presence of the council further stimulated the practice of polyphony and made famous the two-manual organ built by Kaspar Zimmermann between 1532 and 1536 in S Maria Maggiore, where many council meetings were held. The Verona organist Simone Martinelli (1633–60) was responsible for the regular introduction of strings into liturgical music in Trent Cathedral, complemented by wind instruments in the 18th century. F.A. Bonporti (1672–1749), the most important musician to be born in the city, played in the cathedral orchestra, though he never held an official position. In the 19th century the taste for opera was reflected in a further expansion of the instrumental forces. The cathedral orchestra, administrated by the Società Filarmonica from 1851 to 1890, was eventually suppressed under the influence of the Cecilian movement, which was active in the city from 1890. The diocesan school of sacred music, founded in 1927, also played a part in the spread of the movement.

In the field of secular music, the presence of *piffari* and trumpet players in Trent is recorded from the 14th century onwards. In the 16th century music flourished at the courts of the prince-bishops Bernardo Clesio (1514–39) and Cristoforo Madruzzo (1539–67), where musicians such as Antonio del Cornetto, Cerbonio Besozzi and Giovani Contino served. In the 18th century noble families made only sporadic contributions to musical life. The

single exception was Count Pio Fedele Wolkenstein, who held a regular series of musical academies in his palace between 1771 and 1778. In contrast, the 19th century saw a growth in musical associations through the activities of the Società Filarmonica (founded in 1795), which provided an orchestra and organized academies, and of the Banda, founded 1801.

The first opera known to have been performed in the city was Martinelli's *Alcina* (before 1649). Subsequently opera was given mainly in the Jesuit college and, from 1766, at the Teatro Osele, until the opening of the Teatro Mazzurana (later Teatro Sociale) in 1819. The opera seasons at the Mazzurana, one in spring to coincide with the feast of the city's patron saint, Vigilio, and one in the autumn, both lasted a month, and consisted of three productions. The theatre was also used for plays, concerts and, in the 20th century, for films; it was closed for restoration in 1983.

Musical life in the city today consists of orchestral and chamber concert seasons (the regional Orchestra Sinfonica 'Haydn', Società Filarmonica) and festival performances. The Civico Liceo Musicale Pareggiato Vincenzo Gianferrari, the city conservatory, was brought under state control in 1980, and Trent hosts an international conductors' competition. In 1976, under the auspices of the Società Filarmonica, Clemente Lunelli initiated a 'Collana per la storia della musica nel Trentino', with 19 volumes published up to 1995. In the same year the library of Lorenzo Feininger, an important collection for sacred music studies, was housed at the Castello del Buonconsiglio. The Coro della Società Alpinisti Tridentini, founded in 1926, is especially well known for its performance of Dolomite folksongs.

Trento, Vittorio

(*b* Venice, *c*1761; *d* ?Lisbon, 1833). Italian composer. After studying under Bertoni at the Conservatorio dei Mendicanti in Venice, he began his career there as a composer of the ballets that were usually performed between the acts of an opera. According to Fétis, his first was *Mastino della Scala* (1783). He composed about 50 of these, mostly before 1803, for various theatres in Venice, where he became *maestro al cembalo* firstly at the Teatro S Samuele and later at La Fenice. At Lucca for the opera season of August to October 1787, he was paid 16 testoni for composing the dances (Roncaglia, the castrato, received 240 testoni for singing 38 performances of the opera). His most successful ballet, and his best-known work, was

Triumph of Love (or *La forza dell'amore*), composed in 1797 for Drury Lane at the invitation of Dragonetti.

Trento had first attempted opera in 1789 with *Orfeo negli Elisi*, an *azione teatrale* performed privately in Verona. From 1791 he produced a large number for the public theatres, specializing in farces and comedies. In 1801 came his one great success, the *farsa Quanti casi in un sol giorno*, which for 20 years was performed all over Europe under different titles and in various forms. Later he turned more often to the *opera seria*, but with only moderate success. In 1806 he went to Amsterdam as *maestro concertatore* of the Italian opera company of Nicola Miarteni and in 1809 to Lisbon in the same capacity. In 1811–12 he was in London, where his opera *La Climène* was performed at the King's Theatre as a benefit for Angelica Catalani. In 1815 he seems to have contributed one opera each in Munich and Lisbon. From there he returned to Italy in 1817 and produced several new works, mostly unsuccessful, for Naples, Rome and Venice. According to Fétis he returned to Lisbon in February 1821 where he was music director of the opera house until 1823. He returned to Italy that September and wrote two more operas before abandoning the composition of stage works. Trento never became a major figure in Italian opera, and in his later years his works, like those of so many of his contemporaries, were overshadowed by the success of Rossini and he was soon forgotten.

WORKS

stage

for fuller list of operas see GroveO (A. Lanza)

Il cucù scopre tutto (commedia, 2, G. Artusi), Florence, Pallacorda, 1796, *I-Mr**

Quanti casi in un sol giorno, ossia Gli assassini (farsa, 1, Artusi), Venice, S Benedetto, Dec 1801; rev. (commedia per musica, 2, with some Neapolitan dialect by G. Palomba), Naples, Fiorentini, sum. 1817; *Fc, Mc*, Nc, Pl, PAc, Rmassimo* [also perf. as Gli assassini, Roberto l'assassino, Roberto capo d'assassini, La foresta di Nicobar]

Teresa vedova (farsa, 1, Artusi), Venice, S Benedetto, 13 Jan 1802, *F-Pc, I-Fc*

Le nozze dei Morlacchi (os, 2), Padua, Nuovo, June 1802, excerpts in *Fc* and *Vnm*

La baronessa immaginaria (dg, 2), Rome, Capranica, carn. 1804, *Fc*

Ifigenia in Aulide (os, 2, G. Pagliuca), Naples, S Carlo, 4 Nov 1804, *Nc*

Andromeda (os, 2, G. Schmidt), Naples, S Carlo, 30 May 1805, *Nc*

I vecchi delusi, ossia La burla (farsa, 1, A.L. Tottola, after Palomba), Naples, Nuovo, aut. 1805, *Nc*

La Climène (op eroi-comica, 2, G. Caravita), London, King's, 25 April 1811, *GB-Lbl* (partly autograph), excerpts (London, 1811)

Emilia di Laverpaut [Il ritiro, ossia Emilia] (dramma sentimentale, 2), Naples, Fiorentini, sum. 1817, *I-Nc*

Le gelosie villane [La comunità di Castel Formicolone] (ob, 2, ?J. Ferretti, after T. Grandi: *Le gelosie villane*), Livorno, Carlo Lodovico, carn. 1824; Florence, Cocomero, 2 Nov 1825, *Gl*

2 drammi sacri: Il diluvio universale (L. Buonavoglia), Amsterdam, 1807; I sette Maccabei (3, F. Tarducci), Rome, Valle, 25 May 1818, *Fc, PAc*

Trepak

(from Russ. *trepat*: 'break', 'beat').

A Russian dance of Cossack origin in animated 2/4 time. It is performed by men and features the *prisiadka* (kicking the legs from a squatting position). Perhaps the best-known example in art music is the trepak in Tchaikovsky's *Nutcracker* suite.

Treptow, Günther (Otto Walther)

(*b* Berlin, 22 Oct 1907; *d* Berlin, 28 March 1981). German tenor. He studied in Berlin, where he made his début at the Deutsche Oper in 1936 as the Italian Tenor in *Der Rosenkavalier*. Despite being on the 'forbidden' list of non-Aryan musicians, he managed to remain a member of the company until 1942, by which time he was singing such parts as Florestan, Pedro (*Tiefland*), Max and Otello. In 1942 he joined the Staatsoper in Munich, where he was heard chiefly in the Wagner repertory. After the war he returned to Berlin, first to the Staatsoper and then to the Deutsche Oper, where he created La Rocca in *Der junge Lord* (1965). He made regular

guest appearances in Vienna. He sang Siegmund at Bayreuth in 1951 and 1952; Siegmund, Florestan and Tristan at the Metropolitan, 1951; and Siegfried at Covent Garden in 1953. His repertory included Adolar (*Euryanthe*), Tannhäuser and Parsifal. Treptow's dramatic intensity compensated for his occasional lapses in technique. His true Heldentenor voice can be heard in his recordings of Walther (*Die Meistersinger*) and Tristan, both under Knappertsbusch, and as Siegmund in Furtwängler's live recording of *Die Walküre* at La Scala.

Tresor [Tresure], Jonas

(*fl* 1650–60). French or Flemish composer. He probably went to England during the reign of Charles I. He is known only from his harpsichord music, most of which survives in English manuscripts of the Commonwealth period. The musical style, which shows a strong French influence, is similar to that of other English composers of this period, though less advanced than the music of Locke or Bryne.

Tresti, Flaminio

(*b* Lodi, *c*1560; *d* after 1613). Italian composer. According to the titles and dedications of his printed works, he was in Cremona in 1585 and 1587, Casale Monferrato in 1590, at Lodi in 1594 and 1596, and he was organist at the church of S Pietro in Bergolio, Alessandria, in 1613. During his wanderings across northern Italy he must have had opportunities for gaining favour, particularly as a madrigal composer, from such influential men as Ranuccio Farnese, Duke of Parma, and Vincenzo Gonzaga, Duke of Mantua and Monferrato, to each of whom he dedicated a volume of madrigals. Gonzaga, who was himself a musician, had heard the madrigals before they were printed 'with great pleasure in S Salvatore' (according to the dedication). Beyond the surviving works, Tresti also published *Motetti a 4 voci*, dedicated to the Abbot Cornelio Pozzo of Alessandria (a fact which may be learnt from the dedication to the abbot of the *Messe a cinque voci, libro primo*); a set of *Canzoni francesi* for organ are mentioned by Adriano Banchieri as examples of a gay and pleasing style by a celebrated organist.

Tret'yakov, Viktor Viktorovich

(*b* Krasnoyarsk, 17 Oct 1946). Russian violinist. He studied with Yury Yankelevich at the Central Music School in Moscow (1954–65) and at the Moscow Conservatory (1965–70). He began giving concerts in 1963 and gained wider acclaim after winning the Tchaikovsky International Competition in Moscow in 1966. In 1967 he was appointed soloist of the Moscow State PO. He has since toured internationally, and made his British début with the RPO in 1967 and his American début in 1969 at Carnegie Hall. He has appeared with Richter, Yury Bashmet, Natal'ya Gutman and the Borodin Quartet in chamber music concerts, and has made notable recordings of the concertos of Tchaikovsky, Brahms, Sibelius and Bruch. He was appointed professor at the Moscow Conservatory in 1984, and was made People's Artist of the USSR in 1987. He is a true virtuoso whose playing is notable for emotional range, breadth and magnificent artistry.

<div align="right">I.M. YAMPOL'SKY/MARGARET CAMPBELL</div>

Tretzel.

See Dretzel family.

Tretzscher, Matthias

(*b* Lichtenstadt [now Horžnětín], Bohemia, 23 March 1626; *d* Kulmbach, Upper Franconia, 9 April 1686). German organ builder. He was the son of Paul Tretzscher (*d* 1633) and Susanne Schott, who in 1636 married the organ builder Jakob Schedlich of Joachimsthal. In 1641 Matthias Tretzscher was apprenticed to his step-brother, Andreas Schedlich; subsequently he worked in Nuremberg for 21 months with David Schedlich, a relative of Hans Leo Hassler. He returned to Joachimsthal in 1644, to work under Jakob Schedlich (his step-father), who made him a journeyman in 1647. On Maundy Thursday 1650 Tretzscher had to leave Joachimsthal because of his religious beliefs, and between 1651 and 1652 was organist in Marienberg, in the Ore mountains. In 1653 he built an organ in Bayreuth (Stadtkirche). In the same year he moved to Kulmbach where he became organ builder at the court of the Margrave of Brandenburg; in 1654 he became a citizen there, in 1674 an alderman and in 1684 a churchwarden.

Tretzscher's organs are similar to those of his teacher, Schedlich, though they differed from Schedlich's in having the stops distributed between Great and Choir in the same manner as those of Esaias Beck. Tretzscher was the most important organ builder of the 17th century in Franconia. He made more than 60 organs and taught many organ builders in Franconia and Saxony, including Christoph Donati, Tobias Dressel, Hans Gruber, Hans Purrucker and D.F. Streit. The magnificent casings of Tretzscher's organs came mostly from the Kulmbach workshop of J. Brenck (Brenk) and H.G. Schlehendorf. His most important organs, built between 1653 and

1686, include those at Bayreuth, Heilsbronn (monastery), Kulmbach (St Peter), Schweinfurt (St Johannis), Strasbourg Cathedral, Coburg (Moritzkirche), Cheb (St Nicholas), Kaisheim (monastery), Bamberg (St Michael), Maria Bildhausen Abbey and Münsterschwarzach Abbey.

HANS KLOTZ/HERMANN FISCHER

Treu [Trew], Abdias

(*b* Ansbach, 29 July 1597; *d* Altdorf, nr Nuremberg, 12 April 1669). German music theorist. He attended the grammar school at Heilbronn from 1611 to 1618, when he enrolled at the University of Wittenberg with a scholarship from the Margrave of Brandenburg. Two years later he defended a thesis, *De vero et falso*, and in March 1621 was awarded a master's degree. After working briefly as an assistant at Heidenheim (in 1622) and as a deacon at Markt Erlbach, near Nuremberg (in 1623), he became chancellor of the Lateinschule at Ansbach in 1625. Because of the Thirty Years War his salary was not regularly paid, and he sought other employment in order to support his large family: he accepted the chair of mathematics at the University of Nuremberg at Altdorf in 1636. During his years there he became well known as a competent though conservative mathematician and scientist.

Treu's first published work was a musical treatise, *Janitor Lycaei musici* (Rothenburg ob der Tauber, 1635), in which he explained his attempt to devise an accurate temperament in terms of the monochord. This book, highly praised by his contemporaries, was his only major work on music, though he discussed it in two of his mathematical works: *Manuale geometriae practicae* (Nuremberg, 1636) and *Directorium mathematicum* (Altdorf, 1657). His abiding interest in music is reflected, however, in the work of his students, among them W.C. Printz and Tobias Mayr, who produced a number of treatises on such subjects as the nature of music, consonance and dissonance and temperament.

CECIL ADKINS

Treu [Trew], Daniel Gottlob [Fedele, Daniele Teofilo]

(*b* Stuttgart, 1695; *d* Breslau [now Wrocław], Aug 1749). German composer. What is known of his life comes largely from an autobiography in Mattheson's *Grundlage einer Ehren-Pforte*. According to Walther he was a grandson of Abdias Treu. Early in his childhood, after he had learnt to sing and to play the violin and keyboard instruments, he was taught double counterpoint and other aspects of composition from his uncle on his mother's side, J.S. Kusser. His first compositions were published when he was 12: three *Ouvertures sur le violon avec les quatres parties d'instrumens*. About the same time he composed several German operas to his own librettos, but these were not performed. At 21, as the result of a performance of his birthday cantata for Duke Eberhard Ludwig of Württemberg, Treu was given financial support to study in Venice with Vivaldi and Antonio Biffi.

In less than a year Treu's fame as an instrumentalist gave him entry into the homes of many Venetian noble families. In 1725 he was employed as the Kapellmeister to an Italian opera company which went to Breslau, where he produced four of his own operas: *Astarto* (1725), *Caio Martio Coriolano* (1726), *Ulisse e Telemacco* (1726) and *Don Chisciotte* (1727). In 1727 he moved to Prague and in subsequent years served as Kapellmeister, composer and performer to a number of noble families there as well as in Vienna and at Silesian courts. He also returned to Breslau periodically, first at the request of Cardinal von Sintzendorf, Bishop of Breslau, to write music for the cathedral. In 1740 he became Kapellmeister at the court of Karl Schaffgotsch of Hirschberg (Silesia). In subsequent years, according to Mattheson, Treu was again living in Breslau with a family of several children.

Treu was a prolific composer but almost all his music is apparently lost. His works include (besides those already mentioned) a mass (1732) and other church music, arias (some in *D-Bsb* and *SWl*), several serenatas (one in *ROu*), 12 sonatas *a* 4 and 12 *a* 6, wind partitas and violin concertos.

Mattheson, in comments to Treu's autobiography, praised him highly as a performer and composer. Two manuscript treatises (also lost), *Palatium harmonicum* and *De musica universali*, are cited by Mattheson, who gives a description by chapter titles.

Treviso.

Italian city in the Veneto region. Musical life in Treviso developed during the 13th and 14th centuries, when Italian and Provençal troubadours, fleeing from hostile political conditions, chose the district of Treviso as their centre. Among them were Uc de Saint Circ and Sordello, who settled for a time with the Da Romano family. The Ars Nova reached Treviso through the growing frequency of contacts between Florence and the cities of the Veneto. Nicolò de Rossi, a magistrate living in Treviso in the first half of the 14th century, confirmed the strong influence of Tuscan poetry, and the music associated with it, on the region; in one of his sonnets he mentioned about 20 composers, nearly all Tuscan.

The cathedral choir, which developed from an earlier choir school during the first half of the 14th century, provided a firm basis for the musical life of the city. A document of 1363 refers to an organ in the cathedral; a new organ was installed in 1483, and was itself replaced in 1773 by another, constructed by Callido. During the 14th century *sacre rappresentazioni* took place in the cathedral on the feasts of the Annunciation and of St Liberalis, patron saint of Treviso. A powerful impetus was given to the choir in 1437, when the bishop, Lodovico Barbo, allotted part of the revenue from the Ospedale di S Giacomo del Schirial for the maintenance of 12 clerical singers. Flemish musicians were active in Treviso during the 15th century, as a result of cultural links with nearby Venice; the first Flemish *cantore* and *maestro di canto* to work at the cathedral was Nicolaus Simonis of Liège (1411–12). From 1412 to 1460 both Italian (from Venice, Rome and Mantua) and Flemish *cantori* were employed. In 1463 the Flemish-born Gerardo di Lisa, an important figure in the cultural life of Treviso, was appointed *cantore*. He was responsible for the introduction of printing in Treviso, and published an edition of an early musical dictionary, *Terminorum musicae diffinitorium* by Tinctoris.

During the 16th century the choir reached its peak through the efforts of its excellent directors and the efficiency of its *cantori* (among them Zanin

Bisan), though the war against the League of Cambrai (1509–13) reduced its activities. The Flemish director Jan Nasco (1551–61) was succeeded by several other worthy *maestri di cappella*: Barges (also Flemish, 1562–5), Chamaterò (1565–7), Pietr'Antonio Spalenza (1573–7), Asola (1577–8) and, at the end of the century, Clinio (1584–5, 1592–7 and 1599–1601) and Giorgio Florio (1588–9). As early as 1521 the practice of *cori spezzati*, introduced to the city by Francesco Santa Croce (cathedral *maestro* 1520–27 and 1537–51), was in regular use. At the same time secular music became more widespread, and in 1552 a group of six players of 'Lire e lironi' was formed to give concerts.

With the development of the Baroque style during the early 17th century, the supremacy of Italian choirs began to decline. The *maestri* at Treviso at this time were relatively obscure figures: G. Kreysello (1603–5), P. de Cavalieri (1605–6), Antonio da Bologna (1608–13), Amadio Freddi (1615–26) and Giovanni Moroni (1628–33). The cathedral chapter suspended the choir's activities in 1633 because of a lack of funds for its maintenance. Archives relating to the choir, which contained many manuscripts of Gregorian chant, were largely destroyed by bombing in 1944.

During the 17th century the first theatres opened in Treviso. The earliest was one near S Margherita belonging to the Bensi-Zecchini family; it functioned from 1678 to about 1693. Another theatre, the property of Count Onigo, opened in 1692; it was in use until 1714, when performances were suspended until Count Guglielmo d'Onigo had the theatre rebuilt in 1765. It reopened the following year with a performance of Caldara's *Demofoonte*. While the Teatro Onigo was closed the Dolfin family built a very small theatre (1721), which survived into the 20th century. In the 18th and early 19th centuries these two theatres were the focal points of the city's musical life. In 1844 Count Onigo ceded the management of his theatre to an association of box-holders, and it became the Teatro Sociale; in 1868 it was burnt down. The theatre was rebuilt and opened in 1869 with a production of Gounod's *Faust*.

In 1931 the Teatro Sociale became the property of the municipality of Treviso and was renamed the Teatro Comunale, and it is now the city's only concert hall, although the churches of S Nicolò and of S Francesco are used for chamber music recitals. Every autumn the Teatro Comunale promotes a season of music, the Autunno Trevigiano, which has featured important premières, including Malipiero's *Il marescaclo* (1969) and Bussotti's *La rarità, potente* (1979); each June it organizes an international singing competition. During November, a national competition for pianists and piano compositions is held. Two large choral associations are active in the city: the chorus formed for the autumn music festival, and the cathedral choir.

FRANCESCO VALLERANI/R

Trevor, C(aleb) H(enry)

(*b* Much Wenlock, Shropshire, 17 March 1895; *d* London, 16 June 1976). English organist, editor and teacher. Virtually self-taught, he held a number of posts, among them director of music at Sherborne School, sub-organist of Wells Cathedral, organist of St Paul's Cathedral, Calcutta, and organist of St Peter's, Eaton Square, London (1937–64), and of Lincoln's Inn Chapel. As a broadcasting recitalist in the 1930s his lucidity and sense of style brought much unfamiliar music to life, notably that of Reger, whose organ works were then little known in England. Highly regarded as a teacher at the RAM (1936–64), where his pupils included Simon Preston and Barry Rose, his abiding legacy is in the large number of series of graded anthologies of organ music he edited. These contain works of all periods, many of them by composers then largely unknown to British organists. Trevor's *Oxford Organ Method* became an overnight bestseller and remains one of the most widely used tutors.

Triad

(Ger. *Dreiklang*).

A chord consisting of three notes which can be arranged to form two superimposed 3rds. If the lower 3rd is major and the upper 3rd is minor, the triad is said to be major (C–E–G); if the lower 3rd is minor and the upper 3rd is major, the triad is minor (C–E♭–G). If both 3rds are major the triad is augmented (C–E–G♯), and if both 3rds are minor the triad is diminished (C–E♭–G♭).

See Harmony, §2.

ROGER COTTE

Trial

(1) Jean-Claude Trial

(*b* Avignon, 13 Dec 1732; *d* Paris, 23 June 1771). Violinist, composer and theatre director. He attracted local attention at an early age for his precocity both as a violinist (at the Concert d'Avignon and later at the Montpellier theatre) and as a composer of violin pieces. He went to Paris for the sole purpose of asking Rameau's advice, intending to return to the south of France, where he was assured succession to the post of music master for the province of Languedoc. Parisian musical life enticed him, however, and he became first violin at the Opéra-Comique, then second violin and later director of the Prince of Conti's private orchestra. On 1 April 1767 he was named co-director of the Opéra, with Pierre Berton, theoretically for 30 years. Although their administration achieved successful reorganization of the orchestra and choruses, they were badly received by both critics and public, and in 1769, during a financial crisis, the city of Paris assumed administrative control.

Trial's violin pieces were widely played in his days and at least one of his compositions for the theatre, *Silvie*, had considerable success. He also wrote overtures, chamber music, *ariettes*, religious music and cantatas, in which he is said to have been the first French composer to have written for the female contralto voice (the *bas-dessus*).

Trial

(2) Antoine Trial

(*b* Avignon, 1737; *d* Paris, 5 Feb 1795). Tenor and actor, brother of (1) Jean-Claude Trial. He was educated at the *maîtrise* of Avignon Cathedral and first appeared in provincial theatres. He followed his brother to Paris and joined the troupe of the Prince of Conti. On 4 July 1764 he made his Paris début at the Comédie-Italienne as Bastien in Philidor's *Le sorcier*. Despite his thin, nasal voice, he achieved success, mostly through his acting, and interested himself from then on in the interpretation of peasants' and simpletons' roles; his name remained associated with this genre, qualified sometimes as 'singer without voice' or more usually 'singer Trial'. His most famous roles were Bertrand in *Le déserteur* (Monsigny), Ali in *Zémire et Azor* (Grétry), André in *L'épreuve villageoise* (Grétry) and Crispin in *La mélomanie* (Champein). During the Revolution he sided with Robespierre and was an active agent of the Terror; after Robespierre's fall (1794) he had to renounce the theatre because of the hostile attitude of the public, who reproached him for his political position. In desperation he poisoned himself.

Trial

(3) Marie-Jeanne Trial [née Milon]

(*b* Paris, 1 Aug 1746; *d* Versailles, 13 Feb 1818). Soprano and actress, wife of (2) Antoine Trial. Her first husband, a royal functionary named

Comolet, had discovered and cultivated her singing talent and arranged her début at the Théâtre-Italien (Paris) in 1766 under the stage name Félicité Mandeville. She was Antoine Trial's most brilliant pupil, and married him after Comolet's death. Poor health caused her to leave the theatre in 1786 and after Trial's death she married a certain de Montion. Her ability was particularly remarkable in vocalises and roulades; she is remembered as the best interpreter of Grétry and Monsigny.

Trial

(4) Armand-Emmanuel Trial [*fils*]

(*b* Paris, 1 March 1771; *d* Paris, 9 Sept 1803). Pianist and composer, son of (2) Antoine Trial and (3) Marie-Jeanne Trial. At the age of 17 he attracted attention with an *opéra comique*, *Julien et Colette*, presented by the Comédie-Italienne. A remarkable accompanist, he became director of singing at the Théâtre Lyrique in 1797. He married an actress, Jeanne Rigorey-Méon, who left him when he embarked on a life of debauchery, a primary cause of his early death. His music for several stage works did not fulfil the promise of *Julien et Colette*: with time, his inspiration had turned to banality and was only occasionally redeemed by well-written choruses.

Triana, Juan de

(*fl* 1477–90). Iberian composer. A papal bull dated 9 February 1478, which he presented to the chapter of Seville Cathedral, confirmed his title as a

prebendary, a position he had held from at least a year previously. At some time before 1483 he transferred to Toledo Cathedral where he was Master of the Boy Choristers, responsible for their welfare and for teaching them polyphony. Lacunae in the documentation make it difficult to piece together Triana's subsequent career, but he may have held his position at Toledo until 1490 when he would have been succeeded by Pedro de Lagarto.

Of the 20 pieces attributed to Triana in the Cancionero Musical de la Colombina, five are sacred pieces and three of these can be described as song motets, a form not commonly encountered in the surviving polyphonic sources from the Iberian peninsula. One of the Spanish-texted pieces, *Juysio fuerte será dado*, is a setting of the Song of the Sibyl, traditionally sung on Christmas Eve in some churches in the peninsula: it was part of the duties of the choirmaster at Toledo to provide the music for this occasion.

Triana's setting of courtly love poems are in canción form. His melodies are melismatic and the lower voices rhythmically active in the song idiom characteristic of Iberian composers of the generation before Juan del Encina. The florid contra he added to a duet by Cornago is typical. Among various settings of popular texts are a *cosaute* and a villancico, *Aquella buena muger*, which has an *estribillo* with canon-like imitation at the octave between tenor and superius. In an unusual through-composed piece, *¿Querer vieja yo?/Non puedo dexar/Que non sé filar*, each part has a different text. The superius, perhaps freely composed, is combined with a popular tenor and a quodlibet contra.

Triangle

(Fr. *triangle*; Ger. *Triangel*; It. *triangolo*).

An instrument much used in the modern orchestra, consisting of a steel rod bent into the shape of an equilateral (or isosceles) triangle, but open at one angle (it is classified as an idiophone: percussion stick). It is struck with a steel beater which is occasionally tapered to give a heavier or lighter stroke – at the performer's discretion – or occasionally with a wooden drumstick. Because of its numerous high dissonant partials which obscure the fundamental note, its pitch remains indeterminate, though it invariably appears to belong to the prevailing tonality of the orchestra. (If the corners of the triangle were closed it would have a definite pitch.)

In its medieval form the triangle had rings strung on the lower bar (see fig.1). The shape varied considerably: equilateral with closed or open ends (as shown by Praetorius and Mersenne); trapeziform; or resembling a medieval stirrup (hence the German *Stegereif* and the Italian *staffa*). An early mention of the triangle is found in a 10th-century manuscript. Here the instrument is without rings. A triangle without rings is depicted in the Wenceslas Bible (*c*1390–95) and again on a 15th-century window in the Beauchamp Chapel, St Mary's, Warwick. The Warwick specimen has a remarkably modern appearance, except that at the top angle the bar is twisted into a loop through which the thumb of the performer (an angel) passes. In many cases the medieval triangle (and its beater) is depicted as a larger instrument than the modern orchestral triangle. It was clearly used for religious purposes in medieval churches, and is frequently illustrated in the hands of angels, who sing as they play. It had a place also in secular music, and is seen occasionally (with and without rings) as an accompaniment to the pipe (see fig.2). Its use as such continued throughout the Middle Ages and the Renaissance.

In 1710 the triangle was reported to be in use at the Hamburg Opera, and in 1717 two triangles were purchased for the Dresden Opera. It appeared as an orchestral instrument in an overture in G by J.F. Fasch, about the middle of the 18th century. It was employed by Mozart (*Die Entführung aus dem Serail*, 1782), Haydn ('Military' Symphony, 1794) and Beethoven (Ninth Symphony, 1822–4), who included it in their representations of the Janissary music which swept Europe during the 18th century. It is possible that the triangle used in the music of these composers was not always equipped with rings, though the accoutrement did not finally vanish until the middle of the 19th century, by which time the instrument had become a permanent member of the orchestra.

Until the end of the 18th century the orchestral triangle was used mainly to provide rhythm. In 1853 it was raised to the rank of a solo instrument by Liszt in his Piano Concerto in E♭. As with many innovations, Liszt's cunning use of the (so-called) humble triangle caused considerable consternation. Wagner's varied use of the instrument includes the tremolo, e.g. in *Die Meistersinger*(overture), repeated demisemiquavers in *Die Walküre* (see ex.1) and the judicious example of economy in the single stroke to be found at the end of the second act of *Siegfried*. Grieg made use of the triangle roll to add a touch of silver to the orchestral chord announcing Anitra's Dance (*Peer Gynt*). A further example of the exquisite use of a quiet tremolo is in the cadenza of Rimsky-Korsakov's Spanish Capriccio, where the harp is joined by a *pp* tremolo on the triangle.

In the late 20th century the percussionist had available a variety of sizes and weight of triangle, from about 10 to about 30 cm across. Composers have occasionally requested graduated sizes: in William Russell's Fugue for Eight Percussion Instruments (1933) muffled triangles measuring about 10, 15 and 25 cm are required and Messiaen called for sets of three in *Eclairs sur l'Au-delà* (1988–92) and *Concert à quatre* (1990–92, completed Y. Loriod, H. Holliger, G. Benjamin). Unusual uses include Walton's *Façade*(1921–2, rev. 1942; cymbal struck with triangle).

In orchestral performance the triangle is suspended by a loop of thin gut or nylon which passes around the bar, or through a small hole in the upper corner. The instrument is held in one hand or hung on a special stand, or in some cases is suspended from a 'bulldog' paper clip drilled to receive a small loop of gut (see fig.3). (This method of suspension allows the instrument to be held in the hand, or attached to a music stand or convenient part of a drum outfit when the use of two beaters is preferable, or during *tacet* periods.) If a triangle is of good-quality hardened steel, properly suspended, and the tone correctly elicited, many and various tones are possible. For normal orchestral purposes the instrument is struck on the outer side, the open or lower end of its closed side being preferred for quiet strokes. The inside of the lower side is used on occasions for *fff*strokes. For the tremolo, the beater is placed in either the top or bottom closed corner of the instrument, and the two sides struck in rapid alternation, the crescendo being effected by moving the beater to operate in a larger area. Beaters of varying weight are used. The sound is terminated by gripping the instrument with the fingers of the non-playing hand (or the other if more convenient).

The triangle is by no means a simple instrument to play. Composers do not hesitate to allot it complicated rhythms and grace notes, as in, for instance, the 11th variation of Elgar's 'Enigma' Variations, where it is used to depict the tinkle of the medal on the collar of the bulldog Dan as he shakes himself after a plunge into the River Wye, and Respighi's *Trittico botticelliano* (1927). For such figures as grace notes and repeated quavers and semiquavers, etc., two beaters are used, or one is used to strike the inner side of two bars with an alternating back and forth movement.

The triangle is notated on a single line or upper part of the staff and is designated as given above.

Tribolet, Marianne de.

Singer, wife of Ignaz Willmann (*see* Willmann family, (1)).

Tricarico, Antonio.

Italian violinist, brother of Giuseppe Tricarico.

Tricarico, Giuseppe

(*b* Gallipoli, nr Lecce, 25 June 1623; *d* Gallipoli, 14 Nov 1697). Italian composer and teacher. He received his early training at Naples. In the 1640s and early 50s he lived in Rome, where he published a good deal of church music (much of it now lost) and was active in academies. In 1654 he became *maestro di cappella* of the Accademia dello Spirito Santo, Ferrara. He is designated as such in the libretto of his first opera, *L'Endimione*, but two years later he settled in Vienna and was *maestro di cappella* to the dowager Empress Eleonara. He probably went straight there from Ferrara, following his brother Antonio, a violinist who applied for a position at the imperial court in 1656, but was only accepted by Eleonora later. Both served her only until 1662, when P.A. Ziani was appointed in Giuseppe's place. The circumstances of his withdrawal are not entirely clear, but it is likely that he left this important position in order to return to Gallipoli, where he was active as a teacher for the remainder of his life. His extant dated works are confined to the period 1649–70. Well versed and talented in the then current idiom of Roman church music as well as in opera and oratorio, he was most important for his transmission (together with G.F. Sances and other composers) of elements of Italian style to the Habsburg court, which was largely dominated by musicians from northern Italy for many years to come.

RUDOLF SCHNITZLER (with HERBERT SEIFERT)

Trichet, Pierre

(*b* Bordeaux, 1586–7; *d* Bordeaux, before 1649). French author, theorist, collector and lawyer. By profession a lawyer in the Parliament of Bordeaux he made use of the humanistic education he had received from his uncle, Jean d'Avril, by publishing during his lifetime two tragedies, a book on witchcraft and two volumes of epigrams. He was also a collector of books, printed portraits, medals, naturalia, ethnographic objects and mathematical and musical instruments; an inventory of the entire collection was printed in his *Synopsis rerum variarum* and translated in his *Dénombrement*. His interest in music is further demonstrated by the inclusion, among his publications, of poems in praise of two composers active in or near Bordeaux: the Spaniard Juan d'Escobar and Hugues de Fontenay. About 1630, or perhaps earlier, he began work on his *Traité des instruments de musique*. It was not published during his lifetime, possibly because he was not able to perfect it according to his own standards before he died. In his *Traité* Trichet divided musical instruments into three classes: wind instruments, string instruments and percussion. For each instrument he first explained the etymology of its name, gave a brief history of its origins and then described its use. The variety of source material upon which he

drew reveals the wide range of his own reading; he cited not only ancient authors but also contemporary historians, poets, travellers and men of science. To the dense series of references both ancient and modern he sometimes added trenchant and sensible observations drawn from his own experience (for example, he heard the 'Sourdeline' played by Langlois in Bordeaux in 1626). His treatise is neither as complete and systematic nor as useful to modern scholars and performers as the two best-known books of the time on musical instruments, those by Praetorius and Mersenne, with the latter of whom he corresponded. The *Traité* is the work of a provincial antiquarian and scholar; nevertheless it sometimes supplies information not otherwise available.

Trichord.

A grouping (or set) of three notes of different pitch (or pitch classes). There is no standard scalar arrangement of three notes in traditional theory (as with Hexachord and Tetrachord), nor is the trichord necessarily a harmonic entity (a triad is a trichord, but a trichord need not be a triad). The term 'trichord' is derived by analogy from the 20th-century use of 'tetrachord'. In *The Structure of Atonal Music* (New Haven, CT, 1973), Forte identified the 12 possible trichords (plus inversional equivalents) from the 12 notes of the tempered scale, labelling them 3–1 (0, 1, 2 or adjacent semitones) to 3–12 (0, 4, 8, or the augmented triad). Webern in his Concerto op.24 employed a 12-note row consisting of a trichord (B–B♭–D) and three permutations (E♭–G–F♯; G♯–E–F; C–C♯–A); by use of transposition, inversion, and retrograde, any trichord can generate a 12-note row in this fashion (this is not true of tetrachords).

JULIAN RUSHTON

Trichterregal

(Ger.: 'funnel regal').

A term applied to regal pipes with resonators in the shape of an inverted cone. *See* Regals. *See also* Organ stop (*Regal*).

Tricinium

(from Lat. *tri-*: 'three times' and *canere*: 'to sing' or 'to play').

A term applied by many modern scholars to any three-part vocal or instrumental composition of the Renaissance or early Baroque. Less frequently found than 'bicinium', it was not often used in contemporary sources to designate a similar pedagogical repertory. Although it was first employed in manuscript in 1540 (Jan z Lublina's *Tabulatura*, *PL-Kp* 1716; *see* Chybiński) and in print in 1542 (Rhau's *Tricinia … latina, germanica, brabantica & gallica*), earlier publishers, Formschneider, Kugelmann and Petreius, had already provided tricinia, compositions suitable for performance in Lutheran schools and homes and by small church choirs (see Noblitt, 1989). These large collections contain a somewhat more contemporary repertory than the bicinium publications, including French chansons published between 1520 and 1536, as well as a few conservative Franco-Flemish trios (often in cantus firmus style and frequently with moralizing biblical contrafacta). Contemporary Italian and French publications do not use the term (although they were sources for the Lutheran editors; see Bernstein, 1980), but later Catholic composers including Castro, Aichinger and Hagius did. A broader meaning, without didactic intentions, is implicit in Praetorius's calling Monteverdi's *Scherzi musicali* 'tricinia jocosa' (*Syntagma musicum*, iii, p.129) and in numerous German publications by Regnart, Kauffmann, Franck and others who printed villanellas as tricinia 'nach italiänischer Art'. The appearance of both text and continuo figures in the third voice of some Praetorius, Dilliger and Grimm trios indicates a further amalgamation of bicinium and tricinium textures into the *geistliches Konzert* (see Adrio).

SOURCES BEFORE 1625

(selective list)

This list includes the German collections using the term in title or dedication, and those Italian and French collections with a pedagogical purpose or those that are sources for German publications.

Trium vocum carmina (Nuremberg, 1538[9]; H. Formschneider); Concentus novi, 3vv (Augsburg, 1540[8]; J. BRUCE A. BELLINGHAM

Tricklir [Trickler, Triklir], Jean Balthasar

(*b* Dijon, 1750; *d* Dresden, 29 Nov 1813). French cellist and composer of German descent. As a child he was destined to the priesthood, and received violin and cello lessons as part of his ecclesiastical training. However, at the age of 15 he left Dijon for Mannheim, where he continued his musical studies until about 1768. He made three trips to Italy and performed at the Concert Spirituel in Paris in May 1776. In 1782 he became chamber virtuoso at the court at Mainz where he played quartets and double concertos of his own composition with the violinist Ernst Schick. In the following year he entered the service of the Elector of Saxony in Dresden, where apart from concert tours to England and France he remained most of his life.

Tricklir was well regarded by his contemporaries as a music theorist and composer; he was praised in *Correspondance des amateurs musiciens* (19 November 1803) and J.-B.S. Bréval's *Traité du violoncelle* (Paris, 1804). His works were published in Germany and France and his fourth concerto was performed in Paris at the Concert Spirituel by J.-L. Duport, who later published his own edited version of the work. In his unpublished treatise, *Le microcosme musical* (1785), Tricklir described a device for preventing the effects of atmospheric changes on the tuning of string instruments; discussion of the device appeared in Cramer's *Magazin der Musik*. Tricklir also taught the cello, and his pupils included Dominique Bideau.

Tricklir's compositions display an interesting combination of French and German performing practices. His French training is revealed in his carefully crafted bowings and use of natural harmonics, the latter being explored particularly in the 'nouveau' concertos. An invaluable source for the study of contemporary cello performance, all concertos use the cello's full range; the technical demands for the upper register include thumb-position octave and 10th figurations played across adjacent strings, with double stops integrated into the lower positions. His sonatas contain diverse use of dynamic contrasts, with Mannheim influences also apparent in his fingering method; Tricklir was an important link between Anton Fils and B.H. Romberg. Tricklir's thumb-position technique, notated in most of his publications, is based on the use of stationary, block-hand positions with inclusion of the fourth finger. He not only preceded Romberg in the use of such fingerings, but was also one of the first composers to publish cello music using bass, tenor and treble clefs at pitch.

MARY CYR/VALERIE WALDEN

Trico, Simon

(*b* Châtelet, nr Charleroi, bap. 11 Jan 1678; *d* Maastricht, 9 Jan 1757). Dutch composer and singer. He studied in Liège, where he received major ordination, and his musical career as a singer began in the choir of St Denis there. In 1709 he became a prebend of the Chapter of Onze-Lieve-Vrouwekerk in Maastricht. His first known compositions date from this year. From 1726 to 28 May 1751 he was cantor *unanimi voce* there. Trico's music is strongly influenced by the musical style of the Liègian church composers from the last quarter of the 17th century, characterized by simple, transparent harmony, a preference for homophony and the avoidance of graces. The two pieces (in *B-Lc*) which Auda attributed to Trico are, in fact, from the second half of the 18th century and may be by Trico's nephew, Charles Théodore Trico (*fl c*1740–69).

HANS VAN DIJK

Tricotet [tricotée, triquotée]

(Fr.).

A word, often used in the plural, applied mainly during the 16th and 17th centuries to a number of different tunes and dances. It enjoyed particular vogue in France and England (as 'trickatee'), appearing in various forms among the texts of numerous chansons, and, eventually, in the titles of instrumental compositions. The word 'tricotet' derives from *tricot* ('stick') and *faire tricoté quelqu'un* ('to make someone dance by beating him with a stick'); another meaning was *faire l'amour*. The modern association of the word with *tricoter* ('to knit') was acquired no earlier than the late 16th century. Bernard de Lamonnoye (*Glossaire des noels*), referring to the early 18th-century dance, said that it was thus named because the movement of the feet was as fast as that of the hands in knitting.

The earliest extant source of a *tricotet* tune is the tenor of an anonymous three-part chanson, *Belles tenés-moi – La triquotée* (*I-Bc* Q15, *olim* 37; ed. in Brown, *Music in the French Secular Theater*, p.251). Josquin quoted two fragments of the tune and its text, 'La tricoton, la belle tricotée', in his well-known five-part chanson *Je me complains de mon amy*. The tune, though much altered, is still recognizable in a simple keyboard piece of the late 16th century entitled *Almande trycottee* (*GB-Lbl* Add.29485; ed. in MMN, iii, 37). It may be an ancestor of the 'branle couppé nommé Cassandre' mentioned by Arbeau (*Orchesographie*, 1588), which achieved popularity as a *voix de ville* with the text 'Vive Henri IV'.

In the 17th century two principal melodies were known under this title: *vieux tricotets* and *tricotets nouveaux* (*D-Mbs* Mus.1511, ff.2, 27). Both show a preference for three-bar phrases, a feature they share with the earliest *menuets* (*de Poitou*) and the *branles de Poitou*. Both tunes survive in printed and manuscript dance collections of the end of the 17th century and the first half of the 18th (e.g. Jean Le Clerc, *Premier recueil de contredanses*, *c*1729; late 17th-century lute versions are in *GB-Lbl* Add.16889 and the Besançon lute manuscript). One choreography survives: *Les tricotets*, a social dance for two gentlemen and two ladies, accompanied by an anonymous set of four airs, was published by Malpied in about 1780, and republished with amendments by Guilemin in 1784 (Little and Marsh, no.8180).

MARY CYR/MEREDITH ELLIS LITTLE

Triddel [Tridel], John.

See Trydell, John.

Triebensee [Trübensee], Josef

(*b* Wittingau [now Třeboň], 21 Nov 1772; *d* Prague, 22 April 1846). Bohemian composer and oboist. He studied composition with Albrechtsberger and the oboe with his father (Johann) Georg Triebensee (*b* Herrndorf, 28 July 1746; *d* Vienna, 14 June 1813); Georg was first oboist in the service of Prince Schwarzenberg at Wittingau and Vienna until 1782, first oboist in the emperor's Harmonie (retired 1806), and from 1777, concurrently with his other employment, first oboist with the Nationaltheater at Vienna. In 1791 the younger Triebensee, as second oboist at the Theater auf der Wieden in Vienna, took part in the première of *Die Zauberflöte* under Mozart's direction; he frequently performed as a soloist in the Tonkünstler-Sozietät concerts in Vienna. In 1793 he became second oboist at the Kärntnertortheater, and in 1794 first oboist and Kapellmeister to Prince Liechtenstein's Harmonie at Feldsberg (now Valtice); he left when the band was dissolved in June 1809. In 1811 he was in the service of Count Hunyady in Vienna and also worked as a theatre composer in Brno; in 1816 he succeeded Weber as director of the Prague Opera, a post he held until his retirement on 31 December 1836. Edward Holmes encountered him during his tenure, and wrote thus of him:

> The present maestro (in Prague) is a little wizened old man, remarkable for the quaint singularity of his dress, and his long hair, parted and streaming over his shoulders. Having found that his compositions will not do for the people of Prague, he ensconseth himself in his strong-hold as singing-master, in which capacity he is really excellent. With a counterfeit surliness in his voice and look, he somteimes sits in the orchestra eyeing a poor girl on the stage, and as she sings doubtingly, points to some particular inch of the throat from which the sound proceeds; but he does not quit his remarks nor renewed beginnings until the tone comes forth from the proper quarters.

Triebensee was a prolific composer; his most notable works are two sets of Harmoniemusik, including both original and arranged pieces. The first was advertised in the *Wiener Zeitung* for 16 November 1803, and the other,

entitled *Miscellanées de musique* and probably commissioned for the emperor's Harmonie, appeared in 32 instalments of ten or more movements from June 1809. He also wrote 12 comic operas for Vienna and Prague stages, as well as a number of smaller vocal pieces, orchestral and chamber works.

ROGER HELLYER

Triébert.

French family of woodwind instrument makers. Their work may be said to have established the definitive characteristics of the French-style oboe.

In addition to their various individual improvements in the French oboe, the Triéberts carried out work to the requirements of a number of celebrated players, notably A.M.-R. Barret (who is known to have consulted them closely). In 1855 they produced a version of the Boehm system oboe and made improvements to the French bassoon. (2) Charles-Louis Triébert also compiled fingering charts for oboes with 10 and 15 keys (this being the *système 4*, which he personally favoured), while (3) Frédéric Triébert compiled others for Boehm-system instruments.

Besides instruments, the Triébert showrooms offered perhaps the most extensive stock of oboe music available on the Continent during the 19th century; the 1866 catalogue shows that it catered specifically for French taste, offering many works available nowhere else, and included chamber works for oboe by Charles-Louis and Frédéric. These works were available in print for about fifty years from the 1840s onwards. Many of the works by Frédéric have been falsely attributed in secondary sources to his more famous brother.

After the death of (3) Frédéric, the firm's stock and assets passed for a time into other hands, but were finally bought up in 1881, together with the trademark, by the firm of Gautrot. The natural successor to Frédéric Triébert was in fact François Lorée, who had been his foreman since 1867. He set up on his own in 1881 and by further experiments with the last Triébert model, and his own superb workmanship, evolved one of the most highly esteemed of all oboes. Later generations of the Triébert family have also produced distinguished instrumentalists.

For illustration *see* Oboe, fig.2(b).

PHILIP BATE/GEOFFREY BURGESS

Triébert

(1) (Georges-Louis-)Guillaume Triébert [Georg Ludwig Wilhelm Triebert]

(*b* Storndorf bei Alsfeld, Hesse, 24 Feb 1770; *d* Paris, 5 June 1848). He trained as a cabinet maker, perhaps in Laubach, and by 1804 had travelled on foot to Paris, where he pursued his craft before entering the workshop of the celebrated flutemaker Winnen. By 1810 he was *maître-facteur*, had married and opened his own business. In 1811 he was granted French citizenship. The jury at the Paris Exhibition of 1834 declared his oboes to be superior to all others there. This maker is normally known by the French form of his name.

Triébert

(2) Charles-Louis Triébert

(*b* Paris, 31 Oct 1810; *d* Gravelle, Seine, 18 July 1867). Elder son of (1) Guillaume Triébert. He took a minor part in the family business, preferring the life of a performer and composer; he did, however, contribute much to the technical developments introduced by the firm. He won the *premier prix* for oboe at the Conservatoire in 1829 and held many important orchestral appointments. In 1863 he succeeded Verroust as professor at the Conservatoire, a position he held until his death. Compositions by Charles-Louis include *6 melodies extraites des études caractéristiques de Decourcelles* (oboe solo), *Fantaisie sur un air limousin* (oboe and piano) and numerous fantaisies on operatic themes.

Triébert

(3) Frédéric Triébert

(*b* Paris, 8 May 1813; *d* Paris, 19 March 1878). Second son of (1) Guillaume Triébert. He did not at first take up music, but studied metal

engraving with Lecoq from 1826 to 1830. He then followed his brother as an oboist, becoming second oboe at the Opéra-Comique in 1839. About 1846 he gave up professional playing to assist in running the family firm, and took over the management on his father's death. Frédéric's compositions include two works for oboe and piano, *Air pastoral* and *L'Illusion valse*; he also composed songs on texts by G. Chatinot, *Les Bergers d'autrefois* (voice, oboe and piano) and *Leucade* (voice, piano and oboe or English horn).

Triébert

(4) (Auguste-) Raoul Triébert

(*b* Paris, 1845; *d* after 1894). Son of (3) Frédéric. He studied oboe with his uncle, winning the Conservatoire *premier prix* in 1864, playing in the *garde républicaine* and at the Paris Opéra (1867–95). He was described as the rightful successor to the talents of his uncle, whose music he often performed at meetings of the Société académique des Enfants d'Apollon.

Trient

(Ger.).

See Trent.

Trier

(Fr. Trèves).

City in Western Germany, the oldest in the country (15 bce). Under Constantine (286–337) it became the capital of the western Roman Empire. St Ambrose, later Bishop of Milan, was born in Trier in about 339–40; he was important in the history of Western music both for the introduction of antiphonal singing and for the writing of hymn texts, and possibly of the *Te Deum* itself. Bishop Nicetius (*d* 566) was active in Trier in 527; as the author of *De laude et utilitate spiritualium canticorum … seu de psalmodiae bono* he was the first German writer on music. Towards the end of the Carolingian era Regino of Prüm (*d* Trier, 915) wrote his treatise *De harmonice institutione*, to which a tonary in Messine neumes is appended.

In the Middle Ages the institutions responsible for the promotion of music were the abbeys, the cathedral chapter and the cathedral school, which was dependent on the chapter; in all these the liberal arts, including music, were taught. The cathedral Kantor, assisted by a succentor (or occasionally two), was responsible for the cathedral choir; the earliest known Kantor, Otter, was appointed in 924. *Chorales* (choirboys) assisted in the choral singing (a tradition that has continued into the 20th century), instructed by the succentors who were musically the most skilled. The most famous succentor was Leonhard Lascens, Kapellmeister at the electoral court of Trier at Ehrenbreitstein (near Koblenz) in 1668. Evidence of Trier's ancient tradition of singing, the *cantus trevirense*, can be found in manuscripts in the Stadtbibliothek and in the Bistumsarchiv, some with neumes (staffed and staffless) and some in Gothic or Roman notation.

From the 17th century cantus figuralis (polyphony) was cultivated as well as cantus planus. In the 19th century the leaders of church music reform in Trier were Johann Baptist Schneider, Stefan Lück and Heinrich Oberhoffer. The revival of the *cantus trevirense* was brought about by Peter Bohn and particularly by Michael Hermesdorff, whose pupil Peter Wagner did some significant research on the subject. The Bantus seminary, a centre for choral and instrumental music in the 18th century, became the Musikinstitut in 1802 and was converted into a cathedral music school by Bishop Mannay in 1808. The Bischöfliche Kirchenmusikschule was founded in 1904, and the Trier Cathedral choir reached a peak under the Kapellmeister Wilhelm Stockhausen (1900–34) and Johannes Klassen (1934–57).

Meister Everhart (*fl* 1364) was the first organ builder in Trier. The earliest information about the cathedral organ dates from 1387–8 (Meister Matthias); it was enlarged in 1464 by Peter von Trier and the carpenter Nicolas von Metz, and reconstructed in 1537 by Peter Breisiger, who brought to Trier the style of organ building of the Netherlands and north Brabant. Their successors were Florentius Hocque (*fl* 1590) and his son Nicolas (1617), Thomas Dupré (1624) and Jean Nollet and his sons, who introduced French influence (*c*1717). In the 19th century Breidenfeld was the leading firm of organ builders in Trier.

The university, founded in 1473, was closed by the French in 1798 and was not re-established until 1970. Music was an accepted field of study in the department of arts, and in the 18th century dancing-masters taught there. In 1794 Trier was occupied by the French, on whose initiative the Stadttheater was installed in the secularized Capuchin monastery (1802–5). German and French operas, operettas, vaudevilles and Viennese farces were performed in preference to plays, with musicians supplied by the Musikinstitut. Under Heinz Tietjen (1907–22) the theatre flourished, with many performances of Wagner operas. The present Theater der Stadt Trier opened in 1964.

In the 18th century, through the influence of opera, orchestral music became popular in Trier. A Hofkapelle had been established in 1654, but the court musicians were mostly active in Koblenz, and the cathedral chapter founded its own orchestra. In the 19th century the city (under Prussian administration from 1815) relied almost exclusively on private initiative for its concert life. Amateur instrumental and vocal societies were founded, such as the Trierische Liedertafel (1837) and the Allgemeiner (later the Trier) Musikverein (1846); both remain active. From 1919 the city has had a professional orchestra. The military bands of the Trier garrison also take an active part in the city's musical life. Outstanding directors of music in the city have been Stephan Dunst (1787–1838), Nikolaus Dunst (1805–85), the Theaterkapellmeister Josef Stern (1817–18) and Josef Eschborn (1818–20).

GUSTAV BERETHS/R

Trier, Johann

(*b* Themar, Thuringia, 2 Sept 1716; *d* Zittau, Saxony, bur. 6 Jan 1790). German organist and composer. He matriculated at the University of Leipzig on 2 June 1741. During the following years he probably studied with J.S. Bach and by the mid-1740s had become a prominent participant in several of Leipzig's musical societies. By 1 May 1746 he had assumed the direction of the collegium musicum formerly led by G.P. Telemann and J.S. Bach; he probably remained in this position until 1747. Although he failed in his attempt to succeed J.S. Bach as Thomaskantor in 1750, Trier was unanimously chosen in 1753 from nine applicants (including C.P.E. and W.F. Bach) for the important position of music director and organist of the Johanniskirche in Zittau, which he held from 1754 until his death. Two of his pupils, J.G. Schicht and J.G. Schneider (the elder), achieved some eminence.

Trier was esteemed during his lifetime mainly as 'one of our greatest masters of the organ' (Gerber). However, he was also the composer of a variety of polonaises and preludes for clavier and organ and of at least two cycles of cantatas for the church year. His organ and church works are in the late Baroque polyphonic style.

WORKS

Cants.: Auf Geister, zeigt die frohen Triebe, vv, insts, 1786, *B-Bc*; O Freudenfest, o Tag voller Wonne, vv, insts, *Bc*; Jesus ward aufgehoben, for the Ascension, vv, insts, *Bc*; Drei sind, die da zeugen, vv, insts, *Bc*; 44 sacred cants., solo vv, choir, insts, formerly Königsberg University Library, lost; 2 cycles, of cants. for the church year mentioned in *GerberNL*, lost

Kbd: 3 short preludes [?frags.], ed. K.E. Hering, *Orgelmusik für Unterricht, Kirche und Schule*; Polonaise, *B-Bc*; Präludium auf drei Orgeln in der hl. Christnacht, 1755 mentioned by Sietz, present location unknown; Prelude, a, mentioned by Sietz, present location unknown; 7 short polonaises, inc.

Other: Serenata nach geschehener Erb-Huldigung, formerly Königsberg University Library, lost; occasional works, incl. 2 Abendmusiken, insts, tpts, timp, Leipzig,

1747, 1748; Partie, insts, lost; MS Choralbuch, lost

ROBERT L. MARSHALL

Trieste.

Italian city, capital of the Friuli-Venezia Giulia region. In the Middle Ages it was governed by a count-bishop and the Patriarch of Aquileia; between 1382 and 1918 it was part of the Habsburg empire and in 1954, after years of contention with Yugoslavia, it was annexed to Italy.

1. Cathedral 'cappella'.

The earliest documentation relating to the organ in the cathedral of S Giusto dates from 1473, and two breviaries from 1348 and 1509 (in *I-TSci* 1–22) contain the liturgical drama *Visitatio sepulchri* in the version of the Aquileian rite, which the Council of Udine eliminated in 1596.

The first documented reference to the *maestro di civica cappella* of S Giusto was in 1538, and between 1560 and 1642 the post was held by Bartolomeo Rovere, Giulio Zacchino, Silao Casentini, Gabriello Puliti and Martino Naimon. When the newly built Palazzo Comunale was opened in 1707 the *maestro* was also given responsibility for conducting opera performances there, an arrangement that lasted until 1860. During the early 18th century, under Giambattista Arcari and Giacomo Notte, the *cappella* was endowed with a group of four violinists and four singers. At the beginning of the 19th century the opera composers Giuseppe Farinelli and Luigi Ricci alternated as directors of the institution. The subsequent spread of the Cecilian movement, timidly accepted by Giuseppe Rota, led to the suppression of the orchestra under Carlo Painich in 1922. After World War II Giuseppe Radole and, subsequently, Marco Sofianopulo brought an innovatory impetus to the institution.

2. Opera.

After the mystery plays *Il mistero di San Giusto* (1534) and *La passione di nostro Signore il giovedì santo* (1536), the first record of staged musical drama is *La fidutia in Dio* by Pietro Rossetti, performed in 1683 to celebrate the defeat of the Turks. However, it was only in the 18th century that operatic activity began to develop in Trieste, with the intermezzos *La contadina* by Hasse (1721) and *Serpilla e Bacocco* by Orlandini (1730). The latter was staged in the same year that a commercial fair was

instituted in the city. In 1752 the Palazzo Comunale was transformed into the Teatro di S Pietro whose repertory alternated works by Fischietti, Gazzaniga, Piccinni, Paisiello and Mozart with those by resident composers such as Notte, Domenico Della Maria and Farinelli. In 1801 the Teatro Nouvo was inaugurated with two new operas: Mayr's *Ginevra di Scozia*, and Salieri's *Annibale in Capua*. The theatre became the Teatro Grande in 1821 and the Teatro Comunale in 1861. In the early 19th century, during the three periods of French occupation, there was a predilection for the *farse* of Generali, Pavesi and Mayr; later in the century, alongside pieces by local composers (Ricci, Strmić, Manna), the directors showed a preference for established successes, though two new works were commissioned from Verdi: *Il corsaro* (1848) and *Stiffelio* (1850). Around 1876 Trieste audiences developed a passion for Wagner, and in 1883 Angelo Neumann's company, under Anton Seidl, performed the entire *Ring* at the new Politeama Rossetti, inaugurated in 1878. Antonio Smareglia spent the latter years of his life in Trieste, collaborating with the librettist Silvio Benco, and his *Nozze istriane* (1895) received its première in the city. The Teatro Comunale was renamed the Teatro Comunale Giuseppe Verdi in 1901.

Operetta, now the subject of an important festival, was first seen at the Teatro Armonia in 1866, with music by Offenbach and Suppé. Lehár was frequently in contact with the city, writing marches and songs (*Sangue triestin*, *Miramare*) and in 1907 staging *Die lustige Witwe* at the Teatro Filodrammatico.

3. Concert life.

The opening of the free port in 1719 and the consequent immigration of merchants from central Europe and the Mediterranean (Slavs, Germans, Jews and Greeks) contributed to the formation of a cosmopolitan population, showing a middle European taste in the arts. As in other cities in the Habsburg empire, *Hausmusik* and musical evenings became popular during the early 19th century, initiating a tradition of chamber music. In 1763 concerts were inaugurated at the Casino dei Nobili, transferring to the Gabinetto di Minerva in 1810 and then the Teatro Mauroner, where Giuseppe Scaramelli appeared in a quartet in 1828. Scaramelli, an admirer of Haydn, was Konzertmeister at the Teatro Grande and wrote a *Saggio sopra i doveri di un primo violino direttore d'orchestra* (1811) in which he deplored the practice of conducting in tandem with the harpsichordist and advocated that the first violin alone carry out the conductor's role. Danced pantomimes and pieces for orchestra and smaller groups of instruments were habitually inserted between the acts of plays, and until the early 20th century international stars visited the city: Paganini in 1816 and 1824, Liszt in 1839 and Mahler in 1905 and 1907 (the printed copy of Mahler's Fifth Symphony housed in the Trieste Conservatory contains modifications in the composer's hand, made for the concert of 1905).

In 1829 the musical activities of the Società Filarmonico-drammatica were inaugurated and after the revolutionary uprising of 1848 the Schillerverein (1850–1918) was formed to promote German culture. The Hungarian violinist Julius Heller was appointed conductor in 1860 and introduced all Beethoven's symphonies into the orchestra's repertory. He then formed a

quartet, which served as a model for Augusto Jancovich's Quartetto Triestino (1903) and the Quartetto Barison (1919), but only the Trio di Trieste (1933) achieved an international reputation. The Società dei Concerti, founded in 1932, today provides a healthy concert life, while in the field of contemporary music there is the Premio Città di Trieste (1949) and the festival organized by the Chromas association (1986) under the composer Giampaolo Coral.

4. Education and publishing.

The first academy of music in Trieste was the Liceo, directed by Giuseppe Cervellini from 1822 to 1825; it was followed by the municipal school founded by the pianist Eduard Jaell (1838–43) and the school of choral singing (1843, from 1864 the Civica Scuola) run by Francesco Sinico. Following on from the singing schools founded by Luigi Ricci and Francesco Zingerle were the Liceo Musicale, opened under Arturo Vram in 1884, the Conservatorio Verdi and the Liceo Tartini (1904), amalgamated into a single institution, the Ateneo Musicale Triestino, in 1932; this in turn became the Conservatorio di Musica Giuseppe Tartini in 1953.

In 1893 Giangiacomo Manzutto founded the *Rivista musicale illustrata* and Busoni, critic on the daily *L'indipendente* from 1884 to 1885, had his *Entwurf einer neuen Aesthetik der Tonkunst* published by Carlo Schmidl, himself a musicologist and the founder of a valuable collection of music and documents now held in the Museo Teatrale which is named after him (*I-TSmt*).

5. Minority cultures.

The story of music among the minority religions in Trieste (Greek Orthodox, Jewish, Protestant) is still to be written. There is more information on the Serbian Orthodox church, which preserves music by Galuppi, Berezovsky, Bortnyansky and Turchaninov, brought from St Petersburg. Francesco Sinico was the first to compose for this church, following the Old Slavonic liturgy. However, the roots of organized Slav culture lie in the Slavjanski Zbor (Slavic Society) which brought together Slovenes, Croats and Serbs. Following the example of the Czechs, after 1848 native Slovenes formed a Slavjanka Narodna Čitalnica (Slovenian Reading Room), directed by the Bohemian Jan Lego in the manner of the *besedy* of Prague and Zagreb. In 1873 the Čitalnica formed a permanent choir under the direction of Anton Hajdrič and Hrabroslav Volarič began to publish choral pieces and folksongs for piano (*Narodne pesme*, 1887; *Slovenske pesmi*, 1891, 1894), which were performed by choirs in surrounding villages and in those parts of city which had always been inhabited by Slovenes. In 1890 groups of players of the *tanburice* (a plucked instrument) were formed; in 1907 the Slovensko Gledališče (Slovenian Theatre) was opened in the Narodni Dom, where works by Czech and Croat composers were performed, and in 1909 the Glasbena Matica (Slovenian Music School) was founded. With the exception of the *tanburice* groups, these institutions were revived after the fall of fascism, which between 1922 and 1945 had pursued a brutal policy of aggression towards the region's Slav population.

IVANO CAVALLINI

Triflauto

(It.).

A designation for an instrument, known only from a stage direction in Peri's *Euridice* (Florence, 1600): 'Tirsi Viene in scena sonando la presente Zinfonia con un Triflauto, e canta la seguente stanza'. The score at this point comprises a ritornello on three staves, all with soprano clefs. The top two parts (e'–e") are written predominantly in parallel thirds, while the lowest is a drone alternating between only four notes.

The direction may simply refer to a stage-prop, perhaps an instrument comparable to the *flauto harmonico* or *armonia di flauto*. The latter was a kind of recorder with five pipes (four of which served only as a drone) made by Manfredo Settala about 1650; the only surviving instrument is in the Civico Museo Bibliografico Musicale, Bologna. The music could have been played on recorders, as prescribed by Francesca Caccini for a very similar

ritornello in her opera *La liberazione di Ruggiero* (Florence, 1625). In another very similar scene, inscribed 'al modo antico', in Emilio de' Cavalieri's *Rappresantatione di Anima, e di Corpo* (Rome, 1600), recorders are expressly directed to be used solely as substitutes if *sordelline* are unavailable; the latter are meant to imitate 'tibie all'antica'. Mersenne described the keyed *sordellina* (a complex bellows-blown Bagpipe), and they are also listed in contemporary Medici inventories, so it is possible that the term *triflauto* is an abbreviation denoting 'sordellina con tre flauti'.

MARTIN KIRNBAUER

Trigon

(from Gk. *trigōnos*, Lat. *trigonus*: 'triangular').

In Western chant notations a neume signifying three notes, the first two the same and the third lower, or, more rarely, the second higher than the others. Its name refers to its usual shape, three dots set as the points of a triangle. The exact significance of the *trigon* is obscure. Wagner thought that the first note might have been lower than the second by an interval of less than a semitone, hence the differences between scribes writing it on the fixed staff. Cardine suggested that it indicated a peculiarity of performing practice and that it should be sung lightly. (For illustration *see* Notation, Table 1.)

DAVID HILEY

Trigōnon

(Gk.: 'three-cornered').

A term for the Greek Harp (a Chordophone). It is the least ambiguous of the names used for this instrument, the other terms for which include Pēktis, Magadis, Sambuca and Psaltery. Associating any of these terms with a specific type of harp is difficult, as there seems to have been no consistency of usage among the Greeks themselves. Indeed, as Maas and Snyder have suggested, the term *trigōnon*, which originated only in the 5th century bce, may have been coined as a generic term 'for various instruments that bore foreign names and were still relatively unfamiliar to Athenian (if not Eastern) Greeks'.

The Greek harp, which generally took the form of an angular harp as opposed to the arched harp of the Egyptians, appears in three types. By far the most common is the open 'vertical angular' harp (see illustration). The neck of the instrument is the horizontal member, resting on the knee of the seated player. The resonator is the vertical member, rising at an angle away from the body of the player to about the height of the head, where it frequently hooks forwards. Sometimes it grows thicker towards the top, thus affording greater resonance to the longer strings. Harps are generally depicted with considerably more strings than lyres and kitharas; a range of at least two octaves was probably not uncommon. The strings extended vertically, with the shorter strings closer to the body of the player. They were probably tuned similarly to those of the lyra and kithara; representations of the harp show protuberances on the post which may represent *kollopes* (*see* Lyra(i), §2). The second type of Greek harp is a less common variant of the first – the so-called frame harp, which has a supporting forepillar extending from the ends of the resonator and neck. The third type is the comparatively rare 'spindle' harp, an instrument with a resonator that is wider in the middle and narrower at the ends; the resonator of this type is usually depicted away from the player.

Players of Greek harps are generally depicted as females, both amateur and professional. They play the instruments by plucking them with the thumb and forefingers of both hands, usually with the left hand extending further outwards to the longer strings. That harps were played by plucking with the fingers (*psallein*) as opposed to 'striking' (*kruein*) with the plectrum gave rise to the later term for the harp *psaltērion*. Similarly derived is the term *psaltria*, a female harpist, although this term came to be used for female string players in general.

The angular harp was known to the pre-Greek inhabitants of the Cyclades, as attested by a number of marble statuettes dating from the period about 2800–2300 bce that depict a male figure playing a frame harp. There is, however, no more evidence of harps in the Aegean area until the appearance of several references to the instrument in the poetry of 6th-century Eastern Greek authors such as Alcaeus, Anacreon and Sappho. These writers generally use the term *pēktis* and associate it with Lydia. Harps came to be mentioned in Athens in the 5th century and are pictured with some frequency in Attic vase paintings of the second half of the century, but not nearly so often as lyres and kitharas. Harps of the period retained their foreign associations and are among the instruments that Plato and Aristotle excluded from their ideal states.

Trihoris

(Fr., ?from Lat. *saltatio trichorica*: 'a leaping dance of three steps').

A Breton dance of the 15th and 16th centuries. 16th-century sources of information about it include du Fail and Arbeau. Du Fail's description is vague, but he offers the Latin equivalent given above. The extant musical repertory for the trihoris amounts to a single phrase in Arbeau seven semibreves long. Arbeau's step pattern can be repeated with a slight variation. The dancers always move to the left and use kicks and hops in addition to branle steps. According to Guilcher, whose account of the trihoris is extensive, dances similar to it are still danced in Brittany.

Trill. *See* Ornaments, §8.

Triller, Valentin

(*b* Guhrau [now Góra], Lower Silesia; *d* probably at Oberpanthenau, nr Nimptsch [now Niemcza], Silesia, probably in 1573). German clergyman and hymnbook compiler. He was a Protestant clergyman at Oberpanthenau from 1555 to 1573. He compiled the first Lutheran hymnbook in Silesia, *Ein schlesich Singebüchlein aus göttlicher Schrifft, von den fürnemsten Festen des Jares, und sonst von andern Gesengen und Psalmen, gestelt auff viel alte gewönliche Melodien, so zum teil vorhin Lateinisch, zum teil Deutsch, mit geistlichen oder auch weltlichen Texten gesungen seind* (Breslau, 1555, 2/1559 with a rather different title, *Ein christlich Singebuch fur Layen und Gelerten, Kinder und Alten, daheim und in Kirchen zu singen*). Though its influence on the Silesian people was not great, it is of some importance because many of its hymns were reprinted by other compilers; for instance, Johannes Leisentrit used several of them in his Catholic hymnbook (1567), and Michael Praetorius included 11 in the seventh volume of his *Musae Sionae* (1609). Triller's sources were psalms and biblical texts, and he changed 13 psalms into German songs; nearly half of his hymns are intended for feasts. He used both secular and sacred tunes; there are 90 unharmonized melodies as well as seven others in two-part versions and 43 in three-part versions. There is no reliable evidence for the assertion, often found in secondary literature, that he subscribed to the teachings of Kaspar Schwenckfeld.

Trimble, Joan

(*b* Enniskillen, 18 June 1915; *d* Enniskillen, 6 Aug 2000). Irish composer. She was awarded piano, violin and composition scholarships while studying at the Royal Irish Academy of Music, Dublin (1930–36). She received the BA (1936) and MusB (1937) from Trinity College, Dublin, and went on to study at the RCM with Vaughan Williams and Howells (composition) and Arthur Benjamin (piano). In 1940 her *Phantasy Trio* won the RCM Cobbett Prize and she was also awarded the RCM Sullivan Prize for composition. With her sister Valerie she formed a two-piano duo, which was to have a long and distinguished performing history. Her many compositions for the medium include the Sonatina (1940). Commissions for the BBC included *Érin Go Bragh*, a march-rhapsody for brass band (1943), *Ulster Airs* (arrangements, 1939–40) for the BBC Northern Ireland Orchestra (Ulster Airs Scheme), and the television opera *Blind Raftery* (1957). Her setting for voice and orchestra *How dear to me the hour when daylight dies* won the Radio Éireann Centenary Prize in 1953. *Three Diversions for Wind Quintet* (1990) was commissioned by the Arts Council of Northern Ireland for her 75th birthday. An Irish idiom informs her distinctive style, giving it both a rhythmic and rhapsodic quality. Her compositions also convey something of the colour and clarity of French music.

SARAH M. BURN

Trimble, Lester (Albert)

(*b* Bangor, WI, 29 Aug 1923; *d* New York, 31 Dec 1986). American composer and music critic. Encouraged by Schoenberg, who had seen some of his scores, Trimble entered the Carnegie Institute of Technology (BFA in violin and composition, 1948; MFA in composition), where he studied with Lopatnikoff and Dorian. At the Berkshire Music Center he studied with Milhaud and Copland and, in 1950 in Paris, with Boulanger, Milhaud and Honegger. He returned from Paris in 1952 and settled in New York, where he was managing editor of *Musical America* (1960–61) and executive director of the American Music Center (1961–3). From 1963 to 1968 he was professor of composition at the University of Maryland and then was appointed composer-in-residence with the New York PO by Bernstein (1967–8). In 1971 he joined the faculty of the Juilliard School and in 1973 he became the first composer-in-residence at Wolf Trap Farm Park.

Trimble wrote criticism for the *Pittsburgh Post-Gazette* while still a student. In 1952 he was engaged by Virgil Thomson as a critic for the *New York Herald Tribune*, a post he held for ten years. He was also music critic for *The Nation* (1957–62), the Washington *Evening Star* (1963–8) and *Stereo Review* (1968–74). After studying with Lopatnikoff he withdrew his earliest compositions; the first catalogued works are the Duo for viola and piano and the First String Quartet (both 1949). These and later works demonstrate an inclination towards lyricism, with close-knit thematic organization, intense harmonic and instrumental coloration, distinctive melodic contours and original formal structures. The *Five Episodes for Orchestra* (also in a version for piano) is his only work to use 12-note techniques, but in character it is more closely related to the music of Ives than to that of the Second Viennese School.

Trimble's concern with thematic unity culminated in the composition of his Second Symphony (1968), based entirely on elements from a single lyrical theme. He later sought to create a different structural technique – one which would allow him freedom of improvisation, montage and aleatory procedures without relinquishing a tight control over all the compositional elements. In this the 'drip' paintings of Jackson Pollock and Trimble's own work at the Columbia-Princeton Electronic Music Center were catalysts, and the result was a series of eight diverse instrumental works, which he called *Panels*.

ALLEN HUGHES

Trinado

(Sp.).

Trill. *See* Ornaments, §2.

Trinidad and Tobago, Republic of.

Country consisting of an archipelago situated off the coast of South America. The two main islands of the republic are the most southerly of the Caribbean islands, lying 12 km off the Venezuelan coast. Trinidad and Tobago gained independence from Britain in 1962 and remains a member of the British Commonwealth. Trinidad's so-called plural society (pop. 1,340,000, 2000 estimate) has two main racial groups: African (43%) and East Indian (40%); minorities include Europeans, Chinese, Venezuelans, Syrians and Lebanese. The indigenous Amerindian population (Arawak) died tragically from European-born viruses during the period of Spanish dominance (1498–1797). Tobago was not settled before the arrival of Columbus (1498). During British rule, slaves from West Africa (until emancipation in 1838) and then East Indian indentured labourers (1845–1917) were conscribed to work on the islands' sugar-cane plantations. These immigrants contributed their languages, religions and musics to the modern cultural mosaic. While English is the official language, French patois (Creole) and Bhojpuri (a Hindi dialect) are still popular in song and colloquial speech, particularly in rural areas. The statistics for religion are as follows: Roman Catholic (32%), Protestant (29%), Hindu (25%) and Muslim (6%). The mixed ethnic composition, the multiplicity of religions and the contrasting cultural backgrounds of the islands' peoples have drawn generations of anthropologists and ethnomusicologists to study these popular tropical tourist resort islands.

HELEN MYERS

Trinidad and Tobago

1. Amerindian heritage.

Archaeological excavations indicate that Trinidad's Neolithic Arawak population engaged in agriculture, ceramics and weaving; no musical instruments have been unearthed, possibly indicating their music was primarily vocal. 19th-century historical sources mention an Arawak dance, the *arectoe*, performed at sporting events and accompanied by choral groups, drums and conch trumpets. Some researchers, with scant evidence, have argued that calypso has its roots in the topical, humorous Arawak *carieto* (*arieto*) songs, but no trace of ancient Arawak music is evident in modern times.

Trinidad and Tobago

2. Shango and syncretized cults.

The musical history of Trinidad is riddled with contradictions and problems of nomenclature: the 'Indian' music of the island is of Hindu immigrants from India, not Amerindian groups; the Hispanic influences derive from recent trade and migration with Venezuela, not from the centuries of Spanish rule; and Muslim music is performed by Asians and Africans alike.

But without dispute, the most well-known and widespread music of Trinidad and Tobago is that of the African-derived population, comprising over half a million creoles, most of a mixed ancestry of black slaves and their white landowners. From the 16th century to the 19th, slaves were brought to Trinidad from the Guinea coast (groups such as the Fon, Ewe and Yoruba), western Sudan (Nupe, Hausa and Mandinka) and the Congo area (Kongo). Following emancipation in 1838, former slaves continued to migrate to Trinidad from the French and Hispanic Caribbean, and free blacks from West Africa. In the 1940s the anthropologist M.J. Herskovits explained the unique music and culture of these 'New World Negroes' in new terms including 'acculturation', 'cultural focus', 'survival', 'reinterpretation' and 'syncretism', contentious ideas about culture change that spirited the debate of his scholarly generation (and beyond). In *The Myth of the Negro Past* and *Trinidad Village*, Herskovits discussed African musical retentions of the Spiritual ('Shouter') Baptists and the Shango cult of the isolated north-eastern coastal village of Toco.

Shango exemplifies acculturation, combining Nigerian Yoruba religion with Christianity. Herskovits grouped Shango with other New World syncretic cults, including Haitian Vodou, Cuban Santería and Brazilian Shango (or Xangô). These worshippers all believe in spirit possession, animal sacrifice and a combination of African and Christian deities. Each deity in Shango is identified by songs and drum patterns: Abatala, Ajaja, Elephon, Emanjah, Eshu, Mama Latay, Ogun, Osain, Oshun, Oya and Shango (of African derivation); Gabriel, Raphael, St Anthony, St George, St Joseph and St Peter (of Christian derivation).

Herskovits emphasized African retentions in Shango song style, including body-swaying during singing, leader-chorus form, the use of rattles, hand-clapping (with cupped, rather than flattened, palms), polyrhythm and double-headed drums which resemble Yoruban *bata* drums. The two larger Shango drums, the *bemba* and the *congo*, are beaten with one stick, the smaller *oumalay* (or *omele*) with two. Drums are usually accompanied by the *shak-shak*, a small calabash rattle. Cult members believe the two larger drums can speak to St Michael and St John the Baptist (Catholic equivalents of Ogun and Shango). Other songs are accompanied with a single-headed box drum (see ex.1).

Other African-derived Trinidadian genres are the *bongo*, the *bele* and the reel, all dance styles accompanied by creole songs. The all-night performance of *bongo* at a wake is thought to placate the spirit of the deceased; the *bele* and reel are also performed at wakes as well as on holidays. Herskovits noted that *bele* performances were vigorously opposed by local Christian priests: *bele* singing, he explained, is led by a 'captain' who makes offerings of rum and rice, then slays a sacrificial goat or fowl (or both). The drummers, singers and other mourners sip the sacrificial blood while the sacrificial meat is cooked and eaten. *Bele* dance songs (like Shango songs) show the retention of the West African leader-chorus style (ex.2).

Herskovits assumed that most 'survivals' dated from the pre-emancipation period. Some Africanisms of contemporary Trinidad cult music, however, were introduced by free blacks who came to the islands in the second half

of the 19th century. Alan Merriam, a student of Herskovits, found African traits retained in the music of the Rada cult, a community from Benin (formerly Dahomey), founded in Trinidad in 1855 by a free African *bokono* (diviner). Richard Waterman, also a Herskovits student, analysed African musical survivals in Trinidad (1963), drawing on the concepts of reinterpretation (assigning new values to borrowed cultural forms) and syncretism (similarities between distinct cultural forms providing a basis for their fusion). He pointed out that 'since there was little reason, in terms of pressure from the rest of the [New World] culture, to change many diagnostic elements of the West African musical style, it changed only through the incorporation of new musical elements that could be reinterpreted to fit it'.

Trinidad and Tobago

3. Creole music.

(i) 'Mas', street marches and the band system.

Calypso, the hallmark of Trinidadian art, developed in the 19th century, blending Hispanic, British, French and African influences to form a uniquely creole expression that has spread from its original source in Trinidad to the entire circum-Caribbean area. The history of calypso is linked with the celebration of Carnival in Port of Spain. During the 18th century Trinidadian Carnival was organized by the European ruling classes. But following emancipation it was taken over by blacks, creoles and Spanish peasants, who transformed the sedate Christian holiday into a rowdy, disorderly festival, introducing *canboulay* (*cannes brûlées*, 'cane burning'), a night-time torchlight procession including wild stick fights between *batonniers*, and the robust singing of French patois *kalindas*, the antecedent of the calypso. *Kalindas* celebrated black liberation and the starring singers, *chantuelles* (*shantelles*, *shantwells*), were accompanied by the din of horns, conch shells, rattles and African-type hourglass drums (*doun doun*).

In the 1850s and 60s the white ruling classes suppressed these often violent and riotous masquerades and revelries ('mas'), protesting against the obscenity of the *kalindas*, with their lewd dancing and noisy instruments. In 1881 conflict between blacks and whites resulted in two days of rioting in Port of Spain and led to the prohibition of torchlight processions. The Peace Preservation Act of 1884 banned African-style drums, but time has proven that these prudish laws could not prevent the growth of Carnival into a national (and eventually international) celebration.

From 1890 to 1900 the 'band system' developed. Masqueraders from Port of Spain neighbourhoods organized large groups of revellers wearing highly-styled costumes based on themes from history and current events. To circumvent the ban on African drums, *tamboo bamboo* bands were improvised by raucous groups banging together stamping tubes (various lengths of bamboo), knocking them with pieces of wood or metal, or pounding them against the ground. Late 19th-century songs, in the popular tongue of Creole English, dealt with topical events from the illustrious Port of Spain underworld, the lyrics commenting on political gossip and scandal.

(ii) Calypso and social commentary.

Like many West African songs, calypso has response patterns, litany forms and short repeated phrases. The calypso melodies, however, are mainly European-derived (some 50 melodies are continually being set to new texts). This eclectic genre is accompanied by the Hispanic *cuatro*, a small four-string Venezuelan guitar. Social criticism and satire, a hallmark of West African praise singing, is still the most acerbic trademark of modern calypso. The history of Trinidad and Tobago and the complex social relations within this plural society have, over the decades, been described in calypso. Around the beginning of the 20th century, the fashionable language of the white landowners became the new language of calypso, and artists attacked each other on points of grammar in *picong*, calypso battles. Lord Executor, who began singing around 1890, addressed singer Atilla the Hun in this 1901 calypso (Rohlehr, 1990):

> I admire your ambition, you'd like to sing
> But you'll never be a kaiso king
> To reach such a height without blemish or spot
> You must study Shakespeare, Byron, Milton and Scott.
> But I'm afraid I'm casting pearls before swine
> For you'll never inculcate such thoughts divine
> You really got a good intention, but poor education.

Calypsonians also specialized in mocking the various religious sects of Trinidad; in this pastime no group was spared abuse. Similarly, 'race calypsos' singled out the minority populations of the islands and in humorous song released feelings of ethnic tension. Between World War I and II, many calypsos chronicled the development of Trinidad's independence movement.

Beginning around 1930, with the rise of the recording industry, calypso came under criticism for becoming commercialized; but as many calypsonians achieved international reputations (including Lord Executor, Lord Beginner, Atilla the Hun, the Mighty Sparrow and Edward the Confessor), commercialization became another distinguishing trait of this Trinidadian musical contribution. Nonetheless, the Ordinance of 7 December 1934 instituted measures for protecting the 'public safety' from calypso lyrics, followed by official censor of calypso records in 1938.

(iii) Steel bands.

Poverty and a local ban on drums dating from the 19th century inspired lower-class rebellious teens to contrive this unique melodiously percussive ensemble. The Steel band (*see* illustration) seems to have evolved from masquerade bands of Carnival processions, particularly the *tamboo bamboo* bands of 'Hell-Yard', Port of Spain, that had enlarged by the 1930s to include such ad hoc instruments as soap boxes, biscuit tins, dustbins, gin bottles and odd bits of iron. After World War II, bandsmen developed a technique whereby the discarded American 55-gallon oil drums littering the island could be fashioned into a tuned idiophone whose tempered steel extended the range and musical versatility of their groups. Bandsmen became local stars in their own right as the 'Bar-20' players: 'Batman', Anderson, 'Scribo' Maloney, 'Red Ozzie' Campbell, 'Big-Head John' Pierre and his brother 'Bitter-Man'. The 'band wars' of 1945 between 'Hell Yard' and 'John-John' led to widespread street fights between rival bands, a

notorious urban problem, whereby membership in a band was thence forward interpreted as hooliganism signalling creole disdain for European norms. A 1963 survey by the Ministry of Community Development reported that steel bands drew their members from teenage groups that mistrusted the upper classes and showed a high incidence of delinquency and unemployment.

The manufacture of pans (steel drums) is a highly specialized skill. Instruments are not standardized, as the fierce competition between rival bands has fostered innovation and experimentation in pan design and tuning. Drums are made in families; bass pans (formerly called tuned-booms), rhythm pans (including double second pans, double guitar pans, treble guitar pans and cello pans; formerly tune boom or kittle), and tenor pans (formerly ping-pongs) for the melody. The layout of the pitches on the surface of the head usually varies from maker to maker.

Modern steel bands have added vibraphones, cow bells, congas, bongos, triangles and other percussion instruments to the basic pan family. In Carnival processions, the small high drums are slung from the player's neck, and large drums are mounted on enormous movable frames.

By the 1970s, an estimated 200 bands with some 5000 players were established in Trinidad. Steel bands no longer have an antisocial stigma, and island-wide, government-sponsored competitions have led to rigorous standards of performance in both village and city groups and to virtuoso overseas performances, with programmes including well-known pieces from the Western art music repertory. Trinidad creoles have introduced their music and lively Carnival celebrations to cities in Britain, Canada and the US, while calypso and steel bands have also permeated most other Caribbean islands, where they have become important tourist attractions.

Trinidad and Tobago

4. Parang and other Hispanic forms.

Trinidad's Venezuelan minority in the towns of Lopinot, Santa Cruz, Gran Curucaye and Penal maintain Hispanic customs, for instance the *veiquoix* (*velorio de la cruz*, 'wake of the cross'), which includes the competitive singing of *décimas* and the Venezuelan *fandang* dance. But *parang*, the typical Hispanic Christmas songs of the island, which evolved during the 18th and 19th centuries among the African-Spanish cocoa workers, are popular throughout Trinidad. The term derives from the Venezuelan-Spanish *parada* ('to stop' or 'to put up'), signifying the strolling of four to six men, serenading from house to house and accompanied by *cuatro*, violin, mandolin, guitar and *shak-shak*, with ballroom-style dancing, all-night celebrations and ginger-beer drinking.

The centre of Venezuelan music was Cedros village, at the south-western tip of the island, in sight of the Venezuelan mainland. Traditional *parang* sessions included the Spanish genres, most in leader-chorus style, such as the *aguinaldo pasión* (*serenaldo*, *serenal*) about the birth of Christ, *joropo* with dancing, *galerón*, *estrebio*, *paseo*, *manzanare* and the triple-metre *castillian*. Before Independence, *parang* flourished mainly in the villages of Trinidad. During Advent 1967, the first *parang* competition was held, with five contestant groups; in 1969 the 'National Parang Champions' contest

was staged in Woodford Square in Port of Spain, drawing big audiences and various groups with commercial sponsorship.

In modern Trinidad, *parang* is growing in popularity, thanks to radio, television, the local record industry and island-wide competitions. With national acclaim from those of both African and East Indian descent, *parang* style has become more unified, including less village serenading, more standardized hit tunes and rehearsed shows on city stages.

Trinidad and Tobago

5. Music of the Muslim community.

6% of the population is Muslim, and Islamic devotional forms, including the call to prayer and Qur'anic chant, are performed in city and village mosques and in Muslim elementary schools where children sing *kaseeda* (*qasīda*), devotional songs.

Around Carnival time, the Muslim festival of Hosay is celebrated in full splendour in Port of Spain, San Fernando and the smaller Trinidad cities. This special ritual, called Ta'ziye in the Middle East, commemorates the martyrdom in 684 ce of Imam Hussein, the grandson of Muhammed. The festival is held on the tenth day of the Islamic lunar month of Muharram and isa solemn and mournful ritual incorporating breast-beating, wailing and self-flagellation with small whips.

In Trinidad, during the 1850s, Hosay became the outlet for East Indian national feeling (both Hindu and Muslim), culminating in the San Fernando Hosay Riots of 1884. In modern times, Trinidad Muslims have transformed Hosay into a high-spirited season that vies with Christian Carnival and Hindu Holī for colour, drama and excitement. Families or neighbourhoods set up tents, in which they erect elaborate floats of paper rosettes decorating a bamboo frame 3 to 6 m high. These complicated constructions, replicas of the tomb of Hussein, take some six weeks to construct, are decorated with giant birds, columns, turrets and cornices, and are topped with a large dome. They are brought out for between three and seven days, and the festival concludes with a procession to the nearest stream or river where the floats are immersed in the water and pushed out to sea. In modern processions, trained men carry large shining half-moon cutouts across their shoulders and bedazzle onlookers with swirling dances. The march is accompanied by *gatak* stick fighting, jumping-up and rum drinking, all to the rhythm of *tassa* drummers, the same groups who perform at Hindu weddings. The rhythmic patterns for Hosay, however, are unique, including *sada mahatam*, signifying the preparation for the battle of Karbela, *tin chopa*, indicating the beginning of the battle, *chalta mahatam*, suggesting the full rage of the battle and *nabbie sarrwar*, the solemn pattern that marked the burial procession for Imam Hussein.

Hindu and Muslim festivals were incorporated into the Trinidad national calendar in the 1960s. In this festival-infatuated society, the sectarian nature of these street celebrations has broken down as people of all religions join in for fun.

Trinidad and Tobago

6. East Indian music.

The abolition of slavery throughout the Empire in 1838 triggered a labour shortage that brought the Trinidad economy to near ruin, a crisis averted with the introduction to the British Caribbean colonies of indentured labourers from India. The forebears of today's 525,000 Trinidadian East Indians (a significant segment of the 8·5 million South Asians living overseas) were brought between 1845 and 1917; many remained, and at the turn of the millennium their descendants still occupied the swamp land along the western coast and the central interior county of Caroni. Nearly all Trinidadian Indians speak English as their first language, yet they sing songs in an Indian language: Hindi, Sanskrit or Bhojpuri (the Hindi dialect that served as a *lingua franca* on the old plantations).

The music of these impoverished immigrants is first described in logs of the ships that transported labourers from the ports of Calcutta and Madras to Port of Spain. Over the 150 years since this community was established in the New World, they have abandoned caste and the *jajmānī* patronage system.

(i) The Bhojpuri repertory.

North Indian village songs in Bhojpuri were still sung in Trinidad as recently as the 1960s and 70s, including *byāh ke gīt* and *lācharī* (wedding songs), *godna* (for the ritual tattooing of the bride), *sohar* (after childbirth), *kajarī* (for the rainy season) and *chautāl* (for the springtime festival of Holī). Vestiges of these songs remain.

The traditional Hindu three-day marriage ceremony includes 30 to 40 unaccompanied *byāh ke gīt*, describing the marriage of Rāma and Sita as told in the Hindu epic, the *Rāmcharitmānas* ('The Lake of the Acts of Rāma') by the illustrious Gosvamī Tulsī Dās (1552–1623). The strophic texts of wedding songs are in leader-chorus style, as sung by groups of older women in an older and creolized form of Bhojpuri. The songs typically have undulating melodies of a limited range, in duple metre or an easy swinging alternation of twos and threes (as with *kaharwā tāl*, eight beats, or *dīpchandī tāl*, 14 beats). Women singing at weddings use a full-throated style with a low tessitura, typical of village singing in India.

The Bhojpuri wedding songs of Trinidad are strikingly similar to those of Ghazipur, Gorakhpur, Ballia, Varanasi and Azamgarh districts of Uttar Pradesh, India, including that for the ceremony of *kanyādān* (the giving of the virgin daughter), for the dusting of the blood-red *sindū* (vermilion) powder in the parting of the bride's hair, and for the couple entering the *kohobar*.

Lachārī, amusing and gently teasing songs performed by half-a-dozen to a dozen women, are sung during cooking, the wedding feasts and long delays while the rites are being performed. *Lachārī* derive from a 19th-century Indian genre, and in Uttar Pradesh they are now mostly replaced by *gāli* (rough and funny songs of sexual abuse). *Lachārī* (cognate or corresponding with the north-eastern Indian forms as *lachī*, *nakatā* and *jhūmar*) are accompanied by the double-headed *dholak* drum, and such simple instruments as *manjīrā* finger cymbals, the *dhantāl* stick idiophone,

tambourines and *shak-shak* rattles, played by the singers. However these traditional folksong genres are slowly being forgotten in Trinidad, as are some of the ceremonials they accompanied.

Wedding processions and dancing are still accompanied by a *tassa* ensemble of two kettledrums of Islamic derivation, with goat-skin heads (tuned over an open fire), and an extremely heavy cylindrical, double-headed 'bass' drum. *Tassa* drums are played with a pair of sticks ('chupes') and their repertory consists of a series of 'hands' comparable to some of the duple-metre *tāl* of north India. *Tassa* hands are named after song genres, Indian festivals or West Indian matters: *tillāna*, *chautāl*, *kabīr*, *ulārā*, 'wedding', 'one-way drum', 'calypso-steel band' and 'olé'.

Around Carnival time, East Indian Hindus celebrate their springtime festival, Phāguā or Holī, with lively men's songs, *chautāl*, accompanied by vigorous *dholak* drumming and clanging of pairs of *jhāl* (cymbals). *Chautāl* songs proclaim the victory formula (*jaykārā*): 'Shout victory to King Rāmachandra! This is the happiness of salvation. Oh, as the sun rises, darkness fails, as the bee of the pond was caught out of love, oh, praise Sita and Rāma!' With rice-planting time and the rainy season, the village women of Trinidad remember *kajarī*, songs of love and longing reminiscent of the oriental monsoon.

Some Bhojpuri songs of Trinidad have been forgotten in north-eastern India, the land of their origin. Certain Indian singers, when listening to recordings of Trinidad ladies, explained that these songs are '*bahut purana*' ('very old') and no longer sung, an example of marginal survival whereby old traditions are preserved by isolated immigrant communities.

The *dhantāl* (metre-long iron rod, struck with a curved metal beater), used to accompany *lachārī* and local classical songs, is an other example of marginal survival. The *dhantāl* is common in Trinidad, but has disappeared from eastern Uttar Pradesh where it was once used to accompany men's *birahā* (song-stories). Although *birahā* singers in north-eastern India recall such an instrument being played formerly, they now use iron clappers (*kartāl*).

(ii) The devotional repertory.

During the 'Hindu Renaissance' of the late 19th and early 20th centuries, reformist organizations in India sent Hindu missions to overseas diaspora groups. In 1917, missionaries from the Bombay-based Ārya Samāj ('Society of Aryans'), including Pandit Mehta Jaiman and Pandit Ayodhya Prasad visited Trinidad with the intent of reconverting Presbyterian East Indians to Hinduism. They taught the Vedic *sandhyā* and *havan* (*homa*) rituals, together with Vedic chants in Sanskrit (accompanied by drone-producing instruments such as the harmonium or *tambura*) and a new repertory of *bhajan*, Hindu devotional songs.

Beginning in the 1960s, Hindi *bhajan* and Vedic mantras have been taught in the Hindu primary schools. Trinidad *bhajan* have unconventional leader-chorus forms with 'cue lines' by the leader to signal the refrain or new verse for the chorus; many praise Rāma while the texts of *nām kīrtan*, a *bhajan* type, repeat the various names and epithets of the deity.

In 1974, the Sai Baba movement of India reached Trinidad and brought another style of worship and a repertory of short catchy *kīrtan* songs. Trinidadians reported miracles in their homes (*vibūthī*, 'sacred ashes') and tears of honey flowing from portraits of the contemporary saint, Satya Sai Baba. The energetic, highly repetitive Sai Baba songs emphasize accelerando and crescendo as the excitement of the *kīrtan* builds, then enthusiastic hand-clapping with the loud accompaniment of small percussion instruments as well as *dholak* and harmonium, all amplified by an in-house public address system. The melodious tunes and short texts serve well for a Hindu population whose grip on Hindi has deteriorated over the decades (by the 1970s, most East Indians in Trinidad spoke only English).

(iii) Local classical music.

During the early years of the 20th century, a distinctive form of local classical singing developed in Trinidad, with genres carrying such names as *sargam*, *ghazal*, *thumrī*, *dhrupad*, *tillānā* and *dōha*. Most formal singing during the 19th and early 20th century took place at night, with public contests between rival artists sometimes lasting until dawn. Song duels, still popular in Uttar Pradesh villages, were fought out by the early 'songsters' (in Bhojpuri, *gayak*, 'singer'). Each hour of the night had a prescribed song form, just as the theory of classical Indian music assigns each *rāg* to a particular time. Trinidadian scholars explain that the function of the *rāg* as a modal form was not followed in Trinidad, where performers used *rāg* names to identify melodies or well-known compositions, hence 'a *bhairavī*' or 'a *kāfī*'. A 'Quawal Song' recorded by Sayyeed Mohammed in the 1940s says: 'Let us go to a foreign land, my love, without you my heart is trembling, I found myself in the whirlpool of love.' An unusual example recorded in the 1930s by local star Jugrue Quawal praises the Rajasthani Hindu queen and poet Mirabai and the Muslim prophet Muhammad in this 'Quawali Song': 'Among all prophets the great Mirabai is the greatest, you drank poison from the blessed bowl. Oh, Muhammad you are the greatest of God's prophets, the beloved of everyone.' Another songster, Benny Sewnath, recorded this *bhajan*: 'You will find Shyām [Krishna] inside, not in your grandfather, nor in stone icons, nor in sacrifice, nor in the corner of the temple. You will find Shyām within yourself.' European and American scholars who have characterized this 'local classical' music of Trinidad as a corrupted or distorted version of the classical music of India (even taunting it as 'tattered rags') have missed the charm of New World transformation and mistakenly assumed that Trinidadian composers knew of Indian classical music before it hit the Americas in the 1960s.

(iv) Film and popular music.

In 1935, *Bāla Joban*, the first Indian talkie, opened in San Fernando, inaugurating a wave of local composition and the development of an island music industry. Month by month from the 1940s onward, Hindi films became a source for singers to enliven their repertory, albeit from the glitzy Bollywood studios, themselves much influenced by the Latin American and US pop scenes.

In 1936, the first shipment of Indian records reached Trinidad, together with a new set of 'light classical' pieces: *ghazal* and *thumrī*. In 1947, Radio

Trinidad (the island's first station) opened, and by September of that year a regular programme of local Indian music was aired. By the 1960s dozens of Indian orchestras played film music arrangements at weddings, parties and bazaars, on radio and on the weekly television programme *Mastana Bahaar*. These ensembles include electric guitars and keyboards, a drum set, sometimes mandolin, *congo* drums, bongos, trumpet, violin and saxophone, as well as the occasional traditional Indian instrument (the *bānsuri* (flute), *dholak* and *tablā* drums).

Indian classical music *per se* was introduced to the island in 1966 by artist H.S. Adesh, and tens of students have since studied *sitār*, *tablā* and Hindustani classical vocal music.

(v) Chutney.

The popular hot songs of the 1990s youth culture are Chutney, also known as Indian soca (soul plus calypso); they draw on the old local classical repertory and traditional instruments but with a disco beat and accompany drinking and dancing in a nightclub setting. Sharlene Boodram's 1994 competition-winning hit 'Chutney Time' is typical, with its driving intensity, rap style and English text with occasional use of Hindi vocabulary: 'Tie your *dhōti* man, tie it up cause *chutney* down it extremely hot, we say come down! Form a little ring man, and I do a little thing man, and a wiggle of your body, and I make your waist thin!' *Chutney* rap, *chutney jhūmar*, *chutney lambada*: the scene is alive with innovation as Caribbean styles are mixed with Bombay film music and US pop, and suggestive titles are commonplace. Disco artists from India, notably the singer Kanchan and her husband Babla, have made hit arrangements of Trinidad soca and of *chutney* songs, adding to them the studio techniques of Hindi film songs. The local recording industry thrives in Trinidad, with many small private labels as well as the widely distributed releases of Windsor Records, Port of Spain. East Indian recordings from Trinidad are available from New York distributors who provide prompt mail-order service for the expatriate Trinidadian East Indian immigrants in the US and Canada.

Trio

(It., from *tre*, formed in imitation of *duo*).

(1) A piece of music for three players. The commonest types are the Piano trio (piano, violin, cello) and the String trio (violin, viola, cello); *see also* Chamber music, Trio sonata and (for vocal music) Terzet.

(2) In the 18th century, the term 'trio' was applied to an instrumental piece for three obbligato voices, without further accompaniment, in strict style. Many such pieces belong to the realm of academic music, being used by theorists to demonstrate rules of counterpoint and composition. There are, however, trios of this kind in the keyboard music of J.S. Bach, notably in his organ sonatas and his sinfonias (or three-part inventions), where all three voices are equally important and all three are continuously engaged in working out the musical ideas. The canons of the Goldberg Variations, except that at the 9th, are trios. Trios are also prominent in his organ chorales, where the variety in treating various combinations of voices is striking.

Related to the strict trio is the permutation fugue, cultivated in 17th- and 18th-century Germany by such composers as J.A. Reincken and J.S. Bach. In this technique neither episodes nor harmonic digression are allowed, but rather a subject and two countersubjects are presented continuously, as the voices exchange material. Reincken's Trio Sonata in A minor (1697) has as its second movement a textbook example of a permutation fugue; the sonata was transcribed by Bach as the keyboard sonata bwv965.

(3) From the 17th century onwards, the second of two alternating dances was called a 'trio' whether or not it is actually scored for three voices; a typical form is minuet–trio–minuet da capo. The trio of this kind is a common feature of 17th- and 18th-century music for dancing; its main purpose is to provide enough music for the figures of an entire dance (for an ordinary minuet may require more than 120 bars of music). The alternation of two dances provides opportunity for variety in texture and sonority. Lully alternated two minuets in the Prologue to *Armide*; the first, in his normal five-part string scoring, is followed by a trio for two oboes and bassoon. In the prologue to *Persée*, a passepied *en trio* is played (two oboes and bassoon) and sung (two sopranos and continuo) in alternation a total of five times to provide enough music for the dancers.

An analogous use of the term is Georg Muffat's, in *Ausserlesene Instrumental-Music* (Passau, 1701; Eng. trans. in *StrunkSR1*), a set of 12 concerti grossi, where 'trio' signifies 'concertino' or 'petit choeur'. The ripieno is for five-part string orchestra and the trio or concertino is for two oboes and bassoon or strings. There are many dance movements in Muffat's concertos, but the trio scoring is used not for long-range contrast (as in the dance suite) but for dynamic contrast within a single dance: he often started a dance movement with the wind trio playing alone; the repeat is then written out with much fuller scoring. Muffat said in his foreword that in the sudden contrast 'of loud and soft, the ear is ravished by a singular astonishment'.

The suites of J.S. Bach contain many bourrées, gavottes, minuets and passepieds alternating with trios which, although as likely to be in two or four voices as in three, are still labelled 'trio'. There are also many independent dances in three voices: an example is the sarabande *en trio* in his Suite in E♭ bwv819. Two or even more different dances may be used in alternation: the minuet of Bach's Brandenburg Concerto no.1 alternates with a trio (oboes and bassoon), a polacca or polonaise in 3/8 (strings) and a second trio in 2/4 (two horns and unison oboes). The bourrée from the Prologue to *Achille et Polixène* by Lully and Collasse alternates with a minuet; and Mozart wrote a pair of minuets with alternating contredanses (k463/488*c*).

Most trios of the 17th and early 18th centuries are in the same key as the movements to which they belong, though they often involve a contrast between major and minor modes. During the Classical period composers often cast trio sections in remoter keys, particularly Haydn (for example the trios in E♭ and D♭ to movements in G and F respectively in the op.77 string quartets) and Beethoven (Symphony no.7, trio in D to a movement in F). Trios of this period are usually lightly scored: in the trios of his late

symphonies Haydn often wrote a woodwind melody with a simple accompaniment, and in several Beethoven symphonies (e.g. nos.1, 3, 4, 8 and 9) the trio is given a distinctive character by the prominent use of wind instruments and lighter textures. Mozart (Serenade k361/370*a*, Symphony no.36) and particularly Schubert (Symphony no.5) often gave their trios a ländler-like character. Several composers, including Mozart (Serenade k361/370*a*, Clarinet Quintet) and Schumann (Symphonies nos.1 and 2) used two different trios, providing more extended movements in the form *ABACA*; Beethoven (Symphonies nos.4 and 7) has a single trio recur, as does Schumann (Symphony no.4), in the form *ABABA*. Several composers from the time of Beethoven (Symphonies nos.6 and 9) onwards used contrasting metres in their trio sections. The term 'trio' was still used in symphonic works by Brahms, Tchaikovsky, Bruckner and Mahler, and the concept of a contrasting or lightly scored middle section to a scherzo-type movement, even without the term, persisted well into the 20th century.

A type of partsong. *See* Canti carnascialeschi.

Trio sonata.

A term applied to Baroque sonatas for two or three melody instruments and continuo. Many trio sonatas are for strings, but wind instruments (cornetto, oboe, flute, recorder, bassoon) are also found. The melodic parts are usually of equal importance, although the bass may be less active. Trio sonatas were perhaps the most popular instrumental music of the period, written by composers throughout Europe and eagerly consumed, especially by amateurs. Their three-part texture could also be rendered by a single melodic instrument and obbligato keyboard, and some sonatas exist in

both formats; Bach's organ trios (bwv525–30) demonstrate the transfer of the idiom to two manuals and pedal.

In the 17th century, Italian church sonatas *a due* and *a tre* were composed for two (ss, bb, sb) or three (ssb, sbb and sss) instruments and continuo; melodic bass instruments participated fully in the contrapuntal dialogue, which was simplified in the chordal continuo. From Rossi to Corelli secular trios ordinarily had a single bass part, played by a chordal or melodic instrument (chitarrone in Rossi's trios, bowed string in Buonamente's). Corelli's sonatas conform to this pattern, opp.1 and 3 requiring four instruments (two violins, violone or archlute, and organ), opp.2 and 4 needing only three (two violins and violone or harpsichord). After 1700, most English and Dutch editions treated church and chamber sonatas identically; thus Roger's version of Corelli's op.2 has four partbooks (two identical ones for the bass) and is entitled *Suonate da camera à tre, due violini e violone, col basso per l'organo* (Amsterdam, *c*1706).

From the late 17th century, composers strongly favoured scorings for two treble instruments, with or without bass; moreover, melodic bass and continuo were less and less independent, although Buxtehude still wrote virtuoso sonatas for violin, bass and continuo. In his description of the trio and quartet, Quantz recognized the dual function of the continuo bass (it must participate fully in any fugal passages, yet must have a true bass quality) and included it as he counted the parts (*Versuch*, 1752, chap.18). Thus, his quartet is identical with the earlier trio for three treble instruments, or two treble and one bass, with continuo. Similarly, Quantz's trio has two principal parts and continuo, just like the earlier sonata *a 2*.

SANDRA MANGSEN

Trip hop.

A form of 20th-century club dance music. It owes part of its sound to hip hop, although it is considerably slower, generally using lugubrious, loping 4/4 rhythms, and also takes in influences from electro, jazz and techno.

Early trip hop from 1994 was heavily based on hip hop, with artists such as RPM, La Funk Mob and DJ Shadow manipulating hip hop beats with scratching and sampling. The following year, the sound developed further and, with the advent of artists such as Tricky and Portishead, became more song- than sound-based. Instrumentation tended to be sparse: keyboards and percussion were common, but a string section, guitars or a DJ less so. There was an emphasis on the bass line, either electronically generated or from a bass guitar, and on the slowed-down hip hop rhythms. It was frequently repetitive, riff-based and in the minor key, and also differed from earlier trip hop in that it used vocalists, frequently both rappers and singers. The groove-based *Protection* by Massive Attack, Portishead's song-based eponymous début album and *Maxinquaye* by Tricky, which mixed both approaches, are the three albums that best define the style. The term itself soon became despised by those labelled with it, and the core of artists from whom the phrase had been coined developed a less generic sound, arguably to rid themselves of the tag. However, it continued to influence mainstream pop music, particularly through its rhythms and tempos, until the end of the 1990s.

WILL FULFORD-JONES

Tripla

(Lat.: 'triple').

In early music theory, the ratio 3:1. In terms of musical pitch, two lengths of the string of the monochord in this ratio sounded the interval of a 12th. In the system of Proportional notation of the late Middle Ages and Renaissance, *proportio tripla* indicates a diminution in the relative value of each note shape in the ratio 3:1. As the most frequently used proportion involving a triple mensuration was the *sesquialtera* (3/2), the simple *tripla* sign (3) was often used to denote this proportion. It was in this sense that *Proportz tripla*, or merely *Proportz*, was used as the name of a *Nachtanz* derived from a preceding duple-time movement in 16th- and 17th-century Germany. In modern practice, triple time has three beats to the bar.

A fugue on three subjects. *See* Double fugue.

Triple punctum.

See Bi–punctum, tri–punctum.

Triplet

(Fr. *triolet*; Ger. *Triole*; It. *terzina*; Sp. *tresillo*).

A group of three notes to be performed in the time of two of the same kind, or in the time of any number of another kind. They are indicated by a figure *3* usually under a slur (ex.1). The slur and figure may also signify a two-beat note plus a one-beat note; and rests may take the place of any of the notes. The slur and figure used in this way do occur in the 16th century, but were not common until the 19th.

Triple time.

In modern practice, three beats to the bar. *See* Tripla.

Triple tonguing.

In wind playing, a technique employed for the clean articulation of detached notes in the fastest tempos (*see* Tonguing). The tip and back of the tongue are used alternately, forming the consonants 'T' and 'K' in succession. Thus triplets will be articulated 'T–K-T' or when dotted 'T–T-K'. Many wind players, notably flautists, have worked out their own methods of dealing with different articulations.

PHILIP BATE

Triple virga.

See Bi-virga, tri-virga.

Triplum, triplex

(Lat.: 'triple', 'threefold').

Terms used in medieval theory to denote principally (1) three-voiced polyphony. In 13th-century theoretical writing both terms were used as nouns in this sense, or as adjectives in phrases such as 'organum triplum' and 'triplices conductus' (*see* Organum and Conductus).

(2) The third voice of a polyphonic composition – an independent voice composed against a tenor and duplum (or motetus). The term 'triplum' was thus used in the 13th century with reference to organum and the motet; it remained in use in the 14th century, and can be found also (together with 'triplex') in the 15th century, although mostly replaced by terms such as 'cantus' and 'superius'. The English form, 'treble', was used in the vernacular early 15th-century treatises on English discant.

(3) 'Triplex' is the name given to the highest of the three partbooks of a set in the 16th and 17th centuries (*see* Partbooks).

(4) Diminution or augmentation by a factor of three ('tripla', 'proportio tripla') in mensural notation of the 14th century to the 16th (*see* Proportional notation).

<div align="right">IAN D. BENT</div>

Tripous [tripod].

A triple kithara said by the historian Artemon of Cassandrea (*fl* 2nd century bce), probably following Aristotle's pupil Dicaearchus (*fl* c326–296 bce), to have been invented in the 5th century bce by the music theorist Pythagoras of Zacynthus (Athenaeus, xiv, 637b–f). It had a revolving base, and a touch of the performer's foot made the Dorian, Phrygian or Lydian mode instantly available. Whether or not the instrument (or indeed its inventor) actually existed, Artemon's account of it has importance for modal theory and organology. Sachs pointed out the most obvious inference: the idea of such a multiple instrument can be based only on the assumption that even at this early period modes differed radically from one another. Light is also thrown on the disputed question of the function of the left hand in lyre playing: the placing of the left hand somehow within the upper part of the tripod remains inexplicable, unless it is seen in relation to a standard technique whereby the fingers of this hand damped strings rather than plucked them.

Artemon's description of the tripous inspired Giovanni Battista Doni (1594–1647) to design and build the 'lyra Barberina' or 'amphicord'. He had already written a treatise on ancient Greek music, and his lyra had multiple sets of strings on which all the modes and their transpositions could be played.

Trisagion

(Gk.: 'thrice holy').

An Ordinary chant of the Eastern Christian liturgies. It is found prominently at Lauds (with the Gloria in excelsis), and at Mass (*see* Divine liturgy (byzantine)) before the readings, where it performs a function roughly similar to the Roman introit. The text reads: *Hagios ho Theos, hagios ischyros, hagios athanatos, eleēson hēmas* ('Holy God, holy and mighty, holy and immortal, have mercy on us'). The three invocations of God as 'holy' of the Trisagion should not be confused with those of the ordinary triple Sanctus used in the Canon of the Eucharist in both East and West.

The Trisagion was first mentioned at the time of the Council of Chalcedon (451) and appears to have been introduced into the liturgy not much later. According to legend, it was originally revealed by angelic voices at 5th-century Constantinople: an earthquake threatening the city subsided as the populace took up the new chant. Greek and Slavic melodies of the Trisagion (though very few) survive from the 12th century and later; they all seem to be amplifications of modal recitatives in the plagal G mode or in the E mode.

In high Byzantine usage, two further texts appeared as substitutes for the Trisagion on special occasions: *Hosoi eis Christon ebaptisthēte* ('Ye who are baptized in Christ'; after *Galatians* iii.27) – the Trisagion for feasts of the Saviour; and *Ton stauron sou proskynoumen* ('Thy cross do we adore'). The Slavic tradition of the asmatikon (*see* Liturgy and liturgical books, §IV) transmits an ancient melody for each of these, that for *Hosoi eis Christon* being in the plagal D mode, and that for *Ton stauron sou* in the plagal E mode. The common function of all three is reflected in the fact that the doxologies accompanying them in the asmatikon tradition have essentially the same music, though in different transpositions.

Each of the three eastern chants found its way into various western liturgies. The usual *Hagios ho Theos* was an Ordinary chant in the Gallican liturgy described by Pseudo-Germanus of Paris; various settings of it were prescribed for major feasts in the Mozarabic liturgy; and probably as a result of Gallican influence, a chant for the Trisagion survives in the Gregorian Veneration of the Cross in the Good Friday liturgy, where it is

sung alternately in Greek and Latin with the Improperia, or Reproaches of the Saviour. *Hosoi eis Christon* has a musical as well as textual translation in the chant *Omnes qui in Christo* found as an offertory or communion for the Easter Vigil and its octave at Ravenna, Benevento and Rome. *Ton stauron sou*, translated as *Crucem tuam adoramus*, appears as an antiphon for feasts of the cross, particularly the Veneration of the Cross on Good Friday, in the repertories of Benevento, Rome and Milan.

KENNETH LEVY/JAMES W. McKINNON

Tristabocca, Pasquale

(*b* Aquila, *fl* 1586–91). Italian composer. His *Secondo libro di madrigali a cinque voci* (RISM 1586[20]) is dedicated to the Grand Duchess of Tuscany, and includes a three-sectioned work, *Cantai un tempo*, by Giovanni de' Bardi, Count of Vernio, who was closely connected with musical activities at the Medici court. The book consists chiefly of light pieces in the canzonetta style particularly fashionable in Florence at the time, although it also contains a small number of pieces in a more serious vein, such as the setting of *Misera che farò* with well-managed 'pathetic' effects in its opening bars. The dedication of this work refers to an earlier book of five-voice madrigals, of which no copies have survived. According to the title-page the book of four-voice masses was intended to reflect Tridentine reforms. A copy of the five-voice masses had entered the library of the Marienkirche in Danzig by 1600 (see M. Morell: 'George Knopf: Bibliophile and Devotee of Italian Music in Late 16th-Century Danzig', *Music in the*

German Renaissance: Sources, Styles and Contexts, ed. J. Kmetz, Cambridge, 1994, 125).

IAIN FENLON

'Tristan' chord

(Ger. *Tristanakkord*).

The first chord in Wagner's *Tristan und Isolde, f–b–d♯–g♯*, or an enharmonic spelling of it. The name has often been used for any four-note chord made up of a minor 3rd, a diminished 5th and a minor 7th, reckoned upward from the lowest note; a generic term sometimes used for this chord is Half-diminished seventh chord. Apart from its dramatic importance, as a single vertical sonority which carries all the qualities of a *leitmotif*, the 'Tristan' chord has been viewed (by Kurth and others) as the basis of a 'crisis' in Romantic harmony. For although it can be explained in ordinary functional harmony as an augmented (French) 6th (*f–b–d♯–a'*) with the *g♯* as a long appoggiatura to the *a'*, or alternatively as an added 6th chord in first inversion with chromatic alterations (e.g. *d–f–a + b*, inverted to *f–a–b–d'* with lowered 3rd and raised 6th = *f–a♭–b–d♯*), it seems to have its own harmonic significance in this work and later operas of Wagner (especially *Parsifal*). It played an important role in the last developments of chromatic harmony in the late 19th century and the early 20th, and seems to have been crucial to the limitation of the applicability of functional theory to harmonic analysis.

KURT VON FISCHER

Tristano, Lennie [Leonard] (Joseph)

(*b* Chicago, 19 March 1919; *d* New York,18 Nov 1978). American jazz pianist and teacher. He first studied with his mother, an amateur pianist and opera singer, and later at a school for the blind, where from 1928 to 1938 he learnt the piano and several wind instruments and received a thorough grounding in music theory. He then entered the American Conservatory in Chicago, and graduated with a BMus in 1943. During these years he played the piano and wind instruments semi-professionally in a wide variety of jazz settings and began teaching jazz privately in Chicago. By 1945 he had attracted his first important pupils – Billy Bauer, Lee Konitz and Bill Russo – and was drawing critical attention with his performances in Chicago clubs.

In 1946 Tristano moved to New York, where he immediately attracted a cult following. He performed with Charlie Parker and Dizzy Gillespie in concerts and broadcasts, issued his first album as a leader and was named *Metronome* magazine's 'musician of the year' for 1947. (He contributed two articles on bop to the magazine during that year.) In 1948 he acquired an important new pupil in Warne Marsh, and when Konitz and Bauer rejoined him shortly thereafter he had the basis of his now famous sextet. The recordings of this group for Capitol in 1949 (including *Wow*/*Crosscurrent* and *Yesterdays*) are representative of Tristano's powers as an improviser and group leader at the highest level, but they caused controversy among musicians and sold poorly.

Having by then attracted a large number of private students, in 1951 Tristano founded a school of jazz in New York, the first significant institution of its kind. For his teaching staff he used his most important pupils, including Konitz, Marsh, Bauer and Sal Mosca. From this point he increasingly withdrew from public life, appearing rarely and issuing only a few experimental recordings as an adjunct to his teaching. He gradually lost his staff as his pupil-disciples embarked on their own careers, and in 1956 he dissolved his school to live in semi-seclusion as a private teacher on Long Island. He performed occasionally at the Half Note (between 1958 and 1965) and also toured Europe in 1965, but made his last public appearance in the USA in 1968. In 1973 French television broadcast an hour-long documentary interview on his life and work. After his death many of his recordings were reissued and a number of private tapes made by his students became commercially available.

Tristano's music stands apart from the main tradition of modern jazz, representing an alternative to bop which poses severe demands of ensemble precision, intellectual rigour and instrumental virtuosity. Rather than the irregular accents of bop, Tristano preferred an even rhythmic background against which to concentrate on line and focus his complex changes of time signature. Typically, his solos consisted of extraordinarily long, angular strings of almost even quavers provided with subtle rhythmic deviations and abrasive polytonal effects. He was particularly adept in his use of different levels of double time and was a master of the block-chord style of George Shearing, Dave Brubeck and others, carefully gauging the accumulation of dissonance. His experiments in multi-track recording and overdubbing, beginning in 1951 with *Ju-Ju* (on the Jazz label; not issued until 1971), inspired similar performances by Bill Evans and others in the 1960s. With his groups he also explored free collective improvisation, most notably in *Intuition* and *Digression* (both 1949, Cap.). Although he was accused at the time of being wilfully experimental, 'free' performances of this sort were in fact part of Tristano's teaching practice (many were taped privately by Bauer) and pointed the way to similar experiments by Charles Mingus and Ornette Coleman in the late 1950s.

Tristano excelled as a teacher, demanding and receiving firm loyalty from his pupils, many of whom sacrificed more lucrative careers to continue their work with him. His method stressed advanced ear training and a close analysis of the work of several seminal jazz improvisers, including Louis Armstrong, Earl Hines, Roy Eldridge, Charlie Parker and Bud Powell. Because of his knowledge of several instruments and broadminded approach, Tristano attracted players of different instruments and schools, among them such established musicians as Bud Freeman, Art Pepper and Mary Lou Williams. Perhaps more than in his own scant recordings, Tristano's influence is felt most strongly in the work of his best pupils – many of whom also became outstanding teachers – and in his example of high-mindedness and perfectionism, characteristics which presupposed for jazz the highest standards of music as art.

J. BRADFORD ROBINSON

Tristan Schalmei.

A woodwind instrument with some of the characteristics of the musette group, designed by the maker Wilhelm Heckel in an attempt to produce the particular timbre imagined by Wagner for the shepherd's rustic pipe in Act 3 of *Tristan und Isolde*. The sound which Wagner had in mind has in all probability been most nearly realized with the Holztrompete; the Tárogató, english horn and other instruments have also been used. As originally constructed the Tristan Schalmei had a sharply conical bore terminating in a very wide bell with an in-curved rim after the fashion of many folk instruments. Its fundamental was f. The tube was perforated by six plain finger-holes of which the uppermost was provided with a simple 'half-hole' mechanism (*see* Speaker key). The instrument is apparently no longer in use.

PHILIP BATE

Tristropha.

See Distropha, tristropha.

Tritone

(Lat. *tritonus*).

The Interval equal to the sum of three whole tones. In equal temperament it is exactly half an octave and can therefore be perceived either as an augmented 4th or a diminished 5th. Since the beginnings of polyphony in the early Middle Ages theorists and composers have changed their attitudes to the tritone and its use more than to any other interval.

In the medieval system of church modes the tritone was most conspicuous as the interval between the final and the fourth degree of the modes on F, the Lydian and Hypolydian. Conjunct progressions that outline the ascending tritone or the descending diminished 5th F–B are not uncommon in Gregorian chant (although tritone leaps are rare; see Gellnick), and the introduction of B♭ in plainsong notation seems to have been a relatively late development. The first known use of the word 'tritonus' occurs in the 9th- or 10th-century organum treatise *Musica enchiriadis*, though it was not explicitly prohibited until the development of Guido of Arezzo's hexachordal system, which made B♮ a diatonic note, namely as the fourth degree of the hexachord on F. From then until the end of the Renaissance the tritone, nicknamed the 'diabolus in musica', was regarded as an unstable interval and rejected as a consonance by most theorists. In the 13th century it was classified as a *discordantia perfecta*, along with the minor 2nd and major 7th; and by the 15th century the Lydian mode was understood as having a flattened fourth degree (Tinctoris: *Liber de natura … tonorum*, 1476), that is, as being a transposed Ionian mode, as Glarean defined it in the *Dodecachordon* (1547).

Since the 16th century the instability of the tritone has led to developments in two directions. On the one hand, its presence in the dominant 7th chord in four-part counterpoint has made the authentic perfect cadence an even stronger affirmation of the tonality, providing an approach by semitone not only to the tonic degree but also to the 3rd (ex.1*a*). However, because it divides the octave into two equal parts, the tritone has also assumed the role of the tonally most ambiguous interval, as opposed to the 5th, which divides the octave into unequal parts and is (apart from the octave itself) the interval most fundamental to tonality: in particular, the tritone has come to be recognized as a basic substructure within the diminished 7th chord and the whole-tone scale (ex.1*b*–*c*). In the chorale *Es ist genug* (ex.2) Bach used the tritone embedded in the major scale to create an ambiguity in the relationship between tonic and dominant. Both Mozart and Beethoven used tritones thematically or motivically to divide the octave into equal parts (exx.3–4). In 19th-century Romantic opera the tritone regularly portrays that which is ominous or evil; an early instance is in the dungeon scene in Act 2 of *Fidelio*, for which the timpani are tuned A–E♭. Its importance in dramatic music led to further developments in the extension and suspension of tonality, particularly in Wagner's *Tristan und Isolde* and *Parsifal* (*see also* 'Tristan' chord), the late piano works of Liszt and the music of Debussy (ex.5). In 12-note music, the fact that the inversion of the tritone at the interval of an octave yields another tritone (no other interval except the octave has this property) has proved fundamentally significant, both in theory and in practice.

WILLIAM DRABKIN

Tritonikon.

A metal double bassoon, invented by Václav František Červený.

Tritonius, Petrus [Treybenreif, Peter]

(*b* Bozen [now Bolzano], *c*1465; *d* ?Hall, Tyrol, probably 1525). Austrian composer and humanist. His family came from the Ötztal, Tyrol. He studied at Vienna University in 1486; the records of Ingolstadt University state that 'Petrus Traibenreif ex Posano' matriculated on 23 February 1497. About this time he adopted the Latin name Tritonius, following the custom of humanist scholars of the time. In Ingolstadt he met and probably studied with the famous humanist Conradus Celtis. With Celtis's encouragement and guidance Tritonius composed four-voice settings of Horatian odes in

note-against-note style, strictly observing the classical metres and quantities; these were performed after Celtis's lectures on Horace to illustrate the metres. After his studies at Ingolstadt, Tritonius returned to the Tyrol as teacher of Latin and possibly also of music in the cathedral school of Brixen (now Bressanone), from which he wrote letters (still extant) to Celtis dated 3 July 1500 and 21 June 1502. The 1502 letter states that he had just received a doctorate from Padua University; when and how long he had been in Padua before this is not known. Not long afterwards he went to Vienna at Celtis's invitation. There he evidently taught music at Celtis's new College of Poets and Mathematicians at Vienna University and had some connection, possibly informal, with Maximilian's Hofkapelle. After Celtis's death in 1508, Tritonius returned to Bozen and until 1512 directed the Lateinschule, having in 1509 applied without success for a position at Augsburg. In 1513 he was at Hall (Solbad Hall, Austria) and by 1521 he was in Schwaz am Inn. According to Simon Minervius's preface to Senfl's *Varia carminum genera* of 1534, he died before Senfl arrived in Munich in late 1523 or 1524. There is no apparent evidence to support Kroyer's suggestion that Tritonius died in Munich (DTB, v, Jg.iii/2, 1903, p.xxxix); it seems likely that he was back in Hall as a teacher at the Lateinschule and probably died there in the plague of 1525.

Tritonius's settings of Horatian odes were published in 1507 by Erhard Oeglin in Augsburg in the *Melopoiae*, which contains 19 odes by Horace, and three others, evidently by Celtis, all in different poetic metres. Although the title of the publication suggests that others may have composed some of the settings, Tritonius is the only composer named in this edition or in those of 1507, 1532 and 1551. The second edition in 1507 appeared immediately after the first and corrected most of the latter's errors, omitting the odes not by Horace. The 1551 publication was a large collection that included besides Tritonius's compositions other settings of the same Horatian odes as well as a large number of other sacred and secular poems. In his odes, possibly influenced by the *Grammatica brevis* of Franciscus Niger (Venice, 1480), Tritonius used the *brevis* and *semibrevis* to correspond to the long and short quantities of the poetic metres; his strict adherence to these produced irregular musical metres that correspond to neither duple nor triple metre, although the odes had the signature of *tempus perfectum diminutum*. The success of Tritonius's odes is indicated not only by their several reissues but also by the succession of settings modelled on them by other German composers throughout the 16th century. The lutenist Hans Judenkünig published intabulations of 19 of Tritonius's compositions in his *Utilis et compendiaria introductio*. Senfl's collection even retains Tritonius's tenors in otherwise new compositions. Stylistic parallels to Tritonius's odes may be found in Protestant hymn and psalm settings from Luther's time on as well as in the *vers mesurés* settings of French composers later in the 16th century, even though direct influence is questionable in the latter case. The *Melopoiae* and its second edition are also significant as the earliest known examples of music printing from movable type in Germany.

The choruses that close each act of Celtis's play, *Ludus Dianae* (1501), are similar in style to the odes of the *Melopoiae*. Tritonius is probably not the composer, however, since he was in Brixen or Padua at that time. Tritonius's *Hymnarius* is the oldest known printed Catholic hymnbook; it

contains the Latin texts of 131 hymns with German translations which correspond syllabically to the original texts, and blank staves on which the melodies could be written in. Tritonius is not named in the publication, but Waldner argued convincingly that he was the only person in Schwaz who could have accomplished the labour of editing and translating.

Tritto [Tritta], Giacomo (Domenico Mario Antonio Pasquale Giuseppe)

(*b* Altamura, nr Bari, 2 April 1733; *d* Naples, 16/17 Sept 1824). Italian composer. He studied at the Pietà dei Turchini conservatory, Naples, with Cafaro, whose assistant he later became. While a *maestrino* there he had

his first opera performed (1754) but it had no immediate successors. In 1764 he did, however, undertake an abortive stage career. A comic opera performed at the Teatro Nuovo was followed by an intermezzo at a Naples convent in Carnival 1765. In Carnival 1766 he directed the production of Sacchini's *Lucio Vero* at the S Carlo. In 1777 he tried again, addressing petitions to the king and prime minister begging permission to compose an *opera seria* for the S Carlo. This request was denied, with Tritto's lack of experience and reputation given as reasons. He turned to the secondary theatres of Naples and in the summer of 1780 began to provide them with a series of over 30 comic operas. He also started writing comic operas for Rome and later for several other cities. In 1784 he was finally given a commission for an *opera seria*, *L'Artenice*, from the S Carlo. He subsequently wrote 13 more *opere serie* for Naples, Rome and Milan.

On 1 October 1785 Tritto was named *secondo maestro straordinario*, still at the Pietà dei Turchini, and in 1793 *secondo maestro*. After the revolutionary government was put down in 1799, Tritto celebrated the king's return in July with two cantatas. Unlike Paisiello, Cimarosa and many conservatory students, Tritto apparently had not been compromised during the revolutionary period, because on Sala's retirement in October he was made *primo maestro* of the conservatory. On 27 July 1804 he was named *maestro* of the royal chamber. When the two remaining Naples conservatories merged in December 1806 Tritto became, with Fenaroli and Paisiello, one of the three joint *maestri* of the new Real Collegio di Musica. Although Zingarelli was named sole *maestro* in 1813, Tritto continued to hold the chairs of counterpoint and of sacred and profane composition until his death. On 14 July 1816, continuing to show a remarkable suppleness in adapting to changes of regime, he was named *maestro* of the royal chapel and chamber under the restored Bourbon monarchy.

Tritto was perhaps most important as a teacher, having been influential in the formation of several generations of Neapolitan composers; however, his two published didactic works, *Partimenti e regole generali per conoscere qual numerica dar si deve ai vari movimenti del basso* (Milan, 1816), a collection of figured basses with very little accompanying text, and *Scuola di contrappunto, ossia Teorica musicale* (Milan, 1816), in the traditional form of dialogues between master and pupil, are inconsequential. He was undistinguished as a composer of sacred music and *opere serie*. His talent lay primarily in comic operas, where he showed a fine musical dramaturgy, genuine humour and a particular feeling for Neapolitan folk traditions (such as dances and popular song forms). Their strong Neapolitan colouring, however, limited their dissemination, and Tritto's influence remained largely local, confined to Naples and to some extent Rome. That his *opere serie* achieved some prominence in the first decade of the 19th century is an indication less of their own merit than of the impoverishment of the Neapolitan scene by the death or the silence of the leading older figures such as Cimarosa, Paisiello and P.A. Guglielmi. Lippmann emphasized the modern tendencies in Tritto's last opera, *Marco Albino in Siria* (Naples, 1810), pointing to the use of the chorus in the arias and to the multi-tempo forms. However, these were hardly innovatory in 1810, and a slightly earlier work, *Cesare in Egitto*, which was very successful in Rome in 1805 and was also performed in Naples, makes a rather old-fashioned impression, especially in style, but also in its range of

forms. While exhibiting an attempt to cater to the Roman taste in the prominence given to wind passages, it is timid in its use of the new formal possibilities and of the chorus and accompanied recitative. According to Florimo, Tritto also worked for several Neapolitan churches, and he composed a considerable amount of church music. His 18 children included Domenico Tritto (1776–1851), an unimportant Neapolitan church musician and dramatic composer who also taught at the conservatory, to which he sold his father's manuscripts, including scores (mostly autograph) of nearly all his operas and much church music. Other libraries also possess scores of some operas and church works. Michele Costa was a grandson of Giacomo Tritto.

Trneček, Hanuš [Jan] [Johann, Hans]

(*b* Prague, 16 May 1858; *d* Prague, 28 March 1914). Czech composer and conductor. He studied the violin with Antonín Bennewitz and the harp with Václav Staněk at the Prague Conservatory (1871–6). In 1882 he appeared as an operetta conductor in Franzensbad (now Františkovy Lázně), and from that year until 1888 he played the harp in the orchestra of the Hoftheater in Schwerin, where his first opera was staged in 1886. Returning to Prague in 1888, he attained an important position in the city's musical life. He became professor of harp and piano at the conservatory, and was chairman of the music section of the Umělecká Beseda (Artistic Society) from 1894 to 1913. He also organized orchestral and chamber concerts, and in 1904 founded the first Czech music festival.

Trneček was a well-educated but self-taught composer. In his operas he often used superficial theatrical effects, most of them taken over from French *grand opéra*. He is known mainly for his operatic transcriptions for harp and piano and for his didactic works.

Trofeo [De Troffeis], Ruggier

(*b* Mantua, *c*1550; *d* Turin, 19 Sept 1614). Italian composer and organist. He is represented by one madrigal in an anthology of music by native Mantuan composers (RISM 1588[14]), and in his book of *Canzonette* (1589) he called himself a Mantuan. He was probably a pupil of Rovigo, some of whose compositions he published with his own. During winter 1576–7 he served as organist of the Mantuan cathedral church of S Pietro, deputizing for Annibale Coma, who at the time was on loan to Prince Vincenzo Gonzaga. In 1587 Trofeo was organist of the ducal Basilica Palatina di S Barbara, according to documents recording an event of 10 May 1587 in which the prince found him talking to a woman in the low quarter of Mantua and ordered him away; Trofeo, not recognizing the disguised prince, refused to comply, and was severely wounded. He seems to have escaped further punishment only because of the death of Duke Guglielmo on 14 August 1587; Vincenzo, now duke, apparently made no move against Trofeo, who was still at S Barbara in 1589. He was replaced there by Rovigo in 1590 and by 1596 he was in Milan as organist of S Marco where he had Costanzo Antegnati rebuild the organ with an 'extravagant' number of stops. Picinelli claimed that Trofeo was *maestro di cappella* of S Maria della Scala but confused him with Orfeo Vecchi. In 1604 Trofeo was in Turin, as *maestro della cappella di camera* of the Savoy court. He was also organist of Turin Cathedral, where he was succeeded after his death by his son Giovanni Cristoforo, who in 1656 was organist of the Jesuit church in Turin.

Trofeo's instrumental canzonas, his most important compositions, are lively and inventive pieces, with a transparent texture and well-organized structure. In the four-part canzonas each phrase typically opens with a well-defined point of imitation, which moves vigorously through the various parts, and concludes with a well-prepared and clearly-articulated cadence. Phrases and sections are often repeated, especially the final one, which is often followed up with a brief codetta.

Troiano, Giovanni

(*b* Todi; *fl* 1571–1622). Italian composer. The inclusion of one of his works in the madrigal anthology *Le Gioie* (RISM 1589[7]) indicates membership in the Compagnia dei Musici di Roma who collectively published the volume. He was *maestro di cappella* at Gubbio Cathedral from 1571 to 1573 and at S Maria Maggiore in Rome from 1596 to 1601. An earlier madrigal appeared in 1574 (1574[4]) and two sacred works for double-choir were also published (in 1607[2] and 1622[1]); other pieces for two choirs survive in manuscript (five in *I-Rvat* C.G.XIII/25 and two, incomplete, in *I-Rn* Mss Mus 33–4, 40–6). They are in the most advanced style of the period, with short declamatory phrases using crotchets and quavers, syncopation and voice-pairing. A single surviving concertato motet for two basses (in 1661[1]) is competent if somewhat uninspired.

NOEL O'REGAN

Troiano [Trojano], Massimo

(*b* in or near Naples; *d* after 1570). Italian composer, singer, poet and writer on music. On the title-page of his *Primo et secondo libro delle canzoni alla napolitana* he styled himself 'Massimo Troiano di Corduba da Napoli', which probably refers to his birthplace but is not clear; in his fourth book he is described as being 'da Napoli'. The dedication of the third book is signed

from Treviso on 10 March 1567, but this does not prove that he was there then. He is heard of for the first time as an alto in the Bavarian Hofkapelle at Munich under Lassus; he received the usual singer's income of 144 gulden for the full year 1568, although he had returned from Venice in mid-April, presumably having stayed there by order of, or with the consent of, his employer. In November 1568 he was in Venice again, and Duke Wilhelm V had to pay his travel expenses and other debts so that he could leave Italy and enter his service. Early in 1569, however, he was still waiting anxiously in Venice for money and a letter of acceptance from Bavaria: hence the signature 'L'infelice M.T.'. Only at the end of April 1569 did he reach Wilhelm's residence at Landshut, but he received his full salary for 1569. This concession and other gifts of money indicate that he was much admired at the Bavarian court; he in turn published in 1569 an anthology of music by members of the Hofkapelle (RISM 1569[19]; ed. in DTB, new ser., iv, 1981). He served there until Easter 1570, when he had to flee because of the murder of a musical colleague. A warrant was unsuccessfully issued for his arrest.

Troiano did not, as has often been maintained, serve in Johann Jakob Fugger's private Kapelle at Augsburg: Fugger did not have his own Kapelle but at that time was a court official and superintendent of court music for the Duke of Bavaria. Nor should Troiano be labelled an actor or even an impresario: we know merely from his own account that he, Lassus and others improvised a *commedia dell'arte* with music on the occasion of Wilhelm's marriage. His *canzoni alla napolitana* are settings of his own texts. More important than these, however, is his account of the wedding of Wilhelm V to Renée of Lorraine, which was celebrated with great splendour at Munich in 1568; it appeared later that year at Munich, and the following year a slightly expanded version was published in Venice, together with a Spanish translation and an introduction in Spanish. The book, written in the form of a dialogue, gives vivid descriptions of music and its performance at the Bavarian court.

Troili [Trolli, Troli, Paradossi], Giuseppe

(*b* Bologna; *fl* Bologna, 1695–1706). Italian composer and instrumentalist. He was the son of the painter and stage designer Giulio Troili, from whose *Paradossi per praticare la prospettiva* (Bologna, 1672) he and members of his family derived the surname by which they were often known. With great enthusiasm he briefly popularized the Sistro, or *timpano musicale*, a kind of glockenspiel, of which he was no doubt a virtuoso exponent. It was invented by G.B. Ariosti, of whose little instruction manual *Modo facile di suonare il sistro nomato il timpano* (Bologna, 1686) he brought out (using the name Paradossi) an enlarged and corrected second edition (Bologna, 1695, repr. 1933, 3/1702). The manual includes 44 dance tunes for the *sistro* in a special numerical notation, and Troili (now using this name) later published in normal notation a separate volume of dances for it, *Balletti capricciosi, e diversi sul timpano musicale accompagnati dal basso* (Bologna, 1705, 2/1706 as *Balletti diversi*).

See also Ariosti, Giovanni Battista.

Troilo, Aníbal Carmelo [Pichuco; El Gordo]

(*b* Buenos Aires, 11 July 1914; *d* Buenos Aires, 18 May 1975). Argentine tango bandoneon player, bandleader and composer. Largely self-taught, he played full-time in tango bands from the age of 13, working in those of Juan Maglio, the Vardaro-Pugliese Sextet, Julio De Caro and Alfredo Gobbi among others. His own band made its début at the Marabú cabaret in Buenos Aires in July 1937. With Troilo's bandoneon and the piano skills of Orlando Goñi, it was soon recognized as the leading band of its time; the

first of its nearly 500 recordings date from 1938. Supremely popular in Buenos Aires, Troilo made relatively few trips abroad, which were always short. His best tango songs were written with the lyricist Homero Manzi, and include *Barrio de tango* and *Sur*, the prime tango classics of the 1940s. In 1953 he wrote music for a long-running musical comedy, *El patio de la morocha*, and he and his musicians appeared in eight Argentine films. From the 1950s to the end of his life Troilo also worked with excellent smaller groups, the Troilo-Grela Quartet (with guitarrist Roberto Grela) and his own Aníbal Troilo Quartet. The records he made with these groups, especially the album Troilo-Grela (1963), display magnificently his bandoneon technique, above all his astonishing sensitivity and his equal skill with both hands. Troilo's affection for strenuous night life and his taste for whisky gradually undermined his health, but he never lost his status as a popular idol, shown in the public grief occasioned by his death.

SIMON COLLIER

Troilo, Antonio

(*b* Verona; *fl* Vicenza, 1606–8).Italian composer and musician. The title-pages of his three collections of music show that he was a municipal musician at Vicenza; he also seems to have played at the Accademia Olimpica there. The three collections were published at Venice. Two consist of instrumental music: *Il primo libro delle canzoni da sonare con ogni sorte de stromenti* (1606), for four and five instruments and continuo, and *Sinfonie, scherzi, ricercari, capricci et fantasie a due voci per cantar et sonar con ogni sorte di stromenti* (1608). The latter consists of 21 pieces, the last ten apparently intended specifically for violins, which belong to the genre of the pedagogic duo cultivated by a number of composers about this time, among them G.B. Calì and G.B. Bianco. They are short rhythmic pieces with varied textures, reminiscent of the *canzone francese*. Between these two prints Troilo published a volume of church music, *Salmi intieri* (1607), for five voices and organ continuo; he included in it nine psalms by G.B. Biondi. His own nine psalms include homophonic writing such as is found in many works at this period, as well as a good deal of word-painting. A fourth collection, *Alfabetto musicale*, for three voices, was cited in Vincenti's catalogue but it no longer survives.

NIGEL FORTUNE/RODOBALDO TIBALDI

Troilus à Lessoth, Franciscus Godefridus

(*fl* 1612–22). Humanist aristocrat who lived in Prague. He was descended from a family from Rovereto, in the south Tyrol; one of its members was knighted at Vienna on 25 May 1557. In recognition of his services Troilus was named Councillor of the Emperor on 2 May 1617 in Prague, but this title carried no official duties. He assembled in his library a valuable collection of Italian monody published mostly in Venice between 1604 and 1618, and mainly by composers from northern Italy. It is a fairly representative collection of music that cannot have been well known in Bohemia at that time, but it includes nothing by such important figures as Caccini, Marco da Gagliano and Peri. The volume of monodies from Troilus's library is now in the National Library in Prague.

JOHN CLAPHAM

Trojahn, Manfred

(*b* Cremlingen, nr Brunswick, 22 Oct 1949). German composer. Initially self-taught as a composer, he gave first performances of his early works while studying the flute in Brunswick (orchestral diploma 1970). After working as an instrumental instructor, he studied composition with Diether de la Motte in Hamburg (from 1971), attended seminars given by György Ligeti and took conducting lessons with Albert Bittner. The 1976 première of his first symphony ushered in a long series of performances of his orchestral works by ensembles such as the New York PO, the Berlin PO, the Cleveland Orchestra and Ensemble Modern. He has conducted his works both in concert and on recordings. In 1991 he accepted a post at the Robert-Schumann-Hochschule, Düsseldorf. His honours include the Stuttgart Förderpreis (1970), prizes from the International Rostrum of Composers, Paris (1978, 1988), stipendiums from the Villa Massimo, Rome (1977, 1979–80) and membership in the Free Academy of the Arts, Hamburg (1993). His published essays and interviews explore aesthetic issues and cultural politics.

Trojahn's passionate musical language quickly developed away from dodecaphony into a personal, freely tonal idiom. In response to what he perceived as the 'ugliness' of avant-garde aesthetics, he made the subjective urge towards expression and communication the focus of his works. Regarding the reception of his music, he has remarked, 'I have my ideas as to what this other person should be like, namely a very qualified listener, who does not feel alienated by me but rather inspired …. For him I compose'. An interest in poetry and other literary materials is also fundamental to his oeuvre, as is demonstrated by his many text settings, from the song cycle *Trakl-Fragmente* (1983–4) for mezzo-soprano and piano the symphonic *Fünf See-Bilder* (1979–81) show. His belief that composition means translating 'one reality into another' eventually led to a concentration on opera. His two stage works, *Enrico* (1989–91) and *Was ihr wollt* (1998), are fully committed to the narrative element, while maintaining a link to the conventions of traditional operatic form.

MICHAEL TÖPEL

Trojan.

British record company. One of the principal reggae companies in Britain, it was founded in 1967 by the owners of two existing reggae labels, Chris Blackwell of Island and Lee Gopthal of Pyramid. 'Trojan' was the nickname

of the Jamaican producer Duke Reid, and the company issued recordings made by Reid and other leading Jamaican producers including Bunny Lee, Leslie Kong and Lee Perry, whose productions appeared on the Upsetter label from 1969. The company also issued records by British-based performers such as Dandy Livingstone, Judge Dread and Greyhound, often using associated labels such as Down Town, Big Shot and Horse. During the first half of the 1970s a considerable number of Trojan releases were hits in Britain. Several were reggae cover versions of pop or country music ballads. They included Jimmy Cliff's *Wonderful World, Beautiful People*, Ken Boothe's *Everything I own*, John Holt's *Help me make it through the night*, Bob and Marcia's *Pied Piper* and Nicky Thomas's *Love of the Common People*. More conventional reggae performances came from Desmond Dekker, the Pioneers and the Maytals. LP collections of Trojan singles were also best-sellers.

Blackwell sold his interest in the label in 1972; in 1975, the Trojan catalogue was purchased by Marcel Rodd of the Saga group, who began an extensive reissue programme, continued by Colin Newman of Receiver Records who acquired the catalogue in the late 1980s. Compiled and annotated by the reggae archivist Steve Barrow, the Trojan collections on CD are a fitting tribute to an important era of Jamaican music.

<div style="text-align: right">DAVE LAING</div>

Trojan, Jan

(*b* Brtnice, 31 May 1926). Czech musicologist. He studied musicology with Jan Racek and music education with Bohumír Štědroň at the University of Brno, earning the doctorate in 1951 with a dissertation on the *Musica* of Václav Philomates of Jindřichův Hradec, and the CSc in 1968 with a dissertation on 20th-century oratorio. He was an assistant professor at the University of Brno, a music editor for Brno Radio and a lecturer in the history of music and opera, dramaturgy and opera analysis at the Janáček Academy (1961–89). He was made professor in 1990. Trojan has specialized in stylistic issues of music from the 18th century to the 20th, the performance of 18th-century Czech music, and ethnomusicology (concentrating especially on adaptations of Moravian folk music); he has edited music by Janáček and 18th-century Czech composers, and has been prodigiously active as a critic.

KAREL STEINMETZ

Trojan, Václav

(*b* Plzeň, 24 April 1907; *d* Prague, 5 July 1983). Czech composer. At the Prague Conservatory he studied the organ with Wiedermann and conducting with Ostrčil and Dědeček (1923–7) and continued his studies in the composition masterclasses of Suk and Novák until 1929; he also attended Hába's classes in quarter-tone and sixth-tone music. Trojan worked as a music teacher, music manager for Prague Radio (1937–45), composer for the State Cartoon Film Company (1945–6) and, from 1949, lecturer in theatre and film music at the Prague Academy. His early compositions were mainly entertainment music, dances and incidental scores; after World War II he focussed his attention on music for animated films, generally in collaboration with the painter Jiří Trnka. This field gave full expression to Trojan's fresh melodic invention, dramatic gift and wit and to his abilities in musical characterization; he received numerous awards at international film festivals. In 1940 he was given the Czech National Prize for his remarkable children's opera *Kolotoč* ('The Merry-Go-Round'), and in 1960 the K. Gottwald State Prize for his music for *Sen noci svatojanské* ('A Midsummer Night's Dream').

WORKS

(selective list)

Stage: Kolotoč [The Merry-Go-Round] (children's op, 6, M. Charousová-Gardavská), 1936–9, Ostrava, 13 Feb 1960; Paní Marjánka, matka pluku [Mrs Marjánka, Mother of the Regiment] (operetta, 6, F. Rachlík, after J.K. Tyl), Prague, Karlín State, 1951; Sen noci svatojanské [A Midsummer Night's Dream] (ballet-pantomime), 1958, perf. 1982; Zlatá brána [The Golden Gate], solo vv, chorus, orch, 1971–3 [based on folk motifs of K. Plicka]

Trojano, Massimo.

See Troiano, Massimo.

Trojan [Trajan] Turnovský, Jan [Trajanus Turnovinus, Johannes]

(*b* Turnov, *c*1550; *d* after 1594). Czech composer. A Utraquist priest, he served in the parishes of Šepekov (1581) and in Netvořice (1595). With Jiří Rychnovský he is the most important Czech composer of the 16th century. He wrote his music for the Czech literary brotherhoods, which came to their fullest flowering during the later 16th century. The relatively small amount of his extant music, which is found in various manuscripts of the last third of the century, consists on the one hand, of arrangements for four and five voices of Czech sacred songs, on the other of polyphonic settings for the Utraquist liturgy. The nature and style of his music were thus conditioned by external influences, and despite the evidence in some of it of his finished polyphonic technique, it is as a result distinguished most by its simple, unpretentious expression, inner serenity and songlike character. According to Branberger, he was the first Czech composer to write four-part music for men's voices. Much still has to be done before a full assessment of his work is possible; for example it is not always easy to decide if a given work is by him, since he can easily be confused with another composer, Gregorides Troianus Turnovinus, who was a close contemporary.

JIŘÍ SEHNAL

Trolda, Emilián

(*b* Prague, 3 June 1871; *d* Jičín, Bohemia, 28 Nov 1949). Czech musicologist. His law studies at Prague University led to a professional career in public administration; it was only after he had held several provincial posts that he was transferred to Prague, where he was able to continue his part-time music studies at the conservatory and the university. He obtained the doctorate with a dissertation on Černohorský in 1926. Through his tireless examination of countless city and country archives Trolda built up his formidable knowledge of Czech music from the 16th to the end of the 18th century. His catalogues and newly unearthed biographical data, and above all his reconstruction of many scores, were decisive in the revival of the Czech Baroque. Notable was his championing of Michna, whose *Česká loutna* ('The Czech Lute') he edited in 1943. He left his valuable collections to the National Museum in Prague.

Trombetti, Agostino

(*b* Bologna; *fl* 1639). Italian guitarist, singer and composer. He published a two-part collection of pieces for five-course Baroque guitar in the *battute* style, *Intavolatura di sonate nuovamente tradotte sopra la chitarra spagnuola … libro primo et secondo* (Bologna, 1639), which consists of accompaniments to popular songs and dances of the period. Most of the pieces in the first part (the first 16 pages are missing in the only surviving copy, in *I-Bc*) are transposed into six different keys, reminiscent of earlier books for guitar ensembles. The second part is more varied in scope with a greater emphasis on songs. It includes a dedicatory piece combining the *battute* and pizzicato techniques, Trombetti's only surviving work in this style. An Agostino Trombetta is listed in the role of Creon in P.A. Ziani's *Le fortune di Rodope e Damira* (libretto published in Bologna, 1658) but it is not known for certain if this is the guitarist.

ROBERT STRIZICH/GARY R. BOYE

Trombetti [Cavalaro, Cavallari, del Cornetto], Ascanio

(*b* Bologna, bap. 27 Nov 1544; *d* Bologna, 20 or 21 Sept 1590). Italian composer and instrumentalist. He was a son of Astorre (or Astorgio) Cavallari, and perhaps a relative of Nicolò Cavallaro da Mantova (called Mantovane), who was a singer at S Petronio, Bologna, in 1527, and *maestro di cappella* there from 1551 to 1558. The family was known by its adopted surname evidently because of the outstanding ability of its members in playing wind instruments. Ascanio played the cornett in the civic group of wind players called the Concerto Palatino from 1564 to 1590. He began occasional service in the *cappella musicale* of S Petronio in 1560, with the annual salary of 8 lire and was given a fixed appointment there in 1574 with a monthly wage of 2 lire, raised in 1579 to 4 lire. His name appears regularly in the account books until August 1590. He was also *maestro di cappella* at the church of S Giovanni in Monte from 1583 until 1589. His death was a violent one: he entered into an amorous relationship with the wife of a book dealer and was murdered by the outraged husband.

His madrigals are written in a graceful, melodic and occasionally florid style. The motets for five to twelve voices show a variety of styles ranging from chordal homophony to a more contrapuntal style with elegant melodic lines. The many reprints and transcriptions of his music during the 16th and early 17th centuries attest its popularity.

ANNE SCHNOEBELEN

Trombetti [Cavallari], Girolamo

(*b* Bologna, bap. 7 Dec 1557; *d* Bologna, May 1628). Italian composer, singer and instrumentalist; brother of Ascanio Trombetti. He was a singer at the Santa Casa in Loreto from 1566 to 1575. He succeeded Bartolomeo Spontini in 1582 as trombonist in the *Concerto Palatino* remaining until his death in 1628. In 1591 he succeeded his brother as *maestro di cappella* at S Giovanni in Monte, a post which he also held until his death.

ANNE SCHNOEBELEN

Trombly, Preston (Andrew)

(*b* Hartford, CT, 30 Dec 1945). American composer. He studied composition with Whittenberg at the University of Connecticut (BM 1968), with Arel and Davidovsky at Yale (MMA 1972) and with Crumb at the Berkshire Music Center; he also studied conducting with Bernstein and Barzin. Awards he has received include a Guggenheim Fellowship (1974–5), two NEA grants (1976, 1981) and several residencies at the MacDowell Colony. He has had works commissioned by the Fromm Foundation, the Columbia-Princeton Electronic Music Center and leading contemporary music ensembles. Trombly has held teaching positions at Vassar College, CUNY and the Catholic University of America. In the early 1980s he became increasingly active as a saxophonist and jazz clarinettist, both as a soloist and with jazz ensembles, most notably the Jaki Byard group; he has since also served as a music commentator for several New York radio stations. Besides composition Trombly has shown considerable skill in photography and other visual arts.

The majority of his compositions are for chamber ensembles, several with tape. His works reveal a brilliant sense of instrumental colour with extreme textural contrasts which frequently serve to delineate formal structures. Most of his music is contrapuntally conceived. Early works such as *In memoriam: Igor Stravinsky* (1972) employ counterpoint in which multiple voices comprise figurations based on serialized pitch collections. Works such as *The Bridge* (1979) and *Time of the Supple Iris* (1980) are characterized by impressionistic textures, more easily audible tonal centres and slower harmonic rhythms. His compositions of the early and mid-1980s reflect his activities as a jazz performer with their freer rhythmic notation, use of jazz harmonies and incorporation of improvisatory sections; *Homage to Eric Dolphy* (1981) and *Neanderthal Woman* (1983) are examples of this style. By the late 1980s, however, the improvisatory elements had become assimilated into a completely notated music in which driving, strongly rhythmic sections contrast with expansive lyrical passages. *One Big*

Marimba (1987) and *Duo for Flute and Percussion* (1985) show this more direct musical language. His works for tape and instruments unify seemingly disparate elements: *Kinetics III* (1971) achieves coherence through coincidences of rhythm, pitch and timbre, while *The Trumpets of Solitude* (1982) integrates elements of jazz improvisation with music for conventional instruments and tape.

WILLIAM F. PRIZER

Tromboncino, Bartolomeo

1. Life.

Tromboncino's *Scopri, o lingua* was ascribed to 'Bartholomeus Trumboncinus Vero[nensis]' in Petrucci's first book of frottolas (RISM,

1504[4]), and in a letter to the Doge of Venice dated 19 September 1521 he signed himself 'Bortholamio Tromboncin Veronese'. He apparently grew up in Verona, where his father, Bernardino Piffaro ('Bernardino the shawm player'), was a member of the town's municipal wind ensemble. There has been some confusion as to the identity of Tromboncino's father and therefore as to the musical environment in which Bartolomeo was raised. This was because there were two musicians known as Bernardino Piffaro: one in Verona and later in Venice, and another, a native of Mantua (*b* 1445; *d* 2 January 1527), who served in the Mantuan court ensemble from at least 1474. Tromboncino was the son of the Veronese musician, not the Mantuan one, and he was therefore trained in Verona, probably as an apprentice to the ensemble's trombonist. By 1489, however, he was in the services of Francesco II Gonzaga, Marquis of Mantua: on 10 June he wrote to Lorenzo de' Medici, apologizing for being unable to go to Florence as a trombonist because he was needed in Mantua for two feasts.

Tromboncino's name is frequently mentioned in Mantuan documents: in 1497 Alfonso d'Este of Ferrara requested four books of frottolas by him (probably four part books); Michele de Placiola asked for some of his music, referring to him as 'a singular young man'; and Isabella d'Este, Marchioness of Mantua, presented him with several gifts of money. In 1498 Ippolito d'Este requested a book of his songs, and the poet Galeotto del Carretto asked him to set his poetry. He travelled frequently to neighbouring courts. In May 1499, together with other Mantuans, he sang Vespers in Vicenza; in June of the same year he took part in a comedy by Galeotto del Carretto in Casale Monferrato; and he was in Milan and Pavia with Francesco Gonzaga and King Louis XII of France in October of the same year.

At some point shortly after 1490, Tromboncino ceased to be a member of the Mantuan wind ensemble and entered the services of Isabella d'Este herself. He served as a composer and lutenist in her court at the same time his colleague Marchetto Cara functioned in the same capacity in Francesco's court. Bartolomeo apparently served as Isabella's accompanist and tutor as well: on 8 May 1499 she thanked her half-brother Giulio for a group of songs, saying that 'if Tromboncino had not gone to Casale we would have begun to sing them immediately, but as soon as he returns we shall lose no time'. Although Tromboncino was much favoured by Isabella and her husband, his career in Mantua seems to have been a stormy one. He fled to Venice in June 1495, returning in July only at his father's insistence, and in July 1499 he killed his wife Antonia after finding her with her lover. He was apparently pardoned for these two offences, for he is mentioned in Mantuan documents throughout the remainder of 1499 and in 1500, but he fled Mantua again in 1501. On 28 April of that year Francesco Gonzaga wrote to Verona that Tromboncino 'has left our service in a deplorable manner and without permission, even though he was the best paid and had more favours and kindnesses and liberty than any of the courtiers in our house'. He added that Tromboncino 'will be well advised not to leave the territory of St Mark'. In spite of this, the musician seems to have returned to Isabella's service for several years: in February 1502 he sang in the *intermedi* for two comedies by Plautus (*Asinaria* and *Casina*) at the wedding of Lucrezia Borgia to Alfonso I d'Este at Ferrara, and Isabella commented that his performance brought honour to Mantua. In 1504 he

apparently composed at Isabella's behest the earliest known setting of a Petrarchan canzone, *Sì è debile il filo*; this poem was suggested by the poet Niccolò da Correggio in August 1504 and Tromboncino's setting of it appears in Petrucci's seventh book of frottolas (Venice, 1507).

By June 1505 Tromboncino had left Mantua and had entered the service of Lucrezia Borgia in Ferrara. He remained in her employ until at least 1508 and probably through 1510. His name appears in Lucrezia's payment records for the years 1506, 1507 and 1508 (earlier payment records for Lucrezia's stay in Ferrara are missing, and they are entirely lacking after 1517). A letter from Bernardino de' Prosperi to Isabella d'Este of 2 February 1508, stating that Tromboncino had performed in a dramatic eclogue by Ercole Pio, further confirms his presence there. In 1509 and 1510 the court released many musicians due to the expense of the duke's war against Venice and the papacy in the League of Cambrai. Tromboncino, however, did not leave Ferrara. He entered the service of Cardinal Ippolito I d'Este there in 1511. He was paid through 1512 and he probably stayed in Ferrara until at least 1513, when Francesco Gonzaga gave him permission to take back two casks of wine to Ferrara. (Some scholars have claimed that Tromboncino was in Mantua again in 1512, on the strength of a document which mentions merely the 'figluolo' of Bernardino Piffaro, but this is the Mantuan shawm player, not Tromboncino's father.) It is possible that Tromboncino journeyed to Rome with Ippolito in 1513. This would help explain his otherwise problematic setting of Michelangelo's *Come harò, dunque, ardire*.

Tromboncino may have returned to Lucrezia's employ at this point, though he had clearly left by 1518, when he rented a house in Venice and declined her request to return to Ferrara. In Venice, he had set up a school for gentlewomen in his house, presumably to teach them lute and voice. He reported that there was a large demand for his services, so much so that he hoped to get out of debt and bring his wife and family to Venice with him. Tromboncino was apparently successful in this endeavour. Eight years later he was still in Venice. On 19 September 1521 he wrote to the doge asking to be repatriated as a Venetian citizen and to be granted a composer's patent. He was still there in 1530, when he composed a trio for the Carnival season. He is last recorded in 1535, when he wrote from Vicenza to the theorist Giovanni del Lago, sending a copy of his *Se la mia morte brama* (now lost) and mentioning his imminent return to Venice. Tromboncino's reputation lived on through his students, who were apparently among the best lutenist/singers in the Veneto for years after his death. Shortly after the mid 16th century, the singing of several of his students was held up as the model against which the prodigy Irene di Spilimbergo was measured (Lorenzetti, 1994).

Tromboncino, Bartolomeo

2. Works.

Tromboncino's sacred works – a motet, a setting of the Lamentations of Jeremiah and 17 *laude* – are varied in style. (His *Vergine bella*, although published in a collection of secular music, sets a Petrarchan canzone dedicated to the Virgin and should be considered a *lauda* rather than a frottola.) His motet *Benedictus Dominus Deus* is an *alternatim* setting of the

canticle of Zachariah. Odd-numbered verses are set polyphonically, with the even-numbered ones to be sung to plainchant. The cantus firmus appears in long notes in the top part. He made little use of imitation, which was favoured by northern contemporaries such as Obrecht and Antoine Brumel, both of whom he may have encountered in Ferrara. His Lamentations cycle does not use the whole text; he selected verses and used the word 'Jerusalem' as a recurring refrain. The cycle uses the formulae of the sixth psalm tone and is a simple but effective chordal setting of the plainchant. Tromboncino seems most at home in his *laude* (nine in Italian and eight in Latin). Some are nearly homorhythmic, but others show a considerably more complicated texture. *Ave, Maria, regina in cielo*, for example, is texted in all voices and was thus probably intended for voices on all four parts; it is a political prayer asking the Virgin to protect the marquisate of Mantua; *Eterno mio signor*, on the other hand, is a personal prayer in the form of a sonnet and may have been composed for Isabella's performance. Two *laude* are actually contrafacta of secular works: *L'oration è sempre bona* and *Qui per viam pergitis*, both found in the Capetown manuscript. Two others, *Eterno mio signor* and *Sancta Maria, ora pro nobis* also have secular versions, but both of these were probably first composed as *laude*.

Tromboncino is most important, however, as a composer of secular music. He was the most prolific frottolist: 170 frottolas are ascribed to him, although several also appear under other names. In addition, two *barzellette* published anonymously – *Pace, hormai* (1505[6]) and *Lassa, donna, i dolci sguardi* (1506[3]) – can be attributed to him on the basis of a letter written by Galeotto del Carretto on 14 January 1497 asking for Tromboncino's settings of these poems and of two others (*Se gran festa*, ascribed to 'T.' in 1505[6], and *Donna, sai come tuo sono*, now lost). Tromboncino greatly favoured *barzellette*, of which he set 87; among the other frottola forms, he set 27 *strambotti*, 11 sonnets, six *ode*, five *capitoli* (of which two are in dialogue) and seven poems in a refrain form combining elements of the *oda* and the *barzelletta*. He set three secular Latin texts, and four texts either partly or entirely in Spanish, perhaps because of his service with Lucrezia Borgia, who was of Spanish origin.

Tromboncino is particularly important for his choice of more serious, madrigalian texts at a comparatively early date; this is first evident in Petrucci's seventh book of frottolas (1507[3]) which includes three of his settings of Petrarchan verse: *Sì è debile il filo*, already mentioned, *Che debb'io far?* and *S'i'l dissi mai*. He was clearly the most innovative composer in choice of text during the earlier period of the frottola, but his importance waned rapidly in later years. A possible explanation for this decline may be found in his request in 1521 for a composer's patent, where he stated that he had 'composed in the past many settings of canzoni, madrigals, sonnets, *capitoli* and *strambotti*, Latin verses and Latin *ode*, vulgar *barzellette*, frottolas and dialogues'. He asked the doge to allow no-one to 'print or have printed in this land … any of the above-mentioned songs or any of the others that the said supplicant should compose and has composed in the past … for 15 years, under the penalty of ten ducats for each work printed'. Whether or not the doge granted this patent is not known, but none of the composer's works was published in Venice after this date, and only two others ascribed to him were printed elsewhere. One

of these, *Non al suo amante più Diana piacque*, a setting of a Petrarch text, ascribed to both 'B.T.' and 'M.C.' in *Libro primo de la croce* (Rome, 1526), resembles the musical style of neither Tromboncino nor Cara and is more probably by Sebastiano Festa. The other, *Cantava per sfogar*, ascribed to 'B.T.' in *Libro secondo de la croce* (Rome, 1531), is a ballata with a refrain of popular character.

Although much of the poetry of Tromboncino's frottolas is anonymous, it is possible to identify the poets for more of his works than for those of any other frottolist, and he appears to have enjoyed close ties with the most important poets of his generation. He set 12 poems by Petrarch, six by Galeotto, five by Dall'Aquila, two by Sannazaro, one each by Ariosto, Bembo, Ovid and many other classical and Renaissance poets (these textual attributions are not, however, always unchallenged). Among these are some settings for dramatic presentations: *Crudel, fugi, se sai fugire* for Galeotto's *Nozze de Psyche et Cupidene* performed at Casale Monferrato in 1502, *Queste lacrime mie* for Castiglione's *Tirsi* performed at Urbino in 1506 and three Carnival songs (*Ai maroni, ai bei maroni*, *Fate ben, gente cortese* and *Nui siam tutti amartelati*) which all feature sexual *doubles entendres*.

The textures of Tromboncino's secular works tend towards non-imitative polyphony – with the inner voices more rhythmically active than the outer voices – rather than the simple chordal style of many frottolas. The works feature frequent simultaneous cadences coinciding with the ends of poetic lines, and functional basses, moving often by 5th. Tromboncino's formal structures reflect the fixed poetic forms, yet they remain varied and subtle, although he seems to have been less interested in this aspect than Cara. Indicative of this relative lack of concern for formal structure is the fact that in well over half of his *barzellette* he set only the *ripresa* and the refrain, whereas most of Cara's have new music for the stanza. But Tromboncino's interest in the subtler text forms, the theatre and sacred music made him more versatile than Cara; he was one of the most prolific, gifted and significant frottolists, particularly in the earlier stages of the genre.

Trombone

(Fr., It. *trombone*; Ger. *Posaune*).

A brass lip-reed aerophone with a predominantly cylindrical bore. The most common trombones are the tenor and bass counterparts of the trumpet. In its most familiar form the trombone is characterized by a telescopic slide with which the player varies the length of the tube; hence the term 'slide trombone' (Fr. *trombone à coulisse*, Ger. *Zugposaune*, It. *trombone a tiro*; Fr. and Eng. up to the 18th century, *saqueboute*, sackbut). Both the Italian and German names for trombone are derived from terms for trumpet: *trombone* (large trumpet) from the Italian *tromba*(trumpet), and *Posaune* from *Buzûne*, derived in turn from the French *buisine* (straight trumpet). The etymology of *saqueboute*is discussed in §7 below. *See also* Organ stop (*Posaune*).

Trombone

1. Slide trombone.

The structure of a slide trombone can be seen in fig.1*a*. The two parallel inner tubes of the slide are connected at their upper ends by a cross-stay. The mouthpiece is inserted into the top of one tube; the bell joint fits on to the top of the other, the tube being either tapered externally or attached to the bell by means of a threaded collar (the 'bell lock'). Over the stationary inner tubes runs the slide proper, which consists of two tubes joined at the bottom by a U-tube known as the 'slide bow' (with a water key for releasing condensed moisture) and at the top by a second cross-stay, which the player holds with the right hand. Friction is minimized by slightly thickening the walls of the lowest 120 mm of the inner tubes to provide running surfaces for the outer slide. Formerly these short sleeves or 'stockings' were of a different metal (such as phosphor bronze) from that of the slide; in modern manufacture they are formed integrally with the inner tubes, which are of chromium-plated nickel silver. The bore of the modern instrument is cylindrical for about half its length (more with the slide extended), the cylindrical section usually between 12·5 mm and 14·0 mm in diameter, although in bass trombones it may exceed 14 mm. A wide variety of bore sizes is produced by the larger manufacturers, and players select the most appropriate for the repertory and their own characteristics. The

bore expands to a markedly flaring bell of brass, occasionally silver, with a terminal diameter ranging from about 20 cm across on a tenor trombone to about 25 cm on a bass. The U-bend of the bell section (the 'bell bow') is usually fitted with a tuning-slide and may include a weight to balance the whole instrument in the player's left hand.

In each position of the slide, a series of resonances approximating to a harmonic series is available to the player. Modern slide technique is based on seven positions that lower the pitch of all members of this series progressively by semitones (Table 1); the 1st (highest) position is with the slide fully retracted, the 7th (lowest) with it fully extended. The distance between adjacent positions increases as the slide is extended. On the tenor trombone, for instance, from 1st to 2nd position is about 8 cm, from 6th to 7th position about 12 cm. A slide allowing lowering by six semitones gives a complete chromatic compass from the second-lowest available note in 7th position (*E* on the tenor trombone in B♭) upwards for some three octaves, more or less, depending on the skill and needs of the player.

The modern tenor and bass trombones stand in 9' *B♭* (length of tubing, with the slide retracted, 9 feet). Some tenors and most basses are B♭/F trombones, which incorporate in the bell section a valve which, when operated, extends the tube length to lower the basic pitch of the instrument by a perfect 4th to 12' *F* (The 'F attachment'; fig.1*b*). The practice of using B♭ and B♭/F trombones has almost done away with what survived in the 20th century of the traditional use of three different sizes of slide trombone: alto, tenor and bass. The B♭ trombone, however, is still often called a 'tenor trombone'. Wide-bore models of the B♭/F trombone are often termed 'bass trombone', and are used for the lowest of the three trombone parts that have normally been written in orchestral and band music (fig.1*c*). The E♭ alto trombone is used in parts written for it; many players, however, use a tenor trombone to play alto parts. The trombone is a non-transposing instrument except for tenor trombones in the British-style brass band, where the parts are written in the treble clef a major 9th higher than they sound.

The second leg (leading to the joint) of the trombone's slide is sometimes of slightly wider diameter than the first (leading from the mouthpiece receiver); such a model is termed 'dual bore'. In any case, the high proportion of cylindrical tube (even with the slide retracted) acoustically determines the tonal character of the trombone. In order to bring the modes of vibration of the air column into a usefully close approximation to a harmonic series, there has to be a significantly high 'horn function', given by a flaring bore profile, over the last foot or so of the bell. Even so the frequencies of the lowest one or two modes are markedly lower than the nominal frequencies of the corresponding notes available to the player: one can only sound the lowest ('pedal') and next lowest resonances in tune because of the presence of an extensive series of strong higher modes allowing a 'cooperative regime'. Compared with other brass instruments of comparable tube length and tessitura such as the euphonium, the strong higher modes of vibration (resulting from the more cylindrical bore) and the greater acoustical energy trapped in the instrument by the flaring bell of the trombone give the instrument a more brilliant character, especially when

played loudly. It has recently been suggested (Hirschberg and others, 1996) that the energy levels in a trombone can be so high that they display non-linear (shock-wave) characteristics; this is probably responsible for the non-harmonic 'tearing of linen sheets' effect when the trombone is played at maximum volume (*see* Acoustics, §IV, 4–5).

A variety of mouthpiece designs have been used for the trombone. Few early mouthpieces have survived, but the earliest models seem to have been larger versions of the trumpet mouthpiece with hemispherical cup shape, a sharp-edged throat and a flat rim. The 19th-century French trombone mouthpiece was a large version of the horn mouthpiece, with a deep funnel-shaped cup. The modern trombone mouthpiece is of intermediate cup shape and a larger cup volume to match the large bore of modern instruments.

The mutes commonly used with the trombone are the straight mute (today often of curved profile rather than a truncated cone) – this is the mute used in parts marked *con sordini* without further qualification – and the cup mute; these are positioned by strips of cork allowing the air to pass between mute and bell. Some mutes, such as the 'harmon' or wah-wah mute and the practice mute, fit tightly to the bell and have a central air passage. Other mutes are loosely attached, hand-held or attached to a music stand; these include the bucket and 'derby' or hat mutes (*see* Mute).

Trombone

2. Tenor trombone.

The tenor trombone in A, B♭ or C has always been the most common; in 16th-century Germany, for instance, it was often termed *gemeine* ('ordinary'), and the deeper-pitched instruments (*Quartposaune* etc.) were described by their pitch interval below the tenor. Table 1 shows how the scale is made on the tenor trombone. The lowest available note in each position (the 'pedals') was not written for until Berlioz, and these notes even at the end of the 20th century were to some extent treated as a special effect. The lower pedals are, with a normal mouthpiece, difficult to produce. Although one talks loosely of the slide having seven positions, for sustained notes fine adjustment of slide position is needed to produce good intonation, and intermediate positions are required for quarter-tones. In fast passages, the slide is hardly stationary in any position. Higher in the range, extended positions of the slide are used primarily as alternatives to avoid long shifts in fast passages and to allow variation in making slurs for legato playing. Alternative positions are also often needed for the first or last note of long glissandos.

Trombone

3. Bass trombone.

The F bass trombone formerly used in German and central European bands barely survived into the 20th century. In Britain, however, the G bass trombone, pitched a minor 3rd below the B♭ instrument, was used in every orchestra and band from about 1815 up to the 1950s and still appears in some brass bands. Its lowest note, apart from pedals, is C♯; in the orchestra a D valve was used. Because of the long slide extensions

necessary on F and G trombones, the stay of the outer slide is provided with a handle, needed to reach the lowest positions.

The B♭/F trombone was introduced in 1839 by the Leipzig maker C.F. Sattler; in Paris Halary and Sax followed with similar instruments, though they were little used in France. The B♭/F instrument was at first regarded as a 'tenor-bass trombone', capable of covering the compasses of both bass and tenor, rather than a replacement for the true bass in F. With the valve operated, the slide has only six positions, and the scale of the trombone is thus extended down to *C*, the lowest note in classical bass trombone parts. The F valve also also provides further alternative positions to avoid shifts to the slide that are awkward on the B♭ trombone: for example the semitone from B♭ to *B*, 1st to 7th position, is reduced to 1st to 2nd position, allowing the progression to be played legato, if the *B* is taken with the valve operated. *B*' is missing altogether as the instrument lacks the 7th position. Composers such as Bartók and Stravinsky who have included this *B*' in important works have obliged players to use an extended tuning-slide in the valve loop, putting the instrument into E, or a bass trombone with two valves. Many bass trombones now have a second valve lowering the basic pitch by a 2nd or a 3rd (fig.1*c*) which gives further alternative positions as well as a complete compass down to *E*' or lower so that the instrument can also play contrabass trombone parts, e.g. those of the *Ring*.

During the second half of the 19th century it became regular practice in German orchestras for the second and third players to use B♭/F trombones (with a wider-bore instrument for the third part), while the first used the B♭ instrument. This practice has been extended to the USA and to other European countries. For some repertory, the second or even the first player in a section of three will prefer a B♭/F instrument, although where a valve is less useful many players prefer to use the B♭ trombone, which is lighter and usually freer-blowing. The 'stuffiness' caused by the conventional rotary valve in trombones led at the end of the 20th century to the introduction of valve designs with gentler bends in the windways; these valves are of necessity bulky and some incorporate valve designs tried and abandoned in the 19th century, but they do provide an instrument on which the response of both valved and unvalved notes is good.

Trombone

4. Contrabass trombone.

For a long time many opera houses possessed a true contrabass trombone in 18' *B♭*'', provided with a double slide consisting of two parallel slides connected in series (by two U-bows at the base and one at the top) but moved as one (fig.2*a*). As each shift on such an instrument requires half the movement necessary with a normal slide, the shifts are no greater than those of the ordinary B♭ trombone. Double slides were also fitted to some F trombones. Boosey & Co. made a trombone in 16' *C*' for the London première of the *Ring*; as its double slide provided nine positions instead of the usual seven, Wagner's *E*' could be reached on it. According to Arthur Falkner, however, it failed to earn Hans Richter's approval and the part was played on a tuba.

A contrabass in 12' *F* or *E♭* with two valves has been used in Germany, particularly a model introduced by Ernst Dehmel of Berlin in 1921 and used at the Bayreuth Festival of 1924 (fig.2*b*); this was modified by Hans Kunitz in 1959 as the 'Cimbasso' model, in which one valve lowers the instrument to 16' *C'*, the other to D, and both together lower the pitch to 18' *B♭*. Cimbasso when it means a trombone denotes a four-valve contrabass in 18' *B♭*. An instrument of this kind is required for the lowest trombone parts in the late works of Verdi and the operas of Puccini. It is also used in the larger Italian wind bands.

Trombone

5. Alto and soprano trombones.

Alto trombones in E♭ or F, commonly used from the 16th century to the 18th as the top voice in the brass choir (see fig.6 below), declined in popularity from the early 19th century, when trombones became an established part of the symphony orchestra. The range of the parts can usually be covered with the B♭ instrument; furthermore, players have become accustomed to the B♭ trombone's slide shifts and mouthpiece, and some prefer its sound to the brighter, thinner tone of the alto. (Indeed, even in the 17th century Praetorius recommended using the tenor instead of the alto.) Although some first trombone players have always used the alto in parts so marked, its use was unfashionable from the mid-19th century to the mid-20th. Several 20th-century works require the alto, for example Berg's *Wozzeck* and Britten's *The Burning Fiery Furnace*, and at the end of the 20th century it was more frequently used for classical parts than a generation earlier.

The soprano trombone, usually in B♭ an octave above the tenor, seems to have appeared in the late 17th century, the period from which the earliest surviving specimens date. It was used in Germany to play the treble part in chorales, and this tradition survives in the Moravian trombone choir at Bethlehem, Pennsylvania. In the 20th century several manufacturers made soprano trombones as doubling instruments for jazz cornet players, or as a novelty, but the instrument has never been widely used. It lacks its own character and the short shifts make it difficult to play in tune.

Trombone

6. Valve trombone.

Although Heinrich Stölzel, co-inventor of the valve, had considered its application to the trombone, the first valve trombones were produced during the 1820s in Vienna by other makers, employing the double-piston valve (the double-piston valve trombone survived until the second half of the 20th century in Belgium as the *trombone Belge*). Made in alto, tenor and bass pitches, valve trombones reached a peak of popularity soon after the mid-19th century. In 1890, according to Constant Pierre, German and Italian orchestras almost always used a valved bass trombone, and until the mid-20th century valve trombones (often alongside slide trombones) were common in bands and theatre orchestras in the Latin countries, eastern Europe and Asia. Most valve trombones have kept the basic shape of the slide trombone, although in 'short' models the length is considerably reduced. From about 1840 instruments intended for mounted and marching

bands were produced in various upright (tuba) and circular (helicon) designs. Among these was the *Armeeposaune* (Ger.: 'army trombone') invented by V.F. Červený of Hradek Králové in 1867 ; it had rotary valves and came in several sizes, from alto in F to contrabass in B♭.

Tenor and bass instruments are frequently fitted with a fourth valve that, as on other four-valved brass instruments, lowers the pitch by a 4th; but as three valves remain tuned to the B♭ pitch, use of the fourth valve adds intonation difficulties to those inherent in the standard three-valve system. The constant need to correct intonation by embouchure and the stuffiness resulting from tight bends in the windway are shortcomings of the valve trombone. Advantages are greater technical flexibility (e.g. on certain trills), compactness, and the fact that every instrument from alto to contrabass has the same fingering pattern as other brass instruments.

A valve arrangement that offers better intonation is Sax's system of six independent pistons, used for many years in Belgium. Each valve controls a loop giving a total tube length matching a given shift on a slide; when operated, a valve diverts the windway through its own loop, cutting off all those below it. The main windway leads through all the valves to a terminal loop and back through the valves to the bell. The first valve corresponds to the 1st position, the sixth to the 6th position; without any valve operated the instrument gives the notes of the 7th position. No combinations of valves are required (unless an extra valve is fitted to serve as the fourth valve of a normal valved instrument).

Trombone

7. History to *c*1750.

The early history of the trombone was misunderstood in Britain until the end of the 19th century. Burney appears to have believed it to be an entirely new instrument when players of the 'Sacbut – or Double Trumpet' were sought for the 1784 Handel Commemoration, and many 19th-century antiquarians thought that it had origins in deep antiquity. The source of the latter misconception was the appearance of the word 'sackbut' in the Old Testament (*Daniel* iii. 3, 5, 7 and 10); Francis W. Galpin's monumental paper 'The Sackbut: its Evolution and History' (1906–7) showed this to be no more than a translator's error. The translators of the Geneva Bible (1560) had encountered the word *sambuca* (meaning a type of harp) in a passage that clearly referred to musical instruments and erroneously concluded that it described an instrument with which they were familiar in the 16th century. The error was repeated in the 1611 Authorized and the 1885 Revised versions. Galpin correctly showed that the trombone, an instrument with a double, U-shaped slide, can be dated no earlier than the 15th century, though neither he nor any subsequent scholar has been able to establish exactly when and where it first appeared.

The instrument has always been called *trombone* in Italy and *Posaune* in German-speaking countries: both are terms derived from words meaning 'trumpet'. Other commonly used names for the early trombone are uncertain in origin, but appear to be a combination of two elements: *sac* (perhaps from the Spanish word *sacar*, a word with several different meanings, the most likely in this context being 'to draw' in the sense of

pulling); and *bu* (meaning to thrust or push, and probably deriving from the Teutonic *boten*). These combined to become *saquebote* (French), *sacabuche* (Spanish) and *sackbut* (English), each of which appeared in several different spellings in the 16th and 17th centuries. In England for example, 'sagbut', 'shakbush' and 'shagbut' were as common as 'sackbut'. This group of words is important to scholars: from the time that they began to be applied to a musical instrument they seem to describe it as having a movable slide. The same could not be said of *trombone* and *Posaune*, since in the 15th century these words could equally have meant a form of large trumpet without a slide. Other words meaning trombone in the 16th century were *dracht* (*draught*, *draucht*) *trumpet* and *tuba ductilis*. 'Dracht trumpet' occurs in a number of Scottish sources from the late 15th century and the early 16th. In describing a wedding reception of 1538, Robert Lindsay distinguished between the 'weir trumpattis' and the 'draught trumpattis' (*The History and Cronicles of Scotland*, ed. Ae.J.G. Mackay (Edinburgh, 1899), i, 379), implying that the latter was different from the former and that it had some sort of slide. At this late date it was almost certainly a double slide instrument. *Tuba ductilis* seems to have been the commonly accepted Latin expression for the trombone from the 16th century onwards. For example, an early 16th-century warrant in the Scottish Privy Seal Records which registered the appointment of a 'draucht trumpet' player Julian Drummond specifies his office as that of 'tuba ductilis'. Elyot's Latin–English Dictionary (*Bibliotheca Eliotae*, 1538) translated 'Tuba ductilis' as 'a brazen trumpet', but elsewhere this phrase was consistently associated with the trombone. Praetorius used it, as did Roger North and Giles Schondonch, the author of 'The Custom Book of St Omer', an early 17th-century manual describing practices at the English Jesuit school at Saint-Omer, France, (MS, *c*1609, Stonyhurst College, Lancs. Arch. CII 19), who provided the unambiguous explanation 'Tuba ductilis (vulgo Sacbottum)'.

Most scholars believe that the immediate precursor of the trombone was the instrument now referred to as the 'Renaissance slide trumpet'. This instrument had a single telescopic slide which enabled the player to produce notes approximating to those of a harmonic series on each of three or four semitone-adjacent slide positions. No such instruments survive, but the case for their existence – based primarily on iconographic sources, but also on some documentary and musical evidence – seems compelling (*see* Slide trumpet). Although no direct relationship between the slide trumpet and the trombone has been established, a progression from the former to the latter seems probable since both instruments seem to have been prevalent in the same regions – Germany, the Low Countries and Italy. Keith McGavan has offered the view that the double slide instrument, because of its modular construction, could also be adapted into a single slide instrument. It is likely that Germany, where there were established centres of brass instrument making by the mid-15th century, was the source of the design and manufacturing techniques of these instruments. From northern Europe the trombone spread to other regions: by the end of the century, German and Flemish players were prominent in several parts of Europe: the first named trombone players associated with the English court, for example, were Hans Broen and Hans Nagle, the latter having originated in Leipzig.

The earliest detailed depiction of a trombone appears in Filippino Lippi's fresco *The Assumption of the Virgin* (1488–93) in S Maria sopra Minerva, Rome (fig.5). From that time to the end of the 16th century – to the extent that sources allow such generalities to be drawn – most instruments were broadly similar. A drawing of a trombone in Virdung's *Musica getutscht* (1511) shows characteristics typical of other representations and of surviving specimens. The earliest surviving trombone, by Erasmus Schnitzer of Nuremberg, is dated 1551 (fig.6*a*). While several early trombones are no longer in their original state, a comparison of the morphology of extant instruments presents a fairly consistent picture: the instruments have a narrow internal bore diameter; the tubing is cylindrical apart from the length between the final bend (in the bell section) and the bell end, which flares gently, expanding to a significantly smaller final bell diameter than with the modern trombone. H.G. Fischer compared the measurements of 22 such instruments (Fischer, 1984), and found that, though there was some inconsistency among instruments, the tube bore of most was about 10 mm in diameter, and the bell diameters were seldom more than 10·5 cm. Another feature common to such instruments is the thinness of the metal walls. The bore of early trombones closely matched that of contemporary trumpets. The inner tubes of the slides had a consistent external diameter: they did not have 'stockings' (expansions at the open end of the inner slides intended to minimize friction). There was no water key to allow for the disposal of moisture accumulated from condensation of the player's breath.

The drawings of trombones in Praetorius's *Theatrum instrumentorum* (1620) are the earliest which provide any reliable and accurate iconographical detail, and the information is broadly consistent with what we can observe in specimens of the period (though it is unlikely that any surviving trombone dating from before the 18th century is completely intact). The instruments described by Praetorius had most of the principal features that were to characterize all trombones until the 19th century. Crooks and other devices for tuning and changing pitch were already in use at the start of the 17th century. A reference in the 1541 letters of the Nuremberg maker Georg Neuschel to an order which included two 'bogen' for the 'quintposane' has been taken, probably correctly, by A.C. Baines (*see* Crook), to mean that crooks were already being used on trombones at this early date. Praetorius's drawings show *Krumbbügel auf ein ganz Ton* for the tenor instrument, and the bass instruments have a tuning slide on the bend of the bell section operated by a long rod extending forward. This would have been used to change the overall pitch of the instrument rather than for moving from one note to another. Other means of changing the overall pitch were a coiled crook fitted between the bell section and the slide section (Mersenne (1636–7) illustrates an instrument crooked down a 4th in this way) and straight extensions at the same point, some possibly in the form of one or more tapered 'bits'. The earliest surviving instruments have loose-fitting stays held together by metal clasps, sometimes ornate and sometimes lined with leather, on both the bell and slide sections. From the second half of the 17th century, makers fitted tubular stays on the slide section, making the right hand grip of the slide more comfortable and flexible. The slide-stays on some instruments were in two parts, one fitted rigidly to each leg of the slide, joined telescopically in the middle; such a device would also have facilitated an easy slide action. Illustrations of 17th-

and 18th-century trombone players show differences in the way that the instrument was held, but an engraving by J.C. Weigel (*Musicalisches Theatrum*, *c*1722) shows the player holding the instrument in a similar way to that used today. Bass instruments had a handle fitted to the stay of the outer (movable) slide section so that players could reach the furthest positions. H.G. Fischer has suggested that such devices were also sometimes fitted to tenor instruments if the player's arm was too short to reach the outer positions. Both of the latest 17th-century English depictions of trombonists (a drawing of a waits band attributed to Marcellus Lauron the elder (*GB-Cmc*) and an anonymous painting of a trombonist on a 17th-century organ case) show the players holding such handles: this suggests that it was the bass instrument which lasted longest in England in the 17th century.

Very few early mouthpieces survive; perhaps the most important is one inscribed with the mark of the Schnitzer family, who made trombones in Nuremberg in the 16th century. This mouthpiece is important because it accompanies an extant instrument, which carries the same mark and is dated 1581. Like the representations of mouthpieces in treatises such as Mersenne's *Harmonie universelle* (1636–7), which it resembles, it suggests that mouthpieces tended to have flat rims, shallow cups and sharp, well-defined apertures. But there is insufficient detailed evidence to show that all mouthpieces followed a broadly consistent, let alone identical, pattern.

Trombones were made in several sizes (fig.7). Praetorius's description of the names and pitches of different sizes is open to interpretation (see Myers, 1995), but he gives for the alto, tenor, bass and contra/double bass trombones the following nominal pitches:..\Frames/F010358.html

The labelling of the tenor instrument as 'gemeine' (common or ordinary) suggests that this size of instrument had the widest utility, and this indeed seems to have been the case. The bass was also widely used, but the alto less so, particularly outside Germanic countries. The soprano trombone, which was introduced towards the end of the 17th century, was not widely popular, but Moravians who settled in North America used it on the chorales.

The way in which early trombone players produced notes was broadly similar to that used by modern players, as were the basic mechanics of the instruments, but the sound and style they employed – the idiom of the early instruments – was markedly different from that which began to develop in the late 18th century. The idiom of the early instruments was influenced by the technical features of the instruments themselves, the musical and cultural contexts in which they were employed, and other pragmatic considerations, particularly the physical environments in which they were played.

The earliest source to provide explicit, diagrammatic evidence about trombone slide positions is Aurelio Virgiliano's *Il dolcimelo* (*c*1600). Virgiliano's drawings are consistent with other sources up to the end of the 18th century in showing that trombone players recognized four slide positions (modern players use seven). The first of the four was likely to have been sounded not with the slide closed, but with it slightly extended, allowing the player to sharpen and flatten notes to bring them in tune. As

there was no secondary tuning slide, the main slide (perhaps assisted by some 'lipping') was also used to adjust the overall pitch of the instrument. The recognition of four rather than seven slide positions is consistent with the view that early players thought in diatonic rather than chromatic terms: while the seven modern positions are a semitone apart, the four associated with the early trombone were diatonic, with additional semitones treated as adjustments between them.

The best modern reproductions replicate not only the measurements of early specimens, but also the manufacturing processes by which they were made. Such instruments provide an insight into the world of early players, and allow scholars to make sense of primary-source evidence. They show that early trombones were versatile: not only could they be played in a number of settings, but they were able to produce two distinct types of sound. When these instruments are blown loudly, the sound is brassy and strident. The abundant references to trombones being combined with shawms and trumpets for fanfares and other loud outdoor music suggest that they were often heard in this mode (fig.8; for further illustration *see* Alta (i)). Mersenne commented that this type of trombone playing was 'deemed vicious and unsuitable for concerts', but (although his utterances are not without ambiguity in this respect) he had probably heard instruments played in this way. However, modern reproductions show that early trombones were easy to play quietly; when played in this manner they produce a restrained, suave, clearly focussed sound, capable of subtle articulation and inflection, that even remains focussed in the lively acoustics of a church. It is this mode of expression that was the most common in the 16th and 17th centuries. The sound is well matched with that of the cornett: a partnership between the two instruments was established by the early part of the 16th century and continued until the closing decades of the 17th. The two instruments were superbly suited; they had wide and complementary pitch compasses, and broad dynamic and expressive ranges. They were natural accompanists for choral music, and players of them were employed in ecclesiastical foundations across Europe (*see* Chorus (i), fig.4). While trombonists were employed with cornett players in court, church and civic ensembles, single instruments were also used in broken consorts. Praetorius's observation that the English had a predilection for a single quiet trombone (*eine stille Posaune*) in consort music is confirmed by other sources, and many pictorial representations show trombones in the company of various wind and string instruments (fig.9). Praetorius and Mersenne recognized the trombone as one of the instruments on which it was possible and appropriate to play diminutions and other decorations. Because many trombonists also played other instruments, it is likely that the majority were not only technically capable of playing such embellishments, but had a fine sense of what was tasteful and appropriate. Some players were famous for their virtuosity: Praetorius wrote of 'the famed Phileno of Munich', and the Italian Lorenzo da Lucca was said to have had 'in his playing a certain grace and lightness with a manner so pleasing' as to leave his listeners 'dumbstruck' (Haar, 1988, p.64).

Although trombones were used by European courts and ecclesiastical foundations from the middle of the 15th century onwards, their entry into different musical centres was not simultaneous. The earliest recorded use

of trombones in England does not occur until 1495, and regular wages were not paid to players until some time later. The first record of the use of a trombone by an English civic authority appears in 1526, when the Court of Aldermen of the City of London sanctioned the purchase of an instrument for their waits. In Spain, trumpets, shawms and trombones (*trompetas, é chirimias, é sacabuches*) were employed to play at the baptism of Prince Juan, the son of Ferdinand and Isabella, in 1478, but it was not until 1526 that trombonists were given regular employment at Seville Cathedral. However, from the opening decades of the 16th century until the closing years of the 17th, the trombone was one of the most prominent professional instruments. There are few labelled trombone parts in 16th-century musical sources, but contextual evidence is so plentiful that it is easy to deduce the types of circumstance in which the instruments were used. Trombonists were regular members of Stadtpfeifer, *piffari*, waits and other town groups, and of church ensembles. However, regional differences did occur. For example, in England, where there were up to 12 trombonists in receipt of wages from the court in the 16th century (the arrival of the Bassano family swelled the numbers in the 1530s), there is no evidence of them being used for liturgical music before the second half of that century, and even though the ensemble of cornetts and sackbuts was ubiquitous in Europe, only two English sources – John Adson's *Courtly Masquing Ayres* (1621) and Matthew Locke's *Music 'ffor His Majesty's Sagbutts and Cornetts*' (1661) – specify this ensemble alone. However, other pieces such as Charles Coleman's *5 Partt things ffor the Cornetts*(1661) provide compelling evidence that this grouping may also have widely been used in England. In the late 16th century and the 17th it became more common for a group of trombones to be used in ensembles to produce a heterogeneous block of sonority. Some of the *cori spezzati* effects which Andrea and Giovanni Gabrieli seem to specify for the Venetian players exploit this idiomatic feature, and similar sonorities dominate the trombone writing of Heinrich Schütz, the marvellously sculptured writing in *Fili mi Absalon* (*Symphoniae sacrae*, 1629) being a superb example. It is probably from this type of sonority rather than from the sound of the single instrument that the symbolic association of trombones with death, the underworld and other dark features of the emotional spectrum derives; while it is difficult to determine the exact point from which such meanings originate, it is certain that these associations were well understood by the start of the 17th century. Monteverdi's dramatic use of a large trombone ensemble in *Orfeo* seems to follow an established convention, and similar passages are found, for example, in the music for the Florentine *intermedi* performed for the Medici wedding celebrations of 1589. This symbolism seems to have been understood elsewhere as well: a stage direction for the first performance in London of Beaumont and Fletcher's *The Mad Lover* (1616) calls for 'A dead march within, of Drums and Sagbuts'.

A small repertory for solo trombone survives from the 17th century, including a piece called 'La Hieronyma' (*Musicali melodiae*, 1621) by G.M. Cesare (himself a trombonist), and another by Francesco Rognoni Taeggio, who includes in his book of divisions, *Selva de varii passaggi* (1620), a piece with the rubric 'per il violone over trombone alla bastarda'. But towards the end of the 17th century, the trombone began to fall out of use in many European centres where it had been an established feature of

musical life for almost two centuries. The evidence for this descent is quite unambiguous: records show a decline and then a halt in payments to players who had regularly received them. The same types of source also show that players who had long been associated with the trombone were transferred to other instruments. In England the decline was particularly complete: not a shred of evidence suggests that there was a single native-born trombone player in the country for the entire 18th century, and an inventory of goods at Canterbury Cathedral refers to a chest in which are kept 'two brass Sackbuts not us'd for a grete number of years past'. Trombones were used for the first performances of Handel's *Israel in Egypt* and *Saul* in 1739, but they must have been played by foreigners. Their use a few years later at a benefit for the trumpeter Valentine Snow was deemed sufficiently unusual to be featured in advertisements. When they were reintroduced for the 1784 Handel Commemoration, a member of the audience annotated his programme with the observation that they looked something like 'bassoons with an end like a large speaking trumpet'.

There are several reasons why the instrument fell from use. The most obvious is a change in taste which favoured more homogeneous sonorities, particularly after the fashion of the string orchestra of the French court. Another is the decline in the practice of doubling vocal lines with cornetts and trombones; because this was a primary function of the instrument, trombones were less needed when that practice became less favoured. In Austria, however, the practice of doubling vocal lines with trombones survived. As late as 1790 Albrechtsberger complained of 'trombones written in unison with alto, tenor or bass voice'. It was in Austria and Germany, especially in Vienna, that the trombone survived as a church and theatre instrument. Many sacred choral works contain trombone obbligatos, and there is a small but attractive solo repertory. It is no accident that it was here, in the hands of Gluck and Mozart, that the earliest developments of the modern idiom took place.

Trombone

8. History from *c*1750.

In the mid-18th century the trombone was still used principally in church music (particularly for doubling the lower voices) and in small ensembles: it did not become a part of the orchestra until the late 18th century. The instrument maintained strong associations with the underworld or the supernatural. The use of a trio of trombones – alto, tenor and bass – appears to date from the beginning of the modern phase of trombone usage in the late 18th century, when the instrument was increasingly used in orchestral and band music. The widespread use of the trombone is a result of the burgeoning of wind bands and brass bands in the mid-19th century in towns, villages and workplaces all over Europe and North America. Gluck wrote for a trio of alto, tenor and bass (e.g. in the oracle scene of *Alceste*), as did Gossec, who also scored for a single trombone joined to a bass part. Mozart used trombones only in his operas and sacred works; his dramatic use of the instrument is particularly well exemplified by the supper scene of *Don Giovanni*, and he provided a notorious solo for the instrument in the 'Tuba mirum' of the Requiem (not without precedent in his earlier church music). In Germany the reorganization of military bands gave

the trombone the role of strengthening the bass line, although the trio was maintained in large infantry bands as well as in the orchestra.

Romantic composers considered the trombone capable of expressing a broad range of emotional situations; Berlioz said the instrument possessed 'both nobleness and grandeur' and had 'all the deep and powerful accents of high musical poetry, from the religious accent, calm and imposing … to wild clamours of the orgy'. He included an impressive solo in his *Symphonie funèbre et triomphale*. According to Algernon Rose (*Talks with Bandsmen*, 1895) trombonists' propensity for playing too loudly was the reason one conductor, about 1850, employed trombones designed with the bell pointing back over the shoulder. Over-the-shoulder trombones were also used in at least one American band (the Boston Brass Band) to match the design of the other instruments, which were all over-the-shoulder models. 19th-century composers often limited themselves to a stereotyped usage of the trombone for reinforcements of tutti passages and for background harmonies in soft passages; because of the preponderance of 19th-century music in 20th-century concert programmes, it is with these least interesting sides of the trombone's character that audiences are most familiar. In the dance band music of the first half of the 20th century, however, arrangers made liberal use of the trombone's inimitable cantabile, which dance band trombonists execute so well they are sometimes credited with having discovered new techniques. Other technical developments have been largely due to the influence of jazz musicians (see for example Kid Ory, Tommy Dorsey and j.j. Johnson). Jazz trombonists have explored the expressive potential of irregular attacks, glissandos, microtones, a wide variety of mutes and (particularly the German virtuoso Albert Mangelsdorff) multiphonics of up to four distinct pitches, revealing that a greater range of timbres is available than is usually employed even by modern symphonic composers. Vibrato – always a technical possibility – has become part of the trombone soloist's style; it can be made with the slide, the embouchure, or the diaphragm. Slide technique has become more flexible, and the instrument's range has been extended at both ends, making the feasible range of the tenor trombone from *E'*, the lowest pedal note, to *g''* or above.

Although the trombone is now seldom heard in the concert hall as a solo instrument apart from jazz, several 19th-century players made reputations as soloists, including C.T. Queisser and F.A. Belcke in Germany, and in France A.G. Dieppo.

The developing use of the trombone from about 1750 was accompanied by changes in design. The concept of the tenor instrument standing in A with a 'floating' first position and four diatonic slide positions gradually gave way to the perception of the instrument as standing in B♭ with seven chromatic slide positions. The earliest known source to treat this disposition as normal is André Braun's *Gamme et méthode pour les trombonnes* (*c*1795). The large basses in E♭ and D tended to give way to the more manageable basses in F and G with seven positions on the slide. Around the turn of the century, the flat stay on the bell section was replaced by a tubular stay, facilitating the modern mode of holding the instrument, with several fingers curled around the stay. The expansion in bore from the joint through the bell bow to the bell tube is much more pronounced in the later models,

which considerably influences the tone and increases the volume at which the instrument can be played. Also important in determining the quality of the sound is the degree of flare in the bell over the last foot or so of the air column – the last inch or two being probably less important than the region a little way into the bell (which is where most of the sound energy is reflected back towards the mouthpiece). By the end of the 19th century nearly all trombones were equipped with slide stockings, a tuning-slide and a water key. In the modern trombone there is a 'tapered leadpipe': a subtle shaping of the first few inches of the tubing (inside the downward leg of the inner slide) which gives a gradual transition from the narrowest part of the bore (inside the mouthpiece) into the cylindrical bore of the slide. This has the effect of making notes speak more readily.

From the early years of the 19th century, when the instrument became far more popular and its manufacture more widely distributed, distinct models developed. In Germany the bore increased from an average (for the tenor) of 11 mm around 1800 to 13 or even 14 mm by about 1840. The flare of the bell was increased in acuity and was continued to a termination of wide diameter. This enlargement of the trombone's bore and bell size (and increase in power) is usually credited to the Leipzig maker C.F. Sattler, and its adoption to Wagner during his period at Dresden. The tubular slide stays, consisting of two sections, one end of each fixed to the limb of the slide and the other ends resting one inside the other in a loose fit to provide flexibility, have been continued on some German trombones until the present day. German trombones of the late 19th century and the early 20th often carried a traditional embellishment of a pair of snakes disporting themselves on the bell bow.

The use of large-bore tenors and basses in B♭/F became general in military bands after 1850 and such instruments were used in the orchestra for the later works of Wagner, Brahms, Bruckner and Richard Strauss. In the early 20th century some British players changed to instruments of wider bore for this repertory and at the end of the century some changed from their normal American-model trombones to German instruments for the music of these composers.

In France subtle changes were made to the bell flare to create an instrument capable of playing louder without increasing the bore of the slide, which remained at around 11 mm or even less. This model seems to have been developed by François Riedloker towards the end of the 18th century and later modified by Courtois and others. Braun described the bass as the principal member of the family, merely providing fingering charts for the tenor and the alto. While his alto is an instrument in E♭, the tenor is distinguished from the bass only by its use of the tenor clef and its avoidance of the lowest notes: both parts were taken by trombones in 9' B♭, presumably with a larger mouthpiece for the bass. The true bass and alto sizes were a rarity in France in the 19th century; the tenor was not infrequently pitched in C.

The German model seems to have been favoured in Britain early in the 19th century, the French from mid-19th to mid-20th century. The traditional complement was a set of alto, tenor and bass, disposed either in F, C and G or in E♭, B♭ and F. The trombone was virtually unused in Britain during

most of the 18th century, but in the first quarter of the 19th it returned to fashion, frequently with a forceful style of playing which gave it associations that are only being thrown off at the end of the 20th century, but no doubt appealing to many band members and bandmasters. The alto, capable of less volume than the tenor and bass, and not as full in tone as valved french horns, does not appear to have been much used after the 1860s. The bass in G), more manageable than that in F, had a particular appeal to players in Britain; it was as numerous in early bands as the tenor trombone and also became the standard bass trombone in the orchestra.

The wide-bore German model was further refined in the USA to produce the modern trombone, sonorous in *forte* but perhaps lacking in character in *pianissimo*. The American instrument (fig.1*a*), with its good intonation and lightweight outer slide (essential on a wide-bore instrument) is used and copied worldwide. The higher dynamic level in late 20th-century bands and orchestras (to the detriment of some aspects of tone quality and balance), was largely the result of the power of the trombones combined with the desire of brass players to be audible above the rest of the ensemble.

Tromlitz, Johann George

(*b* Reinsdorf, nr Artern, 8 Nov 1725; *d* Leipzig, 4 Feb 1805). German flautist, teacher and flute maker. In 1750 he received the degree of Imperial Public Notary at Leipzig University. At about this time he began to make flutes. In 1754 he became principal flautist of the Grosses Conzert, a forerunner of the Gewandhaus orchestra. His career, interrupted by the disbanding of the orchestra during the Seven Years War, included solo tours as far afield as St Petersburg. J.F. Reichardt's accounts of his own travels (published 1774–6) took note of Tromlitz and only three other Leipzig virtuosos. Tromlitz left the orchestra in 1776 and devoted himself to teaching, writing, composition and flute making. He recorded his ideas and teaching methods in several texts which shed much light on late 18th-century flute playing and performing practice. His *Kurze Abhandlung vom Flötenspielen* (1786) announced his rejection of merely average standards of performing and instrument making; this was to become a constant theme of his. He introduced the elements at the core of his ideal: clarity of articulation and expression; perfect intonation in a system having both large (5-comma) and small (4-comma) semitones, for which the E♭ and D♯ keys invented by J.J. Quantz in 1726 were essential; the appropriate choice of music for the hall and audience; and the total technical control and emotional involvement of the performer.

These themes were developed in the 1791 *Ausführlicher und gründlicher Unterricht die Flöte zu spielen*. This monumental work, the most comprehensive of the 18th-century flute tutors, was designed to give complete instruction without the aid of a teacher. It covered in detail all aspects of flute playing: intonation, articulation, flute maintenance, posture and breathing, dynamics, ornaments, musical style, cadenzas and the flute's construction. The two chapters on articulation, for single and double tonguing, were at the time the most thorough written treatment of the subject for any instrument. Each subject was reduced to a set of well-thought-out rules and richly illustrated with examples. Though Tromlitz advocated a methodical approach to playing, his view was that once correctness had become second nature the performer's personal taste should be given free rein, especially in articulation and ornamentation.

In 1800 *Über die Flöten mit mehrern Klappen* was published as a supplement to the 1791 tutor. It gave a detailed and methodical explanation of the use of the keys on a flute of Tromlitz's own design, which had taken as its point of departure the three keys (B♭, G♯ and F) added to the instrument by London makers as early as the 1750s. Tromlitz first announced flutes with added keys in 1781. Between 1783 and 1785 he developed the essential points of his new design, a *c*″ thumb key and a duplicate key for F, the latter invented in 1783 by the father of the virtuoso F.L. Dülan. Tromlitz's flute of 1785 employed these two keys as well as the B♭, G♯ and short F keys. By 1796 the system had been completed by applying a second lever, for the right index finger, to the B♭ key controlled by the left thumb. Tromlitz's original contributions were the 'long' B♭ and the *c*″/b♭ arrangement for the left thumb, which was to be

adopted by Theobald Boehm in 1832 in preference to several other possibilities developed in the meantime including a *c''* key for the right index finger. A *c'* foot joint was available, but Tromlitz discouraged its use because of its detrimental effect on the flute's tone. The instrument was voiced and tuned using specialized and innovative tooling to maximize its focussed, even tone. The eight-keyed Tromlitz flute, like the two-keyed one, was intended to play scrupulously in tune in all 24 keys with a full set of major and minor semitones, even when accompanied by an equal-tempered keyboard. A critique of the Tromlitz flute, reflecting the belief that equal temperament was the better tuning system for melody instruments, was published anonymously by H.W.T. Pottgiesser in 1803. Towards the end of his life Tromlitz began the invention of a chromatic flute with only one key, probably still with a conical bore, a design in which he no longer insisted on separate enharmonic fingerings. He discontinued this experiment because he felt he would not live to see it to fruition, or to see players accept its unfamiliar fingering patterns. More important than any mechanical detail Tromlitz invented was his philosophy that the way to improving the flute lay in completely rethinking its design along unified lines, not in the incremental refinement of existing models.

Contemporary accounts of Tromlitz's playing are uniformly positive, stressing his perfect intonation, brilliance and precision, and strong, trumpet-like tone. He was reputed to have been one of the first in Germany to practise a bravura style of concerto playing and to espouse the strong and cutting tone best suited to this style. Tromlitz's compositions (listed in F. Vester: *Flute Music of the 18th Century*, Monteux, 1985, p.495) are not considered of much importance today, except for the light they shed on his musical taste. His obituary states that he had pupils from all regions. Despite his influence as a performer and teacher and his achievements as a flute maker, Tromlitz's effect on his world was overshadowed by that of major commercial instrument makers of the time. Though some players prized his flutes, and such makers as F.G.A. Kirst (Potsdam) and J.H.W. Grenser (Dresden) imitated aspects of his work, his contributions were not widely understood until after his death, when they were an important catalyst for many of the elaborate key systems of the early 19th century, including those of Boehm.

ARDAL POWELL

Trommel (i)

(Ger.).

See Drum.

Trommel (ii)

(Ger.).

See under Organ stop (*Pauke*).

Trommelbass

(Ger.: 'drum bass').

A bass part consisting of steady repeated notes, usually quavers, occasionally moving from one pitch to another, designed to give the impression of rhythmic animation in a harmonically static idiom. It is a mannerism found frequently in music of the middle 50 years of the 18th century. The same device is often used to enliven inner parts. Modern German dictionaries attach a pejorative value to the term which it did not always have; the device itself, though easily abused, is found in some of the best music of the Classical period.

DAVID FULLER

Trommet

(Ger.).

See under Organ stop (*Trumpet*).

Trompa (i)

(Sp.).

A medieval, long, straight trumpet. Sebastián de Covarrubias (*Tesoro de la Lengua Castellana o Española*, Madrid, 1611) explained that the elephant's trunk was called a *trompa* because it had the shaped of the 'the simple, even [?cyclindrical] trumpet which is without turns' (*la trompeta senzilla e igual, que no tiene vueltas*).

Trompa (ii).

A circular Horn (hunting and orchestral horn).

Trompa (iii).

See Jew's harp.

Trompa da caza

(Sp.).

Hunting horn; *see* Horn.

Trompe (i)

(Fr.).

French term for a trumpet or horn, recorded from the 12th century; at first the trompe was a long straight trumpet used as a signal and ceremonial instrument. In 1606 Nicot described it as made of brass. By the late 17th century the term was being used for an instrument with a single coil. It was

sometimes used to denote a hunting horn (*trompe de chasse*), to distinguish it from the orchestral horn (*cor*).

Trompe (ii) [trompe de Béarn]

(Fr.).

Term used in the 17th and 18th centuries for the Jew's harp.

Trompe antique

(Fr.).

See Tuba curva.

Trompe de chasse

(Fr.).

Hunting horn. *See* Horn.

Trompes

(Fr.).

The largest bass pipes in 15th- and 16th-century organs, usually occupying a separate chest and/or position in the organ case. *See under* Organ stop.

Trompete (i)

(Ger.; Fr. *trompette*).

Trompette à coulisse

(Fr.).

See Slide trumpet.

Trompette courbée

(Fr.).

See Tuba curva.

Trompette des ménèstrels

(Fr.: 'trumpet of the minstrels').

Term employed in areas under Franco-Burgundian influence during the 15th century for the brass instrument (probably a Slide trumpet) and player associated with the Alta (i) by contrast with the *trompette de guerre*, or natural trumpet.

PETER DOWNEY

Trompette marine

(Fr.).

See Trumpet marine.

Tronca

(It.: 'cut off'; apocopated past participle of *troncare*; *parola tronca* is a word accented on the last syllable).

Sharply cut off and accented, or drily; an instruction found particularly in Verdi. On the *cadenza tronca* (Tosi), *see* Recitative, §1(ii).

See also Tempo and expression marks.

DAVID FALLOWS

Tronci.

Italian family of organ builders. Antonio [Anton Maria] Tronci (*b* 19 June 1704; *d* 16 April 1791) and his brother Filippo (i) (*b* 18 March 1717; *d* 22

March 1788) opened a workshop in Pistoia about 1750, having worked as apprentices and then associates of Giovan Francesco detto Domenico Cacioli in Lucca. The organ of S Maria delle Grazie, Pistoia (1755), is one of their masterpieces. They were succeeded by Antonio's sons, Luigi (i) (*b* ?1755; *d* 23 Oct 1803) and Benedetto (*b* 24 Dec 1756; *d* 4 March 1821), whose most important work is the spectacular organ at S Pietro Maggiore, Pistoia (*c*1815). A small organ of their's, built in 1793, originally in the Villa Rucellai, Campi Bisenzio near Florence, and which had been preserved completely intact, has been restored and placed in Pistoia Cathedral (1997). It has a single manual of 47 keys (*C–c'''*; short first octave) and eight pull-down pedals plus two accessory pedals (*Timpano* and *Usignoli*: 'Nightingale'). Benedetto's nephew, Filippo Tronci (ii) (*b* 12 July 1795; *d* 25 April 1847), inherited the firm, building organs at Montepulciano Cathedral (1840) and S Bartolomeo in Pantano, Pistoia (1844), both with brilliant Cornetto IV stops in the treble and Cornettone II in the bass placed to the fore of the front pipes. Filippo's two sons, Luigi (ii) (*b* 23 Aug 1823; *d* 3 Jan 1911) and Cesare (*b* 6 June 1827; *d* 10 Dec 1874), took over after his death. Many good organs built by them are still preserved in their original state. Another Filippo (iii) (*b* 27 Feb 1849; *d* 7 July 1918) was the last organ builder of the family. By 1877 the Tronci firm had built 359 instruments.

In 1883 the Agati and Tronci workshops merged, and Filippo (ii) became the sole proprietor of Agati–Tronci. Three of his most important organs are in Lucca province: at Capezzano Pianore (1895), Corsánico (near Viaréggio; 1899) and Capánnori (1904); and he exported organs to Corsica, Argentina (Teatro Colón, Buenos Aires) and the Middle East (church of the Holy Sepulchre, Jerusalem).

The typical Tronci organ is very rich in colourful 'da concerto' stops (flutes, cornettos and reeds), together with the traditional Italian Ripieno. This is due to the influence of both the monumental five-manual organ at S Stefano dei Cavalieri, Pisa, built in 1737 by Azzolino Bernardino Della Ciaia with the assistance, among others, of the young Antonio and Filippo Tronci. Also influential was the organ in Spirito Santo, Pistoia (1664), by Willem Hermans.

UMBERTO PINESCHI

Trondheim.

City in Norway. Founded as Nidaros in 996, it was renamed Trondhjem in the 16th century; it was again called Nidaros in 1930–31 and then became Trondheim. From the Middle Ages until the 19th century it was the main Norwegian centre of church music. In the first half of the 11th century it became an episcopal see with its own school and Benedictine monastery; in the 12th century it became an archiepiscopal see. King Olaf II Haraldsson (ruled 1016–23) was the country's patron saint, and Nidaros Cathedral became the centre of the cult of St Olav. The 'Olavsmusikken' consists of sequences, antiphons and responsories, including the sequences *Lux illuxit letabunda* (?*c*1200) and *Postquam calix Babilonis*. (The music was lost during the Reformation but rediscovered around 1900.) As in other large European towns there was close cooperation between the cathedral and the cathedral school, and the school's cantor and pupils were of decisive importance for the musical life of the city. Outstanding post-Reformation cantors were Jens Andersøn (1577–99), Hans Søffrensen (1627–60), J.P. Thams (1736–73) and J.C. Tellefsen (1815–39). There was an organ in the cathedral from the 14th century; organists there have included Elias Hasse (1643–63), J.D. Berlin (1740–87), J.C. Tellefsen (1807–57), Kristian Lindeman (1894–1934), Ludvig Nielsen (1934–76) and P.F. Bonsaksen. The town's other large church, the Vår Frue Kirke (church of Our Lady), with an organ from about 1650, has had Ludvig Simonsen (1664–78), O.A. Lindeman (1799–1857), M.A. Udbye (1869–85) and P.H. Albertsen (1947–68) among its organists. The Olavsfestdagene (Olav Festival) has been an annual event since 1963, linked to the cathedral.

Apart from those of organist and cantor, the most important musical post in Trondheim (as elsewhere) was that of *stadsmusikant*; an instrumentalist is first mentioned in 1643. Among the town musicians were Augustus Krigsmand (1702–36), J.D. Berlin (1737–67) and Peter Eberg (1794–1815). The post was abolished in 1848. The first musical society in Trondheim was founded in 1768, but survived only a few months. More important was the Trondhjemske Musikalske Selskab (1786–1804). A Musikalsk Øvelsesselskab (Practical Musical Society) existed from 1815 to 1830, and several other societies were active later in the century. Many important musical families and individuals have worked there as organists and composers, including the Berlin, Lindeman and Tellefsen families and M.A. Udbye.

The Trondheim SO, including the Trondheim Chamber Orchestra, was founded in 1909, and among its conductors were Morten Svendsen, Håkon Hoem, Olav Kielland and Arvid Fladmoe; from 1950 to 1981 it was conducted by F.A. Oftedal, and Jiří Stárek was a regular guest conductor from 1969 to 1984. The orchestra had 62 members in 1995. The principal conductor from 1987 to 1995 was Ole Kristian Rund, and the artistic director from 1995 was the violinist Arve Tellefsen. In 1997 Daniel Harding was appointed principal conductor. Amateur groups include the Students' Society Orchestra (1910) and its two related jazz groups, the Bodega Band and the S. Møller Band, as well as the Ila Wind Ensemble (1972) and Trondheim Handelstands Forenings Orkester (Mercantile Association

Orchestra, 1947). The cathedral choir, conducted from 1976 by Bjørn Moe, consists of some 60 members, and has toured abroad. Other choirs include the Olavskor (St Olav's Choir, 1909–72), Trondhjems Kvindelige Studentersangforening (Women Students' Choral Society, 1930), Trondhjem Studentersangforening (1910) and the Trondheim Kammerkor. The semi-professional string orchestra Trondheimsolistene was founded in 1988 and is directed by Bjarne Fiskum. The orchestra has quickly become highly respected and had a successful European tour in the spring of 1999 with Anne Sophie Mutter as soloist.

The music department at the university was established in 1962. A course of study in folkdance was established there in 1989, and the first Nordic chair of folkdance in 1992. Trondheim cathedral school was one of the first in the country to start a separate music specialization. The Trøndelag Conservatory was founded in 1911 as the private Trondhjems Musikskole and was taken over by the municipality in 1973 and the state in 1986. It has a separate jazz specialization. Since 1995 the conservatory has formed part of the University of Trondheim. The Trondheim district music school has been an important training ground for young musicians since it was set up in 1973. The Ringve Museum, opened in 1952, has a collection that includes about 1600 musical instruments and several thousand pieces of music. It is the only specialist music museum in Norway and since 1995 has been classified as a national museum owned by a foundation. Since 1995 the museum has had a technical conservation workshop for musical instruments, the only one in the Nordic region. The director until 1993 was Jan Voigt, succeeded by Søren Hjort and in 1997 by Peter Andreas Kjeldsberg. Two music stations were established by NRK (the Norwegian Broadcasting Company) in Trondheim in 1984 and 1993 respectively.

KARI MICHELSEN

Troparion

(Gk.: diminutive of *tropos*, 'manner', 'mode').

A collective term for several genres of hymn in the Byzantine liturgy. *Troparia* are in most cases poetic intercalations or refrains used in the recitation of psalms, canticles and doxologies; a few may be performed independently, for example, as processional chants. They constitute by far the largest body of chanted texts in the Byzantine rite and include the important *stichēra* (*see* Stichēron) and *kanōnes* (*see* Kanōn); the text strophes of the latter, each following the melody of a model strophe, are commonly known as *troparia*. By comparison with Western antiphons. the texts of *troparia* are usually less explicitly linked to the scriptural recitative with which they are performed; typically they consist of invocations, calls for mercy, prayers, praises, dogmatic statements or descriptions of the particular saint or feast of the day.

Troparia belong to the oldest stratum of Byzantine hymnody. The earliest known poet-singers, such as the monophysite Anthimos and the Orthodox Auxentios and Timokles, who were active in the 5th century, apparently followed a practice of *troparion* singing associated with urban liturgies rather than with an early ascetic and monastic tradition of pure psalmody. In the older literature *troparia* are often referred to as 'hymns' and hence include old monostrophic, non-scriptural chants such as the 6th-century *Ho monogenēs hyios* ('O only-begotten Son') and the Trisagion sung at the beginning of the Divine Liturgy, and the Cheroubikon and its substitutes.

The oldest collections of *troparia* were probably called 'tropologia', a term found in a series of manuscripts from the 9th century onwards containing the texts of *kathismata*, *stichēra* and *kanōnes* combined in a single volume, but with each subsection arranged according to the system of the eight modes (*see* Oktōēchos).

To distinguish the different categories of *troparia*, manuscripts often also give them a second designation that defines their specific textual content (e.g. *theotokion*, 'a piece in honour of Our Lady'), their liturgical function (e.g. *doxastikon*, 'to be sung with the doxology'), the day on which they are sung (e.g. *anastasimon*, 'on the Resurrection', i.e. Sundays) or their origin (e.g. *anatolikon*, 'of the East').

In a narrower sense, the term *troparion* also refers to the *troparion tēs hēmeras* or *tēs heortēs* (the Proper *troparion* 'of the day' or 'of the feast'), which was repeated several times on a given feast after the 'lesser entrance' of the Divine Liturgy and in the Office. This *troparion* is often known as the *troparion apolytikion* ('*troparion* of dismissal') and is named after its fixed position at the end of Hesperinos. The music of this group of *troparia* was usually transmitted by oral tradition alone; however, a cycle of

troparion melodies that were used as models (*automela*) to generate hundreds of other *troparion* melodies is preserved in a few sources from the 13th and 14th centuries. These notated *automela* reflect the characteristics of a widespread oral tradition. The melodies are predominantly syllabic and use a limited repertory of musical formulae for each mode; they often divide into sections, each consisting of two lines with identical settings, and conclude with a different, refrain-like line. Although the music appears rather simple, these *troparia* could, according to the Byzantine typika (*ordines*), be performed in a variety of ways: by the congregation alone; by the soloist alone; by the soloist and then the congregation; with the congregation repeating only the refrain line after the soloist; in simple style; or with greater solemnity. *Troparia apolytikia* are sometimes called *kathismata* or *kontakia*, because several proems for *kontakia* in the simple style (rather than in the melismatic tradition of the Kontakaria) also function as *automela* for *troparia*.

Finally, three series of *troparia*, each consisting of 12 chants, for Christmas, Epiphany and Good Friday, are traditionally ascribed to Patriarch Sophronios of Jerusalem (*fl* 7th century). These are transmitted in the Stichērarion and are more similar in musical style to *stichēra* than the main repertory of *troparia* and *troparia apolytikia*.

CHRISTIAN TROELSGÅRD

Trope (i)

(Gk. *tropos*: 'turn', 'turn of phrase'; Lat. *tropus*).

Name given from the 9th century onwards to a number of closely related genres consisting essentially of additions to pre-existing chants. Three types of addition are found: (1) that of a musical phrase, a melisma without text (unlabelled or called trope in the sources); (2) that of a text to a pre-

existing melisma (most frequently called *prosula*, *prosa*, *verba* or *versus*, though sometimes also trope, in the sources); (3) that of a new verse or verses, consisting of text and music (most frequently called trope, but also *laudes*, *versus* and in certain specific cases *farsa*, in the sources).

1. Historical overview.
2. Melodic tropes.
3. Purely textual tropes.
4. Textual and melodic tropes.

ALEJANDRO ENRIQUE PLANCHART

Trope (i)

1. Historical overview.

The medieval terminology was far from consistent (Odelman, C1975), and scholars in the late 19th and early 20th centuries expanded it (thus compounding the problem) to include even the sequence and its proses, the conductus, verse songs that sometimes replaced the *Benedicamus Domino*, and the upper voices of early Ars Antiqua motets. Despite efforts by Crocker (C1966) and others to clarify this terminology, the influential work of the Corpus Troporum research team in Stockholm has led to the acceptance of the three categories listed above as closely related enough to be studied as part of the phenomenon of troping. Following Huglo (D1978), they have adopted the terms 'meloform trope' for the first category, 'melogene trope' for the second, and 'logogene trope' for the third. Nonetheless, the repertorial distribution of chant sources from the 9th century to the 11th suggests that in the Middle Ages the second of these categories, most often called 'prosula', was a genre related to but quite distinct from that of tropes. Most tropers contain prosulas, but often as a separate series; more telling, however, in manuscripts containing a gradual and a troper (e.g. *F-Pn* 903 or *I-Ra* 123), the prosulas are copied in the gradual section, while the tropes are in the troper section (*see also* Prosula).

Even when dealing with those categories that were invariably called tropes in the Middle Ages, modern scholars still face problems of terminology, since what is today commonly called 'a trope' – for example, the introduction and interpolations added to a given introit antiphon in a given manuscript – was viewed in the Middle Ages as a set of tropes (hence the plural rubric 'tropi' found almost universally in medieval sources). For this reason the distinction introduced by the editors of the Corpus Troporum between a trope – which medieval scribes would have regarded as a set of tropes – and a trope element or verse – which is what medieval scribes called a trope – has become important.

The earliest known specific mention of tropes is a decree of the Council of Meaux (848) condemning a number of new practices in the performance of the liturgy (Silagi, C1983–4). These practices were specifically the *prosae* sung to the *sequentia* after the alleluia and the tropes to the Gloria. By implication the canon appears to condemn prosulas as well as all tropes similar to those of the Gloria, that is, the Proper tropes. It is probably no coincidence that the earliest surviving manuscripts to transmit the new genres, such as *D-Mb* 14843, *I-Vc* and *Rv* Reg.1553, largely transmit prosulas, *prosae* and Gloria tropes together with a few introit tropes. It is

worth noting that the Council considered the melismatic *sequentiae* after the alleluia to be part of the venerable traditions being corrupted by the new uses, and that by 848 *sequentiae* and perhaps other purely melismatic tropes were viewed as an old repertory. In any event the Council's decree predates by only a few years the earliest of the Norman raids on Jumièges (951 and 962). One of the monks who fled from that abbey to St Gallen took with him a book containing a number of *prosae*, or, as Notker called them, *versus ad sequentias*, which represent, if only by the witness of Notker's dedicatory letter to Liutward of Vercelli, the first known collection of an extended repertory of the new kinds of pieces mentioned by the Council fathers.

Presuambly, then, trope composition began sometime in the first half of the 9th century, and it affected almost exclusively the newly imposed Gregorian chant. Given that trope repertories probably began as local additions to the Gregorian chant, it is not surprising to find in some tropes a continuation of melodic and textual traditions that existed in the different locales before the adoption of Gregorian chant, albeit modified by the very presence and prestige of the Gregorian repertory (Planchart, C1988; *see also* Gallican chant). The lack of an 'official' status encouraged the textual and melodic reworking of tropes, which do not show the stability of Gregorian chant. The surviving early 9th-century trope repertory probably consists for the most part of those pieces that appear in substantially the same form throughout Europe. Scholars view such patterns of transmission as an indication that these pieces were disseminated before the division of the Carolingian Empire in 843.

Despite the opposition evinced in the decree of the Council of Meaux, the repertory appears to have grown substantially, at least in certain centres, between 850 and 950. The sections of *F-Pn* lat.1240 that can be dated to about 930 show not only an expanded repertory but also one that was building upon an already established body of works, since the manuscript contains a number of trope verses given as incipits, indicating that the verses in full are expansions of a known repertory. Further, a number of pieces in this source use a neumatic notation from northern France instead of the Aquitanian notation found throughout most of the manuscript (Emerson, B1993; Evans, B1970), suggesting an active importation of northern repertory into Aquitaine. Similarly, the redating of the earliest St Gallen tropers proposed by Arlt and Rankin (A1996) shows an immense repertory being copied at St Gallen in the second quarter of the 10th century, which is in itself a vast expansion of the tropes found in *A-Wn* 1609.

An expansion of the different trope repertories and their spread throughout Europe continued throughout the 10th century, but with some exceptions, such as the immense Aquitanian anthology in *F-Pn* lat.1118 and the fragment of an apparently even larger troper in *I-Rv* Reg.222, the individual regional traditions became relatively stable by the early 11th century. Tropes may originally have been largely a monastic phenomenon, but it should be noted that a substantial number of sources come from cathedrals and secular churches as well.

Tropes came under increasing attack, however, from various monastic reform movements, particularly the Cluniac, which eliminated all Proper tropes from its liturgy, and the Cistercian, which allowed no room for them in the reform of its chant. Fassler (D1990) has shown that a similar attack on tropes was carried out by the Augustinian canons in the 12th and 13th centuries. In any event the typical late 10th- or early 11th-century troper contained a considerable collection of Proper tropes with a substantial complement of Ordinary tropes followed by proses and sometimes *sequentiae*, each in a separate section or more rarely interspersed with each other according to the liturgical year. By contrast, most of the late 11th- and early 12th-century tropes transmit a 'single series' consisting of Kyrie verses, Gloria tropes, proses, Sanctus tropes, Agnus tropes and some *Ite missa est* and *Benedicamus Domino* tropes. When Proper tropes are present in later sources they consist for the most part of a few introductions to the introit. The changed format of the sources lends some validity to the classification proposed by Gautier (C1886) of a 'first' and 'second' epoch in the creation and dissemination of the tropes. Because every trope category had a different evolution and characteristics, they are better described category by category.

Trope (i)

2. Melodic tropes.

Purely melodic tropes appear to be connected with only two repertories: the introit and the Gloria. There is also a repertory of melismatic additions to the Office reponsories.

(i) Introit.

Melismatic additions to the introit have been partly catalogued and discussed by Huglo (D1978). They are, by and large, restricted to two sets of sources: Aquitanian manuscripts of the 10th–12th centuries; and the three earliest tropes of the St Gallen orbit, all 10th century, *A-Wn* 1609, *CH-SGs* 381 and 484.

The Aquitanian sources show only one set of melodic tropes for any given introit. The tropes may expand any of the phrases of the introit antiphon as well as the end of the psalm verse and the amen of the doxology. In no source have these additional melismas been found with text added to them. (For editions of some Aquitanian melodic tropes see Weiss, D1970; Evans, C1961; Sevestre, in Jonsson, H1975; and Sevestre, D1980.) Outside Aquitaine and St Gallen only one other source transmits melodic introit tropes, a mid-11th-century gradual-troper from the abbey of St Vaast in Arras (*F-CHRm* 75), which has a number of melodic expansions of several doxologies and one complete melodic troping of the antiphon *Ex ore infantium*.

The East Frankish repertory of melodic introit tropes is considerably larger. As in Aquitaine the melismata extend some of the phrases of the introit antiphon, the end of the psalm and the amen of the doxology, but the sources often show several sets of melismatic tropes for a given introit. Further, some textual tropes copied in close proximity to the melismatic tropes can be shown to be settings of the same melodies. (A detailed

catalogue of the East Frankish melodic tropes has been compiled by Haug, D1990.)

East Frankish melodic tropes disappear from all sources later than the mid-10th century, and thus the only recoverable melodies are those that can be shown to have been used in textual tropes that survive in later sources with diastematic notation (see example in Hiley, C1993, pp.198–9). Their presence only in the earliest St Gallen sources suggested to Weakland (C1958) that they represented the earliest layer of tropes, a hypothesis expanded by Huglo (D1978), who proposed that the earliest layer of interpolation tropes with text (as opposed to texted introductions) began as prosulas written to these melismas. Both hypotheses are ultimately impossible to substantiate. The addition of melismata to traditional chants to render them more solemn appears a number of times thoughout the history of plainchant and is not simply an 'early' trait. Further, one characteristic of the prosula repertory, the settings of multiple texts to a given melody, is absent from the repertory of texted tropes.

One last type of melodic trope loosely connected with the introit may be noted: Weiss (D1964) has drawn attention to a group of Aquitanian introit tropes that in some sources have been expanded by the use of melodic tropes within the texted verses.

(ii) Gloria.

Purely melismatic tropes to the Gloria in excelsis Deo are restricted to the three early sources from the St Gallen orbit (see §2(i) above); as with the melodic tropes to the introit, some of the melismatic additions are also provided in these same sources with texts in the manner of a prosula. It appears that all the texted Gloria tropes whose provenance can be traced to St Gallen originated as textings of melismatic tropes (Rönnau, *Die Tropen*, E1967).

The Aquitanian manuscripts transmit three tropes that may have been derived originally from a single melismatic troping of Gloria IV: *Carmine digno*, *Quem cuncta laudant* and *Angelica iam Pater* use the same set of melodies for the trope verses and are copied in the same manner as prosulas and some sequences in these manuscripts, that is, with melismas that replicate the music of the trope verse following or preceding each verse in the different sources. As regards the nature and scope of the repertory of melodic or melodically derived texted tropes for the introit and the Gloria, the parallels between the St Gallen and Aquitanian sources are both striking and suggestive.

(iii) Office responsories.

The earliest documentary evidence for the existence of any kind of trope is connected with the melismatic additions to the Office responsories. In a much cited passage, Amalarius of Metz, writing in about 840, reports that a *neuma triplex* was sung near the end of the Matins responsory for St John the Evangelist, *In medio ecclesiae*, which modern singers had transferred to the end of the Christmas responsory *Descendit de caelis* at the words 'fabricae mundi' (Hiley, C1993, pp.200ff). The melisma, in its association with the Christmas responsory, gave rise to a large repertory of prosula

texts, but what is important here is the evidence for the addition of a melisma, taken from another chant, to the responsory *Descendit de caelis*. The repertory of melismatic tropes to the responsories remains essentially uncharted. Holman (G1963) and Steiner (G1973) have shown that some of the melismata were taken from offertories and their verses and even from *sequentiae*. Counterparts to these melismatic additions to the responsories are also found in the Ambrosian rite. The presence of extended melismas at the end of the responsories cannot, however, always be regarded as evidence that they are additions (Kelly, G1974). In later sources, perhaps under the influence of the prosula and the prose, some responsory melismas are provided with reduplicated phrases derived from their own melodic material.

Trope (i)

3. Purely textual tropes.

The addition of text to a pre-existing melisma was usually labelled 'prosula', 'prosa or 'verba' by medieval scribes. As noted above, some of the early East Frankish introit tropes may have arisen in this manner, but by and large the prosula repertory remains distinct from the tropes in its grouping within the sources and even in the kinds of sources that transmit it. The principal *loci* of prosula or prose composition were the melismas of the gradual, the alleluia, the offertory verses, the 'Osanna' of the Sanctus, the trope verse *Regnum tuum solidum* near the end of a number of Gloria tropes, and the melismas – added or original – in the Matins responsories (*see* Prosula; for further discussion of prosulas to the *Regnum tuum solidum* and the 'Osanna', see §4 (ii) (b–c) below).

There are two other repertories that pose special problems. The first concerns the verses to the Kyrie eleison. As Bjork has shown ('Early Repertories', 'Early Settings', 'The Kyrie Trope', E1980), what are commonly called 'Kyrie tropes' are for the most part not tropes (although true Kyrie tropes do exist) but prosula-like settings. The distinction is important because most of the medieval Kyries that survive seem to have begun not as melismatic Kyries nor yet as tropes but as elaborate compositions where Latin invocations preceded (or followed) the melismatic ones. It is significant that scribes and singers alike treated them as prosulas in the sense that over time they provided multiple textings for the melodies. (For a discussion of these Latin Kyries and their closely related Kyrie verses, see §IV, 2(i) below.)

The second problematic repertory consists of the proses added to the second melodies sung on the repeat of the alleluia respond after the verse, that is, the *sequentiae*. This repertory, though a product of the same impulse to increase the splendour and solemnity of the chant that gave rise to tropes and prosulas, developed from the early 9th century onwards distinct characteristics that mark it as an independent genre requiring a separate investigation (*see* Sequence (i), and Sequentia).

Trope (i)

4. Textual and melodic tropes.

Tropes consisting of musical and textual introductions, with or without further interpolations to the Proper and Ordinary chants of the Mass as well

as to some chants of the Office, constitute by far the vast majority of the surviving repertories.

(i) Proper of the Mass.

(a) Introit.

Tropes to the introit survive in sources from virtually all regions of Europe and consist most frequently of a simple introduction or an introduction followed by one or more intercalations to the introit antiphon (ex.1). Less frequent are introductions to the psalm, the verse *ad repetendum* and the doxology. A few tropes to the doxology contain intercalations that divide the doxology at the 'sicut erat'.

A small number of introit tropes are found in both East Frankish and West Frankish sources, suggesting that they are early enough to have come into circulation before the division of the Carolingian Empire with the Treaty of Verdun in 843; most, however, tend largely to have either an East Frankish or a West Frankish tradition. As local traditions developed within each area in the course of the 9th and 10th centuries, introductions and intercalatory phrases were combined with each other in a vast variety of patterns; these patterns changed widely from one local tradition to another but tended to remain relatively stable within each tradition. (These variations can be gathered from the tables in Jonsson, H1975, and Björkvall and others, H1982; further discussions appear in Planchart, B1977 and D1994.) Melodies for tropes are also unstable in their transmission across boundaries and parallel to some extent the recombining of the trope elements mentioned above. Notable among the melodic changes is the large-scale reworking of the melodies for a considerable number of tropes transmitted with the same texts but with different melodies in northern France and in Aquitaine (Reier, B1981).

In a few instances textual transmission of introit tropes from one region to another was not literal in terms of the individual trope verses but rather involved the composition of new works based upon a received model (Planchart, C1988).

Tropes to the psalm and doxology occurred considerably less frequently than tropes to the introit antiphon and were seldom transmitted from one tradition to another. The few exceptions involve transmission from the northern French and English tradition to Aquitaine, or the transmission of tropes to the psalm or doxology in one tradition as tropes to the antiphon in another.

Textually the great majority of the introit tropes consist of phrases that introduce or provide a context for the phrases of the introit itself or else represent a commentary upon the text of the official chant. This relationship between the trope and the official text is reflected both in the performance (tropes being sung by the soloists and the introit antiphon by the choir) and

in the music, which in some works appears to reflect the music of the official chant while in others it provides a distinct contrast. A group of south Italian introit tropes, however, appears to consist of deliberately self-referential works, where the trope verses and their melodies make their own point independently of the chant they ornament (Planchart, D1994).

Closely related to but distinct from the introit tropes is a small group of works found essentially in northern France and England and labelled in English sources 'versus ante officium' and in northern France 'versus ad processionem'. These represent introductions to the entire Mass and are then followed by the first of the introit tropes. Some were introit tropes imported from elsewhere and used in this manner, such as the adaption of Tuotilo's *Hodi cantandus est nobis puer* in northern France and England, but some are local productions that seem to have been intended from the start as a *versus ante officium*.

Related to the *versus ante officium* is one of the most famous of the early introductions to the introit, the Easter dialogue *Quem queritis in sepulchro*, the *fons et origo* of liturgical drama (for its early history see Hardison, C1965; De Boor, H1967; and Drumbl, D1981). Drumbl proposed that this dialogue arose in the late 8th or early 9th century as part of a separate ceremony before the Easter Mass. During its transmission to the different regions it developed in three distinct manners that were virtually independent of each other (Planchart, D1994): in northern France and England it became the *visitatio sepulchri* and as such part of the Easter Eve procession, while in Germany, after a very early appearance as an introit trope (in *CH-SGs* 381 and 484), it also became the *visitatio sepulchri*; in Aquitaine and Spain it was invariably an introit trope and spawned parodies for a number of other feasts, including Christmas, St Stephen, St John the Baptist and Ascension; and in Italy it was invariably a *versus* sung immediately before the Mass, making it the only Italian equivalent of the northern *versus ante officium*. Significantly, early examples of liturgical dramas directly dependent upon the *Quem queritis* are found only in the regions where it was a *visitatio sepulchri*. Further, when the Aquitanian parodies of the *Quem queritis* as tropes for other feasts were imported north they were treated always as a *versus ante officium* rather than as a trope. (*See also* Medieval drama, §II.)

From an early date introit tropes were drawn from a number of sources, including scriptual texts (often from the same scriptual source as the introit antiphon) and hymns, but newly composed texts, some in metric or rhythmic verse and some in prose, are equally frequent. It has been suggested that Proper tropes of the earliest layers may be viewed either as invitations to sing a chant (Husmann, C1959) or as attempts to create a liturgical context for the often neutral biblical texts that make much of the Mass chants (Stäblein, C1963). In some manuscripts, such as *F-Pn* lat.9448, tropes seem to be carefully chosen to integrate the Propers into a specific theological plan (Jonsson, C1983).

The use of phrases drawn from the same scriptural sources as the introit antiphon means that in a number of instances the text of a trope element may appear in the same manuscript used also as verses *ad repetendum*. Thus, in a number of cases where manuscript rubrication is absent or

ambiguous, the only way of determining the difference between a trope and a verse *ad repetendum* is whether or not the text is provided with a psalm tone or with an independent melody. Conversely, there are a few instances of non-scriptural texts that share the stylistic traits of tropes in terms of their texts, but which survive now only as verses *ad repetendum* (Steiner, D1993).

Introit tropes are the only tropes of the Proper of the Mass that were added to chants from outside the Gregorian repertory. The Old Roman Gradual from S Cecilia in Trastevere transmits a single introit trope for the Christmas introit *Puer natus est* and a trope text (transmitted as such in the St Gallen manuscripts) as the verse *ad repetendum* for the Easter introit.

As the popularity of tropes waned in the 12th century, introit tropes were among the few that survived in some centres until the 14th and 15th centuries. In most cases they were reduced to simple introductions without any intercalatory lines, although late East European manuscripts transmit a number of the St Gallen tropes with intercalatory verses (Haug, D1995). A small repertory of introit tropes composed in the 12th and 13th centuries survives in late sources, but these have not been studied extensively. In a few cases these late tropes consist of textual and melodic borrowings from hymns and even proses of the Victorine tradition.

(b) Gradual.

Several early 20th-century studies of tropes, including Analecta Hymnica Medii Aevi (Dreves, Blume and Bannister, xlix, H1906/*R*) contain many items as tropes to the gradual, but these are mostly prosulas written to fit the melismas of the graduals and their verses. There is, however, a minuscule repertory of true tropes to the gradual, that is, introductions to the respond with an independent melody. Some of these seem to be introit tropes pressed into service as introductions to the gradual, but two Aquitanian sources transmit a few pieces that survive only as gradual introductions. Typical of these is the following (*F-Pn* n.a.lat.1871, f.15*r*): AD R(ESPONSORIUM)Cantibus altithronis tua reperimus cantica laudum suscipe petimus pie rex canora fratrum quae caecinit in laude Christo: *Haec dies*

(c) Alleluia.

As in the case of the gradual, true tropes to the alleluia are a small repertory easily confused with prosulas. One example in *CH-SGs* 484, *O redemptor omnium*, may be the result of a scribal confusion, since the scribe entered it in *SGs* 381 as an offertory trope, and the piece retains this function in all later concordances. The trope to the Easter Eve alleluia in the Minden Troper, *PL-Kj* (olim *D-Bsb*) Cod.Theor.IV°11, f.45*r*, is presented unequivocally with an extended rubric and consists of one of the classic functions of a trope – an invitation to the celebrant to intone the alleluia.POST LECTIONEM ANTE ALLELUIA CANTETUR ISTA LAUSIam domnus optatas reddit laudes pascha cum Christo adest favete [MS: habete] cui canentes: *Alleluia V. Confitemini*

(Further examples of true tropes to the alleluia appear in Marcusson, H1976, although they are not labelled as such in this edition.)

(d) Sequentia.

Sequentia tropes form a small but important repertory found exclusively in Aquitanian sources from the early 10th to the late 11th centuries (see the study by Evans, D1968). They consist of introductions to the *sequentia* or the prose. In most sources the tropes introduce the melismatic *sequentia*. Isolated instances connecting them to the gradual seem to be simple scribal errors, but at least one important source, *F-Pn* lat.1118, used them consistently as introductions to the prose.

(e) Offertory and its verses.

Found in the earliest layers of the Proper trope repertory, offertory tropes were never as numerous as introit tropes and, except for a small group of early international tropes, are largely restricted to a single region or two adjaccent regions. The repertory consists for the most part of introductions to the offertory. In the early layers these introductions are often invitations to sing the offertory; as such they pose the same problems as some of the early introit tropes, for in citing most of the antiphon text they are thus hard to distinguish from the antiphon itself (Johnstone, D1984). Intercalatory tropes occur far less frequently in the offertories than in the introits, and tropes that introduce the offertory verses are relatively rare. Like the tropes to the psalm and the doxology in the case of the introit, tropes to the offertory verses rarely if ever moved from one tradition to another. The main exception is a very early set of paraphrase tropes to the verses of the offertories *Tui sunt* and *Terra tremuit*; these tropes survive with a remarkable number of small textual and melodic variants in all the traditions (Johnstone, D1984).

Italian sources transmit a rich repertory of prosulas to offertory melismas, but are particularly poor in offertory tropes; characteristically, some of the few manuscripts that transmit offertory tropes, for example, *I-Vc* 107, label them *prosa*. South of Rome only *Ab increpatione et ira* was ever used. Ex.2

gives the north Italian version of *Ab increpatione*, which agrees with the East Frankish tradition of this trope: (*a*) provides a sample of the variants within the offertory trope, and (*b*) typical paraphrase verse tropes from the oldest layer.

(f) Communion.

Just as the early structure of the communion, consisting of an antiphon, a psalm, verse and a doxology, parallels that of the introit, tropes to the communion present a similar picture to that of the introit tropes except that they were far less plentiful. Tropes to the psalm or doxology of the communion are extremely rare. Like the tropes to the offertory, the communion tropes, with only a few exceptions among the earliest pieces, were seldom transmitted from one region to another. Musically, communion tropes are simpler than tropes to the introit, although there are a few exceptionally elaborate ones. As is the case of the introit, a number of communion psalm verses have trope-like texts and have been mislabelled as tropes by scholars who fail to notice that the music given to the verses is

that of a psalm tone. Ex.3 shows the communion trope for the feast of the Purification together with a trope-like psalm verse.

(g) Fraction antiphon.

Throughout Europe, Gregorian codices from the 10th century to the 12th preserve a small number of Fraction antiphons, most likely survivals of the Gallican rite, that continued to be sung in some places until the early 12th century. Their function in the Gregorian rite was not clear, and from one establishment to another they were used as chants that either preceded or followed the communion in certain feasts, most often Easter and Christmas. Two Aquitanian tropers, *F-Pn* lat.887 and *Pn* n.a.lat.1871, transmit a trope that introduces the Fraction antiphon. The rubric for this piece in *Pn* lat.887 makes it clear that this was not a scribal error, even though elsewhere the trope in question is one of the 'wandering' introductions to the Agnus Dei.

(h) Lessons and prayers.

The 12th and 13th centuries saw the rise of a small repertory of tropes to the Epistle called *farsa* in the sources (*see* Farse). The surviving sources suggest that this repertory arose largely in northern French and Norman cathedrals and that it spread from there thoughout Europe. Most of the farsed Epistles are for feasts of the Christmas season, although there are some for Easter, Pentecost, feast of the Virgin, and St Nicholas. In a few sources certain feasts such as the Circumcision (1 January) were also provided with tropes to the Nicene Creed and to the *Pater noster*. (For a discussion of the Circumcision liturgy at Sens and Beauvais, see Villetard, B1907, and Arlt, B1970; *Pater noster* tropes are discussed in Stäblein, F1977.) Lessons and prayer tropes, when newly composed, often follow the newer styles of rhymed and rhythmic poetry, but a number of them are centos of phrases drawn from hymns, proses and older tropes.

Trope (i), §4: Textual and melodic tropes

(ii) Ordinary of the Mass.

(a) Kyrie.

Discussion of the tropes to the Kyrie eleison presents special problems in that modern scholars have used the term 'Kyrie trope' to refer to a vast repertory of Kyrie settings that are not tropes; these settings could best be defined as prosulas or as Latin Kyries (of which there are different types).

As the Kyrie eleison was taken over by the choir, perhaps in the late 9th century, melodies began to be set down and a number of formal strategies were evolved. The simplest one (apart from the singing of the nine invocations with their Greek text set to a melisma) consisted of a melodic scheme *AAABBBAAA* (or *CCC*), where each strain was sung twice, once with a Latin text and once with the melismatic Greek text (*Orbis factor*). A more elaborate melodic scheme contemporary with the first is *ABACDCEFE'*, with each strain sung twice following the pattern given above and where *E'* is an expanded version of *E*, often going twice through the first half phrase of the melody followed by an extended cadence ('Te Christe rex'). A few large-scale Kyries have a similar expansion in the sixth

invocation ('Clemens rector'). A few West Frankish sources transmit an inversion of the order between the Latin and Greek invocations, where the Greek text precedes the Latin Verse.

In Italian Kyries south of Rome all invocations are sung to the same melody, and the Greek invocations precede the Latin verses with the last verse followed by a short Amen. None of the patterns and text settings just described is properly a trope. Many of these melodies were apparently created from the start with their Latin texts but were regarded by medieval musicians as a form of prosula, and, characteristically, many of them were provided in the course of the 10th and 11th centuries with multiple texts, a trait common in the prosula and prose (*prosa*) repertories but extremely rare in the tropes.

True tropes to the Kyrie eleison are relatively few, less than 25 compared with hundreds of Latin Kyries (see inventory in Bjork, 'The Kyrie Trope', E1980), and largely follow three patterns: (1) introductions to the entire Kyrie, which can be either purely melismatic or have Latin verses and melismas; (2) expansions of the previous category that introduce each set of three (or six if the troped Kyrie has Latin verses) invocations (a few exceptional instances do not have a trope for the last three invocations or else add a fourth trope to introduce the extended final invocation); (3) sets of eight tropes interpolated between the nine invocations as follows (K – Kyrie, T – Trope, X – Christe): K T1 K T2 K T3 X T4 X T5 X T6 K T7 K T8 K. Patterns 1 and 2 are found in sources from France, England, Spain and northern Italy; pattern 3 seems to be a German tradition that filtered into those north Italian centres that received some of the St Gallen repertory. Bjork (op. cit.) emphasizes that the main characteristic of a true Kyrie trope is its independence from the melody of the Kyrie itself. That medieval singers and scribes were aware of this is shown by the exceptional attempt in the Winchester tropers to use verses from a Latin Kyrie as a true trope (Planchart, B1977, i, 249–51).

Kyrie tropes disappeared from the repertory during the 12th century, although a few of the East Frankish tropes were still copied in the 13th century in St Gallen. Latin Kyries, however, survived in England until the 16th century and were set to polyphony throughout most of the 15th century. They were known in northern France and the Netherlands, and an exceptional instance of newly composed Latin Kyrie verses appears in each of the six anonymous masses built on *L'homme armé* in *I-Nn* VI.34.

(b) Gloria.

These are among the oldest in the repertory, and at least one of them, the late and atypical *Spiritus et alme* for the Masses of the Blessed Virgin, was in use until the mid-16th century. The fundamental study of Gloria tropes remains that by Rönnau (E1967); though basically a detailed study of a single tradition (Aquitanian), it nevertheless takes into account the other repertories. (For the Italian repertories, Rönnau's work is complemented by that of Boe, E1990, and Borders and Brunner, E1996.)

Like the Proper tropes, Gloria tropes consist of a series of verses that introduce the different phrases of the Gloria. There were also a few introductions to the entire hymn, which often invited the celebrant to intone

the Gloria (Kelly, E1984). Ex.4 presents the trope *Laus tua Deus*, one of the earliest Gloria tropes, connected with the most widely used Gloria melody of the 10th century, called 'Gloria A' by Rönnau. This Gloria did not survive into the modern editions because it has a particularly problematic melodic transmission in the sources with lines and clefs, which give it beginning on *f* and on *g* (with and without *b*♭s) and ending on *e, f* or *g*. In this example the Gloria (4c) is preceded by the introduction *Sacerdos Dei excelsi* (4a), slightly later than *Laus tua Deus* (4b) but also widely used (Kelly, E1984). The version of *Laus tua Deus* is that found in the earliest sources and one that remained stable in the East Frankish region and England. Verses 1–4 are the constituent verses, that is, verses that always appear as part of this trope (verse 4 in the Aquitanian versions is expanded to *Qui unus idemque est vereranda trinitas*). Verse 5 is a stable verse, that is, one that appears in the great majority of versions. Verses 6–9 probably originated as part of *Laus tua Deus* (Falconer, E1993) but quickly became wandering verses that were attached to a considerable number of other Gloria tropes. The long melisma of verse 9 also gave rise to a substantial repertory of prosulas.

The earliest layer of Gloria tropes, of which *Laus tua Deus* is a typical example, remained stable in Germany, northern Italy and England. In France, Aquitaine and southern Italy it was expanded by the addition of wandering verses and of stable verses borrowed from other Gloria tropes so that it contains 12, 18 and even 24 verses (Rönnau, E1967, p.140). The phrases of the Gloria most often introduced by a trope were the litany-like set beginning with 'Laudamus te' up to 'gratias agimus tibi' and the similar set beginning with 'Domine Deus', as well as the final 'Cum Sancto Spiritu'. As with the Proper tropes, which in terms of their development and distribution the Gloria tropes most closely resemble, few Gloria tropes from the 10th and 11th centuries have the pan-European concordance of *Laus tua Deus*. When they do they tend to parallel the eventual structure of *Laus tua Deus* in the different regions: Aquitanian and south Italian Gloria tropes generally have a good number of verses, including recombinations of wandering verses, while northern French, English (pre-Conquest) and German Gloria tropes have far fewer verses and remain stable. The function of a number of Gloria tropes was to render the text Proper for a specific feast; thus *Pax sempiterna* was a Christmas trope and *O gloria sanctorum,* originally for St John the Evangelist, could, by changing the name of the saint in the trope verses, be made appropriate to a number of other saints.

The verse *Regnum tuum solidum* (see ex.4, verse 9) with its long melisma on the word 'permanebit' became a widespread wandering verse and gave rise to a substantial repertory of prosulas; the latter often consisted of parallel phrases with alternating syllabic and melismatic settings (see Rönnau, E1967) as well as one or two derived verses, such as *Sceptrum cuius nobile*, which in turn became the *locus* of prosula composition. The *Regnum* verse and its prosulas are often the ornamental climax of any Gloria trope that includes them. Early sources include them in specific Gloria tropes, but some later manuscripts emphasize the wandering nature of the *Regnum* and its prosulas by presenting a series of such prosulas at the end of the Gloria series, thus indicating that they could be added to a number of the preceding Gloria tropes. A few late manuscripts that transmit

no Gloria tropes still retain one or another of the *Regnum* prosulas as their only ornamentation of the Gloria.

Apart from the Gloria A, the Gloria melodies most often provided with tropes were those of Glorias IV, VI, XI, XIV and XV of the Vatican Edition. In the 11th century a few Glorias with their tropes were composed entirely ad hoc, particularly in southern Italy (Boe, E1990). Tropes to the Gloria, like the Proper tropes, disappeared during the course of the 12th century and only one, the Marian trope *Spiritus et alme*, which is itself a 12th-century composition associated with Gloria IX for the Lady Mass, survived until its suppression by the Council of Trent.

(c) Sanctus.

Tropes to the Sanctus differ from most of the other tropes so far discussed in that the vast majority begin with the official text rather than with an introduction. Indeed, the nearly complete edition of all surviving Sanctus trope texts up to the end of the 12th century (Iversen, H1990) gives only four introductions in the entire repertory, and the peculiar transmission of one of them, the Aquitanian introduction *Sanctus Deus omnipotens Pater*, which outside Aquitaine was consistently misread as beginning with the official text, confirms the view that Sanctus introductions were rare and little understood at the time.

Typically, early Sanctus tropes provide short apposite phrases, often in Trinitarian form, following the three statements of the word 'Sanctus', followed by lines that function more like other tropes in that they introduce the official text. Ex.5 shows the north Italian version of a very stable late 10th-century Sanctus found in Italy, France and England; it presents the most common structure in terms of where the trope verses intersect the official text.

Absent from this example are two elements found in other Sanctus tropes: an introduction to one or both of the 'Osanna in excelsis', and an expansion of the 'Osanna' melisma, which was often provided with an extended prosula. The 'Osanna' prosula was the element most frequently found, and in a number of Sanctus settings it is the only addition. The most elaborate of the prosulas reveal a double versicle structure in which syllabic and melismatic versions of each segment alternate with each other. (A complete repertory of the texts up to the 12th century is given in Iversen, H1990; studies of individual pieces and groups of related pieces appear in Thannabaur, E1967, Atkinson, E1983–4 and E1993, and Iversen, E1983–4 and H1990.)

A very small repertory of Sanctus tropes, including some new trope texts, survived into the 14th and early 15th centuries. A number of them, such as the Sanctus of the so-called Barcelona Mass, are polytextual motets using a Sanctus trope as one of the texts, but others are polyphonic settings of texts clearly constructed along the lines of the traditional Sanctus tropes or of hymn texts interpolated into the Sanctus. No repertorial studies of the late Sanctus tropes have been undertaken, but polyphonic examples appear in sources such as *F-APT* 16*bis*, *I-IVc* 115, *Bc* Q15, *AO* and *TRmp* 87 and 92.

(d) Agnus Dei.

The official text of the Agnus Dei was still not settled in the 9th and 10th centuries, at which time it consisted of one or more statements of the phrase 'Agnus Dei qui tollis peccata mundi miserere nobis' (see Atkinson, E1977, and Iversen, H1980, for two differing views of the situation). The early layer of tropes to the Agnus Dei consists for the most part of verses ending with the works 'Miserere nobis', which follow a complete statement of the official text. In a few instances that first invocation is preceded by an introductory verse (see ex.6).

During the course of the 11th century various developments took place: the number of invocations became more consistently restricted to three; the trope verses, both the ones used in the 10th century and those newly composed, came to be framed by the official text, with the trope verse appearing after the phrase 'Agnus Dei qui tollis peccata mundi'; and the ending of the final invocation came to be changed to the phrase 'Dona nobis pacem'. As in the case of the Sanctus tropes, a small number of Agnus tropes, including a few new tropes, survived into the 14th and 15th centuries and were set polyphonically. Sources for these late trope settings are the same as those for the Sanctus tropes.

(e) Ite missa est.

These are by far the least studied tropes in the repertory. Even though the Dismissal belongs among the earliest elements of the Mass, tropes for it do not appear in the sources before the very end of the 10th century. There is a single instance in the highly elaborate Christmas Mass in *F-Pn* lat.1118, and what appears to be a purely melodic trope in *APT* 18, f.62*v*. The early 11th-century sources present a clear pattern: tropes to the *Ite missa est* were rare in France and all but unknown in Spain and England. A small repertory developed in Germany (Hospenthal, E1990), and some examples of this repertory turn up in Italian manuscripts. The pattern of the 11th century remains for the most part unchanged in 12th- and 13th-century sources, and only in the 14th century is there a small expansion of the repertory with late compositions, including polyphonic motets based upon *Ite missa est* chants with texts that resemble trope texts in the upper voices. Such texts and their settings, both monophonic and polyphonic, were more common in connection with the *Benedicamus Domino* that closed the Office.

Trope (i), §4: Textual and melodic tropes

(iii) Office chants.

Apart from the responsory melismas and prosulas mentioned above, tropes to the Office chants arose in the 11th century or even later. In the Office of a few special feasts, notably the Circumcision, the Apostles' Creed was provided with tropes (Arlt, B1970). In the English Sarum rite the second part of the Marian antiphon *Salve regina* was provided with a series of five four-line verse tropes. The troped antiphon is not found in plainchant sources before the late 12th century. The trope was included in most English polyphonic settings of the *Salve regina* from the 14th century until the Reformation (see Williams, G1979).

The largest number of tropes to an Office chant occur in connection with the versicle Benedicamus Domino that closed most of the canonical Hours. Tropes to the *Benedicamus Domino* seem to have arisen in the early 11th century, since there is a small collection of them in *F-Pn* lat.887. The early repertory is very similar to that of the tropes to the *Ite missa est*, consisting of modest interpolation between the two words of the versicle and its response. This kind of *Benedicamus* trope remained in use until the end of the Middle Ages, and relatively large collections of them appear in Norman (*E-Mn* 289) and German (*D-Mu* 156) manuscripts. By the end of the 11th century, however, as the repertory in *F-Pn* lat.1139 shows, other kinds of *Benedicamus Domino* tropes were being composed. The new tropes consist of relatively extended poems in rhymed rhythmic verse ending with the words 'Benedicamus Domino'. Monophonic examples of such *versus* that could be used in the place of the *Benedicamus Domino* appear in the late Aquitanian *versaria*, the Norman-Sicilian tropers and some German sources such as *D-Mu* 156, where on occasion an independent cantio is used as a *Benedicamus* trope. Polyphonic settings of such *versus* are also found in the Aquitanian *versaria* and among the collections of conductus from the Notre Dame school as well as in Office manuscripts from Sens, Beauvais and Laon. Notre Dame manuscripts also transmit Latin motets built upon *Benedicamus Domino* chants; these could be used as substitutes in much the same manner that the 14th-century polyphonic Ordinaries made occasional uses of polytextual motets in place of the *Ite missa est*. Most of these late *Benedicamus* tropes and *versus* would appear to retain only a tenuous connection with the liturgy.

Trope (ii).

A medieval term meaning octave species, mode, maniera. It was used thus by Latin writers on music from the time of Martianus Capella (*c*400) and Boethius (*d* 524) onwards. *See* Mode, §II, 1.

Tropea, Giacomo

(*b* Squillace, Calabria, ?1590–1600; *d* ?Naples, after 1622). Italian composer. He is known by two sets of 20 madrigals, both dedicated to

Francesco Filomarino, Count of Castello Abbate. The first, *Madrigali a cinque voci … libro primo* (Naples, 1621), includes settings of poems by Guarini, G. Murtola, Marino and Chiabrera. It survives incomplete but apparently includes such features of the Neapolitan *seconda pratica* madrigal as unexpected chromaticism and lively, nervous counterpoint, which is marred, however, by awkward dissonances and chord progressions. The second print, *Madrigali a quattro voci … con dui madrigali a cinque voci nel fine: libro primo* (Naples, 1622[14]), includes settings of eight poems by Marino. The music is similar to that of the earlier collection but expressive cross-relations and augmented triads are more frequent. Tropea seems to have modelled three madrigals in this book on other settings of the same texts, two by G.D. Montella, one by Ascanio Mayone. The volume also includes a madrigal by Ottavio Vitale.

KEITH A. LARSON

Troper

(Lat. *liber troparius*, *troparium*, *troperium*, *tropharius*, *trophonarius*, *troponarius*).

A type of medieval liturgical chant book, or a section of one, containing a significant number of tropes.

In his *Summa de ecclesiasticis officiis* of 1160–64, John Beleth, a professor at Paris University, described a troper as 'a certain book that contains certain songs … and they are called *tropi* and *sequentiae* and *Kyrieleison* and *neumae*' (ed. H. Douteil, Turnhout, 1976). The four categories of song listed by Beleth cannot be equated easily with genres recognized by modern scholars, but they most probably include Proper tropes, troped Ordinary chants (or perhaps more restrictively Latin-texted Kyries), proses (sequences) and sequence melodies. A troper neither necessarily nor typically includes all the genres implied by Beleth's definition, but a troper always contains at least one of them, and this medieval definition covers all the manuscripts and portions of manuscripts that scholars designate 'troper', 'troper-proser', 'proser' or 'sequentiary'. The term 'troper' was used in the Middle Ages, as it is today, to describe both whole codices and portions of manuscripts. For example, a 13th-century inventory of the goods of an English parish church refers to a *graduale vetus cum tropario* and a *troparius per se* (*Vetus registrum sarisberiense alias dictum Registrum S. Osmondi*, ed. W.H.R. Jones, Salisbury, 1883–4/R, i, 276). Scholars do not always agree over whether a given codex containing a number of tropes merits the name troper; one modern writer's 'troper', in fact, may be another's 'cantatorium' or 'gradual'. Husmann, for example, excluded from his RISM volume (1964) a great number of manuscripts which he considered to be graduals but which other scholars routinely refer to as tropers.

The earliest surviving tropers date from the 10th century. Their origins may be traced on the one hand to *libelli* (booklets, often of a single gathering) of liturgical material for particularly solemn feast days. (Only one *libellus* of tropes survives, that in *A-Wn* 1609). On the other hand, the repertory of some early trope collections must have been learnt through oral tradition

and ephemeral written sources (such as scraps of parchment and wax tablets). In the early period tropers tended to be small codices, sometimes very small (e.g. *F-Pa* 1169 and *CH-SGs* 484). Many tropers of the 10th and 11th centuries are plain (even scruffy) manuscripts, filled with additions and corrections. Nevertheless, a few illuminated tropers survive from the 11th century (e.g. *D-BAs* Lit. 5 and *GB-LBl* Cotton Caligula A. xiv, ff.1–36). The 12th century saw the introduction of staff notation, as well as the occasional use of a two-column page layout. The heyday of the independently bound troper waned in the 13th century, although tropes of various genres, some more than others, continued to be included in Mass chant books until the Council of Trent.

The first inventory to mention a troper dates from 1003 (there is a 16th-century copy in *D-TRs* 1759/82); it lists 'one troper with ivory tablets' (*troparium i … cum tabulis eburneis*). This is an unusual case, for the notice comes not in a library booklist but in the inventory of a church treasury. The manuscript to which it refers (*F-Pn* lat.9448), however, is not a typical troper, and its lavish illumination and ivory covers (the latter since lost) accorded it special status. Tropers are more commonly mentioned in monastic and cathedral booklists, where they almost invariably appear towards the end of the list among the liturgical books. We know from these catalogues and from the surviving codices that a single ecclesiastical establishment might possess several tropers; a 12th-century booklist reports a surprising 14 tropers in the library of a French monastery (ed. L. Delisle, *Le cabinet des manuscrits de la Bibliothèque nationale*, Paris, 1868–81/*R*, ii, 487).

The contents of medieval tropers are extremely varied and rarely restricted to tropes alone. Besides the different genres of tropes, a troper might include a tonary, offertory verses (with or without prosulas), processional antiphons, the *Laudes regiae*, fraction antiphons and other liturgical songs. Tropers are generally either anthologies of available trope repertory from which pieces could be chosen to be sung on a given feast day each year (e.g. *CH-SGs* 484, in which the process of anthologizing can be traced because it led to the creation of irregular gatherings as new material was acquired) or more prescriptive liturgical books containing a body of tropes selected and arranged for performance in the celebration of the Mass (e.g. *GB-Ob* Bod.775).

The organization of a troper's contents also varies tremendously from manuscript to manuscript. Nevertheless, Gautier was able to identify three types of troper based on the manuscripts' contents and arrangement: in the first type there is a separate section of Proper tropes (in liturgical order) followed by a section of troped Ordinary chants; in the second, troped Ordinary chants are integrated with Proper tropes in a liturgical cycle and are thus assigned to a particular feast day; the third type is defined by the absence of Proper tropes.

An interesting aspect of medieval tropers is the graphic presentation of the coordination of Proper tropes with their host chants. Sometimes the Proper chants are given in their entirety, but usually the insertion points for the trope element are indicated by a cue consisting of the word or words that should immediately precede or follow the trope element in performance.

The use of cues by preceding word is restricted to a small group of early east Frankish manuscripts (including *CH-SGs* 484, 381 and *A-Wn* 1609). Far more widespread is the use of cues by following word.

Knowledge of the production of trope manuscripts is limited. In the 10th and 11th centuries, tropers were undoubtedly chiefly made by Benedictine monks, working alone or collaboratively. There is reason to believe that it was not uncommon for the musical notation to be supplied by someone other than the text scribe(s). By the 12th century, the situation was changing, with lay craftspeople playing a larger role. A medieval chronicle reports, for example, that an English abbot of the early 12th century appointed scribes 'beyond the cloister' (*praeter claustrales*) to write 'missals, graduals, antiphoners, tropers, lectionaries and other ecclesiastical books' (*GB-Lbl* Cotton Vitellius A. xiii, f.87*r*). Tropers were available commercially in the 13th century. According to an account book of 1270, for instance, the count of Flanders paid a sum of money to a middle man for 'a missal and a troper purchased in Lille' (ed. C.C.A. Dehaisnes, *Documents et extraits divers concernant l'histoire de l'art dans la Flandre, l'Artois et le Hainaut avant le XVe siècle*, i, Lille, 1886, p.63)

In the Middle Ages, tropers were owned both by institutions and by individuals. The earliest surviving tropers are associated with Benedictine monasteries. Noteworthy in this regard are St Martial at Limoges and St Gallen, two houses from which a number of tropers survive. Tropers were also made for cathedrals (e.g. *F-Pn* lat.9449 and n.a.lat.1235 from Nevers). Even if owned institutionally, however, tropers must have been used principally by the cantor of an ecclesiastical establishment or by a few soloists of the choir. Occasionally, high ranking clerics counted a troper among their personal possessions. *I-Ac* 695, for example, was owned by Cardinal Matteo Rosso Orsini (*d* 1305). In modern times, tropers find their homes in church and university libraries, among the holdings of the foundations dedicated to preserving medieval monastic libraries, and in many of the municipal and national libraries of Europe.

Troppau

(Ger.).

See Opava.

Troppo

(It.: 'too much').

A word used to qualify tempo directions. Examples include *allegro non troppo*, 'lively, not too much so'; *presto, ma non troppo*, 'fast, but not too much so'.

See also Tempo and expression marks.

Tror [dra, tro].

Generic term for bowed lutes in Cambodia. There are six types of *tror* in common Khmer practice. They are *tror Khmai* or *tror Ksai bey* (three-string spike fiddle), *tror che*, *tror sao tauch*, *tror sao thom*, *tror ou*, and *tror ou chamhieng* (two-string fiddles). At the Royal University of Fine Arts in Phnom Penh there are two other types of *tror*, called *tror kandal* (medium-sized two-string fiddle) and *tror thomm* (large-sized two-string fiddle), but these are only academy-based experiments and do not have a wider use outside the university. The *tror Khmai*, the only Khmer three-string fiddle, resembles the Thai *so sām sāi*.

The precise origin of the *tror Kmai* is unknown. However, oral history reveals that the *tror Kmai* has existed alongside the Khmer people, used in the *arak* (spirit-worship) and *kar* (wedding) ensembles. The Khmer two-string fiddles are believed to be a modification of the Chinese two-string fiddle, which was used in the *hi* theatre ensemble brought to Cambodia around the turn of the 20th century. The *tror* has a range of approximately one octave when played in the usual finger position (first position). The range can be extended through use of other finger positions.

The resonator of the *tror Kmai* is made of a thin piece (less than half) of coconut shell covered with snake- or lizardskin. The three strings are made of silk or nylon. A detachable bow, with bow hair made of horsehair, sugar-palm fibres or nylon threads is used to play the instrument. The resonators of the *tror che* and *tror sao tauch* are made of bamboo or wood, covered with snake- or lizardskin. The bow hair (made of horsehair, pineapple fibres, or thin nylon threads) passes between the two metal strings. *Tror so thomm* has a resonator made of tortoiseshell, bamboo or wood, covered with snake- or lizardskin and also possesses two metal strings. The two types of *tror ou* are distinguished by the shape of their resonators; the *tror ou* is made of an almost-whole coconut shell, whereas the *tror ou chamhieng* is made of half a coconut shell (*chamhieng* = half). The strings of both types of *tror ou* are made of gut, silk, metal or nylon.

The varieties of two-string *tror* are used in the *arak*, *kar*, *mohori* (entertainment), *ayai* (vocal genre), *yike* (folk theatre) and *basak* (theatre of Chinese origin) ensembles, sometimes solo or to accompany a vocalist.

SAM-ANG SAM

Troschel, Wilhelm.

See Troszel, Wilhelm.

Trossarello, Pietro

(*b* Bene, Piedmont, before *c*1550; *d* after 1570). Italian composer. The *Primo libro de madrigali a sei voci* (Milan, 1570), his only extant work, indicates that he was a priest and canon at Acqui in the province of Alessandria, Piedmont. His madrigals use both secular and sacred texts, and a few motets are scattered through the collection.

MARIANGELA DONÀ

Trost, Caspar

(*b* Klein Ballhausen, nr Tennstedt [now Bad Tennstedt], 23 March 1589; *d* Jena, 26 July 1651). German organist and composer. He was the son of a schoolteacher, Bernhard Trost, and was Kantor and organist in Oeleshausen (now Orlishausen, Sömmerda) by 1606. In 1614 he moved to Herbsleben as organist, and from 1617 was organist at the Michaeliskirche in Jena, where he supervised the extension of the organ in 1630. Probably, given his entry 'Casp[ar] Trost Balhusan Thur[ingensis]' in the matriculation register of 1619 at Jena, he took up a position at the university; at any rate, his death was announced in an obituary by the university rector, Johannes Zeisold. He wrote mainly occasional pieces, many of which survive incomplete, but his contribution to a collection of compositions on Psalm cxvi published by the Jena tax collector Burckhard Grossman (RISM 1623[14]) circulated widely. It reveals a composer who understood how to use the stylistic devices of his period to good effect.

A certain Johann Trost, who also came from Klein Ballhausen and matriculated at Jena University in 1619, worked as Kantor at Nordhausen, where he was regarded as the equal of one of his successors, Christian Demelius. According to Eitner he was the composer of *Pars specialis musica* (Halle, 1635). His relationship (if any) to Caspar Trost is not known, though they may have been brothers.

WORKS

printed works published in Jena unless otherwise stated

Siehe, lobet den Herren, alle Knechte (Ps cxxxiv), 8vv (1618); Wündschet Jerusalem glück, 8vv, in *Drey Christliche Muteten* (1618); Angst, Klag, gross Noth, 5vv (1619); Freuet euch des Herren (Ps xxxiii), 5vv (1620); Ich beschwöre euch, bridal song, 8vv (1620); Laudate pueri (Ps cxvii), 7vv (1621); Drei Ding bei uns auf Erden, wedding song, 8vv (1622); Ach Gott, Vater, funeral song, 5vv (1623); Freue dich des Weibes, wedding song, 6vv (1623); Du bist aller Dinge, bridal song, 5vv (1623); Der Herr behüte dich (1623); Das ist mir lieb, 5vv (1623[14]; ed. C. Wolff and D. Melamed (Cambridge, MA, 1994)); Betrüb dich nicht, funeral song, 4vv (1625); Compositio musicalis, 6vv (1628); Cygnea Cantio Simeonis, 4vv (1634); Derr Herr ist gnädig [pt 2 of Das ist mir lieb], 3vv (1637[3]); Ich glaube [pt 3 of Das ist mir lieb], 3vv, bc (1637[3])

Lost: Ich weiss, dass mein Herr Jesus Christ, der mich erlöst, beym Leben ist, 4vv, cited in *WaltherML*; Ps xx, 6vv (1621), cited in *EitnerQ*; Wedding motet, 8vv, cited in *WaltherML*; Ein Kindelein so löbelich, listed in 1658 inventory in *D-NAUw*

DANIELA WISSEMANN GARBE

Trost, Johann Baptist Matthäus

(*fl* 1714–26). German composer. He was one of a group of German musicians of the early 18th century who wrote operas for the court of Margrave Karl Wilhelm of Baden-Durlach. According to archival material (*D-KA*), Trost was born in Württemberg. He became a *Hof-musicus* in autumn 1714 and also served as tutor for singers of the court opera at Durlach. All Trost's operas seem to be lost, including *Rhea Sylvia* (1716) and *Ademarus* (1718). Two other works attributed to him are *Die bestürzte Königin in Schottland Maria Stuart* and *Die enthauptete Königin in Schottland Maria Stuart* (1716). In 1715 Trost was sent on court business to Stuttgart and Nürtingen, but he returned to Durlach the following year. His name continued to appear in court documents until July 1726.

GEORGE J. BUELOW

Trost, Johann Caspar

(*b* Jena, before 1600; *d* Halberstadt, 1676). German theorist, organist and composer. The date of 1607 in his copy of Virdung's *Musica getutscht* (1511), probably from his school years, suggests a date of birth before 1600. He taught keyboard, mathematics and geography for the Margrave Georg Wilhelm of Bayreuth before moving to Halberstadt, where he was organist at the Stadtkirche and worked as a government lawyer. The 81 books, including 28 tracts on music theory, which survive from his library (in *D-HSj* and *D-W*) reflect his broad education; his own work as a music theorist is also in manuscript (*D-W* 14 (4) Mus.Helmst). A number of other theoretical works and translations and new editions of well-known works were advertised in a Leipzig fair catalogue of 1673. They were probably never published, as Trost's son, also Johann Caspar, who was organist at Halberstadt from 1676 to 1696, was still searching for a publisher for them in 1677 when he published his own *Ausführliche Beschreibung des neuen Orgelwercks auf der Augustus-Burg zu Weissenfels* in Nuremberg. Of his compositions, only the motet *Herr Jesu Christ, ich schrey zu dir* (Goslar, 1642) survives. Trost's most famous pupil was Andreas Werckmeister.

DANIELA WISSEMANN-GARBE

Trost, Tobias Heinrich Gottfried

(*b c*1679–81; *d* Altenburg, bur. 15 Aug 1759). German organ builder. He was a pupil of his father, the organ builder Johann Tobias Gottfried Trost (1651–1721), himself a pupil of Christian Förner. In 1704 T.H.G. Trost married in Tonna (Gräfentonna), where he then had his workshop. In 1705 he completed his first independent instrument. In 1718 he moved to Mockern, and in 1722 to Altenburg, where in 1723 after protracted rivalry with the elder J.J. Donati he was awarded the exclusive position of organ builder to the Duchy of Saxe-Gotha-Altenburg, on the strength of a testimonial from Gottfried Silbermann. He held this post until his death. His two main works are the organs in Waltershausen (1722–*c*1740) and Altenburg (1735–9). The Altenburg instrument was appraised by Silbermann (1737), J.S. Bach and J.A. Scheibe (1739) and found excellent. It was this instrument that J.L. Krebs used as court organist from 1756 to 1780.

Trost was the most important Thuringian organ builder of the 18th century. His instruments show an unusual modernity in conception, aimed at *Empfindsamkeit* and the *galant* styles in organ music. Typical markers of this include copious foundation and string stops, mixtures with Tierce ranks, and few mutations. J.F. Agricola, who in his youth witnessed the building of Trost's Altenburg organ, drew attention to the characteristic use of 8' flue stops. In the form and dimension of his pipes Trost went to extremes: for instance, the 8' Viola di Gamba is very narrow-scaled in order to imitate the original string tone. He also favoured special construction methods in some ranks, employing unusual materials, as in the double Flaute douce, the Unda maris and the Vugara. The flute stops range up to 2' pitch and are prominent in the disposition of the instruments. The larger organs tend to have Pedal stops borrowed and extended from the *Hauptwerk*. To facilitate this, Trost developed a wind coupler (*Hauptwerk* to Pedal), which is operated by double valves and a wind overflow. Both the exterior and interior construction of Trost's instruments reflect the aesthetic ideals of the Enlightenment, with sumptuously fashioned consoles and embellished technical workings. Of his 30 or so instruments, only five remain to some extent complete. Because he used expensive materials, Trost never became wealthy as did Silbermann. His contemporaries admired his work, though he was often criticized for his treatment of schedules and deadlines. Among his pupils were Adam Gottlob Casparini, Johann Jacob Graichen, Johann Nikolaus Ritter and Johann Christian Immanuel Schweinefleisch.

FELIX FRIEDRICH

Troszel [Troschel], Wilhelm

(*b* Warsaw, 26 Aug 1823; *d* Warsaw, 2 March 1887). Polish bass and composer. Son of the piano maker Wilhelm Troszel of Warsaw, he studied with Freyer and others. He made his début at Warsaw on 17 April 1843 and sang at the Warsaw Opera until 1865. Particularly noted for his interpretations of the bass roles in operas by Moniuszko, Minchejmer and Dobrzyński, and in German and Italian operas, he was also a fine recital singer; his last concert was on 29 June 1866. After retiring from concert and operatic work, Troszel devoted himself to composition and teaching. He wrote *Szkoła do śpiewu na głos sopranowy i mezzosopranowy* ('Singing tutor for sopranos and mezzo-sopranos', Warsaw, 1860) and also *Ćwiczenia głosowe na kontralt, mezzosopran i sopran* ('Vocal exercises for contraltos, mezzo-sopranos and sopranos', Warsaw, n.d.). His compositions include numerous sacred works (*Ave Maria*, *Salve regina*, *Veni Creator* and a Requiem), romances and dumkas, and various piano works (many MSS are in *PL-Wtm*). He also composed over 50 songs to texts by T. Lenartowicz, J.B. Zaleski and others, many of which achieved considerable popularity.

IRENA PONIATOWSKA

Trotter, James Monroe

(*b* Grand Gulf, MS, 8 Nov 1842; *d* Hyde Park, Boston, 26 Feb 1892). American music historian. He was the son of a slave owner, Richard S. Trotter, and a black slave named Leticia. He studied music with William F. Colburn in a school for Negroes in Cincinnati run by the Methodist minister Hiram S. Gilmore, working between terms as a cabin boy on a steamer plying the Cincinnati–New Orleans run. About 1856 he moved to Hamilton, Ohio. Between 1857 and 1861 he attended Albany Manual Labor University near Athens, Ohio, and then taught in Muskingum and Pike Counties, Ohio. After service in the Civil War he worked in the Boston post office (1866–83), and on 3 March 1887 President Cleveland appointed him

Recorder of Deeds in Washington, this being the highest office in the nation reserved by custom for Negroes. At the end of 1889 ill-health and political pressures forced him back to Hyde Park, where he died of tuberculosis.

His epochal 508-page *Music and some Highly Musical People: Containing … Sketches of the Lives of Remarkable Musicians of the Colored Race* (Boston, 1878), concluding with a 152-page musical appendix of 13 vocal and instrumental pieces by 12 different black American composers, contains indispensable data on black American musicians. Reprinted in 1880 and 1881 ('Fifth Thousand') and again twice in 1969, Trotter's vademecum 'brings together a mass of curious, interesting and valuable information … upward of forty noted individuals or groups are distinctly treated, and more than fifty pages are additionally devoted to briefer notices of various obscurer musicians, vocal and instrumental, in all parts of the country' (*Literary World*, ix/6, 1878, pp.7–8).

ROBERT STEVENSON

Trotter, Thomas (Andrew)

(*b* Birkenhead, 4 April 1957). English organist. He studied at the RCM, with Ralph Downes, and at King's College, Cambridge, where he was organ scholar. During that time he was a pupil of Gillian Weir. After graduating he studied in Paris with Marie-Claire Alain. He won first prize and the Bach prize at the St Albans International Organ Competition in 1979. His début recital was at the Royal Festival Hall in 1980, and he has appeared several times at the Proms. Trotter became organist of St Margaret's, Westminster, in 1982, and organist to the City of Birmingham in 1983. He has appeared as a concerto soloist with leading international orchestras such as the Berlin PO and the Concertgebouw Orchestra, and has revived orchestral arrangements for organ by W.T. Best, Henry Lemare and others. He favours the Romantic and French 20th-century repertories. He gave a series of Messiaen recitals at the 1994 Edinburgh Festival, and has performed the complete organ works of Jehan Alain for BBC Radio 3. Among his recordings are works by Mozart, Liszt, Messiaen and Alain.

Troubadours, trouvères.

Lyric poets or poet-musicians of France in the 12th and 13th centuries. It is customary to describe as troubadours those poets who worked in the south of France and wrote in Provençal, the *langue d'oc*, whereas the trouvères worked in the north of France and wrote in French, the *langue d'oil*.

JOHN STEVENS/ARDIS BUTTERFIELD (I, II), THEODORE KARP (III)

Troubadours, trouvères

I. Troubadour poetry

Troubadours, trouvères, §I: Troubadour poetry

1. Introduction.

The troubadours were the earliest and most significant exponents of the arts of music and poetry in medieval Western vernacular culture. Their influence spread throughout the Middle Ages and beyond into French (the trouvères, see §II below), German, Italian, Spanish, English and other European languages.

The first centre of troubadour song seems to have been Poitiers, but the main area extended from the Atlantic coast south of Bordeaux in the west, to the Alps bordering on Italy in the east. There were also 'schools' of troubadours in northern Italy itself and in Catalonia. Their influence, of course, spread much more widely. Pillet and Carstens (1933) named 460 troubadours; about 2600 of their poems survive, with melodies for roughly one in ten.

The principal troubadours include Aimeric de Peguilhan (*c*1190–*c*1221), Arnaut Daniel (*fl c*1180–95), Arnaut de Mareuil (*fl c*1195), Bernart de Ventadorn (*fl c*1147–70), Bertran de Born (*fl c*1159–95; *d* 1215), Cerveri de Girona (*fl c*1259–85), Folquet de Marseille (*fl c*1178–95; *d* 1231), Gaucelm Faidit (*fl c*1172–1203), Guillaume ix, Duke of Aquitaine (1071–1126), Giraut de Bornelh (*fl c*1162–99), Guiraut Riquier (*fl c*1254–92), Jaufre Rudel (*fl c*1125–48), Marcabru (*fl c*1130–49), Peire d'Alvernhe (*fl c*1149–68; *d* 1215), Peire Cardenal (*fl c*1205–72), Peire Vidal (*fl c*1183–*c*1204), Peirol (*c*1188–*c*1222), Raimbaut d'aurenga (*c*1147–73), Raimbaut de Vaqeiras (*fl c*1180–1205), Raimon de Miraval (*fl c*1191–*c*1229) and Sordello (*fl c*1220–69; *d* 1269).

All known troubadours are listed in the *Bibliographie* (1933) of Pillet and Carstens; and their poems, with individual sources, are given alphabetically

beneath each name. A standard reference work, with an anthology of poems by 122 poets, is de Riquer's *Los trovadores* (1975). Among the best general introductions to the songs of the troubadours are those by Davenson (1961), Topsfield (1975), Di Giralamo (1989), Akehurst and Davis (1995) and Gaunt and Kay (1999). The anthologies of Hill and Bergin (1941) and Goldin (1973) are useful guides for English readers; the translations of Ezra Pound (1953) are classics of their kind.

Troubadours, trouvères, §I: Troubadour poetry

2. Social status.

The romantic idea of the troubadour current in the 19th century is slowly fading before the careful and more realistic appraisal built up by scholars over the years. So far from being a carefree vagabond 'warbling his native woodnotes wild', the troubadour was characteristically a serious, well-educated and highly sophisticated verse-technician. Admittedly a good deal of the blame for the blurred and rosy picture must be laid at the door of the Middle Ages themselves. The earliest lives of the troubadours are the *vidas* compiled in the 13th and 14th centuries; they are highly romanticized fictions derived, for the most part, simply from the surviving poems. The following account of the troubadour Jaufre Rudel (trans. Topsfield) is typical :

> Jaufre Rudel of Blaye was a very noble man, prince of Blaye. And he fell in love with the countess of Tripoli, without seeing her, for the good that he heard of her from the pilgrims who came from Antioch. And he composed many songs about her with good tunes and poor words. And through his desire to see her, he took the cross, and set out to sea; and sickness came upon him on the ship, and he was brought to Tripoli, into an inn, as if he were dead. And this was told to the countess and she came to him, to his bed, and took him in her arms. And he knew that she was the countess and forthwith he recovered his hearing and sense of smell, and praised God for having kept him alive until he had seen her. And so he died in her arms. And she caused him to be buried with great honour in the house of the Temple; and then, on that same day, she took the veil for the grief she had at his death.

Fictional though this account no doubt is, it conveys an important truth: the art of the troubadours was one in which music and poetry were combined in the service of a courtly ideal, the ideal of *fin' amors*.

Jaufre Rudel was well placed in courtly society; he was 'prince of Blaye', i.e. at least the lord of a castle. But others were even higher in the social scale. Guillaume IX of Aquitaine, generally described as 'the first of the troubadours', was a duke, and his granddaughter, Eleanor of Aquitaine, married first King Louis VII of France and soon afterwards Henry of Anjou, later Henry II of England. Raimbaut d'Aurenga was another high-ranking noble; he held numerous castles. At the other end of the social scale, Cercamon (*fl* 1137–49) rose from being a *joglar*, i.e. an instrumentalist and singer, a professional and normally itinerant musician. Aimeric de Peguilhan is said to have been the son of a citizen of Toulouse, a draper;

Marcabru, a foundling (although this is unreliable); and Bernart de Ventadorn, the son of the castle's baker (more recent research suggests he was in fact a younger son of the house of Ventadorn and later an abbot). Whatever a troubadour's origins, he had to become *cortes et enseignatz* (courteous and accomplished) if he was to succeed.

Troubadours, trouvères, §I: Troubadour poetry

3. 'Fin' amors'.

The topic of ideal love, though hardly new in the 12th century, and not the exclusive preserve of western European poets, has long been seen as the distinctive contribution of the troubadours to Western literary culture. The modern term 'courtly love', apparently first coined by Gaston Paris in the late 19th century, enjoyed an undisputed period of dominance until the 1960s. Thereafter, it was subjected to questioning and re-evaluation, from which emerged a more nuanced and detailed understanding of the relationship between love as it is described in all its variety in medieval poetry and prose, and the changing social and ecclesiastical structures of love and marriage in the Middle Ages. *Fin' amors* is no longer seen as an exclusively literary phenomenon, but as a powerfully influential cultural element in medieval society that deserves the broadest historical scrutiny (Duby, 1981; Brundage, 1987; Harvey, 1989; Paterson, 1993).

The medieval terms *fin' amors* (refined or pure love) or Chaucer's 'gentil lovyng' reveal the aspirations central to the type of love described by troubadour poetry. Refinement (*gentilesse*) is the essence of this experience (or rather this complex of experiences). The lover seeks refinement through the experience of being a worthy lover; he is impelled by *joi*: 'en joi d'amor ai et enten/la boch' e·ls· olhs e·l cor e·l sen' ('in love's joy I hold and direct my mouth, my eyes, my heart, my understanding'; Bernart de Ventadorn, trans. Press). The features of *fin' amors* that relate it to other manifestations of romantic love throughout the centuries are the longing, the secretiveness, the sense of illumination, the almost manic-depressive succession of moods; the distinguishing feature of *fin' amors* is the emphasis on the social and personal benefits of love. Thus, Bernart de Ventadorn again:

> Ben es totz om d'avol vida
> c'ab joi non a son estatge
> e qui vas amor no guida
> so cor e so dezirer
>
> (Every man who does not dwell in a state of joy and does not direct his heart and his desire towards love, leads a base life; trans. Topsfield).

Love is the source of all goodness – *fin' amors*, *fons de bontat*; the quasi-religious sentiment and phraseology are common (for a comprehensive account, see Topsfield). Paris's word 'courtly' is helpful in so far as it points to the complex relation between the lover and his social environment: he is required to observe discretion and practice decorum, qualities which are defined by the courtly culture to and for which he speaks.

The ideal love put forward by the troubadours is remarkable for its analytical intensity; it is also full of tension and contradiction. There is an intriguingly dissonant yet insistent relation between the sacred and profane, between the noble and the ironic and obscene, between idealism and the messy social realities of aristocratic separation, divorce and remarriage exemplified, for instance, in the life of Eleanor of Aquitaine, who, along with her daughter, Marie de Champagne, was an important patron of poets and composers in the 12th century. As far as religion is concerned, *fin' amors* seems, at first sight, an outright denial, a blasphemous assertion of human desires against the eternal truths of Christian love or *caritas*. But the rapprochement is equally striking. This ecstatic love which exalts the worth of the individual is, allowing for the difference in its object, analogous to the love celebrated by many 12th-century devotional writers (such as Bernard of Clairvaux and Richard of St Victor).

Another area of tension is that between the kinds of power ascribed to women in many troubadour love songs and the powerful social constraints that existed not only for women but also for the less socially elevated troubadours. No other group of poets give women so exalted a definition within so tightly circumscribed a context of female suppression. Renewed attention to the women troubadours, the *trobairitz*, has encouraged some scholars to argue that an independent female perspective can be isolated; others, however, argue that the troubadours largely worked in self-contained masculine circles in which women were not exalted but excluded. The question of how we are to understand the distribution of power, agency and responsibility between the sexes in troubadour writing remains open. The *trobairitz* were a small group of women composers who belonged to the nobility. They flourished between 1170 and 1260. Their songs are a remarkable survival. In modern editions, the number of texts offered range from 23 to 46, compared to some 2,500 texts by male authors. Few *trobairitz* are named, and difficult judgments have to be made about the ascription of anonymous songs. They wrote mainly in two genres, the *canso* and the debate poem (*tenso*). Perhaps the most celebrated figures are the Comtessa de Dia and Castelloza, each of whom left four *cansos*. Only the song survives with music: the *canso*, *A chantar m'er de so qu'ieu non volria*, by the Comtessa de Dia.

Troubadours, trouvères, §I: Troubadour poetry

4. Critical approaches.

In the 100 years following the origins of modern medievalism in the 19th century, much attention was given to the genesis of troubadour lyric and of the experiences conveyed in it. It is perhaps not too much to say that nearly all approaches to troubadour lyric – formal, technical, generic, historical, anthropological – were assumed with that overarching quest to discover a point of origin for modern, nationalist histories of attitude and sentiment. No single theory won general acceptance, no doubt because the questions that needed to be posed are complex ('origins' cannot, for instance, be sharply distinguished from 'influence') and the answers could not but be equally so. The principal hypotheses are: (i) Arabic; (ii) Celtic; (iii) Cathar; (iv) liturgical; (v) Christian; (vi) classical Latin; (vii) 'goliardic', that is, medieval Latin; (viii) feudal–social; (ix) folklore (for a succinct and judicious summary see Davenson, supplemented by Axhausen and

Dronke). The most substantial of these point to some important connections: for instance, a body of song of comparable intensity, profanity and eroticism existing in Arabic from the second half of the 9th century onwards; the para-liturgical Aquitanian *versus* found in tropers associated with St Martial de Limoges; the influence of Ovid, especially his *Amores* and *Ars amatoria*; the deep and extensive links (analysed by Spanke, 1936) between vernacular and medieval Latin songs.

More recently, however, the intense preoccupation with origins has diminished. It has largely been replaced, firstly, by a fresh examination of the social and historical contexts for troubadour song. Stimulated by the influential Marxist approach of Erich Köhler, who insisted on the deeply rooted analogy between feudal social structures and the psychology of love, Bloch, Duby and others have emphasized the essential hegemony, in the aristocratic château or royal court, of the woman, originally and primarily the *seignor*'s wife, in the posited absence of her lord and master. The use of feudal terms to describe relationships (the lady, *dompna*, is also referred to as *midons*, my lord) is marked; Duby, in particular, further identifies younger, potentially disaffected aristocratic sons, not immediately in line to inherit, as the kind of audience for whom poetry addressed to an unattainable female object of desire would be an explicable and powerful fantasy. Developing this in psychoanalytical terms, Huchet and Cholakian have moved away from sociological explanations for feudal imagery, seeing it instead as an expression both of male anxiety about the loss of social and erotic control, and of inter-male rivalry.

A second area of interest concerns the highly allusive and self-referential nature of the poetry (Gruber, Meneghetti). This builds on but also reacts against the extensive work carried out in the 1960s and 70s on the formal, technical complexity of troubadour (and trouvère) verse (see Dragonetti, Zumthor and below). Gruber's detailed attention – in semantic, metrical and musical terms – to the intertextual relationships between clusters of songs and groups of authors, has turned scholarly emphasis away from formalism as an end in itself and towards a revised, newly historical sense of the competitive, personal circmstances in which troubadour songs were composed. Meneghetti, likewise, in analysing the early reception of troubadour lyric, reinforces our understanding of the primacy of debate and dialogue in its construction.

Perhaps ironically, given that intertextuality was originally a way of bypassing critical approaches that relied on Romantic notions of authorship and intention, it seems that studies of the intertextuality of troubadour lyric have stimulated a renewed interest in the subjective dynamics of troubadour rhetoric (Zink, Kay). Allowing for a coincidence between the intertextual and the historical has enabled discussion of the speaking/singing voice to include a more nuanced and rhetorically subtle approach to autobiography. The 'subject' of troubadour lyric is now seen as a complex, shifting rhetorical position, open to irony and parody, capable of sliding disarmingly between the personal and the general.

Troubadours, trouvères, §I: Troubadour poetry

5. Genres, themes, motifs.

The numerous recurrent motifs of troubadour love-poetry include love and courtesy; love and the hostile spies (the *lauzengiers*); the 'service' of love and the idolatry of the lady; resistance to sensual desires; the deception and despair of love; love-sickness and death; the joy of love (especially as a source of creative inspiration); the lady's power; the personification of love as attacker, or god; and so on. The need to express these and many other motifs in succinct and recognizable form led to the establishment of genres, distinguished not so much by form as by content or implied situation. Thus the lovers' desire never to be separated is epitomized in the alba or dawn-song: the lovers in their happiness do not notice the night has passed until alarmed by the song of the birds, by the nightwatchman, or by a confidant. Although in the earliest generation of troubadours there is little evidence that poets attributed much importance to generic distinctions, the main genres are as follows: (i) *vers*: the term most frequently used by troubadours (*c*1100–50) to describe their songs, possibly derived from the liturgical *versus* (Chailley); it was applied without much discrimination of type or topic (although in the late 12th century it came to be used more specifically of moralizing poems in the style of Marcabru). After the 1150s, poetry divides into two principal kinds: (ii) *canso*: a courtly love-song, the central type of Occitan lyric which allowed a wide variety of predominantly serious content and high style (e.g. Bernart de Ventadorn, *Can vei la lauzeta mover*); and (iii) sirventes: a song usually satirical on a political, moral or literary topic devised to a borrowed melody, i.e. a contrafactum (e.g. Bertran de Born, *D'un sirventes no motz cal far*; he acknowledged having used a melody by Giraut de Bornelh). Other principal genres are, in the terminology of the period: (iv) *tenso*, partimen, *joc-partit*: songs of various kinds in debate form, often involving therefore, two participants by name, but not necessarily being joint compositions (e.g. Peirol, *Quant amors trobet partit* – a debate between the poet and Love; Aimeric de Peguilhan, *Amics n'Albertz, tensos soven* – a debate between Aimeric and Albert de Sisteron); (v) *pastorela*: a courtly song in mock-popular style presenting an amorous encounter between a knight and a shepherdess (e.g. Marcabru, *L'autrier jost' una sebissa*); (vi) *dansa*: a mock-popular song based on a dance form (not commonly extant, but represented by the famous *A l'entrada del tens clar*); (vii) descort: in some sense a 'discordant' song; 'The stanzas must be individual, disagreeing and variable in rhyme, melody [*so*] and in languages' (*Las leys d'Amors*). Another explanation stresses the 'discord' of the speaker's feelings. Raimbaut de Vaqeiras wrote a descort in five languages. Modern analysis relates the descort to the French lai, an 'irregular' sequence type (Gennrich, 1932); (viii) *escondig*: a *canso* consisting of a lover's apologia for behaviour which has offended his lady (e.g. Bertran de Born, *Ieu m'escondisc, domna, que mal no mier*); (ix) planh: a lament on the death of a king or other important personage (e.g. Cercamon, *Lo plaing comenz iradamen*, ? on the death of Count Guillaume VIII of Poitou); *see also* Planctus; (x) *gap*: 'a poem, sometimes in bawdy style, of self-praise, challenge or confrontation' (Topsfield), though whether this term was ever used in the medieval period to denote a distinct genre has been questioned.

Troubadours, trouvères, §I: Troubadour poetry

6. Style and technique.

There can be few repertories of poetry so selfconscious as that of the troubadours. The discussion of technique plays an important part in the poems themselves; and for sheer virtuosity the poets surpass all other lyric poets of the Middle Ages with the exception of Dante. It is surely no accident that societies in which literary technique was so prized emerged in time as 'literary societies' in the narrow sense; the court became a Puy. The surviving Occitan treatises are, for the most part, manuals of technique – the *Doctrina de compondre dictats*, Uc Faidit's *Donatz proensals*, and above all the huge *Leys d'amors* (1356, but summing up a whole tradition). The 'company of the Seven Troubadours of Toulouse' systematized the whole corpus and awarded the titles of Bachelor and Doctor in *gai-savoir* (joyful learning). Estimates vary slightly; but, for example, van der Werf (1972) deduced from the comprehensive analyses in Frank (1953–7) 1575 different metrical schemes of which 1200 are used only once. An indispensable and accessible guide to versification in troubadour song may be found in Chambers (1985).

Most troubadour songs are strophic (the descort is an exception); that is to say, the stanzaic pattern is repeated throughout the song and, with it, the melody of the first verse. The stanzaic pattern is normally described in modern analyses by rhyme and number of syllables, with a superior stroke indicating a 'weak' (or 'feminine') ending; see Table 1. Certain basic shapes are more common than others: in particular, the *canso* tends to be in the form α α β. The terminology of Dante (from his unfinished *De vulgari eloquentia*, *c*1305, ed. Mengaldo, 1968, the most important single treatise on vernacular poetry) is often used to describe the different parts of the *canso*. The α sections together constitute the *frons*, and individually each is called *pes* (plural *pedes*); the β section is called the cauda (or *sirima*) and is treated with the utmost variety (when divided into two symmetrical parts these are called *voltae*). Gaucelm Faidit's song (see Table 1) has a four-line *frons* divided into two *pedes* (*ab ab*) and a nine-line unsymmetrical cauda. (As will be observed below there is no necessary connection between the metrical and the melodic structure of a stanza, but a basic shape α α β is usually observed in the music.)

<center>table 1</center>

</center>

The poet's ingenuity is further demonstrated in the relationship between the different stanzas. This can vary considerably, not in number of syllables but in rhyme. The norm for the *canso* is to have five, six or seven stanzas (*coblas* in Occitan terminology) with one or more shorter *tornadas* or envois. Various basic schemes can be identified: (i) repetition of the same rhyme scheme and sounds but with different rhyme-words in each stanza (by far the most common); (ii) the same, but with some end-words of the first stanza not finding their 'answer' within that stanza but waiting to be answered in the second and subsequent stanzas; (iii) repetition of the same rhyme scheme, but with the sounds changing every two or three stanzas (*coblas doblas*, *coblas ternas*); (iv) repetition of the same rhymes but with a different scheme in each stanza (uncommon). Procedures such

as the last-mentioned culminate in the tour de force of the sestina. Arnaut Daniel's *Lo ferm voler* is the first and most famous example: the rhyme-words of the first stanza (*intra*, *ongla*, *arma*, *verga*, *oncle*, *cambra*) are repeated in a different, and calculated, order in each of stanzas 2–5; the three-line *tornada* contains all six words. Other links between *canso* stanzas depend on devices such as (i) *coblas capfinidas* – the last line of one stanza is linked verbally with the first line of the next; (ii) *coblas capcaudadas* – a variety of (i) depending on the rhyme-word; and (iii) *coblas retrogradas* – the rhyme-words, or rhyme sounds, of one stanza are inverted in the next.

The pre-eminent place occupied by sheer technical accomplishment in the aesthetic of troubadour verse is evident from Dante's treatise. He named the three elements which must be studied in the composition of the perfect highly-wrought stanza as follows (*De vulgari eloquentia* II, ix.6): *cantus divisionem*, the formal melodic structure of the stanza; *partium habitudinem*, the harmonious putting-together, or proportioning, of lines and rhymes; *numerum carminum et sillabarum*, the 'harmony' of lines and syllables. The key term in Dante's discussion is *armonia*, harmoniousness, a concord of sounds.

These classifications and codifications are all of a piece with the view of poetry as a branch of rhetoric which culminated in the *seconde rhetorique* of Machaut, Froissart and Deschamps (second half of the 14th century) with its extraordinarily elaborate analysis of the formal components of verse. Early comments on technique occur chiefly in the poems themselves. Among the terms the poets use are *trobar naturau*, *trobar clar*, *trobar clus*, *trobar ric*, *trobar braus*, *trobar leu* and *trobar prim*, all referring to different styles of writing (*trobar*: 'invent'). The meaning of these and other terms has been and still is hotly disputed (for full discussion see Paterson, 1975). The most puzzling terms are *clus* and *ric*. *Clus* is used, for example by Giraut de Bornelh, to describe a difficult style which he is discarding in favour of *trobar leu* (Lat. *levis*: 'light', 'easy') and can refer, variously, to a style applying embellishment (the *ornatus difficiles* of medieval rhetoric) to an essentially simple theme, or to a style of deliberate and riddling ambiguity (? with an esoteric purpose and a select audience in mind) or, more broadly, to difficult poetic content which only gradually reveals its meaning to the reader. *Ric* is used by Raimbaut d'Aurenga in revealing conjunction with *car*: 'I know how to couple and lace words and music together so graciously that no one can compete with me in the precious noble style' (*del car ric trobar*; trans. Paterson). Arnaut Daniel, whom of all the troubadours Dante most admired, never used the term 'clus' and yet wrote, in his famous sestina *Lo ferm voler*, a poem of extraordinary density of meaning and complexity of pattern.

To search for a consistent terminology is vain; but the search is in itself rewarding since it uncovers the complexities of selfconscious technical experimentation which are at the heart of the enterprise. There are, of course, troubadours who do not talk much about their style and write poems of an apparently artless directness; Bernart de Ventadorn is one of these:

> Lo tems vai e ven e vire
> Per jorns, per mes, e per ans;
> Et eu, las, no·n sai que dire,
> C'ades es us mos talans
>
> (The time comes and goes and runs its round in days, in months, in years; and I, alas, know not what to say of that for my longing is ever one; trans. Press.)

But one should not be deceived into thinking that this apparent artlessness, a *trobar clar*, does not itself conceal art.

The words and phrases that best sum up the technique of troubadour verse are images of forging (*il miglior fabbro*), of polishing (*trobar prim*), of interlacing (*entrebescar les motz*), of locking together (*motz serratz*), of carving, planing, filing (see Arnaut Daniel, *En cest sonet coind' e leri*) and so on. It is an art of *maestria*, an art that 'masters' its materials.

Troubadours, trouvères

II. Trouvère poetry

Troubadours, trouvères, §II: Trouvère poetry

1. Introduction.

The trouvères (a French form of the word troubadour) provide the earliest surviving view of the troubadours: with the exception of a single manuscript dating from around 1100, the earliest physical evidence of troubadour song occurs in mid- to late 13th-century manuscripts copied by trouvères and contemporary clerks; some of our biographical knowledge, often sketchy and unreliable, comes from the *vidas* and *razos* composed by trouvères and scribes, and circulated with the songs from the second half of the 13th century onwards. The earliest known treatises on vernacular poetry likewise date from the 13th century. Yet the crucial mediating role of the trouvères involved their own eclipse: they are often discussed only as a footnote to their more exotic predecessors. Once again, this is in part a consequence of the importance attached to the troubadours as originary: the very word 'original' has talismanic significance for the art of the troubadours in a way that it could never have for those who followed. Nonetheless, the writings of the trouvères have a peculiarly interesting place in their 13th-century context. In a position, historically, to look back at the troubadours, they did not merely imitate them, but subjected them to analysis, parody and ceaseless reinvention, not least in their efforts to commit their songs to written record. This was a period of generic invention and transition, where 'lyric' genres were brought into direct confrontation and collaboration with romance. Furthermore, the social conditions of vernacular writing shifted markedly throughout the century, so that aspirations towards notions of courtliness were produced from within

selfconsciously urban environments, notably that of Arras and its surrounding region. This created a layered and ambiguous approach (or set of approaches) to the conventions and mannerisms of courtly writing, and a newly subtle sense of the relation of the past to the present.

The French of the trouvères was not yet a standardized language based on an acknowledged cultural centre, Paris, but rather a collection of related, regional languages: those of Champagne, Picardy, Normandy and England were the most fruitful from the literary point of view. One of the first of the trouvères, Chrétien de Troyes, came from the district of Champagne; he was also, unlike other trouvères, a great narrative poet. This fact alone should suggest that the common account of trouvère poetry as derivative from that of the troubadours cannot be more than partly true; a 'great clerk' like Chrétien did not need models from the south. Other important trouvères include Blondel de Nesle (*fl c*1175–1210), Chastelain de Couci (*fl c*1170–1203; *d* 1203), Colin Muset (*fl c*1230–60), Conon de Béthune (*fl c*1180–*c*1220; *d*1220), Gace Brule (*c*1159-after 1212), Gautier de Coincy (1177/8–1236), Gautier de Dargies (*c*1170-after 1236), Gautier d'espinal (*d* before July 1272), Gillebert de Berneville (*fl c*1255); Gontier de Soignies (*fl c*1180–1220), Guiot de Dijon (*fl c*1200–30), Perrin d'angicourt (*fl c*1245–50), Philippe de Remy (*c*1205–*c*1265), Raoul de Soissons (*c*1215–1272), Richard de fournival (1201–*c*1260), Thibaut iv, Roi de Navarre (1201–53); and, in addition, a whole group of trouvères centred on Arras that included Adam de la Halle (*c*1240–88), Andrieu contredit d'arras (*d c*1248), jehan le Cuvelier d'arras (*fl c*1240–70), Guillaume le Vinier (*fl c*1220–45; *d*1245), Audefroi le Bastart (*fl c*1200–1230), Jehan Bretel (*c*1200–1272), Jehan Erart (*d c*1259) and Moniot d'arras (*fl c*1250–75) (many other trouvères have articles in this dictionary).

Some 2130 poems are listed in the standard bibliography by Raynaud (rev. Spanke, 1955) of which at least two-thirds have melodies, often surviving in several chansonniers (for an anthology of 217 texts and their melodies, see Rosenberg and Tischler, 2/1995, from which the above dates are taken). Raynaud-Spanke's work has received an important update in Linker (1979). The full extent of the northern French song repertory cannot be gauged unless a large number of so-called refrains (*see* Refrain) are also taken into account. The total includes a few songs found in English sources. Unfortunately no single English (i.e. Anglo-Norman) chansonnier survives, though it is difficult to believe that they did not exist in a country where the royal court and many aristocratic households were French-speaking for three centuries. The annotated bibliographies by Doss-Quinby (1994) and Switten (1995) are essential research guides.

Troubadours, trouvères, §II: Trouvère poetry

2. Social status.

The Occitan distinction between troubadour and *joglar* holds in the north of France between trouvère and jongleur. The trouvère was the poet-musician, often of high birth (Thibaut IV de Champagne was King of Navarre); the jongleur was usually itinerant, a professional instrumentalist, singer, entertainer and so forth. Once again, the distinction is not altogether firm and clear; Colin Muset was a jongleur who through force of talent became known as poet and composer. And the conditions of writing in

Arras and its environs, better described as 'civic', even bourgeois, rather than courtly, caused various kinds of social distinction to become more fluid (see Ungureanu, 1955, and Berger, 1981). This is perhaps best seen in the nature of the literary societies that flourished in Arras: the *confrérie* (a large guild of jongleurs and bourgeois citizens) and the *puy* (which included poets from aristocratic families and elected a yearly *prince*). Adam de la Halle, for instance, one of the greatest trouvères, composed for both societies; his works demonstrate the shifting perspectives between the courtly, urban and clerical that are characteristic of Arrageois productions.

Troubadours, trouvères, §II: Trouvère poetry

3. 'Fine amour'.

Fine amour is the cousin of *fin' amors*. That the trouvères learnt directly from the troubadours is certain. Some instances of literary and perhaps also personal contact between them include Chretien's knowledge of Raimbaut d'Aurenga and Bernart de Ventadorn, and the links between Gaucelm Faidit and Raimbaut de Vaqeiras and certain trouvères. The occasional occurrence of chansons in Occitan and in French alongside each other in the same manuscript would be sufficient evidence that the two repertories were not totally distinct. A direct link is suggested, moreover, by circumstantial evidence, such as the activities and influence of Eleanor of Aquitaine and her daughters. Moreover the crusades, mingling together as they did men from the north and south, and the fact of a widely travelling minstrel profession, are also likely to have been influential.

Even more when reading trouvère than troubadour poetry we have the sense of inhabiting an imaginative world in which the concerns are explicitly personal and individual but implicitly public and social. For example, Chastelain de Couci (R.700, stanza 3) addressed his (real or imagined) obdurate lady:

> Quant je regart son debonaire vis,
> Et je la pri sens bel respons avoir,
> N'est merveille s'en l'esgart m'esbahis,
> Quant g'i conois ma mort et sai de voir.
> Puis ke merchis ne m'i deigne valoir,
> Ne sai ou nul comfort praigne;
> Car ses orgueus m'ochit et li mehaigne
> Ha douche riens crueus, tant mar vos vi,
> Quant por ma mort nasquistes sens merchi

What the poem ostensibly does is to express the lover's despair at the lack of *bel respons* in his lady, her lack of pity for him. What it also does is to draw the audience's attention to a general delicacy and refinement of feeling on the poet's part, to his verbal skill (for example the rhetorical dexterity of the juxtaposition of *mort* and *nasquistes* in the last line) and generally therefore to his eloquence, the social grace most to be prized in a courtier. To love (or to pretend to love) such a lady is a sentimental education and its own reward.

The invention of a good song is in itself a sign that love is converting a *vilain* into a civilized being. Consequently, it is almost *de rigueur* for a poet

to insist on the source of his creative inspiration: *De joli cuer chanterai* ('I shall sing out of the happiness of my heart', R.66); *Chanter me fait por mes maux alegier/Tres fine Amor* ('Most refined Love makes me sing to alleviate my woes', R.1251).

Troubadours, trouvères, §II: Trouvère poetry

4. Genres, themes, motifs.

The genres of trouvère poetry closely resemble those of the troubadours; but some, like the sirventes, have dropped out, while others have acquired a new popularity. Among the latter the Jeu-parti (related to Occitan *joc-partit* and other debate poems) is prominent, especially at Arras. The jeu-parti, a sung debate between two trouvères, is essentially a literary–social diversion. Typical of the topics debated is: 'If you are in love with a lady, would you prefer her to love you deeply while being married to someone else, or to be your own wife and love another man?'. The genre occasionally turns to parody and mocks itself with absurd questions; but whether serious or playful, it palpably serves the purpose which much other courtly poetry served – social entertainment. Even the favourite genre of all, the *chanson d'amour* (Occitan *canso*), has a social raison d'être: it demonstrates the poet-lover's eloquence and elegance, giving him a chance to play in public with the finer shades of commonplace feeling.

The *pastourelle* (Occitan *pastorela*) is well represented: Raynaud's *Bibliographie* (nos.1694ff) lists a dozen songs beginning *L'autrier chevauchoie* ('The other day as I was riding out'); such an opening is the key to the genre. The Lai is formally related to the Occitan descort. This 'lyric' lai with music was originally connected with the French narrative lai, of which Marie de France (*fl* 1160–85) was the greatest exponent; both the lyric (sung) and the narrative (spoken) forms seem to have roots in Celtic oral tradition (see Maillard, 1963). A genre unique to the trouvère repertory is a special type of 'refrain-chanson'. Songs with refrains, in the ordinary sense, occur also in troubadour manuscripts (*Reis glorios* is one of them); since the music is strophic, the refrain is a verbal phenomenon only. But the trouvère *chanson avec des refrains* is one in which the strophic repetition of the music is broken into verse by verse by the insertion of extraneous *refrains* (courtly tags with tunes attached to them; *see* Refrain). Another unique genre is the (now so-called) Chanson de toile, weaving-song (old French *chanson d'histoire*). Several examples are cited in the early 13th-century *Roman de la rose* by Jean Renart. Like the *pastourelle*, it is a courtly, mock-popular song, rather than the genuine popular article: a lady (Bele Yolanz, Bele Doette and so on) sits at her loom bewailing the absence of her lover (fig.6). Other genres include the *chanson de femme*, *chanson de mal marié* and *rondet de carole*, and the *rondeau*, *rotrouenge* and *sotte chanson*. Finally, there are in the trouvère repertory a considerable number of religious chansons, especially crusade songs and songs to the Virgin. A principal and pioneering exponent of the religious chanson was Gautier de Coincy, whose songs are found for the most part inserted between the books of his collection *Les Miracles de Nostre-Dame*.

The themes and motifs of trouvère poetry are dominated by the topic of *fine amour*. The marked continuity of the discourse over 150 years – the constant references to the divine perfection of the lady; the lover's entire

surrender of himself to her; the sweet suffering (*li dous mal*) of love; the prayers for reward (*guerredon*); the despair when reward is not forthcoming – has lent itself to structuralist analysis, notably that by Zumthor. In his highly influential studies, trouvère (and indeed troubadour) art is essentially a closed, 'circular' system, broadly static and collective, in which the speaking voice, the 'I', functions purely grammatically as a generalized stylistic device rather than as a personal expression of individual feeling. While Zumthor is undoubtedly drawing attention to a central feature of trouvère verse, that is, the use of formulaic language, it is clear that issues of authorship, elided in Zumthor's account, are also paramount in this period. Examination of the use of formulaic material, notably in the widespread citation of refrains among the whole spectrum of 13th-century writing, shows that poets and composers were fascinated by the boundaries between genres. They consistently explored and sought to redefine the distinction between collective and individual forms of language, between past generic modes and new ones, between music and speech. There was a new attempt to consider the role of authorship: not only are the troubadours themselves given historic status as named authors, but trouvère compositions are also, especially by the end of the 13th century, copied into manuscripts in ways that draw attention to the name and rank of their authors. The most striking example of this is the 'Adam de la Halle' manuscript (*F-Pn* fr.25566), the first known case of a vernacular author being granted the accolade of a complete-works collection.

Troubadours, trouvères, §II: Trouvère poetry

5. Words and music.

The relation between words and music in trouvère and troubadour song is of primary significance. The area of greatest debate is undoubtedly that of rhythm: the theory of modal rhythm proposed in the early 20th century remains controversial, and debate about different approaches to rhythmic transcription persists. However, support for the theory of modal rhythm has gradually declined in favour of non-mensural notation in modern transcriptions of the songs. In particular, the work of Hendrik van der Werf and John Stevens has encouraged a more flexible approach to rhythm, including isosyllabism, and, especially in the case of Stevens, a far more searching and sympathetic examination of the medieval notation itself in all its variety and idiosyncrasy.

The very diversity of manuscript presentation of the songs, and the lack of unambiguous comment in medieval theoretical writing, means that many fundamental questions about versification and form, especially as they apply to the music and the words together, are unresolved. It is not clear, for instance, whether editors are right to seek to tidy up the stanzaic patterns of individual songs according to a notion of assumed regularity of rhyme, metre or syllable count, when the manuscript sources of those songs show no such regularity. Marshall has argued convincingly that certain forms and genres, notably the lai and descort, have been misrepresented in modern editions by the refusal to respect principles of irregularity and disharmony discerned from manuscript evidence.

The question of how the melody collaborates with the words is especially problematic: does one define a song by its text or its melody? Different manuscripts often present different combinations of text and melody, and often only the first stanza is presented with music, leaving open the question of how a modern editor or performer is to coordinate subsequent stanzas (and their metrical irregularities) with the opening melodic statement. One way forward, as signalled by Marshall and Stevens, is to return with renewed vigilance to the manuscripts themselves to try to gain a better grasp of medieval editorial principals, including layout, punctuation and notation. It always has to be borne in mind, moreover, that the manuscript sources are rarely contemporary with the composition of the songs, but offer an editorial perspective from the second half of the 13th century. The relative paucity of surviving troubadour melodies (approximately a tenth of the texts are copied with music) compared to those for trouvère songs (about two-thirds have music) has no obvious or single explanation. Music was not generally transmitted as widely as texts because (as now) it required specialist skills both in copying and in reading the notation: we cannot assume, then, that in all cases where music does not survive, it was not intended. Much of it must have circulated only orally, and proved hard to recover for those compiling songs some 150 years after their composition. On the other hand, especially in some of the later Italian troubadour chansonniers where there is no preparation for music, the words of the songs evidently had independent value for the compilers and their patrons.

Closer study of the manuscripts promises more than merely editorial benefits. A broader approach to manuscript studies has encouraged more acute observation of the ways in which the physical processes of writing themselves shape and constrain the ways in which text and music are conceived. There is much still to be learnt about the influence that the manuscript presentation of a song has upon the relation between words and music, and upon the potential performance of that song.

For further discussion see §III, 4 below.

Troubadours, trouvères, §II: Trouvère poetry

6. Style and technique.

The trouvères, like the troubadours, were highly selfconscious verbal artists. Dragonetti (1960) described and analysed the 'rhetoric' (*ars rhetorica*, in the medieval sense) of the trouvères, a 'rhetoric' learnt in the schools and transferred from Latin to the vernacular. The heading of 'easy ornament' allows for figures of repetition, of antithesis, of interrogation and of sententious statement; 'difficult ornament' includes feudal metaphors, symbols of reward, religious metaphor and so on. There is a rhetoric of the introduction (*exordium*) and a rhetoric of the conclusion (*l'envoi*). The stanza patterns and rhymes are similarly complex and selfconscious – artificial and calculated in the best sense. It is seldom that one finds a

trouvère chanson that cannot be precisely accounted for, indeed counted, numerically. There is wide variation of strophe, line length and rhyme.

An appreciation of the art of trouvère composition needs to take into account both the extraordinary prominence given to the topic of ideal love, and the way this topic gained an extraordinarily inventive range of formulations. Conditions of increasing literacy encouraged and enabled scribes to reflect widely on the question of how to represent vernacular compositions in written form, an effort which in turn gave these compositions an independent written authority. Starting with the cleverly sardonic Jean Renart, who set some 46 pieces by a wide range of troubadour and trouvère poets into his *Roman de la rose*, trouvère writing was characteristically a type of writing that did not stand on its own, but was always set into relief by other genres, other registers, other authors. This was a period in which language, and particularly courtly language, was examined intensively by juxtaposing it with lower, more 'popular' styles. The genre of the pastourelle is a prime example.

The legacy of both the troubadours and the trouvères was immensely influential within Western medieval culture. Music historians have a great deal to learn from studying their poetry. They will become aware, above all, of a highly selfconscious, historically sensitive artistry, in which great refinements of verbal expression are brilliantly sought and achieved.

Troubadours, trouvères

III. Music

Neither the troubadours nor the trouvères regarded their poetry as a self-sufficient art. Their verse achieved life mainly through the performance of the singer. Indeed, Folquet de Marseille wrote that 'a verse without music is a mill without water'. In *De vulgari eloquentia*, Dante stated that the *cantio* (chanson) 'is the action or passion itself of singing, just as *lectio* is the passion or action of reading'; poetry is a 'rhetorical fiction musically composed', and a chanson 'nothing else but the completed action of one writing words to be set to music'. Unfortunately, surviving information concerning the music of the troubadours and trouvères is far less plentiful and far more equivocal than information concerning the poetry.

For a full description of troubadour and trouvère sources, *see* Sources, MS, §III.

1. Manuscript sources.

4. Rhythm.

1. Manuscript sources.

The major sources of troubadour poetry include approximately three dozen manuscripts and sizable fragments from the 13th to 16th centuries. Of these, only two (*F-Pn* fr.22543 and *I-Ma* R71 sup.) survive with music, and then only for a portion of their contents. A further group of troubadour poems and melodies is found in two sources devoted primarily to the art of the trouvères, the Manuscrit du Roi (*F-Pn* fr.844) and the Chansonnier de St Germain-des-Prés (*F-Pn* fr.20050; fig.6). Depending on the criteria of individual scholars, music survives for approximately 300 of more than 2500 troubadour poems and is perhaps recoverable for an additional small handful. Usually this music is known from only one source, though about 50 chansons are accompanied by music in two, three or four sources.

The major sources for trouvère poetry comprise about two dozen manuscripts and sizable fragments from the 13th and 14th centuries. All but a few survive with music. Thus it is not unusual for a well-known work to be accompanied by music in ten or more sources. Comparison of different readings reveals that many poems were set two, three and even four times. Since no catalogue of these multiple settings is yet available, it is not possible to estimate accurately the size of the trouvère musical repertory even though we know that most of the nearly 2100 poems survive with music. Since the manuscripts often attribute to the same trouvère a poem surviving with different melodies, one may conclude that the rubrics refer primarily to the poet and not the composer. Generally it is assumed that the poet and the composer of the only surviving melody (or of the melody taken to be oldest) were one and the same person. This seems likely to be true in most cases, although irrefutable proof is lacking.

In three kinds of case an identification of the later settings may be made with reasonable security. Sometimes (e.g. in the Manuscrit du Roi) staves left blank by the original scribe have been filled in by another hand, and the music does not correspond to that contained in any other source. At other times (also in the Manuscrit du Roi) there are late additions to the main corpus of the manuscript. In still other instances (e.g. in *F-Pn* fr.1591 and 24406) there are large concentrations of melodies unrelated to those contained in any other source. Moreover, in dealing with unica that are either late additions to a manuscript corpus or are contained in manuscripts with large numbers of late settings, it would be rash to assume that the melodies were necessarily those originally designed for the poems in question. There are also examples that may survive in one source each, for which neither manuscript evidence nor stylistic evidence indicates securely which of the melodies, if either, was the original. The same is true for a small number of troubadour melodies. It is exceptionally rarely that we are able to determine the composer of any of the late settings, although it can be shown that in *GB-Lbl* Eg.274 the melody accompanying *La douce vois du rossignol salvage* (R.40) originally accompanied *Loiaus amours et desiriers de joie* (R.1730) by Colart le Boutellier. It is not possible to estimate accurately the date of composition for the late settings; many were probably roughly contemporaneous with the compilation of the

sources containing them (*c*1275–*c*1310) and some may perhaps have been the work of the scribes themselves.

For both the troubadours and the trouvères, the symbiotic relationship between poetry and music remained a flexible one until the end of the 13th century. Not only was it possible to replace the melody for a given poem, but it was frequent practice to pay homage to an admired poem and melody by imitating the structure of the poem while retaining the melody with which it was associated. The survival of numerous contrafacta thus documents the influence of several of the troubadours and trouvères, as well as the fame of certain individual works. Bernart de Ventadorn's *Can vei la lauzeta mover* furnished the point of departure for no fewer than five works: *Sener, milas gracias* (inserted into the Provençal mystery play of St Agnes); two anonymous trouvère poems, *Plaine d'ire et de desconfort* (R.1934) and *Amis, qui est li mieus vaillant* (R.365); the Latin song *Quisquis cordis et oculi* and its trouvère reworking, *Li cuers se vait de l'oil plaignant* (R.349), both attributed to the Chancelier de Paris. A sizable majority of the songs to the Virgin by various trouvères (mostly anonymous) are contrafacta, while the jeux-partis also include a significant though far smaller number.

Whereas a remarkable degree of constancy exists in the transmission of Gregorian repertory surviving in hundreds of manuscripts, there is a striking degree of variability among troubadour and trouvère melodies within a manuscript corpus that is far smaller in numbers as well as in chronological and geographical distribution. Even when various manuscripts contain related settings of the same poem, these may vary widely. Some variants are seemingly of minor consequence, involving matters of ornamentation or the distribution of notes among the various syllables. Others, however, may involve the replacement of one or more melodic phrases, and sometimes the replacement of the entire concluding section, the cauda (this may comprise as many as six lines of a ten-line poem). Even the replacement of a single phrase may bring about a changed repetition pattern; and significant modal and formal alterations may come about through consistent treatment of changes of detail. The variability of the melodic tradition is of course best documented within the trouvère repertory, which includes a large number of melodies surviving in multiple readings. However, those limited comparisons that can be made within the troubadour repertory suggest that the same general principles applied there too.

The need to account for this variability provides one of the central problems in troubadour and trouvère studies, the investigation of the transmission of these two repertories. Several different possibilities may be envisaged. At one extreme one might posit that the melodies were transmitted entirely through writing and that the variants observed are to be attributed to a combination of editorial reworkings by successive scribes and of errors committed in the copying process. At the other extreme one might posit that the melodies were transmitted only orally until the moment at which they were set down in the manuscripts that survive. It can be shown that neither extreme is correct, but scholars do not agree concerning the relative degree of importance of oral versus written transmission.

As to *F-Pn* fr.22543 (fig.7), the chief source of troubadour music, melodies are given for less than a fifth of the more than 900 lyric works it contains, the music occurring in irregularly scattered fashion. It would seem likely that the scribe was able to enter only those melodies that were known to him personally. Had he been working from a model containing most of the music, he would surely have provided melodies for a far greater number of poems. Nevertheless, the accuracy of these conclusions cannot be fully tested owing to the paucity of source material available.

Trouvère manuscripts, however, are more numerous and can be divided into several distinct families. These are characterized in general by striking similarities of content, order of content, and common textual variants. The chief members of the largest family are *F-Pa* 5198, *Pn* fr.845, 847 and n.a.fr.1050; but the family also includes two fragments as well as the lost Chansonnier de Mesmes (see Karp, 1962) and at least one more distantly related member. A second family, more important by virtue of the generally greater trustworthiness of its attributions and readings, consists of two distinct branches that are often treated separately: *F-Pn* fr.844 and 12615 (Chansonnier de Noailles), and *AS* 657 together with *I-Rvat* Reg.lat.1490. A third family includes the Chansonnier de St Germain-des-Prés and a small group of manuscripts without music.

Within the Arsenal family, variants among the melodic readings are quite infrequent and are, for the most part, of minor consequence. This one family thus stands in strong contrast to others, and it is agreed that its members were unquestionably copied from a common archetype. On the other hand, the Chansonnier de St Germain-des-Prés presents in its opening section (the later portions do not contain music) a situation comparable to that discussed with regard to the troubadour source, *F-Pn* fr.22543. Again the conclusion seems warranted that each scribe entered only melodies known to him personally. But this conclusion cannot be established beyond question since intrafamily melodic comparisons are not available.

The greatest area of uncertainty regarding the transmission of trouvère melodies thus concerns the second of the families mentioned and other manuscripts not closely related to the three main families. Similarities of order of contents show that the Manuscrit du Roi and the Chansonnier de Noailles were heavily indebted to some form of common original, as were the Arras and Rome chansonniers. This is borne out also by a study of textual variants. Oral transmission of the texts in the stage immediately preceding the construction of these two pairs of manuscripts is highly unlikely. Nevertheless, while the melodies of these manuscripts are normally clearly related in their readings, they also present a disconcerting number of variants. It has been suggested that after the texts had been copied out, scribes familiar with the music set down the melodies in the forms known to them. On the other hand, it has also been contended that in most cases the melodies were copied along with the texts – not ruling out the likelihood of oral transmission at earlier stages. The first alternative lays stress on the importance of oral tradition in medieval culture as a whole, and provides the simplest explanation of the numerous variants. The second, by contrast, concentrates on the explanation of consistent similarities of variants, particularly of exceptional musical readings. It is

claimed also that when the choice of texts, their order and their actual readings have been predetermined by access to written models, it is more likely that access to written models was available for the music as well. Recognizing the extent of editorial revision that is occasionally present within the Arsenal family of manuscripts (ex.1), this alternative would stress scribal reworking, combined in certain instances with scribal errors, in accounting for intrafamily variants.

2. Modality.

From the standpoint of variety of modal construction, the repertory of the troubadours and trouvères is undoubtedly the richest in the Middle Ages. Compared with the great melodic treasure of Gregorian chant, a wider variety of accidentals is employed, there is greater contrast between extremes of range, a larger number of ways in which the final may relate to the melodic ambitus, and a larger variety of finals.

The trouvère manuscripts contain not only the B♮ and B♭ known to the Guidonian system and chant, but also E♭; F♯; C♯; and even isolated instances of G♯. Several problems are attendant on the inconsistent use of symbols for accidentals. In the first place, conflicting accidentals – e.g. notated B♭ versus notated B♮ – may appear in different readings of the same passage. Secondly, the manuscripts are not uniform in their use of the various accidentals. *F-Pn* fr.846 (the Chansonnier Cangé) is, for example, the most prolific in the use of sharps. Very often these occur not at the most expected places but at the places where they might most easily be omitted by the performer, not for the subsemitone to a G final, but for the upper, unresolved 7th to such a final or to specify the outline of a melodic tritone. The Arsenal family of manuscripts, on the other hand, ignores sharps entirely, even when notating melodies with finals on G that appear in major-sounding modes in other manuscripts. The use of E♭ and C♯ is infrequent in all sources.

The narrowest extreme of range for troubadour and trouvère music is to be found in melodies such as the Manuscrit du Roi reading of Conon de Béthune's *L'autrier avint en cel autre päis* (R.1574; ex.2). The melody, which comprises repetitions of two versions of a single phrase, unfolds within the compass of a 4th. On the other hand, the same manuscript presents a late setting of a poem by Gautier de Dargies, *Se j'ai esté lonc tens hors du päis* (R.1575; ex.3), that extends over the range of a 16th. The melody begins with the final, climbs to the upper octave within the first phrase, and continues to climb with few turnings until the peak of the second octave is reached in the middle of the third phrase. A range of just under two octaves is found in *Be·m pac d'ivern e d'estiu* by Peire Vidal. On the whole, most melodies unfold within the range of a 7th to 10th. The more restricted melodies within this group are, however, active primarily within the interval of a 5th, the extremes of ambitus being reached through one or two notes that lie outside the normal activity of the melody. When ranges of a 10th or more are found – they are common in the works of Gautier de Dargies – these normally arise through the combination of plagal and authentic ranges. The melodic development of the Manuscrit du

Roi setting of *Se j'ai esté*, which, apart from the subfinal, is entirely above the final, is rare among such melodies.

The medieval theoretical descriptions of the melodic modes underlying Gregorian chant distinguish as a matter of course between authentic and plagal forms. In the former, the final is located at the lower extreme of the octave ambitus, though provision for a subfinal is also made. In the latter, the final is a 4th above the lowest point of the octave range, although again provision may be made for decorative notes exceeding this compass by a step at either end. These constructions are also the ones most frequently to be found in the troubadour and trouvère repertories. However, in addition to these, and to previously mentioned examples that either fall within the range common to both plagal and authentic forms or extend to combine these ranges – both types being observable also in chant – there are less typical examples. In a small but noticeable group, the basic octave is divided in such a fashion that the final is located a 5th rather than a 4th above the lowest note. Less often the final may be located at a still higher point within the compass. The melody to *J'oi tout avant blasmé* (R.769; ex.4), by Gilles de Vies Maisons, develops within the octave *g–g'*, extended at one point by the use of the upper *a'*. Quite unexpectedly, the melody ends on *f'*, a note which had been used as the initial of lines 1, 4 and 5, but which had not been employed previously as a cadential final.

The finals employed in troubadour and trouvère melodies include all the normal ones found in the chant repertories, i.e. all the diatonic degrees. Finals on D, G, F and C are the most frequent, the last three often being equivalent to one another. The number of troubadour and trouvère melodies ending on E is much smaller than the number of chant melodies in the 3rd and 4th modes. However, such melodies may be found, as well as melodies ending on B. On the other hand, transpositions of melodies in different sources in such a fashion that the same melody may end on two or three different finals is more frequent than seems to be true for chant. Moreover, the octave positions of the finals are more variable in secular monophony than they are in chant; the high *f'* on which *J'oi tout avant blasmé* ends is not the F final of modes 5 and 6. One may even find an exceptional, surprising example of a trouvère melody ending on B♭ (ex.5).

The role of the final in the construction of troubadour and trouvère melodies is variable. There are many melodies with a powerful sense of tonal gravity throughout that leads inexorably to the final, whose central role has been clearly established from the beginning. But there are also many in which the melody seems to oscillate between two centres – usually a whole tone apart – in such a fashion that either could be used satisfactorily as a point of final repose. There is a third group in which there seems to be a shift from one clearly defined tonal centre at the beginning to another that governs the final phrases. For example, the late setting of *Fine Amours claime en moy par heritage* (R.26) by Pierre de Craon in *F-Pn* fr.1591 begins in what one might term F major. The openings of the first four lines and the cadences of lines 2 and 4 outline the F triad, while lines 1 and 3 reach an open cadence on the subfinal. Line 5, however, cadences on B♭; and in line 6 an E♭ is notated. The importance of B♭ and of the notes of the

B♭ triad increases and the final cadence on B♭, preceded by a descent from a notated E♭, seems quite natural (ex.5).

In this and in comparable melodies there is the equivalent of modulation, though not with the harmonic implications and sense of tonal distance and tonal order found in works written after 1650. Lastly, there are many melodies in which the final plays an insignificant role in the melodic construction and in which the choice of final is indeed unexpected. Often these melodies are similar in principle to those of preliterate societies that have been described by Sachs as pathogenic. In other words, the melodies begin at a comparatively high pitch level and lose tension gradually, descending as they go, and reaching a point of final repose at a low level on a tone that may not have appeared at all until the last phrase or two. Another melodic characteristic described by Sachs and to be found in these repertories is the use of chains of 3rds. Sometimes these provide the underlying structure of a basically conjunct melody. At brief moments, however, they may surface in stark succession (see ex.4, lines 2, 4 and 7).

The relationship between the final and the other notes of a melody does not necessarily remain invariable among the different readings of a given melody (a few chants were analysed variously by medieval theorists and some Old Roman chants end on different finals in different manuscripts). The problem of modal variability in troubadour and trouvère music extends to almost a quarter of the repertory. The outward manifestations are various. Transpositions combined with varying uses of accidentals may alter the relationship between adjacent degrees. Or there may be only partial transposition, involving one or more phrases, altering the relationship between these phrases and those that are untransposed. 'Partial transposition' occurs also in chant. There its purpose is to avoid the notation of chromatic notes not within the Guidonian gamut; this seems not to be a factor in trouvère music, however. Sometimes one may find one or a series of changed cadential figures, causing the melody to end on a different note, even though most or all phrases may be at comparable levels with their counterparts.

Just as the troubadour and trouvère poets made considerable use of stock imagery and stock situations, so also the composers made frequent use of standard melodic outlines. On the whole, these are handled with greater freedom than the standard formulae employed in chants such as the gradual, and they do not necessarily have any fixed modal function. For example, not only do recitations appear on scale degrees that do not fill those functions in chant, but a recitation on the same tone may be used in melodies or readings having different finals.

There is no universally accepted vocabulary for the description of the modal usage of the troubadours and trouvères. In the past, many authors have used the vocabulary of the church modes to describe these melodies, adding also either the terms 'Ionian' and 'Aeolian' or 'major' and 'minor'. In many instances the vocabulary is apt. There are melodies, especially those with D finals, that loosely follow Gregorian procedures and use variants of Gregorian phrases. But there are even larger numbers that belong to other realms of melodic expression. Johannes de Grocheo, the only medieval theorist to treat of secular monophony in any detail, commented on the fact

that the musicians of his day did not use the terminology of the church modes in discussing secular music, but the underlying significance of his remark is not entirely clear. The statement may have been mere reportage: although one might have used the vocabulary of the church modes, this was not done. Or it may have been intended pragmatically: since there was no need to connect these melodies to a standard series of recitation tones, as in chant, there was no practical value to such terminology. Finally, the statement might be a tacit acknowledgment of the many ways in which this repertory exceeds the technical characteristics of the Gregorian modal system. At present most scholars deal with the modal analysis of trouvère songs by discerning the chief tonal centres of each melody and describing the intervallic relationships among them.

Troubadours, trouvères, §III: Music

3. Form.

The troubadour and trouvère poets prided themselves on an originality of structural detail that was achieved primarily within the confines of a few basic patterns. Through the governance of verse lengths and the order of rhyming syllables, any given pattern was susceptible of innumerable variations. Similarly, there was considerable variety of formal detail in the melodies, even though these rest for the most part on a few standard schemes. This variety is easily overlooked in the examination of repetition patterns, but the subtle variation of line lengths that plays such an important part in the flexibility of poetic form has similar influence on the balance between constituent musical phrases.

Nearly all troubadour and trouvère poems continue the format of the initial strophe throughout. These texts receive strophic settings in all but exceptional cases. In the Manuscrit du Roi there are three late settings in Franconian mensural notation with fresh music for each strophe. In two of these the content of the individual strophes is non-repetitive, while in the third each strophe follows an *AAB* pattern. In each of the three examples all strophes end on the same final.

There is, however, a modest group of poems that do not observe the same poetic structure from one strophe to the next. Rather fewer than 100 works of this kind, termed variously lais or descorts, are known (*see* Lai). A few are known merely through citations; some survive without music, others with music incomplete. The genre is often compared with the sequence, although the pattern of strict repetition in paired versicles rarely obtains. Repetition may be varied, in irregular patterns, and often more than twofold statements are involved. The details of the repetition patterns are individual to each work.

The constitution of the strophic works also exhibits considerable variety. In a handful of troubadour poems and in still fewer trouvère poems, there is no internal rhyme to the strophe, but only correspondence of rhyme between comparable lines of each successive strophe. Normally, however, internal rhyme is a central formal element in the strophe. There are various classes of rhyme schemes, but by far the largest are those opening with quatrains that rhyme either *abba* or *abab* and at the same time display equivalence of length between the *a* lines and between the *b* lines. Usually poems of the former class are set either by melodies devoid of phrase

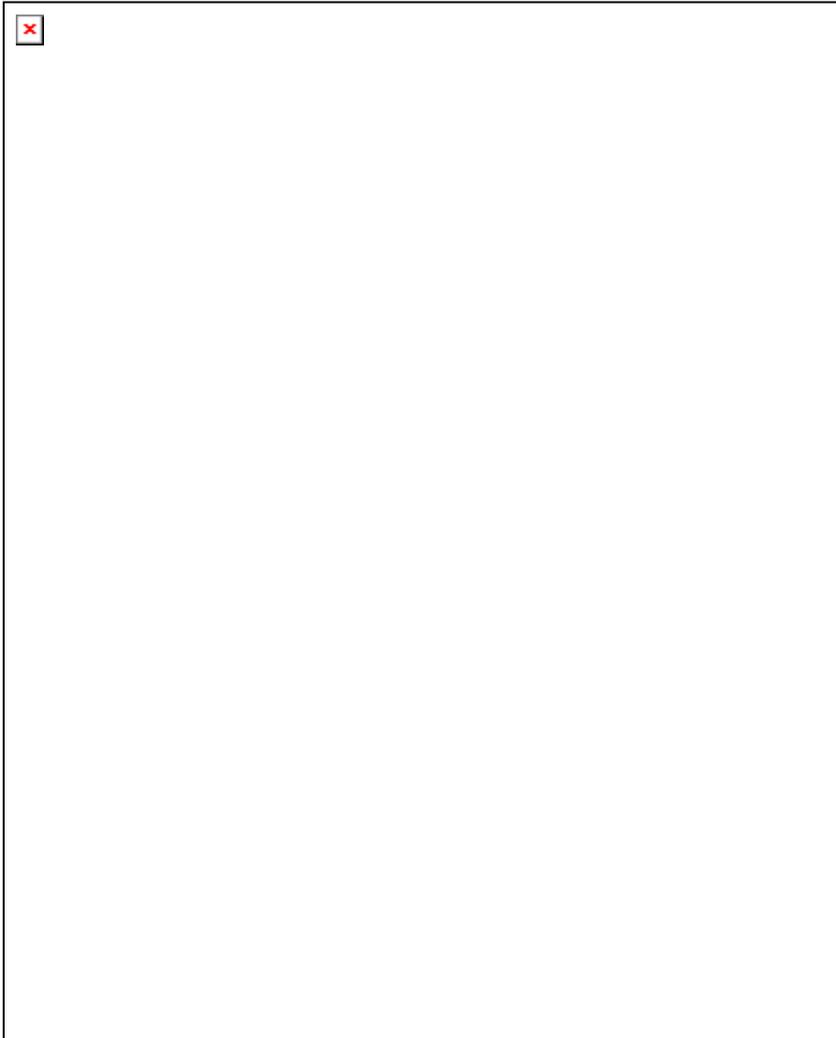
repetition or by melodies with repetition that is incidental rather than central to the construction. This class is proportionately much more frequent among troubadour poems surviving with music than among their trouvère counterparts. The latter group, on the other hand, is typically set by melodies that reflect the parallelism between the opening pairs of lines in their repetition pattern. Each musical statement *AB* (and, by transfer, each *ab* rhyme pair) is termed a *pes*, and the freely patterned concluding section a cauda. The form is often termed Bar form, although this word originated in conjunction with later German secular monophony. It is this form that underlies the majority of the trouvère repertory and a sizable portion of the troubadour repertory.

Although the average *pes* comprises two phrases, there are a number of examples with three, and even some with four. There are fewer variants in the transmission of the *pedes* than in the caudas, and repetition is normally carried out fairly strictly. However, the second element of the initial *pes* may end with some form of open cadence, while its later counterpart ends on the final. In a smaller number of instances, the reverse holds true, the cadence to the second phrase of the second *pes* avoiding the final in order to provide a smoother transition to the following cauda. In rare exceptions, such as *Mout me merveil de ma dance dame et de moi* (R.1668) by Guiot de Provins, the relationship between the two *pedes* is established solely by means of extensive musical rhyme.

The cauda is basically a section that develops freely according to the ingenuity of the composer. There may be re-use of material from the *pedes*, or no reference to earlier material. Phrase repetition may be employed or avoided. If present, it may be literal or varied; on the whole, the latter is preferred to the former. Motivic development may occur. But there is no practice that constitutes a standard expectation. A subdivision of bar form has been suggested on the basis of the treatment of repetition in the cauda, but this does not appear to correspond to any basic difference of concept held by the medieval artists themselves.

Bar form may be employed also – as a departure from the norm – for poems with opening quatrains that rhyme *abba*. It may, in addition, be adapted to poems that open with a succession of *a* rhymes (this class, including the pastourelles and rotrouenges which are among the early segments of the trouvère repertory, is otherwise accompanied by melodies that repeat the opening phrase). On the other hand, there are many late settings of poems that open with *abab* rhymes and yet do not employ bar form. This form is also often absent from poems having strophes with fewer than eight lines (see ex.4).

Scholars have noted that the melodic form of trouvère and troubadour compositions rarely corresponds throughout to the rhyme pattern of the verse. Such correspondence may be found exceptionally in works such as ex.2, but the functions of rhyme patterns and of melodic phrase-repetition are sufficiently divergent that attempts to mirror the rhyme scheme by the musical repetition pattern would result in the impoverishment of the melodic invention. In normal circumstances there is correspondence between the larger divisions of the poetic and musical forms and between poetic and musical phrase lengths. But each of these correspondences may be

disregarded among exceptional works. Conon de Béthune's *Chançon legiere a entendre* (R.629), for example, has strophes of seven lines, with *pedes* of two lines each, thus dividing the strophe 2–2/3. The late setting in *F-Pn* fr.1591, on the other hand, exhibits the repetition pattern *ABC–AB¹/DE*, dividing the strophe 3–2/2. The musical division between the fifth and sixth lines is emphasized both by the leap of a 6th and by the exploration of a new and higher tessitura (ex.6). In such exceptional works, the main dividing-point of the musical structure may occur a line – or rarely two lines – earlier or later than the corresponding structural point in the poetry.


Conflicts between poetic and musical phrase lengths also occur in a small group of exceptional works. A brief instance may be noted in ex.6. Since line 4 lacks the feminine ending of line 1 and thus requires less musical material, the cadence of line 1 recurs in the repeat not in its original placement, but as the opening unit underlying line 5, subsequent material being shifted forward one unit by this displacement. One of the more extensive illustrations of such conflict is provided by the Arras setting of Gautier de Dargies' *Cançon ferai mout marris* (R.1565). An irregular poetic structure, 7*a* 7*b* 7*b* 3*a* (*sic*) 8*a* 8*b* 10*b*, is accompanied by a much more regular musical structure with a repetition pattern, *ABC–ABC¹/D*, the musical phrases consisting of 7, 7, 7, 7, 7, 8 and 7 syllables each (ex.7). It might be thought that melodies such as this were designed originally to accompany other poems with structures equivalent to the music, but no

evidence to support such conjecture has been discovered. Knowledge that musical phrase length is not automatically determined by poetic line length makes urgent a closer examination of musical phrase structure and of relationships between successive phrases, an area thus far neglected. Many phrases seem to be constructed as indivisible units, though some consist of similar or identical halves. The interior points of division do not necessarily coincide with points of division in the poetic thought. Occasionally considerable artistry may be displayed in the handling of internal details of phrase construction. For example, the melody setting lines 1 and 3 of Gautier de Dargies' *Autres que je ne suel fas* (R.376; ex.8) is treated as if it were made up of three sections. In line 5, the second and third sections are replaced by new material. In line 7, the first replacement is retained, while there is a varied return to the third section of lines 1 and 3. In line 10, there is a return to a varied form of the second section, while the third reverts again to a variation of the cadence to line 5.

Troubadour and especially trouvère musical forms may be modified through the use of refrain structures. In the *chansons avec des refrains* of the trouvères, each stanza ends with a different refrain with different music. Manuscripts of the Arsenal family generally provide space for the music of only the first strophe. Other manuscripts may provide space for the music for all refrains, but do not consistently furnish all the music. Tonal shifts may occur from strophe to strophe when not all end with the same final. More frequently, however, there is one refrain common to all strophes. This refrain may consist of a single word that is either part of a larger line or forms a poetic line of reduced size. Or the refrain may comprise one or more lines of normal length. Some refrains include nonsense syllables. The refrain may occur at an interior point in the strophe or at the end. In either event, the device is primarily poetic rather than musical, although it may result in the highlighting of a musical passage. When the refrain occurs at the end of a work in bar form, the equivalent of a ballade is created. It is questionable, however, whether early examples of such form were regarded as a category apart, and the point of transition to the ballade proper appears obscure. The *formes fixes* – the rondeau, virelai and ballade – begin to appear within the troubadour and trouvère repertories, but stand at the periphery. Most examples are either by such late figures as Adam de la Halle or are late additions, such as occur in the Manuscrit du Roi, to a previously completed manuscript corpus. Similarly, though echoes of the laisse structures of the *chanson de geste* may be found in certain highly repetitive melodies, the practice of the epic poets does not enter into the central core of troubadour and trouvère art.

Troubadours, trouvères, §III: Music

4. Rhythm.

Although Franconian mensural notation had been developed by the decade following 1250, and although most surviving troubadour and trouvère manuscripts were compiled after this period, only a small proportion of these two repertories survives in any form of mensural notation. The Chansonnier de St Germain-des-Prés used Messine neumes (see fig.6), while the other sources used mainly the standardized square forms of contemporary chant notation (see fig.7). Among medieval theorists, only Johannes de Grocheo discussed secular monophony, and

his few remarks concerning rhythm are not sufficiently specific to be unequivocal in meaning. Intense controversy has raged over questions of rhythmic interpretation. On the one hand, it has been argued that when a mensural notation is available and is not employed, this is indicative of the use of free rhythm, while on the other it has been argued that the samples in mensural notation provide the models from which the rhythm of all other melodies may be deduced. It is doubtful that any universal rhythmic system prevailed for the entirety of the two repertories.

The chief source of information concerning trouvère rhythm is the Chansonnier Cangé. Approximately a third of the melodies in this source are presented in whole or in part in a pre-Franconian mensural notation which distinguishes between symbols for longs and breves, but which does not distinguish the values of notes occurring in ligatures or conjuncturae (fig.8). The notation of one work, drawn from the motet repertory, shows that the scribe was familiar with the forms for isolated semibreves and for ligatures with opposite propriety, but these forms are not used elsewhere in the manuscript, even when appropriate. It is difficult to tell why mensural notation appears sporadically and breaks off abruptly within individual works. Not all works that might have been notated mensurally are so written. Non-mensural notation is used for *Pour conforter ma pesance* (R.237) by Thibaut IV de Champagne even though the melody is notated mensurally in the section devoted to him that prefaces the Chansonnier de Noailles (no other instance of mensural notation is known in the Noailles manuscript). The second most important source of information on both troubadour and trouvère rhythm is the Manuscrit du Roi, which contains a number of late additions to the main corpus in advanced stages of mensural notation. Mensural notation is present also in the Frankfurt fragment, and in three manuscripts of the *Miracles* of Gautier de Coinci, though again not in consistent fashion. *F-Pn* fr.1591 appears to contain occasional hints of mensural notation, but these passages may be subject to divergent interpretations. It should be noted that an objective distinction between early mensural and non-mensural notation cannot always be made; in many cases one is able to classify as mensural only those notations that present rhythmic patterns already familiar to the mind. Lastly, there are passages from the trouvère literature that are incorporated into motets with known rhythm.

Implications concerning rhythm have been sought in various passages in Grocheo's treatise. First, deductions have been based on his division of music into secular song, mensural polyphony and plainchant. Some have argued that since secular song is not classed together with mensural polyphony, Grocheo intended to imply that the rhythm of secular song was free; others have argued that since he had previously defined unmeasured music specifically as ecclesiastical chant, he intended to imply that secular song was measured. Still others claim that the division is faulty, not proceeding according to any one criterion, and that therefore no deduction may be made securely. Secondly, there is a passage in which Grocheo states, 'If, however, by unmeasurable they mean not very precisely measured, this classification … may stand'. Although this passage relates primarily to a preceding mention of plainchant, it has entered into various discussions of troubadour and trouvère rhythm, and questions concerning the meaning of 'unmeasurable' and 'not precisely measured' have been

raised. It has been pointed out that in early modal theory the perfect long, for example, was regarded as *ultra mensuram*, beyond measure, and that Grocheo was not necessarily discussing music that could not rightfully be measured according to later standards. Others have seen in the passage an allusion to the possibility of rubato, while still others have seen nothing more than a vague reference to the quasi-mathematical forms of speculation that underlie many early medieval treatises. Finally, there is a passage in which Grocheo states that the *cantus coronatus* is formed entirely of perfect longs. *Ausi com l'unicorne sui* (R.2075, by Thibaut IV de Champagne) and *Quant li roussignol* (presumably *Quant li rossignols jolis*, R.1559, attributed to both the Chastelain de Couci and Raoul de Ferrieres) are cited as examples of the *cantus coronatus*. It has not been entirely clear whether Grocheo was indicating the rhythmic values of the individual notes, the values for the text declamation, or merely a generally slow tempo. In addition, it is possible to glean other hints from comparisons made later in the treatise between other forms of music and secular song.

In those troubadour and trouvère melodies surviving in mensural notation, modal rhythm is clearly employed. The first three modes appear in approximately equal proportion, while the last three are used very rarely. By the final quarter of the 13th century, during the twilight of the trouvère movement, modal theory was known at least in a restricted circle centred about the court of the trouvère Charles d'Anjou, whose patronage extended to such figures as Perrin d'Angicourt, Rutebeuf and Adam de la Halle. The lai *Ki de bons est, souëf flaire*, attributable perhaps to Charles, provides a systematic exposition of modal theory, each of its strophes developing a different mode. The first strophe provides documentation for the rhythmic style *ex longis et perfectis* mentioned by Johannes de Grocheo and demonstrates that he was apparently referring to the pace of text declamation. The overall progression can be explained most systematically by reference to Franconian modal theory, but the actual rhythms correspond more closely to those described in the theory of Lambertus. The work, however, appears only as a late addition to the Manuscrit du Roi and thus stands only at the periphery of the repertory. Furthermore, it furnishes no information concerning rhythmic theory for the period preceding 1250.

During the decade 1900–10 Aubry, Beck and Ludwig each proposed a theory to the effect that the entire troubadour and trouvère repertories were governed by modal rhythm. Aubry argued that since certain manuscripts contained both motets and secular monophony and since the same notation was employed for both, the notation maintained the same significance throughout, and all pieces were understood to be in modal rhythm. Beck discussed large numbers of works that are notated mensurally and use modal rhythm, and concluded that the rhythm was applicable to all other works in the repertory (unfortunately his musical citations mix indistinguishably works surviving in mensural notation with those that do not and thus must be used with caution). Ludwig based his argument primarily on affinities of construction between the monophonic repertories and the motet repertory. A bitter quarrel over priority of conception arose and so distracted attention from purely scholarly issues that the correctness of the premises and logic of the deductions of the three authors were not examined until the theory had seemingly acquired a

life of its own, almost independent of any specific foundation. Meanwhile scholars such as Gennrich had begun to explore exceptions to strict modal usage. However, neither singly nor in any combination do the arguments provide proof that all troubadour and trouvère melodies used modal rhythm. Thus later scholars such as Handschin, Reese and Westrup were noticeably sceptical in reviewing the more extreme claims of modal theory.

The objections that may be raised against modal theory are both historical and stylistic in nature. No explanation of how modal rhythm came to be associated with secular monophony has been furnished, and the appropriateness of such rhythms may be challenged with especial vigour for those works that antedate the evidences of modal rhythm in polyphony. The likelihood that any one principle of rhythmic construction held universal sway for a full two centuries seems dubious. From the stylistic standpoint, the application of modal principles to the more florid of the troubadour and trouvère melodies results in rhythms that appear highly strained and lacking in musical justification. And many scholars, particularly philologists, are deeply disturbed by the numerous instances in which strict application of the modes will force unnatural rhythms and accentuations on the text.

Premises regarding the rhythmic influence of text on music in the troubadour and trouvère repertories underlie much thinking about musical rhythms suitable for the performance of these melodies. From the late 18th-century realizations by La Borde through the early 19th-century transcriptions of John Stafford Smith and Perne, to the later transcriptions of Riemann and then of the adherents of the modal theory, a steady interest in prosody has been shown. However, neither the poetry of the troubadours nor that of the trouvères displays an immutable rhythmic pattern for lines of equal length. The placement of stresses will vary from line to line and from strophe to strophe. Thus no transcription depending upon a fixed rhythmic scheme will arrive at a perfect fit between musical and poetic stresses. Scholars such as Hendrik van der Werf who feel that the melodies' chief function was to support the texts, that the music was merely a vehicle and not important in itself, advocate a flexible declamatory mode of performance, the rhythm of the melody being shaped anew to meet the demands of each successive strophe. This is, in fact, the only way in which a perfect fit between text and music can be consistently assured. And there are some melodies in which the level of musical interest seems so low that they are suitable for such interpretation. However, there are at least as many with powerful musical personalities. Inasmuch as those melodies surviving in mensural notation show repeated instances in which musical rhythm takes precedence over poetic rhythm, there is little reason to conclude that this did not happen also in non-mensurally notated melodies, whether these are realized modally or in any other, freer system.

More promising are efforts by scholar-performers such as Christopher Page to distinguish between declamatory rhythms suitable for works in 'high style' (the *grand chanson courtois*) and the more symmetrical rhythms adaptable for works in 'lower style' (especially those connected with dancing). Nevertheless, it is difficult to establish universals even here inasmuch as several chansons in 'high style' survive in mensural notation indicating modal rhythm. It is necessary to allow for the possibility that

rhythmic style and interpretation did not remain fixed for all chansons over a period of several generations. Moreover, we may find it profitable to distinguish between measurability as a concept in the mind of the medieval creator-performer and measurability as a guide to the modern scholar's conception of medieval performance. Experiences with various repertories of the world's music show that it is possible for performances to be measurable even in the absence of abstract theories of measure from the minds of the performers. One avenue that remains to be explored is the ascertaining of musical stylistic characteristics that would either favour modal interpretation or point in another direction. For the time being, it may be suggested that melodies in which there is a consistent pattern of alternation between single notes and ligatures are the most satisfactory candidates for modal interpretation. Next come those melodies in which the pitch organization proceeds frequently in cells of regular size. Very simple melodies are apt to be neutral. Less suitable for modal interpretation are those melodies in which the phrase openings are simple and there is greater floridity at the cadences, and least suitable are those melodies that are highly florid.

Trouillon-Lacombe, Louis.

See Lacombe, Louis.

Trouluffe [Truelove, Treloff], John

(*fl* 1448–*c*1473). English composer. He was a protégé of Edmund Lacy, Bishop of Exeter, who made him a canon of Probus, Cornwall, in 1448. He also became a canon of Crantock, Cornwall, neither post requiring priestly status. Trouluffe, who died at about Christmas 1473, was probably a musician of Lacy's chapel since, despite having links with Exeter Cathedral, he was not on its staff. Four carols, all for two voices with three-part chorus, are jointly ascribed to him and Richard Smert in the Ritson Manuscript (*GB-Lbl* Add.5665): *Jhesu fili Dei*, *Jhesus autem hodie*, *O clavis David* and *Soli Deo sit* (all in MB, iv, 1952, 2/1958). The same collection contains three settings of *Nesciens mater* ascribed to Trouluffe (the name of Smert is also given at the end of the third); the openings of the first two of these short antiphons are transcribed in *NOHM*, iii, 320–21.

DAVID GREER/N.I. ORME

Troupenas, Eugène-Théodore

(*b* Paris, 17 Dec 1798; *d* Paris, 11 April 1850). French publisher. After training as a mathematician, he acquired the publishing firm of Isouard

(who traded as Nicolo) in February or March 1825, taking premises at 3 rue de Ménars, Paris. In September 1828 he moved to 23 rue St-Marc Feydeau. In June or July 1835 he moved again, to 40 rue Neuve-Vivienne (sometimes given simply as rue Vivienne). For a short time after his death his firm continued to advertise, but in October 1850 it was taken over by Brandus (with whom Troupenas had occasionally published in partnership).

Troupenas' success in business mainly derived from his contacts with Rossini and Auber. Between 1826 and 1829 he published the first editions of Rossini's last four operas – *Le siège de Corinthe*, *Moïse*, *Le comte Ory* and *Guillaume Tell*; later he published the *Soirées musicales*, the *Stabat mater* and the adaptation *Robert Bruce* (in 1841 he was involved in a lawsuit with Schlesinger and Aulagnier over the rights to the *Stabat mater*). It was Rossini who encouraged him to publish Auber's *La muette de Portici* in 1828, and this was followed by scores of 19 further Auber operas (including all the famous ones). In addition he published full scores of operas by Bazin, Gomis and Labarre and reissued 13 of Isouard's works. He also put out vocal scores of more than 40 operas, ending with Meyerbeer's *Le prophète* (in association with Brandus). In all he issued about 2400 publications (judging by the plate numbers, which in general are reliably chronological), all from engraved plates. Notable among them were didactic works by Kastner and Fétis, a collection of Beethoven's symphonies edited by Fétis (for which, and for *Guillaume Tell*, he employed Berlioz as proofreader), and a large quantity of instrumental music, including string quartets and quintets by Onslow and numerous works for violin by de Bériot, for flute by Tulou, for harp by Bochsa and Labarre, for piano by Czerny, Herz, Kalkbrenner and Thalberg, and quadrilles and waltzes by Lanner, Labitzky and Musard. In 1840–41 he published the first editions of Chopin's opp.35–41 and 43. During summer 1838 and subsequently he advertised publications of the former Magasin de Musique (i) which he seems to have purchased from Janet & Cotelle at the period of the dissolution of that partnership.

Troupenas composed some church music and a few *romances*, and in 1832 contributed to the *Revue musicale* three theoretical articles which were published separately that year. According to Fétis, when he died he left unfinished a work elucidating his theories. Catalogues of the firm's publications appeared in 1836, 1843, 1846 and 1850.

See Breeches part.

Troutbeck, John

(*b* Blencowe, 12 Nov 1832; *d* London, 11 Oct 1899). English translator and church musician. Educated at Rugby and Oxford (MA, 1858) and ordained priest in 1856, Troutbeck became minor canon of Manchester Cathedral in 1864 and precentor the following year. In 1869 he became minor canon and from 1895 precentor of Westminster Abbey, where he greatly improved the education and welfare of the choristers. His English translations of J.S. Bach's *St Matthew Passion*, *St John Passion* and *Christmas Oratorio* were well known; but these were only a few of many similar translations, all published in Novello's 'Original Octavo' edition of vocal scores, which he made of works by Beethoven, Brahms, Dvořák, Gounod, Graun, Liszt, Saint-Saëns, Schumann, Tchaikovsky, Weber and less familiar composers (see *Grove5*). In the field of opera his English librettos of Gluck's *Iphigénie en Aulide*, *Iphigénie en Tauride* and *Orfeo ed Euridice*, Mozart's *Così fan tutte* and *Die Entführung aus dem Serail*, Wagner's *Der fliegende Holländer* and Weber's *Preciosa* were once generally used, and his translation of Hermann Goetz's *Der Widerspänstigen Zähmung*, an operatic version of Shakespeare's *The Taming of the Shrew*, was used for the first London productions of that work (1878, 1880). Troutbeck was also the compiler of several hymnals and pointed psalters including *The Manchester Psalter* (1868), *Manchester Chant Book* (1867) and *Manchester Hymn Book* (1871); the *Cathedral Psalter*, with S. Flood-Jones, Stainer and Barnby (1874); the *Westminster Abbey Hymn Book* (1883), later with tunes edited by Frederick Bridge (1897) and the *Westminster Abbey Chant Book* with Bridge (3/1894); and the *Cathedral Paragraph Psalter* (1894). He also published a *Music Primer for Schools* (1873), with R.F. Dale, and a treatise on *Church Choir Training* (1879).

Trowell, Brian (Lewis)

(*b* Wokingham, Berks., 21 Feb 1931). English musicologist. He studied at Christ's Hospital and Cambridge University (BA 1953, PhD 1960), where Thurston Dart supervised his research on music in 15th-century England. He lectured in music at Birmingham University (1957–62) and King's College, London (1964–5). He held appointments as head of radio opera at the BBC, where he supervised many first performances (1967–70), and Regents' Professor at the University of California at Berkeley (1970); he returned to King's College, first as reader in music (1970) and then (1974)

as King Edward VII Professor of Music. In 1988 he became Heather Professor of Music at Oxford University, retiring in 1996. Apart from his 15th-century studies Trowell has been much concerned with opera (of all periods, but particularly pre-Classical and 20th-century), and has worked as editor, translator, coach and producer. His later writings also reflect an interest in Elgar and he has served on the editorial committee of the complete edition of Elgar's works.

Trowell, Robertus.

?English theorist. He is known only from a reference in a treatise by John Hanboys (*fl c*1370). Hanboys mentioned him in connection with his symbols for notes smaller in value than the *semibrevis*: the symbols are 14th-century in character, using the rhomb with a flagged or unflagged upward tail, or a downward tail. (See P.M. Lefferts, ed. and trans.: *Robertus de Handlo, The Rules, and Johannes Hanboys, The Summa*, Lincoln, NE, 1991, pp.272–3)

ANDREW HUGHES

Troyanos, Tatiana

(*b* New York, 9 Dec 1938; *d* New York, 21 Aug 1993). American mezzo-soprano. She studied at the Juilliard School with Hans J. Heinz, making her début in 1963 as Hippolyta in the New York première of Britten's *A Midsummer Night's Dream* with the City Opera. After two seasons with the company, during which she sang Marina, Stravinsky's Jocasta, Cherubino and Carmen, in 1965 she made her European début as Preziosilla at Hamburg, where she remained for ten years; her roles there included Elisetta *(Il matrimonio segreto*), Dorabella and Baba the Turk, and she created Jeanne in Penderecki's *The Devils of Loudun* (1969). She sang the Composer at the Aix-en-Provence, Munich and Edinburgh festivals, and Octavian at Salzburg, Covent Garden and the Metropolitan (where she made her début in 1976). Her other roles included Dido (Purcell and Berlioz), Handel's Ariodante (which she sang at the inauguration of the Kennedy Center, Washington, in 1971), Sesto, Charlotte, Poppaea, Adalgisa (in which she made her La Scala début in 1977), Romeo (*I Capuleti*), Eboli, Geschwitz, Santuzza and Brangäne. Troyanos had a warm, flexible voice and an intensely dramatic stage presence. Her recordings include Purcell's Dido, Adalgisa, the Composer and, most notably, Carmen.

HAROLD ROSENTHAL/ALAN BLYTH

Troyer, Carlos

(*b* Frankfurt, 12 Jan 1837; *d* Berkeley, 26 July 1920). American composer and arranger of German birth. Before settling in San Francisco he claimed (in the 1913 biography prefacing his *Indian Music Lecture*) to have known Jenny Lind, to have played frequently for Liszt, to have taught the élite of New York, to have toured South America with an opera company and while there to have become the personal friend of Emperor Pedro II of Brazil. From 1871 to 1917 he appears without interruption in San Francisco city

directories variously listed as 'musician' (1871), 'pianist' (1875) and 'teacher of music' (1880–90). On arrival he used 'Charles' as his first name, but after 1885 'Carlos'. In the 1898 directory he advertised himself as 'pianist and composer, specialist in artistic voice culture, new system of lung development'. After 1900 he called himself simply 'pianist and composer'.

Inspired by the 'Zuñi melodies' published by B.I. Gilman in the *Journal of American Ethnology and Archaeology*, i (1891), Troyer published his first Indian arrangement, *Two Zuñi Songs* (San Francisco, 1893). He then published with Wa-Wan Press (1904–7) and Theodore Presser (1904–18) a series of heavily romanticized ad lib arrangements, typified by the title of the last: *Midnight Visit to the Sacred Shrines, a Zuñian Ritual: a Monody for Two Flute-trumpets of High and Low Pitch (Clarinet and Oboe); a Traditional Chant of Melodic Beauty, and Parting Song on Leaving the Shrines, with English and Indian Texts … the Accompaniment may be played on the Piano*.

Obituary, *San Francisco Chronicle* (27 July 1920)

ROBERT STEVENSON

Truax, Barry (Douglas)

(*b* Chatham, ON, 10 May 1947). Canadian composer and electronic music researcher. After completing the BS in mathematics and physics at Queen's University and the MMus at the University of British Columbia, he studied at Utrecht University with Gottfried Michael Koenig (electronic music and computer composition) and Otto Laske (sonology and procedural theory). In 1973 he joined R. Murray Schafer's World Soundscape Project at Simon Fraser University, where in 1976 he was appointed professor in the School of Communication and School for the Contemporary Arts. His innovations include the interactive PODX compositional system, which he has employed in compositions for electronic tape, often in conjunction with instruments, computer graphics and voices.

Truax's use of frequency modulation culminated with the composition of *Solar Ellipse* (1984–5). With *Riverrun* (1986) he became one of the first composers to use real-time granular sound synthesis as a compositional tool. He later refined this procedure to prolong sound sequences without altering their pitch, a technique he used in *Pacific* (1990). Increasingly, as exemplified in extended and colourful music-theatre settings such as *Powers of Two* (1995–9), his electronic manipulation of natural sounds has reflected their cultural and environmental origins.

ROBERT JORDAN

Trubar [Truber], Primus

(*b* Rašica, nr Turjak, 9 June 1508; *d* Derendingen, 28 June 1587). Slovene theologian. He studied theology in Trieste (where he was a singer in Bishop Bonomo's chapel) and in Vienna. A Catholic priest in several places in Slovenia, he became a supporter of the Reformation and in 1548 had to flee to Nuremberg. He preached at Rothenburg ob der Tauber, officially joining the Protestant sect, and was later pastor in Kempten and Urach. In 1561 he returned to Slovenia and became a member of the Reformation movement there. He became superintendent in Ljubljana but was again forced into exile in 1565, at first in Tübingen, and in 1566 in Lauffen and Derendingen, where he stayed until his death. His funeral sermon was given by Jakob Andreä, chancellor of Tübingen University.

Trubar was notable chiefly as the leader of the Reformation in Slovenia, where he strongly emphasized the importance of music in Protestant schools and churches. He is also noteworthy for having arranged and edited the first Slovenian hymnbook, *Eni psalmi, ta celi catechismus, inu tih vegshih Gody* (Tübingen, 1567, 5/1595). He may have composed some of the melodies, for in the 1574 edition the *Slavicus hymnus de resurrectione Domini* is described as 'per Truberum compositus'; it is not clear whether this refers to the melody, the text or both. He drew the melodies, some of which he modified, from a variety of sources: German hymnbooks (*Achtliederbuch*, Wittenberg, 1524; M. Weiss, *Ein new Gesangbüchlein*, 1531; J. Walther, *Geystlich Gesangk-Buchleyn*, Wittenberg, 1524; V. Babst, *Geystliche Lieder*, 1545) and the Czech anthology *Pysnicky duchovni* (1501), as well as Slovenian hymns, especially those from the group *Vetus vulgaris Slavorum cantus*. The volume is particularly important because it contains parts of the medieval Slovenian repertory.

DRAGOTIN CVETKO/CLYTUS GOTTWALD

Trube, Adolph

(*b* Waldenburg, Saxony, 16 Jan 1815; *d* Glauchau, 17 March 1857). German organist, teacher and composer. He was the son of the church musician Johann Adolph Trube (*b* Grosserkmannsdorf, 1789; *d* Waldenburg, 8 Feb 1839), who studied at the Friedrichstadt seminary in Dresden before becoming organist and teacher at the girls' school in Waldenburg (1813). J.A. Trube was a rigorous teacher and his practical chorale collection was widely circulated. Adolph Trube studied with the Kantor Fincke at the seminary in Plauen, became a Präzeptor and organist there and later took a teaching post in Schneeberg. From 1840 he was Kantor, music director and singing teacher (later also organist) at Glauchau. He founded Glauchau's mixed church choir and was also an important promoter of secular music. He formed choirs and organized large-scale evening concerts of varied vocal and instrumental programmes. He was also an excellent pianist and an imaginative composer; his works are solidly constructed and are noteworthy for their contrapuntal artistry and careful instrumentation. He also arranged and published his father's motet *Jauchze dem Herrn alle Welt*.

WORKS

Sacred: cants., incl. Das ist mir lieb, 4vv, chorus, orch; motets, incl. Tzschirners letzte Worte an heiliger Stätte, 4–7vv, chorus, Zum Aerntfest, 2 T, B, male vv; songs, 4vv

Male choral: Einschiffung (C.O. Sternau); Ich feire meine schönste Stunde; Schön ists, die Harfe schlagen (Meissner); Mondenschein; other songs, 4vv

Inst: 4 concert ovs., orch; Ruhe sanft, aria, 2 tpt, t hn, trbn; pf pieces, incl. set of variations on themes from La fille du régiment and L'elisir d'amore; numerous sets of character-pieces; pieces, pf 4 hands

Trumpet

(Fr. *trompette*; Ger. *Trompete*; It. *tromba*).

A lip-vibrated aerophone. The term is used not only for the modern Western instrument and its ancestors, but also generically to denote some or all of the lip-vibrated wind instruments, depending on the system of classification.

See also Organ stop.

Trumpet

1. Terminology and systems of classification.

In the Hornbostel-Sachs classification system (1914), the term 'trumpet' is applied to any instrument in which 'the airstream passes through the player's vibrating lips, so gaining intermittent access to the air column which is to be made to vibrate'. This category is then divided into two subgroups; natural trumpets ('without extra devices to alter pitch') and chromatic trumpets ('with extra devices to modify the pitch'). Further subdivisions are made on the basis of body shape (conch shell or tubular) and method of playing (side-blown or end-blown) in the case of natural trumpets, and of pitch-alteration method (fingerholes, slides or valves) and shape of tubing (conical or cylindrical) in the case of chromatic trumpets.

Despite its apparent inclusivity, this system has serious shortcomings when dealing with non-Western trumpets. Although non-Western trumpets are found with fingerholes (for example, the *bas* of Madhya Pradesh; see fig.1), most chromatic trumpets are Western, leaving the rest of the world's trumpets categorized as 'natural'. Excluding conch-shell trumpets, a relatively small and distinctive subgroup, leaves an enormous variety of instruments in the 'tubular' category. Geneviève Dournon's 1992 modification of the system with subdivisions based on structure, shape and material, permits greater distinction between non-Western instruments. Useful as these classification systems are, they do not address issues of distribution and function. In many cultures trumpets have important functions that are symbolic or practical as well as, or instead of, musical.

Trumpet

2. Geographic distribution and construction.

General observations regarding distribution are based on uneven geographical coverage and rarely take account of variant names of instruments or of the frequency with which particular specimens occur. Furthermore, early studies – many of which are still consulted because the ground has never been revisited or the instruments have become obsolete – range from first-hand research to studies based on secondary sources and museum collections. However, it can be broadly observed that trumpets are widespread in Africa and Europe, less so in South Asia, infrequently found in the Americas and are rare in East and South-east Asia.

Patterns emerge of geographic distribution by material type. Some patterns are a matter of common sense: it is hardly surprising that most trumpets made from gourd or ivory are found in Africa (fig.2). Exceptions, when they occur, are instructive: the medieval *oliphant*, for example, a short, thick end-blown trumpet finely carved from an elephant tusk was probably a Middle Eastern instrument introduced to Europe during the Crusades. Instruments made from perishable materials like tree bark depend upon suitable climate and flora. In Scandinavia and Eastern Europe, spiral bark shavings are bound firmly into conical tubes, which can range in length from the Yugoslavian *borija*, made from willow or ash bark (about 50 cm), to the now-obsolete Latvian *tāsu taure*, made from birch bark (up to 150 cm). In the hotter, more humid climate of the Amazonian rainforest, giant trumpets – up to four metres in length – are made from tightly coiled bark

attached to supporting sticks that run along one or both sides to prevent sagging.

In other cases, distribution is so widespread that patterns are less easy to discern. For example, trumpets made from animal horn are most commonly found in Africa and rarely in the Middle East (with the exception of the Jewish ram's horn *shofar*; fig.3*a*), elsewhere in Asia and in Oceania. In Africa, where animal-horn trumpets are more often side-blown than end-blown, the rarity of a particular type of horn increases its value. For example, in Uganda, cow horns are only used when game horns or ivory tusks are unavailable or unaffordable. Wherever they occur, a horn, once selected, is boiled or otherwise softened and the interior is scraped out. Depending on the playing style, an aperture is created by sawing off the tip of the horn or by cutting a mouthhole, usually at the point where the tip of the horn ends and the bore of the tube begins. Many African side-blown animal horn trumpets also have a small fingerhole in the tip which gives an extra pitch (fig.3*b*).

Occasionally distribution patterns are surprising. While isolated examples of bamboo trumpets can be found in Africa and South America, there are virtually none in the bamboo-rich areas of East and South-east Asia. Here cultural ambivalence towards lip-vibrated instruments overrides the regional abundance of raw material. An unusual exception is the bamboo 'brass brand' tradition of Sulawesi. Introduced to European brass bands by 19th-century Dutch missionaries but lacking the materials to reproduce instruments, local craftsmen began to make bamboo copies during the mid-1920s. Although they soon graduated to zinc replicas, there are some pockets, notably the Sangir Islands north of Minahassa, where bamboo 'brass' instruments can still be found. One might also expect wooden trumpets to be particularly widespread, but they appear predominantly in Africa, Europe and Australia. Often long, they range from straight cylindrical tubes, like the Scandinavian *lur* or the Australian *didjeridu*, to conical tubes with an upturned bell, like the European alphorn. Some are hollowed-out branches; others involve cutting the branch or tree trunk in half lengthwise before hollowing it out and rejoining both halves with whatever comes to hand: tar and osier (*lur*), putty and linen yarn (Lithuanian *daudytė*), animal hide (Ugandan *arupepe*), and bark or gut (alphorn).

The distribution patterns of both conch-shell and metal trumpets are historically illuminating. Shells used for trumpets include the *triton* (trumpet shell), *cassis* (helmet shell), and *strombus* (true conch). The spiral interior functions as tubing and a mouthhole is created either by breaking off the point of the shell (end-blown conch) or by boring a small hole in the body (side-blown conch). As might be expected from an instrument known since neolithic times, conch-shell trumpets are found almost everywhere, including inland areas like Tibet and Central Europe, where they support the existence of early trade routes. Particularly common throughout Oceania, conch-shell trumpets were formerly associated with religious, ceremonial, military and signalling functions. Today, however, they are often blown to announce mundane public events. For example, ensembles of up to nine *kele'a* are played at Tongan football matches to sustain general excitement (fig.4*a*). As sacred ritual instruments, end-blown conch-

shell trumpets have retained their status better in South and East Asia (fig.4*b*). *Śankh* are blown by Brahmans in Hindu temples throughout South Asia. Known as *dung* in Tibet, *faluo* in China and *horagai* in Japan, the conch-shell trumpet travelled through Asia with the spread of Buddhism. The *horagai* was first mentioned in historical records during the Heian period (794–1185) but may well have reached Japan much earlier. Still used by Shugendo Buddhist sects, it is the only traditional lip-vibrated instrument found in Japan.

There were several types of ancient metal trumpets: the Egyptian *snb*, Israelite *hasoserah*, Celtic *carnyx*, Greek *salpinx* and the Etrusco-Roman *cornu*, *lituus* , *tuba* and *buccina*. Long metal trumpets employed by Saracen armies made a great impact on European soldiers during the Crusades. It is possible that these trumpets ultimately derived from the Roman *tuba*. The distribution of long, straight metal trumpets in the non-Western world suggests a strong connection with the world of Islam. In Africa, for example, end-blown metal trumpets are found only in Islamic areas such as Nigeria, Chad and Central Cameroon. Known as *kakaki* (among the Hausa) or *gashi* (in Chad) these trumpets are narrow cylindrical tubes, sometimes over two metres in length, with flared metal bells (fig.5). At the other end of the Islamic world, the silver *nafiri* is one of only two trumpets found in Malaysia. Slightly less than one metre long, a single *nafiri* is present in each of the royal *nobat* ensembles maintained by the local sultans. As in Africa, these ensembles play for royal ceremonial occasions and on Islamic holidays. However, not all non-Western metal trumpets are long, straight or associated with Islam. South Asia has a great variety of metal trumpets of different shapes and sizes, ranging from the S-shaped *narsīgā*of southern Bihar, the double U-shaped Rajasthani *bānkiā*, to the long, conical, telescopic Tibetan *dung-chen*.

Trumpet

3. Use and function.

One of the most widespread and important functions of trumpets is the marking of power and status. In many parts of the world, trumpets and drums have been part of the regalia associated with kingship. This association continues to the present day: the British monarch, for example, is still heralded on state occasions by military trumpeters. Sometimes such instruments are more than symbolic regalia. In northern Nigeria, for example, the right to kingship itself was vested in the royal trumpets and kettledrums (*kakaki* and *tambari*); a coup d'etat could be effected simply by capturing them. The association between long metal *kakaki* trumpets and Islamic rulers in West Africa is clear, but using trumpets to generate power and mark status is neither limited to metal instruments nor to the Islamic world. Throughout Oceania, conch-shell trumpets were markers of chiefly status, rank and power. In Rarotonga, for example, the local term for conch was applied to chiefs, rulers and priests.

Power and status can also be marked in other contexts. There is often, for example, an association between trumpets and gender difference. Sachs and others have attributed it all to sex, specifically to the homology between instrument shape and the shape of sexual organs and to a correlation between aggressive (male) sounds and gentle (female) sounds.

This argument confuses sex (a biological distinction) with gender (a culturally constructed distinction). Though it is true that in many parts of the world, trumpets are loud instruments reserved for outdoor use, the separation between male-dominated public and female-dominated private domains is equally widespread. It could be argued that trumpets are played by men because they are played outside, rather than that trumpets are played outside because they are played by men. This applies equally to the traditional associations with regalia, signalling and ritual, all of which mediate with the outside world in one form or another and thus fall into the public domain controlled, in most cultures, by men.

There are many ways in which trumpets are used to communicate, for example: European herdsmen use alphorns to call each other across the mountains; Latvian youths play goat-horn *āžrags* on summer evenings to announce their intention to marry; Bugandan hunters from Uganda sound their *eng'ombe*(side-blown animal horn trumpets) to ensure a successful hunt; fisherman from Aoba, Vanuatu, blow their conch-shell trumpets, *tapáe*, to summon assistance for bringing in their nets. Not all communication is so pastoral: from the Roman legion to the US Cavalry, trumpets have been an essential part of military life. Communication can also exceed the boundaries of the everyday world: the BaMbuti people of the Democratic Republic of Congo sound the *molimo* trumpet to wake up the spirit of the forest; Japanese Shugendo Buddhists imitate a lion's roar on the *horagai* to drive out evil spirits; and Fijian islanders use their *davui* conch-shell trumpets to invoke the presence of a god. The sound of trumpets can bridge the gap between temporal and spiritual worlds. In each case, a short loud sound, series of sounds or rhythmic pattern functions as a signal, a means of carrying a message or an instruction from one person or persons to others often a great distance away.

Trumpet

4. The Western trumpet.

A member of the family of brass instruments, in its modern form the Western trumpet is a folded tube opening at the end into a bell, with a separate mouthpiece and (usually) three valves. Trumpet playing normally involves overblowing to obtain various members of the harmonic series. Ex.1 shows the harmonic series for a trumpet in 8' C (i.e. with approximately 8' (2·44 metres) of tubing; Roman numerals denote the beginning of each octave, Arabic the individual members). Certain partials, indicated in black, are distinctly sharp or flat (as shown by the direction of the arrows above them) in relation to their equivalents in the equal-tempered scale. For example, the 11th partial is intermediate between *f″* and *f♯″* and the 13th partial intermediate between *g♯″* and *a″*. In performance, pitch can be adjusted slightly by lip technique.

The older 'natural trumpet' is able to produce only the notes of the harmonic series. In the modern valve trumpet the three valves add, in effect, extra lengths of tubing, thus enabling the pitch of 'open' notes to be lowered by a whole tone, a semitone or a minor 3rd respectively. Used in various combinations the valves can lower the pitch by as much as a diminished 5th, making available a chromatic scale from a diminished 5th below the 2nd partial up to the 10th partial or higher (*see* Valve (i)).

Trumpet parts are traditionally notated in the key of C; the actual pitch sounded depends on the length of the instrument (*see* Transposing instruments). Natural trumpets were commonly built to pitches between 6' F and 9' B♭. In modern valve trumpets the tubing need be only half as long: 'trumpet in C' generally means 4' C, and *c*' is the 2nd partial, not the 4th (*see also* Acoustics, §IV).

(i) Sizes and types.
(ii) History to 1500.
(iii) 1500–1820.
(iv) Since 1820.
Trumpet, §4: The Western trumpet.

(i) Sizes and types.

The B♭ trumpet common in orchestras and bands today has a tube length of 130 cm and three piston valves. It consists of a tapered mouthpipe (Fr. *branche*; Ger. *Mundrohr*) 18 to 33 cm long into which the mouthpiece is inserted; a middle section of cylindrical tubing, including the tuning-slide (Fr. *coulisse d'accord*; Ger. *Stimmzug*) and the valves together with their associated tubing; and a conical bell section (Fr. *pavillon*; Ger. *Schallstück*) ending in a flare (Fr. *évasement*; Ger. *Schallbecher*, *Schalltrichter* or *Stürze*) about 12·5 cm in diameter. The cylindrical part of the bore is between 11·66 mm and 11·89 mm in diameter. Although the bore was traditionally about one-third conical and two-thirds cylindrical, modern manufacturers of piston-valve trumpets have increased the length of the conical section to improve intonation; in some modern trumpets the cylindrical tubing constitutes only about 20% of the total length.

The trumpet in 4' C, pitched a whole tone above the B♭ instrument, is also common in orchestral work. Indeed, modern trumpeters, because of the variety of musical styles in which they are required to play and the perfection demanded of them in broadcast and recorded performances, need at least three or four instruments, including ones pitched in B♭ and in C for regular work, in D/E♭ and in high B♭/A (piccolo trumpet; Ger. *Hoch-B/A-Trompete*; Fr. *petite trompette en si-bémol/la aiguë*, *trompette piccolo*) for high parts and in Baroque music. The 'quick change' rotary valve which changes the pitch from B♭ to A, favoured by some orchestras at the beginning of the 20th century, is no longer in general use. A low E♭ trumpet is still used in military bands on the Continent, especially in Germany and Italy. It is the band counterpart of the old orchestral valve trumpet in 6' F.

The orchestral bass trumpet was designed to Wagner's specifications for the *Ring*. Wagner first visualized a huge trumpet pitched an octave below the ordinary 6' F valve trumpet of his day, with the same length of tubing as a horn or tuba. He later suggested (to the Berlin maker C.W. Moritz) the construction of a four-valve trumpet in 8' C with crooks for B♭ and A. The resulting instrument has a tube length no greater than that of the 6' F trumpet played with its longest crooks, but it has a more mellow tone because of its wide bore and large mouthpiece. It is usually played by a trombonist. Wagner demanded of it a large compass, from G♭ to g♭', and gave it solo passages in every part of its range. Since Wagner, other

composers – including Richard Strauss and Stravinsky – have been attracted to write for the bass trumpet.

After World War II piston-valve trumpets spread from France, England and the USA to most European orchestras, although rotary-valve trumpets, traditionally used in Germany and eastern Europe, remained in use in a few, such as the Berlin PO, the Leipzig Gewandhaus, Dresden Staatskapelle and the Vienna PO. In the 1980s many orchestras – including some in which they had never been employed – began to use rotary-valve trumpets for the German Classical and Romantic repertory. An instrument of this type has a mouthpipe only about 13 cm long; the valve section is usually inserted between mouthpipe and tuning-slide; the bell is some 13 to 14 cm in diameter.

Trumpet, §4: The Western trumpet.

(ii) History to 1500.

Most trumpets of antiquity were short straight instruments of wood, bronze or silver, used for both military and ceremonial purposes. The most ancient type – called *šnb* in hieroglyphic inscriptions – is that depicted in Egyptian art of Dynasty 18, accompanying marching soldiers (see fig.6). A scene in Amarna style (late Dynasty 18, from *c*1348 bce) shows it might also be used to accompany the dance. One of Tutankhamun's trumpets (Egyptian Museum, Cairo; fig.7) is of silver and 58·2 cm long; the other is of bronze and 50·5 cm long; their bores expand from 1·7 cm at the narrow end to 8·2 cm at the bell. They have no detachable mouthpieces; the lips were applied directly to the narrow end. Their military purpose is confirmed by the divine names inscribed on the instruments; the gods are those of Egyptian army divisions. Herodotus likened the sound of the ancient trumpet to the braying of an ass.

The Assyrians used a similar trumpet, as can be seen on a relief from the time of Sennacherib (reigned 704–681 bce) showing the moving of a colossal bull statue, where two trumpeters stand on the statue, one playing, the other resting (Egyptian trumpeters were also often shown in pairs). The same instrument (*hasoserah*) was known to the Hebrews. *Numbers* x.2 contains the divine command to Moses, 'Make thee two trumpets of silver, of a whole piece shalt thou make them: that thou mayest use them for the calling of the assembly, and for the journeying of the camps' (Authorized Version). Flavius Josephus (*Antiquities*, iii, §291) described the instrument as a little less than a cubit (about 45 cm) long. Such trumpets were part of the priestly insignia of the Temple from the earliest times; they are represented on the Arch of Titus; and mention of them persists in the Dead Sea Scrolls. They were used as signalling instruments also, in war, in peace and in royal processions; in the Temple three trumpet blasts accompanied the morning sacrifice, and at the end of a chant section indicated the moment when worshippers should prostrate themselves.

Other early trumpet-like instruments include the Greek (straight, with variable Salpinx bell-shapes) and the Roman Lituus (in 'J' shape; see fig.8), *tuba* (long and straight; *see* Tuba (ii)), Buccina (an animal horn) and Cornu (in 'G' shape); the Romans inherited all their brass instruments from the Etruscans. The Seleucids of the Middle East followed Macedonian practice by using the trumpet in their battle music, as did the Huns when

fighting the Chinese Han Empire in the 3rd and 2nd centuries bce. There is a late echo of the Temple trumpet at Dura Europus (now Qal'at as Sālihīyah, Syria) where David is shown with a lyre and trumpeters in a synagogue wall-painting dated after the Roman conquest 165 ce. It is interesting that in a 6th-century Sassanid military orchestra (rock relief; Tāq-e Bostān, nr Kermānshāh) the trumpeters are represented in pairs using an instrument similar to the Roman *tuba*.

According to Sachs, the trumpet disappeared from Europe after the fall of Rome and was not reintroduced until the time of the crusades, when instruments were taken from the Saracens as war booty. Sachs attributed the long form and the shape of the bell to Arabian influence: a late 11th-century fresco in the church of S Angelo in Formis, near Capua, depicts four angels blowing long, conical, slightly curved trumpets, and is often cited as the first illustration of the imported form. Medieval illustrations of trumpeting angels, for example in the Trier Apocalypse manuscript (*D-TRs* 31, f.3*v*) have been shown to be part of an older pictorial tradition (see Seebass, B1973): the artists were following models derived from antiquity, rather than representing instruments in use in their time. Smithers's attempt (B1989) to show the 'unbroken history of manufacture and use' of metal trumpets in the West has been refuted by Meucci (B1991).

The Church Fathers, writing in Greek and Latin, used the terms 'salpinx' and 'tuba' respectively. In Western art before the crusades (in many depictions of the Last Judgment, for example), animal horns are generally shown (fig.9). According to Meucci (1991) and Ibsen al Faruqi (1981), many Arabic words at various times indicated a straight trumpet. The generic term 'būq', occurring after 800 and describing instruments of both the trumpet and the horn type, may have been derived from the Latin 'buccina'. The *būq al-nafīr* was a large metal trumpet used in the military bands of the Abbasid period (750–1258) and later; in the 14th century it was as long as a man. The term *nafīr* connotes war. From the 11th century, as an instrument designation, it meant any long straight trumpet. Other Arabic words for trumpets in various shapes were, *qarnā* and *sūr* (named in the Qur'an as the one to be used on Judgment day, probably the predecessor of the *nafīr*). The term 'buisine' was associated with various instrument forms, and was not always applied to a long, cylindrical instrument (as Bowles thought). By the 14th century, or perhaps as early as 1180, the *buisine* was sometimes made from an animal's horn; in 1240 it was smaller than a *trompe*. It is not certain when the French form of the word began to mean a long metal trumpet as well as the animal-horn type, nor whether the *buisine* more closely resembled the *būq* or the *nafīr*. Another instrument used in the West as a result of contact with the East was the *cor sarrazinois*, a long metal trumpet. The term 'trumba' occurred in Old High German and 'trumbono' in 8th-century Italian sources. The diminutive form 'trombetta' is found for the first time in Dante's *Inferno* (xxi.47), its German derivation 'Trum(m)et' in 1343. In England 'trompette' or 'trumbetta' seem to have meant a straight trumpet.

During the Middle Ages trumpeters played in the low register. Johannes de Grocheo wrote (*De musica*, *c*1300) that only the first four partials of the harmonic series were used, a fact corroborated by the earliest surviving trumpet music. Medieval trumpeters puffed out their cheeks when blowing

and produced a tone that was described as airy and trembling, not unlike the vibrato produced by a boy soprano. Until about 1300 trumpeters and many other musicians were vagrants, but during the 14th and 15th centuries their social position gradually stabilized as they found employment as city musicians or, in the case of trumpeters, tower watchmen. Two kinds of ensemble using trumpets came to be differentiated: the shawm-trumpet ensemble (or *alta musica*, *see* Alta (i); the trumpet was later replaced by a trombone) and the trumpet-kettledrum ensemble (the kettledrums appeared towards 1500). (Later, in Germany, these two groups developed respectively into the Stadtpfeifer and the courtly trumpet corps.) The shawm-trumpet ensemble first used the trumpet to play a drone bass (for examples of such music from the 13th and 14th centuries see Heyde, 1965, pp.163–4). The members of the trumpet-kettledrum ensemble performed in a genre named after the Roman *classicum*, an improvised mingling of various sounds, which by dint of sheer resonance was effective in encouraging troops and frightening the enemy. This type of ensemble became an élite corps of musicians, partly because of its military role in giving signals and performing courier duties. The oldest surviving medieval trumpet is the 'Billingsgate trumpet' from the 14th century, excavated in London in 1984; the four sections of a straight trumpet, including a bell and a section with integrated mouthpiece, could have belonged to a single instrument (although not necessarily).

Around 1400 instrument makers learnt to bend the trumpet's tubing: first to an S-shape (fig.10*a*), soon afterwards with this S-shape folded back on itself to form a loop – a more compact arrangement that has since remained standard. The earliest illustration of an S-shaped trumpet is a wooden relief in the choir stalls of Worcester Cathedral; once dated 1397, it is now thought to have been carved *c*1379 (for a modern reproduction see Galpin, 4/1965, pl.49). A very short-lived form, the U-shaped trumpet, is depicted in a Parisian manuscript, the Hours of Charles the Noble (*c*1404, Cleveland Museum of Art CMA 64.40). The earliest illustration of the looped form is from the *Très Riches Heures* of Jean, Duke of Berry (*c*1411/13–16; fig.10*b*). At about the same time the Slide trumpet was developed with a mouthpipe that telescoped inside the first length of tubing to enable the player to alter the instrument's length while playing. Downey (1984) questioned the existence of such an instrument at such an early date, but his view has been emphatically refuted by many scholars, including Duffin, Meucci, Myers, Polk and Welker. Tower watchmen adopted the slide trumpet to play chorales; it was also used in church music (but the natural trumpet continued to be used in the trumpet-kettledrum ensemble).

Trumpet, §4: The Western trumpet.

(iii) 1500–1820.

Renaissance sovereigns saw in their trumpet ensembles a symbol of their own importance – Matthias Corvinus had 24 trumpeters at his court; in 1482 there were 18 at the Sforza court. They staged tournaments, which the courtly trumpet-kettledrum corps accompanied at close range (fig.11). In 1548 (not 1528, an error deriving from Altenburg, 1795) the Emperor Charles V issued a decree putting trumpeters under the direct jurisdiction

of the sovereign. From this time on the social distinction between trumpeters and other musicians was progressively widened.

During the 16th century the trumpet's compass was extended upwards as far as the 13th partial. Within the trumpet-kettledrum ensemble certain players became responsible for specific registers. Towards the end of the century a five-part ensemble consisted of players capable of playing the following notes (on trumpets in 8' C): *basso*, *c*; *vulgano* or *vorgano*, *g*; *alto e basso* or *alter Bass*, *g–c'–e'*; *sonata*, *quinta* or (later) *principale*, *c'–e'–g'–c''–(d''–e'')*; and *clareta*, *soprano* or *clarino*, from *c''* (the 8th partial) upwards. Cesare Bendinelli in his method of 1614 (the contents of which appear to derive from the 1580s) gave specific directions for improvising the upper parts in a five-part trumpet ensemble. This music has a distinctive style, which may go back to the Middle Ages: over a drone of tonic and dominant the upper three parts weave their counterpoint. During the same period the trumpet's form became more standardized. The body was usually made of brass, its tubing (with a bore of about 9·5–11·2 mm) rolled from brass sheet about 0·5 mm thick; heavy, ornate ceremonial trumpets were sometimes made of silver. The bell was rolled from brass sheet into a narrow cone, brazed and hammered out on an anvil to a thickness of only about 0·35 mm. The natural trumpet (fig.12*a*) thus comprised two sections of tubing or 'yards', two bends or 'bows', and a bell section. The yards and bows were not soldered but telescoped into each other, and were insulated by a non-permanent material such as beeswax; the joins were covered by an ornamental ferrule or 'garnish'. Circling the middle of the bell section was a round 'boss' or 'ball' (the ball did not cover another joint in the tubing; the bell section was in one piece up to the ferrule). The bell end was strengthened by an embossed rim or 'garland', usually inscribed with the maker's name, mark, town and sometimes the date. On German trumpets the mouthpipe yard and the bell section were separated from each other by a wooden block, with heavy woollen cord wound round block and tubing; on English trumpets the mouthpipe yard was girdled by an oversized 'ball'. Trumpets were also made in other forms, such as the coiled 'Italian trumpet', which may be identical with the 'Jäger Trommet' illustrated by Praetorius (1620).

In the 16th century Nuremberg began to emerge as the great centre of brass-instrument making and remained so throughout the Baroque period; members of the Neuschel and Schnitzer families were the earliest Nuremberg brass-instrument makers. There are, however, few extant 16th-century instruments. Two city trumpets made in 1578 by Jacob Steiger of Basle are in the Basle Historisches Museum.

Extant Baroque trumpet mouthpieces differ from modern ones in several ways (fig.13). Their rims were flatter and wider, and there was a sharp edge between cup and throat. The throat, or bore, had a larger diameter, 4 to 6 mm. The shank was often longer and had a larger outside diameter. The sharp edge between cup and throat not only lent brilliance to the tone and enhanced the precision of the instrument's response, but in combination with the wide bore it also made it easier for trumpeters to 'lip' the out-of-tune partials into tune, or even to produce usable notes between the partials, a technique that is difficult if not impossible on a mouthpiece with a V-shaped cup, such as that of a horn. (Playing in tune was perhaps

the most important prerequisite for the acceptance of the trumpet into ensembles of strings in the early 17th century.) As with the modern mouthpiece, a shallow cup facilitated playing in the high or Clarino register; a deeper, wider one was more suitable for low or Principale playing.

Throughout the 17th and early 18th centuries the form of the trumpet remained the same, although it is possible (see Wörthmüller, 1954–5) to distinguish between early, middle and late Baroque bell flares, as the bell throat became progressively narrower (fig.14). The best-known Nuremberg instrument-making families were Schnitzer, Neuschel, Hainlein, Kodisch, Ehe and especially Haas. The leading English makers of the time were William Bull, John Harris and, later, William Shaw. In Germany and England the standard pitch wasD or E♭; and the instrument was crooked down to play in lower keys. Independently of one another, both Mersenne (1636–7) and Altenburg (1795) gave the tube length as 224 cm (seven *pieds*, or four *Ellen*), which would yield a pitch slightly lower than modern D. Fine tuning was effected by inserting tuning-bits (short prepared lengths of tubing) between the mouthpiece and the instrument or crook. A number of composers, including J.S. Bach, J.L. Bach, Telemann and Endler also wrote for the shorter F trumpet, called variously *clarino piccolo*, *tromba piccola* or *kurze Trompete*.

In 1623 an Imperial Guild of Trumpeters and Kettledrummers was formed in the Holy Roman Empire by virtue of an Imperial Privilege granted by Ferdinand II. The guild had a twofold function: to regulate instruction and thus limit the number of trumpeters, and to ensure the trumpet's exclusiveness by restricting where it could be played and by whom. The Elector of Saxony was named patron of the guild and arbiter of its disputes, and the articles of the guild were subsequently confirmed by every Holy Roman Emperor up to Joseph II (1767). Saxon mandates 'against the misuse of the trumpet' were issued in 1650, 1661, 1711, 1736 and 1804; revisions of the Imperial Privilege appeared in 1653 and 1747. Nuremberg brass-instrument makers formed a guild of their own in 1635 which was closely supervised by the city council. Although the organization of trumpeters into a guild of more than just local proportions was unique to the Holy Roman Empire, the trumpet enjoyed a similar status in other European countries.

The medieval tournament gave way to the more stylized carousel or equestrian ballet, in which costumed participants formed intricate figures (fig.15). Since the music of the court trumpet corps was usually improvised, few examples survive. During the 17th century, however, the trumpet was accepted into 'art music', as shown by compositions from that time. In the Habsburg lands, the five-part trumpet choir was a symbol of *ecclesia militans* and of imperial power. Beginning perhaps as early as 1610, court composers such as Reimundo Ballestra (*Missa conletronbe*, 1610–16), Giovanni Valentini (*Messa, Magnificat et Jubliate Deo*, 1621) and Christoph Straus (*Missae*, 1631) integrated the trumpet choir as a unit into vocal compositions (masses, magnificats and Vespers psalms); their example was followed by Bertali, J.H. Schmelzer, Biber and Fux, all of whom wrote large-scale *Messe con trombe*. Praetorius in his 1619 setting of *In dulci jubilo* (*Polyhymnia panegyrica et caduceatrix* no.34) used a six-part trumpet ensemble in a choral setting. One year later, in setting the same

chorale (which had been one of the trumpeters' favourite Christmas sonatas in the late 16th century), Scheidt retained only the two *clarien* parts to perform elaborate divisions on the chorale melody. Schütz's *Buccinate in neomenia tuba* of 1629 (*Symphoniae sacrae*, i, no.19) was probably the first piece to include a *c‴* (the 16th partial) for trumpet.

The 'chamber' or 'concert trumpeter' increasingly distinguished himself from the members of the trumpet corps, and performed sonatas, concertos and church music with the court or municipal orchestras. During the century two styles of trumpet playing developed. Altenburg referred to them (pp.14 and 23) as *Feldstück-* or *Prinzipalblasen*, and *Clarinblasen*, comparing them directly to techniques used by the ancient Hebrews and known as *teruah* and *tekia*: Luther translated these as *schmettern* and *schlecht blasen* respectively, and the King James Bible as 'blowing an alarm' and 'blowing'. The former style was deemed appropriate for military signals and for the 'outdoor' music of the trumpet corps; the latter, softer style was associated with solo playing in the clarino register. In 1619 Praetorius advised that the trumpet group be separated from the other musicians when called on to play in church, so as not to drown them out. Altenburg wrote that a 'concert trumpeter is [often] spared the weekly playing at table, because through the blaring he would spoil the delicate and subtle embouchure [needed] for clarino [playing]'. 18th-century theorists praised players who were able to manage their instrument as softly as a flute.

The most important centre of Baroque trumpet playing was Vienna, followed by Dresden, Leipzig, Weissenfels, Kremsier (now Kroměříž), Bologna, London and to a lesser extent Paris and Lisbon. Vienna's elaborate court protocol prescribed the use of trumpets in groups of four, two high (*clarini*) and two low (*trombe*). On the highest feast days, sacred and secular, the usual string orchestra was joined by a choir of trumpets, with two choirs being reserved for 'gala' days (i.e. the birthdays and namedays of the Emperor and Empress). In church music, a tradition of 'solemn sonatas' arose, many of them with trumpets, replacing the sequence of the mass, or, at coronations and similar highly ceremonial occasions, the gradual. In Kremsier, P.J. Vejvanovský, a court and field trumpeter as well as a composer, wrote and played many sonatas. Other important composers for that court were Schmelzer and Biber. Biber, who like Torelli was also an important composer of violin music, was one of the most prolific composers for the trumpet; among his works are two magnificent sonatas for six- and eight-part trumpet ensembles with kettledrums and continuo. The Bologna composers Petronio Franceschini, Domenico Gabrielli and Giuseppe Torelli consistently wrote trumpet parts whose compass extended to the 16th partial. Starting with Maurizio Cazzati's op.35 of 1665, trumpet sinfonias, sonatas and occasionally concertos lent their splendour to festival celebrations of Mass in the Basilica of S Petronio. The leading Bolognese trumpeter was Giovanni Pellegrino Brandi. One or two trumpets were frequently used in Venetian opera towards the end of the century. There was already an important tradition of trumpet playing in Leipzig when Bach arrived there: his predecessors as Kantors of the Thomaskirche had thought well of the instrument, and J.C. Pezel had written and played some difficult trumpet parts. Bach composed much of his most splendid trumpet music for

Gottfried Reiche, senior Stadtpfeifer until his death in 1734. But some of Bach's most virtuoso parts were not written for Reiche: Cantatas 31, 63, 147a and 172 were composed in Weimar and the second Brandenburg Concerto was composed at Cöthen. Two important composers for trumpet in lesser German courts were J.W. Hertel at Strelitz and J.M. Molter at Karlsruhe-Durlach; their trumpeters were Hoese and Pfeiffer. In London, Purcell relied on the trumpeters Matthias, William and John Shore, as Handel later relied on Valentine Snow. French trumpet music retained the heroic *Affekt* perhaps more consistently than did that of any other country; the preludes to *Te Deum* settings by Lully and Charpentier are among the most stirring and best-known examples. Lisbon's trumpet corps ('charamela real') consisted of 24 trumpeters and four kettledrum players, many of them German. A unique collection, containing 22 of their instruments and 26 partbooks (with 54 processional sonatas in 7 to 28 parts) survives in the Museu Nacional dos Côches, Lisbon (fig.16). Probably the greatest Baroque trumpeter was Johann Heinisch, active at the Viennese court from 1727 to 1750. He was said to have extended the playing range of the trumpet to include high notes that other trumpeters had never envisaged. Trumpet parts in the operas written for the Viennese court by Caldara, Fux and Georg von Reutter the younger for Heinisch and his colleagues ascend consistently as high as the 20th and sometimes the 24th partial.

The period between about 1720 and 1780 saw both the zenith and the decline of the Baroque trumpet. The technique of playing in the clarino register was developed to the fullest in Vienna and other centres including Salzburg and Fulda. Concertos in which the trumpet is asked to play in the fourth and fifth octaves of its harmonic series were written by Michael Haydn, Reutter, F.X. Richter and Joseph Riepel. In the slow movement of Reutter's *Servizio di tavola* no.1 (1757) a single trumpeter performs a songlike solo ascending to *f'''*, while in the remaining movements the two trumpets play in the tutti-reinforcing style characteristic of the Classical period. Some of the latest concertos for the Baroque trumpet were written by Leopold Mozart (1762, presumably for the Salzburg court trumpeter J.A. Schachtner) and J.M. Sperger (1778–9, probably for Franz Faber, first trumpeter in Pressburg). By then, however, the trumpet concerto as a genre had become old-fashioned. New musical styles called for the less pompous virtuosity of violin, oboe and flute and did not use the trumpet in the old way. In addition, the accelerating decline of courts, hastened by the French Revolution, deprived the Imperial Guild of Trumpeters and Kettledrummers of its socio-economic foundation. The guild was finally dissolved in Prussia in 1810 by the same Friedrich Wilhelm III to whom the Berlin trumpeters had 'most respectfully' dedicated a suite for three trumpets and kettledrums in 1801; Saxony abolished the guild in 1831.

In the Classical style of Haydn, Mozart and Beethoven the trumpet was used mainly as a tutti instrument, although an occasional fanfare at the end of an *allegro* movement called attention to the trumpeters' surviving court function. However, it is wrong to maintain, as has been done, that trumpeters of the Classical period became less skilful: instead, new skills were required. Beethoven, for example, made great demands on endurance. Moreover, the technique of playing in the clarino register was not lost overnight.

In the late 18th and early 19th centuries several attempts were made (before the invention of the valve trumpet) to enable the instrument to play a complete chromatic scale. One early device was the Keyed trumpet (fig.12*d*), for which Haydn and Hummel wrote their concertos. The stop trumpet (Ger. *Stopftrompete*) was usually made with two double bends in its tubing; thus the instrument was short enough for the player to insert his hand in the bell to lower the pitch of the harmonic partials by a semitone or a whole tone. Hand stopping was first used in horn playing (by A.J. Hampel, *c*1760), and was first applied to the trumpet about 1777, by Michael Wöggel of Karlsruhe. Karl Bagans, a German trumpeter of the early 19th century, showed that he knew of keyed trumpets but wrote that a stop trumpet could perform chromatic music even more satisfactorily. J.D. Buhl was the leading French performer on the stop trumpet, the French version of which was built in G and called the *trompette d'harmonie* – as opposed to the military trumpet in E♭ called the *trompette d'ordonnance* on which hand stopping was not used. In Germany the stop trumpet was usually made in G, with crooks to put the instrument into lower pitches. Some early stop trumpets were built in Nuremberg by Johann Leonhard Ehe (iii), but makers elsewhere, such as Michael Saurle in Munich, soon became more important and Nuremberg lost its pre-eminence in brass-instrument making. The *Inventionstrompete* was a stop trumpet with a tuning-slide in U-form, either in the middle of the instrument or in one of the bends (fig.12*e*). It too was derived from the horn; Hampel's first *Inventionshorn* was built in 1753/4 by J.G. Werner of Dresden. Wöggel's stop trumpet was itself a kind of *Inventionstrompete*; it was bent into a curved shape, like the instrument later known in France as the *trompette demilune* (introduced by Courtois Frères *c*1820). Improved *Inventionstrompeten* were built in the 1790s by A.F. Krause of Berlin. In England, a new type of Slide trumpet was invented about 1798, and was subsequently used throughout the 19th century (fig.12*c*).

The superiority of the valve system over other methods of making trumpets (and horns) chromatic became clear during the 19th century. The advantage of valves over keys was homogeneity of tone (though perhaps not with the first valved instruments): the advantage over the slide was facility. A valve horn was introduced in Berlin by Heinrich Stölzel in 1814. In 1818 a joint patent was taken out in Berlin by Stölzel and Friedrich Blühmel for both a tubular valve (then called *Röhrenschiebeventil*, now *Schubventil*) and a square piston valve, also known as a box valve (Ger. *Kastenventil*); the latter was applied to the trumpet in 1820.

The two types of valve in use today are the rotary valve and the piston valve. Dahlqvist (1980) has shown that J.F. Riedl of Vienna, working with the horn player Josef Kail, was assigned a five-year patent (later renewed another five years) for a rotary valve in 1835 (not 1832, as previously thought). The piston valve (Ger. *Pumpventil*) was patented by François Périnet of Paris in 1838 as an improvement on the tubular valve which had been Stölzel's invention. Another type of valve sometimes still used, the double-tube 'Vienna' valve (Ger. *Wiener Ventil*), had been developed in 1823 by Kail and Riedl as an improvement on an earlier double-tube valve produced by Christian Friedrich Sattler of Leipzig by 1819; this type of valve had been developed from Stölzel's original (double-tube) valve of 1814. Leopold Uhlmann of Vienna added cork buffers in 1830, also

introducing the clock-spring return action (*Trommeldruckwerk*), one of two in use today on instruments with rotary valves (the other is the spiral spring action (*Spiralfederdruckwerk*), the origin of which is uncertain).

Trumpet, §4: The Western trumpet.

(iv) Since 1820.

The first champion of the valve trumpet was Kail, who in June 1826 became professor of trumpet and trombone (both with valves) at the Prague Conservatory. From 1827 he wrote or commissioned the earliest known works for solo valve trumpet (in low D, E♭ and F) with piano or orchestral accompaniment. Besides Kail (1827), composers included Lindpaintner (1829), Kalliwoda (1832), Höfner (1836), Conradin Kreutzer (1837), Friedrich Dionys Weber, C. Grimm and W. Smita (1855 and 1856). In Italy Raniero Cacciamani in 1853–5 and Domizio Zanichelli in 1857 published works for trumpet and piano, many of them based on popular opera themes. The valve trumpet was introduced into France in 1826, when Spontini, music director for the King of Prussia, sent a valve trumpet in F and a valve trombone made by Haltenhof to Buhl and Dauverné. The latter recognized the possibilities of the new instrument and immediately published several instruction books. The German prototype had had three tubular 'Stölzel' valves, a type that was improved on – but not invented, as is sometimes claimed – in 1827 by J.C. Labbaye. Halary later made more successful improvements, and on Dauverné's urging produced the first French valve trumpet, with only two valves, in 1828. Even well into the 19th century after valve trumpets had become relatively securely established, trumpeters played on either the valve or the stop trumpet, depending on the music to be performed. The first works in France to use valve trumpets were Chelard's *Macbeth* (1827), Berlioz's overtures *Les francs-juges* (1826) and *Waverley* (1827–8), Rossini's *Guillaume Tell* (1829) and Meyerbeer's *Robert le diable* (1831). Meyerbeer used both valve and natural trumpets, as did Wagner (*Rienzi*, 1842; *Lohengrin*, 1850). In Germany and England, valve trumpets were made in 6' F, rarely G, and were crooked down to C and sometimes B♭; French valve trumpets were first made in G (fig.12*f*), later in F. Trumpets with (tubular) valves had arrived in England in 1831 via Russia, where Prussian instruments had been copied as early as 1825.

A disadvantage of the three-valve system is that the instrument becomes progressively sharper when the valves are used in combination. On modern trumpets the third and often the first valve are usually provided with movable slides (actuated by finger-rings or triggers) which may be lengthened by the player as needed to compensate for this acoustical deficiency. 'Compensating systems', by which additional lengths of tubing are automatically brought into play when the valves are used in combination, were developed in Paris as early as 1858; the most successful system, developed by D.J. Blaikley of Boosey & Co., London, in 1874, is still used on low brass instruments. Trumpets and cornets have also been constructed with similar types of compensating systems: J.-B. Arban experimented with them between 1883 and 1888 (after 1885 with the engineer L. Bouvet). (Various valve trumpets and cornets are shown in figs.12 and 17.)

Wagner, Mahler and Richard Strauss notated their trumpet parts as much as possible in C, indicating the desired transposition above, thus leaving to the performer the question of which instrument to use. The trumpet's pitch could thus change every few bars, especially with Wagner's music, though in no case did trumpeters change crooks as frequently as notated, nor did composers expect them to. The increasing technical difficulty of parts written for the long F trumpet, however, influenced trumpeters to change to a shorter instrument, the 4½' B♭ or the 4' C trumpet.

The introduction of the B♭ and C trumpets was also due to the influence of the B♭ cornet (fig.17*a* and *b*), which was invented around 1830 when Halary built a B♭ post horn with valves. The cornet's lowest crook, G, was the highest crook of the French valve trumpet. Because its tubing was shorter and more conical than that of the F or G trumpet, the B♭ cornet was considerably more agile than the trumpet; accordingly French composers came to orchestrate for a pair of cornets and a pair of trumpets. Arban's cornet method (1864) was used as a trumpet method and continued to influence trumpet playing throughout the 19th and 20th centuries. In the USA and especially in France towards the end of the 19th century and at the beginning of the 20th, the cornet even threatened to oust the trumpet from the orchestra. The cornet also introduced a different notation, according to which *c*" was no longer the 8th partial but the 4th. The consequent greater distance between adjacent partials (in any part of the register) reduced the chance of 'cracking', or hitting another note besides the one desired. Ex.2 shows the 'open' notes on the modern C trumpet (on the B♭ trumpet and cornet they sound a tone lower).

The transition from the long F to the shorter B♭ trumpet began in Germany, where A. Kühnert of Dresden was one of the first to recognize the possibilities of the shorter instrument, about 1850 to 1860. Teste, first trumpeter at the Paris Opéra, introduced the C (actually D/C) trumpet in France in 1874. By about 1890 the transition was complete. In England the F trumpet was reinstated at the Royal College of Music in 1910 and taught there for a few years, at the insistence of Walter Morrow, but the new generation of players returned to the B♭ instrument.

Around 1850, especially in France, England and the USA, brass-instrument making began to convert to modern industrial methods of manufacture. Some of the most important 19th-century manufacturers, and bitter competitors for the international market, were: Moritz (Berlin), Pelitti (Milan), Sax (Brussels and Paris), Besson (Paris), Červený (Königgrätz; now Hradec Králové), Boosey (London), Hawkes (London), Conn (Elkhart, IN) and Couesnon (Paris). An ideal situation existed before World War II in Neukirchen (now Markneukirchen) and Graslitz (now Kraslice), where specialized makers of bells, valve sections and other parts lived close together and sold their products to an assembler, whose name appeared on the finished product.

During the early 20th century small-bore instruments were popular in countries in which piston valve trumpets were used. The Conn 22B, widely used in American symphony orchestras, had a bore of 11·12 mm. The Thibouville-Lamy C trumpet, played in France before and just after World

War I, had a bore of 11·2 mm (fig.17*f*), whereas that of the contemporary French Besson B♭ trumpet, the prototype of modern American trumpets, was 11·61 mm. In the 1930s in the USA, after World War II in England and after about 1960 in France, larger-bore trumpets were introduced in symphony orchestras to balance the larger volume of tone produced by the horn and trombone sections, which had already adopted large-bore instruments. Typical bore measurements of B♭ trumpets in use today are: Vincent Bach medium large, 11·66 mm (fig.17*e*); Bach large, 11·74 mm; Schilke, 11·1 to 11·89 mm; and Yamaha, 10·5 to 11·76 mm. The most popular rotary-valve trumpets throughout most of the 20th century were the smaller-bore model (10·9 mm) used in Vienna and Dresden and made by Heckel, later Windisch, then Meyer, all of Dresden, and the larger-bore model (11·2 mm) used in Berlin and made by Josef Monke of Cologne. At the end of the 20th century a host of new names – Adaci, Baumann, Egger, Ganter, Kröger, Kürner, Lechner, Meyer, Peter, Scherzer, Syhre, Thein and Yamaha – were vying for the favour of players. American and German trumpets differ in other aspects of construction, which account for the characteristic difference in their sound and response. Besides their generally larger bore, American trumpets have more conical tubing than German ones; the bell is smaller; the mouthpiece cup medium large as compared with the German very large; and the beginning of the mouthpipe small (9·5 mm) as compared with the German (10 mm).

Although mouthpieces were also standardized at the beginning of the 20th century, they vary widely in width and form of rim, shape and depth of cup, and width of throat, so that the selection of a proper mouthpiece is still an individual matter. Some mouthpieces have a 'double cup', the shoulder between cup and throat being constructed to include a smaller second cup between it and the throat proper. A short cylindrical section in the throat increases the sureness of attack but tends to make the upper register out of tune (fig.13).

Trumpet parts in modern orchestral works frequently reach the *d'''* first introduced by Mahler and Strauss. Some jazz musicians frequently play up to *b♭'''* and even higher, but playing such notes with the required force would tend to deaden the 'classical' trumpeter's sensitivity in the middle and lower registers, where it is all-important. Ideal articulation today demands that every note receive exactly the same attack. Trumpeters have departed considerably from the unequal articulation that was the ideal of the Baroque period and from the manifold subtleties of attack described in most 19th-century methods. Double tonguing (*tu-ku tu*) is done for quick duplets, triple tonguing (*tu-tu-ku tu*, formerly *tu-ku-tu tu* – first applied to the cornet by Arban – and sometimes as in double tonguing *tu-ku-tu ku*) for quick triplets. Because the large-bore instruments in use today require more air, correct breathing and diaphragm support are central in modern instruction. A number of special effects once reserved almost exclusively for jazz are now used in chamber and symphonic music: for example, flutter-tonguing, performed by trilling the dental *R* (although this was used as early as Strauss's *Don Quixote*, 1897); vibrato of varying amplitude and speed, produced by the chin, the diaphragm or the motion of the right hand; glissandos (accomplished by depressing the valves only halfway); rips, similar to glissandos but with a rapid random action of the valves;

singing and playing simultaneously, which results in various tones and beats being produced, best workable in the low register; producing an 'airy' tone, by tightening the lips more than usual and blowing with force so that part of the lip tissue does not vibrate; and even playing multiple notes, by tightening or relaxing the lips unduly and blowing between the partials.

Louis Armstrong (1901–71) was the most influential of early jazz trumpeters. He was the first to use the higher register to e♭″, and also set standards in jazz phrasing and 'inflection' – the varied attacks, timbres and vibratos common to jazz trumpeting. Other jazz trumpeters, such as Bubber Miley and Cootie Williams, excelled in growl and plunger-mute effects; trumpeters of the swing period, such as Henry 'Red' Allen and Roy Eldridge, explored high-register smears and rips. Virtuoso demands, already at a high level, were increased still further by the bop musicians Dizzy Gillespie and Clifford Brown, who cultivated special techniques such as half-valving; Miles Davis explored the more subdued timbres of the instrument. Avant-garde jazz trumpeting is represented by Don Cherry, who played a miniature instrument called the 'pocket trumpet', and Woody Shaw. The 'big band' style of orchestral jazz has produced a number of excellent high-note specialists, including Cat Anderson, Maynard Ferguson, Bill Chase, and, towards the end of the 20th century, the flamboyant and versatile James Morrison and Arturo Sandoval. The teaching of jazz at academic institutions has encouraged high-note trumpet methods (by Carlton MacBeth, Roger Spaulding, Claude Gordon and James Stamp) which are studied by trumpeters of all persuasions, and has furthermore produced a number of jazz players with classical training such as Allan Vizzuti and Wynton Marsalis. The jazz influence on orchestral music can also be seen in the use of new kinds of mute – cup mute, Harmon or 'wa-wa' mute, 'solotone' mute, felt hat and plunger mute – in addition to the traditional straight mute made of wood or metal (*see* Mute, §2).

After the introduction of the B♭ valve trumpet in the mid-19th century, even higher instruments were produced. The D trumpet, only half as long as the Baroque D trumpet, seems to have been used in works of Bach and Handel by 1861 in Brussels, and in Germany from about 1885; it appeared in England in a straight form in 1892 and was subsequently folded back on itself like a B♭ trumpet (*see also* Bach trumpet). Several 20th-century composers have made use of the D trumpet (the instrument they intended had a narrower bore and a more penetrating tone than the kind generally made today); they include Ravel (*Boléro*), Stravinsky (*Rite of Spring*, *Petrushka*, *Symphony of Psalms*), Britten (*Peter Grimes*) and Peter Maxwell Davies (Sonata for D-trumpet and piano). Today, such orchestral parts are increasingly played on the piccolo trumpet in B♭ or A. The first piccolo trumpet in G was made by F. Besson for a performance by Teste of Bach's *Magnificat* in 1885. Besson subsequently constructed high trumpets in F/E♭ and E♭/D. The piccolo B♭ was originally developed by Sax (as 'petit Sax-horn suraigu en ut ou en si♭') in 1849 for the première of Berlioz's *Te Deum*, but was subsequently forgotten until 1905 or 1906, when Alexander of Mainz built one which A. Goeyens of Brussels used for performance of Bach's second Brandenburg Concerto, a work he had first performed in 1902 on a small F trumpet. (T. Charlier had been the first to perform this

work on a high G trumpet, in 1898.) The first modern player to adopt the piccolo B♭ for D trumpet parts was Adolf Scherbaum, for whom Leistner of Hamburg constructed one with three different bells in 1951. Scherbaum & Göttner, Schilke, Yamaha, Adaci and J. Monke have even made piccolo C trumpets, and Schilke has had an order for a piccolo D trumpet. A hindrance to making such tiny trumpets – besides the obvious acoustical difficulties – is the extreme shortness of the second valve slide, which is already of compromise length on the piccolo C trumpet and cannot be pulled out. Fig.18 shows some of the great variety of shapes in which the piccolo B♭ trumpet is made.

Although England was slow to adopt the B♭ or C trumpet, by the 1970s a number of English players were among the most progressive in using an E♭ trumpet in place of the B♭ or C. Unfortunately this involved the loss of a certain fullness of tone, as at the beginning of this century when the B♭ trumpet – called the 'trumpetina' in England – replaced the long F trumpet.

A revival of the natural trumpet of the Baroque period took place in the 20th century. In 1931 Alexander of Mainz built three low-pitch D trumpets (a'= 415) after an original by J.J. Schmied (Pfaffendorf, 1767) for the Hoesch Collection (now dispersed); these were tested in concerts of the Kammermusikkreis Scheck-Wenzinger, but with no particular success. Another design built by Alexander, in 8' pitch with two double bends and two valves, was presented by Werner Menke in 1934. In 1960 Otto Steinkopf, working with the instrument maker H. Finke, devised a trumpet with two vent holes and a transposing hole which not only correct the intonation of the 11th and 13th partials but also improve accuracy by artificially increasing the distance between the partials in the fourth (and fifth) octave. For example, when the hole covered by the ring finger of the right hand is opened, only the 8th, 10th, 12th, 14th and 16th partials can be sounded, the intervening odd-numbered ones being cancelled out. Walter Holy, first trumpeter of the Capella Coloniensis, used this instrument with great success in works of Bach and others. The Steinkopf-Finke trumpet was built in coiled form like the instrument held by Gottfried Reiche in the famous portrait by E.G. Haussmann (probably painted in about 1727). Meinl & Lauber (now E. Meinl) and Rainer Egger, working from 1967 with E.H. Tarr, produced trumpets both with and without the three holes after Hans Hainlein (1632), J.L. Ehe (ii) (*c*1700), J.L. Ehe (iii) (1746) and W.W. Haas; Michael Laird has since collaborated with various London makers on a model with four holes. Trumpets with vent holes should not be termed 'natural' (Tarr proposes the neutral term 'Baroque trumpet'). A class for both natural and vented trumpets was set up at the Schola Cantorum Basiliensis in 1973 and the instrument subsequently began to be taught in many institutions, notably in Cologne, Göteborg, London, Trossingen and Lyons.

In 1916 Merri Franquin, professor of trumpet at the Paris Conservatoire, developed a five-valve C trumpet with Jérome Thibouville-Lamy. The fourth valve raised the pitch by a whole tone; the fifth lowered it by a major or minor 3rd, depending on the slide setting. Owing to the complexity of its operation, this instrument never enjoyed wide use. A four-valve trumpet by Franquin was more successful and was played by Roger Voisin during his

career as first trumpeter of the Boston SO. The advantages of a whole-tone ascending valve in obtaining correct intonation were also recognized by Armando Ghitalla, Voisin's successor; he encouraged the maker Tottle (Boston) to rebuild Vincent Bach trumpets with a rotary whole-tone ascending valve placed in the middle of the tuning-slide. Renold Schilke's innovations include the tuning-bell, by which the tuning-slide is placed as far towards the bell end of the trumpet as possible, thus reducing internal turbulence and improving the response.

Since the early 19th century trumpeters have traditionally had to seek their livelihood in orchestras. Although there have been cornet soloists and jazz trumpeters, only after World War II did the trumpet slowly come to be recognized again as a solo instrument in orchestral music. The first recordings of the Haydn concerto, performed by George Eskdale and Helmut Wobisch, were important in this revival. While the earlier soloists – Eskdale, Wobisch, Scherbaum, Voisin, Ghitalla, Roger Delmotte – were primarily orchestral musicians, some trumpeters are now active exclusively as soloists. The charismatic Maurice André has enjoyed an unparalleled career, and two of his pupils, Guy Touvron and Bernard Soustrot, were pursuing active solo careers at the end of the 20th century, as were Eric Aubier and Thierry Caens (France), Reinhold Friedrich and Markus Stockhausen (Germany), Håkan Hardenberger (Sweden), Ole Edvard Antonsen (Norway), Jouko Harjanne (Finland), Michael Brydenfelt (Denmark), John Wallace (Britain) and Stephen Burns (USA).

For further discussion of the use of the trumpet for signalling, *see* Signal (i).

Trumpet-major.

An officer in the army who has charge of the trumpeters in a regiment of cavalry or, in Great Britain, in the Royal Artillery or Royal Army Service Corps. The name occurs as early as Digges's *Arithmetical Warlike Treatise* (1590), which states that the 'Trompet Maior' not only taught the other trumpeters, but also took charge of the enemy's trumpeters when they came to 'parley'. Originally the office was considered to be high, but in the 18th century, as with the drum-major, the position was not recognized officially in the British service, and although most regiments of horse, and most regiments of dragoon guards and dragoons after 1766, appointed a trumpet-major unofficially, no government pay was allowed him. The situation was not remedied until 1810 when it was decided that those who had acted as trumpet-majors would be 'placed upon the same footing of rank as the sergeants of the respective corps to which they belong'. Since then trumpet-major has been an official rank in the army: the title was changed to sergeant-trumpeter in 1881, but George V restored the former title in 1928. In modern practice the position is filled by regimental musicians who are non-commissioned officers.

H.G. FARMER/R

Trumpet marine

(Fr. *trompette marine*; Ger. *Trumscheit*, *Nonnengeige*, *Marien Trompet*, *Trompetengeige*; It. *tromba marina*).

A bowed monochord equipped with a vibrating bridge (*see* Bridge (i), fig.1*d*) in common use from the 15th century until the mid-18th. In its fully developed form the instrument is capable of sounding all of the pitches of the harmonic series up to the 16th partial. Analysis of the tone of the trumpet marine shows an extremely complex wave form whose partials are in the audible range up to about 14,000 Hz (the 25th partial). Comparison of its tone with that of a modern brass trumpet shows that the partials of the latter drop off sharply after the 10th or 11th partial. The use of a straight mute, however, heightens the upper partials of the trumpet so that it begins to show the same configurations as the trumpet marine for the first six or seven partials.

In the Hornbostel-Sachs classification the trumpet marine is a bowed lute (or fiddle).

CECIL ADKINS

Trumpet marine

1. Historical development.

The history of the trumpet marine may be divided into two overlapping periods: the first extending from 1450 to 1650, the second from 1550 until the late 19th century. During the first half of the 15th century a vibrating bridge was added to the drone string of the dichord (another monochord derivative stemming from the late 12th century) as a means of enhancing the tone or increasing the volume. At this time the dichord was common in two forms: a long instrument of approximately two metres which was played with its lower end resting on the ground (fig.1) and a shorter instrument held against the breast with its open end projecting into the air (fig.2). The instrument with the vibrating bridge eventually became known as a *Trumscheit* and existed concurrently with the dichord until the mid-16th century when the latter disappeared.

When playing the shorter instrument it was more convenient to bow it close to the nut while supporting the body with the left hand. Although earlier representations show this string used only as a drone, the performers probably discovered that other pitches could be produced by touching the string at the nodal points, and in his *Dodecachordon* of 1547 Glarean described the sounding of trumpet blasts. Supporting the instrument with the hand, however, precludes any manual dexterity, and the short string places the upper partials so close together that their performance is impractical.

Users of the longer instrument did not encounter these problems. In the late 16th and early 17th centuries the technique was evolved to make the trumpet marine a more satisfying musical instrument. Mersenne, describing the full range of available pitches, remarked in 1636: 'I do not doubt that it would be played perfectly if one should employ as much time as is done in playing the viol or the lute'. Although Mersenne, Praetorius and other 17th-century writers mentioned only trumpets marine with a long pyramidal body (fig.3), a newer style with a more pleasing tone had been invented in the late 16th century. Apparently of German origin, the earliest of these newer instruments, of which examples still exist, may date from the third quarter of the 16th century (fig.4*a*).

By the third quarter of the 17th century public knowledge of the name 'trumpet marine' was such that composers could use the instrument to reinforce a seafaring image. The origin of the 'marine' part of the name is not known, although in earlier times it was attributed to its use by sailors as an instrument or as a signalling device on ships – hypotheses for which

there is no substantiation. Nor is there any proof of its derivation from 'Mary' or the name of the 15th-century trumpeter Marin (or Maurin). Similarly, Sachs's tracing of it to the Polish *tub maryna* is erroneous, as are the implications fostered by Martin Vogel's derivation of the name from the Hebrew. It is interesting, nonetheless, that in German-speaking countries the instrument had some real association with convents; according to Rühlmann it was still in use in Marienthal (Saxony) in 1885. Of the 70 trumpets marine surviving in museums in these areas, at least 35 were acquired from local cloisters.

For some 75 years (from about 1650 until about 1725) the trumpet marine seems to have been a popular instrument. Besides the hundreds of examples constructed during this time, over 300 pieces, including some *concerts*, sonatas and suites, were composed for the instrument. Also surviving are 56 arrangements from the works of Lully. Public performances were numerous, e.g. the programme attended by Pepys at Charing Cross in 1667, the frequently cited quartet performance offered at the Fleece tavern in 1675 (not 1674, as has been so widely printed), as well as a river performance mentioned in the *Mercure galant* of 1677. The trumpet marine was often used in Swiss collegia, and instruction was given on it in some Scandinavian schools. Numerous scientific papers on the instrument were prepared in the decade preceding 1700 in both England and France. In the latter country trumpet marine players were part of both the royal establishment in Paris (from 1679 until 1767 – there were five listed in 1760 alone, all doubling on the cromorne) and the orchestra of the Archbishop of Lyons (1715–21). Even as late as 1752 trumpets marine were sought for purchase through newspaper advertisements (Nuremberg, *Frag- und Anzeige-Nachrichten*, 1752, no.94).

In spite of its wide acceptance, critics of the instrument were plentiful. The harsh remarks of Virdung and Agricola, and Sebastian Brant's characterization of it as a fool's device, were, however, directed at the older form of the instrument. 17th-century critics, aware of its popularity, were more subtle, often referring only to the way it attracted animals, or was preferred by the bourgeoisie. By the mid-18th century its decline was apparent: Dom Caffiaux described its sound as insufferable; J.R. Wettstein ungraciously satirized it in an ink drawing of a Basle music society (*c*1792); and to Berlioz, writing in 1859, the trumpet marine was 'a triton's conch, capable of frightening asses'.

Trumpet marine

2. Music.

The known music for the trumpet marine [tpt m] is contained mainly in the works of ten composers:

J.-B. Lully: *Xerxes*, 1660, entrée 4, movts 2 and 3; tpt m, str

J.M. Gletle: *Musica genialis latino-germanica* op.4 (Augsburg, 1675): 2 sonatas and 36 unacc. duets

C. Huber: *Geistliche Seelenmusic* (St Gallen, 1682, 4/1705): 8 short duets (only in 4th and later edns]

V. Molitor: *Epinicion Marianum* (St Gallen, 1683), 'nam clarinis, 2. violini, vel etiam tubae marinae commodissime substitui possunt'

N. L'Armessin: partial tablature displayed in 'Habit de musicien', *Les costumes grotesques et les métiers: XVIIe siècle* (1695/*R*)

A. Scarlatti: introduction to Act 4 scene i of *Il Mitridate Eupatore*, 1707; 2 tpt m, 2 muted tpt, timp, str

J.-B. Prin: 367 pieces, some with ob, str, in 4 MSS, 1702–42, *F-LYm*

W. Iten: *Pastorella media nocte*, 1738, 2vv, 2 vn or 2 tpt m; *De S.P.N. Benedicto*, 1751, 1v, 2 vn, 2 tpt m, bc [begins 'Eia clarae tubae lacto sono intonare']; MSS both in *CH-EN*

L. de Castro: [14] Suonate per la tromba marina (92 movts; MS, late 18th-century, *D-Dl*); 4 movts ed. F. W. Galpin in *ML*, xiv (1933), 29 only; 2 movts in *Grove5*

Anon.: *Cantus à 10: De Immaculata Virgine Maria* (MS, *A-Sn*), 2vv, 6 clarin or tpt m, bc; ed. K. Ruhland (Ebersberg, 1990)

Anon.: 3 pieces and a duet of 17th- or 18th-century Dutch provenance

M. Keller: *Sechs kurze und leichte Aufzüge* (MS, *c*1834, *D-AÖhk*), 3 tpt m or 3 tpt, timp, org 'wilkürlichen Orgelbegleitung'; ed. U. Wolfe (Leverkusen, 1985)

Two other items erroneously included in lists of trumpet marine music are *Trumpet Tunes, Aires, Marches and Minuets* (London, 1698), which (according to Thurston Dart, *GSJ*, vi, 1953, pp.35–40) is for the chalumeau; and Vivaldi's Concerto in C rv558/p16 for pairs of recorders, violins 'in tromba marina', salmoè, trumpets, mandolins and theorbos with strings and continuo, where the ascription may be interpreted 'two violins, in the style of a tromba marina'. It should also be noted that the assumption made by E.J. Dent, and subsequently J.A. Westrup, that the ascription *trombi marina* in Act 4 scene i of *Il Mitridate Eupatore* indicates that these are two trumpets played on board ship is without foundation.

Trumpet marine

3. Construction.

In its most popular form the trumpet marine averages 190 to 200 cm in length and consists of a hollow, open-ended resonator with an attached solid neck (fig.4). The neck ends in a pegbox surmounted with a head, shield or scroll, and has as a tuning device a peg or machine head. The form of the latter, depending on the age of the instrument, is: a vertical screw, turned by means of a knob on the end of the instrument (oldest form); a ratchet and pawl, sometimes in combination with a peg; or a worm gear. Only rarely is the tuning device mounted in the lower end of the instrument. The belly is usually of pine, and the staves, of which there are most often five or seven, are of pine, maple or a similar hardwood. The belly is braced with several lateral slats or ribs, and the staves are reinforced with cloth, paper or, not infrequently, strips of old parchment.

Other, less common features include the *guidon*, used to adjust the distance of the free foot of the vibrating bridge from the belly; a rose or soundhole, used mainly for decoration; sympathetic strings; inlays of hard material under the vibrating bridge; or other acoustical treatment. The *guidon*, a feature found on perhaps a third of the instruments, is an essential adjunct to facile performance. One end of a thin string is attached either to the bridge or to the main string below the bridge. The other end is fastened to a peg in this area or guided to one on the upper body or neck of the instrument. Mersenne, illustrating another approach to the problem of adjusting the bridge, wrote:

> It is very difficult to fit this bridge so that it trembles as it must, for if one errs only slightly, the quivering becomes too strong and disagreeable or too weak. Thus one is often many hours in finding the point of perfection that one desires.

The *guidon* was used at least as early as 1660. Sympathetic strings are rarely found even though they are frequently described as an integral part of later instruments. Interior sympathetic strings were first mentioned by Randel Holme in 1680; however, sympathetic strings do appear on the outside of the instrument pictured by Praetorius (*Theatrum instrumentorum*, 1620).

Glarean mentioned the use of nails or ebony on the foot of the vibrating bridge as a means of increasing the volume. Although one finds a few 18th-century instruments so equipped, the practice was seldom followed because it emphasized the brittleness of the tone. More commonly the entire vibrating bridge area was inlaid with hardwood, but this may have been as much to prevent excessive wear as to enhance the tone; many old instruments show signs of having had several bridge sites. The 16th-century practice of coating the interior back and sides of the instrument with ground glass serves to restrict the vibrations of these areas; this allows the belly to vibrate more freely and greatly reduces the attendant noise level.

Trumpet marine

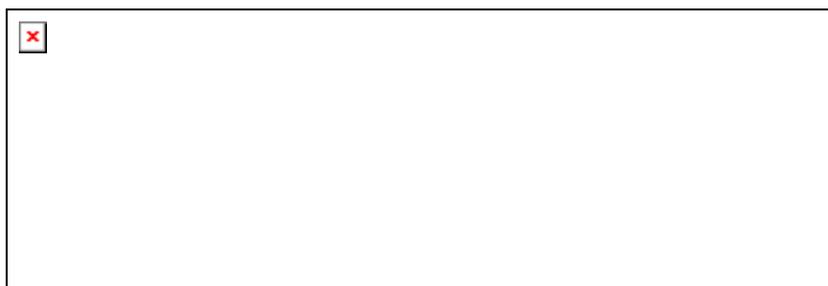
4. Makers.

More than 180 trumpets marine are preserved in museums. Of this number, five are 16th-century instruments. There seem to be no extant examples of the triangular-shaped instruments in either size, although several museums exhibit 18th-century versions or later reproductions based on pictures or early descriptions. Makers are known for about one fifth of the instruments. In the following list the number of known instruments for each maker is indicated either by multiple dates or by a number placed after a single date. P. Alletsee, Munich (1732, 1737); J. Berger, Landshut (*c*1685); Johann Balthasar Berler (Bieler), ?Switzerland (1689); Robert Brenner, England (1765, advertisement); Nicolas Duclos, Barcelona (1763); Thomas Eberle, Naples (1773, copy after Praetorius); Johann Ulrich Fischer, Landshut and Munich (1720, 3; 1722, 2; *c*1725; 1728, 2); Goutenoire, France (early 18th century); Frederick Hintz, England (18th century, advertisement); Matthias II Hornsteiner, Mittenwald (1790, 2); Rudolf Hoss, Munich (*c*1700, 1701); F. Houyet, Namur (1680); R. Imbert, France (1715, Prin's favourite builder); Jacobs (1702); G.A. Janke,

Saxony (1682, 2); E. Lewis, London (*c*1700); MFSB (?Andreas Ferdinand Mayr), Salzburg (*c*1720, 3); J. Ott, Füssen (1727, *c*1732); Claude Pierray, Paris (1730, 1750); Sebastian Renault, Paris (*c*1760, 2); Pieter Rombouts, Amsterdam (1730); Seraillac, France (early 18th century); Gemiano Sighnolfi, Nonantola (1773); Johan[n] [S]tassar, Switzerland (1674); L. Tobi, ?Germany (1702); Tywersus, ?Lorraine (16th or 17th century, 2); IBST (1702); J. Weiss, Salzburg (1702); Gregori Ferdinand Wenger, Augsburg (*c*1713, 4).

Trumpet marine

5. Performance.

A skilled performer is capable of producing a variety of effects. It is possible, for example, to alternate the trumpet-like timbre with the normal sound of the harmonics, or to expand the usual playing range, by means of auxiliary pitches, to two full octaves. For the most part melodies use the 6th, and 8th to 13th partials; however, there are many instances, frequently in duets, where auxiliary pitches are required adjacent to the 4th, 5th, 6th and 7th partials. These pitches (ex.1) speak best when approached diatonically, as they always are in the music. When this is taken into account there is no justification for the frequently held opinion that trumpets marine of several sizes were used for duets or ensembles.


Tonal variety is achieved in trumpet marine music in ternary forms by allowing the ensemble to play the alternating sections in another key. Beyond this, temporary modulations to the subdominant are made by using the flat 14th partial. The 7th partial, an octave lower, is never used. The dominant can be implied by using the second and fifth scale steps, or more strikingly the sharp 11th partial. For example, in the key of C the *f″* is used as both an *f♮″* and an *f♯″*. In many pieces the tonality is actually shifted to the dominant key by using this pitch as a leading note.

The music is liberally ornamented, usually with a small cross or an occasional simple appoggiatura. Since all of the pitches were traditionally stopped with the thumb or one finger, even short trills can be technically demanding. Regarding the difficulty of the instrument, Mersenne noted that 'one meets few men who play it well, because the thumb or another finger must run with a certain measure and speed … which is not easy to imitate'. Prin's only remarks about ornamentation concern the trill, about which he said: 'with practice one will master it, provided that one does not become discouraged'.

Performers of the trumpet marine mentioned in this dictionary include Jean Danican (*c*1610–79) and his son André Danican Philidor (*b* ?Paris, *c*1652;

d Dreux, 11 Aug 1730); *see* Philidor family); Jean-Baptiste Prin (*c*1699–after 1742); and Luigi Taglietti (1668–1715).

Trumpet tune.

A piece for the trumpet, or, more often, one for other instruments or voices in which the melodic style of trumpet writing is adopted. Imitation of this kind was a common feature of Baroque music, a product of the creation at that period of genuinely idiomatic instrumental styles and, paradoxically, of a preoccupation with transferring them from their natural medium to others. The severe limitations of the notes available on the natural trumpet meant that imitations of its idiom were immediately recognizable as such: an early example is Du Fay's Gloria 'ad modum tube'. Later they occur (generally in the keys of C or D, in which the trumpet was built) in the marches and soundings that are usual features of battaglias (e.g. 'The Trumpetts' in Byrd's *Battle*, MB, xxviii, no.94*d*) and in a wide range of other contexts: there is, for example, Biber's *Aria tubicinium* (DTÖ, xxv, Jg.xii/2, 59), where the scordatura of the violin is specially chosen to facilitate the imitation of a consort of trumpets, and there are examples for harpsichord, such as the *Fanfare pour la Suitte de la Diane* in Couperin's second *ordre*.

In English sources such pieces are especially common towards the close of the 17th century and at the beginning of the 18th. A 'Trumpet Preludem' and a 'Trumpet Allmaine' by William Gregory (ii) occur in a lyra viol tablature of the 1670s (*GB-Er* 787–1); Nicola Matteis has sets of *Arie e passaggi ad imitatione della trombetta* for solo violin in both the second and fourth parts of his *Ayrs for the Violin*. The great accomplishments of the leading English trumpet players of the period such as John Shore, as well as a preoccupation with 'warlike musick' generally, seem to have made the genre particularly popular, and there are many examples in the works of Purcell, Croft, Jeremiah Clarke (i), John Eccles, John Reading (iii) and others, bearing titles such as Trumpet Air, Trumpet Minuet, March and so on. Purcell's 'Trumpet Tune called the Cibell', 'Shore's Trumpet' by Clarke and his 'Prince of Denmark's March' (long misattributed to Purcell under the title 'Trumpet Voluntary') are perhaps the best known.

Many such pieces exist in several versions: for keyboard, for ensemble or as vocal pieces with an added text. Some were clearly composed originally for the trumpet; others are simply modelled on the kind of diatonic writing suited to it and may introduce notes foreign to the trumpet scale without departing too far from the essential characteristics of the style. Sometimes this transfer of idiom is put to dramatic ends. When in *Dido and Aeneas* Aeneas is received at Dido's court Purcell makes Belinda declaim her lines 'See, see, your royal guest appears; How godlike is the form he bears!' to a phrase which could easily be played on the trumpet. Since there were no trumpets in the orchestra, the sounding which would normally have accompanied the entry of a royal personage such as Aeneas is economically embodied in the voice part.

Trumpet tunes continued to be written well into the 18th century. In organ music they were usually designed to display a trumpet stop and have continued to be written up to the present time. Since, however, many no longer observe the melodic limitations of the Baroque trumpet, an essential element of the original genre has disappeared.

MICHAEL TILMOUTH/BARRY COOPER

Trümpy, Balz

(*b* Basle, 4 Aug 1946). Swiss composer. He spent his childhood in Glarus. His musical education at the Musikakademie in Basle included teaching diplomas for piano and music theory, Paul Baumgartner's master class and composition. He continued his composition studies in Rome with Berio, later becoming his assistant (1975–8). He spent several periods at IRCAM. He won the Kunstpreis des Lion's Club Basle in 1977. He taught theory and composition at the Basle conservatory from 1979, and was vice-director 1982–7.

Trümpy's music attempts to open up new perspectives and to be anchored in the spirit of its time without yielding to fashion. It avoids the potential brutalism of total serialism. In composing, Trümpy makes use of one of music's essential characteristics, its relationship with space and time. This sometimes results in large musical frescoes of imposing dimensions.

Trunk, Richard

(*b* Tauberbischofsheim, Baden, 10 Feb 1879; *d* Herrsching am Ammersee, 2/3 June 1968). German composer, conductor and critic. He was a pupil of Iwan Knorr at the Hoch Conservatory in Frankfurt (1894–5) and Joseph Rheinberger at the Munich Academy (1896–9). After his studies Trunk settled in Munich where he pursued a career as an accompanist, private teacher, conductor of various choral societies and critic of the *Münchner Post* (1907–12). In 1912 he went to New York to serve as conductor of the Arion choral and orchestral society, returning to Munich just after the outbreak of World War I. From 1916 to 1922 he wrote music criticism for the *Bayerische Staatszeitung*. In 1925 he was appointed director of the Rheinische Musikschule Cologne and professor at the Staatliche Hochschule, and remained extremely active as the conductor of the Männergesangverein. Trunk returned to Bavaria in 1934, succeeding Siegmund von Hausegger as president of the Munich Academy. From 1935 to 1939 he also directed the Lehrergesangverein and the Choral Concerts of the Academy. Hitler awarded him the Goethe Medal in 1939, and he also received the City of Munich Music Prize in 1942. In 1945 he retired to Riederau am Ammersee and devoted himself mainly to composition.

During his lifetime Trunk was widely admired for his vocal compositions which were regularly performed by such artists as Maria Ivogün, Sigrid Onegin, Karl Erb, Lauritz Melchior, Heinrich Schlusnus and Leo Slezak. He was a dedicated exponent of the late Romantic tradition of Strauss and Pfitzner, although his melodic lines are simpler and owe much to folksong. As a strong supporter of the National Socialists, Trunk enjoyed special prominence during the 1930s, composing several patriotic works, most notably the cycle for male chorus *Feier der neuen Front* (1932) to words by the Hitler Youth leader Baldur von Schirach, with the movement titles 'Hitler', 'Des Führers Wächter', 'O Land' and 'Horst Wessel'.

ERIK LEVI

Truschetzki, Georg.

See Druschetzky, Georg.

Trutovsky, Vasily Fyodorovich

(*b* Ivanovskaya Sloboda, nr Belgorod, *c*1740; *d* St Petersburg, *c*1810). Ukrainian folksong collector and composer, resident in Russia. In 1761 he entered the Russian Imperial court as a singer and *gusli* player. Apparently by 1792 he left the court and continued to pursue his musical activities under the patronage of the Russian aristocracy. His *Sobraniye russkikh prostïkh pesen s notami* ('Collection of Simple Russian Songs with Music') was the first printed collection of Russian folksongs with melodies. Parts i-iii were published anonymously with texted melodies and a single bass line. In part iv and the 1796 edition of part i, Trutovsky added a fuller harmonic texture. The collection contained songs popular in St Petersburg at the time; parts iii–iv also contained Ukrainian songs. The melodies were mostly transcribed by Trutovsky himself although he used some materials from manuscript songbooks, previously published collections of songs texts, music by Russian composers and, in part iv, his arrangement of a Ukrainian song by Józef Kozłowski. Trutovsky did not organize the songs into categories; the ordering is based only on alternation between fast and slow songs. In his foreword he complains about the songs not written 'according to the rules' and, accordingly, he made them match the European system of keys, harmony and metre, adding instrumental lines for those wanting to play the songs on instruments or to sing them with instrumental accompaniment. The collection has considerable interest as a document of musical practices and repertory of the time. L'vov and Pratsch published 46 of the songs in their collection and several were used by the

Russian composers Pashkevich, Serov, Musorgsky and Rimsky-Korsakov. Few of Trutovsky's own compositions have survived. His song *Kruzhka* on a text by Derzhavin was popular at the time among young intellectuals and army officers.

MARGARITA MAZO

Trutruka.

An end-blown, straight trumpet, 2·5 to 6 metres long, played by male Araucanians (Mapuche) of southern-central Chile and Neuquén, Argentina. In the early 18th century the instrument was known as *thouthouca* or *trompette*; it may date back to the early 17th century. In its modern construction a stem of *coligüe* or *küla* bamboo is dried, cut lengthwise, hollowed, re-dried, re-joined, and covered with fresh horse-gut. At the wider end a cow horn is attached with plant fibres or leather as a resonator (see illustration). Metal instruments, made from gas- or water-pipes, are known among the Mapuche of Lanalhue, Chile. The *trutruka* is similar in construction to the Argentine Erke, but has a diagonal cut at the tip which serves as a mouthpiece, whereas the *erke* is side-blown or uses a single reed. It is played, together with other instruments, at the *elüwún* funeral rite for a shaman, in the *ngillatún* ceremony when Araucanians meet to supplicate their gods for protection against calamities and bad weather, and in other ceremonies. The *trutruka* has a compass of 13 pitches; its melodies are frequently centred on a single low pitch, with added leaps, ascending or descending arpeggios at the beginning and rapidly ascending glissandos at the end. A few sips of water are allowed to enter the instrument before playing in order to humidify the walls. Playing it requires some exertion and physical strength: *trutruka* pieces are usually short. The

long tube is rested horizontally on a tree trunk or branch, or on a boy's shoulder, with the horn pointing upwards.

Trydell [Triddel, Tridel], John

(*b* Dublin, *c*1715; *d* 1776). Irish divine and writer on music. He was educated at Trinity College, Dublin (1731–6), ordained deacon in 1744 and installed rector of Kilnamanagh in 1760. He published *Two Essays on the Theory and Practice of Music* (Dublin, 1766). A primary purpose of this tract was to encourage native Irish composers by supplying a 'regular Introduction, and easy Method' for the composition of music. The treatise appeared as the article 'Music' in the first edition of the *Encyclopaedia Britannica* (Edinburgh, 1771). A supplement to the theoretical part of the *Two Essays* was published as *Analogy of Harmony* (Dublin, 1769).

Tsang, Richard [Tsang Yip-fat]

(*b* Kowloon, Hong Kong, 11 Sept 1952).Hong Kong Chinese composer and conductor. After graduating from the Chinese University of Hong Kong, studying composition with David Gwilt (1976), he gained the Master's degree from the University of Hull (1978). The Founding Chairman of the Hong Kong Composers' Guild (1983–93), he brought Hong Kong into the ISCM. He taught at the Chinese University (1984–6), then, apart from two years spent composing and broadcasting in England (1996–8), headed the

Serious Music Service of Radio-TV Hong Kong; he concurrently held the vice-presidencies of the ISCM (1990–96) and the Asian Composers' League (1991–6).

His music evolved from the Expressionism of his early choral pieces to fulfil divergent goals: the variation piece *Images of Bells* (1979) is based on a two-note motive, while the Prelude (1988), first performed by the Boston Symphony Orchestra, is neo-romantic in style. In the early 1980s he began to write for Chinese instruments, as in *Dou-Sou* (1981) and *Three Meditations* (1982), and he has frequently conducted and contributed to the repertoire of the Hong Kong Chinese Orchestra. In the *Echo Mime* series and the three dance-dramas he has made striking use of electronics. Later works such as the *Wu-Ch'ang* concerto (1998), bring a full array of international avant-garde devices and improvisational writing to the Chinese orchestra.

Tschudi [Tschudy, Scudus], Aegidius [Gilg]

(*b* Glarus, 5 Feb 1505; *d* Glarus, 28 Feb 1572). Swiss statesman, historian and collector of music. From his studies with Zwingli and with Glarean in Basle (1516–17) he developed a special enthusiasm for music. With Glarean's help he studied the theorist's system of 12 modes and analysed a large repertory of the period 1460–1520, which included the work of Glarean and others. (He may not, however, have seen a completed draft of Glarean's *Dodekachordon*, as has sometimes been suggested.) After Tschudi had classified the repertory, grouping compositions together by genre, number of voice parts and the mode of their tenors, he began (probably after 1540) to assemble his own songbook (*CH-SGs* 463). The extant discantus and altus partbooks include 87 Latin pieces, 49 lieder, 30 chansons, 16 canzonas, four pieces without title and one pavan. Tschudi attributed 94 of the works to 37 composers, citing in an index the national and sometimes regional origins of 25 contributors. Concordances identifying 19 other composers raise the number of attributable compositions to 122. Tschudi's attributions to composers attached to the French court during the second decade of the 16th century probably came from Glarean, who lived in Paris from 1517 until 1522. As Tschudi failed to identify some of the chanson composers and also introduced conflicting attributions to Josquin, Mouton and Obrecht, some doubts arise about the authenticity of other identifications, even those made by Glarean. The songbook nevertheless shows the momentous confluence of musical styles early in the 16th century. It complements the *Dodekachordon* and with the treatise functions as a vital, if peripheral, witness of the Josquin period.

Tsenova, Yuliya

(*b* Sofiya, 30 July 1948). Bulgarian composer. A student at the Sofiya State Music Academy, she graduated in composition and piano from the class of Vladigerov (1972). Thenceforth she embarked on a career as a composer, performer and teacher. She was appointed professor (1999) then dean at the Sofiya Academy, and she has frequently participated in European forums on contemporary music. Her works are philosophically based, dramatic and rich in contrast. The clearest indication as to her work's artistry and aesthetic – a traditional and modest form of expression – is the work *Freska* ('Fresco') for chorus and orchestra. *Bezkrayniyat krag* ('Endless Circle', 1995) is widely considered one of the most impressive examples of Bulgarian chamber music.

MAGDALENA MANOLOVA

Tsepkolenko, Karmella

(*b* Odessa, 20 Feb 1955). Ukrainian composer. Having studied the piano with G. Kuchinsky and Ye. Pannikova from 1962 at a special music school, she entered the Odessa State Conservatory in 1972 where she continued her piano studies with L. Ginzburg and took composition lessons with A. Krasotov. From 1980 she taught at Odessa State Conservatory, and after winning a prize in the Dresden Weber competition in 1983, she undertook post-graduate research at the Moscow Pedagogical Institute under G. Tsïpin (1986–9) gaining a 'kandidat' degree in pedagogical sciences. In 1990 she was a finalist at the Rendezvous international de piano en Creuse; she attended the Darmstadt summer courses in 1992 and 1997, and in 1995 received a grant from the Heinrich Belle Foundation, Germany. She is the organizer of the 'Two days and two nights of new music in Odessa' festival and has participated in numerous festivals in Chişinău, Cologne, Kiev, L'viv and Freiburg. Tsepkolenko's work has been placed in the so-called conceptual movement, and is comparable – in terms of the variety of genres and techniques – with contemporary Western trends.

LESYA LANTSUTA

Tsesakow, Kim Dzmitrïyevich

(*b* Cherven', Minsk province, 20 Feb 1936). Belarusian composer. He and his family survived the German occupation of Belarus'. At the beginning of the 1950s he studied at the conducting and choral department of the college in Gomel' and started writing songs, romances and choruses. He then studied composition at the National Conservatory in Minsk with

Bahatïrow (1954–6) and in 1957 moved to Novosibirsk in Russia where he taught theory at the music college. He graduated from the Novosibirsk Conservatory in 1965 (class of G.N. Ivanov) and returned to Minsk where he taught at the college and conservatory and managed the editorial office for musical literature at Belarus' publishers. From 1973 to 1995 he ran a composition class at the music school attached to the Belarusian Academy of Music. As the theme of the war waged by the Belarusians against fascism defines Tsesakow's primary interest, in his five symphonies and 10 string quartets (which, in their embodiment of concepts of and expressive and tragic type, are similar to those of Shostakovich and Bartók) he has been particularly concerned with the problems of expressing conflict in contemporary instrumental writing. He makes liberal use of elements drawn from Belarusian songs, and employs polyphonic technique extensively. In his cantatas, oratorios, choruses and cycles of instrumental pieces he tends towards a programmatic narrative and a decorative style of writing which has a direct, poster-like appeal. He has successfully employed Slavonic folk-sources of various historical epochs (he particularly likes song-laments, soldiers' recruiting songs, ritualistic melodies and games). The most recognizable *popevki* [melodic and rhythmic turns of phrase] are frequently found in the harmonically complex context of large-scale works.

TAISIYA SHCHERBAKOVA

Tshe-ring, Norbu

(*b* Lhasa, 1927). Tibetan *lha-mo* (musical theatre) actor and teacher. He was born to a family of performers of the sKyor-mo-lung troupe and enrolled for performance at the age of eight. He was nicknamed La-pa-lags, 'the one who sings la-la-la'. His acting, especially of the female roles, made him a national celebrity in pre-communist Tibet. He could have become the next teacher of the sKyor-mo-lung troupe at a young age if the political situation had not forced him into exile in India in 1960. After the hardships of life in exile, he was appointed *lha-mo* master of the Tibetan Institute of Performing Arts of Dharamsala in 1979. He is the main source for the reconstitution of *lha-mo* in India, where he has taught the song texts for six plays from memory and has performed in all the *lha-mo* recordings made in exile. His brother, Tseten Dorje, remained in the Lhasa official troupe and became a stage director.

Tsïganov, Dmitry Mikhaylovich

(*b* Saratov, 12 March 1903; *d* Moscow, 25 March 1992). Russian violinist and teacher. He studied the violin with Mogilevsky at the Moscow Conservatory until 1923; he became a well-known soloist and chamber musician in Moscow, a brilliant exponent of Paganini and of contemporary

works. But he gradually concentrated on chamber music, and led the Beethoven Quartet continuously from 1923. His dynamic, driving style of playing gave the quartet a majestic collective character, distinguished by its orchestral tone-quality and its concern for a clear and spirited musical unanimity. The quartet played an important role in the development of Soviet chamber music performance, inspired Shostakovich to write his Piano Quintet op.57, and was the dedicatee of other works by him as well as by Aleksandrov, Glière, Kabalevsky, Myaskovsky and Shebalin. Tsïganov joined the teaching staff of the Moscow Conservatory in 1930, becoming a professor in 1935 and director of the violin school in 1956. He published transcriptions for violin and piano of songs by Tchaikovsky, Shostakovich and Stravinsky, and five volumes of violin cadenzas (Moscow, 1951–62) which were much esteemed.

Tsimmermann, Fyodor Mikhailovich

(*b* 1813; *d* Tambov, 1882). Russian guitarist and composer. His place of birth and the exact dates of his birth and death are not known. A nobleman of German origin, he was a landlord in the Tambov region, and was famous for his stud farm of prizewinning racehorses. His other passion was the seven-string guitar, on which he was a brilliant improviser. Like Vïsotsky, to whom he was often compared, Tsimmermann was a celebrated player; he developed a unique style of performance, and preferred not to play any compositions except his own. He also refused to write down and publish his improvisations, waltzes, mazurkas and études, and so the 14 pieces which survive in published form exist only due to the efforts of his friends, including the composer V.S. Sarenko, who wrote down his improvisations. Not surprisingly, these publications are full of mistakes and ambiguities. Nevertheless, many of the compositions show Tsimmermann's ingenious musical mind and his imaginative virtuosity on the instrument.

Tsintsadze, Sulkhan

(*b* Gori, 23 Aug 1925; *d* Tbilisi, 15 Nov 1991). Georgian composer and teacher. He began his career as a cellist and was already a member of the Georgian State SO when he entered K. Minyar's cello class at the Tbilisi Conservatory; in 1943 he became a member of the State String Quartet of Georgia. In 1948 he entered the Moscow Conservatory, studying cello with S.M. Kozolupov and composition with S.S. Bogatïryov, graduating from these courses in 1950 and 1953 respectively. In 1963 he began to teach orchestration at Tbilisi Conservatory, where he became an assistant professor in 1966 and a professor in 1973. Concurrently with these appointments, Tsintsadze was rector of Tbilisi Conservatory (1965–84) and chairman of the Union of Composers of Georgia (1984–91). He has served as a jury member of various international competitions, was awarded the State Prize of the USSR in 1950, the Paliashvili Prize in 1974 and the Rustaveli Prize in 1981; he became an honorary member of the New England Conservatory of Music in 1966, and was named People's Artist of the GSSR in 1961 and of the USSR in 1988.

Tsintsadze's work represents a major contribution to Georgian music of the second half of the 20th century; he created professional forms for Georgian music based on a synthesis between his country's folk music and the idioms of 20th-century European composers. Through writing theatre and symphonic music he gained experience which contributed to his solving problems encountered in writing for his favourite genre, the string quartet. He wrote string quartets throughout his life: the first belongs to his student years, while the twelfth and last was completed shortly before his death. The quartets occupy a central place in his output not only because they reflect all the stages of his evolution as a composer, but also because this was the genre in which he attained the most profound expression of his ideas and forged an individual style. The persuasive power of these works tests in their expressive force, and the logic of their inner structure which is rooted in the traditions of Bartók, Shostakovich and Hindemith. They incorporate the typically 20th-century characteristics of psychologism and intellectualism, and their importance in contemporary chamber music extends far beyond Georgia. Allied to these works are a large number of miniatures for chamber ensembles; for Tsintsadze, these constituted a stylistic laboratory. String quartets 1–4 (1947–55) and the cycles of miniatures for string quartet (1945–55) are based on folk music and dominated by its influence. They are close to the source material and this characteristic determines their tendency towards suite-type cycles of movements and the use of contrasting, juxtaposed themes, and variation form as a method of development. These works embody the composer's

predilection for miniatures depicting folk life in a markedly decorative manner. The Fourth Quartet (1955), however, is notable for its increased dramatization.

The miniaturism and ethnographic character of the early quartets gave way in later works to thematic expressiveness, enlargement of scale, a dense and rich polyphonic texture, through-composed development and orchestral effects. These features, which owe much to Tsintsadze's earlier symphonic and ballet music, are seen from the Fifth Quartet (1963) onwards. In the mature string quartets the thematic structure fulfils an increasingly dramatic role while the formal development of the earlier works is replaced by a more complex, linear polyphonic approach. Mastery of horizontal development and the combination of motivic economy with richness of imagination are displayed in the Sixth Quartet (1966). The stimulus to its composition was the playing of the Juilliard Quartet to whom the work is dedicated. In the traditions of Bartók and Shostakovich, Tsintsadze interprets the genre of the string quartet in terms of symphonic composition with progressive formal development. He owes much to these two composers, and his Seventh Quartet (1970) is dedicated to the memory of Bartók, his Ninth (1978) to that of Shostakovich. His evolution as a composer follows a line of increasing complexity and chromaticism, and while chordal structures of seconds and fourths or fifths predominate, suggestions of mode are maintained. The late quartets possess a wealth of imagination in their scoring and texture, and at times timbre has a more expressive significance than any other element. Experimentation and variety in timbre are not only ornamental, but also contribute to the overall dramatic effect. One of the most striking examples of this is the Tenth Quartet, the 'Polyphonic' (1984), the second movement of which consists of a sonic portrait of old Tbilisi; here, the quartet imitate the sounds of folk instruments (duduki, daira, doli and others).

As a result of the close interaction of original and folk thematic material in Tsintsadze's work, the latter became an integral part of his musical language, the resulting fusion being polyphonized and subjected to variation. In the one-movement Eleventh Quartet (1986) the principal subject undergoes the stages of reflective analysis, dramatic treatment, and finally the catharsis of transfiguration, the last bars dissolving into silence. In no other work did he achieve such profundity and expressive power: a ceaseless flow of variations on the opening melodic cell strikingly displays the imagination of a composer who can harness all the possibilities inherent in a simple melodic fragment.

LEAH DOLIDZE

Tsïtovich, Vladimir Ivanovich

(*b* Leningrad, 6 Aug 1931). Russian composer and musicologist. After attending a musical school he studied at the music college attached to Leningrad Conservatory (1949–53) with Sergey Wolfenson (composition) and Grunya Gankina (piano) before entering the conservatory itself in 1953, where he studied composition with Arapov (graduating in 1958) and piano with Isaya Braudo (graduating in 1959). He joined the Composers' Union in 1957 while still a student at the conservatory. In 1961 he attained his *aspirantura* (post graduate education) in composition (with Arapov), and joined the conservatory staff in the same year, as a lecturer in composition and instrumentation; he was appointed senior lecturer in 1972 and professor in 1990. Among his students were the composers Anatoly Korolyov (in composition) and Aleksandr Radvilovich (instrumentation) and the conductors Vladimir Al'tshuler, Peter Feranets and Yury Temirkanov. He became an Honoured Artist of the RSFSR in 1990. Tsïtovich has successfully combined composition and teaching with research; in 1973 he defended a *kandidat* dissertation entitled *The specifics of Béla Bartók's timbral thinking*, and he has published a number of articles in specialist volumes and journals.

Tsïtovich's first serious composition dates from 1956 and since then he has composed in a variety of genres. He has collaborated with the ballet master Leonid Yakobson, the conductors Igor' Blazhkov, Eduard Serov and Yury Temirkanov and the violist Yury Kramarov. He is one of Russia's acknowledged masters of writing music for children; he has made a major contribution in this field. The intellectual foundation of Tsïtovich's music is enhanced by unfettered fantasy; the logical precision and aphoristic wit of his musical utterance do not, however, compromise the total sum of his musical ideas. His work has a fine architectural balance and sense of proportion; a mastery of tone-colour and rhythm and, finally, a sense of humour are further characteristics of the music of this distinguished representative of the St Petersburg school of composition of the second half of the 20th century.

ADA BENEDIKTOVNA SCHNITKE

Tsitsanis, Vassilis

(*b* Trikala, 1915; *d* Athens, 1984). Greek *rebetika* musician. He was the leading figure in postwar *rebetika* and his career spanned almost 50 years. He went to Athens in 1936 to study law but abandoned his studies to become a full-time musician and song writer. His first recording, made in 1936, was a song about hashish, although later he disassociated himself from the disreputable elements of the *rebetika* milieu. He wrote his first successful song, *Arhondissa* ('Classy Lady'), in 1938. During the German occupation of Greece he moved to Thessaloniki where he opened his own bar and continued to write songs, including the most famous of his compositions *Synnefiasmeni kiriaki* ('Cloudy Sunday').

Returning to Athens in 1946, Tsitsanis resumed his recording career. His discovery of the singer sotira Bellou inspired a number of his finest songs. The partnership between them lasted until his death. He also collaborated

for many years with the singer Marika Ninou. In the aftermath of World War II and the Greek Civil War, as the *rebetika* lost their popularity, Tsitsanis began to distance himself from the genre and described himself as a composer of *laika* ('popular') songs. Since there was never any clear distinction between these two genres his claim was no doubt a successful bid for survival as a songwriter. With the revival of *rebetika* in the 1970s he was hailed as the greatest of the *rebetika* composers.

For bibliography *see* Rebetika.

GAIL HOLST-WARHAFT

Tso Chen'guan

(*b* Shanghai, 5 March 1945). Chinese composer. He has lived in Russia since 1961. He studied the cello at the Novosibirsk Conservatory, graduating in 1971, and then went on to study composition with G.I. Litinsky at the Gnesin State Institute for Musical Education. He is a member of the Union of Composers, and of the Russian Association of Contemporary Music. He taught at the Institute of International Relations (1974–80), and was senior editor of Gostelradio (1980–88). Since 1989 he has been a research worker at the State Institute of Art History. He has played in the symphony orchestras and string quartets of the Irkutsk, Novosibirsk and Kemerovo Philharmonias. In 1978 and 1993 he won international composing competitions in Shanghai; 1988 saw the first programme of the composer's works performed in Moscow. He has been a participant in festivals of contemporary music ranging from the Moscow Autumn to the Almeida (London); his works have been heard in more than 20 countries including China, Singapore, Great Britain, Yugoslavia, Germany, Finland, Austria and Korea.

Tso writes predominately instrumental music; he is attracted to oriental themes, and with his preference for sound painting assisted by contemporary techniques, he creates an intensely original space-time continuum in such works as *Osennyaya luna v Khan'skom dvortse* ('An Autumn Moon in the Khan's Palace') (1989), *Gokhua* for chamber ensemble (1984) and *Prikosnoveniye k tsvetam méykhua* ('Touching the Flowers of Meykhua') for chamber ensemble, 1993). He often conjures up the images and the symbols of ancient Chinese philosophy (*Tsin'* for piano, 1994; *U Sin*, for percussion, was suggested by the atmosphere in a Buddhist temple).

Tso's characteristic use of sound colouring, microtones and rhythmic exactitude are specific features of his style; he also freely blends in elements of pointillism, minimalism and aleatory, sonoristic and serial techniques. It is recognized that traditions of the East are reflected in his work; they show themselves in his sensibility for the beauty of sound (especially in the imitation of the sounds of ancient Chinese instruments), and in the manner in which particular procedures of meditation may be said to have affected his way of thinking. Tso is actively engaged in research

work, particularly regarding the problems Chinese music has faced in its development from ancient times to the present day.

Tsontakis, George

(*b* Astoria, NY, 24 Oct 1951). American composer and conductor. He studied with Hugo Weisgall at Queens College, CUNY (BA 1974), privately with Felix Greissle, and with Roger Sessions at the Juilliard School of Music (MM 1976, DMA 1986). A Fulbright-Lusk Fellowship (1980–81) enabled him to pursue additional study with Donatoni at the Accademia di S Cecilia and in Stockhausen's seminar in Rome. His principal conducting teachers included Mester and Peress. In 1979 he assumed the direction of the Metropolitan Greek Chorale, New York. He has also conducted the Riverside Symphony, New York, served as composer-in-residence at the Aspen Music Festival (from 1976) and directed the Aspen Music Festival Contemporary Ensemble (from 1991). He joined the music department at Sarah Lawrence College in 1993. His honours include a Charles Ives Award (1980), two Kennedy Center Friedheim Awards (1989, 1992), a lifetime achievement award from the American Academy of Arts and Letters (1995), a Guggenheim Memorial Fellowship (1996) and numerous commissions.

Tsontakis's early works are written in a dissonant chromatic idiom not unlike that of Sessions. His musical language soon shifted, however, towards a classically-influenced style characterized by large-scale harmonic prolongations and what he calls 'the timeless gesture', a reference to the past through evocation rather than quotation. With the String Quartet no.3 'Corragio' (1986) he arrived at an idiosyncratic tonal language propelled by a non-minimalist, Beethovenian use of repetition. Another primary feature of his work, particularly notable in the *Byzantium Kanon* (1986) and *Stabat mater* (1990), is the influence of sacred music of the Greek Orthodox church. Secular folk music of the same region figures prominently in the oratorio *Erotokritos* (1982) and other works. A number of his compositions have been recorded.

<div align="right">ERIC MOE</div>

Tsoupaki, Calliope

(*b* Piraeus, 27 May 1963). Composer of dual Greek and Dutch nationality. She studied piano and theory at the Hellinicon Conservatory in Athens, and took a composition course with Yannis Ioannithis. She then studied composition with Louis Andriessen at the Hague Conservatory, graduating in 1992. She has attended summer courses given by Messiaen, Xenakis, Boulez and Feldman. In 1993 she won a three-month residency in Budapest from the 'Pepinières for Young Artists' Foundation. In 1996 the 43rd International Rostrum of Composers of the International Music Council chose *Sappho's Tears* as a recommended work for radio broadcasting. She regularly receives commissions from leading Dutch ensembles.

Although Tsoupaki now lives in the Netherlands, the titles of her works show her continued interest in Greece. Her music often breathes a mystic, serene atmosphere, with melodies filled with nostalgic longing. An example is the diptych *Nostos* (Return). In *Nostos I*, based on a folksong from Thrace, colourful instruments are used to create a modal atmosphere. While the soloist sings in *rebetiko* style, bells, glockenspiel, recorder and piano all tinkle independently in light descending runs, accompanied by a tape with the sound of gentle waves and footsteps on seaside pebbles. *Siren* (*Nostos II*) is more dramatic, being based on a tragic story about a Greek revolutionary who wrote letters to a secret beloved. It employs the sounds of real sirens, with stormy percussion used to dramatize the plight of an idealist who, because he feels his love slipping away, destroys himself.

HELEN METZELAAR

Tsuge, Gen'ichi

(*b* Aiti Prefecture, 23 Sept 1937). Japanese ethnomusicologist. After studying ethnomusicology at the Tokyo National University of Fine Arts and Music (BA 1961) he carried out research in Persian music at the University of Tehrān (1963–6), and then moved to Wesleyan University, Connecticut, where he obtained the doctorate (1974) with a dissertation on the rhythmic aspects of Iranian classical music. After teaching at the same university (lecturer 1970–74, assistant professor 1974–9), he returned to Japan and became professor of musicology at Kunitachi College of Music. In 1984 he was appointed associate professor at the Tokyo National University of Fine Arts and Music and director of Koizumi Fumio Memorial Archives of the same institution. In 1991 he was made professor of musicology. As an executive board member and president (1997–8) of the Society for Research in Asiatic Music and an executive board member of the ICTM (1980–), he succeeded in internationalizing the Japanese musicological world and at the same time making the administration of international organizations reflect Asian perspectives. His research interests are focussed on analytical, theoretical and symbolic aspects of Japanese and West Asian musics. He has also specialized in the history of Asian musics and the musical ethnography of Iran, Turkey and central Asia. He has been active in introducing contemporary concepts of world musics to Japanese readers.

YOSIHIKO TOKUMARU

Tsuji, Hiroshi

(*b* Aichi-ken, 10 Dec 1933). Japanese organ builder and organist. He graduated in 1958 from the Tokyo Geijutsu Daigaku (Tokyo Music School), where he had become interested in the workings of the school's organ. He served an apprenticeship with the Schlicker Organ Co. of Buffalo, New York, from 1960 to 1963, and with Flentrop Orgelbouw, Zaandam, Netherlands, from 1963 to 1964. He then returned to Japan to open his own workshop in a Tokyo suburb, and later moved to a larger shop in Shirakawa, Kurokawa. In 1971 he began a study of the historic organs of Europe, and has built several organs based on north European and Italian models, all of which have mechanical action and classical voicing. He is the first Japanese maker to have undertaken the building of pipe organs. Important instruments include those in the Protestant Church, Yashima

(1974), Tokai University (1975), St Paul's Church, Tokyo (1976), the Protestant Church, Gifu (1980), and the Museum of Fine Arts, Gifu (1984).

BARBARA OWEN

Tsuji, Shōichi

(*b* Gifu, 20 Dec 1895; *d* Tokyo, 21 April 1987). Japanese musicologist. He graduated in psychology at Tokyo University in 1920; he also studied composition and conducting with Ryūtarō Hirota, violin with Shin Kusakawa and *gagaku* (Japanese court music) with Yoshiisa Oku. In 1922 he began teaching at St Paul's University, Tokyo, retiring as professor emeritus in 1965; he also lectured at Tokyo University, the Tokyo National University of Fine Arts and Music and Kyūshū University. From 1968 to 1977 he was professor at Kunitachi Music College. The first important Japanese scholar to specialize in European music, Tsuji introduced musicology to Japan. He specialized in Bach and the history of Protestant church music, but is also known for his biographies of Mozart and Schubert. He was one of the founders of the Musicological Society of Japan, serving as president from 1964 to 1970.

Tsutsumi, Tsuyoshi

(*b* Tokyo, 28 July 1942). Japanese cellist. He studied with Hideo Saito at the Tōhō Gakuen School of Music, Tokyo, and with Janos Starker at

Indiana University, Bloomington. In 1955 he made his concerto début in Tokyo, playing the Saint-Saëns A minor Concerto, and in 1960 toured Europe as a soloist with the NHK SO. He made recital débuts in New York, Berlin and London in 1964. Tsutsumi became Starker's assistant at Bloomington in 1963 and was artist-in-residence from 1966 to 1969; he was visiting professor at the University of Western Ontario from 1968 to 1984 and professor at the University of Illinois (1984–8). He has been guest professor at the Tōhō Gakuen School of Music since 1977 and professor at Indiana University since 1988. He has also given masterclasses in Japan, North America and Europe. His many premières include Takemitsu's *Orion and Pleiades* with the Tokyo Philharmonic SO (1984), the cello concertos of Yashiro and Miyoshi (1960 and 1974) and works by S. Saegusa and Ichiyanagi, of which he is also the dedicatee. Of his recordings, the Bach cello suites and complete Beethoven sonatas have been particularly admired. Tsutsumi's playing, on a Domenico Montagnana cello dated 1733, combines an impeccable technique, a luscious tone-quality and an elegant sense of style.

MARGARET CAMPBELL

Tsuur [tsoor].

Mongolian end-blown pipe with three finger-holes which appears to act as an external amplifier for overtones from the low-pitched vocal drone generated by the musician. The drone may be modified by as much as a whole tone by stopping the top finger-hole of the instrument. By fingering the second and third holes, two simultaneous melodies may be produced from overtones (*see also* Overtone-singing).

Widespread under different names among Altai Mountain peoples, it is played by three neighbouring groups in contemporary west Mongolia: the Altai Urianghais (*tsuur*), Tuvans (*shuur*) and Kazakhs (*sybyzgy*). The size and compass of the instrument, position of finger-holes and manner of holding the instrument varies with each group. Occasionally Kazakhs make a fourth hole, one finger's width from the third. Altai Urianghais play the instrument for entertainment while tending the flocks, when encouraging animal mothers to accept their rejected young, prior to hunting, at the beginning of domestic celebrations and from the first to third day of the New Year to ward off bad spirits. When in the countryside, the *tsuur* is hung onto a horse's tail and, when in the home, tucked safely behind a rafter in the respected northern section of the tent. Kazakhs play the *sybyzgy* in celebrations for the birth of a child, during weddings and during their New Year celebration. Prior to the communist era in Mongolia, every Kazakh family had to own a *sybyzgy* and keep it in a place of honour even if none could play the instrument.

The *tsuur* is said by Mongols to date back to Hunnic times but is rare among contemporary Mongols because of attempts by the former communist regime to eradicate it. The instrument is described in the

Kalmyk Mongol epic-cycle Janggar as being played together with the *yatuga* or Yatga. The classical Mongolian word *chogur* or *chugur* has been identified in 14th-century literary texts. In the 18th century, Pallas described the technique of playing a three-hole, end-blown Kalmyk pipe related to the Bashkir *kura* and Kyrgyz *choor*. Isolated examples of the instrument have recently been found in the Inner Mongolia and Xinjiang autonomous regions of China, where it is called *modon huur* and *chor* respectively.

The instrument is made by slitting a larch or willow branch into two halves, hollowing them out, binding them together again with goat gut or thread and then inserting them into a wet intestine, which contracts as it dries. This ensures rigidity and prevents air loss from the joins.

The inside of the pipe is moistened with water prior to playing. The instrument is lodged on the left side of the mouth, between a central and adjoining tooth, with the lips on that side of the mouth closed around it. Maintaining airflow is essential for producing the sequence of notes required achieved after taking air in through the mouth. Each melody is produced by one exhalation of breath. Various traditional melodies (*tatlaga*) are played, often imitating the sounds of nature including water, animal cries and birdsong (*see* Narantsogt, illustration).

Tuareg music.

The Tuareg (sing. Targi), probably of Berber origin, are defined here as traditionally nomads who are widely dispersed over the middle of the Sahara and the Sahelian steppe-country, to the south of the desert. The estimated population of 500,000 are Muslims and have a hierarchical matrilineal social structure with several castes. The Tuareg are in permanent contact with their neighbours, both those of African origin to the south and those of Arab descent to the north, and maintain economic relations with these groups through barter. In spite of this, they have retained their cultural identity and their own language, Tamachek or Tamacheq (with its own script, Tifinar). Many features of Tuareg music are likewise quite distinct from those of its neighbours. In contrast with black Muslim societies, there are no professional musicians among the Tuareg, although certain members of the servant caste do at times profit from their gifts as singers or instrumentalists.

Although both men and women make music, they use separate forms and styles. Women's songs include *tindé nomnas* (praise-songs), *tindé N'guma* (songs of exorcism) and *ezelé* (dance-songs). They are all usually in responsorial form, with both the solo and chorus parts using a limited melodic range. The two kinds of *tindé* have instrumental accompaniments, but the rhythmic accompaniment to *ezelé* comes from hand-clapping.

Tichiwé (men's songs) are in striking contrast to the women's, in that they are essentially lyrical. The man sings of the beauty of the woman he loves or celebrates some happy event in his life. They are performed by soloists, either with or without an accompaniment played on the *imzad* (*anzad*,

anzhad), a one-string fiddle; (fig.1), and are characterized by an extraordinary profusion of ornaments and their extended vocal range.

The art of the singer among the Tuareg lies in improvisation, although this closely follows certain traditional melodic forms. The scales used are often pentatonic, though other more complex ones are also to be found and may include such intervals as augmented 2nds. Although this may indicate some influence from the Middle East, it does not challenge the originality of Tuareg music; only very exceptionally are microtones used. Sometimes, especially at the ends of certain songs, the singer introduces notes that appear unrelated to the scale on which the piece as a whole is based. On other occasions, notes with specific structural functions are deliberately altered. Such practices are evidence of the outstanding virtuosity of skilled Tuareg singers, and it is by such means that they constantly renew the interest in their songs.

Tuareg music is primarily vocal and only a small number of instruments are used. These are played predominantly by women. Mention has already been made of the *imzad*, usually used in accompanying men's songs. This is made by women of the blacksmith caste and played only by women of the nobility. It comprises a resonator made from half a gourd covered with a goat skin; the horsehair string is stretched over a bridge made of two small pieces of wood which form a cross. The bow is made from horsehair knotted to the two ends of a curved stick.

The *tindé* (*tende*) (fig.2), which is played by women to accompany their songs and from which the names of their two kinds of song are derived, is a drum made from a goat skin stretched over a mortar. Tuareg men play an oblique end-blown flute with four finger-holes, called *tazammart* in the north and *tasansagh* or *saréwa* (Hausa) in the south (fig.3). It is constructed from a sorghum stem in which four equidistant holes are made, and has leather thongs tied round its body for protection and ornamentation. The *assakhalebo* ('water-drum') is made from a half-gourd that floats inverted in a large bowl of water. The *tabl*, a shallow kettledrum of wide diameter with a camel skin stretched over the top, formerly used to give the call to battle, is played by groups of women to accompany singing. A three-string plucked lute, *tahardent*, is played in urban centres. Dances (e.g. *tehigelt*/*tehemmet*, *tazengherit* and *arokas*), formerly performed predominantly by slaves, are now performed by men of all ranks. There are regional differences and individual groups of Tuareg show a preference for certain instruments and dances over others.

TOLIA NIKIPROWETZKY

Tuba (i).

A wide-bore valved brass instrument. It is used as a bass or contrabass member of the band or orchestral brass section (in the Hornbostel and Sachs system it is classified as an Aerophone: trumpet). The term is applied to instruments of various sizes and shapes with a wide, conical bore, three to six (rarely seven) valves, and an open (no valves operated) tube length of at least 8', giving a pedal (fundamental) note of *C* or below. Several members of the tuba family are commonly called by other names, e.g. the Euphonium, bombardon (*see* Bombardon (i)), Sousaphone and Helicon. The lower members of the Saxhorngroup may be included in the tuba family. The Wagner tuba has characteristics of both horn and tuba. The tuba, basically a valved bugle, is a comparative newcomer to the brass section (the first instrument so named, a five-valve *Bass-Tuba*, was introduced in Germany in 1835). Unlike the trumpet and horn, it has no direct ancestors among the valveless brasses; the Ophicleide – a keyed brass instrument made in contralto, bass and contrabass sizes – is probably its closest predecessor. Other bass lip-reed instruments superseded by the tuba are the Russian bassoon, Bass-horn and Serpent.

Tuba parts are usually notated at sounding pitch, but in British brass bands and French bands the tubas are treated as transposing instruments.

1. Structure.
2. History.
BIBLIOGRAPHY

CLIFFORD BEVAN

Tuba (i)

1. Structure.

The tuba's wide conical bore (in early instruments interrupted only by the more cylindrical valve system), wide bell and deep cup-shaped mouthpiece give the instrument a rich, smooth tone and facilitate the sounding of the lowest notes of its harmonic series, including the fundamentals. In timbre the instrument is more akin to the horn than to the trumpet or trombone, but because of its massiveness of tone it is associated with the 'heavy' brass.

Usually the tubing is coiled in an elliptical shape with the bell pointing upright. The helicon and sousaphone, however, are made in circular form: these instruments wrap round the player and rest usually on the left shoulder with the bell reaching up above the head, making the instrument easier to carry while marching. Some upright tubas have been made with the bell pointing forwards; this forward-facing or 'recording' bell was devised during the 1920s, when the tuba was often substituted for the double bass in recording studios, as techniques were insufficiently developed to record string tone properly. Instruments with this kind of bell have proved serviceable in the band but unsuitable for orchestral use because of the resulting tone quality; hence modern tubas sometimes provide for the attachment of either an upright or a recording bell (fig.1*c*). Tubas have been built with a left-facing bell (i.e. with the bell to the left of the mouthpiece, as seen by the player; see (fig.1*d*) or with a right-facing bell (fig.1*b*), depending somewhat on whether the instrument has piston or rotary valves. Piston top-valves require a right-facing bell, but piston side-valves (an American development) allow a left-facing bell. The use of rotary valves invariably results in a left-facing bell, allowing the player to use the left hand to adjust the valve slides during performance when necessary. Piston valves are unsuitable if the bore (at the valve) is larger than 19 mm, and rotary valves are faster but less rugged.

Usually there are four valves arranged to lower the instrument's pitch by 1, ½, 1½ and 2½ tones respectively. Used in various combinations the four valves enable the player to produce a complete chromatic octave between the 2nd harmonic and the fundamental (ex.1). But intonation difficulties encountered when using valves in combination are magnified because of the tuba's large size. In ex.1 the cumulative pitch inaccuracy by the time *B′* is reached is at least a semitone, causing the note to sound as *C* unless adjusted in some way. Many players 'lip' the notes down; others, especially in England and many parts of the Commonwealth (in Canada, American practice is followed), use a valve system with a mechanism (such as that designed by D.J. Blaikley in 1874) that automatically compensates for intonation errors. A fifth valve, which usually lowers the pitch by a major 3rd, is often added, and sometimes a sixth (fig.1*a*); each provides fingering alternatives to improve intonation (*see also* Acoustics §IV and Valve (i)).

Playing the tuba demands an enormous amount of breath, especially on the larger instruments, but does not require high breath-pressure. The lips are normally loose and cushionlike; only in the high register need they be compressed or tense. In the hands of an accomplished performer the tuba can be an agile instrument, but the breath supply must constantly be renewed and, on the larger instruments, the lowest notes must be attacked with deliberation.

Tubas in use at the end of the 20th century included the tenor tuba in B♭ (Fr. *tuba basse*, *saxhorn basse*; Ger. *Baryton*; It. *flicorno basso*, *eufonio*), a bass instrument covering much the same range as the cello; bass tubas in F and E♭ (Fr. *tuba contrebasse*; Ger. *Basstuba*; It. *flicorno basso-grave*), contrabass instruments fulfilling a similar function to the double bass; and contrabass tubas in C and B♭ (or, as makers and players would term them, 'CC' and 'BB♭' respectively; the latter is often shown as 'B♭').

The tenor tuba in 9' B♭ (with an open pedal (fundamental) of *B♭*) is often designated 'euphonium' when used in bands, especially in England, and 'tenor tuba' when used orchestrally. In English practice the euphonium is often played with vibrato; the tenor tuba is not. The instrument has the same tube length as the B♭ baritone (an instrument of the saxhorn type), but its bore is wider. Pedal notes from *B♭'* down to *E'* and beyond are available; the upper range extends to *b♭'* or even higher.

The original German *Bass-Tuba* of 1835 was built in 12' F and instruments of this pitch were still in common use in orchestras in much of continental Europe at the end of the 20th century. The band equivalent of the F tuba is the 14' E♭ instrument (in England formerly sometimes called 'bombardon'), which is generally used in combination with the contrabass in 18' B♭. Until about the 1960s a tuba in 12' F was commonly used in English orchestras. It was replaced by an instrument in E♭ with a full bore and four valves ('EE♭'), which remained the most common orchestral tuba in England at the end of the 20th century.

The contrabass tuba in 16' C (with an open fundamental of *C'*) became the standard orchestral type in the USA in the 1940s. At the end of the 20th century it was being increasingly used in England as an alternative to the 'EE♭' instrument, and in continental Europe as an alternative to the F instrument. The 18' tuba in B♭ ('double B♭' or 'BB♭'), with either three or four valves, is primarily a band instrument; in the USA it occurs regularly in sousaphone form. The CC instrument, though a whole tone higher than the BB♭, usually has as wide a bore, giving it a distinctive and satisfying timbre, while its being pitched in C facilitates fingering in the sharp keys frequently found in orchestral works.

Very large sub-bass and 'subcontrabass' tubas have occasionally been made, but have for the most part proved impractical. In 1851 Adolphe Sax built a *saxhorn-bourdon* in E♭ and four years later an even lower one in BB♭. An even larger instrument, Gustave Besson's *Trombotonar*, also in BB♭, was 3 metres tall. Other giant tubas have been built, but it is not certain which of them has the dubious distinction of being the largest tuba in the world, as one instrument might have a greater length of tubing while another might have a larger bell or a greater volume of tubing.

The unique French six-valve tuba in 8' C (fig.1*a*) was developed as an all-purpose orchestral tuba, following on the widespread use of the C ophicleide, a French invention. The six valves enabled it to cover a four-octave range and play Wagner contrabass parts as well as ophicleide parts. French composers, having this instrument in mind, have tended to

write passages for tuba in a higher range than is usually asked of other tubas. For example, the 'Bydlo' solo in Ravel's orchestration of Musorgsky's *Pictures at an Exhibition*, with a compass of F♯ to g♯ is well suited to the C tuba but can pose difficulties to players using BB♭ or F instruments.

Tuba (i)

2. History.

During the 1820s several makers, including Stölzel, may have produced valved brass instruments pitched as low as 12' F. The effectiveness of most of these would have been doubtful since the generally available valves could not be used with the wide bore required in low bugle-horns. In 1827 Stölzel devised a new type of valve, the *Röhrenventil* (later called *Berliner-Pumpe*), a short piston valve of large diameter, which was suited to use on wide bore instruments. The first practical application of the new valve to a low instrument was a *Bass-Tuba* in F introduced by the Prussian bandmaster Wilhelm Wieprecht and the instrument maker J.G. Moritz in 1835 (Prussian patent no.9121 of 12 September 1835). It was equipped with a variant of Stölzel's valve developed by Wieprecht and Moritz, called the *Stecherbüchsen-Ventil*. The design of the *Bass-Tuba* may have been suggested by the suitability of this kind of valve to an instrument of relatively wide bore through the valves; or else the valve itself may have been the outcome of work carried on perhaps first by Stölzel, later by Wieprecht and Moritz, in developing valved low brass instruments. Wieprecht and Moritz's prototype bass tuba, of which there is a specimen dating from 1838–40 in the Musikinstrumenten-Museum, Berlin, differed in appearance from the modern tuba (fig.2*a*) but displayed certain of its important characteristics: it was pitched in F (subsequently the standard pitch of orchestral tubas); it had five valves arranged to lower the pitch of the instrument by 1, ½, 1½, ¾ and 2½ tones respectively; and it could be played down to the fundamental or pedal notes. The instrument was made from brass with German silver fittings, as are most continental tubas to this day.

Other makers adopted Wieprecht and Moritz's designs and began producing tubas in various sizes and shapes (fig.2*b*). The influence of these designs is seen, for example, in the large valved brass instruments ('trombacellos') built by Graves & Co. of Winchester, New Hampshire, in the 1840s. Within a few years makers in German-speaking countries began using rotary valves (introduced in practical form in 1835 by J.F. Riedl of Vienna) instead of *Berliner-Pumpen*. The first contrabass tubas in CC and BB♭ were built in 1845 by the Bohemian maker V.F. Červený. In France during the 1840s and 1850s Adolphe Sax developed the family of saxhorns (ranging in size from sopranino to contrabass), the lower members of which closely resembled modern tubas.

The tuba was soon adopted by bands and orchestras in the German states, but was more slowly accepted in other countries, especially Britain and France, where the ophicleide was firmly established. In France the keyed ophicleide was not superseded at the Paris Opéra until 1874; and although a 'Sax bass' was present at the first known English brass band contest (Burton Constable, 1845), symphony orchestras in England did not

introduce tubas until 1863–87 and even then continued to use the ophicleide until the last years of the century. (When he joined the Hallé Orchestra in 1894 Harry Barlow was expected to play both ophicleide and tuba, although it is likely that he played only tuba following Hallé's death in 1895.) It was, in fact, a Frenchman, Berlioz, who was the first major composer to include tubas in his works. He found in the instrument an answer to problems caused by his customary use of large numbers of higher wind instruments. Previously having used several ophicleides to achieve the proper balance, he now substituted tuba for ophicleide in almost all his scores, with the advice that it be doubled at the octave because of its relative weakness in the lower register. Possibly because of this early usage the tuba came to be regarded as a type of ophicleide in France; for many years the F tuba was known as 'ophicléide monstre', while the term 'ophicléide' could mean either *ophicléide à pistons* (i.e. tuba) or the keyed ophicleide. (19th-century German references to *Ophikleide* should be taken to mean *Ventilophikleide*, a tuba in ophicleide form (see fig.2*b*), rather than *Klappenophicleide*, the keyed ophicleide.)

The Faust overture, often cited as Wagner's first work using the tuba, was composed in 1840 but not performed until 1855, after considerable revision including adjustments to the orchestration. Wagner first scored for bass tuba in *Der fliegende Holländer*, first performed in 1843, and specified use of the contrabass tuba in *Das Rheingold* (composed 1853–4). Later in the century Mahler, keenly aware of the distinctive characteristics of each orchestral instrument, often scored solo passages for tuba. Composers of the Second Viennese School, influenced no doubt by Mahler, treated the tuba equally with other individual instrumental voices. An additional tone-colour was provided by the mute, first requested by Richard Strauss in *Don Quixote* (1896–7).

In eastern Europe the tuba was primarily influenced by the distinctive instrument built by Červený, who until the establishment of the Russian maker Šediva (Schediwa) in the early 1880s was apparently the sole supplier to Russia. Červený's *Kaisertuba* appeared in the early 1880s: made in several pitches, with a very large bore, this design was later copied by many other manufacturers. As professor at the St Petersburg Conservatory, Rimsky-Korsakov, who had become well acquainted with the tuba's potentialities while he was inspector of naval bands, influenced Borodin and others in their treatment of the instrument. Late 20th-century Russian orchestras used the largest and deepest tubas, but there is evidence in Tchaikovsky's and Borodin's works that the three-valve E♭ tuba may have been in common use during the 19th century. The great ballet scores of Rimsky-Korsakov's pupil Stravinsky, since they were composed for performances by the Ballets Russes in Paris, tend towards the French practice of writing for the high tessitura, and do not share the deep massive style of Prokofiev and Shostakovich that is typical of 20th-century Russian composers.

In Britain during the late 19th century, orchestral tuba players had often been trained on the ophicleide or euphonium. The F tuba became standard in symphony orchestras, no doubt because players felt more comfortable with it than with a deeper instrument. The E♭ tuba was also found in orchestras, especially amateur ones. Particularly in lighter music, English

composers also wrote for the tenor B♭ tuba or euphonium. Since the euphonium was often treated as a solo instrument in bands, many British tuba players were capable of considerable virtuosity, and composers such as Elgar, Holst, Vaughan Williams, Walton and Tippett often exploited this. Vaughan Williams's Tuba Concerto in F minor (1955) is the classic work for solo tuba and orchestra; another notable work is the concerto by Edward Gregson (1978; originally with brass band, 1976).

During the early part of the 20th century American orchestras, also drawing on band practice, often adopted tubas in E♭ or BB♭. German musicians who played in the newly formed American orchestras made the F tuba popular, and American manufacturers such as King began producing German-style tubas. Later in the century the contrabass in CC was adopted in the USA.

At the end of the 20th century German and American bands used contrabass tubas in BB♭ and sometimes C; the E♭ bass instrument was found in school bands. British brass bands included two instruments in E♭ and two in BB♭ (reading in transposed treble clef); military bands employed one of each (reading at concert pitch in the bass clef). French and Italian bands also included E♭ and BB♭ tubas, notated in France in transposed bass clef, and in Italy in concert pitch bass clef. During the 1940s the British brass band composers Kenneth Cook and Eric Ball wrote quartets for two E♭ and two BB♭ tubas. Such tuba ensembles (which frequently also include euphoniums) have a largely American repertory. The Tubists Universal Brotherhood Association (TUBA), founded in 1968, has played an active role in encouraging performances. At the end of the 20th century it had about 2500 members worldwide.

Although the tuba repertory has been created over a shorter period than that of other orchestral instruments, tuba players are asked to play in a wide variety of styles, partly because of the divergence of opinion among composers of different countries as to exactly what instrument is meant by 'tuba'. Since orchestral parts for the instrument are written at concert pitch in the bass clef, the player can choose which tuba will best fit a given part. The lowest note in the symphonic repertory is the *A″* in Max Trapp's Fourth Symphony (1928); *g♭* or *a♭* appears regularly in 19th-century French works. Although such avant-garde composers as Melvyn Poore and Krysztof Knittel have on paper extended the compass as far as five octaves, *A″* and *a♭* may be regarded as the extremes of the range normally required.

The period since 1945 has been a time of rediscovery of the tuba; jazz musicians (such as Bill Barker, Don Butterfield and Howard Johnson), the avant garde (e.g. the French tuba and serpent player Michel Godard) and composers of popular music have demonstrated the instrument's unique character. The tuba can be a more subtle and agile instrument than traditionally supposed and can produce a wide variety of timbres. The doyen of tuba players in the mid-20th century was undoubtedly William ('Bill') Bell (1902–71), for many years a member of the Sousa Band and the New York PO, and an influential teacher. Other notable players and teachers have included: in the USA, Rex Connor (1915–95), Harvey

Phillips (*b* 1929) and Arnold Jacobs (1915–98); in England, Stuart Roebuck (1935–94) and John Fletcher (1941–87). These two countries have produced many tuba players who have worked elsewhere; England and the USA have thus influenced stylistic and technical concepts in continental Europe and other parts of the world. A significant late 20th-century work for solo tuba and orchestra is Birtwistle's *The Cry of Anubis* (1994), a 'part tuba concerto, part tone poem'.

Tuba (ii).

A trumpet-like instrument (classified as an Aerophone), the most important of the Roman brass. It consisted of a straight cylinder of bronze or brass or, less frequently, iron or ivory, about 1·2 to 1·5 metres in length, and flared at the end (see illustration). Usually it had a detachable mouthpiece of horn or ivory. Modern models produce about six tones of the overtone series. Several classical references to the instrument as 'terribilis' or 'rauca' suggest that its tone must have been more strident than that of the modern trumpet. Similar instruments existed in ancient Greece, Israel and Egypt, but the Roman version was directly derived from the Etruscans. Several authors, both Greek and Roman, attributed the invention of the overall type to the Etruscans; although this is obviously untrue, it serves to illustrate the prominence of the Etruscans in the area of brass instruments.

In Etruscan pictorial representations the tuba appears with other brass instruments such as the Cornu and Lituus as an instrument of solemn processions for funerals, civic religious ceremonies and military triumphs. The tuba was used by the Romans for these and other purposes: there survives a rich collection of iconographic and literary evidence.

Although the tuba was not used as frequently in cult music as the tibia or the lyre it had a prominent and even privileged position there. Its players, the *tubicines sacrorum populi romani*, came to enjoy the rank of priest in

imperial times. Each year on 23 March and 23 May a ceremony called the *tubilustrium* took place in which the trumpets used on cult, state and military occasions were blessed.

Above all the Roman tuba functioned as a military instrument: it accompanied marching, sounded the attack and the retreat, and joined the cornu in the heat of battle where its function was both to inspire the Romans and to strike fear into the enemy. Distinctions between the tasks of the various military instruments, namely, tuba, cornu, lituus and Buccina, are seldom clear, but Vegetius's differentiation between the two most important – tuba and cornu – seems plausible. In his *Epitoma rei militaris* he claimed that the cornu relayed commands to the standard bearers while the louder tuba announced them to the army at large. A surprising number of these instruments was employed; the *legio* III Augusta listed 39 *tubicines* and 36 *cornicines*.

The tuba was also played in the arena: only the Hydraulis is mentioned more frequently in this connection.

JAMES W. McKINNON

Tuba curva [corva].

A crude wind instrument, created during the French Revolution and first heard publicly during the ceremony of Voltaire's reburial on 11 July 1791 (see illustration). No undoubtedly authentic specimen survives, since official conservation of instruments was haphazard before the late 19th century. The instrument, probably of brass alloy, had a mouthpiece but was otherwise unbroken and curved into a 'G' shape. There were no finger-holes.

Examination of the music written for the tuba curva shows that the instrument was somewhat over 2·5 metres long and made in three sizes to yield a limited harmonic series on the fundamentals $B\flat$, C and D. Its sound was described at the time as resembling that of six serpents.

The tuba curva (and its companion instrument, the Buccin (i)) was created according to a design that satisfied the musical requirements of composers and the aesthetic principles of Revolutionary iconography. Composers needed a new instrument that would provide increased support for the bass in outdoor music. The great majority of tuba curva and buccin music is found in choruses or instrumental pieces performed at various festivals of the Revolution (*see* Revolutionary hymn). Both instruments assisted in louder episodes in the same limited manner as the natural trumpet; indeed on their first appearance they were described in the score as 'trompe antique' ('antique hunting horns').

In accordance with the neo-classical design of the costumes and emblems of certain festivals, the shape of the tuba curva was taken from antiquity. The model was probably the curved trumpet depicted on Trajan's Column, Rome (see P.S. Bartoli: *Colonna Traiana*, 1700, pls.7 and 8). A decorated variant appears in J.-B. de La Borde's *Essai sur la musique* (1780), i, 233. Gossec was the first composer to write for the instrument and Méhul the last, in *Joseph* (1807). Two instruments identified as 'Trompette courbée: tuba curva' by La Borde (1780) have a curved form like the Roman model, but end in a loop with a dragon's head like the 19th-century buccin, possibly providing a link between the Revolutionary and the 19th-century instruments. The two types were already being confused by Choron in 1813 (*Traité général*).

'Tuba curva' in Chouquet's catalogue of the Paris Conservatoire museum (1884; no.592) was the name given to a 3·4 metre replica of a bronze Pompeiian trumpet from the 1st century ce. A supplement to the catalogue (L. Pillaut, 1899) reports Pierre's discovery in 1893 of a U-shaped tuba curva.

For bibliography *see* Buccin (i).

DAVID CHARLTON

Tuba ductilis

(Lat.).

Term used from the 16th century for the Trombone.

Tubal, Adrian

(*fl* 1553–6). Flemish composer. Ten Latin motets and five chansons were ascribed to Tubal in anthologies of the mid-16th century. Most of the motets were published at Antwerp in a series devoted to composers born and trained in the Low Countries; Hubert Waelrant edited the collections and printed them in collaboration with Jean Laet. On this evidence it has been asserted (*FétisB*) that Tubal was of Franco-Flemish origins. Fétis's view is supported by the style of Tubal's motets which are closely akin to those of Clemens and Crecquillon. They are through-composed and consistently imitative; each musical phrase corresponds to a line of text and begins with a syllabic motif treated in imitation with melismatic continuation and dovetailed cadences. Occasional homophonic passages are introduced, often for verbal effect (e.g. at the words 'sustinete hic' in *Tristis est anima mea*, RISM 1556[5]). Tubal's melody and harmony are conventional, with little chromaticism except for the decoration of cadences by dissonant suspensions. His chansons are similarly typical of the post-Josquin school of Netherlandish composers. The poems are characteristic of the preceding generation; two are narrative anecdotes, two courtly *épigrammes* and one a strophic chanson by Clément Marot. Five

canzonettas for four voices are ascribed to Tubal in the Winchester Partbooks (*GB-WCc* 153), copied in the Low Countries (dated 1564–6).

WORKS

10 motets, 4–6vv, 1554^3, 1554^6, 1555^6, 1555^7, 1556^3, 1556^5, 1556^6, 1556^7

5 chansons, 4, 6vv, 1553^{25}, 1556^{17}, 1556^{18}, 1556^{19}

5 canzonettas, 4vv, *GB-WCc*

FRANK DOBBINS

Tubaphone.

A percussion instrument like a glockenspiel (*see* Glockenspiel (i)) but with metal tubes instead of steel bars, giving it a softer sound. Its range is *c″* to *c″″*. Although it is used mostly in military bands, Khachaturian included it in his ballet suite, *Gayane*. It is also called 'tubuphone'.

Tubb, Ernest

(*b* nr Crisp, TX, 9 Feb 1914; *d* Nashville, TN, 6 Sept 1984). American country music singer and guitarist. During his early career he copied the style of Jimmie Rodgers, including the latter's distinctive yodel; when a tonsillectomy in 1939 made the yodel impossible, Tubb created his own drawling, deep-voiced style, which has had many imitators. In the 1930s he performed on several Texas radio stations, and in 1936 Rodgers's widow helped to arrange a recording session for Tubb with RCA Victor, on which he sang, among other things, *The Passing of Jimmie Rodgers*. In 1941 he made recordings for Decca; *I'm walking the floor over you* (1941) was his first hit. He made his first guest appearance on the 'Grand Ole Opry' in 1942 and became a regular member the following year. Tubb appeared in several films, including the country musicals *Jamboree* (1944) and *Hollywood Barn Dance* (1947). His performances on radio, concert appearances and tours of Texas dance halls with his band, the Texas Troubadours, helped to create the honky-tonk style of country music. In 1947 he first broadcast 'Midnight Jamboree', a radio programme that followed the 'Grand Ole Opry' on WSM, Nashville, and helped to launch the careers of such musicians as the Everly Brothers and Elvis Presley. His recordings and concert apperances kept him at the forefront of country music for decades.

Tubb's vocal style, straightforward lyrics and advocacy of the electric guitar made him a formative figure in the development of honky-tonk. He also helped to establish Nashville as the centre of country-music recording, and persuaded Decca to replace its 'hillbilly' music designation with 'country'.

Tubbs.

English family of bowmakers. The family can be traced in London back to the middle of the 1600s, but the immediate forebear of the bowmakers was the weaver William Tubbs of Bethnal Green, three of whose sons, William (*b* Bethnal Green, 30 Oct 1770), Henry (*b* Bethnal Green, 27 April 1785) and Thomas (*b* Stepney, December 1790; *d* Lambeth, 29 March 1863) took to bowmaking during the years after 1800, most likely in the workshop of the elder Edward Dodd (*see* Dodd (i)). The work of the brothers spanned the era of the modernization of the bow, but only Thomas made any quantity of branded works, and so it has not been possible to identify the individual hands in a workshop in which the quality of work was variable.

Thomas considered the most important maker of the first generation of the family. He first became active on his own account in Soho during the early 1820s, ultimately settling in Lambeth where he remained until his death. While many of his bows were marked with his own name, many others were made for the trade, including such noted shops as those of George Corsby, William Davis, and Louis Panormo, much of whose production probably came from Thomas's workshop. His brand-mark was t-tubbs, usually on the obverse of the handle immediately adjacent to the adjuster. To Thomas we may owe the introduction into English bowmaking of such features as metal headplates and underplates, the 'Parisian' eye, and tortoiseshell as a material for frogs, while at the same time perserving such classic English features as the short length, angled frogs, and oval shape of the stick in cross-section. While early bows often have open ivory or ebony frogs and plain tips, later works have the full mounts associated with modern work.

Thomas's son William Tubbs (*b* Southwark, 20 Nov 1814; *d* Soho, 28 April 1878) was a highly important bowmaker. He was probably a pupil of his father and of the brothers James and Edward Dodd (ii); he took over the latter's business upon his death in 1851. From the 1840s onward he was assisted in bowmaking by his sons William, Thomas, Charles Edward, John Edward, and above all James. His bows were often made for dealers, although a significant quantity were either branded with his stamp w. tubbs or sold unbranded. A number of earlier French and English sticks, some better than others, have been seen with gold and tortoiseshell mounts made by William Tubbs, which suggests that someone may have profited from having silver-mounted bows refitted with gold. He also may have begun the practice of replacing the fittings on older English bows, on which the open frog remained characteristic long after the practice had been abandoned on the Continent, with modern mounts. There is a very decided evolution of the style of the bows of William Tubbs, the earliest work resembling that of his father and teachers, the middle period showing a more modern approach akin to the similar transformation occurring in France, and finally a smaller, more delicate model quite similar to French and German work from the latter part of the 19th century.

William's son James Tubbs (*b* Lambeth, 25 March 1835; *d* Soho, 19 April 1921) was by far the most important bowmaker in the family and perhaps in

England. While early accounts described him as being born in Soho, he was in fact born in Lambeth and was baptized in his grandfather's parish church. He moved to Soho with his father in about 1850 and remained there the rest of his life. He was probably a pupil both of his father and of his uncle Henry, of whom he spoke glowingly in later years. In about 1858 he appears to have been engaged by W.E. Hill as a bowmaker. The bows of this period are frequently outstanding, cleanly made, and with a clear and unmistakably personal style. These bows are frequently shorter in length, usually mounted in ebony and silver, although chased gold mounts are occasionally seen, and are branded w.e. hill on each side of the handle and on the frog.

Tubbs's employment by Hill lasted until 1862, when Hill received the Gold Medal for Tubbs's bows at the International Exhibition of that year, but it is not certain that Tubbs did not continue to make bows for Hill, and he may have performed repairs for the firm into the 1870s. Nevertheless, a substantial argument with Hill ensued, occasionally becoming public at such events as the sale of the Woolhouse Estate. Tubbs would later brand his own name over the Hill mark when he came across one of his early bows, and for many years Hills would not sell a Tubbs bow in their shop. The early years were probably not easy, for with some handsome exceptions the wood is not of the best quality. The bows were branded j. tubbs. Gradually he defined the style which distinguished the rest of his work: the head broad but delicate, with narrow chamfer (in the style of certain Tourte bows), the button of plain silver, the face also of silver, the frog rectangular and with a plain pearl eye (later the heel was rounded and the eye dispensed with). After his father's death, when his brothers entered bowmaking on their own accounts, he changed his brand to jas tubbs. His best bows were mounted with gold and ebony, and sometimes the gold was engraved. An octagonal stick is very rare in a Tubbs, as are bows mounted with gold and tortoiseshell or ivory. The bows are distinctive not only visually but also to the player. They have a unique way of gripping the strings, and some claim that if one is used to a Tubbs it is difficult to play with anything else. The Duke of Edinburgh conferred on Tubbs a royal appointment in about 1874, and after 1878 Tubbs began offering his annual bow prize to students at the Guildhall School of Music and the Royal Academy of Music.

Well before the turn of the century James Tubbs was helped by his son Alfred (*b* Soho, 1863; *d* Soho, 3 Nov 1909). His own craftsmanship grew heavier and coarser with age, but their quality both in observation and use did not. After Alfred's death he began his series of 'Birthday' bows, a special bow with engraved mounts made on each birthday; these bows are now collectors' pieces. He always seems to have worked very quickly. In all he is said to have made, with his son's help, 5000 bows for violin, viola and cello. Occasionally examples are rather weak, but few makes of bow are preferable to the stronger ones by this remarkable man.

Edward Tubbs (*b* St Pancras, London, 1843; *d* New York, 1922) was the younger brother of James Tubbs. He was established in New York City in the early 1880s and worked predominantly as a dealer. His early bows were stamped e. tubbs, the brand e. tubbs new york being adopted after his move. Another brother, Charles Edward (*b* Soho, 1850; *d* St Austell,

1912), was more active as a music seller but also made and sold bows; he used the brand c.e. tubbs.

Tubin, Eduard

(*b* Alatskivi, nr Kallaste, 18 June 1905; *d* Stockholm, 17 Nov 1982). Estonian composer, active in Sweden. He ranks as one of the most prominent international figures in the history of Estonian art music, the early development of which coincided with Tsar Alexander II's liberalizations of the mid-19th century. An Estonian style of composition was widely sought over the brief period of independence from Russian occupation (1918–40), a span demarcated almost exactly by Tubin's first compositions and his arrival at his mature style. Tubin studied in Tartu with Eller, and first gained attention as a composer with his Second Symphony (1937) at a time when he was making his living as an orchestral and choral conductor. Tubin fled to Sweden the day before the Soviet army reoccupied the Estonian capital in September 1944, and he remained there until his death. Some two years after his arrival in Sweden he finished the dramatic and nationalist Fifth Symphony with which Malko, Schmidt-Isserstedt and others first introduced him to audiences abroad. Tubin was able to return to Soviet Estonia several times during and after the Krushchyov period: he wrote his two operas for the Estonia Theatre in Tallinn. Several Swedish honours came to Tubin in his last decade, among them state grants, the prestigious Atterberg Prize and membership of the Royal Music Academy. The conductor Neeme Järvi began a recorded survey of Tubin's music for the BIS label shortly before the composer's death, and in 1995 the Estonian National Library acquired Tubin's manuscripts.

Tubin's career began at a time when nationalist-romantic and modernist currents overlapped in independent Estonia. As Rumessen (1986) has pointed out, Tubin's nationalism subsumed the work of three Estonian forebears: the drama and large-scale forms of Tobias, the subtle orchestral virtuosity of Eller (who, like most Estonian composers of his generation, studied in St Petersburg), and Saar's attempt to meld Estonian folklore with a nationalist concert style. As with Sibelius, however, Tubin made his international reputation with symphonies that lack folkloristic elements: although he often recalled the modality and intervallic constructions of Estonian folksong, only the Fifth of his ten completed symphonies quotes a specific Estonian tune. His work also allies itself more with French and Russian styles (Stravinsky's rhythmic intensity, Honegger's extended tonality) than with the Nordic style of Sibelius or the Germanic manner of Stenhammar.

Tubin's first three symphonies, nationalist in tone and epic in scale, are marked by a rhythmically propulsive and ecstatic orchestral style that reflects Tubin's interest in Skryabin as well as his debt to Eller's brand of impressionism. The radiant, lyrical and transparent Fourth Symphony – at least in its 1978 abbreviation and revision – evokes idealized, pastoral images rather than the turmoil of Estonia's occupation. Tubin's Sixth was marked by a passing interest in jazz and Latin dance rhythms, and is his most ironic and cosmopolitan work. The four remaining completed symphonies, with the exception of the expressive Eighth, are neo-classical to varying degrees. In this, they might reflect the composer's work between 1945 and 1972 in preparing performing editions of Alessandro and Domenico Scarlatti and Mozart's *La finta semplice* for the Drottningholm Court Theatre.

Tubin, in a similar way to Nielsen, Prokofiev and Honegger, brought a narrative theatricality to concert genres. From the beginning he displayed an instinctive and impeccable grasp of polyphony and large-scale structures, yet his orientation is essentially linear and dramatic. Tubin's works are often marked by cyclic unity and thematic economy, but tend to avoid schematic forms, discrete thematic areas, and clear recapitulation. The scherzo of the heavily-scored First Symphony offers an early example: no closed sections articulate the expected ternary form, and the reprise extends and develops the opening material. Tubin underlines the narrative quality of the Symphony no.2 'Légendaire' by restating the opening material in the slow epilogue to the work as a whole. He similarly combines the sonata-allegro forms of his Third and Tenth Symphonies with fugato and ternary elements respectively. Tubin also used symphonic procedures in his non-orchestral music, favouring ostinato and polyphonic development in chamber, solo instrumental and operatic works: Rumessen, for instance, has referred to the 'dramaturgical unity' and 'multilayered and monumental orchestral splendour' of the striking Piano Sonata (1950). The later symphonies, with their reduced orchestral forces, tend towards more clearly recapitulated sonata-allegro structures, but even here fugato and a theatrical use of themes can leave the impression of through-composed forms.

Tubin's harmonic language ranges from free chromaticism to mild polytonality: he professed a distaste for Schoenbergian atonality and twelve-note techniques and an inclination towards the strict voice-leading rules of the 'Palestrina style'. Tubin's taste for archaisms also manifested itself in his operas' inclination towards feudal Estonian subjects. The *Reekviem langenud sõduritele* ('Requiem for Fallen Soldiers') completed in 1979 stands out among his contributions to the song and choral traditions of his native country; it has no connection with the Latin mass, being based instead on Estonian wartime lyrics. The String Quartet is another late and often diatonically-orientated work, based entirely on folk dances and ending with a characteristic fugue fashioned from this material. His varied output also includes several solo concertos, orchestral and instrumental arrangements of folk tunes, chamber works for strings especially, and the folk ballet *Kratt*.

Tubular bells [chimes, orchestral chimes]

(Fr. *cloches*; Ger. *Glocken*, *Röhrenglocken*; It. *campane*, *campanelle*).

A set of tuned metal tubes (classified as an idiophone: set of percussion tubes). They are used for bell effects in the orchestra and on the operatic stage, real bells being cumbersome, heavy and difficult to play with rhythmic precision. Tubular bells consist of a series of brass or steel tubes ranging in diameter from about 3 to 7 cm; the greater the diameter, the longer the bell tube. The compass of the standard set of tubular bells is *c'* to *f''* or *g''*. Two-octave sets *(f–f''org'')* are used in continental Europe and Kolberg has produced a three-octave set (*c–c'''*). The tubes hang in a frame mounted in two rows, keyboard-fashion. They are struck at the top edge, which is capped or reinforced with an inner metal disc or pin. For general purposes a rawhide or plastic mallet is employed, one side usually covered with leather or felt for a contrast in tone. The bells are damped by a foot-pedal mechanism. To play one of the larger instruments, with some tubes 3 metres or more in length, the player stands on a platform; a music stand is incorporated above the instrument.

Tubular bells were introduced by John Hampton of Coventry in 1886, for the peal of four bells in Sullivan's *The Golden Legend*. In 1890 the codophone, a set of 15 tubular bells operated by a keyboard, was used in a performance at the Paris Opéra. Gustave Lyon constructed another instrument of this type in 1908. The part for tubular bells is usually written in the treble clef, at sounding pitch, but though earlier composers frequently wrote in the bass clef it is doubtful whether they were favoured with instruments at the pitch written. Outstanding writing for tubular bells can be found in John Ireland's *These Things Shall Be* (1936–7), Britten's chamber opera *The Turn of The Screw* (1954), Messiaen's *Turangalîla-symphonie* (1946–8) and *Chronochromie* (1960), and Boulez's *Pli selon pli* (1959–62).

Tubular bells sound quite different to church bells, and are frequently a poor imitation of them. In orchestral situations where the composer obviously had the genuine article in mind (e.g. Berlioz's *Symphonie fantastique*, written *g* and *c* in the bass clef; Ravel's orchestration of Musorgsky's *Pictures at an Exhibition*, e☐in the bass clef) real bells are much more effective and their use is very feasible when only one or two pitches are required. For the use of various types of bell in orchestral music, *see* Bell (i), §7.

Tučapský, Antonín

(*b* Opatovice, nr Vyškov, 27 March 1928). Czech composer and conductor. After attending the teachers' institution at Valašké Meziříčí (1943–7), he read musicology and music education at Brno University (until 1951) and concurrently studied choir conducting at the Janáček Academy; he studied composition during this same period with Jan Kunc. At first a secondary school teacher in Kroměřiž and Nový Jičín, Tučapský was appointed lecturer at the university in Ostrava in 1959. During the period he directed the Children's Choir in Ostrava and the famous Moravian Teachers' Choir with whom he achieved considerable success. In 1972 he married the English soprano Beryl Musgrave (a move which cost him his professional post, in former Czechoslovakia), and in 1975 they left for London, where he was appointed professor of composition at Trinity College of Music.

Naturally, vocal compositions are central to his output. Among the most significant of his songs are *The Beginning and The End* (1976), *The Marriage of Psyche* (1981) and *Love and Sorrow* (1983), the latter based on Moravian folksongs. Although later works set English texts, Tučapský has remained true to his Moravian musical roots which had informed Janáček before him. It is his choral works which have brought him widest public recognition, in particular the *Five Lenten Motets* (1977), *Lauds* (1978), *The Seven Sorrows* (1989), *Stabat mater* (1989) and the cantata *Mary Magdalene* (1991). Tučapský's music is tonally based, accessible and direct in its expression.

WORKS

(selective list)

Stage: The Undertaker (op, after A.S. Pushkin), 1988, London, 1993

Choral: Poselství J.A. Komenského k národu [Comenius's Message to the Nation] (J.A. Komenský), Bar, TTBB, bells (1970); Co zbylo z anděla [Before Trees Stir] (J. Skácel), female chorus, fl/rec, tambourine, tri, 1975; In honorem vitae (5 madrigals, Horace), SATB, 1975; The Time of Christemas (Old Eng. texts), solo vv, chorus, gui, 2 glock, tambourine, drum, 1975; Lauds (W.H. Auden), SSAATB, 1976; 5 Lenten Motets (Latin), SATB, 1977; The Sacrifice (G. Herbert), Bar, SATB, org, 1977; The White Goose (Moravian folk poetry), SSAA, 1978; Missa serena (orat), S, Bar, double chorus, org, orch, 1979; Domov [Home] (K. Vokáč, Tučapský and J. Zahradníček), SATB, 1981; Comoedia (Latin), S, Bar, chorus, hn, 2 tpt, trbn, tuba, 1982; Songs of Joy (W. Davenant, Herbert, W. Blake, Causley), SATB, 1983; Veni, sancti Spiritus, SATB, 1985; Babí léto [Indian Summer] (Skácel), SATB, 1986; Under the Starry Sky (H. Raine), SATB, 1988; The 7 Sorrows (T. Hughes), chorus, vn, 1989; Stabat mater (orat), A, Bar, chorus, orch, 1989; Mary Magdelene (cant., B. Pasternak), S, chorus, orch, 1991

Solo vocal: Moravian Love Songs, middle v, pf, 1975–80; The Beginning and The End (R. Jeffers), Bar, cl, pf, perc, 1976; 2 Burns Songs (R. Burns), high v, pf, 1978; The Marriage of Psyche (K. Tucci, Gabriella

(*b* Rome, 4 Aug 1929). Italian soprano. After studying at the Rome Conservatory, she continued her vocal training with Leonardo Filoni, whom she later married. In 1951 she made her début in *La forza del destino* opposite Gigli. She sang throughout Italy (her La Scala début was as Mimì in 1959), and made guest appearances internationally, notably at the Teatro Colón and the Bol'shoy Theatre. She made her London début at the Adelphi Theatre as Mimì in December 1959 and first appeared at Covent Garden in the next year, as Aida and Tosca. Her American début, in San Francisco, was as Maddalena (*Andrea Chénier*) in 1959; the following October, as Butterfly, she began a close association with the Metropolitan which lasted until 1973. Her repertory included most of the standard Italian spinto roles and she also successfully undertook the challenge of such florid parts as Elcia (*Mosè in Egitto*), Luisa Miller and Elvira (*I puritani*), as well as Mozart, Gluck and Gounod roles. Tucci was an uneven singer but her best performances were notable for communicative warmth, taste and lustrous tone. A poignant actress, she was especially effective in the final acts of *Otello*, as discs of a performance in Japan corroborate, and *La traviata*. She was also a sympathetic and dramatically convincing Leonora (*Il trovatore*), a role she recorded with Schippers.

MARTIN BERNHEIMER/R

Tuček [Tuczek, Tutschek].

Bohemian family of musicians. There has been much confusion over the Tuček family, as most writers have followed Bohumír Dlabač's *Allgemeines historisches Künstler-Lexikon für Böhmen* (Prague, 1815) in creating a 'František (Vincenc) Tuček' (*b* Prague, *c*1755; *d* Pest, after 1800) whose career was a composite of those of the two most important members of the family, (1) Jan Tuček and (2) Vincenc Tuček.

Tuček

(1) Jan Tuček

(*b c*1743; *d* Prague, 19 Sept 1783). Composer and conductor. He made his career in Prague as a choirmaster and, from the early 1770s, as conductor of the civil guard band. He wrote incidental music to a number of plays which have taken on a particular significance because they were some of the earliest productions in the professional theatre to use the Czech language and, as such, provide an important link with the pioneering work of František Škroup. He is credited with the music for the pantomime-intermezzo *Der verliebte Nachtwächter* which, despite its German title, is in Czech, and probably the first Czech play to be professionally staged. The date of its first performance may have been as early as 1763, but the first documented performance was in Brno on 11 January 1767. Another of Tuček's early works, the burlesque *Verbování na koňském trhu* ('Recruiting at the Horse Fair'), was probably first performed in 1769. For another play, *Opilý muž* ('The Drunken Man'), he composed an overture, seven arias, six duets and five recitatives; Tomášek, in his autobiography, mentioned that this piece was performed in his home town of Skuteč, which gives evidence of its continuing popularity in 18th-century Bohemia.

Tuček's significance in the tentative beginnings of Czech opera lies in his bringing the provincial tradition of Czech Singspiel into an urban setting, where it competed with the attractions of Italian opera and violated the dictates of aristocratic taste. From then on Czech Singspiel always held a place, however tenuous, in Prague's theatres, particularly at U Hybernů, the Patriotic Theatre, where it alternated with German Singspiel and Italian *opera buffa*.

Tuček

(2) Vincenc (Tomáš Václav) Tuček [Tuczek, (Franz) Vinzenz (Ferrerius)]

(*b* Prague, 2 Feb 1773; *d* Pest, 1821 or later). Composer, conductor and singer, son of (1) Jan Tuček. He first sang at the Patriotic Theatre, Prague, in December 1793; in the following year he sang Tamino in the first Czech performance of *Die Zauberflöte*. From 1794 to 1796 he was harpsichordist at the Patriotic Theatre and composed half a dozen Singspiels for it; some of them were given in Czech and in German. In 1797 he became Kapellmeister to Duke Peter of Courland, and staged *Don Giovanni* at the castle theatre at Náchod (east Bohemia). In 1800 he moved to Breslau, and in March 1801 to Vienna, where he had been known as early as 1794

as having set Gieseke's *Der travestierte Hamlet*, performed at the Theater auf der Wieden and presumably commissioned by Schikaneder. He joined the Theater in der Leopoldstadt in 1801, making his début in Müller's *Die Schwestern von Prag* (he had earlier written music for the Prague première of this work). After Müller's departure for Prague in March 1807 Tuček was Kapellmeister to the Leopoldstadt theatre, though as early as 1802 he is named in the printed text of *Die Erlösung, oder Die Schlafenden* (Pest, 1802) as 'Kapellmeister der hiesigen k[öniglichen] Theater'. He resigned from the theatre in September 1809 and spent the remainder of his life in Budapest.

In many respects Tuček was typical of the itinerant minor composers of the age; he wrote a quantity of music of which little survives and almost none outlived the occasion for which it was written. He did however achieve more than a passing success with the opera *Lanassa*, the melodrama *Samson, Richter in Israel* and the Singspiel *Dämona, das kleine Höckerweibchen* (56 performances in the Theater in der Leopoldstadt, 1806–15, revived in the Theater in der Josefstadt, 1822). Most popular of all were the Singspiel *Hanns Klachl von Przelautsch* (1795 or 1796) and its sequel *Die zwei Klacheln*.

WORKS

stage

all Vienna operas performed at the Theater in der Leopoldstadt

Pražšti sládci [Die Prager Bräuer] (P. Šedivý), Prague, Hibernian, 28 Sept 1795

Honza Kolohnát z Přelouče [Hanns Klachl von Przelautsch, oder Das Rendezvous in der neuen Allee] (Spl, 2, F.G. Quolfinger von Steinsberg), Prague, Hibernian, 31 Jan 1796 or earlier; as Hans Dachel, oder Der Bräutigam von Kakran, Teplitz, 1797

Die zwei Klacheln von Przelautsch (op, 2, Steinsberg), Prague, 6 Jan 1797 [sequel to Hanns Klachl]; as Die beiden Dacheln (2, Tuček), Pest, Stadt, 5 Aug 1811

Rübezahl [Ripheus; Typhon] (op, 3, S.G. Bürde), Breslau, National, 1801

Dämona, das kleine Höckerweibchen (Spl, 3, J. Bullinger), Pest, Stadt, 29 May 1805, Vienna, 4 Feb 1806, *Bc*, vs (Leipzig, n.d.)

Lanassa, oder Die Eroberung von Malabar (3, Tuček), Pest, Stadt, 13 Dec 1805

Die Polterhexe von Lichtenstein, oder Die Zwogenhöhle (komisches Volksmärchen mit Gesang, 3, J. Einweg), Vienna, 3 Oct 1807

Idas und Marpissa (travestierte Dekorations-Oper, 3, J. Perinet), Vienna, 19 Dec 1807 [parody of opera by Stegmayer and Seyfried]

Die neue Semiramis (grosse heroisch-komische Travestie-Oper, 3, Perinet), Vienna, 25 June 1808

Samson, Richter in Israel (melodrama, 3, J.A. Schuster), Vienna, 13 Aug 1808, *Bc*

Der Durchmarsch, oder Der Alte muss bezahlen (komische Oper, 3, Perinet), Vienna, 30 Nov 1808 [based on J. Panek: Die christliche

Judenbraut, 1788]

Alarich und Zaïde, oder Die bezauberte Leyer (komische Zauberoper, 3, J.A. Gleich), Vienna, 5 Jan 1809

Die vier Heymonskinder (komisches Volksmärchen mit Gesang, 4, Gleich), Vienna, 4 Feb 1809

Die schöne Melusine, Vienna, 6 May 1809

Das Laternenfest (3, Perinet), 1809

Israels Wanderung (3, Girzik), Pest, Stadt, 22 Dec 1810

Der Papillonfänger auf den blauen Gebirgen (heroisch-komische Oper, 2, M. Fenzl), Vienna, 7 Nov 1812

Moses' Tod (op, 3, Tuček), Pest, Stadt, 22 Dec 1812

Der Kosak und der Freywillige (op, 1, A. von Kotzebue), Pest, Stadt, 8 Nov 1814

Der Canarienvogel (op, 1, Tuček), Pest, Stadt, 11 Feb 1816

Ruderich der Grausame (op, 3, Tuček), Pest, Stadt, 18 Nov 1816

Fürstin Wlasta, oder Der Amazonenkrieg (op, 4, Tuček), Pest, Stadt, 8 July 1817

Laïs und Amindas, oder Der Kampf für Vaterland und Liebe (op, 3, Tuček), Pest, Stadt, 29 Dec 1817; ? as Doris und Amindas, oder Verrat aus Liebe (3, J. Jung), Pest, 23 March 1829

Arabella, oder Die Schreckensfolgen der Eifersucht (op, 3), Pest, Stadt, 26 Oct 1818

6 ballets and pantomimes, incl.: Kavallerie zu Fuss (Fenzl), Vienna, 19 Dec 1808; Johann von Paris (Bernardelli), Pest, 24 Nov 1814

Incid music to at least 15 plays, incl.: Der travestierte Hamlet (3, C.L. Gieseke), Vienna, 10 July 1794, *A-Wn*; Moses in Egypten (4, Gleich), Vienna, 2 Aug 1810; Sultan Korradin, Beherrscher von Jerusalem (4, Schuster), Vienna, 4 Nov 1815

other works

Vocal: Das jüngste Gericht (orat); Der Retter Böhmens (cant., F.A. von Mohrenbach), Prague, 3 Nov 1796; Zur Feyer der Wiedergenesung des Königs von Preussen (cant.), 1798; Chor auf den Tod des Th. Stelzer (J. Korntheuer), Pest, 1 Dec 1815; masses; requiem

Inst: sym., 1816; Die Schlacht bey Leipzig, tone poem, 1816; Musicalisches Schlachtgemälde als Ouvertüre zum militärischen Gemälde von Schiller, tone poem, 1820; music for tableaux, other works

Tuček

(3) František [Franz] Tuček

(*b* Königgrätz [now Hradec Králové], 29 Jan 1782; *d* Berlin, 4 Aug 1850).Teacher and composer, a relative of (1) Jan Tuček. He studied at the University of Vienna briefly, then taught the piano and the guitar privately. In 1842 he followed his daughter (4) Leopoldine Tuczek-Ehrenburg to Berlin. He wrote variation sets, character-pieces and dances for the guitar and the violin.

Tuček

(4) Leopoldine (Margarethe) Tuczek-Ehrenburg

(*b* Vienna, 11 Nov 1821; *d* Baden, nr Vienna, 20 Oct 1883). Soprano, daughter of (3) František Tuček. She studied singing at the Vienna Conservatory from 1828 to 1834 and joined the court opera two years later. In 1841 she moved to Berlin, where she was a leading soprano at the court opera for 20 years, earning the title of royal *Kammersängerin*.

Tuck [touk, tuicke, tuk, tuke, took etc], tucket [tucquet].

From the 14th century to the end of the 18th, a signal or flourish on trumpet(s) or drum(s). As a verb, 'tuck' occurs in the 14th and 15th centuries, more often in connection with drums ('nakeryn noyse, notes of pipes, Tymbres & tabornes, tulket among'; Morris, l.1414). The sounds of trumpet and drum were often distinguished, especially in the 15th, 16th and 17th centuries, by the use of different verbs, as in 'The trumpet sounds, The dandring drums alloud did touk' (*Battle of Harlaw*, after 1500) or in 'toucking of kettle Drummes, sounding of Trumpets, and other ostentations of ioy' (Lithgow). As a noun, 'tuck' was used in John Lydgate's translation of *The Destruction of Troy* (1410–20) to mean a trumpet signal for assembly: 'With the tuk of a trump, all his tore knightes He assemblit'. Otherwise its musical use was apparently confined exclusively to drums, and the 'tuck of drum' survived in the works of Scottish writers until well into the 19th century, as in Scott's *The Heart of Midlothian* (1818, 'An open convocating of the king's lieges … by touk of drum').

'Tucket' is found in the late 16th century and the 17th, mostly in the stage directions of plays, where it chiefly indicates a piece of trumpet music to accompany an entrance: '[Tucket within.] Hark, the Duke's trumpets! I know not why he comes' (Shakespeare: *King Lear*, Act 2 scene i; 1608). The stage direction 'flourish', which is often applied to both entrances and exits, may be an alternative term. The sounding of a tucket before a military signal is also found in Shakespeare: 'Then let the trumpets sound the tucket sonance and the note to mount' (*Henry V*, Act 4 scene ii; 1599). The term was also used as an alternative name for one of the military trumpet signals: Markham (1639) gave 'Tucquet, march' as the fourth of six explicitly military calls meaning 'Marching after the Leader'.

The tucket was known by various name forms elsewhere in Europe: *Toccete* in Germany (C. Hentzschel: *Oratorischer Hall und Schall … der Trommeten*, 1620), *tocceda* in Denmark (Thomsen, *c*1596), and *toccata*/*toccada* in Italy (Bendinelli: *Tutta l'arte della trombetta*, 1614), among others. These terms have been said to derive from the Italian Toccata, first met with in the late 15th century. However, this cannot be, since 'tuck' and its variants already existed in Old French and Middle English.

Surviving toccatas employ the low triadic register and would have been performed monophonically. (The *toccata … auanti il leuar de la tela* to Monteverdi's *L'Orfeo* (1607) derives its name from the inclusion of the 'customary' Mantuan court monophonic trumpet toccata in the *alto e basso* part of the five-part trumpet ensemble setting.) A particular recurring figure

is the 'dran', a sustained and accented fourth partial approached without separate articulation from a hardly-touched third partial.

There are two main types of toccata. 'Free-standing' ones 'employed on various [ceremonial] occasions' (Bendinelli) comprise four main sections and are characterized by thematic falling arpeggio figures (ex.1). 18 examples were given by Thomsen, and 27 by Bendinelli. The second type was employed in the 16th century and early 17th in conjunction with military signals. Bendinelli notes that these toccatas could be shortened or omitted, depending on the circumstances. He also, exceptionally, supplies a different toccata for nearly every trumpet signal. Thomsen, Mersenne (*Harmonie universelle*, 1636–7) and Fantini (*Modo per imparare a sonare di tromba*, 1638) each include a single toccata for use with all of their military signals, naming it the 'Ingangk', 'l'Entree' and 'sparata', respectively. The military toccatas are shorter than their free-standing counterparts and comprise one to three sections. Bendinelli includes syllabic underlay for his military toccatas to assist correct articulation and as *aides memoires*. The 'Cavalry March' signal was occasionally substituted for the toccata (and also alternatively named 'tucquet') before the trumpet signal 'To the Standard' (Bendinelli).

The free-standing and military toccatas were replaced during the 17th century by a derivative monophonic form called the Chiamata (later termed 'Ruf' in Germany), which may have evolved in its turn into the 18th-century German 'Tusch', a loosely organized trumpet ensemble fanfare on a standing chord. From the late 17th century to the 19th 'touquet' (and related forms) also meant the lowest-sounding trumpet part in military fanfares (J.M. Gottmann: *Aufzüge*; J.D. Buhl: *Méthode de trompette*; F.G.A. Dauverné: *Méthode pour la trompette*).

Tucke, John

(*b* ?Burford, Oxon., *c*1482; *d* Gloucester, after 1539). English theorist. His importance rests principally on the survival of his notebook (*GB-Lbl* Add.10336, partly ed. in Woodley), which contains often enigmatic material

relating to the notation and implicitly to the compositional process of early Tudor polyphonic music.

Tucke gained a scholarship at Winchester College in 1495, followed by fellowship at New College, Oxford (probationer 1501; full fellow 1502), where in 1505/6 he was paid 'for writing and notating a mass'. He obtained the BA around Easter 1504; although he supplicated successfully for the MA in March 1507, he seems never to have taken the degree. He resigned his fellowship some time before June 1507 to take up a teaching post (music or grammar) at Higham Ferrers College, Northamptonshire. On 16 April 1515 Tucke was appointed lay master of grammar, master of the boys of the Lady Chapel, and organist at the Benedictine abbey of St Peter, Gloucester. He retained this post until the dissolution and surrender of the abbey to the Crown on 2 January 1540, when he was retained in the position of 'master of the children'.

Tucke's notebook was compiled over a long period of time from his student days at Winchester through to his last years in Gloucester. In addition to a number of traditional theoretical and pedagogical texts, the notebook contains some particularly interesting material relating to complex coloration schemes in the early Tudor period, many of which can be related to lost versions of surviving works by composers such as Fayrfax, Ashwell and Taverner.

RONALD WOODLEY

Tucker, Edmund

(*fl* early 17th century). English composer. Two anthems of his are in a section of the 'Batten' Organbook largely devoted to music associated with southern England. He may therefore perhaps be the Edmund Tucker who was vicar-choral and organist of Wells Cathedral for less than a year from 1613 to 1614. He may also be identified with the Edward Tucker who succeeded John Farrant (ii) as organist of Salisbury Cathedral in 1618. Apart from the year 1625, when Richard Chappington was 'custos organorum', Tucker continued as organist of the cathedral until about 1631. He was reprimanded in 1624 for taking part in an argument in the cathedral with his colleagues. Surviving works include his five-part full anthem, *Christ*

rising again (*GB-Lbl*, *Lcm*, *Ob* and *US-NYp*), and the organ part of a verse anthem, *He blessed is* (*GB-Ob*). The words of *O give thanks*, attributed to 'Tucker', are in the second edition of James Clifford's *The Divine Services and Anthems* (London, 1664); the music is lost.

Tucker [Tooker], Edward

(*fl* 1618–1631). English organist. He succeeded John Farrant (ii) as organist of Salisbury Cathedral in 1618, and apart from one year continued in the post until about 1631. He may be identifiable with Edmund Tucker.

JOHN MOREHEN

Tucker, Mark (Thomas)

(*b* Seattle, 4 June 1954). American musicologist. He studied music at Yale University (1971–5), the piano at the Yale School of Music (1975–6), and undertook postgraduate work at the University of Michigan (1979–83), gaining the doctorate in 1986 with a dissertation on Duke Ellington. He lectured at Yale University (1985–6) before moving in 1987 to Columbia University, where he became associate professor of music in 1993. He has also been visiting associate professor in the department of Afro-American Studies at Harvard University. Tucker's field of study is American music, especially jazz. He has a regular column, 'Behind the Beat', in the *Newsletter of the Institute for Studies in American Music* and is a critic for the *New York Times* and *Jazz Times*. As a pianist, he has specialized in the music of Duke Ellington, on whom he has also written extensively, and jazz music of the 1920s and 30s. He is also experienced as a transcriber of jazz from recordings.

<div align="right">PAULA MORGAN</div>

Tucker, Richard [Ticker, Reuben]

(*b* Brooklyn, NY, 28 Aug 1913; *d* Kalamazoo, MI, 8 Jan 1975). American tenor. He studied with Paul Althouse and, after a spell in business, made his stage début as Alfredo with the Salmaggi Opera, New York, in 1943. In 1949 he received the accolade of being invited to sing in Toscanini's recorded broadcast of *Aida*. He made his European début in 1947 at the Verona Arena as Enzo to Callas's La Gioconda (her Italian début) and later appeared in London, Vienna, Milan and Florence. America in general and the Metropolitan in particular, however, remained the focal point of his extraordinary career, which spanned three decades of leading roles. Tucker's singing was never notable for finesse, and his acting, though energetic, remained primitive. But he had few peers in the projection of Italianate passions, or in fervour, ease, evenness and vocal security. He gave more than 600 performances in 30 leading roles at the Metropolitan, first lyric and later dramatic, beginning with *La Gioconda* in 1945 and ending with *Pagliacci* a few weeks before his sudden death. Among the recordings which best reveal his forthright, sturdy style are two versions of *La forza del destino* (one with Callas and one with Leontyne Price) and *Aida* (with Callas). Tucker was a deeply religious man; his wish to sing Eléazar in *La Juive* at the Metropolitan remained unfulfilled though he did undertake the role elsewhere (1973, New Orleans). He was the brother-in-law of a rival tenor, Jan Peerce.

<div align="right">MARTIN BERNHEIMER/R</div>

Tucker, Tui St George

(*b* Fullerton, CA, 25 Nov 1924). American composer and recorder player. She attended Occidental College, Los Angeles, from 1941 to 1944 and in 1946 moved to New York, where she became known as a recorder virtuoso and a composer, describing herself as 'underground'. Much of the inspiration for her compositions has come from her yearly summer retreats to the mountains of North Carolina, where she settled permanently in 1985; she began conducting and composing for the Springhouse Farm Choir of Valle Crucis in 1988. A strong melodic bias, ranging from plainsong-like expanses and baroque angularities to expressionist convolutions, characterizes much of her music, in which a pervasive sense of tonality, folk elements, musical quotations and startling, often humorous juxtapositions of disparate elements can also be found. Tucker's music for

recorder reflects her highly developed capacities as a performer, making use of extended ranges, quarter-tones, unusual trills, nature sounds and multiphonics. Some of these devices, especially quarter-tones, are also used in other works, for example *Little Pieces for Quarter-tone Piano*. In later microtonal compositions such as *Vigil 1* (1985) and *Vigil 2* (1989), for microtonal organ, she has continued to focus on key-orientated explorations of intervals above and beyond the outlined major triad of the overtone series (past harmonics 4:5:6). *Ave verum* (1992), an evening-length piano work, is written for a conventionally tuned instrument.

DOUGLAS LEEDY, JOHNNY REINHARD

Tucker, William

(*d* Westminster, London, 28 Feb 1679). English composer and clergyman. On the Restoration of Charles II in 1660 he became a minor canon of Westminster Abbey and Gentleman in holy orders of the Chapel Royal. He was never precentor of Westminster Abbey, as stated by Tudway and echoed by Burney. He was a minor composer of church music in a style which, though modern in outlook as compared with the polyphony of Orlando Gibbons or Tomkins, yet did not attain the more dramatic quality of Humfrey. His works are neatly turned but foursquare and, except for a few full anthems in five or six parts, modest in their technical demands. He did a good deal of music copying for the Chapel Royal and Westminster Abbey, some of which still survives (*GB-Lbl, Lwa*); he also supplied several provincial cathedrals with copies of recent works by London composers, in the process securing wide circulation for his own music. He was buried in the abbey.

Tucket.

See Tuck, tucket.

Tuckey, William

(*b* Somerset, 1708; *d* Philadelphia, 14 Sept 1781). English singer, teacher and composer. He was parish clerk of St Mary le Port, Bristol, and was a lay clerk in the cathedral choir from 1748 to 1752. He then emigrated to New York, where he remained from 1753 to 1773. He served as clerk of Trinity Church (1753–6), where he introduced, probably for the first time in North America, something like a full choir service on Anglican lines, using a choir of charity children. On 29 December 1755 he and William Cobham gave a concert of secular vocal and instrumental music for their own benefit – the first of many such events that Tuckey organized. In 1761 he

directed an anthem on the death of George II. He appeared on 1 January 1762 as Mr Peachum in a performance of *The Beggar's Opera* at the New Theatre in Chapel Street, 'for his diversion'. On 16 January 1770 he put on a concert for his own benefit, whose second half was 'the Overture and sixteen other Pieces' from Handel's *Messiah*, the work's earliest American performance.

In 1773 Tuckey tried unsuccessfully to publish by subscription 'a compleat set of church service' for the Anglican Church. Some time after that he left New York and moved to Philadelphia, where in 1778 at the age of 70 he was engaged as clerk of St Peter's Church. At least nine of Tuckey's compositions circulated in American tune books; the popular tune 'Psalm 33', first printed in James Lyon's *Urania* (Philadelphia, 1761/*R*), is convincingly attributed to him. His anthem *Jehovah Reigns*, from the same source, shows his control of composition techniques.

RICHARD CRAWFORD/NICHOLAS TEMPERLEY

Tuckwell, Barry (Emmanuel)

(*b* Melbourne, 5 March 1931). British horn player and conductor of Australian birth. He began his career at 15 with the Melbourne and Sydney symphony orchestras, and studied at the Sydney Conservatorium. In 1950 he left for Britain, where after various positions he joined the LSO as principal horn (1955) and chairman (1959). Relinquishing both posts in 1968, he then played mainly chamber and solo music, showing particular interest in contemporary works. He formed the Tuckwell Wind Quintet in 1968 and has played with the London Sinfonietta. His repertory includes the major horn concertos (which he has recorded), Britten's *Serenade*, and many works composed for him, among them Thea Musgrave's Concerto and Music for Horn and Piano, Iain Hamilton's *Sonata notturna* and *Voyage* (both recorded), Karl Kohn's *Variations* and Don Banks's Horn Concerto. He has also developed a conducting career, as director of the Tasmanian SO, 1980–83, and the Maryland SO, which he founded in 1982. He announced his retirement from horn playing in 1996, shortly after giving the première of the Concerto by Oliver Knussen.

The leading horn player of his generation, Tuckwell has an outstanding ability to make light of extreme technical and musical difficulties. His use of a large-bored modern Holton double horn gives his playing great presence, contrasting strongly with some of his predecessors who used the lighter-toned french horn. He has written a guide to the horn and its repertory, *Horn* (London, 1983). Tuckwell was the first president and honorary life member of the International Horn Society, and was made an OBE in 1965.

Tuder [Tudor, Tutor], John

(*fl c*1470). English composer. No biographical information is available, and there are no grounds for identifying him with a man of that name who was a townsman of New Romney, Kent, between the 1460s and 1500.

Two of his compositions, including the most substantial example, appear to have been preserved in incomplete form. The intervention of rests plus the omission of odd words and longer passages of text in the single surviving part of his extended setting of the Lamentations combine to suggest that this is the upper voice of a polyphonic setting whose lower voices were never entered into the manuscript. The extant voice-part elaborates in the manner of a set of variations the recitation formulae of its plainchant exemplar. The single surviving voice of Tuder's setting of the hymn *O lux beata Trinitas* elaborates on a similar principle the faburden of its parent chant. Selected apparently for the felicity and skill manifest in their technique, these extracts confirm the private and didactic character of the manuscript in which they survive (*GB-Cmc* Pepys 1236). Some idea of the nature of their complete form may be perceived in the three-part sections of *Gloria, laus et honor*, though in this case the upper-voice paraphrase is somewhat less florid. Each of the three settings of *Audivi* [*vocem*] is for two voices; they exploit with some ingenuity the imperfect consonances of the 3rd and 6th, and paraphrase the plainchant either in the lower voice or (by migration) in both. The vernacular song *O rote of truth* is for two voices, plus an optional bass exhibiting a rhythmic profile more florid than the two

structural parts. The surviving works appear to be the scant remains of an important composer, a professional musician probably in aristocratic service.

ROGER BOWERS

Tuderto, Jacobus de.

See Jacopone da Todi.

Tudino [Todino], Cesare

(*b* Atri, Abruzzo; *d* ?Atri, after 1591). Italian composer and organist. According to his publications he came from Atri, and he seems to have maintained a connection with that city throughout his life. Three of his publications are dedicated to members of the Aquaviva family, holders of the dukedom of Atri, and another is dedicated to the Bishop of Atri. At the Cathedral of Atri there still exists a four-part canon (*In manus tuas Domine*) carved in stone, attributed to Tudino, 'canon, composer and organist' and dated 1577. In 1548 he was employed as organist at S Giovanni in Laterano, Rome. He may also have served Giovanni Jacopo Trivulzio, Marquis of Vigevano (near Milan), to whom he dedicated a book of madrigals and *napolitane* in 1554. Trivulzio is the subject of two homage madrigals, while another praises his sister Barbara. By 1558 Tudino was at the Cathedral of Atri where he served as organist and tuner almost continuously until 1588; he was named procurator of the chapter in 1583.

Eight of the 17 madrigals in the book of 1554 are in *note nere* style with ornamental *passaggi*, syncopations and contrasts between fast and slow motion. In two others, explicitly marked *madrigali cromatici*, he consistently

notated D♮ and exploited chromaticism in the sharp direction. He also adopted the rhythmically supple style of the *madrigale arioso* to set stanzas in *ottava rima* (e.g. *Corro la fresca*, from Ariosto's *Orlando furioso*, *Da gli occhi vostri* and *Qual sì perfetto*). To the repertory of dialogue-madrigals, he added two for eight voices. Some of his *napolitane* are homophonic arrangements of Neapolitan models that circulated in Rome. The nine three-voice *napolitane* that he contributed to Nicolò Roiccerandet's anthologies (RISM 1566[9] and 1566[10]) show the influence of Nola. Tudino's five-voice madrigals (1564) include another dialogue and some spiritual madrigals.

DONNA G. CARDAMONE

Tudor, David (Eugene)

(*b* Philadelphia, 20 Jan 1926; *d* Tomkins Cove, New York, 13 Aug 1996). American composer and pianist. He studied the organ and theory with H. William Hawke, the piano with Josef Martin and Irma Wolpe (later Rademacher) and composition and analysis with Stefan Wolpe. In 1938 he became Hawke's assistant at St Mark's, Philadelphia and in 1943 he was appointed organist at Trinity Church, Swarthmore, PA, where he also served as organist at Swarthmore College from 1945 to 1947. His role as a pioneer in the performance of new music was established as early as 1950, when he gave the American première of Boulez's Second Piano Sonata (New York, 17 Dec 1950).

Although often linked with Cage, Feldman, Wolff and Brown, as a member of the New York School, Tudor did not work under the supervision of these or other composers but prepared his performances independently. During the 1950s and 1960s he gave first performances of works, many written expressly for him, by Boulez, Brown, Bussotti, Cage, Cardew, Cowell, Feldman, Ichiyanagi, Kagel, Maderna, Nilsson, Pousseur, Stockhausen, Wolff, Wolpe, Young, and many others. His agility in solving the most difficult notational problems of experimental music (he wrote out meticulous realizations of many indeterminate scores) made Tudor a catalyst for the increasingly radical compositional techniques of both the American and the European avant garde. From 1954 onwards he made a number of influential appearances in Europe.

Tudor was affiliated with the Merce Cunningham Dance Company from its inception in 1953. He taught at Black Mountain College (1951–3), the Darmstadt summer courses (1956, 1958, 1959, 1961), SUNY-Buffalo (1965–6), the University of California at Davis (1967), Mills College (1967–8), and the National Institute of Design in Ahmedabad, India (1969). In 1968 he was one of the four core artists for the Pepsico Pavilion at Expo '70 in Osaka. He formed the ensemble Composers Inside Electronics in 1973.

Tudor's performances as a pianist were characterized by finger independence in the highest degree, extraordinary agility in moving instantaneously between dynamic extremes, and the invention of new performance techniques in response to the challenges of experimental music, all executed with a seriousness of purpose and economy of motion that Merce Cunningham (a frequent witness) has described as 'grace'. Yet it may have been inevitable that the freedoms entrusted him by composers, his own extensions of the use of sonic materials in his realizations, and his sense of a decrease in the challenge he saw as essential to the composer-performer relationship, gradually led Tudor away from piano-playing almost entirely and into the field of live electronics.

Here, too, he was a pioneer, as well as a guiding spirit for a new generation of composers and performers: designing his own sources of sound production, transforming conventional sound-transmitters (such as loudspeakers) into sound-generators, programming feedback as a component of the composition and mixing both input and output matrices. His works in the medium were often collaborative; many were created for dances by Cunningham, laser productions by Lowell Cross, and visual installations by Jacqueline Matisse Monnier. Some took the form of electro-

acoustic environments, in which sounds were either activated by audience-spectator movements or themselves activated lighting, projections, or sculptures. In the Neural Synthesis series (1992–4) a neural-network chip is used to process both analogue and digital signals which in turn, Tudor wrote, 'are gated by the performer, increasing the complexity and unpredictability of the sonic results'. This double goal had been at the centre of Tudor's radical reformulation of the capacities of musical performance since he began to explore them, at the piano, 40 years earlier.

WORKS

(all el-ac)

Dance scores (all choreog. M. Cunningham): Rainforest, 1968; Melodics for Amp Bandoneon, 1972; Toneburst, 1974 [for Sounddance]; Forest Speech, 1976 [for Event]; Weatherings, 1978 [for Exchange]; Phonemes, 1981; Likeness to Voices/Dialects, 1982; Sextet for Seven, 1982; Dialects, 1984; Fragments, 1984; Webwork, 1987; Virtual Focus, 1990; Neural Network Plus, 1992; Untitled, 1994 [based on Toneburst, 1975]

Perf. pieces and multimedia: Fluorescent Sound, 1964; Bandoneon!, bandoneon, elecs, lights, videotape, 1966 [videotape by L. Cross]; 4 Pepsi Pieces, 1970: Pepsibird, Anima Pepsi, Pepscillator, Microphone, rev. 1973; Monobird, 1972 [incorporating J. Cage: Birdcage]; Rainforest II, 1972 [incorporating Cage: Mureau]; Untitled, 1972 [incorporating Cage: 62 Mestics re Merce Cunningham]; Laser Rock, 1973; Laser Bird, 1973; Rainforest IV, installation, 1973; Pulsers, 1976; Hedgehog, 1985; Web, 1985; Electronics with Talking Shrimp, 1986; Lines and Clusters, 1986; Web for J.C., 1987; Web for J.C. II, 1992; Neural Synthesis 1–9, 1992–4 [based on dance score Neural Network Plus, 1992]

Collabs.: Reunion (D. Behrman, Cage, Cross, G. Mumma, M. Duchamp), 1968; Assemblage (Cage, Mumma), 1968; untitled (TV score, Cage, Mumma), 1968; Video III (Cross), 1968; Video/Laser I, II (Cross, C. Jeffries), 1969; First Week of June (Cage, Mumma), 1970; 52/3 (Cage, J. Johns), 1972; Rainforest III, 1973 [group composition]; Free Spectral Range I, II (Cross), 1973; Photocell Action (A. Martin), 1974; Island Eye Island Ear (installation, F. Nakaya), 1974–8; Free Spectral Range III (Cross), 1976; Free Spectral Range IV (Cross), 1977; Video Pulsers, 1977 [score for TV film Brazos River]; Forest Speech II, 1978 [group composition]; Rotation, 1978 [group composition]; Audio Laser (Cross), 1979; Laser Concert (Cross), 1979; Sea Tails (video installation, M. Davies, J. Monnier), 1983; Tailing a Dream (J. Monnier), 1985; Sea Tails (J. Monnier), 1986 [Sound Totem version]; 9 Lines Reflected (J. Monnier), 1986; Le Dos du Réve (J. Monnier), 1987; Volatis with Sonic Reflections (J. Monnier), 1988; Five Stone Wind (Cage, T. Kosugi), 1988; Soundings 'Ocean Diary' (A. Culver, Cunningham), 1994 [from sketch by Cage]

Other works: Pulsers 2, 1987; Coefficient I, 1991; Coefficient II, 1992

THOMAS W. BRIDGES

Tudway, Thomas

(*b c*1650; *d* Cambridge, 23 Nov 1726). English composer, organist and copyist. He was a Chapel Royal chorister whose voice broke shortly before Michaelmas 1668. It is reasonable to infer that he was the son of Thomas Tudway, a lay clerk of St George's Chapel, Windsor, and that he himself may have been a chorister there before entering the Chapel Royal, where his contemporaries included John Blow, Pelham Humfrey, Robert Smith (i), William Turner and Michael Wise. After leaving the chapel he became organist of King's College, Cambridge, at Michaelmas 1670, a post which, except during a temporary suspension, he occupied for the rest of his life. From Christmas 1670 to Trinity 1680 he was also Master of the Choristers there. Later he also became university organist, and organist both of Peterhouse and Pembroke College. He took the Cambridge degree of MusB in 1681. In 1705 the university revived in his favour the title of professor of music, which had lapsed since the death of Nicholas Staggins in 1700, and he proceeded to the degree of MusD. His career was thus broadly based in Cambridge; he was not, however, cut off from musical life in London. By his own account at least two of his anthems, *The Lord hath declared*, on the discovery of the Rye House Plot in 1683, and *Plead thou my cause*, on the political upheaval of 1714, were composed for the Chapel Royal. In 1702 he petitioned unsuccessfully for an appointment at court; yet from the number of his compositions which, according to himself, were associated with Queen Anne, it seems that he did at least obtain some sort of favour from her as a kind of honorary composer, though there is no official record of this. On the other hand, he suffered suspension (from July 1706 to March 1707) from his college and university offices, and from his degrees, for having spoken punning words held to be a reflection on the queen.

Between 1714 and 1720 Tudway was engaged on the work by which his name is chiefly remembered. It was undertaken at the desire of Robert, Lord Harley, afterwards Earl of Oxford, and forms an important collection of cathedral and Chapel Royal music in six thick quarto volumes (*GB-Lbl* Harl.7337–42). He received the considerable sum of 30 guineas for each volume. Throughout the work he was in touch with Humfrey Wanley, Harley's librarian, and surviving correspondence (*Lbl* Harl.3782) shows that when securing manuscript copies on his patron's behalf he was scrupulous in keeping track of his own financial involvement. In the task of gathering his anthology, which reaches from Tye to Handel, he acknowledged the assistance of James Hawkins; he was also helped by John Church. Because it was never publicly circulated, however, this notable collection did not exert the same influence as the later one compiled by Boyce. Following its completion Tudway seems to have entertained some prospect of becoming 'master of the music' in Lord Harley's chapel at Wimpole, Cambridgeshire, and he composed music for its intended consecration. But the chapel was never consecrated, and nothing came of this. Editorial scholarship as now understood did not exist in Tudway's time, and his text,

even of composers who were his close contemporaries, must be treated with reserve. It is of interest, however, in that it preserves a number of anthems by Purcell and Blow in versions that differ considerably in detail from those found in autograph scores, but whose readings are so plausible that they probably represent earlier drafts. The anthology also provides significant testimony to the continuing interest during the early 18th century in English church music of the period between the Reformation and the Civil War, and the considerable representation of Tomkins is noteworthy. On the other hand Tudway tended to give undue weight to composers of limited reputation among his contemporaries, and the collection includes an Evening Service, a Latin motet and no fewer than 18 anthems composed by himself. Each volume in the collection has a substantial preface, and some of the pieces are headed with historical and biographical notes; this material is often valuable, especially when dealing with contemporary events and personalities, but Tudway was not invariably well informed, and a few of his attributions are incorrect.

As a composer Tudway concentrated almost wholly on church music, the greater part of it occasional in character. There is no instrumental music by him, and the secular part of his work consists only of a few songs printed in the collections of his day, and a birthday ode addressed to Queen Anne. His anthems, four of which have instrumental symphonies and accompaniments, are all of the verse type, and many of them are somewhat florid. He represents a continuation of the school of John Blow but without the same quality of achievement. His verse Evening Service in B flat, however, has proved interesting and attractive in modern revival.

WORKS

principal sources GB-Lbl, especially Harl.7337–42, unless otherwise stated

anthems

all verse

Arise, shine, for the queen's chapel
Behold, God is my salvation
Behold, how good and joyful, Act of Union with Scotland, 1707
Blessed is the people
Give the Lord the honour due, 'Thanksgiving for the Peace'
Hearken unto me, for the laying of foundations for the Gibbs building, King's College, 1724
Is it true that God will dwell with men?, 'sung before Queen Anne at Windsor', 1702
I will lift up mine eyes, 'Sung to the Queen at the Bath'
I will sing unto the Lord, Battle of Blenheim, 1704
Let us now praise worthy men
My God, my God, look upon me, 'on ye Passion', 1675
My heart rejoiceth in the Lord, Treaty of Utrecht, 1713, with str, obs
Not unto us, O Lord
O come, let us sing unto the Lord, with str (B pt only extant)
O how amiable are thy dwellings
O praise the Lord, Battle of Oudenaarde, 1708
Plead thou my cause, 'On the change of Ministry', 1714

Sing, O heavens, for the queen at Windsor

Sing we merrily

The Lord hath declared, Rye House Plot, 1683, with str

The Lord hear thee, Cambridge MusB exercise, 1681, with str

The Lord is righteous

Thou, O Lord, hast heard our desire, sung before the queen in King's College Chapel, 1705

other sacred

Services: Morning and Communion, B♭ (TeD, Jub, re, Cr), with orch, for the planned opening of Wimpole Chapel, 1721; Evening, A (Mag, Nunc), inc.; Evening, B♭ (Mag, Nunc); Evening, G (Mag, Nunc), inc.; Funeral Sentences, g, e, complete but composite

Motet: Quare fremuerunt gentes, Cambridge MusB exercise, 1681, with str

secular

Hail, happy day, auspicious light (ode), Queen Anne's birthday

Songs and catches in 1683^5, 1685^4, 1685^6, 1687^6, 1688^9

WATKINS SHAW/BRUCE WOOD

Tuerlinckx.

Flemish family of woodwind instrument makers. Jean Arnold Antoine Tuerlinckx (*b* Aerschot, 22 Nov 1753; *d* Mechelen, 19 Dec 1827) was the son of a clockmaker and amateur harpsichordist. He began to make instruments at the age of 18, by copying a new French clarinet. In 1782 he married Catherine Meikens and moved to Mechelen where he established himself as a maker of woodwind instruments (and also of arrows), and soon began to receive important orders from the Netherlands. Following a brief imprisonment in May 1799 during the French revolutionary period, his business expanded and he gained clients in both France and Germany. In 1808 his first wife died, and he married Marie Catherine Clavers in the following year. At the peak of his career he employed 40 workmen in two separate workshops, one for brass instruments and the other for woodwind. He frequently equipped entire military and civil wind bands (*sociétés d'harmonie*) with complete sets of instruments and also dealt in pianos, harps and printed music. During the 1820s his business declined owing to growing competition from cheaper instruments made by large foreign firms as well as from local manufacturers. A portrait of him by Charles-Pierre Verhulst survives in the Stadsmuseum Hof van Busleyden at Mechelen.

After the death of Jean Arnold Antoine, the business was continued by his eldest son, Corneille Jean Joseph Tuerlinckx (*b* Mechelen, 31 May 1783; *d* Mechelen, 29 Dec 1855), who worked in his father's shop from the age of nine, at the same time learning to play various instruments and studying composition. He helped to found and direct several wind-band societies in Mechelen, for which he composed a great deal of music (in 1828 he was highly placed in a composition contest in Antwerp). He wrote mainly for wind band and his works reflect the taste of his epoch for tunes from the *opéra comique* which he arranged in 'potpourris', overtures, fantasies and sets of variations. He also wrote waltzes, marches and military symphonies and made arrangements for other instruments such as the piano, flute and oboe. Most of his music was not published, but remained for a time in manuscript in the city library at Mechelen. In 1835, after the death of his wife, Maria Dochez, whom he had married in 1815, he seems to have largely stopped composing, and about 1840 he probably closed his instrument business owing to decline in trade. The contents of his workshop, including some 300 unfinished flutes, 200 unfinished clarinets, and many other completed instruments, were not sold until 1856, after his death.

Since both father and son marked their work 'Tuerlinckx/Malines' or 'Tuerlinckx à Malines', it is almost impossible to distinguish between their instruments. Neither seems to have been a real innovator, though both kept pace with the times. The foreign armies which marched through the Southern Netherlands in the late 18th and early 19th centuries provided them with many opportunities for studying and copying new foreign types of instruments; and, as a result, they produced many new instruments such as the 13-keyed clarinet, the bass clarinet, the bugle horn, the Russian bassoon and the ophicleide. Various records indicate that they made an astonishing variety of instruments including: fifes, piccolos and flutes of many sizes; clarinets in C, B♭ and A, *clarinettes d'amour* and alto and bass clarinets; oboes, small bassoons of various sizes, bassoons and double bassoons; natural trumpets, *trompettes d'invention* and slide trumpets; field bugles and keyed bugles, *clairons* and ophicleides; *cors de chasse*, natural horns and *cors d'invention*; serpents and Russian bassoons; trombones and *buccins*; harps; a variety of percussion instruments and possibly even pianos. Numerous Tuerlinckx instruments are in the Instrument Museum of the Royal Conservatory of Music in Brussels.

JANE M. BOWERS

Tufts, John

(*b* Medford, MA, 26 Feb 1689; *d* Amesbury, MA, 17 Aug 1750). American tune book compiler. He graduated from Harvard College in 1708 and was minister of the Second Church in Newbury, Massachusetts, 1714–38. He compiled a pamphlet containing musical rudiments and some textless tunes, printed in a simple form of fa-sol-la notation. Designed for binding into psalm books, his *A Very Plain and Easy Introduction to the Art of Singing Psalm Tunes* (later titled *An Introduction to the Singing of Psalm-Tunes*) went into 11 editions (all printed in Boston, 1721–44), of which the third (1723) is the earliest extant. Early editions contain varying selections of melodies or two-part settings; from the fifth edition (1726/*R*) the same 37 tunes appear, set for three voices. 'Psalm 100 New' and 'Southwell New', the only tunes that have not been traced to British sources, may be the first pieces composed and published in British North America. 14 of the tunes were among the 100 most frequently printed in American tune books before 1811. The first music textbook issued in the colonies, Tufts's *Introduction* helped spark the so-called Regular Singing movement in New England and therefore represents the beginning of organized music education in America (Lowens).

Tugi [Tugy, Tughin, Tügi, Dügy, Stucki], Hans [Johannes; Hans von Basel]

(*b* Basle, *c*1460; *d* Basle, summer 1519). Swiss organ builder. He was the son of a Basle gunsmith and matriculated at Basle University, 1476–7. By about 1500 he was one of the most important organ builders in Switzerland and south-west Germany. He appears to have worked in Mantua Cathedral in 1503. He built new organs in Basle (1487, 1496–9 and before 1510), Mainz (before 1496, perhaps 1490), Brugg (1493 and the following years), Zürich Grossmünster (1505–7), Colmar (before 1513) and Biel (1517–19). He also rebuilt and repaired organs in Basle (1482), Konstanz Cathedral (1489–90; he may also have built a small organ there in 1490–91), Zürich Grossmünster (1511–13), Mainz Cathedral (1514), Berne Minster (1517–19) and Colmar (1513, 1518).

Tugi should not be confused with the German organist Johannes Gross (*b* Nuremberg, *c*1480; *d* Basle, 1536), who, like Tugi, was known as Hans von Basel; he was organist of Konstanz Cathedral in 1505–6 and of Basle Cathedral in 1507. He was invited to test Tugi's organ in the Zürich Grossmünster in 1507.

MANFRED SCHULER

Tuicke [tuk, tuke].

See Tuck, tucket.

Tuksar, Stanislav

(*b* Gornji Kraljevec, 27 July 1945). Croatian musicologist. He read philosophy and English at Zagreb University (1965–70) and studied the cello with Rudolf Matz at the Zagreb Academy of Music (1966–72). He later studied musicology with Edith Weber at the Sorbonne (1974–6), with Ivo Supičić at Zagreb University (MA 1978), with H.-P. Reinecke at the Staatliches Institut für Musikforschung (1986–8), and again at Zagreb with Koraljka Kos, gaining the PhD in 1990 with a dissertation on Croatian musical terminology. He became associate editor of the *International Review of the Aesthetics and Sociology of Music* in 1980 and was editor-in-chief of *Arti musices* (1990–97). From 1992 to 1997 he was secretary of the Croatian Musicological Society; he also taught at the Zagreb Academy of Music.

In addition to musical terminology, Tuksar is interested in the aesthetics of European music. While he was deputy director of the Institute for Musicological Research of the Croatian Academy of Sciences and Arts (1980–92) he made a significant contribution to the cataloguing of Croatian musical sources. In 1988 he initiated *Indices collectiorum musicarum tabulariorumque in Croatia*, a series of catalogues of Croatian music collections, of which he is the editor.

ZDRAVKO BLAŽEKOVIĆ

Tulikov, Serafim (Sergeyevich)

(*b* Kaluga, 7 July 1914). Russian composer. He graduated in 1940 from Beliy's composition class at the Moscow Conservatory. President of management for the Moscow section of the Composers' Union, he holds a State Prize and the title People's Artist of the RSFSR. He is chiefly known as a composer of songs, many of which achieved wide popularity in the USSR and abroad; *Ėto mï – molodyozh'* ('It is us – Youth') and *Marsh sovetskoy molodyozhi* ('March of Soviet Youth') were awarded first prizes at international festivals of democratic youth in Warsaw and Berlin. Tulikov's work is dedicated to the themes of labour and the revolutionary struggle, and is notable for its epic, hymnic quality, the influence of Russian folk music and its bold vitality.

GALINA GRIGOR'YEVA

Tulindberg, Erik (Eriksson)

(*b* Vähäkyrö, 22 Feb 1761; *d* Åbo [now Turku], 1 Sept 1814). Finnish composer. He studied at the Åbo Akademi and took the master's degree in 1782; he worked there as a librarian until 1784, when he became an accountant to the Province of Uleåborg (Oulu). In 1809, when Finland was annexed to Russia as a Grand Duchy, he became a member of the state council, and in 1811 was appointed chief accountant at the Province of Åbo and Björneborg (Pori).

Tulindberg was an enlightened amateur musician who played the violin and cello and probably keyboard instruments. He collected a large library of 50 scores, containing about 150 individual chamber and orchestral works by composers including: Abel, Boccherini, Cambini, Davaux, Gyrowetz, Haydn, Lorenziti, Mozart, Neubauer, Pleyel, F.P. Ricci, C. Stamitz, Toeschi and Vanhal; the collection is now in the Sibelius Museum in Turku.

In his youth Tulindberg practised music at the university, where he held a music scholarship. It was probably at this time that he wrote a violin concerto, a *Polonaise con variazioni* for violin solo and six string quartets.

The quartets are in the style of Haydn's op.9, which he knew, and some features suggest that he might also have known Haydn's opp.1 and 2 and works up to op.20. The quartets were found only in 1925; the missing second violin part has been reconstructed for performance. The manuscript of the Violin Concerto, dedicated to Patrick Alströmer (1733–1804), founder of the Swedish Royal Academy of Music, is included in the Alströmer collection there. In 1797 Tulindberg was made a member of the Academy, perhaps partly because of his pioneer notation of Finnish traditional runic singing, known in Stockholm through a paper read by J. Tengström at a meeting of the Kungliga Vitterhets, Historie- och Antivitetsakademie in 1795.

ILKKA ORAMO

Tulou, Jean-Louis

(*b* Paris, 12 Sept 1786; *d* Nantes, 23 July 1865). French flautist. The son of a bassoonist on the staff of the Conservatoire, he entered that institution at the age of ten. A pupil of Jean-Georges Wunderlich, in 1799 he won the *second prix*, the *premier* being withheld because of his youth. Two years later he received the *premier prix* and was judged by many the finest flautist in France. He was principal flute at the Opéra from 1815 to 1822, and again from 1826 until his retirement. About the year 1814 he met a formidable rival in Drouet and partisanship ran high in Paris, though in the end it was Tulou who prevailed. Tulou was an outspoken republican and at the restoration of Louis XVIII he was sidelined, failing to secure some coveted appointments, notably at the Conservatoire. Visits to London in 1817 and 1826 were coldly received by a public whose taste had been affected by the fireworks of Drouet and the power of Nicholson. In 1829 Tulou received the long-desired chair at the Conservatoire, which he held till his retirement in 1856.

From 1831 Tulou carried on a successful flute factory in partnership with J. Nonon, but in 1853 they separated, both continuing independently and producing elegant flutes in the older French style. Tulou used a 12-keyed instrument, his only innovation being a small key to help the intonation of

the *f* and *f*. During his professorship he was bitterly opposed to the Boehm flute.

Tulou composed prolifically and effectively for the flute, mainly in the fashionable bravura style of the fantasias and airs with variations. He wrote an influential *Méthode de flûte* in 1851. His playing was said to be an admirable balance of technical virtuosity and musical refinement.

PHILIP BATE/EDWARD BLAKEMAN

Tůma [Thuma, Tuma], František Ignác Antonín

(*b* Kostelec nad Orlicí, Bohemia, 2 Oct 1704; *d* Vienna, 30 Jan 1774). Czech composer. He received his first musical training from his father, organist at Kostelec, and probably studied in Prague, at the Jesuit seminary. According to Dlabacž he was a tenor chorister under B.M. Černohorský at the Minorite church of St James, and he may have received musical instruction from him. Tůma then went to Vienna, where he was probably first active as a church musician; according to Marpurg he was a vice-Kapellmeister at Vienna by 1722. Tůma's name first appears in Viennese records in April 1729, when the birth of a son was recorded. By 1731 he was 'Compositor und Capellen-Meister' to Count Franz Ferdinand Kinsky, the High Chancellor of Bohemia, whose patronage he must already have enjoyed and who made it possible for him to study counterpoint with J.J. Fux. On J.C. Gayer's death in 1734, Kinsky recommended Tůma as his successor as Kapellmeister to Prague Cathedral, but his recommendation arrived too late and Tůma may have remained in Kinsky's service until the latter's death in 1741. In that year he was appointed Kapellmeister to the dowager empress, widow of Emperor Karl VI; among his colleagues were G. Trani and G.C. Wagenseil. On her death in 1750 Tůma received a pension. For the next 18 years he remained in Vienna and was active as a composer and as a player on the bass viol and the theorbo; he was esteemed by the court and the nobility, and at least one work may have been commissioned from him by the Empress Maria Theresa. From about 1768 he lived at the Premonstratensian monastery of Geras (Lower Austria), but in his last illness he returned to Vienna and died in the convent of the Merciful Brethren at Leopoldstadt. His son Jacob was a violinist in the dowager empress's band in 1750, and from 1767 until his death in 1784 was a member of the Viennese court orchestra.

Tůma's output belongs mostly to the late Baroque. Many of his sacred works show affinity with the conservative quasi-Palestrinian counterpoint of his teacher Fux; 14 masses are in *a cappella* style. According to Kinsky's recommendation of 1734 Tůma was 'the only [composer] capable of imitating … Fux and of following the latter's principles'. The idiom of Tůma's more modern-style church compositions is closer to that of Caldara. His sacred works, which were known to Haydn and Mozart, were noted by his contemporaries for their solidity of texture and their sensitive treatment of the text as well as for their chromaticism. His instrumental music includes trio and quartet sonatas, sinfonias and partitas, mostly for strings and continuo; some of them were clearly intended for orchestral use.

Contrapuntal textures predominate, but some movements are in continuo-homophony with only slight contrapuntal touches. Occasional hints of the *galant* style – in the leaning towards simpler harmony, periodic two-bar structure, syncopations, melodic sighs, sudden turns to the opposite mode – do not affect the basic late Baroque character of Tůma's music.

MILAN POŠTOLKA

Tūma, Habīb Hasan

(*b* Nazareth, 12 Dec 1934; *d* Berlin, 10 Aug 1998). German ethnomusicologist and composer of Palestinian birth. He studied piano and theory at the Haifa Conservatory and composition at the Israel Academy of Music, Tel-Aviv, with Alexander Boscovich. In 1964 he received a scholarship from the Deutscher akademischer Ausauschdienst which brought him to Berlin, where he studied ethnomusicology at the Free University with Kurt Reinhard and obtained the doctorate with a dissertation on Arab music theory. From 1969 until its closure in 1997, Tūma worked for the Institute for Traditional Music, which published many of his short articles, reviews and interviews in its journal *World of Music*. He was also able to pursue private academic projects and study trips in south Turkey, Iraq and Bahrain. He initially analysed the *maqām* technique of improvisation, developing a theory of the non-temporal 'tonal spatial component' in its organization; later in life, he studied the contemporary role of the Arabic musician as well as the Moroccan *nawba*, to which he devoted the last ten years of his life and his final, posthumous publication. In Berlin Tūma organized the Arabien Festival Traditioneller Musik (1978) and Festival Traditioneller Musik Islam (1986); he was also concert adviser at La Maison des Cultures du Monde in Paris and made recordings of

traditional music for the UNESCO collection. His compositions are fundamentally infuenced by his studies of Arab music.

CHRISTIAN POCHÉ

Tumanina, Nadezhda Vasil'yevna

(*b* Voronezh, 1 Sept/14 Sept 1909; *d* Moscow, 2 Sept 1968). Russian musicologist. She graduated in 1936 from the department of history and theory at the Moscow Conservatory, where she completed her postgraduate studies with V.Ye. Ferman. From 1938 she taught at the Moscow Conservatory and from 1949 to 1957 was head of the department of Russian music history; she was appointed professor in 1963. From 1952 she was a senior research fellow at the Institute for the History of the Arts. Tumanina's research interests centred on classical Russian and Soviet music. She edited the three-volume textbook on Russian music for higher educational institutions, *Istoriya russkoy muzïki*, and was one of the editors and authors of *Istoriya russkoy sovetskoy muzïki*. Her most important work was a fundamental two-volume monograph on the life and work of Tchaikovsky.

Tunbūr.

Arabian lyre of the Pre-Islamic and Islamic periods; the term is also widely used for a long-necked lute. The term, of Pahlavi origin, is included in the celebrated inventory of the page of the Sassanian king Khosrow II (ruled 591–628 ce), where it appears in a list of musical instruments (*see* Tanbūr and Iran, §I, 5). The instrument might be included – as in all the Turkish-Iranian-Indian area – in the family of long-necked lutes (*see* Arab music, §I, 7(i)).

Tunder, Franz

(*b* Bannesdorf, nr Burg, Fehmarn, 1614; *d* Lübeck, 5 Nov 1667). German composer and organist.

1. Life.

Nothing is known of Tunder's early years except that he was the son of Hans Tunder (*d* 1639). His first teacher was perhaps Christian Prusse, Kantor of the Stadtkirche in Burg until 1629; early in 1632 he was studying music in Copenhagen, possibly with the court Kapellmeister Melchior Borchgrevinck, a pupil of Giovanni Gabrieli. In December of that year Tunder succeeded Johann Heckelauer as organist to the court of Duke Friedrich III of Holstein-Gottorf. Heckelauer, a nephew of the organ builder Esaias Compenius, remained at court as building inspector; he had spent the years 1627–30 in Florence, where he built an organ for the Grand Duke of Tuscany. Frescobaldi was also in Florence at this time, and since Mattheson stated that Tunder had studied with Frescobaldi, it is possible that he accompanied Heckelauer to Florence. Even in Gottorf, however, Tunder would have had ample opportunity to learn of the latest trends in Italian music, not only from Heckelauer but also through Duchess Maria Elisabeth, daughter of the Elector Johann Georg I of Saxony. She was a pupil of Schütz and entrusted her daughters' musical education to Tunder.

On 10 February 1640 Tunder married Elisabeth Voigt, daughter of the court tailor at Gottorf, and the following year he succeeded Peter Hasse as organist of the Marienkirche in Lübeck. In 1647 he also assumed Gerdt Black's duties as Werckmeister (administrator and treasurer of the church), and after Black's death in 1651 he was appointed to the post in his own right, thus increasing his income and prestige. Five children were born to

the Tunders: Friedrich (in 1642), Augusta Sophie (1644), Anna Margarethe (1646), Johann Christoph (1648) and Dorothea (1652); Augusta Sophie married the Kantor Samuel Franck in 1663, and Anna Margarethe married Tunder's successor, Dietrich Buxtehude, in 1668.

At the Marienkirche Tunder was in charge of both the large organ (three manuals, 52 stops) and the smaller one in the Totentanz Chapel (three manuals, 40 stops). His duties are not well documented, but must have included the playing of hymn preludes, communion music and postludes to the services. The violinist Nathanael Schnittelbach and the lutenist Joachim Baltzer, both municipal musicians, regularly performed with him from the organ loft, but much of the music Tunder played would have been improvised. He also collaborated with the Kantor (until 1662 Martin Lincke, and then Tunder's son-in-law Samuel Franck) in the presentation of vocal music, and seems to have influenced the style of music sung by the Kantorei: after his arrival Lincke's purchases for the choir shifted from traditional polychoral works to those in the modern concerted style, including works by Grandi, Rovetta, Vesi and other Italians.

Tunder's Abendmusik concerts are documented from 1646. They are said to have begun with performances of organ music on Thursdays for businessmen awaiting the opening of the stock exchange. It was Buxtehude who first gave the Abendmusiken the dramatic form that was to prevail throughout the 18th century, but Tunder laid the foundation in his cultivation of the patronage of the business community and his reaching out beyond his official duties to compose vocal music.

2. Works.

Tunder's surviving music comprises 14 organ pieces (and a fragment of another). 17 vocal works (including at least one arrangement) and a sinfonia from a lost vocal work. The organ praeludia all require pedals and consist of toccata-like opening and closing sections (with virtuoso display for the manuals) and a single central fugue which is well developed contrapuntally and flows seamlessly back into the toccata style. They exemplify the early use of the *stylus phantasticus* characteristic of north German organ composers, including Scheidemann and Weckmann, whose music Tunder surely knew. His one canzona is a *manualiter* work using a theme from Costanzo Porta's *Canzon quarta* (see Beckmann, 1989). Chorale settings predominate in the organ works, with chorale fantasias such as *Christ lag in Todesbanden*, *Herr Gott dich loben wir*, *In dich hab ich gehoffet, Herr*, *Komm heiliger Geist* and the two versions of *Was kann uns kommen an für Not* representing Tunder's most important contribution to the repertory. These all set one verse of the chorale at considerable length (94 to 257 bars), require two manuals and pedals and show the use of melodic fragmentation, varied textures and echo effects. *Auf meinen lieben Gott* demands two manuals but not pedals and presents three continuous variations on the chorale. *Jesus Christus, wahr'r Gottes Sohn*, for single manual and pedals, is more homogeneous in its contrapuntal texture, and is better designated a chorale ricercare. *Jesus Christus unser Heiland*, with its three separate variations, may represent Tunder's only surviving example of *alternatim* practice; its first variation makes extensive use of double pedal.

Tunder's surviving vocal works are all in the Düben collection (*S-Uu*); their late copy dates do not necessarily reflect composition dates. Among the Latin works are two Protestant versions of the Marian antiphon *Salve regina*. Roche showed that the *Salve mi Jesu* that Gustaf Düben ascribed to Tunder is an arrangement of the *Salve regina* from Rovetta's *Motetti concertati* op.10 (Venice, 1647). *Salve coelestis pater* could also be an arrangement of a Catholic composer's *Salve regina*, but it does not correspond to any in the existing choir library. The fact that there is no great stylistic disparity between these and Tunder's other Latin works shows the degree to which he was influenced by the modern Italian style. *O Jesu dulcissime* and *Da mihi Domine* are solo settings of devotional texts; the other three are concerted psalms.

About a third of Tunder's vocal works are chorale settings with German texts. *Ach Herr, lass deine liebe Engelein*, the third stanza of *Herzlich lieb hab ich dich*, does not use the associated melody and comes closest to the affective quality of the Latin works. The other two settings for solo voice use the chorale melody either in a straightforward way in the vocal part, surrounded by a web of instrumental counterpoint (*An Wasserflüssen Babylon*), or in cantional and concerted style (the two sections of *Wachet auf*). The three larger settings *per omnes versus* (*Ein feste Burg*, *Helft mir Gott's Güte preisen* and *Wend ab deinen Zorn*) vary the scoring, texture and compositional style of each verse; indeed *Wend ab deinen Zorn* can be characterized as the earliest north German example of a true chorale cantata (Krummacher). Of the other works with German words, two (*Herr, nun lässet du deinen Diener* and *Hosianna dem Sohne Davids*) are sacred concertos to New Testament texts and two are designated 'Aria'. Although the latter have poetic texts, their musical style, particularly that of *Ein kleines Kindelein*, is strongly influenced by the sacred concerto.

KERALA J. SNYDER

Tune book.

A collection of psalm tunes with an instructional preface, designed for use in the early American singing schools. *See* Psalmody (ii), §II, and Shape-note hymnody.

Tune families.

The tune family concept was developed in 20th-century British-American folksong scholarship as a tool for explaining the strong relationships among melodies widespread in the oral tradition of Britain, Ireland and North America from the 17th century to the present. According to Samuel P. Bayard, a tune family is 'a group of melodies showing basic interrelation by means of constant melodic correspondences and presumably owing their mutual likeness to descent from a single air that has assumed multiple forms through processes of variation, imitation, and assimilation' (1950, p.33).

Although not so named, the beginnings of the concept are found in writings and notations of folksong collectors and editors as diverse as Patrick McDonald (1784), Patrick Weston Joyce (1806), William Stenhouse (1853), George F. Graham (1854–6), William Petrie (1855), William Chappell (1859), John Glen (1901), Gavin Greig (1906–7), Cecil Sharp (1907) and Anne G. Gilchrist (1932), all of whom acknowledged and often illustrated relationships among tunes which might not have been obvious, and thus contributed to the stockpile of examples that would lead to the tune family theory. However, it was in the writings of American collectors Phillips Barry (1910; 1929; 1930; 1937; 1939) and Samuel P. Bayard (1939; 1942; 1950; 1951; 1953; 1954; 1957) that the theory was clearly formulated. Additional examples were annotated, with Bayard's help, in the American religious repertory by George Pullen Jackson (1943).

Commentary on the theory as developed by Bayard has been offered by D.K. Wilgus (1959), Bertrand H. Bronson (1942; 1949; 1950; 1951; 1952; 1959; 1959–71), Charles Seeger (1966), Anne Dhu McLucas [Shapiro] (1975; 1985; 1992), Norman Cazden (1982) and James Cowdery (1984). Yet because neither Barry nor Bronson developed a comprehensive system of naming and illustrating the tune families they felt existed, the concept has never come into full use as a way of classifying musically the vast repertory of songs in the British-American oral tradition such as the concepts underlying the Antti Aarne folktale types, for instance, have done for the classification of folk narrative.

Bayard (1953) outlined seven major tune families and estimated a total number of 55 tune families in the British-American repertory; of these, only one, 'Lord Randal', has been comprehensively illustrated (Shapiro, 1975), although scholars in various branches of British-American folklore have utilized the tune family names alluded to by Barry and Bayard as a basis for tune annotations. In this regard see John M. Ward (1986; 'Lancashire Hornpipe' 1990; 'Ladie Greensleeves', 1990; 1993), Norman Cazden (1958, 1982), Chris Goertzen (1985), Anne Dhu Shapiro (1992), and Paul F. Wells and Anne Dhu McLucas (1997).

Since the tune family concept was explicitly developed in the British-Irish-American folk tradition, its transferability to other repertories has not been

tested; yet it is clear that the reliance of tune family identification on similarity of contour, strongly accented 'diagnostic tones' and the use of formulaic patterns relates the tune family concept to much broader aspects of mode, as understood in Middle-Eastern and Indian musics and the orally transmitted portions of plainchant repertory (see Jeffery, 1992). David G. Hughes (1981), for example, has outlined three cases in which tune families could be applied to the study of chant: the first is a group of different texts for the same tune with minor adjustments for different syllable count and accent placement; the second is a group of melodies with similar or identical opening phrases, whether or not the continuations are identical; and the third is a group of melodies drawing the greater part of their material from a common fund of formulae peculiar to one mode and category. None of these is identical with the definition as formulated by Bayard, but may well be appropriate to chant. Bruno Nettl has also speculated that Amerindian repertories might contain tune family relationships.

The tune family model relies on observing the ways traditional singers (or instrumentalists) vary their materials over time, including changes in melodic line, transposition of phrases, extensions of melodic intervals, addition of phrases, alternation of cadences, repetitions of certain formulae, modal change, abbreviations, and changes in rhythmic patterns caused by the addition of new texts or dance-steps. Such changes, while resulting in tunes that have obvious surface differences, also conserve the identity of a tune once learned. The tune family concept gives the researcher a way to group together tunes with fundamental likenesses, despite surface differences. While one can presume possible historical connections among tunes, the tune family researcher does not necessarily try to prove them. Rather, researchers use the theory to organize tunes according to their melodic patterns, rather than according to the usual categories of texts, modes or titles.

ANNE DHU McLUCAS

Tunick, Jonathan

(*b* New York, 19 April 1938). American orchestrator, conductor and composer. His education included degrees from Bard College (1958) and the Juilliard School of Music (1960), and compositional study with Nordoff, Giannini and Bernstein. Work in New York as an instrumentalist, conductor and arranger led to the first commercially successful musical with which Tunick was associated, *Promises, Promises* (1968). *Company*, two years later, cemented his position at the forefront of theatre orchestrators and led to a long-lasting association with the work of Stephen Sondheim. His pre-eminence in this area has caused notable theatre composers to seek his services, inluding David Shire, Charles Strouse and Maury Yeston, and has fittingly led to his receiving the first Tony award given for orchestration, for *Titanic* (1997). His film work includes scores for *Fort Apache, the Bronx* (1981), *Endless Love* (1981) and *I am the Cheese* (1983), and he received an Academy Award for *A Little Night Music* (1977). On television his work has been heard in 'Blinded by the Light', 'Concealed Enemies', 'Brotherly

Love', a series of adaptations from John Cheever and the themes for the series 'Tattinger's' and 'Love and War'. For recordings he has arranged and conducted for Cleo Laine, Kiri Te Kanawa, Plácido Domingo and Barbra Streisand, with Emmy and Grammy awards to his credit.

Tunick's position as a master of orchestration is closely allied to his compositional insight, his ability to absorb the point of a musical work and write it as if conceived for orchestra from the beginning. Any initial supposition from his early successes – *Promises, Promises* and *Company* – that he was solely attuned to those current popular sounds was immediately disproven by his flawless evocation of variously glamourized aspects of the past in *Follies* and his invention of a Ravelian operetta texture (completely eschewing the modern rhythm section) for *A Little Night Music*, and with each subsequent score. At a time when amplification is ubiquitous in the theatre, his work remains acoustically conceived and balanced, revealing a fine-tuned ear not just for music but also for its dramatic import. In his hands, nuances of timbre assume the same import as in fine operatic composition.

JON ALAN CONRAD

Tuning.

The adjustment, generally made before a musical performance, of the intervals or the overall pitch level of an instrument. Inflections of pitch that form an inherent part of the performance itself are usually thought of as a matter of intonation (*see* Intonation (ii)) rather than tuning. The term is also commonly used to refer to the note or (more often) the set of notes or intervals to which a particular instrument is tuned. The tunings, in this sense, of individual instruments are discussed in the articles on the instruments concerned (*see also* Re-entrant tuning). A third use of the term is in the sense of the 'tuning system' employed, referring to a model of the scale corresponding to some mathematical division of the octave. For the history of such models in performing practice, *see* Temperaments, Well-tempered clavier, Mean-tone, Just intonation and Pythagorean intonation.

Wind instruments in an ensemble are tuned to make their general pitch level uniform by adjusting the length of tubing in each instrument. Tuning-slides are shifted in brass instruments, the top joint in a flute, the staple of the reed in an oboe, etc. The extent to which bass reed instruments can be tuned is slight, as each millimetre of difference amounts to a smaller portion of the total tube length than on a treble instrument. On the other hand, the palpable lengthening or shortening of any woodwind instrument will complicate the player's task during performance by tending to put the instrument slightly out of tune with itself: to sound a precise octave above the new basic pitch, for instance, the player must compensate for the fact that the effective tube length provided by the normal fingering is no longer precisely half the overall length. The techniques used for this compensation are likely to affect timbre, volume or articulation. Hence the intonation and voicing of a good woodwind instrument are displayed best when it is at the pitch level intended by the maker; this is especially true of the oboe, the instrument which provides the *a'* to which the orchestra tunes (this pitch being used because the violas and cellos as well as the violins have a string tuned to A, and this is the cello's highest and hence clearest string). That pitch level itself, however, varies somewhat with temperature, gradually rising as the instrument is warmed by the player's breath.

On string instruments the tuner adjusts the tension and sometimes the sounding length of the string. Gross alterations of tension are avoided because of the danger of breakage and because a pronounced change in the stress borne by the instrument will more or less subtly alter its shape and hence in turn the sounding length, tension and pitch of any previously tuned strings. (At least two tunings are thus required to raise or lower the pitch level of a piano, the first being unlikely to leave the instrument very well in tune.)

Most keyboard instruments have so many strings or pipes that some of them are far more suitable to begin a tuning with than others. The octave around middle C on the keyboard, perhaps *f–f'*, is traditional nowadays on the organ (using pipes of the 4' Principal rank) and on the piano (using the middle of the three strings for each note, the other two being dampened by a strip of felt which the tuner inserts). One note, for example *a* or *c'*, is set to a pitch standard from a tuning-fork or the like, and then the rest of the

octave is tuned through a network of consonant intervals extending from this starting-point. Often a chain of 5ths and 4ths is used (for instance A–D–G–C etc), but many tuners use 3rds and major 6ths at least as much (*see* Equal temperament). Once the initial octave has been set, the tuning is extended to the other octaves and, finally, to the other sets of strings or pipes.

In judging intervals a tuner listens, consciously or subliminally, for beats among the overtones of the two notes involved. Hence differences in timbre crucially affect the procedure. It would be difficult to set precisely tempered intervals by a stopped-flute rank on the organ, for example, because its timbre is weak in the odd-numbered members of the harmonic overtone series. In piano timbre a mild degree of inharmonicity obliges the tuner to make all the octaves slightly larger than the theoretical norm of 1200 cents (which would be an octave with a frequency ratio of exactly 2:1). While the proper amount varies with the particular instrument, a general indication is given in Table 1 (based on suggestions made by the Tuners Supply Co. of Boston, Massachusetts). Some of the 'stretch' in the extreme bass and treble, however, is for the sake of a certain melodic bite gained by making the octaves larger than harmonic justness would dictate. In this respect different tuners and musicians have different tastes, but markedly stretched octaves are at best a mixed blessing in chamber music, where a more sober intonation will allow the non-keyboard instruments to blend more resonantly.

On instruments with extremely inharmonic timbre, the criteria for good tuning are quite different. Each Indonesian gamelan, for example, is likely to have its own shading of the *pelog* or *slendro* scale, and these shadings differ far more than the various temperaments of the Western tradition. Yet within each gamelan the unisons and octaves are tuned precisely to achieve certain qualities of beating and, according to Hood (*Selected Reports,* 1966), definite patterns of stretching or compressing the octaves for certain notes of the *pelog* or *slendro* scale. *See also* Bell (i).

For bibliography *see* Temperaments and Intonation (ii).

MARK LINDLEY

Tuning-fork

(Fr. *diapason*; Ger. *Stimmgabel*; It. *corista*).

A metal device (occasionally with resonator) for establishing pitch. It was invented in 1711 by John Shore, Handel's famous trumpeter. Its musical advantages are that its pitch is hardly affected at all by changes of temperature, that for all practical purposes it retains its pitch permanently, that it is of convenient size and that its pitch can be adjusted by careful filing. To sharpen it, the tips of the prongs are filed, and to flatten it the prongs are filed inside just above the yoke that joins them (a job better left to an instrument maker). When a fork is struck and held in the air its sound

is faint and, for a short time, at least one high partial tone is clearly heard; but if the stem is pressed down on a table, or other wooden surface of some size, the fork's note becomes much louder, while the high partial tone fades out at once. The vibrations of the two prongs, away from and towards one another (fig.1), cause the stem to move up and down, and it is this that sets the wooden surface in sympathetic vibration as a soundboard: the soundboard rapidly drains away the energy of vibration of the fork to produce its own motion, hence the fading of the fundamental note of the fork and the almost instantaneous fading of the high partial tone. This high partial tone of the tuning-fork is an interesting and extreme example of the 'inharmonicity' of a mechanical system that can vibrate in a number of different 'modes' and is allowed to vibrate freely. It is not easy to determine the pitch of the first upper partial by ear alone; but in the average fork it is about two octaves and a major 6th above the fundamental, which is the note used for tuning. It is thus incorrect to speak of the 'harmonics' of a tuning-fork, for the vibrations of its several tones are inharmonic.

Originally invented for musical purposes, the tuning-fork was found to have properties that made it invaluable as a scientific instrument, and as a reference standard of frequency (rate of vibration). For use in the acoustics laboratory a tuning-fork was often fitted with a resonance box. In shape this was rather like a large matchbox with one end removed; it had a knob on the top with a hole in it into which the fork could be fitted. Sometimes a cylindrical resonator was used instead. The resonance box, or resonator, has its own note, just as a glass jar has (as one discovers by blowing across the mouth of a test tube), and this note was made slightly different from the note of the fork's fundamental. If the notes were made exactly the same, the resonance box would respond so much that it would drain away the energy of the fork too rapidly and the sound of the fork would fade too soon. The resonance box, not being tuned to the fork, actually alters its frequency, though the alteration is extremely slight. Since the resonator radiates the fundamental tone much more efficiently than the inharmonic high partial tones a tuning-fork and its resonance box produce a practically pure tone, and were often used for that purpose before the availability of electronic signal generators.

Three well-known names are especially associated with the scientific use of the tuning-fork in the 19th century for musical objectives. Johann Heinrich Scheibler was the first to devise, in his tuning-fork tonometer, a method of determining with accuracy the absolute frequency of a given musical note and of comparing the frequencies of two notes. Lissajous devised a still more accurate method of comparing the frequencies of two tuning-forks which give a mistuned unison, or a mistuned consonance. He viewed, through what is called a Lissajous vibration microscope, the pattern made by the motion of a spot of light reflected in turn on a highly polished area on one prong of each of the two forks which were set to vibrate in planes at right angles to each other. The gradual shifting of this pattern gave him an accurate measure of the difference of frequency. Rudolf Koenig was able to determine absolute frequency by means of his clock-fork, which he used to show that Lissajous' standard fork, intended to record 'diapason normal', really had a frequency of 435·4(5) Hz at 15° C. (The bracket round the 5 is because Lissajous' standard fork, now in the Paris Conservatoire (fig.2), was attached to a resonance box which Koenig,

quite rightly, was unwilling to disturb. As a consequence its vibration faded too rapidly to allow him time to ascertain the second decimal place.) Koenig's clock-fork was a beautiful piece of apparatus for maintaining a fork in continuous vibration by mechanical means in order to measure its frequency with great accuracy.

Modern methods use electrical means to keep a fork in continuous vibration for such a purpose. Other electrical means are used to compare a fork's frequency with that of a musical sound. Both devices were used in the chromatic stroboscope (Stroboconn), invented shortly before World War II by physicists in the laboratories of C.G. Conn Ltd, the American musical instrument makers. In this instrument the frequency of a fork whose vibrations are maintained electrically is adjusted by turning a knob that moves a weight along each prong. The vibration of the fork controls the speeds of rotation of patterned discs, there being one disc for each chromatic note in an octave. These discs are illuminated by a gaseous discharge lamp that flashes at the frequency of a sound falling on a microphone. After turning the knob to the right or left, until the pattern on one of the rotating discs appears to stand still, the observer is able to read at once from a graduated scale the deviation of the frequency of the sound from that of the nearest note of the chromatic musical scale at standard pitch (a' = 440 Hz). The material of the fork is a nickel-chromium-steel alloy that makes the fork's frequency practically independent of the temperature.

Since the 1970s crystal-controlled frequency generators and meters, in which the oscillation of an electric circuit is controlled and stabilized by the resonant mechanical vibration of a small slab of crystalline quartz, have replaced equipment based on tuning forks for scientific purposes, and compact electronic tuning meters are used by many musicians. These modern achievements may prompt one to appreciate more fully those of the music physicists of the 19th century who, with none of the electronic resources of the modern acoustics laboratory at their disposal, managed to obtain remarkably precise results.

Tuning-fork instruments.

Instruments, mostly with keyboards, that incorporate tuning-forks as the sound source; their descendant the celesta rapidly became a more common alternative. The forks are set in vibration over a resonance

chamber and sound a practically pure, and therefore monotonous, tone. The first instrument of this type was Charles Clagget's 'Aiuton, or Ever-tuned organ' (1788), in which the forks were bowed by a rotating metal cone. In later instruments the forks are usually struck by hammers. To recreate vowel sounds for acoustic research, Hermann von Helmholtz controlled eight tuning-forks (1856, subsequently 12 forks), tuned to the overtone series of a single note, with an oscillating electromagnetic circuit to produce sustained sounds, using an additional fork to stabilize the circuit.

In 1865 Victor Mustel of Paris introduced the Typophone, which was registered in Great Britain in 1866; Vincent d'Indy included it in *Le chant de la cloche* (1885) and Henri Duparc in *L'invitation au voyage* (*c*1870, later revised for orchestra). In 1872 John Milward extended one of the prongs to produce an octave. After 20 years' work Thomas Machell of Glasgow perfected his 'dulcitone' in 1880; it was used in five works by Percy Grainger, including *The Warriors* (1913–16). Other instruments included the 'Adiaphon' of W. Fischer & E.W. Fritzsch of Leipzig (1882) and the 'Euphonium' of G.A.I. Appunn of Hanau, a five-octave instrument without resonators (1885).

From 1885, in his Elektrophonisches Klavier, Richard Eisenmann used a system of electromagnets and tuning-fork oscillators to excite and sustain vibrations in piano strings. Helmholtz's use of tuning-forks as a stable vibrating source for controlling an electrical circuit was extended in the Rangertone organ (1931); the forks maintained electro-magnetic tone-wheels at a constant speed, and the tuning of individual notes could be adjusted by changing single forks. The RCA Electronic Music Synthesizer (two models: 1951–2, 1957) included a set of 12 electronically-driven tuning-forks as the primary source of sound. Amplified tuning-forks are featured in the Kamerton pianino (1950s) from the USSR and in several compositions of the 1980s and 90s, including works by Denis Smalley (1985–9), Richard Lerman (1976) and Warren Burt (several works for a specially-built four-octave set of aluminium tuning-forks tuned in 19-note just intonation, with an extended bass range).

Tuning-slide (i)

(Fr. *coulisse d'accord*; Ger. *Stimmzug*).

On wind instruments, a part of the sounding-tube that can be pulled out to alter slightly the pitch of an instrument. On brass instruments, the tuning-slide is a detachable U-shaped tube of cylindrical bore; it was apparently invented by J.G. Haltenhoff of Hanau in the late 18th century (*FétisB*). On woodwind instruments tuning-slides consisted of tenon-and-socket joints that could be pulled out, a more satisfactory way of adjusting the pitch than

by using middle pieces of varying lengths (*corps de rechange*). The telescopic tuning-slide began to appear on flutes towards the middle of the 18th century; Quantz claimed it as his own invention. For further information, see A. Carse: *Musical Wind Instruments* (London, 1939/*R*), pp.59ff, 77–8.

HOWARD MAYER BROWN

Tuning-slide (ii).

In organ building, a movable metal tube fitted on top of a metal flue pipe; it can be raised or lowered to adjust the pitch of the pipe. Slides have replaced 'tuning-cones', used to dilate or close the tops of open pipes; cones were not satisfactory since they damaged the pipes. For further information, see W.L. Sumner: *The Organ* (London, enlarged 4/1973/*R*).

HOWARD MAYER BROWN

Tuning wire.

In organs, reed pipes are tuned to the pitch of a convenient diapason rank (usually a 4' Principal) by means of a stiff wire of brass or other copper-based alloy that passes through the lead block into which the shallot and tongue are wedged. The lower end of the wire springs the tongue against the shallot; the wire is raised (to flatten the pitch of the pipe) by tapping the edge of a steel reed knife against the overhang of a filed-out portion of the wire, or the underside of a right-angled bend in it, and lowered (to sharpen the pitch) by tapping the wire downwards.

For illustration *see* Organ, fig.17 and Reed, fig.2.

MARTIN RENSHAW

Tunisia, Republic of (Arab. Al-Jumhūriyya al-Tūnisiyya).

Country in North Africa. It borders the Mediterranean Sea, flanked by Algeria and Libya, and has an area of 154,530 km^2 and a population of 9·84 million (2000 estimate). The population is almost entirely Arab-Berber and 98% Muslim. Arabic is the official language, with French reserved for the language of commerce.

Tunisian musical scholarship recognises a basic division between urban music traditions (belonging to the North African branch of Arab music), which are relatively homogeneous, and rural traditions (believed largely to derive from the Arab Bedouin tribes that settled in the individual regions), which are regionally diversified. In reality, the rural-urban divide is not quite so clearcut; migrations of rural peoples to the cities, the mass media and, since Tunisian independence from France (1956), tourism and government patronage have contributed to the widespread transplantation and transformation of previously localized rural traditions. However, with a few

notable exceptions, Tunisian music scholars have concentrated almost exclusively on the urban sector and, particularly, on the repertory known as *ma'lūf*

RUTH DAVIS (I), LEO J. PLENCKERS (II)

Tunisia

I. Urban music traditions

Tunisia, §1: Urban music traditions

1. Ma'lūf.

The *ma'lūf* (literally, that which is familiar or customary) is regarded by urban Tunisians as their oldest, most prestigious musical tradition. Also known as *mūsīqā andalusiyya*, the original repertory was allegedly imported by Muslims and Jews fleeing the Christian reconquest of Spain from the 12th century to the 17th. In Tunisia, the *ma'lūf* took root among urban communities of the northern and coastal regions, and until independence it remained virtually unknown elsewhere.

(i) Musical characteristics.

The *ma'lūf* is essentially a collection of songs and instrumental pieces, organized within a complex system of melodic modes called *tubū'* (sing. *tab'*), or more recently, *maqāmāt* (sing. *maqām*). The melodies may be in fixed or in free rhythm; if metred, they are based on characteristic rhythmic-metric cycles with distinct patterns of accentuation called *īqā'āt* (sing. *īqā'*). Until the recent introduction of Western notation, the melodies relied exclusively on oral transmission. The poetic texts, in contrast, were recorded in special collections called *safā'in* (vessels). The poems mostly belong to the Arab literary strophic verse forms of *muwashshah* (in classical Arabic) and *zajal* (in dialect); typically, they describe romantic love, the beauty of women and nature and the intoxicating effects of wine.

The core *ma'lūf* repertory is classified by *tab'* into 13 song cycles called *nūbāt* (sing. *nūba*). Since it would take many hours to perform an entire *nūba*, in practice a selection of pieces is organized according to a standard sequence of rhythmic-metric genres. The classification and internal organization of the *nūbāt* is attributed to the 18th-century aristocratic patron and amateur Muhammad al-Rashid Bey (*d* 1759), who is also credited with composing, or at least commissioning, the instrumental genres. Through the late 1930s and 40s, the repertory was transcribed into Western staff notation by the Rashidiyya Institute in Tunis. After Tunisian independence, the Rashidiyya's transcriptions became the source for the official *ma'lūf* canon published by the Ministry of Cultural Affairs in a series of nine volumes titled *Al-turāth al-mūsīqī al-tūnisī* (The musical heritage of Tunisia) (*c*1965–79).

The published canon comprises 13 *nūbāt*, totalling 372 songs and 27 instrumental pieces, two volumes of miscellaneous songs grouped by *tab'* in sets of freely contrasting *īqā'āt* called *waslāt* (sing. *wasla*) and 11 instrumental *bashraf*s (overtures). The *bashraf*s and many of the miscellaneous songs are generally acknowledged to date from the 18th century or later; some include *tubū'* and *īqā'āt* foreign to the *nūbāt*, reflecting Ottoman and eastern Arab influences. The entire repertory remained anonymous until the 20th century, when composed pieces by Ahmad al-Wāfī (*d* 1921), Khemais Tarnān (*d* 1966) and Salāh al-Mahdī were accepted into the recognized canon.

The songs of the *nūba* are divided into five genres, each named after its corresponding *īqā'*, performed in the following sequence: *btayhī*, *barwal*, *draj*, *khafīf* and *khitm* (ex.1). A sixth genre, *dkhūl 'al-brāwal*, understood to be a derivative of the faster *barwal*, precedes the *barwal* section in only five *nūbāt*. The 13 *nūbāt* are conceptualized as a large cycle, reflecting the order in which they should ideally be performed. Ex.2 illustrates the scales of the 13 *tubū'* of the Tunisian *nūbāt* in their conventional sequence (al-Mahdi, 1965–79, iii).

The *nūba* may be performed by singers without melody instruments. Alternatively, the core vocal cycle may be framed by various instrumental genres such as the *istiftāh;* (literally: 'opening'), *msaddar* and *tūwshiyya*, creating an expanded cycle. The *istiftāh* opens the *nūba* with flowing, irregular phrases in duple metre played by melodic instruments alone. The *msaddar* is a tripartite overture played by all instruments in triple metre; each part of the *msaddar* is based on a different *īqā'*, proceeding from slow to fast, as illustrated in ex.1.

In the expanded cycle, the core vocal pieces are preceded by an *abyāt*, originally a solo vocal improvisation on two lines of poetry. The *abyāt* was transformed by the Rashidiyya into a fixed composition for chorus in *īqā' al-btayhī*, with an integral instrumental introduction and interludes. The individual songs are embroidered with instrumental preludes (*adkhāl* or *farighāt*) and instrumental responses to the vocal lines. In both the instrumental introductory section and the vocal cycle, duple metres are followed by triple metres, longer rhythmic cycles are followed by shorter rhythmic cycles, and slow tempos are followed by faster tempos. While the overall tendency is from slow to fast, the internal sequencing principle alternates rather than progresses (ex.1).

(ii) Pre-1956 contexts and performance practice.

Until Tunisian independence in 1956, the chief patrons of the *ma'lūf* were Sufi confraternities, popular religious organizations whose ceremonies include music, dance and breath control as a means of attaining heightened spiritual states. Many *zwāyā* (Sufi lodges) also cultivated the *ma'lūf*, whose melodies were often similar or even identical to those of the sacred repertories. In a society where public musical activity was otherwise relegated to non-Muslims and members of the lowest classes, the *zwāyā* functioned as music conservatories and concert halls where anyone could participate, regardless of social status. Elsewhere, the *ma'lūf* was cultivated in aristocratic palaces by amateur musicians in their homes. Professional musicians performed in coffee-houses, often accompanied by

the smoking of hashish, and in communal celebrations for religious and family festivals such as weddings and circumcisions.

The *zwāyā* fostered a type of performance practice called *ma'lūf khām* (literally: 'raw or unrefined *ma'lūf*') characterized by a male chorus accompanied by percussion instruments such as the *darbukka* (goblet-shaped drum), *naqqārāt* (pair of small kettledrums), *tār* (tambourine) and *bendīr* (frame drum with snares) or by hand-clapping alone. In some communities, Sufi musicians also sang *ma'lūf khām* in cafés and during family and communal celebrations. In Tunis and other large cities, the *ma'lūf* was normally performed in secular contexts by small ensembles of soloists that included melodic instruments. The ensemble representing Tunisia at the 1932 Cairo Congress of Arab Music comprised a *rabāb* (boat-shaped, two-string fiddle), *'ūd 'arbī* (fretless, short-necked Maghrebi lute with four strings), *naqqārāt*, *tār* and a male alto singer. More commonly, the *rabāb* was replaced or joined by the violin, and instruments such as the *'ūd sharqī* (six-string Egyptian lute), *qānūn* (trapezoidal plucked zither), *darbukka* and from the 1940s, the *nāy* (bamboo flute without mouthpiece) were added, as were fixed-pitch European instruments such as the harmonium, mandolin and piano. The instrumentalists doubled as chorus and sometimes also as solo vocalists, while the melodic instruments doubled the vocal line. Solo players and singers performed their own versions of the melodies, embellishing them spontaneously, resulting in a simple, heterophonic texture.

A third, more specialized type of performance practice was introduced by the European-style wind band based at the military school in the Bardo (*fl* 1855). In addition to military fanfares, the band played melodies of the *ma'lūf* that had been transcribed into Western musical notation. When civilian wind bands emerged at the beginning of the 20th century, they included performances of the *ma'lūf* in their street processions.

On the rising tide of the Tunisian nationalist movement and in the wake of the 1932 Cairo Congress of Arab Music, the Rashidiyya Institute, named after the 18th-century aristocratic patron Muhammad al-Rashid Bey, was founded in 1934 in Tunis with the aim of conserving and promoting traditional Tunisian music. The founders' stated purpose was to safeguard Tunisian traditional music from pervasive Egyptian influences imported by visiting celebrities and popularized by the emerging mass media. Modelled on the Western music conservatory and concert hall, the Rashidiyya also attempted to counteract traditional social taboos on public music-making by providing an academic status and a serious public secular environment for its performances of the *ma'lūf*.

The Rashidiyya also created a new type of ensemble inspired by both the European orchestra and contemporary Egyptian ensembles, excluding instruments of fixed pitch. This ensemble transcribed the entire *ma'lūf* repertory into Western notation for use in teaching and performance, and it instituted a formal practical and theoretic training, comparable to that developed for Western art music. The Rashidiyya ensemble comprises of a mixed chorus and a separate instrumental section, including a nucleus of Western bowed strings (several violins, two or three cellos and one or two double basses), a *darbukka*, *tār* and *naqqārāt* and an arbitrary smattering

of traditional Arab melody instruments such as *'ūd 'arbī*, *'ūd sharqī*, *qānūn*, *nāy* and *rabāb*. The timbre is dominated by bowed strings and chorus in unison and octave doublings. Since the vocal nuances are considered too subtle to be notated, the singers are taught by the traditional method of repetition and memorization, while the instrumentalists rehearse and perform from notation. The leader conducts with a baton.

(iii) Post-1956.

After independence, the Rashidiyya's teaching methods, syllabus and personnel were transferred to the new National Conservatory of Music, whose curriculum combines Tunisian, Western and Egyptian traditions. With the creation of the Ministry of Cultural affairs in 1961, the *ma'lūf* became the key ingredient in the government's musical policies, and the Rashidiyya's innovations were extended throughout Tunisia. Designating the *ma'lūf* 'the Tunisian musical heritage', the Ministry of Cultural Affairs established a nationwide network of amateur *ma'lūf* ensembles and music conservatories along the lines of the Rashidiyya in new secular cultural institutions called *dūr al-thaqāfa* (houses of culture). The ministry supplied the new institutions with instruments and music teachers, and it distributed the published versions of the Rashidiyya's transcriptions as sources. Despite common acknowledgement of distinct regional variants, the published canon is officially presented as a unitary tradition, and its interpretation is monitored by an annual cycle of festivals, competitions and residential music courses.

The impact of the government's initiatives was reinforced by its hostile attitude towards Sufi confraternities, regarded as both politically suspect and socially regressive. As their activities were restricted and their social prestige plummeted, *zwāyā* throughout the country emptied and ceased to function; many were taken over by the state. Gradually the government modified its attitude, recognizing the confraternities as important guardians of the nation's cultural heritage. The government concentrated instead on secularizing and professionalizing them. *Firaq* were encouraged to reassemble in the *zwāyā* or in the new cultural institutions where they resumed their ceremonies in the guise of concerts, omitting practices associated with trance.

Tunisian musicians and intellectuals have criticized the Rashidiyya and its spin-off, the establishment ensembles, for turning the *ma'lūf* into a museum piece, removed from real-life experience. Meanwhile, in historic *ma'lūf* centres such as Testour, Sidi Bou Said and Zaghaun, Sufi and other old-style ensembles co-exist with modern, state-sponsored ensembles, attracting new, younger recruits and performing in traditional communal contexts. In Sidi Bou Said, the local *ma'lūf* ensemble featuring pedal harmonium, violin, *'ūd* and percussion, entertains both residents and tourists in the café attached to the *zāwīya*, funded by the municipality. The same ensemble also performs at local weddings and other family celebrations. Since the 1960s, Tahar Gharsa, veteran *'ūd* player of the Rashidiyya ensemble, has challenged academic *status quo*, performing the *ma'lūf* and other traditional songs in cafés, hotel restaurants and at wedding parties in Tunis, leading small solo instrumental ensembles.

Since the 1980s, there have been attempts from within the official establishment to reintroduce more flexible approaches to performance practice. In the adult section of the National Conservatory, a reduced *ma'lūf* ensemble led by Rashid Salami rehearses without notation in order to encourage improvisation and a return to solo heterophonic textures. In 1986, Muhammad Saada, former leader of the Rashidiyya ensemble, formed Al-Fann, an ensemble of eight solo instrumentalists that performs the *ma'lūf* along with traditional Egyptian and Turkish repertories in formal concert venues. In 1992, Amīna Srarfī founded the all-women's *ma'lūf* ensemble Firqat al-Azifāt, effectively shattering the all-male instrumental barrier still maintained by the Rashidiyya. Media star Lotfi Boushnak balances solo recitals of Egyptian music with traditional Tunisian songs, including the *ma'lūf*, backed by an ensemble of instrumental soloists. Finally, a recording of *nūbāt al-sika* produced in 1994 by the Tunisian Ministry of Cultural Affairs, features a reduced ensemble in a deliberate attempt to reproduce older performance styles. Some Tunisian musicians see in these high-profile developments fertile seeds of a popular revival of the *ma'lūf*, comparable perhaps to the original revival pioneered by the Rashidiyya ensemble.

Tunisia, §1: Urban music traditions

2. Music and the media.

Songs composed specifically for the new commercial record market emerged in the 1930s. The new songs were characterized by superfical and sometimes obscene lyrics, often sung in Franco-Arabe, and frequent use of Western instruments and musical idioms. A classic representative of this genre is singer-composer Shaykh al-'Afrit whose recordings are still widely appreciated today.

The Rashidiyya reacted to the new trends by holding competitions and commissioning new songs in traditional Tunisian styles. The Rashidiyya's efforts were supported by the radio station, founded in 1938, which had a mandate to promote Tunisian music exclusively. During the years leading up to independence, the Rashidiyya ensemble provided the springboard for some of the most popular media artists of the time, including the legendary female singers Sāliha, Fathiyya Khayrī, 'Aliyyaī, Na'āma and Shabīla (the daughter of Sāliha) as well as the singer-composers 'Alī Riāhī and Farīd al-Atrash. Today, songs of these and other media stars of the period, considered the golden era of Tunisian song, are collectively known as *mūsīqā atīqa* (traditional music), and they are sometimes even loosely designated *ma'lūf*. Far from representing opposing tendencies, the old and new songs are perceived by Tunisians as part of a continuum; inn which the older repertory serves as a foundation and inspiration for the new.

The relationship between old and new songs changed radically after 1958, with the creation of the first state-funded radio ensemble. The new ensemble was modelled not on the Rashidiyya but on contemporary Egyptian media ensembles, and it included a wide range of Western instruments. From its inception, it focussed primarily on Egyptian and other popular eastern Arab songs, and on songs by Tunisian composers in similar styles. The radio also popularized compositions in Tunisian folk

styles, typically featuring the mizwid (bagpipe with two single reeds). Trends set by the radio were reflected in the record industry.

Since Tunisian independence, the *ma'lūf* has maintained a low profile in the mass media; only at the end of the 1990s has this tendency shown signs of changing.

3. Sufi religious traditions.

Scholarly interest in the music of the confraternities has tended to focus on the *ma'lūf*. As a result, their distinctive musical traditions remain largely undocumented. Certain Sufi confraternities, e.g. the ʿĪsāwiyya, the ʿAzūziyya and the Sulāmiyya, cultivate a genre of sacred song called *shishtrī* or Sufi *ma'lūf*. *Shishtrī* was introduced to Tunisia by the 13th-century Andalusian mystic poet-composer ʿAbū al-Hasan ʿAlī al-Shushtarī, and it became firmly established among the confraternities through the efforts of Sidi Qashshāsh at the end of the 16th century, coinciding with the last significant influx of Andalusian refugees.

Shishtrī draws on similar musical and poetic forms (i.e. *muwashshahāt* and *azjāl*) and, in some cases, the same melodies as the *ma'lūf*, to the extent that the two repertories may appear indistinguishable. Some *zwāyā* introduce actual *ma'lūf* songs into their ceremonies, interpreting their texts allegorically; more typically the *ma'lūf* is performed after the sacred ceremonies, providing a transition before the participants return home. In general, the confraternities restrict the use of musical instruments, especially melody instruments.

The most detailed analysis of Sufi music in Tunisia in a European language (L.J. Jones, 1977) is based on provincial traditions of the ʿĪsāwiyya confraternity, which are less closely related to the *ma'lūf* than those of the *zwāyā* in and around Tunis. Nevertheless, the provincial traditions use overlapping terminology and procedures analogous to the *ma'lūf*. Jones identified two types of ʿĪsāwiyya *nūba*. The *nūbāt* of the first type are named after *ma'lūf*, *nūbāt*, but their tonal structures are different. The *nūbāt* of the second type are named after folk modes, and they have no distinctive tonal structures. Their melodies are more limited in range, and their sections are shorter. The ʿĪsāwiyya *nūba* consist of two bipartite sections: first a solo introductory section in free rhythm in which the *zukra* is followed by a vocal *qasīda*; then a main section in fixed rhythm for chorus and drums. The choral section draws on two genres, a *nūba* followed by a faster *barwal*. Neither the *nūba* nor the *barwal* has a distinctive rhythm, although both may use *ma'lūf īqāʿāt*, and there is a gradual accelerando throughout the section. The texts are based on Arab literary forms of *qasīda*, *muwashshah* and *zajal*.

Sufi *firaq* (musical groups) rehearse and hold weekly *hadrāt* (ceremonies) in their *zwāyā*, normally after the mid-afternoon prayer on Fridays. *Hadrāt* are attended by all members of the community, including women and children. Special *hadrāt* and *kharjāt* (street processions) mark religious festivals such as the birthday of the Prophet or the patron saint of the *zāwīya*. Sufi musicians also perform at family festivities accompanying circumcisions, weddings and the return from the *hajj* (pilgrimage), or from

work and studies abroad. Before independence, events such as birth, cutting the first tooth, the first hair cut and memorizing certain sections of the Qur'an were also celebrated. At that time, the local *firqa* performed without payment, as a way of honouring the family; after independence, it became customary to demand a fee. The *firqa*'s communal activities are supplemented by state-sponsored festivals and competitions.

Tunisia

II. Rural music traditions

Two distinct musical idioms form the basis of Tunisia's rural music: the music of the autochthonous Berbers and the music of the Arabic-speaking Bedouin, such as the Bani Hilāl who invaded Tunisia in the 11th century. At least two different types of melodic traditions can be distinguished: melodies based on a gapped scale and melodies using a scale of successive seconds. The first is of Berber origin, insofar as these melodies show a resemblance to the pentatonic melodies of the Algerian Kabyls. Many melodies of the second group contain neutral 3rds, indicating Arab origin. Rural music of Tunisia has also been influenced by the music of several sub-Saharan African ethnic groups, such as the Ghebunten, who settled in the south of Tunisia.

Music plays an important role in both sedentary and nomadic rural populations, one that differs little from its role in urban society. At social events such as weddings and circumcisions and at religious festivals such as a *mouwlid*, the celebration of the birthday of the Prophet or local saint, music is always present.

Musical instruments are used to accompany songs and to perform instrumental introductions. There are only a few instances of autonomous instrumental music. The number of different instruments is small. In fact, only two standard combinations are used: *gasba* and *bendīr* (fig.1) and *zūkra* and *tabl* (fig.2). *Gasba* is the original Arabic term for a flute, and it consists of a straight bamboo tube of about 60 cm with a large bore of about 20-23 mm. Although the *gasba* generally has seven or eight finger holes, it is played with only six fingers: three of each hand. The remaining holes are covered with paper or wax. The *bendīr* frame drum has a diameter of about 50 cm. On the inside of the drum's membrane two strings are tightened that buzz when the membrane is hit.

Zūkra is a Tunisian name for a loud, penetrating double reed aerophone (*zurna*, elsewhere in the Arab world), which is about 25 cm long. The *zūkra* player generally stands while playing. The *tabl* is a two-headed drum hung obliquely from the player's shoulders. The drummer hits the upper membrane with a short thick stick, playing strong beats. Lighter beats and drum rolls are played with a flexible stick on the lower head. The drummer usually performs dance steps and acrobatic movements while playing.

Bands comprising one or two *zūkra*s and two to four *tabl*s are regularly heard in rural areas. They may lead a procession introducing an important person or escort a bride to the home of her future husband. *Zūkra-tabl* bands are always present at horse races, and they often play at outdoor activities to welcome guests and to accompany dances. Popular dances

include the *saʿdāwī* scarf dance performed by women and the *zagāra* dance performed by men (ex.3). The melodic structure of the music consists of a sequence of small melodic motifs consisting of three to five different tones that are constantly repeated. *Zūkra* players use circular breathing to perform long melodic lines without breaks. *Tabl* players add complex rhythmic figures framed within simple binary or ternary beat patterns.

A different kind of instrumental music is *tarq al-saīd* (the mode of the lion), a solo improvisation played on the *gasba* depicting a victorious fight between a Bedouin and a lion. In the first half of the 20th century, this type of programme music was known throughout Tunisia.

There is a large variety of vocal genres, often named after a town or region where a song originates, such as the *jendoubī* (after Jendouba town) or *mornāgī* (Jebel Mornāg mountain), or they may be named after an ethnic group, such as *hamāmī* (Hamama) or *merzūgī* (Merazig). Some song types are named after a person, such as *salhī* ex.4, an improvisation named after its composer, or *darbashī*, a ballad about a folk hero of the same name. A song type may be named after its function, such as the dirge *nawāhī* (*nawha*, 'lamentation')s, or *yahāfī* (*yihfa*, the enclosed couch used to carry a bride to the house or tent of her husband on the day of her wedding). A song type may also identify the rhythmic pattern of the song (*allagi*) or the structure of the text (*melzūma*).

Vocal music is made up of improvisations and pre-composed songs. Improvisations are performed in free rhythm and sung as an introduction to a pre-composed metrical song. Various types of improvisation are known by names such as *mlelia*, *rīsh*, *salhī* and *sharmatī*. With the exception of the *salhī*, no specific data are available. The *salhī* refers to Salah, a south Tunisian musician who was imprisoned and developed this type of improvisation to comment on his lost freedom. *Salhī* texts consist of short, two-line poems with plaintive contents and are generally performed by a singer and a *gasba* player. Improvisation may develop into a lively dialogue between the two musicians.

Pre-composed songs are always strophic. The stanzas are sung in alternation between a lead singer and a small choir of two or three singers who sing the refrain. There are two types of pre-composed songs: non-metric songs and songs with a steady beat. Non-metrical songs consist mainly of traditional, ritual songs such as the *yahāfī*, and epic songs and ballads, such as the *darbaghī*. Both types of song are performed by women at social events such as weddings, engagements and circumcisions. They are sung antiphonally without instrumental accompaniment. The women sing with high and loud voices and tense throats, which enables them to perform a special kind of vibrato and apply a yodelling technique. In the Khroumiri region, ritual songs and ballads comprise the main repertory for women. To the south, their repertory also contains many metrical songs, which they share with male singers. Unaccompanied non-metrical ballads are performed regularly by male singers. Unlike the women, they sing in a chant-like way with short, descending melismas that function as cadences.

Metrical songs are another important group of pre-composed songs. They are always accompanied by *gasba* and *bendīr* or *zūkra* and *tabl*. The

principal role of the instruments is to repeat vocal melodies, albeit enlarged by multiple repetitions and additional improvisatory passages. Short strophic songs may be expanded this way and transformed into complicated repeated patterns by additional vocal repetition and instrumental interpolation. Metrical songs also display a great number of rhythmic patterns, each characterized by a specific succession of strong and light beats (generally called *dūm* and *tek*). Regular binary or ternary patterns are common, such as the *fezzani* (8/8), which originated in Libya, and the *alagi* (12/8). Ternary patterns often employ hemiola.

Religious songs form a special category within metrical songs. They include edifying songs, of which the texts are generally available in printed form, and songs performed in Dhikr ceremonies. Edifying songs are accompanied by *bendīr*s played by the singers themselves. *Dhikr*s songs are performed by a singer and at least two instrumentalists who play the *gasba* and *bendīr*. *Dhikr* song texts are made up of short invocations of a saint's name.

The structure of song texts, especially metrical and rhymed, determines musical structures. Some textual structures of Bedouin songs were described by Hans Stumme at the end of the 19th century. However, their function in the song structure is still basically unexplored, although some research has been done on the subject by Robert Lachmann.

Tunley, David (Evatt)

(*b* Sydney, 3 May 1930). Australian musicologist, composer and music educationist. He received professional training at the New South Wales Conservatorium with Alexander Sverjensky (1947–50) and Sydney Teachers' College (1951). From 1952 to 1957 he taught music in Sydney. In 1958 he joined the staff of the University of Western Australia, first as a lecturer becoming associate professor of music in 1971. He later became professor of music (1980–94) and head of department (1985–90), and was elected professor emeritus in 1994. He took the BMus and MMus degrees of the University of Durham in 1958 and 1963, and in 1970 he received the DLitt from the University of Western Australia. As a composer he studied with Nadia Boulanger (1964–5) and his works, which include the Concerto for Clarinet and String Orchestra (1957), the Suite for Two Violins (1965), *A Hymn of Faith* (1968), *A Wedding Masque* (1970) and *Inflorescence* (1978), reveal her influence as well as that of French neo-classicism, Bartók and Messiaen.

Tunley's musicological interests include the 18th-century French secular cantata (the subject of his doctoral dissertation), French opera from Lully to Rameau, and *mélodie*, stressing both the repertory of 19th-century French solo song and its social significance in salons of the period. His other areas of research are the history of music theory and its applied harmonic practices. From 1967 to 1992 Tunley edited *Studies in Music*. He was chairman of the Music Board, Australian Council (1984–5), national president of the Musicological Society of Australia (1980–81) and national chairman of the Australia Music Examinations Board (1995–6). He founded the Perth chamber chorus Collegium Musicum and the York Winter Music Festival in Western Australia (1982–93). In 1980 he was elected Fellow of the Australian Academy of the Humanities, and in 1987 he was made a Member of the Order of Australia. In 1995 the University of Western Australia published the Festschrift *Essays in Honour of David Evatt Tunley*, ed. F. Callaway (Perth, 1995), which contains an evaluation of his writings and compositions.

ANDREW D. McCREDIE

Tunstede, Simon [Friar of Bristol]

(bur. Bruisyard, Suffolk, 1369). Franciscan friar. He was warden of the Franciscan convent at Norwich, regent-master of the Oxford Franciscans in 1351 and the 23rd provincial minister of the Friars Minor in England *c*1360–69. He was buried at the Poor Clares nunnery at Bruisyard. Bale and Tanner credited Tunstede with the authorship of the *Quatuor principalia musice* (*GB-Ob* Digby 90, f.63*v*; *CoussemakerS*, iv, 200–298). This treatise was subsequently regarded as the work of an anonymous Franciscan from Bristol, but is in fact by John of Tewkesbury. Tunstede wrote commentaries on Aristotle's *Meteorica* and on *Albion*, a description by Richard Wallingford, Abbot of St Albans, of an astronomical instrument invented in 1326.

LUMINITA F. ALUAS

Tuntun.

A name used in the Basque region for the Tambourin de Béarn.

Tuomela, Tapio (Juhani)

(*b* Kuusamo, NE Finland, 11 Oct 1958). Finnish composer, pianist and conductor. At the Sibelius Academy in Helsinki he studied the piano with Tapani Valsta (diploma 1982), conducting with Jorma Panula (diploma 1987) and composition with Englund, Hämeenniemi, Heininen and Magnus Lindberg. He completed his piano and conducting studies with Christopher Rouse and Joseph Schwantner at the Eastman School of Music in Rochester, New York, gaining his master's degree in 1990, and at the West Berlin Hochschule der Künste with Szalonek. He has also attended composition courses directed by Lutosławski, Crumb, Ferneyhough and Klaus Huber.

He began his composing career adhering to neo-classical ideals and wrote his Piano Concerto (1981), among other works, for himself to play. In the mid-1980s, in the wake of a stylistic crisis, he developed a more modernist idiom. His music acquired faster-moving textures, rich in both melody and harmony; tone colour played an important role, and he became interested in a sound world of 'noise', that is, sounds without definite pitch. Despite the great detail of his works, they have a unity that is broad and clearly defined. He is largely an instrumental composer: among the more important pieces of his modernist phase are the rousingly brisk and virtuoso *L'échelle de l'évasion* ('The Escape Ladder') for chamber orchestra (1988–9), *Transition* for two keyboard players, two percussionists and tape (1989), and a one-movement Symphony (1991, revised 1993). Also central to his output is the experimental chamber opera *Korvan tarina* ('The Ear's Tale', 1991, rev. 1993), a partially open work in both form and length, which as a 'meta-opera' – in the composer's words – explores opera as both musical genre and sociological phenomenon. Tuomela's second opera, *Äidit ja tyttäret* ('Mothers and Daughters', 1997–9), based on a subject taken from the Finnish national epic the *Kalevala*, was commissioned by the Finnish National Opera to be premiered in November 1999.

WORKS

(selective list)

Stage: Korvan tarina [The Ear's Tale] (chbr op, Tuomela, M. Aalto-Setälä, J.-P. Hotinen and V. Kiljuna), 1991, rev. 1993; Äidit ja tyttäret [Mothers and Daughters] (P. Haavikko, from the Kalevala), 1997–9

Orch: Focus, str, 1986; Sym., 1991, rev. 1993; Quasi Herzstück, str, 1994; Scherzo, pf 4 hands, str, 1994, arr. pf solo, str; Jokk for Orch,

1995

Chbr and solo inst: Pendulum, vc, 1985; Qnt, ob, cl, bn, hn, vib, 1987; Spiral, vn, 1988; L'échelle de l'évasion [The Escape Ladder], 11 insts, 1988–9; Transition, 2 kbd players, 2 perc, tape, 1989; Foliant – Perspectives for 2 Pf, 1991; Aufschwung, fl, gui, 1994; Lamento, cl, bn, vc, 1994; arr. cl, hn, vc; Kangastus [Mirage], kantele, hp/kantele, 1997

Vocal: Winnie-the-Pooh (A.A. Milne), 4 songs, S, pf, 1988; Papiermusik, mixed chorus, 1990; Suomenkielinen vokaliisi [A Vocalise in Finnish] (Tuomela), chbr chorus, synth, 1993

Tuorba

(It.; Fr. *tuorbe*).

See Theorbo.

Tuotilo [Tutilo]

(*d* St Gallen, 27 April 915). Frankish composer of tropes and monk of St Gallen. Tuotilo was a pupil of Iso and Marcellus, friend of Notker Balbulus and, according to Ekkehard IV (*c*980–*c*1060) a poet, musician, painter and sculptor (*Casus monasterii Sancti Galli*; MGH, *Scriptores*, ii, 1829, p.101). A number of Tuotilo's tropes were cited by Ekkehard, including: *Hodie cantandus*, for the introit *Puer natus* for Christmas; *Omnium virtutum gemmi*, for the offertory *Elegerunt* for St Stephen; *Quoniam Dominus Iesus*, for the introit *In medio* for St John; *Omnipotens genitor*, for the introit *Suscepimus* for the Purification; *Gaudete et cantate*, for the offertory *Terra tremuit* for Easter. This passage of the *Casus*, however, is possibly corrupt, since it gives the wrong liturgical contexts for several of the pieces. Ekkehard also ascribed to Tuotilo a trope for the Ascension offertory *Viri Galilei*, which is perhaps *Haec die fratres* (*CH-SGs* 381, p.258; late 10th century). Rankin (1991) presents cogent evidence for the context and continuation of the trope *Gaudete et cantate*.

Ekkehard described Tuotilo's melodies as 'strange and easily recognizable' (Clark, 194) and suggested that these qualities resulted from his use of the psaltery or *rotta* while composing them. There is no evidence to support Stäblein's suggestion that *Hodie cantandus*, with its clear 1st mode melody, may have been originally intended as a trope to the Old Roman version of the introit *Puer natus* (1st mode), and that the surprising cadence on G was a later adaptation to make the melody connect with the Gregorian version of the melody in the 7th mode.

The ascription of the Kyrie *Cunctipotens genitor Deus* to Tuotilo in *CH-SGs* 456, copied in about 1507, is false; this prosula did not reach St Gallen until the 11th century.

Tupim

(Heb.).

Ancient Jewish drums. *See* Biblical instruments, §3(xi).

Tura, Yalçın

(*b* Istanbul, 23 March 1934). Turkish composer and ethnomusicologist. He studied the violin with Seyfettin Asal and theory and harmony with Demirhan Altuğ and Cemal Reşit Rey. His compositions incorporate melodic and rhythmic elements of Turkish traditional musics. Tura's musical *Keşanlı Ali destanı* (1963–4) has been translated into several languages and produced in Europe and the USA. The oratorio *The Meaning of the Four Books* (1999) includes texts from four monotheistic religions. Tura has won numerous awards for his scores for over 50 films and TV programmes. He has written musicological books and articles.

MÜNİR NURETTİN BEKEN

Turankow, Alyaksey Yawlampavich

(*b* St Petersburg, 9/21 Jan 1886; *d* Minsk, 27 Sept 1958). Belarusian composer. He studied at the St Petersburg Conservatory (1911–14) with Lyadov and Sokolov, and from 1918 worked in Gomel' as the director of choral societies, head of the local music section of Narkompros (the Commissariat of Enlightenment) in addition to playing in the town symphony orchestra and founding a music school. From 1934 he lived and worked in Minsk and was made an Honoured Representative of the Arts of the BSSR in 1940. He is credited with being one of the establishers of the genres of romance and mass song in Belarus; he also composed one of the first Belarusian operas – *Kvetka shchastsya* ('Flower of Happiness') – which was performed at the ten-day festival of Belarusian art held in Moscow in 1940. His work is characterized by vivid musical ideas, a poetic lyricism, richness and diversity of expressiveness and by its strong associations with Belarusian folklore.

WORKS

Dramatic: Kvetka shchastsya [Flower of Happiness] (op), 1940; Lesnaya skazka [A Forest Fairytale] (children's ballet), 1952; Yasnïy rasvet [A Clear Dawn] (op), 1958

OL'GA DADIOMOVA

Turati, Giovanni Antonio Maria

(*b* Milan, 1608; *d* Milan, 2 June 1650). Italian composer and organist. He was a boy chorister at Milan Cathedral between November 1616 and December 1619. In that year Cardinal Federico Borromeo sent him, with others, to sing in Turin, in the festivities celebrating the wedding of Vittorio Amedeo I of Savoy; for this he was rewarded with a gold chain and medal. He became a priest, and on 31 December 1630 was appointed organist of S Maria presso S Celso, later becoming *maestro di cappella*. On 9 January 1642 he was unanimously elected *maestro di cappella* of Milan Cathedral. Carissimi, one of the jury members, judged that Turati had 'the greatest mastery and expertise in his art among all the candidates'. Turati's appointment was probably also influenced by his friendship with Cardinal

Monti, who had a passionate interest in art and Ambrosian chant. He held the post until his death.

The archive of Milan Cathedral contains more than a hundred works by Turati for the various feasts of the liturgical year and for local celebrations. According to Migliavacca these are mostly massive polychoral structures 'in which the effect of grandeur conceals the thinness of the musical material. This becomes more solid and lively when the interweaving sound gives way to episodes of exquisite musicality in those motets whose texts allow for greater, balanced expressive variety'. For the most part Turati employed the *stile antico*, but he demonstrated his predilection for clarity and simplicity by writing many predominantly homorhythmic pieces with cantabile upper voice and well-defined tonal relations. In 1670 Picinelli reported that many of Turati's other compositions, intended for publication, were lost. The few published works which have survived include a collection of motets, *Primi fiori del giardino musicale*, for four voices, published the year after his death by his pupil Agostino Guerriero (who included two sonatas by Turati in his own collection of 1673).

WORKS

Manuscript works in I-Md, unless otherwise stated

Concerti, 2–4vv, op.1 (n.p., n.d.); inc., b part, *I-BGi*

Primi fiori del giardino musicale (Milan, 1651)

SERGIO LATTES/AUSILIA MAGAUDDA/DANILO COSTANTINI

Turba

(Lat.: 'crowd').

A term strictly referring only to those words in the Passion spoken by more than one person (e.g. by the disciples, the Jews or the soldiers). In a broader sense it has come to include all direct address except the words of Christ.

KURT VON FISCHER

Turbasia [tyrbasia; surbē, turbē]

(Gk.: 'confusion').

Lively and noisy ancient Greek choral dance characteristic of the worship of Dionysus and of the Dithyramb (Pollux, *Onomasticon*, iv, 104; Hesychius, see under 'tyrbasia').

T.J. MATHIESEN

Turca, alla

(It.: 'in the Turkish style').

A term describing music for military band with piccolos and Turkish percussion instruments (cymbals, triangles, drums, bells) or music imitating the effect of Turkish band music (*see* Janissary music). According to Schubart (*Ideen zu einer Ästhetik der Tonkunst*, Vienna, 1806/*R*, 330ff), Turkish band musicians living in Vienna were used by Gluck in his operas (he was probably referring to *Le cadi dupé*, 1761, and *Iphigénie en Tauride*, 1779). But operas and ballets with Turkish motifs were favoured elsewhere as well. Many composers in all parts of Europe wrote *alla turca* passages or pieces. Thus Haydn used the style, for instance, in his operas *Lo speziale* (1768) and *L'incontro improvviso* (1775) as well as in various symphonies (nos.63, 69, 100); and Mozart used it in his 'Turkish' Violin Concerto in A k219 (1775), in the Rondo alla turca of his Piano Sonata in A k331/300*i* (where the overture to Gluck's *La rencontre imprévue* is quoted in the coda) and in *Die Entführung*. Grétry used a tambourine and a triangle in *La caravane du Caire*(1783) and Michael Haydn in his incidental music to Voltaire's *Zaïre* (1777). Schubart described Turkish music as noisy, very rhythmic, usually in 2/4 metre and in F, B♭, D or C; but these keys may have been merely the ones most convenient for wind players, since the 'Turkish' music of Gluck, Haydn and Mozart is mostly in A major (or minor) and C. Their 'Turkish' melodies often included leaping 3rds in

quavers or four-note semiquaver *gruppetto* figures which strikingly resemble certain 18th-century dances from Hungary (*verbunkos* and *törökos*; see Bartha, Szabolcsi).

The *alla turca* fashion was also reflected in the many fortepianos built around 1800 with a 'Turkish music' stop or pedal that operated cymbals or bells, a triangle and a drumstick hitting the soundboard (as with the Haschka fortepiano in the Badura-Skoda collection at Vienna): sometimes real bass drums were fixed underneath the instrument. Turkish percussion instruments continued to be used in art music during the 19th century and were employed whenever a composer wanted a martial effect, whether in cases such as the finale of Beethoven's Ninth Symphony or in the many battle symphonies fashionable during the Napoleonic wars; the full title of Beethoven's op.91 in S.A. Steiner's arrangement for wind instruments (which appeared at the same time as the first edition in 1816) reads: 'Wellingtons Sieg oder: Die Schlacht bei Vittoria … eingerichtet für vollständige türkische Musik'. Austrian military bands of wind and percussion instruments were still called 'Turkish' until World War I regardless of which repertory they favoured.

EVA BADURA-SKODA

Turchaninov, Pyotr Ivanovich

(*b* Kiev, 20 Nov/1 Dec 1779; *d* St Petersburg, 16/28 March 1856). Ukrainian composer of church music. Influenced strongly by the Italian composers in Russia, such as Galuppi and Sarti, Turchaninov's compositions are characterized by a simplicity of harmony, and illustrate the prevailing tendency to attempt a symmetry of rhythm in Russian liturgical music. Turchaninov received some early musical training from Sarti, on the suggestion of Prince Potyomkin. Subsequently, he entered the choir of General Levanidov in Kiev, where he was trained by Artemy Lukyanovich Vedel' (1767–1806), the composer and choral conductor, who himself had been taught by Sarti. Moving to Sevsk, in the Kursk government, Turchaninov was put in charge of the episcopal choir and took holy orders in 1803. From 1809 he was a priest in the church at Gatchina, a small town to the south of St Petersburg, but later left to take up the post as director of the Metropolitan's choir in St Petersburg itself. From 1827 he taught singing in the imperial court chapel choir. Turchaninov contributed much to the repertory of liturgical music. Some of his choral compositions and arrangements were published posthumously in 1862, and his

autobiography appeared in St Petersburg in the following year. As a tribute to the composer 50 years after his death, A.D. Kastal'sky prepared a five-volume edition of Turchaninov's arrangements of Russian liturgical melodies (Moscow, 1906), for which he received much acclaim during his lifetime.

GEOFFREY NORRIS

Turchi, Guido

(*b* Rome, 10 Nov 1916). Italian composer and writer on music. He studied at the Conservatorio di Musica S Cecilia in Rome with Cesare Dobici, A. Ferdinandi and Alessandro Bustini, and he was awarded diplomas in the piano and composition in 1940. In 1945 he achieved maximum marks in the advanced diploma course given by Pizzetti. Turchi taught harmony at the Rome Conservatory from 1941, and from 1959 he became professor of counterpoint and fugue, and, subsequently, of composition there. He was appointed director of the Parma Conservatory in 1967 and was also director of the Florence Conservatory (1970–72). Between 1951 and 1953, and again from 1960, he was an adviser to the RAI, and he was co-director of the musical theatre section of the *Enciclopedia dello spettacolo*. He was artistic director of a number of institutions: the Accademia Filarmonica Romana (1963–6), the Teatro Comunale of Bologna (1968–70), the Accademia di S Cecilia (from 1972), the Accademia Musicale Chigiana (from 1978) and the Teatro Angelicum in Milan (from 1988). He has written music criticism for various newspapers including the *Corriere della sera*. As a composer Turchi's first successes included the *Due poesie di Quasimodo* for voice and piano, with which he won the Galleria del Secolo prize and *Invettiva* for small choir and two pianos, which was awarded the prize of the Accademia Filarmonica Romana in 1947.

In his early works, Turchi established an advanced musical language sometimes close to the 12-tone system without embracing it wholeheartedly. His Trio (1945), for example, displays a constructivist and contrapuntal rigour without excluding the use of expressive, non-serial motivic material. Quite different directions were forged in *Invettiva*, which takes as its starting point the neo-madrigalism of the time, Petrassi in particular; while the Bartókian *Concerto breve* (1947) for string quartet (also arranged for string orchestra), makes use of thematic material spelling out Bartók's name B–E–A–B–A. The *Piccolo concerto notturno* (1950) is one of Turchi's most successful pieces; it combines a refined post-tonal style indebted to Hindemith with bold neo-Impressionist colours.

Turchi's interest in the theatre resulted in numerous dramatic pieces in the 1940s and 50s particularly after the radio drama *La sera del grande silenzio* (1949). Of these, the *Cinque commenti alle Baccanti di Euripide* (1952) is of particular note. His only opera came in 1962 with the three-act *Il buon soldato Svejk*, which was performed at La Scala after a gestation period of almost ten years. To a libretto by Gerardo Guerrieri based on

Hasek's *Osudy dobrého vojáka Svejka za svetové války* (The adventures of the good soldier Svejk during the world war), it begins in a style reminiscent of Berg's *Wozzeck* but moves to a lighter, more detached mood. As D'Amico observes, Turchi gives the orchestra rather than the singers the task of providing the expressiveness, thus freeing the *dramatis personae* from spiralling Expressionist tension. The dramatic impact is distanced and the political content made more satirical. Musically the influence of Weill and Shostakovich are clearly in evidence, but dodecaphony is also used as an expressive tool. Such eclecticism became still more of a feature subsequently, for example in the sparkling ballet *Dedalo*, written for the Maggio Musicale Fiorentino in 1972, and in the *Petite suite-paraphrase* (1965) which draws on European popular song. At the opposite end of the scale he has continued to write vocal pieces much more severe in tone and style, such as the *Rapsodia 'Intonazioni sull'Inno II di Novalis'* (1969) and the *Rondel* (1972) for a cappella choir to texts from Trakl and Ecclesiastes. The 1980s marked a new burst in compositional output, especially in works for orchestra, with a clear rethinking and enrichment of his style. The masterfully orchestrated *Adagio* (1983) displays an elegiac, introspective character, while the late *Exil* (1995), a cantata for baritone and orchestra to words by Saint-John Perse, is characterized by bare, detached abstraction.

WORKS

(selective list)

Dramatic: La sera del grande silenzio (radiodramma, G.B. Agnoletti), 1949, RAI, 1949; Il buon soldato Svejk (op, 3, G. Guerrieri, after Hašek), Milan, Scala, 5 April 1962; La steppa (film score, dir. GIORDANO MONTECCHI

Turco, Giovanni del.

See Del Turco, Giovanni.

Turco, Lorenzo del.

Italian composer, probably younger brother of Giovanni del turco.

Turczyński, Józef

(*b* Zhitomir, Wolhynia, 2 Feb 1884; *d* Lausanne, 27 Dec 1953). Polish pianist and teacher. He studied with his father and then at the St Petersburg Conservatory under Aneta Esipoff and in Vienna under Busoni. In 1907 he also completed a law degree at Kiev University. In 1910 he made his début in Vienna, and a year later won first prize at the international piano competition in St Petersburg. During the following years he made numerous successful concert appearances in Russia, Poland and western Europe, and from 1914 to 1919 was a professor at the Kiev Conservatory. From 1920 until 1939 he gave piano classes at the Warsaw Conservatory while pursuing an international concert career. His playing was characterized by a flawless technique, discriminating taste and, especially in his early years, dazzling virtuosity. His repertory was huge and he was particularly renowned for his playing of Chopin and Liszt. He was a member of the jury of the first three Warsaw Chopin competitions and many other international piano competitions. An outstanding teacher, his pupils included Maryla Jones, Witold Małcużyński, Stanisław Szpinalski and Henryk Sztompka. At the outset of World War II Turczyński was in Switzerland, and he spent most of his remaining years in Lausanne and in Rio de Janeiro, performing, teaching and conducting masterclasses in Chopin interpretation. With Ludwik Bronarski and Paderewski he prepared a new edition of Chopin's works, published in Kraków between 1949 and 1961.

JÓZEF KAŃSKI

Turdi Axon

(*b* Yi-isar (Yingjisha), Xinjiang, 1881; *d* ?Kashgar, 1956). Uighur musician. Turdi Axon has had the stature of national hero for the Uighurs in Chinese Xinjiang since the 1950s. His photograph appears in numerous books on Uighur music, Uighur culture, and even on tourist attractions of China. It shows a gaunt man of medium height with long white hair and beard, wearing a cap as he bends over his *satar*.

40 years after his death, his reputation endures as a harsh and demanding character. Living in Kashgar, Yarkand, and then Khotan, the only disciples he accepted were his sons, a nephew, and exceptionally a young boy outside his own family, on whom he imposed preliminary humiliations. Teaching was based on imitation, since neither he nor his pupils could read music; it involved constant listening, imitation and repetition. One month was sufficient to memorize one *muqam* of about two hours. Before every performance, to help his pupils avoid mistakes, Turdi would sing the whole *muqam* to be played, reminding them of its rhythmic sequence. An indefatigable musician, he was known for playing for many hours at a time, and the story is still told today of how in 1955 he played for 24 hours on end for an audience of Urumqi musicologists, forbidding them to move or leave the room. He made similar demands on his disciples, while giving them encouragement and motivation.

Recognized as the sole living repository of the Kashgar *muqam* repertory, after his death in 1956 he was interred in the cemetery in Kashgar next to the Abakh Hodja mosque at the top of the city. The recordings of Turdi by Wan Tongshu are closely guarded by the Urumqi Bureau of Culture, though copies are circulated privately.

See Tourdion.

Tureck, Rosalyn

(*b* Chicago, 14 Dec 1914). American pianist. After making recital and orchestral débuts in Chicago while still a child, she continued studies with Jan Chiapusso and later with Olga Samaroff at the Juilliard School of Music, from which she graduated in 1935. She made her New York orchestral début in 1936 with the Philadelphia Orchestra in Brahms's Piano Concerto no.2. The following year Tureck appeared in a highly acclaimed series of Bach recitals, leading her increasingly to specialize in this type of programme while continuing to play much 20th-century American music. After ten years of concert tours in North America, she made her European début in 1947, and subsequently became a frequent recital and concerto performer in Britain and on the Continent. She also toured extensively in Africa, Latin America, Israel and East Asia.

For many years Tureck concentrated as an executant and teacher on the interpretation of Bach's keyboard music. From 1960 she also began to perform Bach occasionally on the harpsichord and clavichord, and even on electronic instruments. But her approach on keyboard instruments remained essentially pianistic in conception, colourful and with great variety of touch and articulation. Her playing impressed as authoritative, distinguished by clarity of line, sharply defined rhythms and considerable intensity of feeling, although at times some critics noted a certain pedantic tendency. She founded the International Bach Society (1968) and the Tureck Bach Institute (1981) to further the interpretation of his music on all instruments in all media. From 1956 Tureck frequently appeared as a conductor of orchestral performances of Bach's suites and concertos. She has taught and lectured at the Juilliard School, Oxford, Princeton and Yale universities and other institutions. In addition to numerous articles, she has published a three-volume anthology, *Introduction to the Performance of Bach*, and editions of Bach keyboard music and lute suites. Tureck recorded extensively, including all of Bach's major keyboard works performed on the piano and, in addition, the Goldberg Variations on the

harpsichord. She holds numerous honorary degrees, including doctorates from Roosevelt University, Chicago (1968), and Oxford University (1977).

<div align="right">HOWARD SCHOTT</div>

Turetzky, Bertram

(*b* Norwich, CT, 14 Feb 1933). American double bass player and composer. He studied with Joseph Iadone and Josef Marx at the Hartt School of Music, graduating in 1955, and later with Curt Sachs (musicology) at New York University. He received the MM in music history from the University of Hartford in 1965. Turetzky is a leading exponent of the double bass as a solo instrument and has extended an already noteworthy classical technique to include a large repertory of new bowings, harmonics, pizzicatos, glissandos and, especially, percussive effects from the use of his hands, fingers and knuckles on various parts of the body of his instrument. He made his New York début as a soloist at Judson Hall on 19 October 1964, performing a programme of works written for him by, among others, Barney Childs, Donald Erb and Charles Whittenberg. Since then his recordings and public performances have included works written for him by a great number of composers, including Paul Chihara, Donald Erb, Richard Felciano, Kenneth Gaburo, Ben Johnston, Donald Martino, George Perle and William Sydeman. His *Recital of New Music* (1964) was the first recorded collection of contemporary repertory for the double bass. Among his compositions are *Collages I–IV* (1976–81), a series of works for various instruments, of which the first is for solo double bass; *Reflections on Ives and Whittier* (1978–81) for double bass and tape; *In Memoriam Charles Mingus* (1979), a mixed-media piece for two singers, three jazz groups, double bass choir, tape and film; and *Baku* (1980) for tape. Turetzky has written a book *The Contemporary Contrabass* (Berkeley, 1974), and has edited double bass studies for the American String Teachers Association.

<div align="right">JEROME ROSEN</div>

Turgenev, Ivan Sergeyevich

(*b* Oryol, 9 Nov 1818; *d* Bougival, nr Paris, 3 Sept 1883). Russian novelist and dramatist. A liberal who sympathized with the culture of western Europe, he is usually considered to have been a realist, though his later works contain elements of fantasy. He was the first Russian novelist to become widely known in the West.

In 1843 Turgenev met the Spanish mezzo-soprano Pauline Viardot in St Petersburg, and formed a lifelong attachment to her and to her husband. From then on he spent much of his life outside Russia living with, or near, the Viardots, principally in France and Baden-Baden. Always passionately fond of music, he became very well informed about it through Pauline Viardot. He was personally acquainted with almost all the well-known musicians of his day, both in Russia and in the West. He contributed occasional articles on opera to Russian periodicals, and wrote librettos in French for operettas set to music by Pauline Viardot and performed by her

pupils. One of these, *Le dernier sorcier*, orchestrated by Eduard Lassen (and, perhaps, Liszt) was publicly performed in a German translation by Richard Pohl in Weimar (1869), and in Karlsruhe and Baden-Baden (1870). Turgenev also wrote or translated poems which Pauline Viardot set to music (St Petersburg, 1864–74).

Turgenev's most important contribution to music was the part he played as an intermediary between Russian and Western musicians. He was the first to introduce Gounod's music to Russia, and through Pauline Viardot he was the first to make much Russian music known in the West. His conservative musical leanings and attraction to Western culture led him to sympathize more with the work of Tchaikovsky, whom he greatly admired, than with that of the Russian nationalist school; he nevertheless helped to publicize its work. He did much to assist all Russian musicians travelling abroad. Turgenev's correspondence, particularly with Pauline Viardot (in French) and V.P. Botkin (in Russian) is a rich source of information about the musical life and personalities of the epoch. Music also plays an important part in many of his novels and stories.

Settings of Turgenev's works include the following operas: *Asya* by M. Ippolitov-Ivanov (Moscow, 1900); *Il pane altrui* (*Nakhlebnik*) by G. Orefice (Venice, 1907); *Traumwandel* by K.H. David (Zürich, 1928) and *A Month in the Country* by Lee Hoiby (New York City Opera, 1964, as *Natalya Petrovna*). Karłowicz's symphonic poem *Episode at a Masked Ball* (Warsaw, 1914) was left unfinished by the composer and completed by G. Fitelberg. Turgenev's short poems have been set to music by many Russian composers, including Arensky, Anton Rubinstein and Sokolov, as well as by Pauline Viardot.

APRIL FITZLYON

Turges, Edmund

(*b c*1450). English composer. He was admitted to the Fraternity of St Nicholas, the London parish clerks' company, between 1468 and 1470. His later career is obscure, although he was probably active in circles close to the court of Henry VII. It is possible that he was the 'Sturges' (a name commonly abbreviated to Turges in non-musical sources) employed as a chaplain at New College, Oxford, in 1507–8. Turges's surviving *Magnificat* (three others, now lost, were early additions to the Eton Choirbook) and his five-voice *Gaude flore virginali* setting show English polyphonic writing of this period at its most virtuosic. Fragments of a more elaborate version of the five-voice *Gaude*, in which a florid third voice is added to a section set in Eton as a duet, survive in *GB-Onc* 368. The Kyrie and Gloria settings are attributed in *GB-Lbl* Add.5665 to 'Sturges'. Turges's two carols, and perhaps his other songs, appear to have been written for specific occasions. *Enforce yourselfe* is an entry song addressed to the king, probably Henry VII. *From stormy wyndis* is addressed to Arthur, Prince of Wales (*b* 1486; *d* 1502), perhaps to mark his betrothal (1497) or marriage (1501) to Catherine of Aragon, or to pray for his safety before setting out on a journey. A later hand in *GB-Lbl* Add.5465 has added '1501' above the lowest voice; this voice-part was subsequently used as a cantus firmus in John Browne's *Stabat iuxta Christi crucem* (MB, x, 1956, no.6), which may have been intended as a lament on the prince's death in April 1502. Several masses by Turges, now presumed lost, were copied at King's College, Cambridge, in 1482–3, and an inventory of books there in 1529 lists 'vj bokys of parchmente conteynynge Turges massys and antems'. A *Magnificat* setting by 'Turgins' was copied at Tattershall College in 1496–7.

GIORGIO PESTELLI

Turin

1. 1400–1700.

During the Middle Ages the cultural importance of Turin was considerably less than that of the court of the marquises of Monferrato, a flourishing centre of troubadour art, or episcopal centres such as Ivrea or Vercelli. It has been proved that the church of S Salvatore (later the site of Turin Cathedral) had a singing school attached to it, but information about the activities of the cathedral *cappella* (which were probably commensurate with the modest economic development of the city) is available only from the mid-15th century.

The true musical history of Turin began about 1450, stimulated by Bishop Ludovico di Romagnano, who founded the Collegium Puerorum Innocentium and reorganized the cathedral *cappella*, and by the house of Savoy (i), particularly Duke Ludovico (Louis) and his wife Anne of Cyprus, both of whom cultivated a brilliant court and were patrons of music. The duke and his wife were in close contact with Du Fay, who directed the *cappella* in 1434 and maintained contact with the court from 1437 to 1439, and from 1450 to at least 1456. In 1450 Du Fay, then 'cantor illustrissimi domini ducis Burgundiae', lodged in Turin at the Osteria del Cappello. It is difficult to assess his direct influence on the city's subsequent musical life

since the court often moved between Chambéry, Geneva, Turin and other minor centres, even crossing the Alps in winter with the *cappella* musicians in its train. (Antoine Brumel was appointed singer in the *cappella* by a letter from Turin, 20 June 1490, and was active in both Geneva and Chambéry, the official seat of the Ste Chapelle.) This situation continued until 1563 when the duke's capital was fixed at Turin by Emanuele Filiberto, who acceded when the duchy had been destroyed by the Franco-Habsburg war. He worked brilliantly as a diplomat and politician to consolidate its position, revived commercial activity and was able, between 1550 and 1555, to re-create the musical establishment of the court by engaging singers and instrumentalists.

Turin took on the aspect of a capital even more under the enterprising Duke Carlo Emanuele I, a friend of writers (Tasso, Chiabrera and G.B. Marino were received at court) and a man of letters himself. In 1585, on the occasion of the duke's marriage to Catalina Micaela, Infanta of Spain, pastorals were performed in honour of the Infanta; it is probable that a performance of G.B. Guarini's *Il pastor fido* was planned, though this seems not to have taken place. During the early 17th century companies of actors of the *commedia dell'arte* stayed in Turin several times on their way to France (e.g. the Accesi between 1602 and 1609 and G.B. Andreini's Fedeli in 1620). In this period Ludovico d'Agliè became known through his theatrical enterprises: in close collaboration with the duke, he organized festivities, jousts and spectacles of which the court was justly proud; he also organized various theatrical spectacles, using his own librettos, with music and ballets, such as *Il combattimento dei cavalieri di Diana e di Venere all'isola Polidora* (1602) with madrigals by T. Stigliani, *Festa di Mirafiori* (1608), *Le trasformazioni di Millefonti* (1609) and *I trionfi del Petrarca* (1618). The encounter between d'Agliè and Sigismondo d'India, *maestro di musica di camera* (1611–23), was particularly important for the future of opera in Turin. To d'Agliè's libretto d'India composed the music for the pastoral *La Zalizura* (in *stile recitativo*) and a caccia (1602) performed in the villa of Cardinal Maurizio, brother of the duke. Marie Christine of France (sister of Louis XIII), who married Vittorio Amedeo I in 1619, increased the French orientation of the Turin court; she kept four *musiciens de cabinet* recruited in Paris for her own entertainment, and Filippo d'Agliè, nephew and successor of Ludovico, produced *précieux ballets de cour* for her during the years 1624–7. Ballets, entertainments and *comédies à machines*, increasingly following the pattern set by Versailles, continued under Carlo Emanuele II (1648); about the middle of the century the *cappella* was divided into *musici di camera* and *musici armonici* and, to judge by their remuneration, the latter were held in high repute. In 1672 the duke, in imitation of the French fashion, gathered the violinists in his service into a *banda*, which numbered 24 instrumentalists in 1677. During these years notable *maestri di cappella* included G.B. Trabattone (1633), G. Sebenico (1683–90), probably a pupil of Legrenzi, and A.D. Cignani (1699–1707); among the famous figures who came into contact with the court was Alessandro Stradella.

Turin

2. 1700–1900.

The musical history of Turin reached its peak in the 18th century under Vittorio Amedeo II, Vittorio Amedeo III and Carlo Emanuele III. During the first years of the century G.B. Somis, one of the violinists of the *banda* and a descendant of a family of violinists who had been in the service of the court since the mid-17th century, was noted for the consummate artistry of his playing; the duke sent him to Rome to study with Corelli during the years 1703–6 and then kept him as his private soloist, appointing him leader and allowing him ample time for his activities as a composer and teacher. During this period the *maestro di cappella* was S.A. Fiorè, who was particularly active as a composer of theatre music, and who had been sent to Rome with Somis. Somis's pupils included J.M. Leclair, who had gone to Turin as a dancer, Felice Giardini, who later went to Paris and then to London, and Pugnani. Pugnani's brilliant career as a soloist began in 1754 at the Concert Spirituel in Paris; after a brief stay in Rome he returned to Turin in 1770 as first violin in the *cappella* orchestra. Among his pupils was G.B. Viotti, who after a brief period at the Turin court toured abroad with Pugnani (1780) and later settled in Paris and London, the representative of the famed Piedmontese school of violin playing. This tradition of excellence made Turin a lively musical centre in the 18th century – Quantz visited it in 1726, Charles de Brosses in 1740 and Georg Benda, Burney, and Leopold and Wolfgang Mozart during the second half of the century. The successful development of instrumental music was paralleled in opera; the Teatro Carignano was inaugurated in 1715, and operas and plays were given there alternately. The Teatro Regio (1738; see fig.2) was designed by A. di Castellamonte and B. Alfieri, who received advice for the project from Galli-Bibiena. Its repertory from 1740 included works by Francesco Feo, Leonardo Leo, Jommelli, J.A. Hasse, Tommaso Traetta, Galuppi, Niccolò Piccinni, J.C. Bach (his first opera *Artaserse*, 1761), Pugnani, De Maio, Sacchini, Cimarosa and others. From 1748 almost without interruption until 1792 B. and F. Galliari designed the scenery. Much music was also produced for the cathedral, particularly by the *maestri di cappella* and other officials such as Giovanni Antonio Giai (from 1732), his son Francesco Saverio Giai (active until 1792) and Quirino Gasparini (1760–78).

In 1798 Carlo Emanuele IV, driven out by the French Revolutionary troops, was compelled to disband the musical *cappella* which, even after the Restoration, declined rapidly. The last notable music director was G.B. Polledro, who returned to Turin in 1824 after a period as Konzertmeister at Dresden and who had known Beethoven. Under his direction, and that of his successor G. Ghebart, the taste for chamber music and for the Viennese Classical repertory was kept alive at a time when the public was interested only in opera. The struggle for the unification of Italy, of which Turin was the political and military centre, diverted the interest of the ruling class from all aspects of music until the proclamation of the kingdom of Italy in 1861.

Secular organizations of musical culture had been active for some time when the *cappella* was officially disbanded on 5 June 1870. The oldest of these was the Accademia Filarmonica, founded in 1814 with the double aim of establishing a school of singing and encouraging concerts and recitals for 'recreative purposes'. Later came the Società del Quartetto (1862) and the Società Corale (1875) which was directed by the violinist S.

Tempia. The Concerti Popolari (1872–86), held in the Teatro Vittorio Emanuele, were particularly successful; founded by G. Bercanovich, Carlo Pedrotti and G. Depanis, they were modelled on Pasdeloup's Parisian Concerts Populaires and played an important role in bringing public taste up to date and encouraging interest in instrumental music. That this soon became popular is shown by the early activities of Toscanini, who made his début in Italy at the Teatro Carignano in 1886, and by the extraordinary number of private schools of music which were founded; among their students was Alfredo Casella. After some decades of uneventful administration, the Teatro Regio, especially under the direction of the impresario Depanis, enjoyed a period of vigorous revival: in 1876 Wagner's *Lohengrin*, which had failed at La Scala three years previously, was a great success there, and Turin became a Wagnerian centre; and in 1895 Toscanini conducted the local première of *Götterdämmerung*. The last years of the century included the first performances of Catalani's *Elda* (1880) and Puccini's *Le villi* (1884 revision), *Manon Lescaut* (1893) and *La bohème* (1896); these contributed to the creation in Turin of the decadent cultural climate known as *crepuscolarismo*, with Calandra, Faldella, Giacosa and Gozzano as its most noteworthy literary exponents. The première of Zandonai's *Francesca da Rimini* (1914) and the Italian premières of Strauss's *Salome* (1906, conducted by the composer) and Rimsky-Korsakov's *The Golden Cockerel* were also given at the Teatro Regio.

Turin

3. 20th century.

In 1911, as part of the celebrations for the 50th anniversary of the unification of Italy, Debussy conducted a concert of his music in Turin. The institution of greatest cultural importance was the Teatro di Torino (1925–31), an opera house which took over the Teatro Scribe. Under the artistic direction of G.M. Gatti, and with the collaboration of Vittorio Gui and Casella, it brought back into the repertory neglected operas such as Rossini's *L'italiana in Algeri* and Gluck's *Alceste*, and put on the first Italian performances of Strauss's *Ariadne auf Naxos*, Malipiero's *Sette canzoni*, Ravel's *L'heure espagnole* and Stravinsky's *The Wedding*. In 1936 the Teatro Regio was completely destroyed by fire and the war badly damaged the Teatro di Torino. This resulted in increased performances of symphonic and chamber music, a situation encouraged by the presence in Turin, from 1931, of a radio orchestra which also gave public concerts. Since the war the permanent conductors of the Orchestra di Torino della Radiotelevisione Italiana (RAI) have been Alberto Erede, Mario Rossi and Piero Bellugi, and from 1952 it has given regular series of public concerts in the RAI Auditorium built on the site of the Teatro Vittorio Emanuele. In addition to these concerts a lively interest has developed in chamber music, prompted by such societies as the Pro Cultura Femminile, the Amici della Musica, the Musica da Camera and the Unione Musicale; operas have been given in other halls (e.g. the Teatro Nuovo) not really suited to the purpose. After many difficulties the Teatro Regio was finally rebuilt to plans by C. Mollino. It was inaugurated on 10 April 1973 with Verdi's *I vespri siciliani* rehearsed by Gui, conducted by Fulvio Vernizzi, produced by Maria Callas (her first production) in collaboration with Giuseppe di Stefano and with choreography by Serge Lifar. In the 1980s the Teatro Regio passed

through a financial crisis before its fortunes revived under the management of Elda Tessore and the artistic direction of Carlo Majer. A large new concert hall, seating 1900, was built to a design by Renzo Piano inside the disused Lingotto car factory; it was inaugurated on 6 May 1994 with a concert by the Berlin PO conducted by Abbado.

The first proposal for a conservatory of music in Turin was made in the Napoleonic era by C. Botta, a doctor, botanist, historian and secretary for education in the provisional government, whose suggestion was approved by the central government in Paris but was constantly postponed and finally abandoned. In 1872 a Scuola Gratuita di Canto attached to the Accademia Filarmonica was officially opened, and for many years this was the only body competent to give adequate music education. The Liceo Musicale was founded on 11 June 1866; in 1887 it became the Istituto Musicale (directed by Giovanni Bolzoni) and in 1936 was enlarged to become the Conservatorio Statale di Musica Giuseppe Verdi. Among Bolzoni's successors were Franco Alfano, Lodovico Rocca and Sandro Fuga; the staff has included Giorgio Federico Ghedini, Luigi Perrachio and Andrea Della Corte. In 1963 the Istituto di Storia della Musica, directed by Massimo Mila, was founded as part of the faculty of letters and philosophy of Turin University.

Between 1926 and 1933 the Turin University library, already rich in medieval and Renaissance manuscripts, was able to reunite the Durazzo bequest, now known as the Foà-Giordano bequest, which contains among other treasures the *Intavolatura d'organo tedesca* (the richest known manuscript source of organ music) and a great number of operas and instrumental and church music by Vivaldi. The music section of the municipal library, named after Della Corte, has been enriched by his valuable private collection. Turin has made an important contribution to historical and musical studies as the seat of *Rivista musicale italiana* (1893–1955), the organ of the nascent interest in musicological research, and *La rassegna musicale* (1928–62), which was founded (in 1920 as *Il pianoforte*) and directed by G.M. Gatti and had a seminal role in the renewal of Italian musical culture.

Turina (Pérez), Joaquín

(*b* Seville, 9 Dec 1882; *d* Madrid, 14 Jan 1949). Spanish composer.

1. Life.

He was the son of a painter of Italian descent. Music played a large part in his life from his early childhood, and although in deference to his family's wishes he began to study medicine, he soon abandoned everything that interfered with music, for which he showed a strong aptitude. His serious

study began with piano lessons from Enrique Rodríguez and composition lessons from Evaristo García Torres, choirmaster of Seville Cathedral.

He soon became well known in Seville as a composer and, from 1897, as a pianist. His early successes prompted him to go to Madrid with the intention of arranging to have his opera *La sulamita*, which treats a biblical subject in a very traditional style, performed at the Teatro Real. This was an impossible ambition for an unknown provincial composer; but Turina gradually became well known in artistic circles and his friendship with Falla influenced his ideas on the proper character of Spanish music. In 1902 he began to study the piano at the Real Conservatorio Superior de Música wih José Tragó. He was more affected by orchestral and chamber music than by the opera performances at the Teatro Real. Almost the only way for a composer to earn a living in Madrid, however, was as a composer of zarzuelas of the *género chico* type. But the failure of a short zarzuela, *Fea y con gracia*, discouraged him, and the première in Seville of *La copla* was no more successful.

In 1905 Turina moved to Paris, where he studied the piano with Moritz Moszkowski for a time and worked at composition at the Schola Cantorum under d'Indy – though it was hard to escape the influence of Debussy and other antagonists of the Schola. Turina's friendship with Falla continued; both were members of the Société Musicale Indépendante. In 1907 Turina appeared as pianist and composer with the Parent Quartet, and at a second concert they introduced a work which had already been published, the Piano Quintet op.1 (1907), a Franckian product of the Schola. Albéniz, however, now joined Falla in advising Turina to seek material in Spanish popular music.

Turina accepted this guidance, and several more pieces were well received; some were performed in Madrid. Shortly after Turina's graduation from the Schola in 1913, the first major event of his compositional career took place with the première of *La procesión del Rocio* in Madrid by the Madrid SO under Arbós. The work's great success was repeated in Paris. In 1914 Falla and Turina returned to Spain, and in the following year they were honoured at the Madrid Athenaeum. Turina was by that time one of the most highly regarded Spanish composers. He conducted for the Ballets Russes and received a prize for the *Sinfonía sevillana*, again introduced triumphantly by Arbós (1920). Until the closure of the Teatro Real in 1925, Turina was its choirmaster, and his opera *Jardín de oriente* was staged there. In 1926 his Piano Trio op.35 won the National Music Prize. After a visit to Latin America he was appointed professor of composition at the Madrid Conservatory in 1930. The years of the republic were difficult ones, as his family was in disfavour; he was persecuted by the republicans during the civil war, but after the war his prestige increased. He was elected to the Academia de Bellas Artes de S Fernando, and appointed Comisario General de la Música in 1941; he tried unsuccessfully to rebuild the ruined Teatro Real. Turina received a national tribute and finally the Grand Cross of Alfonso the Wise. He was a spirited music critic for the newspaper *El debate* and the periodical *Dígame*. He died after a long and painful illness.

2. Works.

It has been customary to regard early 20th-century Spanish music as centred on two pairs of composers: Albéniz and Granados, Falla and Turina. However, any resemblance between the latter two is superficial. Nor is there much of Albéniz in Turina, although some of his works have a relationship with the poetics of Granados. Despite the picturesque local flavour in some compositions, Turina tried perhaps harder than any of his Spanish contemporaries to write music of a European standard in the conventional major forms. It was not by chance that his op.1 was a piano quintet, conscientiously modelled on works he admired. Turina was the only one of the four leading Spaniards to write a symphony, although the *Sinfonía sevillana* is closer to the character of a symphonic poem in three movements. The Piano Quintet was followed by the String Quartet 'de la guitarra', so called because its basic theme contains the notes of the guitar's open strings, and by several other chamber pieces. These, and his orchestral works, have a grand scale usually found in the music of German-orientated Spanish composers, such as Campo.

However, this scale is moderated by a subtle elegance, grace and humour characteristic of his native Seville; Turina never approached Falla's depth of tragedy. A kind man, who loved simplicity and beauty, he often responded in music to literary or visual ideas, though these find their best expression in his non-dramatic pieces. Of his stage works, apart from his youthful operatic ventures, which arose from his desire, common at the time, to create Spanish opera as well as symphonic music, and the unsuccessful zarzuelas, he is remembered for his music for the *comedia lírica Margot* and the short opera *Jardín de Oriente*. In the piano music he was much further from Albéniz than was Falla; he almost always turned to the piano for portraits (*Mujeres españolas*), little genre pieces (*Cuentos de España*) or *jeux d'esprit*. His song settings often illustrate the text, and his guitar music exploits all the instrument's resources. Apart from the Andalusian, and specifically Sevillian character of his music, Turina also had an individual way of using other Spanish rhythms, such as the Basque *zortzico* or the Catalan *sardana*.

CARLOS GÓMEZ AMAT

Turina, José Luis

(*b* 12 Oct 1952, Madrid). Spanish composer. He began his musical studies at the Barcelona Conservatory, also studying philosophy and literature at the University of Barcelona. From 1973 he studied at the Madrid Conservatory, where his teacher in composition and instrumentation was José Olmedo. He later continued his training as a composer with García Abril, Bernaola and Rodolfo Halffter. He completed his studies at the Accademia di S. Cecilia in Rome as a pupil of Donatoni. He won first prize at Valencia Conservatory's international composition competition (1981) for *Punto de encuentro* and the Queen Sofía Prize (1985) for *Ocnos*. He has taught harmony, counterpoint and composition at the Cuenca Conservatory (1981–5), of which he has also been director. In 1985 he moved to the Madrid Conservatory to teach harmony and in 1992 to the 'Arturo Soria' Conservatory in Madrid. He also taught at in the USA (1989–92), at Colgate University (Hamilton, NY), New York State University at Oneanta and in New York at Cornell University and Hunter College. His works have figured in numerous national and international festivals and competitions, most notably in Cuenca, Geneva, Granada, Lisbon, London, Metz, Oporto, La Rochelle, Seville, Strasbourg, Vicenza and Zagreb.

Turina adheres to an abstract concept of music; for him, music speaks for itself, although he accepts the meta-language that has evolved from the necessity of offering an explanation for individual creativity. His music is based on the constant quest which combines an inherited tradition with personal innovation, a dialectic between expression and structure.

MARTA CURESES

Turini, Francesco

(*b* Prague, *c*1589; *d* Brescia, 1656). Italian composer and organist. He was
a pupil of his father, Gregorio Turini. He became court organist at the age
of 12 and was later sent by Emperor Rudolf to Venice and Rome for further
training in composition, singing and organ playing. On his return to Prague
he resumed his post as organist until Rudolf's death in 1612. He then
returned to Italy and for a time was in the service of G.F. Morosini in
Venice. By 1620 he had become organist of Brescia Cathedral and held
this post until his death. Liberati mentioned that many musicians studied
with him.

Turini was held in very high – even exaggeratedly high – esteem in
Brescia: in 1620, for example, Rossi stated that 'he … is recognized as one
of the foremost men of Italy' and praised his organ playing and
compositions. In adding two violin parts to the vocal parts in his three
books of madrigals he became one of the earliest composers to develop
the concertato style in vocal chamber music. In the second book he was
one of the first composers to use the term 'cantata' as a formal designation,
though it denotes only an extended recitative and not the kind of more
progressive songs to which composers such as Berti and Alessandro
Grandi (i) applied it. The monodies, duets and trios in the first book are also
less progressive in style and texture than many comparable pieces by
other Italian composers of the time. As well as relatively up-to-date solo
motets Turini also published more conservative masses (1643), one of
which is in canon. Handel used a subject from it as the basis of his
keyboard Fugue in B♭ (1735), and extracts from it were admiringly
reprinted in pedagogical literature well over a century later. Burney too
admired Turini as a 'deep and learned contrapuntist and canonist'.

Turini's sonatas for two violins and continuo, published in his first book of madrigals (1621), are among the earliest trio sonatas. Burney wrote disparagingly of his apparent lack of knowledge of the violin, but the sonatas include some idiomatic writing for the violins, and Turini was clearly sensitive to the qualities of the instrument: in an interesting note in the third book of madrigals he suggested that it is desirable to combine a chitarrone with a keyboard instrument in the accompaniment because it goes better with the sound of the violin.

WORKS

Madrigali, 1–3vv, bc, con alcune sonate a 2–3 insts, libro I (Venice, 1621); 2 madrigals ed. in Whenham; 1 sonata ed. in Mw, vii (1955)

Madrigali, 2–4vv, con alcuni concertati con 2 vn, & una cantata, 1v, bc, in stile recitativo, libro II (Venice, 1624); 1 concertato madrigal ed. in Whenham

Madrigali, 3vv, 2 vn, bc (chit/other inst), libro III (Venice, 1629)

Motetti, 1v, bc … libro I (Brescia, 1629); ed. A. Schnoebelen, *Solo Motets from the 17th Century*, (New York, 1987)

Motetti, 1v, bc … libro II (Venice, 1640)

Messe da cappella, 4, 5vv, bc, libro I (Venice, 1643); excerpts in G.B. Martini: *Esemplare, o sia Saggio fondamentale pratico di contrappunto*, ii (Bologna, 1775)

11 motets, 1–3vv, vns, bc, 1615[13], 1624[2], 1624[3], 1646[4], 1653[1]; 2 madrigals, 1624[11]

Other sacred works, *D-Bsb*, *DS*, *Kl*, *Mbs* (according to *EitnerQ*); masses and psalms mentioned in 1719 inventory of *I-BRd*, now lost

1 ciacona, org, *I-Tn* (according to *MGG1*)

NONA PYRON

Turini [Torrini, Turrini, Turino, Dorini], Gregorio

(*b* Brescia, 1553–5; *d* Prague, 1596). Italian composer, singer and trumpet player. He was the father of Francesco Turini. The date of his birth comes from a declaration of property by his father in 1568, in which he mentions among the members of his family his 15-year old son Gregorio. He studied with Giovanni Contino in Brescia where fellow pupils included Luca Marenzio and Lelio Bertani. Turini joined the Habsburg court in Vienna at the end of 1579 and moved with it in 1583 to Prague; he remained in the service of the emperor until his death at the end of 1596. The imperial account books contain a record of payment to Turini's widow, which mentions that he had been at the court for 17 years. After his death the emperor took responsibility for his children, enabling Francesco Turini to receive further musical education both at the imperial court and in Italy. Cozzando referred to Turini as an 'exceptional and in every respect excellent' musician and mentioned that he enjoyed the emperor's great respect and affection and that he received a high salary. Turini's only collection of sacred music is the *Cantiones admodem devotae* (Venice, 1589). His two secular collections, *Il primo libro de canzonette* (Nuremberg, 1597; ed. in Žáčková) and *Neue liebliche teutsche Lieder* (RISM 1590[28]) are of the light genres that became popular in the last 30 years of the 16th century: Italian canzonettas and songs in German modelled on the Italian villanella.

MICHAELA ŽÁČKOVÁ ROSSI

Türk, Daniel Gottlob

(*b* Claussnitz, nr Chemnitz, 10 Aug 1750; *d* Halle, 26 Aug 1813). German theorist and composer. His father, Daniel Türcke, was an instrumentalist in the service of Count Schönburg; he was also secretary to the local mining authority and the owner of a hosiery business. The boy was trained at an early age for the hosiery firm, received his first music lessons from his father and learnt several wind instruments with his father's colleagues. At the Dresden Kreuzschule he received thorough musical education under the Kantor G.A. Homilius, a former pupil of Bach and teacher of J.A. Hiller and J.F. Reichardt. In 1772 he enrolled at the University of Leipzig, but

continued his music studies under the guidance of Hiller, to whom Homilius had recommended him. He played the first violin in Hiller's 'popular concerts' and made his first attempts at composition (two symphonies and a cantata, all now lost). Under Hiller's direction he came to know the latest songs, cantatas and Singspiele, and felt Hiller's formative influence as a teacher and, above all, as a choirmaster. At the same time he took keyboard (clavichord) lessons in Leipzig from J.W. Hässler, a pupil of J.C. Kittel and therefore also in the tradition of J.S. Bach. He was taught according to C.P.E. Bach's *Versuch* and introduced to that composer's keyboard style. While still at Leipzig he decided to devote himself wholly to music.

In 1774, on Hiller's recommendation, Türk became Kantor at the Ulrichskirche in Halle, where he was also expected to teach general subjects at the Lutheran Gymnasium. He worked in that city without interruption until his death, and soon became the generally acknowledged leader in Halle's musical life, which he restored to a remarkable degree after the decline due to the Seven Years War (1756–63). At the beginning of his tenure there he composed four symphonies, a large choral work and four cantatas, but none of these works was either published or performed. In 1776, however, Breitkopf took over the distribution of his first collection of keyboard sonatas (for clavichord), which was dedicated to Count Schönburg and contained a list of no fewer than 347 subscribers. From then on keyboard music formed the central part of his output; apart from numerous new editions, a further 14 collections had appeared by 1808, among which those containing genre pieces enjoyed the greatest popularity because of their suitability as teaching pieces.

In 1779 Türk became director of music at Halle University, lecturing on theory and composition. After receiving a doctorate *honoris causa* and being promoted to professor of music in 1808, he lectured on music history as well. During his lectures he frequently conducted performances by the Stadtsingechor (at that time under his direction) of many of the works discussed. From the early 1780s he embarked on extensive concert activities and gave performances, notably of Singspiele and operas, in the 'Weekly Concerts' which he directed. He married in 1783.

These years also saw the production of a considerable number of cantatas, lieder and other vocal works. Of some 20 sacred and secular cantatas, he published only two, in keyboard arrangements. Only four are written in the old form of the church cantata; the remainder belong to the more recent 'verse cantata' form (without recitative) often described by Türk as 'chorales' even though they were written for solo voices with alternating chorus and instrumental accompaniment. Most are occasional pieces, but his oratorio-like Christmas cantata *Die Hirten bey der Krippe zu Bethlehem* was long performed in the Berlin Singakademie by C.F. Zelter.

In 1787 Türk was appointed organist and musical director of the Marktkirche (Liebfrauenkirche), the principal church in Halle (the position earlier held by W.F. Bach). This appointment, which he held until his death, enabled him to give up teaching at the Gymnasium and to devote himself entirely to his musical work. In the same year his book *Von den wichtigsten Pflichten eines Organisten* appeared, the first of the fundamental

theoretical works which were to occupy him for the greater part of his life and secure his long-lived reputation as an outstandingly thorough and scholarly teacher. With this *Beytrag zur Verbesserung der musikalischen Liturgie*, as the work was sub-titled, he hit on a subject of great topical interest in view of the increasing decline in the importance of ecclesiastical matters, including church music, in the face of the Enlightenment. His treatise was one of the first steps towards reform.

Only two years later his *Clavierschule* appeared. This, too, was carefully prepared and based on years of experience and a thorough knowledge of the relevant literature. Like its important precursors by C.P.E. Bach and F.W. Marpurg, it was written for the clavichord, but it exceeds these works in its range and thoroughness. If his *Clavierschule* is the last textbook of that first generation of teaching manuals of keyboard instruments before the era of the pianoforte, his *Kurze Anweisung zum Generalbassspielen* of 1791 and 1800 occupies a similar position in the declining tradition of thoroughbass. Through the interest and efforts of his pupil, friend and successor J.F. Naue this work underwent a fifth edition some 50 years after it first appeared, thus lasting longer than all his other theoretical works. Beethoven used it in 1808, together with extracts from writings by C.P.E. Bach, J.J. Fux and J.G. Albrechtsberger, as teaching material for the Archduke Rudolph.

Around 1799 Türk was working on a *Violinschule*, which, however, was never completed. His last theoretical work to appear in print was the comprehensive *Anleitung zu Temperaturberechnungen*, written with the most scrupulous scientific exactitude (it was printed by 1806 but, owing to the political situation, did not appear until 1808). In it he described in terms readily comprehensible to specialist and layman alike all the systems of equal, unequal and approximately equal temperament in use at the time, and subjected them to close critical examination without, however, pronouncing in favour of any particular one.

Stimulated by Hiller's Handel performances in Berlin and Leipzig Türk directed *Messiah* (in Mozart's arrangement) and *Judas Maccabaeus* from 1803, and thus founded the Halle Handel tradition. He enjoyed an intimate and stimulating friendship with J.F. Reichardt, who lived nearby in Giebichenstein, and a good rapport with the citizens and students of Halle, who had made possible the great upsurge in the musical life of the city under his direction. He wrote, anonymously, for the Leipzig *Allgemeine musikalische Zeitung* and other journals. His last years, saddened through the French occupation of Halle and by his wife's death in 1808, were brightened by his work with his most important pupil, the ballad composer Carl Loewe, who had joined his choir in 1810 and whom he took into his house to instruct intensively in all branches of music. The 72-page auction catalogue of Türk's extraordinarily comprehensive library (1816/*R*) bears witness to his wide reading and great scholarship, and the long article in Gerber's *Lexikon* (1792) reflects an almost unbounded admiration from his contemporaries.

WRITINGS

Von den wichtigsten Pflichten eines Organisten in Beytrag zur Verbesserung der musikalischen Liturgie (Halle, 1787/*R*, rev. 2/1838 by F. Naue; Eng. trans., 1987)

Clavierschule, oder Anweisung zum Clavierspielen für Lehrer und Lernende … nebst 12 Handstücken (Leipzig and Halle, 1789, enlarged 2/1802/*R*; Eng. trans., 1982) [unauthorized edn as *Neue Klavier-Schule* (Vienna, 1798)]

Kurze Anweisung zum Generalbassspielen (Leipzig and Halle, 1791, enlarged 2/1800/*R* as *Anweisung zum Generalbassspielen*, enlarged 5/1841 by F. Naue) [unauthorized edns (Vienna, 1822 and n.d.)]

Beleuchtung einer Recension des Buches: Kurze Anweisung zum Generalbassspielen (Halle, 1792)

Kurze Anweisung zum Klavierspielen: ein Auszug aus der grössern Clavierschule (Leipzig and Halle, 1792, enlarged 2/1805)

Kleines Lehrbuch für Anfanger zum Clavierspielen nebst 16 sehr leichten Übungsstücken (Leipzig and Halle, 1802, enlarged 2/1806)

Anleitung zu Temperaturberechnungen für diejenigen, welche in dem arithmetischen Theile der Musik keinen mündlichen Unterricht haben können, ins besondere aber für die Besitzer des Kirnbergerschen Werkes: Die Kunst des reinen Satzes in der Musik (Halle, 1808)

WORKS

Printed works published in Leipzig and Halle unless otherwise stated; list of works with some incipits in Hedler, additions in Serauky, pp.222ff.

keyboard

Sonatas (all pubd in sets of 6): 12 Sonaten, i (1776, 3/1798), ii (1777, 2/1789); 12 leichte Klaviersonaten, i (1783, 2/1793), ii (1783); 18 kleine Klaviersonaten, i (1785, 2/1787), ii (1786), iii (1793); 6 Klaviersonaten grösstentheils für Kenner (1789) [thematic index of all sonatas in Hedler; extracts in Serauky; 4 ed. in Organum, 5th ser. (1951–8)]

Other works: 120 Handstücke für angehende Klavierspieler, 60 as vol.i (1792, rev. 3/1806), 60 as vol.ii (1795), some ed. in NM, xciii (1933), 4 ed. in Serauky, others ed. E. Doflein (Mainz, 1940), and W. Serauky (Halle, 1949); 12 kleine Tonstücke … mit beygefügter Fingersetzung (Halle, 1795), from 1st edn of *Clavierschule*; 30 Tonstücke für 4 Hände, angehenden Klavier- und Fortepianospielern gewidmet, i–iv (1807–8), ed. W. Serauky (Halle, 1948); 2 works in J.A. Hiller: Sammlung kleiner Clavier- und Singstücke (Leipzig, 1774); 1 work in *Berlinische musikalische Zeitung* (1794), no.31, p.124; 1 kbd arr. and 1 edn of other composers' works, *D-Bsb*

vocal

Cants.: Die Hirten bey der Krippe zu Bethlehem (K.W. Ramler), vv, orch, *B-Bc*, *D-HAmk**, vs (1782, 2/1798), extracts ed. in Serauky; Der Sieg der Maurerey (Borrmann), vs (1780), selections with altered text as Neujahrskantate, vv, orch, *Bsb*; further sacred and secular cantatas, 1786–98, *Bsb*, *Dlb*, *HAmk* (some in autograph), *HAu*, titles listed in *MGG1*

Lieder: [18] Lieder und Gedichte aus dem Siegwart (1780), 3 ed. in Serauky; Volkslied auf Kaiser Leopolds Todt (J. Heydenreich) (Leipzig, 1792); 2 Kinderlieder in C.F. Weisse: Briefwechsel der Familie des Kinderfreundes, ii (Leipzig, 1784); Choralbuch, 1v, bc, *Bsb*; Sammlung der vorzüglichsten Choralmelodien, *Bsb*; other single lieder in contemporary collections

Lost works: Pyramus und Thisbe (op), 1784; 12 cants, incl. occasional works, 1786–1808; 8 Choräle mit Figuralsolos, 4vv, and Königsberger Liedernachlass (46 choral lieder, some autograph): formerly *USSR-KAu*

ERWIN R. JACOBI

Turkey,

Republic of (Turk. Türkiye Çumhuriyeti). Country in the Middle East. With a total area of 779,452 km^2, 95% of the republic is located in Asia Minor (Asia), while 5% is in eastern Thrace (Europe). The population of 65·73 million (2000 estimate) is 99% Muslim, the majority being Sunnis.

I. Introduction
II. Folk music
III. Religious music
IV. Art music

1. Traditional Turkish music.

(i) Phases of acculturation.

Emigrants turn first to songs, instrumental pieces and dances learnt in Turkey, playing *bağlama* lute, frame drum with jingles (*def* or *daire*) and goblet drum (*deblek* or *darabuka*). In the course of time, they add European instruments: violin, guitar and side-blown flute. Other traditional Turkish instruments are increasingly popular, perhaps through nostalgia: the shepherd's pipe (*kaval*), the short oboe (*mey*) with a dark sound, originally played only in north-eastern Turkey, and the end-blown bamboo flute (*ney*) once typical of religious and art music.

The addition of a double bass or cello and the almost inevitable keyboard (or more rarely an accordion) entails crucial steps towards polyphony (*çok sesli müzik*). Microtones are gradually omitted and the use of modal scales and traditional *makam* pieces becomes less common. Major and minor keys begin to predominate, asymmetrical rhythms are simplified or converted to regular metres, texts are revised, and old forms such as the *uzun hava* (see §II, 1 above) are simplified. However, native Turkish melodies remain to the fore.

This phase is followed by a mingling of musical styles without any predominant element. The musicians have learnt European notation and theory, but still regard their music as traditional. A male or female singer takes the leading role, and ensembles include traditional instruments, as well as the flamenco guitar or Arab goblet drum (*dombak*). Melodies may contain Turkish, Central European, Spanish and even Indian or Chinese elements. At rehearsals, performers skilfully create original new pieces that transcend regional boundaries.

(ii) Aşık improvised folk poetry.

This tradition (see §II above) flourishes more among emigrants than in Turkey itself. This is possibly because emigrants need to express stronger social criticisms than would be possible at home. Textual content is adapted to new circumstances: poets compose many songs of sorrowful exile (*gurbet*), and political songs about minorities such as the Kurds are also seen as very relevant.

Aşık poets almost all belong to the Alevi/Bektaşi religious sect. Their music is essentially unchanged. They sing in private circles and public performances, and their religious ceremonies (*cem*) are always lavish with musical accompaniment. Outside Turkey the *cem* is celebrated publicly and on a large scale, aiming to spread knowledge of an originally secret religious sect.

(iii) The davul-zurna ensemble.

This ensemble (fig.3) is strongly linked to its traditional function, playing at weddings, circumcisions and social gatherings in hired halls. The large drum is often replaced by the softer-sounding, smaller *koltuk davulu* ('hand

drum') held in the lap and beaten with the hands on one side only. The clarinet often replaces the *zurna*, which is difficult to play.

2. Art music.

Since about 1980 Turks in Germany have attempted to revive the old, élite Turco-Ottoman art music with concerts of songs by well-known composers. They strive to reproduce the music as faithfully as possible, but as amateurs they lack profound knowledge of the *makam*s, metrical cycles and performing practice, not following the cyclical *fasıl* form or adhering to the prescribed unity of a particular *makam*.

Inspired by the efforts of Yehudi Menuhin and Ravi Shankar to reconcile very different musical traditions, Turkish emigrants have attempted to create links between Turkish and Western music. A good example is Carlo Domeniconi's double concerto in classical sonata form for *bağlama*, guitar and orchestra, *Concerto di Berlinbul* (1990). The Turco-European art music popular in Turkey itself occupies a subordinate place in emigrant cultures.

3. Popular music.

Arabesk music (see §V, 3 above) is still very popular with young emigrants. Groups perform rock and pop musics at weddings and ceremonies for circumcision, betrothal and prenuptial henna parties. A male or female singer is accompanied by guitar, electric guitar, percussion, drums, keyboard and *bağlama*. Underlying Western harmonies are adapted to Turkish style. New texts are composed by the musicians themselves or by older or contemporary *aşık* poets. Rap and hip hop are popular among various right-wing or left-wing political groups. This music is suitable for expressing discrimination against first- and second-generation emigrants and their identity problems. Messages are hammered home in short repetitive phrases in Turkish, German or English, to varied music styles, Turkish, Western or a mixture of the two.

(For a theoretical survey of diaspora music *see* Diaspora.)

Turkey

I. Introduction

The music practised in what is now Turkey has manifold roots. For the pre-Islamic period *see* Anatolia. Following the Arab conquests of the region in the 8th century, Near Eastern music history became closely intertwined with that of the Arabs and Persians (*see* Arab music. In the 11th century, groups of Turks made their way westwards from Central Asia, occupying virtually all of Anatolia and founding the Seljuk dynasty. The Turks' adoption of Islam contributed to a cultural metamorphosis. The

development of Turkish art music was further affected by impulses from Persian and, above all, Byzantine culture. Over the centuries, urban and rural Turkish music forms disseminated through the Near East and Balkans; this is especially evident in the present-day musical practice of rural Greece.

Through the frequent association of Near Eastern music with the Arabs and Persians, the Turks have often been considered not to have an independent style. This is partly because theoretical treatises on music (as on all subjects) were generally written either in Arabic or Persian, even if their authors were Turkish. The Arabic form of personal names has also served to obscure contributions by non-Arabs, e.g. the composer, performer and theorist 'Abd al-Qādir [ibn Ghaybī al-marāghī] (Turkish spelling: Abdülkadir Meragi), one of the most influential theorists of the Systematist school (*see* Arab music, §I, 2(iii)(a)). Turkish was his mother tongue, and he is traditionally considered a founding father of Turkish music.

Anatolian Turks played a leading role in the musical life of the Ottoman empire (*see* Ottoman music), which dominated most of the Near East and the Balkans from 1453 until the mid-19th century. This important epoch of musical activity culminated in the 'Tulip period' ('Lale Devri': 1718–30), with its elaborate artistic harem culture. In Ottoman society trained slave-girls (*odalık* or *odalisk*) were significant as instrumentalists, singers and dancers.

The numerous reciprocal influences that developed over several centuries make it impossible to give a precise date for the beginning of an independent, indigenous Turkish musical life in Anatolia, particularly with regard to Turkish art music. The Mevlevi order of Sufis ('Whirling Dervishes') was founded in the 13th century in Konya, in Central Anatolia, by the mystic Celaleddin Rumi (Arabic spelling: Jalāl al-Dīn Rūmī). This order began cultivating art music no later than the circumscription of their ritual by Celaleddin's son, Sultān Veled (1226–1312). Two especially old pieces, a *peşrev* and a *saz semaisi*, which have survived until the present, are ascribed to Sultān Veled. Should this ascription prove to be correct, the two most important contemporary instrumental forms in Turkish art music already existed by about 1300.

However, the overall form of contemporary Turkish art music, with its characteristic melodic and rhythmic modes, formal and modulatory schemes, and succession of instrumental pieces, *taksim* improvisations and song forms, began to emerge in the mid-17th century. During this period Ottoman song and instrumental collections began to reflect the musical life of Istanbul, the Ottoman capital, and not that of Arab and Persian poets, composers and theorists known to have been active elsewhere. The history of contemporary Turkish art music properly begins only in that period (see §IV below).

Given the centuries of cultural interchange, it is impossible to assess the impact of interaction with Arab and Balkan peoples. It is also difficult to identify the origin of any specific features within Turkish music today. Inner Asian elements can be recognized within Turkish folk music, as can influences of other peoples with whom the Turks came into contact in the

course of their early migrations. Generally speaking, it is apparent that the Turks never fully adopted the melodic and vocally conceived music of their Arab neighbours. The evidence lies in the abstract forms of melodic development found in Turkish urban art music songs, the prevalence of pentatonicism, use of drones, occasional uses of polyphony and the importance of purely instrumental forms in some rural folk music.

For many Turkish musicologists, the distinction between rural 'folk' (*halk*) and urban 'art' (*sanat*) music is axiomatic: the former is considered to reflect the culture of the Turks' Central Asian homeland, while the latter is considered to reflect the cosmopolitan culture of the urban Near East. Under the impetus of nationalist modernism, from the establishment of the republic in 1923, rural music was systematically privileged as the basis for a contemporary Westernized national musical culture, and urban music was condemned for its association with the hybrid and 'Islamic' cosmopolitanism of the Ottomans. (For a broad discussion of these issues *see* Central asia, §II, 1.)

Turkey

II. Folk music

The systematic elevation of rural folk music (*halk*) was initiated with archival collection. This was undertaken by scholars connected with the Istanbul Conservatory in a series of trips between 1924 and 1932, with the aid of a phonograph. The Ankara State Conservatory subsequently initiated its own programme of collection and archival documentation under Muzaffer Sarısözen. Béla Bartók was invited to conduct field research by the Ankara *Halkevi* ('People's House') in 1936. These rather varied approaches to collection and archival documentation began to find a powerful institutional focus in the Turkish Radio station from 1937, and later the Turkish Radio and Television. Media reproduction of rural folk music was shaped by Muzaffer Sarısözen's Yurttan Sesler ('Voices from the Homeland') choir at the Turkish Radio, which reformulated this collected material for performance by large choirs and orchestras. Sarısözen's choir had a major impact on musical life in the country.

1. Social contexts and performers.

In large and provincial cities, folk music clubs (*dernek* or *cemiyet*) teach the reformulated folk music style to newly arrived rural migrants as well as young urbanites, both male and female. A class of specialist professionals has emerged, most notably the *bağlama* player, Arif Sağ. They draw on rural musical culture and mediate this style through cassettes and live performances at concerts and weddings across the country. Their mass-media omnipresence has been profoundly significant in rural regions. These factors make it impossible to talk about contemporary Turkish folk music as though it existed in isolated pockets of countryside. Rather, it is the product of movement between village and city.

The folk genres described below is performed by a variety of people. Rural professionals are often but not exclusively Gypsies, known to non-Gypsies as çingene or, in cities (especially Istanbul), as Roma. Both these terms are derogatory and, as elsewhere, Gypsies are treated as low-status

outsiders. In south-western Turkey their women are also professional musicians (fig.1).

Semi-professional folk poets are an important class of performer, wandering through the countryside and performing at festivities. The *aşık* poets (Arab. and Per. *'āshiq*: 'lover') improvise new songs drawn from traditional material, accompanying themselves on the Bağlama (long-necked lute). Many belong to the Shi'a Alevi sect, as did the famous 17th-century *aşık* Pir Sultan Abdal, and the religious essence of many of their songs is veiled in mystical language. The last important exponent was the blind singer Aşık Veysel (*d* 1973). Epic singers (*ozan*) recite legendary stories (*halk hikayeleri*), inserting songs with their own lute accompaniment. Many of their stories are of considerable age; others were written as recently as the 19th century. The best-known epic is that of the noble bandit Köroğlu ('son of the blind man'), who supposedly lived in the 16th century and rose up against his lord to help the poor. (For *'aşık* or *āshiq* folk poets *see also* Iran, 4(ii); Azerbaijan.)

Amateur men, women and children perform music at social gatherings throughout the country. Rural festivities, especially weddings and circumcisions, provide the most significant opportunity for music-making, and traditional tea and coffee houses are another context. In rural areas women seldom sing in public places. They sing chiefly indoors, even on festive occasions, and most readily allow themselves to be heard while performing laments (*ağıt*).

Many musical characteristics of the rural genre are shared by the substantial Kurdish population in Turkey. As a result of persistent efforts on the part of the Turkish state to assimilate this population, information on Kurdish music in Turkey is sparse (*see* Kurdish music). Rural Kurdish musical expression has been heavily influenced by the Turkish Radio and Television and the popular market, both of which have done a great deal to popularize songs originally collected in Kurdish from south-eastern Turkey.

2. General features.

Generally speaking, in Turkish folk music several people sing or play instruments together, performing heterophonically. Instrumental preludes and interludes are often improvised. The folk styles of almost all Turkish provinces are very similar. Striking peculiarities are found only on the eastern Black Sea coast, chiefly in the repertory of the *kemençe* (spike fiddle) and *tulum* (bagpipe) and in the region's lively dance tempos.

Turkish folk music is predominantly heptatonic, but often concentrated around a tetrachord. Four specific tetrachords are identified within modal structures referred to as *ayak* ('foot' or 'step'). *Ayak* (or *ayağı*) is used to distinguish folk modes from art music modes known as *makam* (with an overlapping meaning of 'place', 'rank'). These *ayak* modal structures have technical names known to some rural musicians and to musicologists associated with the state-reformed folk music tradition. They are called *bozlak*, *kerem*, *derbeder* and *garip*. *Bozlak* involves diatonic intervals (A–B–C–D); *kerem* and *derbeder* use non-tempered diatonic intervals indicated with an asterisk A–B*–C–D and A–B*–C–D* respectively), and *garip* has an

augmented 2nd (A–B♭+C♮+D). (Non-tempered intervals are discussed below, §IV, 2.)

Many folksongs have been known for generations, and some are sung throughout Turkey. Talented singers also continue to create new songs, especially love songs and laments to suit particular situations. They use traditional, but ever-varied melodic patterns and draw on the innumerable and characteristic textual formulae of their picturesque folk poetry.

3. Folksongs.

Songs are often sung unaccompanied, but singers also accompany themselves on a type of lute: *bağlama* or, among Black Sea communities, the *Karadeniz kemençesi*. Songs are divided into two contrasting styles: *uzun hava* ('long melody') and *kırık hava* ('shattered melody'). *Uzun hava* are rhythmically free songs with broad, descending melodic lines, rich in ornaments. Long, pulsated notes are often inserted, notably at the beginning and end of the melody. The songs of the semi-professional and epic singers are performed in similar fashion. The *bozlak*, usually love songs, and *ağıt*, songs of complaint, particularly laments for the dead, belong to this group (fig.2). Both types are constructed of lines with gradually descending tessituras (ex.1). In the *bozlak* and *uzun hava* the text syllables are often concentrated at the beginning, middle or end of the melodic lines, so remaining melodic sections can be more intensely ornamented with melismas. The *kırık hava* presumably derives its name from the idea that the melodic line does not possess the dignified, cohesive contour of the *uzun hava*, but rather is 'shattered' in that there is little ornamentation and melisma, the range is smaller than in *uzun hava*, the metre is always strict, and the text is set syllabically. *Kırık hava* are almost always dance-songs.

The song texts, which can be coupled with all types of melody, demonstrate the high development of Turkish folk poetry. Their fundamental principle of construction, in contrast with the poetical art forms adopted from the Persians and Arabs, is the number of syllables to a line: for the most part, lines have seven, eight or 11 syllables. Poems with seven-syllable lines are almost exclusively found in dance-songs. Eight-syllable lines are commonly found in laments (as in ex.1). Almost all *uzun hava*, the *bozlak* and narrative songs have 11-syllable lines. Certain internal line structures are maintained throughout single stanzas or entire songs, for example the grouping of eight-syllable lines into words with 3 + 3 + 2 syllables, with matching accent distribution. Stanzas often have four lines but can have more, and refrains can be added at the end or accommodated between lines. The number of stanzas is not fixed; songs with three or four stanzas predominate but there are cases, for example ballads (*destan*), where the text requires up to 50 stanzas. Rhyme schemes occur in various combinations. Although there are no strict rules, the sequence *AABA* is frequent among eight-syllable lines, and those with 11 syllables often close with the sequence *AAAB*.

The various folksong genres differ mainly in the structure and theme of their texts. The *türkü*, with seven-, eight- and 11-syllable lines, are selected for love songs and for narratives of everyday life. They frequently include meaningless syllables, thus stressing the dominant role of the music. *Türkü*

also became the collective designation for all types of folksong. The *koşma* (Per. *qoshma*), with 11-syllable lines, include love songs and songs describing nature. They are in the rhyme scheme *AAAB* and all stanzas end with the same rhyme. *Destan* (Per. *dāstān*) are ballads with seven- or eight-syllable lines; their rhyme scheme, and the fact that the poet mentions his own name in the last stanza, are common to both *destan* and *koşma*. (For *qoshma* and *dāstān*, *see* Iran, §II, 4(i) and (ii) respectively.) *Mani* were once extremely popular folksongs and are often still found. They consist of quatrains with seven syllables to each line and the rhyme scheme *AABA*. The improvised texts are sung by two poets in a type of antiphony, each poet singing an alternate stanza.

4. Instrumental music.

The most important musical instruments of the folk tradition are the *darbuka* (also known as *deblek* and *dümbelek*), a single-headed goblet-shaped drum struck with both hands as an accompaniment to dancing; the *def*, a single-headed frame drum with metal discs, and the *davul* (fig.3), a bass drum whose two heads are stretched over hoops and laced to each other along the body. The *kaval*, an open end-blown shepherd's flute formerly found primarily among nomads, is steadily being supplanted by the *düdük*, a shorter duct flute. The main type of aerophone is the *zurna*, which is lathed from one piece of wood, has one thumb-hole and up to eight finger-holes. The tiny double-reed mouthpiece is completely inserted into the mouth, and the player uses circular breathing so that the melody is continuous. In certain areas other wind instruments predominate: in the south, the *argul* or *kaval kamış*, sometimes also called *zurna*, is a single-reed double pipe with or without a drone pipe. A similar instrument, the *çifte*, is found chiefly on the west coast of the Black Sea. On the east coast the *tulum* (bagpipe) is common. The accordion is often found among Circassian communities in Turkish cities, and is common in Artvin and Kars, provinces adjoining Georgia and Armenia respectively.

The most important string instrument is the *bağlama*. It is played by the *aşık* (folk poets) and is very widely used in the cities, despite the current availability and growing popularity of acoustic guitars. The *bağlama* is a long-necked lute most commonly with three string courses and around 24 nylon frets over a range of an octave and a 4th, allowing for the particular characteristics of rural Turkish modal structure. Generally, one string is played, while the others are used as drones, except in the tuning associated with the *aşık* repertory. The instrument has a pear-shaped body and is played with a plectrum. Urban practice has considerably elaborated and selfconsciously systematized the procedure around distinct regional styles (*tavır*).

The *bağlama* is often referred to by the collective name *saz*, which is also the general term for musical instrument. The addition of a built-in pickup in the 1970s produced what is now known generically as the *elektrosaz*. This, together with a heavily amplified *darbuka* and voice, constitutes one of the most common sounds at rural weddings. The *kabak kemençe*, a spike fiddle with a gourd resonator, is now rare but the *keman* (European violin) remains a popular instrument among rural professionals. The *kemençe* (fig.4), an oblong bowed lute with three strings, is found only on the eastern

coast of the Black Sea; this solo instrument is always played in two-part parallel polyphony, usually in 4ths.

The rhythms of Turkish folk music, most pronounced in the instrumental music, are of great diversity. Besides simple and compound metres with rhythmically enlivening syncopation, there are other metres consisting of, for example, five, seven or 11 pulses, and metres with irregular subdivisions, for example, an eight-beat bar divided into 3 + 3 + 2 beats. Such constructions are usually called *aksak* (although this refers in its specific sense only to the subdivision of nine into 2 + 2 + 2 + 3 beats). *Aksak* means 'limping' or 'slumping', a reference to the asymmetric 'limping' movement created by such rhythms. Although these metres occur in some folksongs (e.g. the *kırık hava*), they are found principally in dance-songs and instrumental dance melodies.

Foremost among the dances is the *halay*, a round dance that is choreographically rather than musically fixed, and almost exclusively performed by men. Other dance forms are the *bar* in eastern Turkey, the *horon* (Gk. *choros*) of the Black Sea and the *zeybek* in the west. There are numerous other dance forms, many specific to certain regions.

Most dances are accompanied by the *davul* (bass drum) and *zurna* (double-reed aerophone), an instrumental ensemble (fig.3) found in places as far apart as India, Morocco and the Balkans. The drummer leads the ensemble, which is called *davul-zurna* and can be enlarged to four players on special occasions. The drum is beaten on both heads, the main beats being executed with a heavy stick on the right side, the rhythmic subdivisions with a thin stick on the left. In the past the *davul* and *zurna* were also the main instruments of military music, which arose in the 14th century and later became known as *mehter*. In the West, as a result of the Turkish wars, this music was called Janissary music because it was mostly played by musicians of the élite *yeni çeri* ('new troops').

Turkey

III. Religious music

Following its proclamation as a republic (1923), Turkey became a secular state in 1928. Many types of religious music exist within the predominantly Muslim community (of which two-thirds are Sunni and one-third Shi'a Alevi). Christian minority groups (including Armenian, Chaldean, Syrian and Greek sects) and a small Jewish community in Istanbul also have their religious musics.

Orthodox Islam allows only very few musical forms, which are not considered to be music as such. Foremost of these are Qur'anic recitation and the call to prayer (*ezan*), which is sounded from all mosques five times daily and has thus entered the general consciousness. The *ezan* has had a considerable influence upon the *uzun hava* folk genre, which gained prestige through this connection and remained relatively unaffected by the otherwise harsh condemnation of musical practices by strict Muslims.

Islamic devotional music falls within both folk and art music categories. Folk hymns are known as *ilâhi* ('for God'), and certain instrumental pieces and songs have mystical overtones, e.g. those of the *aşık* semi-

professional folk poets (see §II, 1 above). A notable form of that music which is accepted by the Turkish Islamic orthodoxy is *mevlut* (or *mevlit*). These are settings of the birth story of the Prophet Muhammad, although performance is not restricted to the date of his birthday. The *mevlut* has developed into a religious ceremony performed on official or private occasions in urban and rural settings.

The musical repertory of the Sunni sects, especially that of the Mevlevi order of Sufis, is purely art music. Indeed, that order is justifiably referred to as the music school of the Ottoman dynasty. Specific liturgical songs belong to their ceremony: for example, the *naat* (Arab. *na't*: hymn in praise of the Prophet), sung at the opening of every religious celebration, or the *ayin* hymn to which the whirling dance is performed (see fig.5). An instrumental ensemble accompanies the choral *ayin* and performs purely instrumental compositions, which are identical in form and name to the two main secular art genres, *peşrev* and *saz semaisi*. The core ensemble consists of one or several end-blown flutes (*ney*) and small pairs of kettledrums (*kudüm*), but this may be enlarged with other instruments: *tanbur* (long-necked lute), *rebab* (spike fiddle) and cymbals (*halile*).

(*See also* Islamic religious music for general discussion; a detailed description of the Mevlevi ritual and music and a further illustration are also provided in that article (§II, 5).)

Turkey

IV. Art music

Turkish art music is essentially melodic and linear in character, traditionally performed heterophonically by a mixed, but not fixed, group of solo instruments. Theoretical discussion revolves primarily around the melodic and rhythmic modal systems known respectively as *makam* (Arab. *maqām*) and *usul* (see §§2 and 3 below).

Turkish art music has undergone significant developments and has a complex history. In the early years of the Republic (1920s), hostility to the Ottoman empire precipitated attempts to 'modernize' Turkish art music by using large multi-part orchestras led by a conductor. Setting this within a concert hall lost the chamber intimacy of the music, and so this kind of experimentalism has little currency in Turkey today. From the 1970s onwards, the Turkish Radio and Television and state conservatories have cultivated a strict monophonic style played by large and highly disciplined orchestras. Mass-media dissemination of this style adds electric guitars and keyboards, often with a harmonic accompaniment. Most contemporary art music composition is orientated towards the popular market (see §5(i) below).

1. Musical instruments.
2. 'Makam'.
3. 'Usul'.

Turkey, §IV: Art music

1. Musical instruments.

Various instruments are employed for art music, including the *ney* (end-blown flute; fig.6*b*), frame drum (*def*) and *kudüm* (small pair of kettledrums) used in the Mevlevi ceremony (see §III above). The *tanbur* or, more precisely, *tanbur kebir türkî* ('great Turkish *tanbur*') is a long-necked lute of characteristic Turkish form with a virtually hemispherical body. Its long neck has up to 48 gut frets, allowing performance of all scales possible in the tonal system with 24 subdivisions of the octave. It is occasionally bowed (*yaylı tanbur*). Two spike fiddles are used in Turkish art music: the *rebab* (*see* Rabāb; similar in form to the Persian *kamānche*) and *fasıl kemençesi*. The latter has a pear-shaped body leading directly to a short neck without a nut: of its three strings, the highest is stopped from the side with the fingernails and the lower two can be used as drones.

Many instruments have been adopted from neighbouring cultures, such as the *üt* (Arab. *'ūd*), an unfretted short-necked lute of Arab origin. The *santur* (hammered dulcimer) comes from Persian music. It has up to four wire string courses, struck on both sides of their bridges with small felt-headed beaters. In Turkey the *kanun* (plucked zither; *see also* Qānūn; fig.6*a*) is now played more often than the *santur*. It has triple-course gut or nylon strings, plucked with metal plectrums attached to the index fingers. Recently, a series of adjustable nuts (*mandal*) has been added for raising the pitch of each course by a microtonal interval of one comma.

In addition, the Western violin (*keman*) and clarinet (*klarinet*) have been enduring components of 20th-century art music, popularized respectively by Haydar Tatlıyay (1890–1963) and Şükrü Tunar (1907–62). The reformer Hüseyin Sadettin Arel (1880–1955) attempted to create 'families' of Turkish instruments analogous to the violin or lute family, used in large orchestras. Mass-media dissemination of art music uses electric guitars and keyboards, and in the night-club art genre (known as *fasıl*) the *darbuka* (Arab goblet drum) provides rhythmic elaboration.

Turkey, §IV: Art music

2. 'Makam'.

The Turkish modal system is based on the term *makam*, which might be usefully described as composition rules. Today *makam*s consist of scales comprising defined tetrachords (*dörtlü*) and pentachords (*beşli*) governed by explicit rules concerning predominant melodic direction (*seyir*: 'path'). The *seyir* indicates prescribed modulations and the general shape of phrases, understood as either predominantly upwards (*inici*), predominantly downwards (*çıkıcı*) or a combination of both (*inici-çıkıcı*). There are terms for the 'opening note' (*giriş*), 'tonic note' (*karar*), a significant tonal centre other than the tonic (*güçlü*: 'dominant'), and a note lower than the tonic (*yeden*). *Çesni* refers to characteristic phrases and concluding figures, or a brief excursion into a related *makam*.

(i) Forms and names.

Turkish *makam* names are largely shared with the Arab and (to a lesser extent) Persian systems. They may designate an important note in the scale (e.g. *çargah*: 'fourth position'), a city (e.g. *esfahan*), a landscape (*hicaz*), a people (*kürdî*) or a poetic abstraction (e.g. *suzidil*: 'heart glimmer'). Today Turkish *makam*s are classified into three categories: simple (*basıt*), combinatory (*birleşik* or *mürekkep*) and transposed (*göçürülmüş* or *şedd*). The *basıt* category contains 12 *makam*s: six of these resemble diatonic modes (*rast*, *çargah*, *hüseyni*, *neva*, *puselik* and *uşşak*), and the others have one or two augmented 2nds (*suzinak*, *hicaz*, *hümayun*, *uzzal*, *karçığar* and *zirgüle*). The *birleşik makam*s usually combine two seven-note *makam*s. A commonly used, but complex, example is *hüzzam*; this combines at the first level a *hüzzam* pentachord and *hicaz* tetrachord on the note F sharp, with, at the second level, the scale of *hümayun* on the note D (ex.2).

Fixed compositions (e.g. ex.3) and improvised sections (*taksim*) effect designated modulations at specific points in performance (see §4 below). These are marked by a sequence of 'hanging cadences' (*asma karar*). Modes can be transposed from any category of *makam*. The *makam acemaşıran* is a common transposition of *çargah* (see ex.3). The modal characteristics of the transposed mode may or may not be incorporated in its transposed form.

The importance of the *makam* is so great that compositions are always named and initially classified by their *makam*. In each theory, all musical forms and rhythms are possible in each *makam*. Although *makam*s are theoretically and notationally bound to certain absolute pitches, they can be performed at any pitch level, according to the range of the voice or instruments.

The number of existing *makam*s depends on whether one counts actual examples or theoretical possibilities. The modern theorist Karadeniz considers 900 *makam*s but acknowledges that only 150 examples can be found, of which only 110 have any contemporary currency. Beyond a core of about 30 well-known *makam*s, many performers today would have to consult a textbook or listen to a recording before attempting to play any others. Today *makam*s possess no specific symbolic value and are not bound to certain times of the day or year, as in the Indian modal system (rāga).

(ii) History.

The *makam* system has a complex documented history. Until the mid-16th century, discussion drew heavily on the work of the Arab Systematist philosophers (*see* Arab music, §I, 4(i)). A distinctly new set of modal principles began to emerge from the song collection (*c*1550) of Hafız Post and theoretical texts and collections of the mid- to late 17th century (principally those of Cantemir and Ufki discussed below). In particular, the canonical division of modes into the 12 *şudud* and six subsidiary *avaz* was replaced by a new hierarchy defined by *makam* and *terkib*. *Terkib* consists of a modal area on which a precomposed piece or improvisation touches during the course of modulations ordained for the specific *makam*.

The new system appeared in its incipient form in the treatise by the Moldavian prince Dimitrie Cantemir (1673–1723), known in Turkish as Kantemiroğlu. During two stays in Istanbul between 1687 and 1710, Cantemir wrote out some 350 instrumental compositions. In his work prescribed modulations (*seyir*) emerge as significant, and it is evident that compositional and improvisational skills were closely related to the performing musician's ability to steer a knowledgeable and structured path through a wide range of *makam*s and *terkib*s, both within individual items of repertory and across the whole architecture of an instrumental or vocal 'suite' (*fasıl*). Cantemir's system is broadly recognizable in current Turkish art music practice, although the specific modal qualities of some *makam*s have changed, some *terkib*s have disappeared and others have become *makam*s in their own right.

(iii) Notation.

Notation has been particularly significant in formalizing the *makam* system as practised today. Cantemir was one of a number of theorists in Turkey to use an alphabetic notation. Western staff notation was first used by the Polish slave 'Alī Ufkī [Wojcieck Bobowski] (1610–*c*1675) in his compilation of court music. An Armenian church musician, Hamparsum Limonciyan (1768–1839), developed his own system of notation. Establishing both pitch and duration accurately, his work enabled a large proportion of the orally transmitted classical music to be written down within a few decades.

Efforts to modernize the art music genre in the 20th century resulted in the more selfconsciously rigorous application of Western staff notation to the *makam* system. Notation of the art music repertory is closely associated with the work of the Alaturka Musiki Tasnif ve Tespit Heyeti (Alaturka Music Committee for Repertory Classification and Establishment) at the Istanbul Conservatory from 1926 on, drawing on the expertise of a number of significant art music scholars: Rauf Yekta (1871–1935), İsmail Hakkı (1866–1927), Ali Rıfat Çagatay (1867–1935), Suphi Ezgi (1869–1962) and Mesut Cemil (1902–63). Outside this conservatory-based group, the work of Hüseyin Sadettin Arel was also particularly significant.

The system of notation that remains in use is known as the Ezgi-Arel system (devised by Suphi Ezgi and Hüseyin Sadettin Arel). It transcribes the *rast makamı* on G, as opposed to C in the system devised by Muschāqa in Egypt in the 19th century. Where the modern Egyptian system establishes 24 equal quarter-tones in the octave, the Ezgi-Arel system involves two different kinds of semitones. These correspond to intervals derived from ancient Greece, the Limma and Apotomē, at 90 and 114 cents respectively, or, in Turkish terms, four and five Pythagorean Commas (*koma sesleri*) in a whole tone consisting of nine commas. According to the notational conventions of this system, a note may thus be flattened or raised by one, four, five or eight commas (the flats respectively , b, ⌐ and the sharps ⌐; ⌐; and). This produces an octave consisting of 24 unequal intervals.

Practice and theory diverge. For example, the comma-flattened B in the first tetrachord of *uşşak makamı* (A–B–C–D) is considered in practice to be flattened by two if not three commas. There have, consequently, been no shortage of attempts by modern theorists to improve the Ezgi-Arel system.

Oransay (1957) proposed a system with 29 intervals, and Karadeniz (1965) one with 41, with an alternative, although less widely used system of notating microtonal intervals. Today, in practice, notes may be known by their Turkish pre- or post-notation names (either according to modern conventions or Tonic Sol-fa). Thus 'A' may be referred to as 'la' or *dügâh*.

Turkey, §IV: Art music

3. 'Usul'.

Just as the *makam* system began to take on its current form in Turkey towards the end of the 17th century, the system of rhythmic modes (*usul*) has also changed substantially over time. Though it is not easy to document, this process has principally taken place as ornamentation and melodic elaboration lengthened phrases and entire pieces, retarding older *usul* patterns, and elaborating their internal structure. Theorists and song-text collections of the mid-15th century refer to about 30 *usul* patterns. By the 16th century conspicuous *usul*s such as *ramal-qasir* (24 time units) or *'Amal* (14) had disappeared from the texts. Cycles occurring frequently in the 16th century, such as *se darb*, are absent from 17th-century texts. *Usul*s established in the 17th century overlap with those still in use today, although most (such as *devr-i kebir*, *evfer*, *frenkçin*) are enormously long and mainly of antiquarian interest. They have been replaced by a new 'generation' of commonly used *usul*s of two to ten time units (respectively *nim sofyan*, *semai*, *sofyan*, *türk aksağı*, *yürük semai*, *devr-i hindi*, *düyek*, *aksak*, and *curcuna*).

Today, in self-consciously high-brow performances, such *usul*s are tapped out on *kudüm* or *nakkare* (two small kettledrums). At conservatories or music societies, students tap these rhythms on their knees while they sing the song text to Sol-fa. Lower-pitched main beats are sounded on the right drum (or right knee), and higher-pitched auxiliary beats on the left. As a memory aid for learning an *usul*, spoken syllables are used: *düm* (low), *tek* (high), *düme* (low-high), *teke* or *teka* (two high strokes, with alternate hands right-left) and *tahek* (high and then high-low simultaneously). The shortest pattern, *semai*, consists of three equally long strokes, *düm-tek-tek*; another, *sofyan*, contains one long and two short beats, *düm-tek-ka*. Other relatively short *usul* patterns have between five and 12 beats and may contain asymmetrical subdivisions, syncopation and unusual metres. Longer patterns can often be recognized as composites of simpler *usul*s, but may contain no repetition: they are, so to speak, 'through-composed'. The longest *usul*, *darb-i feth* ('beat-pattern of conquest'), is no longer in use; it consists of 80 strokes within 88 time-units and comprises rhythmic values that may be notated as minims, crotchets, quavers and semiquavers.

Like the *makam*s, not all *usul* patterns are used with the same frequency: many, principally shorter ones, are used far more often than the longer

ones. An important aspect of the *usul* is that it provides the framework of a composition. Lines of songs or movements of instrumental compositions have a certain number of *usul* repetitions. Sometimes an *usul* of greater length is chosen, for example *muhammes* (16/2) or *remel* (28/2), so that one *usul* covers half or an entire melodic line.

There are more than 40 *usul*s listed in sundry theoretical writings. They can all be varied; thus a new form, *velvele* ('din'), is derived, which then remains unaltered through an entire piece. Fixed variants of a few *usul*s have become established and are subsequently used in place of the basic *usul aslî darplar* ('original strokes'): this can be seen in the customary forms of the *usul devri kebir* in the *peşrev* of the Mevlevi ceremony.

The melodic rhythm, *düzüm*, may correspond to the *usul* used in a composition or may be entirely divergent. It often corresponds to the *usul* only sporadically, for the most part at the beginning of a piece, after which it becomes increasingly independent.

Turkey, §IV: Art music

4. Formal structure.

The terminology used by 15th-century theorists and compilers of mid-16th century song texts indicates a close relationship between early Ottoman forms and the more generally distributed Middle Eastern cyclical forms, the *nawba*. The formal categories employed referred to songs primarily defined by their poetic attributes, namely the *qawl*, *'amal*, *firudast*, *gazal*, *tarana* and *mustezad*. In the absence of notated music, only a certain amount can be inferred about the musical properties of these forms. By the mid-17th century, these formal categories had all but disappeared (save for the *külliyat*, *nakış*, *kar*, *zecel* and the *savt*), being replaced by a new set of musical and poetic formal terms, including *şarkı*, *murabba*, *beste*, and *semai* (later *semaisi*). Cantemir's treatise and compilation of instrumental pieces indicated the completion of a shift from the old *nawba*-oriented suite form to the contemporary *fasıl*. In this, sections of the song, instrumental piece or *taksim* improvisation were structured around a sequence of contrasting yet related *makam*s or their *terkib* subsections (possessing, in Cantemir's terms, *ünsiyet*, 'harmony', that is, in a contiguous rather than simultaneous sense).

This principle is particularly clear in the *şarkı* song form, which owes its current outlines to the song form popularized by Hacı Arif Bey (1831–85) in the mid-19th century (see §5 below). This consists of two contrasted melodic lines, corresponding to two textual lines, referred to as *zemin* and *zaman*. This is followed by a contrasting *meyan* section, in which there is a modulation and often an upwards shift in tessitura. In ex.2 the E natural in the 2nd bar of the *meyan* indicates a brief modulation to *ferahnak*, followed by a modulation back to the upper register of *hüzzam*. The *meyan* is followed by a repeat of the first or second line (in this case, the second), or a freshly composed line that functions as a refrain. The whole is punctuated by instrumental sections known as *aranağme*.

Dominant among the instrumental forms are the *peşrev* and *saz semaisi*; since the early 19th century they have had four sections (*hane*: 'house'). A *teslim* (also called *mülazime*) is added to each section in the manner of a

ritornello. From the late 17th century, the *peşrev* began to conform to the more general principle of modal modulation, transforming Turkish art music practice. In the contemporary form, the second *hane* of the *peşrev* often modulates to a related *makam*. The final *hane* is often in a contrasting ternary rhythm (*usul*). The *saz semaisi* is always in a ternary *usul*, and usually concludes the *fasıl* performance.

Another important instrumental form is the *taksim* (Arab. *taqsim*: 'division'), often simply translated as 'improvisation'. In early Ottoman texts, the term referred to a vocal form, but since the late 17th century it has designated a form of solo instrumental composition in performance, without fixed *usul*. In this respect, *taksim* is akin to forms of Qur'anic recitation (notably a form known as *tecvit* or in Arabic as *tajwîd*) but distinguished from the secular free rhythm vocal form, *gazal* (Arab. *ghazal*). Its etymological meaning, 'division', indicates its function of demonstrating divisions between *makam*s, effected through modulations to related modal sub-groups. In this respect, Turkish practice is quite distinct from Persian classical music (*see* Iran, §I, 3). Thus a *taksim* has the dual purpose of allowing a moment of individual instrumental virtuosity within a group performance and of demonstrating the characteristic *makam* structure of the pieces to follow. *Taksim*s by celebrated performers such as Tanburî Cemil Bey were recorded and notated by commercial publishers during their own lifetime.

In current practice, then, the *fasıl* employs many elements. It often begins with a *peşrev* and proceeds with a sequence of *şarkı*, beginning with older pieces in longer *usul*s, interspersed with *taksim* improvisations. The *fasıl* usually follows with more contemporary pieces in shorter *usul*s, concluding with a *saz semaisi*. Often a *fasıl* will begin in one *makam* and modulate to another half-way through, by means of a *taksim*.

Turkey, §IV: Art music

5. Composers.

In Turkish urban musical circles, composition and performance remain closely connected and equally privileged activities.

Over the centuries compositions have been preserved by means of oral transmission through carefully maintained chains of authority (*meşk*). However, for the period before 1650 it is virtually impossible to establish authorship of any single piece of music, although we know from the song texts that a core of canonical composers existed. Even after 1650 authorship is problematic. The frequent attribution of pieces to significant religious figures such as Sultān Veled (1226–1312, of the Mevlevi order) or to theorists such as Abdülkadir Meraği (Arab. 'Abd al-Qādir) should be treated with some caution. Ten compositions by Hafız Post (*c*1630–92) and 42 by Buhurizade Mustafa Itrî (*c*1630–74) are believed to have survived; indeed, Itrî's *na't* (hymn) continues to be sung as the opening of the Mevlevi ritual. The existence of a huge repertory of art music compositions can be inferred from 17th-century song-lyric texts (including Hafız Post's own).

The significant collections of 'Alī Ufkī (some time after 1650) and of Cantemir (between 1687 and 1710) have already been discussed with reference to notation. Both texts provide valuable evidence concerning the

emergence of a new style of music in the Ottoman court, reflecting, among other things, a more localized musical style in preference to the previously dominant music of Arab and Persian composers. However, until more systematic efforts to use notation in the 19th century, the identification of composers and the attribution of pieces is an uncertain business.

Music flourished during the *Lale Devri* ('Tulip period', 1718–30) through the work of court composers such as Eyyubî Bekir Ağa (1680–1730), Hafız Süleyman Ric'at Molla and İsmail Ağa (?1674–1724). Significant composers of the next century include Tanburî Isak (1745–1814), Sultan Selim III (1760–1808), Hacı Sadullah Ağa (1760–1825), Tanburî Mustafa Çavuş (1764–1854), Hamamîzade İsmail Dede Efendi (1778–1846) and Şakir Ağa (1779–1841).

The *tanzimat* reform movement began in 1839, introducing a judicial and administrative system based on Western models. This had an incalculable impact on Turkish cultural life. In 1828 Giuseppe Donizetti, brother of the opera composer, was made director of court music and reformed the Janissary band on Western lines. The *tanzimat* also marked the emergence of a non-Muslim bourgeoisie as significant patrons and cultural brokers. The music of Hacı Arif Bey responded to these transformed circumstances. He popularized the new *şarkı* song form known as *nevzemin*, characterized by shorter melodic lines and more direct lyrical style. (Its formal structure is analysed in §4 above; see ex.2.) Şevki Bey (1860–90) was one of his pupils. The *tanzimat*'s bourgeois musical traditions were taken into the 20th century by Lemi Atlı (1869–1945) and Tanburî Cemil Bey, the famous instrumentalist who also worked as a composer, theorist and teacher. Parallel to these innovations, a tradition of austere classicism was pursued in the late 19th century by Zekâi Dede (1824–97), whose works were carefully memorized and notated by his son Ahmet Irsoy (1869–1943), on the eve of the Turkish Republic.

The Republic (1923) brought new cultural institutions that affected composers and performance profoundly. Western-style music conservatories and symphony orchestras were established, and teacher-training colleges began to orientate the entire state education system towards teaching Western music. Principal of these was the Gazi Eğitim Enstitüsü (Gazi Education Institute) in Ankara, headed by Eduard Zuckmayer.

The reformist work of Hüseyin Sadettin Arel has already been mentioned: he promoted large orchestras with 'families' of instruments and helped devise the Ezgi-Arel system of music notation. As a composer, he attempted to modernize Turkish art music through systematic application of Western contrapuntal techniques.

Arel's efforts were subsequently eclipsed by the more ideologically acceptable work of the Turkish 'Five', comprising Ahmet Adnan Saygun, Ulvi Cemal Erkin, Cemil Reşit Rey, Hasan Ferit Alnar and Yalçın Tura. They achieved some distinction outside Turkey: Adnan Saygun's oratorio *Yunus Emre* (1946) received performances in Paris (1947) and New York (1958), and Hasan Ferit's *Qānūn Concerto* was first performed in Vienna (1946). The movement generally sought to find 'international' clothing for music of rural and Anatolian inspiration. Its austere contrapuntal style is

more reminiscent of Western European neo-classicism than the work of the Russian 'Five'. Some composition in this genre currently takes place in the state conservatories (which now have Turkish art music sections).

State institutions and the popular market have played important roles in recent years. Most contemporary composition occurs within the popular market, with numerous important influences from outside Turkey (see §V, 1 below).

Turkey

V. Popular music

The popular music domain is closely related to both Turkish folk and art music. It has also systematically appropriated non-Turkish popular genres. In the late 1920s tango (from Argentina) reached Turkey through travelling European and American orchestras: Necip Celal was its first Turkish imitator. In the 1960s there were imitators of chanson (from France), e.g. the arranger Fecri Eyüboğlu and singer Ajda Pekkan. Egyptian and Lebanese film music, first disseminated through Arab radio stations, has had an important impact.

The history of Turkish popular music is very much set in Istanbul. In the early 20th century the Muslim bourgeoisie frequented popular entertainment districts such as Şehzadebaşı Caddesi (also known as Direklerası: 'Arcades') and Beyoğlu, where theatres produced a popular song genre known as *kanto*. Its lyrics reflected many new aspects of the changing city. In the early 1950s mass migration from rural areas swelled Istanbul's population, transforming the popular culture revolving around the city's clubs (*gazino*) and bars. As elsewhere, the mass media have been particularly important. Commercial recording was initiated by the Gramophone and Typewriter Company in 1903, followed by numerous other firms, notably HMV; the first Turkish firm (Şençalar) began operating in 1962. The first Turkish cassettes were produced and distributed in 1976. This marked the proletarianization of popular musical culture, which responded quickly to shifts in the ethnic composition of Turkish cities, e.g. the influx of a large Kurdish community in Istanbul. The media were deregulated in the 1990s. Despite the incursions of private music television channels and of multinational cassette companies such as Polygram, people today mostly listen to music made in Turkey by Turkish and Kurdish musicians.

Popular music is performed by musicians drawn from a wide variety of backgrounds, ranging from the socially privileged or conservatory-trained to marginal 'outsiders' such as Roma Gypsies. The latter often work in clubs and bars, especially in Istanbul, the women as dancers, the men as instrumentalists. Some Roma musicians have achieved considerable prestige, notably clarinettist Mustafa Kandıralı, who played for Turkish Radio and Television orchestras.

1. Popular art music.

In the 20th century many key exponents of Turkish art music had one foot firmly in the popular market, despite connections with the cultural institutions of the republic. The singer Münir Nurettin Selçuk dominated the

popular market from 1926 (his first recording) until the late 1960s. As leader of the Istanbul Conservatory Performance Group (İcra Heyeti), he gave a number of influential live radio concerts, but his enduring significance in Turkey rests on recordings and musical films, including early adaptations of Egyptian film musicals whose original versions were banned by the Turkish state. He is considered as the last master of the *gazal* singing genre, and as 'the man who put Turkish music in European dress'. He introduced bel canto singing into Turkish popular art music and instituted the practice of the singer standing in front of the musicians rather than among them.

Zeki Müren received a classical education in music. He made his name with versions of Egyptian and Lebanese musicals, and with *gazino* club performances in the 1970s. His association with the conservatory-trained composer Muzaffer Özpınar (*b* 1941) exemplifies the close connection between the popular market and art music performance and composition.

2. Turkish rock and pop.

In the late 1950s the films of Elvis Presley and Bill Haley initiated a wave of imitators in Istanbul. The first rock and roll orchestra was formed at Istanbul's Naval College, playing mainly for school and university proms. In the early 1960s Erol Büyükbürç was dubbed the 'Turkish Elvis'.

The Anatolian rock movement (*Anadolu rock*) was conceived in opposition to Turkish imitations of American rock and French chanson. It combined a growing identification with the international labour movement, European counter-culture and Anatolian folk music. The careers of Cem Karaca, Erkin Koray and Cahit Berkay have been significant. Most musicians of this movement were middle-class graduates of Istanbul's prestigious foreign-language schools, some from non-Muslim minorities. They used electric keyboards, guitars and drum kits with the *yaylı tanbur* (long-necked bowed lute), *bağlama* and *kabak kemençe* (spike fiddle with gourd resonator, now rare), plus a variety of Turkish rhythm instruments. Performance was predominantly organized around the guitar-based rhythms and textures of Western rock and pop.

Initially musicians such as Cem Karaca argued for a contemporary Turkish response to Euro-American popular culture. Many Anatolian rock groups gained assisted trips to recording studios in Europe, sponsored through national newspaper music competitions. Soon their 'Turkishness' became politicized through songs that drew heavily on the radical urban *aşık* tradition (notable singers were Ali Ihsan and Mahsuni Şerif). Karaca's group Dervişan celebrated the life-struggles of Turkey's urban poor in the first Turkish rock opera, *Safınaz*. In 1978 *I Mayis*, their song honouring the international labour movement, led to legal action, a period of media exclusion and police harassment: the group collapsed and Karaca went into self-imposed exile in Germany.

The 1980 military coup d'état inhibited the flow of musical ideas, instruments and technology from Western Europe, but from the mid-1980s liberal government policies reversed that process. A genre known as *özgün* ('independent') emerged whose characteristic sound combined guitars with

the *bağlama*. Singers such as Ahmet Kaya (a leftist Kurd) revived some of Anatolian rock's political radicalism.

'Turkish pop' (*Türk popu*) emerged more decisively from that period, promoted by the newly deregulated media. Onno Tunç (1949–95) was a key figure, originally an Armenian church musician who directed Turkey's participation in the Eurovision Song Contest throughout the 1980s. In collaboration with a number of musicians (notably Sezen Aksu), he defined a distinct style characterized by vocal techniques very similar to those of popular art music, coupled with Tunç's own application of keyboard-based jazz and soul influences.

Turkish pop emerged in a period when electric guitars were exotic and only the relatively wealthy had opportunities to hear Western popular music. By the mid-1990s this had changed: a wide audience heard Western popular genres through the deregulated media, guitars were readily available and there were cheaply priced 'rock bars' in Istanbul and Ankara. In sharp contrast to the radical stance of the 1960s, musicians such as Tarkan, Mirkelam, Mustafa Sandal and Rafet el Roman articulate bourgeois fantasies of new cars, summer holidays and foreign travel. However, their use of modal constructs, *aksak* rhythms and urban instruments such as the *ut* (Arab. *'ud*) and *darbuka* indicates a somewhat selfconscious nostalgia for 'Turkish' music.

3. Arabesk.

Turkish national identity has long depended on the rejection of its 'Arab' history, but state intervention, censorship and nationalist reforms often had a reverse effect, promoting interest in things Arab. The 1948 ban on Arabic-language music and films prompted an indigenous film and music industry based on Egyptian and Lebanese hits. During the same period, state promotion of the reformed 'folk-chorus' radio style resulted in widespread listening to Arab radio stations. A complex reaction of fascination and repulsion with Arab culture underlies the emergence of the *arabesk* genre.

Egyptian influences have been important in Turkish popular music. The songs of Egyptian singers Umm kulthūm, Mohammad 'Abd al-Wahhāb and farid al-Atrash had direct imitators in Münir Nürettin Selçuk and Zeki Müren (see §1 above). Large dance orchestras modelled on Egyptian film orchestras became popular in Turkey, introduced by Haydar Tatlıyay (1890–1963) on his return in 1947 from working as a musician in Egypt. In turn they helped to establish the enduring popularity of large Egyptian-style 'belly-dancing' (*raks şarkı*) orchestras (*see also* Egypt, §II).

Rural Turkish culture is the other important component of *arabesk* music. Village themes, implicitly or explicitly set in the south-east of the country, became popular in Turkish cinema in the late 1940s. They often focussed on graveside lament scenes, with music drawn simultaneously from the rural *uzun hava* and the urban *gazal*. The recording industry and *gazino* clubs also promoted rural music catering for the large migrant communities in Turkish cities.

The term *arabesk* was first used in connection with the singer and virtuosic *bağlama* player Orhan Gencebay, whose first best-selling single was released in 1969. His style is eclectic, combining elements such as baroque concerto form, Western rock techniques and Turkish art music (*şarkı* song form and *makam*s) often adding a harmonized 'sub-structure' (*altyapı*) and passages of counterpoint.

In 1975 the introduction of stereo-recording technology facilitated a distinctive orchestral sound in the late 1970s *arabesk* music. This is typified in recordings by Orhan Gencebay, Ferdi Tayfur and Müslüm Gürses, using string orchestras (in Arab film style), large percussion sections and instruments associated with Western rock and Turkish folk and urban art music. An antiphonal structure prevails, with solo vocal or instrumental statements answered by string chorus.

While *arabesk* was rigorously excluded from state radio and television, its commercial presence was tolerated, and it thrived through cheap cassette production and live performance in clubs. *Arabesk* no longer operates as a focus for opposition to nationalist cultural policies, which have largely been discontinued. Despite the apparent dominance of Turkish pop in the 1990s, sales of *arabesk* cassettes exceed those of any other genre, and public performances draw capacity audiences.

Turkey

VI. Emigrant music

Since the 1950s Turkish citizens have been driven by economic need to emigrate to European countries, especially Germany. Although they intended to return home, most of them stayed abroad indefinitely. Their isolated place in a foreign culture leads to a greater awareness of Turkish tradition. Many develop an interest in Turkish music, singing familiar songs and often learning to play the *bağlama* (long-necked lute). Young Turkish emigrants meet and make music at cultural reunions, youth clubs, folk music schools and workers' welfare centres. Some absorb new influences from the West and (to a lesser extent) other emigrant communities. This creates a musical synthesis; subsequent generations are often bi-musical, playing Turkish and non-Turkish music.

Turkey trot.

A social dance enormously popular in the early 1910s in the USA. It was danced to ragtime music, and was closely related to the one-step. The turkey trot was predominantly a forward walk, with one step per beat, its name derived from the flapping arm movements that imitated a turkey's wings. Although the name 'turkey trot' appeared in Ernest Hogan's 1895 song *La Pas Ma Las* and is documented in New Orleans, San Francisco and other cities in the 1900s, the dance did not gain wide popular acceptance until 1911. Its primary point of dissemination was the Barbary Coast area of San Francisco, and it was spread by numerous entertainers who featured it in vaudeville and musical theatre. Phonograph recordings of turkey trots also first appear in early 1911. The dance was widely criticized for its robust character and the lingering bodily contact it engendered between partners, and it was denounced by the Vatican in 1914. In the same year the famous exhibition dance team Vernon and Irene Castle described the turkey trot and other 'animal' dances as 'ugly, ungraceful, and out of fashion' and discouraged their performance. Its popularity waned, and it was replaced by the more generic one-step.

Turkish crescent [jingling Johnny, Chinese pavilion]

(Fr. *chapeau chinois*; Ger. *Schellenbaum*).

A percussion stick in the form of an ornamental standard, generally having at the top a conical pavilion or an ornament shaped like a Chinese hat, surmounted by the Muslim crescent – hence its several names. Bells and jingles and usually two horsetail plumes of different colours are suspended from the various ornaments. The plumes are occasionally red-tipped (emblematic of the battlefield). The instrument which is held vertically is shaken with an up and down or twisting movement.

The Turkish crescent may have originally derived from the *tugh*, the symbol of rank of the Ottoman military élite. It developed in Europe in the mid-18th century when jingles were added as decoration, perhaps in imitation of another Turkish instrument, the *cewhan*, a small crescent-shaped stick-rattle with bells which was not associated with military music. It became an important instrument in the Janissary band (*see* Janissary music) and was adopted by British Army military bands in the late 18th century. From the middle of the 19th century it was discarded by the British, but survives on the Continent in the Oerman lyre-shaped form, *Schellenbaum*.

The Turkish crescent was primarily an instrument of the military band. Berlioz (in his *Grand traité d'instrumentation*) wrote that the shaking of its 'sonorous locks' added brilliance to marching music. It is included (as *pavillon chinois*) in his *Symphonie funèbre et triomphale*. His 'dream' ensemble of 467 instrumentalists included four *pavillons chinois* among the 53 percussion instruments.

Turkmenistan

I. Traditional music

Turkmen traditional music culture has a highly distinctive character but also has ties with two large neighbouring areas, the Near East Turkestani region

(Azerbaijan to Uzbekistan) and the Kazakh-Kyrghyz zone (fig.1). Some of the traits shared with the former area are the *ghidjak* spike fiddle, the use of Arabo-Persian metric patterns, verse forms and imagery, the spread of the *Görogly* epic and recent romantic tales, and some microtonal scales. Characteristics relating more closely to the Kazakh and Kyrgyz region are the traditionally weak development of the dance, paucity of percussion instruments, use of the *qobuz* horsehair fiddle (now obsolete), singing contests, and a stress on instrumental music, particularly the high development of polyphonic lute styles with highly esteemed virtuoso performers. Some features of Turkmen music, such as the *ÿar-ÿar* wedding song, patterns of Turkic versification and use of a metal jew's harp (*gopuz*), are common to Central Asia as a whole. Turkmen music culture seems analogous to the Turkmen language, which is transitional between the eastern and western wings of the Turkic language family. It may be divided into three genres: oral epics and narrative tales performed by professional bards, an independent instrumental repertory and folk music.

1. Bards.

(i) Inspiration, training and repertory.

Turkmen professional music is primarily a vocal art performed by a male *bagşy*, who is simultaneously a poet, singer, musician and inspired bard. The word *bagşy* has its origins in the Turkish term *bak* (*bakmak*), meaning 'to look carefully' or 'to watch'. Hence *bakyjy* or *bagşy* means a person who investigates or divines. A fortune teller and shaman, he is also a wise man, teacher or guardian. The same term is used by Kazakhs, Kyrgyz and Uygurs to describe 'shaman', 'soothsayer', 'doctor healing by uttering charms' or 'magician', and by Uzbeks for reciters of epic tales (*see* Uzbekistan, §3(i); Kazakhstan; and Kyrgyzstan). In remote Turkmen history, the singing of tales was the job of shamans. This link still affects the self-perception of the *bagşy* and provides a key to many aspects of the tradition he conveys. The Turkmen *bagşy* receives the gift of poetry during sleep from his patron saint, Baba Gambar or Aşyk Aÿdyñ. Traditionally, those learning the art had to train both in their own homes and in that of their teacher, where they stayed for several years. Having completed his apprenticeship the new *bagşy* was introduced to the community by the master (*halypa*) in a ritual of blessing (*pata*). Anyone who had not been granted the *pata* was treated as an illegal (*haram*) performer.

The *bagşy* repertory includes both *dessan* and songs. The *dessan* is an epic tale in prose, usually a monologue or dialogue, performed by a specialized *bagşy* known as *dessançy-bagşy*. There are two types of Turkmen *dessan*. One comprises parts of epic-cycles such as *Oguz nama* (The Tale of Oguz), *Gorkut atanyñ kitaby* (The Book of Dede Korkut), and *Görogly*, as well as *Yusup-Ahmet* attributed to Gurbanaly Magrupy, an 18th-century Turkmen poet. The other comprises 'folk novels', which fall between oral folktales and classical written texts. A number are anonymous (e.g. *Şasenem-Garyp*, *Nejep Oglan*); others are the performers' own

interpretations of tales, fables and stories drawn from folklore or from classical Persian or Turkish literature (e.g. *Seÿpelmelek-Methaljemal* by Gurbanaly Magrupy; *Yusup-Züleyha* by Nurmuhammet Anadalyp (1710–80). The heroic *dessan* (e.g. *Görogly* and *Yusup-Ahmet*) and the anonymous *dessan* known mainly in northern Turkmenistan, is usually performed to the accompaniment of a *dutar* (two-string long-necked lute) and a *ghidjak* (spike fiddle). In south-eastern Turkmenistan, especially in Yoloten district, the *dessan* is performed to the accompaniment of one or two *dutar*. The recital of a *dessan* is called *ÿol*, meaning 'road' or 'journey'.

There are also *tirmeçy-bagşy*, who perform poem-songs from different *dessan* and the work of poets, such as Magtymguly Pyragi (1733–83), Nurmuhammet Andalyp (1710–80), Abdylla Şabende (1720–1800), Seÿitnazar Seÿidi (1775–1836), Gurbandurdy Zelili (1795–1850), Kemine (1770–1840) and Mollanepes (1810–62).

(ii) Events, texts, styles and vocal techniques.

The *bagşy* concert, which is also called 'journey' (*ÿol*), consists of preliminary, middle and concluding stages. The preliminary stage introduces the concert and its length varies according to the expected duration of the performance. During the middle stage, which is the longest part of the concert, the *bagşy* 'enters the right road', referring both to his style and emotional intensity. The concluding stage, in which the concert reaches its climax, is relatively brief, consisting of less than a dozen songs. In Turkmen tradition, the three concert stages are equivalent to three zones of tonal space: a low, middle, and high zone, each related to vocal registers. The rise to higher registers is effected by altering the tuning of the *dutar*. As he begins his performance, a *bagşy* tunes his instrument as low as possible, adjusting it to the lowest register of his voice. After some time, he raises the pitch by a quarter- or semitone, a change that pleases the audience as it signals the increasing expressiveness of the *bagşy* and a rise in emotional tension. Despite frequent adjustments, Turkmen musicians distinguish three principal tunings of the *dutar*: low tuning (*pes çekim*), middle tuning (*orta çekim*) and high tuning (*beik çekim*). These correspond to the following approximate tonal ranges: from *a–d'* to *c'–f'*; *c'–f'* to *e'–a'* and *e'–a'* upwards.

Particular songs are linked to each tonal range, and so to each stage of the concert. The vocal repertory of Turkmen *bagşy* falls therefore into three classes: songs prepared for the low register (*ÿapbyldak aÿdymlar*) played in the first stage of the concert; songs prepared for the middle register (*orta aÿdymlar*) played in the second stage; and songs prepared for the high register (*çekimli aÿdymlar*) performed in the third and final stage of the concert. Low songs are characterized by a narrow range (a 4th or 5th); middle songs by a medium range (an octave); and high songs by a range of more than an octave. Within each performance, a strict ordering of registers for works is closely observed.

The texts of songs performed by the *bagşy* are mostly based on a syllabic system termed *barmak*, characterized by an equal and unchanging number of syllables in a line. The most frequent are seven-, eight- and eleven-syllable lines with a varying and irregular division of the line. Less popular with the *bagşy* are texts written according to the Arabo-Persian *aruz*

system. The link between poetic and musical layers of song is complicated in Turkmen music. Although the strophic verse form accounts for the division of the song into melodic stanzas, the melody within these stanzas is rarely synchronized with the structure of the text. The songs of the *bagşy* are based on an approximate metrical-rhythmic model of ten beats referred to as *kaku* (*kakmak* means 'to beat') related to the free manner in which poems are set to music. The basic *kaku* structure is identified by the mnemonic pattern of the hand's movements on the *dutar*. However, during performance the structure is frequently modified, producing irregular rhythms that constitute one of the characteristic features of Turkmen music and an aspect of the song performance style also referred to as *ÿol*.

The Turkmen *bagşy* distinguishes at least eight styles of performance: *Yomut-Gögleñ*, *Çowdur*, *Ata*, *Ärsary*, *Saryk-Salyr*, *Ahal-Teke*, *Damana* and *Gazanjyk* (also called the *Yomut* style, in western Turkmenistan). Those in use today probably became established during the last two centuries, that is, when Turkmen tribes abandoned nomadism and settled. Ethnocultural processes in Turkmenistan from the 18th century to the early 20th resulted in the emergence of two main performing styles: a northern style (comprising *Yomut-Gökleñ*, *Çowdur* and *Ata* styles) and a southern style (*Saryk-Salyr*). A distinctive feature of the vocal art of the *bagşy* is the extraordinary profusion of non-musical acoustic effects, a phenomenon associated with shamanic magical spells. They can be put roughly into one of three categories: rustling sounds (snoring, moaning, murmurs); shouts or cries; and 'barks' or 'hiccups' called *juk-juk*. The first two categories of sounds are more common in northern-style performances. Calls, such as 'eÿ', 'aÿ', 'ÿareÿ', 'ha', 'ah', have usually no definite pitch. The southern style is much more restrained. Indefinite throaty-murmurs turn in the south into an effect called *hümlemek* (slightly throaty singing on the syllable 'hü'), performed on definite pitches in a low register. The *juk-juk* is a favourite song-ornament found in northern as well as southern styles. In the southern style, it is performed very narrowly (usually on the vowel 'i' or 'ü'), and very deeply, on the diaphragm. In the north, it is shallow, guttural, and performed on the vowels 'e', 'a' and 'u'. In south-eastern Turkmenistan, the *bagşy* usually sing in a broad, sonorous, slightly nasal voice. Singing in a very high register is typical of a *bagşy* representing the southern style. A throaty, flat, stifled, hoarse voice is typical of northern performances which are often recitatives with little accuracy of intonation. The rapid tempo and parlando articulation often blur the clarity of the melodic line. In high registers, singing occasionally turns into protracted, intense cries.

Turkmenistan, §1: Bards

2. Instruments and repertory.

The instrumental repertory comprises mostly versions of vocal pieces performed on three professional instruments: the *dutar*, the *gargy tüidük* (long, end-blown flute; fig.2) and the *ghidjak*.

In southern Turkmenistan, the *bagşy* is accompanied by one, occasionally two and, very rarely, three identically-tuned *dutar*s. The *dutar*, an instrument producing very soft sounds, repeats the contours of the melody while at the same time upholding its rhythm. The *bagşy* touches the strings softly, producing fine vibrating sounds. In the north, the *dutar* is used as a

percussive instrument substituting for drums that do not exist in Turkmen music. The manner of playing of the *bagşy* is sharp and the *dutar* sound is quick and dry. The tune of the song is played first by a *ghidjak*. The high and shrill sound of the *ghidjak*, which often dominates in northern performances, gives greater precision to intonation and melody.

The independent instrumental repertory consists of *dutar* pieces that emerged from the Gökdepe school (Ahal region) and are widely known only among the Aşgabat *dutarçys* (musicians specializing in performing on the *dutar*). These include: the five *mukam* (*Goñgurbaş, Aÿralyk, Mukamlarbaşy, Şadilli*); the *Gyrklar* cycle comprising the following seven pieces: *Dillin kyrk, Keçeli kyrk, Mendag kyrk, Selbinÿaz kyrk, Yandym kyrk, Dövletÿar kyrk*; and the *Saltyklar* cycle, consisting of a set of versions of one composition (*see* Mode, §V, 2 and Uzbekistan, §2(ii)).

As in the case of the Uzbek *dutar* and Kazakh *dömbra*, the basic left-hand technique on the Turkmen *dutar* consists in stopping the lower string with the thumb and upper string with the fingers, the thumb thus often maintaining a stable position against which the fingers move. Right-hand technique includes a variety of strokes, but not as varied as on the Kirghiz *komuz*. The frets of the *dutar* form a chromatic scale with a major 2nd between the two highest frets. The structure of *dutar* pieces is varied but there are two fundamental forms: the *ABA* type with subdivisions in each section, and multi-sectional works in which each section begins at a different pitch above the tonic (e.g. 4th, 5th, then octave) and gradually descends to the tonic (open string).

Turkmenistan, §1: Bards

3. Folk music.

Turkmen folk music, which has been insufficiently studied, includes a repertory performed in connection with annual- and life-cycles, and a small number of work songs. Celebrations marking the first day of Ramadan embraced a very rich repertory of carols. The carols, referred to as *ÿa ramazan*, very often of a joking and satirical nature, were performed either by a choir of dervishes (*diwana*) or by children between seven and 15 years of age. Before the October Revolution, all Turkmen tribes solemnly celebrated the end of Ramadan (*gadyr gijesi*, literally 'the night of omnipotence', 'the night of destiny'). Celebrations lasted throughout the night, culminating in the making of a sacrificial offering to St Hyzyr at a cemetery, where ritual dances (*zykr*) were performed, with the dancers finally falling into trance. Religious poems (*ghazel*) were recited simultaneously with the dances.

Music related to the life-cycle primarily embraces lullabies (*huwdi*), girls' songs (*läle*), wedding songs (with different, regional names *ölñer, toÿ aÿdymlary, ÿar-ÿar*), wedding dances (*zykr*) and funeral laments called *agy, tawuş, ses etmek*. Girls' game songs (*läle*) comprise: *damak läle*, during which singers hit their throats with their fingers to produce a tremolo effect; *dodak läle*, during which they hit their upper lips with their fingers; *dyz läle* ('dyz' means 'knee'), also called *aÿak läle* (aÿak means 'a leg') during which a girl sings the song, vigorously rocking the upper part of her body while resting on one leg; and *egin läle* ('egin' means 'the back'), also called

hymmyl. This is a kind of counting game, with some dance elements, performed by two girls.

No research has yet been undertaken on wedding songs. These differ from region to region and are performed before and during the bride's journey to the bridegroom's house. The majority are dialogue-songs, performed by two groups (of two or three female singers each) or by the bridegroom and bride. In western Turkmenistan an important element of wedding celebrations is the so-called entertaining *zykr*, which includes a sequence of parts, each with a different kind of movement, rhythm and melody: *diwana*, *bir depim*, *sedrat*, *üç depim*, *oturma gazal*, *zem-zem*. Performance of the wedding *zykr* is accompanied by cries of 'huw-hu', 'ah-ha', and 'alla'. In western Turkmenistan, a combination of wedding songs and dances (*kuştdepme*), transformations of *bir depim* and *üç depim*, is also popular.

Work songs, most of which have been recorded in western Turkmenistan, include *degirmençi* (sung while grinding grain) and *howlum* (sung while milking cows). A separate group comprises songs or charms (*monjukadty*).

Folksong is strongly dependent on strophic verse in the *barmak* system which is based on the seven-syllable line divided into 3+4 or 4+3. Their metrical-rhythmic structure is much simpler than that of *bagşy* songs. Typical are simple duple rhythms (4/4 and 2/4) and triple rhythms (3/4 and 6/8). Turkmen folksong is strictly diatonic with a narrow range (never exceeding a 4th) and an irregular tonal structure. Like professional music, folk music is characterized by a rich performance style that varies regionally and has many genres. The major components of the performance style of Turkmen folksong include articulation, ornamentation and tonal colour.

There are few Turkmen folk instruments, including the shepherd's single-reed pipe (*dili tüidük*) (see above, fig.2) and jew's harp (*gopuz*). The former are often used to play pieces that have a slow, protracted melody followed by a quicker, dance-like section. The latter, formerly a shaman's instrument, is now played mainly by women who treat it as a toy.

Turkmen dance is traditionally limited to a few local genres. One of these is the *kushtüpmi* circle-dance of the Krasnovodsk area (near the Caspian Sea), incorporating a call-response song in which the group dances while chanting the last phrase sung by the leader. In addition to the girl's game-dance and some female wedding dances there are also shepherds' dances.

Soviet Turkmen music developed rather more slowly than the music of neighbouring republics, but an active school of local composers has emerged, including such figures as Kholmahmedov and Nurimov. An ensemble of folk instruments has been established, led by the well-known musician Tashmahmedov. An electro-*dutar* has been devised enabling the normally gentle sound of the *dutar* to be combined with the piano.

Turkmenistan

II. Opera, ballet, orchestral and chamber music

The works of Turkmen composers are based on the Russian and Western European cultural tradition; most Turkmen composers were educated in Russia. As in other Central Asian republics, genres of art music (opera, ballet, the symphony, chamber music and vocal works) were synthesized with elements selected from traditional Turkmen genres. Opera holds a special place in the new hierarchy of genres in Turkmenistan's music. For it was with opera that the process of refining the method of unifying Turkmen and European musical principles began, and the expressive possibilities of the new system were tried. The development of opera has been orientated to two particular genres. Great popularity has been won at various times by operas created on themes from famous epics (*destan*), including *Leyli Medjnun* (1946) by Dangatar Ovezov and Yu. Meytus, *Shashsenem i Garib* (1944) by Adrian Shaposhnikov and Ovezov, *Zokhre i Takhir* by Veli Mukhatov and Shaposhnikov, and *Keymir Ker* (1977) by Nury Mukhatov. These formed the basis for the repertory of the Theatre of Opera and Ballet, which was opened in 1941.

Operas on contemporary subjects to a great extent expressed Soviet ideology; from a musical point of view they were valuable as a vehicle of the new means of artistic expression. The best-known opera of this type is *Konets krovavogo vodorazdela* ('The End of Bloody Watershed', 1967) by Veli Mukhatov. Ballet, which was introduced as an art form in Turkmenistan almost simultaneously with opera, is less developed as a genre, possibly because dances are not typical of Turkmen culture. In the 1970s ballets with various themes were written and performed at the Theatre of Opera and Ballet, including *Schast'ye* ('Happiness', 1970) by K. Kuliyev, *Dobraya volshebnitza* ('The Good Enchantress') and *Nusai* (1979) by D. Nurïyev, and *Bessmertiye* ('Immortality', 1972) and *Kugitanskaya tragediya* ('A Kughitang Tragedy', 1977) by Chary Nurïmov.

The symphonic genre began to gestate before the 1960s. Many symphonies were written during the 1970s and 80s. In later decades a departure from programmaticism may be noticed in the symphonies of composers such as R. Allayarov and D. Khïdïrov. There are, however, rare examples of programmatic compositions, such as the works of Veli Mukhatov. Within the framework of this genre the stylistic synthesis of Turkmen traditional music and the European tradition has been particularly innovative, for example in works by Chary Nurïmov.

Chamber music is extremely popular. Since the end of the 1970s new chamber music styles have been explored, for instance in Nurïmov's quartet, R. Redzhepov's sonata for solo cello and N. Khalmamedov's quartet. In small vocal ensembles, arrangements are made of the classical poets of the East, including the cycles of romances and songs by Karadzhaoglan, Zelili, Azadi, Makhtumkuli, Mollanepes, N. Khalmamedov, R. Allayarov, A. Agadzhikov, D. Nurïyev, R. Kutlïyev, V. Akhmedov and others. There are also examples of references to the works of European poets such as Heine and Pushkin. Since the 1970s the musical art of Turkmenistan has increasingly developed its own national and stylistic features and the skill of Turkmen composers has reached a high level.

Turkovic, Milan

(*b* Zagreb, 14 Sept 1939). Austrian bassoonist and teacher. From an Austro-Croatian family, he grew up in Vienna, studying there with Karl Öhlberger and later in Detmold with Albert Hennige. After playing from 1962 with the Bamberg SO, in 1967 he was appointed principal in the Vienna SO. In 1984 he left to take up a teaching post at the Mozarteum in Salzburg, leaving in 1992 to become professor of bassoon at the Hochschule für Musik in Vienna. He enjoys a distinguished career as player of both the modern and the Baroque bassoon, with many discs of solo repertory to his credit. He is a member of the Ensemble Wien-Berlin and of the Chamber Music Society of the Lincoln Center, while as a member of the Viennese period orchestra Concentus Musicus he has made over 200 recordings. Other musical activities include those as bassoon music editor, conductor and record producer, and latterly as the author of an entertaining exposé of the music profession. His style of playing is internationalist rather than traditionally Viennese, and his tone has been praised for its richness and focus.

WILLIAM WATERHOUSE

Turkson, Ato Adolphus

(*b* Winneba, Ghana, 1937; *d* Legon, Ghana, 14 June 1993). Ghanaian composer. After obtaining diplomas in general and African music at the University of Ghana (1962–4), he entered the Liszt Academy of Music in Budapest (1964), studying composition with Rezső Sugár. He later took the masters degree and the doctorate in musicology (1972) at Northwestern University, Evanston, Illinois. Most of his teaching and compositional career took place at the University of Ghana, Legon. Largely rooted in 20th-century avant-garde techniques, Turkson's compositions emphasize atonality and serialism. Most of his early piano pieces are pedagogical. He was encouraged both by the analyses of Efutu traditional music he undertook for his doctoral dissertation and by criticisms of a lack of African sources in his works to explore indigenous musical elements in his compositions.

DANIEL AVORGBEDOR

Turku

(Swed. Åbo).

City in Finland. Early musical life centred on the cathedral, the cathedral school (founded *c*1276) and the Dominican monastery. There were musicians in the 15th century, and court musicians accompanied Duke John during his residence in the castle (1556–63). Organists were appointed at the cathedral from 1576, and worked also as town musicians, with others drawn largely from Germany, Estonia and Sweden. Among the organists were Johann Caspar Schultz (1664–79) and Christian Kellner (1680-98), both of whom later took appointments at the German church in Stockholm. Johann Lindell (cantor 1751–87) developed church music and made an edition of songs from the collection *Piae cantiones*. Carl Petter Lenning (organist 1741–88) established in 1747 an orchestra at the university (an institution which, founded in 1640, was moved in 1828 to Helsinki). This was the starting point for orchestral life in Finland. The first

public concerts followed in 1773, given by members of the Aurora society, and the Musikaliska Sällskapet i Åbo/Turun Soitannollinen Seura (Turku Musical Society), founded in 1790, had an orchestra of professionals and amateurs which gave regular concerts under Erik Ferling and his successors, among them Johan Christoffer Downer (1823–7) and Conrad Greve (1843–6).

This orchestra continued in existence, with interruptions, until 1924, and was replaced three years later by the Turku PO. In 1952 this orchestra moved into the first purpose-built concert hall in Finland; it has worked since 1964 with Turku Opera Society and since 1982 with the Chorus Cathedralis Aboënsis. The Turku Musical Society's later ventures include the Turku Music Festival (founded in 1960 and including from 1970 onwards the first rock festival in Finland, Ruisrock) and national cello competitions (from 1974). A school for organists and cantors existed between 1878 and 1951. The Swedish-speaking Åbo Akademi, founded in 1918, started an institute for musicology in 1926; its first professor, Otto Andersson, built up important collections which in 1950 were instituted as the Sibelius Museum. Musicology is also taught at the Finnish-speaking Turku University, and in 1962 the Turun Konservatorio (Turku Conservatory) was established. The Åbo Akademi also has notable men's and women's choirs, known as Brahe Djäknar and Florakören respectively.

FABIAN DAHLSTRÖM

Turle, James

(*b* Taunton, 5 March 1802; *d* London, 28 June 1882). English organist and composer. He was a chorister at Wells Cathedral from 1810 to 1813 when he went to London as an articled pupil of John Jeremiah Goss. He was organist of Christ Church, Blackfriars Road, Southwark (1819–29) and of St James's, Bermondsey (1829–31). In 1817 he became a pupil and later assistant to G.E. Williams, organist of Westminster Abbey. Turle served as deputy to Williams's successor, Thomas Greatorex, on whose death in

1831, Turle was appointed organist and master of the choristers. He retained these titles until his death, but relinquished active duties in 1875 to J. Frederick Bridge who succeeded him as Abbey organist.

Although Turle's main energies were devoted to the music at Westminster Abbey, he played at the Birmingham and Norwich festivals, including performances under the direction of Spohr and Mendelssohn, and at the Handel festival of 1834. F.G. Edwards described Turle as 'an able organist of the old school, which treated the organ as essentially a legato instrument … He had a large hand, and his "peculiar grip" of the instrument was a noticeable feature of his playing'. He was also much admired as a teacher. As a composer, Turle was perhaps more respected than celebrated. His compositions include six anthems, cathedral services, hymn tunes, psalm chants and some unpublished glees. Several of his chants and at least one hymn tune remain in use. As an editor, Turle collaborated with John Goss, beginning in 1843 on a collection of anthems and services by traditional composers, some published for the first time, that ran to 40 numbers or three folio volumes. Turle edited *Psalms and Hymns for Public Worship* (1862), and with Edward Taylor he edited *The People's Music Book* (1844) and *The Art of Singing at Sight* (1846, 2/1855). His brother Robert (1804–77) was organist at Armagh Cathedral, 1823–72.

WILLIAM J. GATENS

Turlur, Englebert

(*b c*1560; *d* Madrid, May 1598). Composer and singer, active in Spain. He was recruited in the Low Countries for service in the chapel of Felipe II of Spain. He arrived at the Madrid court on 28 June 1586 together with seven other singers from the Low Countries, among them Martin Buset. When in 1590 the choirmaster, Philippe Rogier, visited the Low Countries in search of singers and an assistant choirmaster, Turlur acted as his deputy. He remained in the choir until his death. Two eight-part motets by him, *Beati omnes* and *Salve regina* (both in *E-VAc*, the latter also in *V*) are extant; they are double-choir works, making use of contrasts between passages of quick rhythmic movement and more sustained writing in the build-up to the musical climax. The catalogue of the music library of King João IV of Portugal, destroyed in the Lisbon earthquake of 1755, records them and several other works by him: a five-part mass; 18 motets, for four, five, six and eight voices; six hymns, for five and six voices; and four psalms, three Lamentations and a *Magnificat*, all for eight voices.

Turmmusik

(Ger.: 'tower music').

A term denoting music to be played from a church tower, or a town hall tower, by a band of town musicians (*see* Stadtpfeifer). The practice was common in Germany from the late 16th century to the early 18th; the musical repertory consisted of harmonized chorales and other kinds of melody, or more extended pieces (*Turmsonaten*). Such music was normally played by wind instruments, in particular cornetts, trumpets and trombones, in four- or five-part harmony; several books of such music were published in the 17th century, notably by J.C. Pezel and Gottfried Reiche.

Turnage, Mark-Anthony

(*b* Grays, Essex, 10 June 1960). English composer. He studied with Knussen and Lambert at the RCM, where he won all the major composition prizes. The award of the Mendelssohn Scholarship enabled him to undertake further study at Tanglewood in 1983 with Schuller and Henze, the latter remaining an influential mentor. Early works such as *Night Dances* (1980–81), which won the 1981 Guinness prize, and *Lament for a Hanging Man* (1983), quickly established him as an original and confident voice in British music. It was, however, his acclaimed first opera, *Greek* (1986–8, based on the play by Steven Berkoff), which brought him wider international recognition. *Greek* is an exemplar of Turnage's essentially urban music: colourful, often aggressive, yet always lyrical, dramatic and emotionally direct. Stravinsky (modified by a Berg-like lyricism) is an obvious model, not only in Turnage's instrumental, rhythmic and harmonic practices, and his innate sense of theatre, but also in the fusion of 'high' and 'low' through the pervasive influence of jazz on all his works. Jazz and rock elements are incorporated effectively in *Greek* and are also particularly evident in such instrumental works as *Kai* (1989–90) and *Your Rockaby* (1992–3). *Blood on the Floor* (1993–6) is his most explicit engagement with the materials of jazz and includes, for the first time, sections of improvisation. It takes as one of its starting-points a painting by Francis Bacon, whose intensely expressive and violent images strike a chord with Turnage. For similiar reasons, the paintings of Heather Betts and the writings of William Golding have stimulated, respectively, *Dispelling the Fears* (1994–5) and *Drowned Out* (1992–3). Bacon's paintings were also the inspiration behind *Three Screaming Popes* (1988–9), written 'as a rush of adrenalin from *Greek*', and given its première by the City of Birmingham SO. This was followed by a productive period (1989–93) as the same orchestra's composer-in-association, resulting in *Momentum* (1990–91), *Leaving* (1990, rev. 1992) and *Drowned Out*, as well as *Kai* for the Birmingham Contemporary Music Group.

In 1995 Turnage was appointed composer-in-association with the ENO. He is also artistic consultant to the ENO Contemporary Opera Studio, under whose auspices he has continued to explore the confrontation of the violent and the lyrical in two dramatically assured works, *Twice Through the Heart* (1994–6) and a chamber opera, *The Country of the Blind* (1996–7), both first performed at the 50th Aldeburgh Festival (1997).

JONATHAN CROSS

Turnbull, Percy (Purvis)

(*b* Newcastle upon Tyne, 14 July 1902; *d* Pulborough, 9 Dec 1976). English composer, pianist and teacher. In Newcastle he was a chorister at the Cathedral of St Nicholas and studied the piano under Sigmund Oppenheim. He was also befriended by William Whittaker, conductor of the Newcastle upon Tyne Bach Choir Society. In 1923 he won a Foundation Scholarship to the RCM, where he studied with Holst, Vaughan Williams, and John Ireland, who remained a lifelong friend. He was at the RCM until 1927, during which time he gained a reputation as both a soloist and accompanist, appearing on 2LO and its successor the BBC. On leaving the RCM he was an editor for the Aeolian Piano Company (under Scholes), a reader for Oxford University Press (under Hubert Foss), a pianist at the Empire Theatre, Swansea, and a freelance copyist. During World War II he served in the Royal Artillery, after which he became principal piano teacher at the Surrey College of Music. Turnbull's output is slender but highly polished. Though he occasionally turned his hand to more extended compositions, such as the Violin Sonata (1925), it was as a miniaturist that he excelled, particularly for the piano. His style evinces an interesting diffusion of British and French music of the early 20th century. Much of his

music has now been published under the auspices of the Turnbull Memorial Trust.

WORKS

(selective list)

Orch: Allegro con brio, D, *c*1919–27; Ov., e, *c*1919–27; Northumbrian Rhapsody, *c*1927; Suite, str, *c*1927–34

JEREMY DIBBLE

Turner, Bruno

(*b* London, 7 Feb 1931). English choral director. Following a strict Catholic upbringing, Turner combined self-taught studies in early chant and

polyphonic repertories with a close involvement in the family business. In his youth he received much encouragement from Thurston Dart and Denis Stevens. He began directing performances of Renaissance polyphony in his late 20s and is credited with having organized the first known liturgical reconstruction in 1962 (a performance of Fayrfax's *Missa 'Tecum principium'*). Turner's belief in the appropriateness of an all-male approach to the performance of early vocal polyphony led him to direct the ensemble Pro Cantione Antiqua in a series of recordings issued on the Archiv label in the 1970s, and he has since served as one of the ensemble's occasional directors, leading them in performances of Franco-Flemish, English and Iberian repertories. Turner's research focussed first on plainchants of the Sarum rite, and latterly on those of the Iberian uses and their relation to polyphony. Responsible for numerous performing editions of polyphony, he is also founding editor of Mapa Mundi Editions.

FABRICE FITCH

Turner, Dame Eva

(*b* Oldham, 10 March 1892; *d* London,16 June 1990). English soprano. She studied in Bristol, and with Albert Richards Broad. She made her début in 1916 as a Page in *Tannhäuser* with the Carl Rosa Company, with which she remained until 1924, singing such roles as Santuzza, Tosca, Aida, Brünnhilde and Butterfly. In the last role she was heard by Ettore Panizza (Toscanini's assistant at La Scala), who sent her to Milan to sing for Toscanini. She made her La Scala début as Freia (*Das Rheingold*) in 1924 and soon established herself as a leading dramatic soprano, singing Aida, Leonora (*Il trovatore*) and other roles with an Italian company touring Germany in 1925. In 1926–7 at Brescia she sang her first Turandot, a role with which she was closely associated for the next 20 years, and in which Alfano, who completed the opera after Puccini's death, considered her ideal (see illustration). Her recording of 'In questa reggio', made about 1930, created a 'unique impression of power and mastery'. A more extended souvenir of her interpretations exists in a disc of substantial extracts from this role in a live Covent Garden performance of 1937.

Turner first sang at Covent Garden with the Carl Rosa Company in 1920 and then, when established internationally, between 1928 and 1939 and in 1947–8, as Turandot, Aida, Santuzza, Sieglinde, Isolde, Agathe and Amelia (*Un ballo in maschera*). She also appeared in Chicago, Buenos Aires, Lisbon and elsewhere. From 1950 to 1959 she taught singing at the University of Oklahoma, and from 1959 at the RAM, London (among her pupils was Amy Shuard). Her penetrating and powerful soprano and authoritative style were admirably suited to the dramatic soprano roles in Verdi and Wagner. She was created DBE in 1962.

HAROLD ROSENTHAL/ALAN BLYTH

Turner, (Big) Joe [Joseph Vernon].

(*b* Kansas City, MO, 8 May 1911; *d* Inglewood, CA, 24 Nov 1985). American blues, jazz and rhythm-and-blues singer. He began working as a barman and cook at the age of 14 in various clubs in Kansas City. There he became known as the 'singing bartender' and attracted the attention of such bandleaders as Bennie Moten, Andy Kirk and Count Basie, with whom he subsequently toured. From the mid-1930s he was frequently accompanied by Pete Johnson; the two men appeared together at the 'From Spirituals to Swing' concert at Carnegie Hall in 1938 shortly before Turner recorded his first titles. *Roll 'em Pete* (Voc.), with spectacular piano playing by Johnson, is an example of Turner's forceful, half-shouted vocal style; tension is built up towards the close of the piece by his use of repeated phrases. Although he was best known as a 'blues shouter', Turner had a musical voice and was a sensitive singer on slow blues. Throughout the 1940s and 1950s he toured extensively with bands and solo pianists. With his relaxed singing style and the hot tone, strength and subtle inflections of his voice, he soon became recognized as a model for other jazz-blues singers. His recording of *Shake, Rattle and Roll* (1954, Atl.) precipitated a revolution in popular music, though it was Bill Haley and his Comets who made a reputation out of the rock-and-roll theme. In spite of his many popular hits, Turner remained at his best in jazz-blues performances, as on his *Boss of the Blues* album made with Pete Johnson and members of the Count Basie orchestra in 1956. In his 60s he was much in demand for concerts, films and television appearances, and was the star of the film *The Last of the Blue Devils* (1979).

PAUL OLIVER

Turner, John

(*fl* 1833–56). English organist and pioneer of school music. Music in schools, virtually dead in England since the abolition of the song and monastic schools at the Reformation, began its long period of recovery during the decade immediately following the passing of the first Reform Act

(1832). Turner's *Manual of Instruction in Vocal Music* (1833) was the earliest music textbook published for use in English schools. Ostensibly designed to bring about the improvement of congregational psalmody, it was also meant to exert a wider civilizing effect on the industrial population.

Little is known of Turner's life; but he wrote as an experienced teacher whose book was presented to the public 'not as an experiment for the first time tried, but as the result of long experience'. Music master at the Westminster Day Training College for Teachers, Turner was also organist and choirmaster at St Stephen's Church, Avenue Road, St John's Wood (since demolished), where one of his choristers, L.C. Venables (*b* 1847), later paid tribute to Turner's able teaching.

A second edition of Turner's *Manual* appeared in 1835, and an American edition was published in Boston in the following year. He also published a *Class Singing Book for Schools* (1844) as well as some songs and a *Te Deum*. (B. Rainbow: *The Land without Music: Musical Education in England, 1800–1860, and its Continental Antecedents* (London, 1967))

BERNARR RAINBOW

Turner, Robert.

See Tornar, Roberto.

Turner, Tina [Bullock, Annie Mae]

(*b* Brownsville, TN, 26 Nov 1938). American rhythm and blues and rock singer. She joined Ike Turner's group in 1956, changed her name to Tina and later married Ike. In 1960 she recorded her first rhythm and blues hit, *A Fool in Love*, as part of the 'Ike and Tina Turner Revue'; several other hits followed in 1960–61. All of these songs featured her shouting style over blues- or gospel-based harmonic progressions and call and response vocal patterns between Tina and the Ikettes (a trio of female backing singers), or between Tina and Ike (as in *I think it's gonna work out fine*).

In a major stylistic departure, they recorded *River Deep, Mountain High* with Phil Spector in 1966. The recording, one of Spector's most lavish productions, succeeded in the UK but failed commercially in the USA. The Turners were introduced to many members of the rock audience in 1969 as the opening act for the Rolling Stones. Several hits date from that time, most of them cover songs of previous hit recordings by white rock acts; the most successful of these was their version of *Proud Mary* (1971). Musically the group had absorbed elements from funk and rock into their sound; the vocal approach, however, of both Tina and the Ikettes remained firmly rooted in gospel music.

After Ike and Tina split personally and professionally in 1976, it took several years for Tina to establish herself as a solo act, but by 1983 she had secured a new recording contract, and later that year had a minor hit with a cover version of Al Green's *Let's stay together*. The album that followed, *Private Dancer* (Capitol, 1984), yielded three more hit singles, including the number one 'What's love got to do with it', and initiated a

string of successful albums. In 1993 the film *What's Love Got to Do with It* was released, based on her autobiography. Her musical style since her comeback has featured both gospel-inflected pop ballads (as in her hits) and songs based on 1970s mainstream rock conventions. During her remarkably long and varied career she has thrived on her unique singing style and a playfully aggressive, sexualized stage persona.

DAVID BRACKETT

Turner, William (i)

(*b* Flintshire; *fl* 1675–97). English clergyman and antiquary of Welsh birth. He was in Oxford in 1675 and later became vicar of Walberton in Sussex. His *History of all Religions* (London, 1695) includes observations on the music of churches other than the English church. In 1697 he completed, and published in London, a work begun by 'the Reverend Mr Pool', entitled *A Compleat History of the Most Remarkable Providences … To which is Added, Whatever is Curious in the Works of Nature and Art*. Chapter 63 of part i deals at some length with the singing of psalms and hymns, and chapter 4 of part iii contains remarks on changing instrumental practice in music of the late 17th century. (M. Tilmouth: 'Some Improvements in Music noted by WIlliam Turner in 1697', *GSJ*, x (1957), 57–9)

MICHAEL TILMOUTH

Turner, William (ii)

(*b* Oxford, 1651; *d* London, 13 Jan 1740). English composer and singer. He began his musical training as a chorister under Edward Lowe at Christ Church, Oxford. He became a chorister at the Chapel Royal in the early 1660s, and he collaborated with Humfrey and Blow about 1664 to write 'The Club Anthem', *I will always give thanks*. When his voice broke in 1666 he was placed in the care of Henry Cooke until he was appointed master of the choristers at Lincoln Cathedral on 28 November 1667. He returned to the Chapel Royal on 11 October 1669 to sing countertenor and remained a Gentleman of the Chapel for the 71 years until his death. On Cooke's death in 1672 he was appointed a member of the King's Private Musick. In 1674 he appeared in Shadwell's production of *The Tempest* and the following year sang a principal role in Crowne's masque *Calisto*. In 1686, 1687 and 1690 he sang the alto verses in court odes by Blow and Purcell; he is also listed as a soloist in the St Cecilia's Day performances of 1687, 1692 and 1695. He became a vicar-choral of St Paul's Cathedral in 1687 and joined the choir of Westminster Abbey as a lay vicar in 1699. He received the degree of MusD from Cambridge University in 1696; a Latin poem written in honour of the occasion praises him as having no peer but Purcell. He died four days after his wife, and they were buried together in the west cloister of Westminster Abbey.

Turner composed primarily church music, comprising over 40 anthems, a motet, three services and a few hymns and chants. Nearly all of it dates from before 1700. His earliest anthems, written at Lincoln between 1667 and 1669, are scored for three soloists (usually alto, tenor and bass) and chorus without instruments, and are modelled on the psalm settings and early verse anthems of Locke; like him, he followed imitative verses with chordal sections for soloists and chorus. Two of the best-known works in this style – *Lord, what is man* and *Lord, thou hast been our refuge* – were copied into Chapel Royal partbooks between 1670 and 1676. In the anthems composed between 1676 and 1685 the overlapping phrases and careful partwriting of Turner's early works give way to short rhythmic phrases, frequent cadences, a marked use of homophony and a prevailing fast triple time. *God standeth in the congregation of princes* begins with a symphony in the French style, followed by a series of verses, each with ritornellos; in typical Restoration fashion the string passages repeat the last few bars of the preceding verses. Turner's finest instrumental anthems date from after 1685. *O sing praises unto the Lord* shows increased Italian influence in both the string and vocal writing. A highly florid verse for solo bass voice, 'God reigneth over the heathen', uses wide leaps and coloratura passages to great dramatic effect. The choral writing includes ornamented contrapuntal passages which contrast sharply with the strictly syllabic choruses of the earlier anthems. *The King shall rejoice* is Turner's only extant ceremonial anthem (his two anthems for the coronation of James II in 1685 are missing): with its extended two-part overture, grand concertato effects between soloists and chorus, it is one of his finest achievements. The Morning Service in D major was composed for St Cecilia's Day 1696; its symphonies, florid solo passages and massive choruses are clearly modelled after Purcell's *Te Deum* and *Jubilate* of 1694.

Among his theatre music are two songs and a dramatic recitative scena for chorus and three solo voices for Shadwell's *The Libertine* (1675) and songs for D'Urfey's *Madame Fickle* (1676), *Pastor fido* (1676) and *A Fond Husband* (1677). Some of the stage and other works ascribed to William Turner (iii) could be by this composer.

<div align="right">DON FRANKLIN</div>

Turner, William (iii)

(*fl* London, early 18th century). English composer and theorist. He is thought to have contributed songs and instrumental music to a number of London stage productions and is presumably the Mr Turner referred to in several concert advertisements of the period. As no other biographical information has surfaced, it is possible that the theoretical work *Sound Anatomiz'd* and the 1728 version of Ravenscroft's Psalms are by yet another author of the same name. Attribution of any of the works listed here to William Turner (ii) is unlikely; after 1696 he was always styled 'Dr' Turner.

The anonymous author of *Presumptuous Love*, most of Turner's music for which is lost, speaks of his 'happy genius in naturalizing Italian musick into a true English manner, without losing the spirit and force of the original in the imitation' and 'the masterly touches of the art' he had shown in its composition, but this may be taken as a puff rather than a criticism. *Sound Anatomiz'd* deals briefly with the physical nature of sound and at some length with notation and the rudiments of singing. Turner mentioned that violinists occasionally reached *g'''* and that some organs were made with a compass down to *G'*. He wished to abolish key signatures, and erroneously declared that the natural sign (or 'Mark of Restoration') had been introduced only within the previous 20 years and was still not commonly used (in fact it was used by some English composers in the mid-17th century). The discourse on the 'Abuse of Musick' is a tirade directed against inadequately trained composers and performers.

WORKS

stage

performed at Lincoln's Inn Fields unless otherwise stated

Songs and inst music in the following plays (for songs pubd separately see *BUCEM*): The Generous Choice (F. Manning), 1700 [? by William Turner (ii)]; The Plain Dealer (W. Wycherley), 1715, music lost; Woman is a Riddle (C. Bullock), 1716; The Artful Husband (W. Taverner), 1717; The Virgin Sacrifice, place of first perf. unknown

Alexander the Great (masque), 26 April 1715; 1 duet pubd in 20 New Songs (see below)

MICHAEL TILMOUTH, ROBERT FORD

Turner, W(alter) J(ames)

(*b* Melbourne, 13 Oct 1889; *d* London, 18 Nov 1946). Australian music critic and poet. Educated at the Scotch College, Melbourne, he emigrated to England in 1907 and from 1910 to 1914 he travelled in South Africa, Austria, Germany and Italy, where his studies ranged widely: he never devoted himself exclusively to music. In 1916 his first book of poems were published and in the same year he became music critic for the *New Statesman*, a post he held until 1940. After war service he was drama critic of the *London Mercury* (1919–23), music critic of *Truth* (1919–39) and literary editor of the *Daily Herald* (1920–23) and *The Spectator* (1942–6). From 1941 he was general editor of the series Britain in Pictures, which included his *English Music*.

Turner was one of the few non-specialist critics of his generation who maintained an unsophisticated approach without compromising critical perception. His criticism was often outspoken, controversial and highly opinionated but he was admired for his integrity and independence (many of his articles were reprinted in book form in 1924, 1928 and 1933). He was critical of insular British musical attitudes during the interwar period, for example, championing instead contemporary composers such as Hindemith and Bartók, and he was always seeking to elevate Beethoven at the expense of Bach, a composer he considered overrated. Although his three major books, on Beethoven, Wagner and Berlioz, have inevitably

been superseded as authoritative critical biographies, each contains material that remains of enduring value. His trilogy of autobiographical novels (*Blow for Balloons*, 1935; *Henry Airbubble*, 1936; *The Duchess of Popocatapetl*, 1939), form studies of the aesthetic and philosophical ideas of his time and won critical acclaim. Peter Racine Fricker drew on his poetry for his *Night Landscape* op.6 (1947).

DAVID SCOTT/NIGEL SCAIFE

Turner Robinson, Ann.

See Robinson family, (2).

Turnhout, Geert van [Gérard de]

(*b* Turnhout, *c*1520; *d* Madrid, 15 Sept 1580). Flemish composer, active in Spain, elder brother of the composer Jan van Turnhout. The family name was originally 'Jacques', as Spiessens has shown. In his early career he held positions at the church of Our Lady, Antwerp, and at the church of St Gummarus, Lier, where he became *maître de chapelle* in 1559. He entered holy orders, though no date for his ordination is established. In 1562 Turnhout became music master of the Confraternity of Our Lady at the church of Our Lady, and *maître de chant* there in 1563. In 1564 he composed a *Te Deum* for the entry into Antwerp of Margaret of Austria, Regent of the Low Countries. Looting by iconoclasts destroyed the music collection and organs at the cathedral in 1566, and in the following years Turnhout copied out masses, motets etc., to replace what had been lost. He also presided over the commission which examined the new organs constructed by Gillis Brebos.

Through the Duke of Alva as intermediary, Philip II of Spain engaged Turnhout on 2 May 1571 as *maestro de capilla* of the Capilla Flamenca in Madrid. After a delay of over a year Turnhout travelled to Madrid, bringing with him, as was customary, a group of singers from the Low Countries. His name is first noted as *maestro de capilla* in November 1572. There is little record of Turnhout's activities during his eight years in Spain. He was held in high esteem by Philip II, as is shown by the many prebends granted to him.

Turnhout's only mass, '*O Maria vernans rosa*', is a notably lengthy work. Melodic motifs in this movement are reminiscent of the hymn 'Ave maris stella' and the antiphon 'Assumpta est Maria'. The Agnus Dei summarizes the musical material by using the two most important motifs simultaneously.

The collection *Sacrarum ac aliarum cantonum* was intended for household use. Dedicated to Adrain Dyck, notary of Antwerp, it includes graces, songs for Christmas, Advent and Lent, settings of the *Song of Songs* and a thanksgiving reflecting Turnhout's loyalty to Phillip II. The motets are largely imitative, while the French chansons have faster-moving melodies.

WORKS

Sacrarum ac aliarum cantionum, 3vv (Leuven, 1569): 20 motets, 2 Fr. sacred songs, 18 chansons, ed. in RRMR, ix, x (1970)

Turnhout, Jan van [Jean de]

(*b* ?Brussels, *c*1545; *d* ?Brussels, after 1618). Flemish composer, younger brother of Geert van Turnhout. The family name was 'Jacques', which has given rise to the alternate Christian name 'Jean-Jacques' or 'Jan-Jacob', as Spiessens has shown. 'Jean' is first mentioned as the newly appointed *maître de chapelle* of St Rombout at Mechelen on 9 August 1577. At this time he is described as a native of Brussels. During the religious troubles

around 1580, he lost his position; by 1586 he was *maître de chapelle* to Alessandro Farnese, Governor of the Low Countries, at Brussels. In 1594 he was paid 50 livres for a mass composed in honour of Archduke Ernest's entry into Antwerp. In 1594 and in 1596 he successfully requested additional funds for the education of six choirboys for whom he was responsible. At the funeral ceremonies for the Archduchess Margaret of Austria in 1611 he and Géry Ghersem shared the duties of *maître de chapelle*. His name appears for the last time on the chapel roster in 1618.

Turnovský, Jan Trojan.

See Trojan Turnovský, Jan.

Turnovský, Martin

(*b* Prague, 29 Sept 1928). Czech conductor. He studied at the Prague Academy of Music (1948–52) with Ančerl and Robert Brock and made his début in 1952 with the Prague SO. During his military service he directed the army opera chorus and symphony orchestra. He won the 1958 Besançon International Conducting Competition and was appointed conductor of the Brno State PO in 1960. Appointments as musical director of the Plzeň RO (1963–7) and the Dresden Staatsoper (1967–8) followed. He left Czechoslovakia in 1968 to settle in Austria, and embarked on a freelance career that led to guest appearances with many of the leading European orchestras. In 1968 he was invited by Szell, with whom

Turnovský had studied in 1956, to make his début in the USA with the Cleveland Orchestra. He has conducted the LSO, RPO and other British orchestras and toured Australia and New Zealand. He was music director of the Norwegian National Opera, 1975–80, and of the Theater der Stadt Bonn, 1979–83. His British opera début was in *Yevgeny Onegin* with the WNO at Swansea in 1988, where he was praised for his combination of passion and sensitivity. In 1992 he was appointed music director of the Prague SO. Turnovský's recordings with Czech orchestras include distinctive performances of works by Martinů. His recording of Martinů's Fourth Symphony with the Czech PO was awarded a *grand prix*; it demonstrates the charm, vitality and scrupulous attention to detail that characterize his conducting, qualities which made his recordings of Haydn symphonies in the mid-1960s outstanding. Turnovský's later recordings have included music by Fibich, Dvořák, Hindemith and Korte.

LESLIE EAST/NOËL GOODWIN

Turpin, Edmund (Hart)

(*b* Nottingham, 4 May 1835; *d* London, 25 Oct 1907). English organist, editor and composer. He studied with Charles Noble, then in London with Hullah and Pauer. At 15 he was organist of St Barnabas's, Nottingham, and a year later gave a London recital at the Great Exhibition. At first he maintained some Nottingham connections, and he conducted Mendelssohn's *St Paul* to inaugurate the Nottingham Sacred Harmonic Society (1856). Settling in London in 1857, he became organist of St James's, Bloomsbury (1869), and St Bride's, Fleet Street (1888); as the honorary secretary of the Royal College of Organists from 1875, he did much to develop the examinations, and he was also warden of Trinity College of Music (1892–1907). He edited the *Musical Standard* (from 1880), the *Musical World* and was joint editor of *Musical News* (1891). Widely known as a writer and lecturer on music and as an organist, he was much in demand to inaugurate new instruments in all parts of the country. His works, mostly unpublished, include two masses, oratorios (*St John the Baptist*, *Hezekiah*, both lost), cantatas, anthems, services, a symphony 'The Monastery', overtures, songs, chamber music and piano and organ music (manuscripts in *GB-Lco*). He also published editions of piano works and hymn tunes.

Türrschmidt [Durrschmied, Thürrschmidt, Thürschmidt, Türrschmiedt, Turschmit], Carl [Karl]

(*b* Wallerstein, 24 Feb 1753; *d* Berlin, 1 Nov 1797). German *cor basse* player. He studied under his father Johann Türrschmidt (*b* Leschgau, 24 June 1725; *d* Wallerstein, 1800), a renowned *primo* horn player in the orchestra of the Prince of Oettingen-Wallerstein. From 1770 Carl Türrschmidt and the *cor alto* player Johann Palsa appeared as duettists in Paris, where they were also appointed to the private orchestra of the Prince of Guémené. The pair became one of the most famous horn duos of the 18th century, playing together for more than two decades. During the years 1773–81 they performed together on at least 14 occasions at the Concert Spirituel, playing at times with J.J. Rodolphe and Punto (Pierre, 367–8). In 1783 they joined the orchestra of the Landgrave of Hessen-Kassel. After their appearance in a double concerto by Antonio Rosetti at Koblenz (1785) the elector ordered four horns of the *cor solo* type, an improved *Inventionshorn* model played by many soloists, which Türrschmidt had developed with Joseph Raoux in Paris in 1781. In 1786 Türrschmidt and Palsa played their silver *cors solo* in London at an Anacreontic Society concert and at one of Salomon's subscription concerts (2 March). That year the King of Prussia appointed them to his court in Berlin, where they remained active until Palsa's death (1792). Türrschmidt continued to perform on tour and in Berlin with Jean Lebrun as first horn.

Türrschmidt was among the most celebrated of the many *cor basse* virtuosos active during the last three decades of the 18th century. Critics praised the facility of his hand technique, the bass viol-like delicacy of his low register and the fullness and ease of his pedal C. Antonio Rosetti composed at least five concertos for *cor basse*; one of them, dated July 1779, is dedicated 'pour Monsieur Dürrschmied'. Some of Rosetti's numerous concertos for two horns were probably written for the Palsa and Türrschmidt team as well. Türrschmidt's influence is seen in other double concertos of the time and in the *cor basse* style in Paris, though he never held an official teaching post there. In 1795 (probably with Heinrich Domnich) he developed a chromatic mute later made popular by the Böck brothers. With Palsa he wrote two sets of six horn duos opp.1–2 (Paris, by 1784, lost) and another of 50 (op.3, Berlin, 1795). Türrschmidt supplied much of the information about the horn for Gerber's *Lexikon*.

Of Carl Türrschmidt's family an uncle, Anton Türrschmidt, was first horn player at the court of Prince Albrecht of Teschen (now Cieszyn, Poland), and a younger brother, Joseph Türrschmidt, was a noted *cor basse* player. Carl's son, Carl Nicholaus Türrschmidt (*b* Paris, 20 Oct 1776; *d* Berlin, 18 Sept 1862), was a horn player and respected music teacher in Berlin, and his wife Auguste Türrschmidt, née Braun (*b* Berlin, 20 Nov 1800; *d* Berlin, 7

Sept 1866; *see* Braun family, (1)), became one of the city's best-known contraltos and teachers, performing frequently at the Sing-Akademie, the court and at private concerts. Their son Albrecht Türrschmidt (*b* Berlin, 16 May 1821; *d* after 1857) wrote two books of six lieder (Berlin, 1857–8).

HORACE FITZPATRICK/THOMAS HIEBERT

Turski, Zbigniew

(*b* Konstancin, nr Warsaw, 28 July 1908; *d* Warsaw, 7 Jan 1979). Polish composer. He studied composition with Rytel and conducting with Bierdiajew at the Warsaw Academy. He was a music producer at Polish Radio in Warsaw (1936–9) and after the war developed a career as a conductor. He was president of the Polish Composers' Union in 1959–60.

Turski is perhaps best known as an early victim of socialist realism, when the Second Symphony (*Sinfonia olimpica*), which had won gold medal at the London Olympics in 1948, was lambasted at a Party-controlled composers' conference at Łagów in 1949. It was immediately banned for being 'incapable of mobilizing our man'. Its subsequent history marks the breakdown of political dogma in Poland after Stalin's death in 1953: it resurfaced on Polish Radio in 1954, was included in the first Warsaw Autumn Festival in 1956, and a quotation from the finale was printed on a Polish stamp for the 1960 Olympics. Its forthright language marks it out as one of the most striking Polish symphonies of the postwar decade. The unjustly neglected First Violin Concerto (1951) further highlights Turski's lyrical individuality at an otherwise desultory period in Polish musical history.

Tutev, Georgi (Ivanov) [Ivanov, Georgi]

(*b* Sofia, 23 Aug 1924; *d* Sofia, 13 Sept 1994). Bulgarian composer. Tutev's father was Bulgarian and his mother German. He grew up in Germany, where his father was secretary at the Bulgarian Consulate in Düsseldorf. At the time of the communist takeover in Bulgaria and the ensuing power struggle, his father was condemned as a revisionist and formalist and given a lifetime prison sentence. As a result Tutev was forced to change his name to Georgi Ivanov until 1970, when his father was rehabilitated.

Tutev studied law at Sofia University while taking private music lessons with the composer Lyubomir Pipkov. From 1946 to 1950 he studied composition with Bely and Shaporin at the Moscow State Conservatory, and conducting with Nikolay Anosov. After the Zhdanov decree of 1948 and the subsequent removal of Shostakovich and Bely from the conservatory, he was forced to study on his own.

He returned to Bulgaria in 1950 and from 1954 to 1958 was secretary of the Union of Bulgarian Composers; he was the chief music editor at the Bulgarian National Radio (1958–61) and music director and principal conductor of the orchestra of the National Youth Theatre (1961–87). Until his death he was active as a freelance composer. In 1990, he founded the Bulgarian Society of New Music and became its first president, establishing the international festival Muzica Nova in 1993. In 1991 he succeeded in incorporating the society as a section of the ISCM.

As a composer, Tutev rejected traditional tonality and embraced serial techniques believing that the system offered unlimited possibilities. His work in film and theatre music provided him with the opportunity to experiment with aleatory and serial techniques which he later incorporated into his instrumental music (e.g. Variations for orchestra, Symphony no.2). His compositional method involved first writing down his musical ideas and then organizing them into series. Because of censure imposed by the system in Bulgaria, most of his works had their premières abroad, including *Metamorphosen für 13 Streicher* (Zagreb Biennial Festival, 1968), *Tempi Rithmizati* (Warsaw Autumn, 1968), *Clavinomusica* and *J.S.B. Meditationen* (Musik-Biennale, Berlin, 1988 and 1993 respectively).

ANNA LEVY, GREGORY MYERS

Tuthill, Burnet C(orwin)

(*b* New York, 16 Nov 1888; *d* Knoxville, TN, 18 Jan 1982). American composer, writer on music, conductor and administrator. A son of William Burnet Tuthill, the architect of Carnegie Hall, he studied at Columbia University (BA 1909, MA 1910) and the Cincinnati College of Music (MM 1935). He took appointments as general manager of the Cincinnati College (1922–30), conductor of the Memphis SO (1938–46), head of the music department at Southwestern University, Memphis (1935–59), and director of the fine arts section at Shrivenham American University, England (1945). He was awarded an honorary DMus by Chicago Musical College in 1943. Tuthill also held important offices in the National Association of Schools of Music and the Society for the Publication of American Music, and he was a frequent contributor on American topics to the *Musical Quarterly*, the *Journal of Research in Music Education*, and *Notes*. He was a prolific composer of *Gebrauchsmusik* for instruments lacking a large concert repertory.

ROBERT STEVENSON

Tutilo.

See Tuotilo.

Tutino, Marco

(*b* Milan, 30 April 1954). Italian composer. He studied the flute and composition (with Giacomo Manzoni) at the Milan Conservatory, graduating in 1982. However, as early as 1972 he had abandoned the study of classical music and became interested in light music and planned to become a singer-songwriter. But after completing his studies and having made his mark at various contemporary music events in Italy and abroad, he began to teach composition at conservatories in Milan and then Parma. He made his debut as a composer in 1976 at the Gaudeamus Festival with *Ed altro più io non so dirne*, on texts by Pasolini. His *Quintetto d'ombre* and *Stanze*, both from 1979, revealed a musical style that placed him at a certain distance from the approach typical of the avant garde. His stance became polemical in 1981 when the journal *Musica/Realtà* published an open letter by him in which he wrote that 'most modern music is deadly boring. It is ugly, unpleasant and ungrateful'. This change in attitude, which came to be shared by other composers of his generation in Italy during the course of the 1980s, resulted in a neo-Romantic style. This style aimed to revive the language of historic tradition and, at the same time as absorbing elements from non art music, to restore communication with the audience. The concerto for violin and woodwind, and *La foresta incantata* for orchestra, both of 1982, exemplify this approach. It is no coincidence, however, that he chose to explore this new position most fully in the opera house, attempting to overturn the troubled relationship between opera and the avant garde by the casual juxtaposition of different styles and genres. In his lyric comedy *Cirano* (1987), rock references and the operatic tradition exist side-by-side. Tutino then brought the *verismo* style up to date with *La lupa* (1990), a one act drama which transfers the rural Sicilian setting of Verga's short story to the outskirts of a modern city. This type of transferral provides an ideal context for Tutino's postmodern eclecticism; he can thus bring the vernacular urban soundscape together with the more traditional models of operatic history.

Tutti

(It.: 'all').

A word used in musical contexts primarily as a contrast to *soli* or solo, and sometimes abbreviated, particularly in 18th-century scores, to *T*. In the Baroque concerto, where the soloist or soloists usually played also with the ripieno, the solo parts normally included the words 'solo' (or 'soli') and 'tutti' to show the changes of texture which inevitably required a different style of playing from that of the soloists; on the other hand, in the post-Classical concerto it was more often the orchestra that accompanied the solo sections and needed such indications to show when to take care not to overpower the soloist. In orchestral string parts the word 'tutti' is often

found after a section where one of the instruments in the group has played alone and indicates that they must now all play again; but in such contexts the form *tutti violini*, etc., is normally used to avoid any possible confusion with the other usage. In looser parlance, tutti is used as a noun denoting any section employing the full orchestra, or even the sound itself of a full orchestra.

DAVID FALLOWS

Tutuual

(*fl* mid-16th century). Composer mentioned by Doni in his *Libraria* (1550,2/1557), possibly identifiable with Tuttovale Menon.

Tuukkanen, Kalervo

(*b* Mikkeli, 14 Oct 1909; *d* Helsinki, 12 July 1979). Finnish composer and conductor. He studied composition with Leevi Madetoja, graduated from Helsinki University in 1933 and continued his studies on many trips abroad. He taught at the Viipuri Music School (1935–8), was a singing teacher in schools in Helsinki from 1938 to 1967 and taught at the Sibelius Academy in Helsinki (1971–77). He was also visiting professor of music in Hong Kong (1967–9). Tuukkanen actively defended composers' and performers' interests and played a leading role in the founding of the Finnish Composers' Union in 1945. Due in large part to his efforts, the first extensive anthology of modern Finnish music, *Fennica*, was recorded in the 1950s and 1960s. As a composer he combined the national romantic tradition of Madetoja and the neoclassicism of Uuno Klami, with the addition of some exotic elements. *Karhunpyynti* ('The Bear Hunt', after the poem by Aleksis Kivi) for male chorus and orchestra was awarded the silver medal in the Olympic Arts Competition (1948). Also active as a critic and writer on music, Tuukkanen was the author of *Leevi Madetoja* (Porvoo, 1947).

ERKKI SALMENHAARA

Tüür, Erkki-Sven

(*b* Kärdla, Hiiumaa Island, 16 Oct 1959). Estonian composer. After studying percussion and the flute (from 1976), he enrolled at the Tallinn Conservatory (graduated 1984) where he studied composition with Rääts; he also studied privately with Sumera. He taught composition at the Tallinn

Conservatory (1989–92) before devoting himself to composition full-time. He has received several Estonian prizes and in 1995 his Requiem (1994) was chosen as the first recommended work at the UNESCO Composers' Rostrum in Paris.

Tüür first attracted attention with compositions for his rock band In Spe (1979–83) that blend elements of rock with Renaissance polyphony and Baroque rhythms. After completing his studies he became interested in diatonic polyphony and the repetitive quality of minimal music. In 1985, with works such as the String Quartet 'In Memory of Urmas Kibuspuu', he began to combine repetitive procedures and colouristic textures reminiscent of the 1960s avant garde. The tension between tonal and atonal spheres has been an important dramatic feature of his style; he has described his compositional goal as forming a connection between 'these two worlds in a single composition so that it's not a mixture but a structurally-felt and built music totality'. Most of his works, beginning with *Kaljukitse pöörijoon* ('Tropic of Capricorn', 1991), make use of 12-note techniques in their atonal sections.

MERIKE VAITMAA

Tuvalu.

See Polynesia, §III, 5.

Tuvan music.

The Tuvans live primarily in an eponymous autonomous republic, Tuva (officially known as Republic of Tyva), and in the late 1990s numbered slightly more than 200,000. Considerably smaller groups of Tuvans live in western Mongolia and in the extreme north-west of China's Xinjiang Autonomous Region. Most Tuvans speak their own language, Tuvan, which a standard fourfold scheme for classifying Turkic languages places within the Northeast group. Tuvans residing in Tuva are typically conversant in Russian (*see also* Russian federation, §III).

Tuvan music includes a variety of instrumental and vocal genres which range from onomatopoeic sounds and signals to formalized songs and tunes. No Tuvan word covers the same semantic field as 'music' (*xögzhüm*, a loan word from Mongolian, means broadly 'music' or 'orchestra', implying the use of musical instruments as opposed to voice alone). Rather, social functions, techniques of acoustical production and formal styles are described by a range of specialized terms. These functions, techniques and styles might best be understood as points along a continuum which ranges from 'sound' to 'song', that is, from iconic imitation of natural sounds through stylized imitations of natural sounds to autonomous musical constructs. Examples of iconic imitation include vocalizations which Tuvans call *ang-meng mal-magan-öttüneri* ('imitation of wild and domestic animals') and instruments such as the *ediski* (a single reed made to imitate bird sounds), *xirlee* (a thin piece of wood that imitates the sound of wind when spun like a propeller on a tensed, twisted string) and *amyrga* (a hunting horn used to imitate an elk call). Stylized imitations of natural sounds are produced on instruments such as the *xomus* (jew's harp) and *igil* (two-string fiddle) as well as, most famously, by the vocal technique known as *xöömei*, commonly translated as 'throat-singing' or Overtone-singing.

In *xöömei*, a single vocalist produces two, and occasionally three, distinct notes simultaneously by selectively intensifying vocally produced harmonics. Numerous legends about the origins of *xöömei* underscore the notion that humankind learnt to sing in such a way by imitating natural sounds whose timbres are rich in harmonics. These sounds include waterfalls, burbling brooks, bird songs and strong wind exciting the strings of a zither, called *chatagan*, which Tuvan herders place on the roofs of their yurts to dry the instrument's gut strings. Performers of *xöömei*, called *xöömeizhi*, use harmonics both to extemporize melodies and to perform standardized tunes. In either case the use of harmonics is not simply naturalistic, but conforms to a culturally determined notion of melodic

mode. The strong propensity to pentatonicism in Tuvan music is reflected in the ubiquitous use of the 6th, 8th, 9th, 10th and 12th harmonics.

In Tuva, music scholars and performers alike divide *xöömei* into several styles, e.g. *sygyt, kargyraa, borbangnadyr, xöömei* (the name of a particular style as well as the general term for throat-singing), each characterized by a different type of vocal production. These core styles, however, are performed in highly individualized ways by different singers, and well-known throat-singers typically become identified not only with a particular manner of vocal production, but with a specific tune that serves as a personal musical signature. For example, 'Kombu *xöömeï*' is a musical item identified both by vocal style and melody as belonging to the singer Kombu.

Vocal genres other than *xöömei* include most notably the lyrical *uzun yry*, literally 'long song', so-called because of its melismatic style in which syllables are melodically extended over long durations, and *kozhamyk*, a light-hearted refrain song often sung antiphonally by two groups of singers in an undeclared competition. Both of these genres represent strophic song forms, yet many of the ways in which Tuvans traditionally use sound and music represent more a technology than an art; that is, sound is used to achieve a specific goal such as calming animals, communicating across a river or appeasing spirits.

During the Soviet era, official musical life in Tuva was centred on pan-Soviet cultural institutions such as the Composers' Union, House of Culture system and Philharmonia Society, which organized and provided artistic direction for professional ensembles performing folkloric and popular music. Following the break-up of the Soviet Union, state-sponsored ensembles largely evolved into groups initiated by musicians themselves, several of which have become well known outside Tuva for their arrangements of throat-singing and other musical genres. (*See* Huun-Huur-Tu.)

THEODORE LEVIN

Tuxen, Erik (Oluf)

(*b* Mannheim, 4 July 1902; *d* Copenhagen, 28 Aug 1957). Danish conductor. Though born in Germany, he was of Danish parentage and moved to Denmark as a boy. He studied music and architecture in Copenhagen. After further study in Paris, Vienna (with Toch) and Berlin, he conducted opera in various theatres, including the Royal Theatre in Copenhagen (1930–32). In 1936 he became conductor of the Danish State RO, with which he appeared at the Edinburgh Festival in 1950: his performance there of Nielsen's Fifth Symphony helped set off a wave of British enthusiasm for the composer. He was also guest conductor of other orchestras in London, Paris, Brussels, New York (1951), South America (1954) and elsewhere. His recordings with the Danish State RO include Nielsen's symphonies nos.3 and 5 and other Danish music. He composed music for plays, including Goethe's *Faust*, and films, and he worked as a film music conductor from 1943 to 1945.

Tuyll van Serooskerken, Isabella Agneta Elisabeth van.

See Belle van Zuylen.

Tüzün, Ferit

(*b* Istanbul, 24 April 1929; *d* Ankara, 21 Oct 1977). Turkish composer. He studied the piano with Ulvi Cemal Erkin and composition with Necil Kâzım Akses at the Ankara State Conservatory. In 1950 he became assistant professor at the Ankara State Conservatory, and in 1954 he left Turkey for Munich to study at the Hochschule, where he completed a four-year course in orchestral conducting under Fritz Lehmann and Adolf Mennerich. Later he worked as a répétiteur at the Prinzregententheater. In 1959 he became assistant conductor at the Ankara State Opera. His career as a composer began in 1948 with the writing of piano pieces and chamber music. His works reflect the influence of such German composers as Richard Strauss, Pfitzner and Hindemith. Some of his compositions have been performed outside Turkey. His works include a symphony (1951), two suites, *Anadolu* (1954) and *Çeşmebaşı* (1964), an orchestral piece, *Turkish Capriccio* (1956), and an opera, *Midas' Ears* (1969). Tüzün's principal publisher is Leuckart.

FARUK YENER

Tveitt [Tveit], (Nils) Geirr

(*b* Bergen, 19 Oct 1908; *d* Oslo 1 Feb 1981). Norwegian composer and pianist. He studied composition with Hermann Grabner and Leopold Weninger and the piano with Otto Weinrich at the Leipzig Conservatory (1928–32). He spent the following year in Paris and Vienna, where he

consulted a number of composers, including Honegger and Villa-Lobos. He returned to Norway in 1933, after that time also touring abroad as pianist and conductor.

His music builds upon the modalities of Norwegian folk music, attempting to integrate its tonality into his own idiom (as he expounded in his controversial *Tonalitätstheorie des parallelen Leittonstystems*, 1937). Although the folk music influence is most often indirect, some of his works, such as the orchestral suites *100 folketonar frå Hardanger* ('100 Folk Tunes from Hardanger'), draw directly upon Norwegian folk tunes. He was a central figure of the national movement in Norwegian cultural life in the 1930s, but his music is also oriented towards the continental styles of the first half of the 20th century. This is evident both from his excellent orchestration, recalling the French Impressionists (especially Ravel) and from his piano style, comparable to that of Bartók and Prokofiev. Tveitt's music is characterized by shifting modalities, colourful, often bitonal harmonies, an extensive use of ostinato figures, many-layered textures and brisk rhythms; the atmospheres range from delicate lyricism to burlesque barbarism. His first opus, *12 zweistimmige Vorstudien in lydisch, dorisch und phrygisch*, published in 1930 under the name Tveit, is a chromatically ordered cycle of modal inventions, a surprisingly mature predecessor of works such as Hindemith's *Ludus tonalis*. Tveit's monumental ballet *Baldurs draumar* ('Baldur's Dreams') typifies the 'Norse Impressionism' style which prevailed in Norway during the 1930s. After World War II he composed in a more modernistic and internationally oriented style, later returning to a more folkloristic idiom. Many of the ballads composed during his final years have become very popular in Norway.

Twardowski, Romuald

(*b* Vilnius, 17 June 1930). Polish composer and pianist. He studied the piano and composition with Juzeliūnas at the Vilnius Conservatory (1952–7) and was then a pupil of Woytowicz at the Warsaw Conservatory. In 1963 a French government scholarship took him to Paris to study medieval polyphony and Gregorian chant with Boulanger. His *Sonetti di Petrarca* won the Prague Spring International Composers' Competition in 1965 and *Posągi czarnoksiężnika* ('The Sorcerer's Statutes') and *Lord Jim* the Prince Rainier of Monaco competition in 1965 and 1973 respectively.

An important place in Twardowski's output is reserved for stage works, in particular music drama. Each opera is written in a specific style that reflects his interest in synthesizing older music, particularly medieval and Renaissance polyphony, and modern compositional practices. In *Tragedyja, albo rzecz o Janie i Herodzie* ('Tragedy, or A Piece on John and Herod'), for example, material that draws on 17th- and 18th-century Polish sacred music is juxtaposed with folk-derived gestures, while *Upadek Ojca Suryna* ('The Fall of Father Suryn', a tale of monastic impropriety) features three different systems of notation for the vocal parts, allowing gradual transition from speech to singing. *Lord Jim*, arguably his masterpiece, uses lyricism and explosive violence in its portrayal of the individual against society.

Twelve-note.

This term refers to the 12-note system in which the 12 pitch classes are placed in a specific order, forming a set which then becomes a compositional tool. *See* Serialism and Twelve-note compostition.

Twelve-note composition.

A method of composition in which the 12 notes of the equal-tempered chromatic scale, presented in a fixed ordering (or series) determined by the composer, form a structural basis for the music. It arose in the early years of the 20th century, when the dissolution of traditional tonal functions gave rise to several systematic attempts to derive a total musical structure from a complex of pitch classes that are not functionally differentiated. Skryabin's Seventh Sonata (1911–12), for example, is based upon such a

complex, or 'set' (ex.1). The set, at any of its 12 transpositional levels, generates both the melodic and the harmonic elements of the composition. It is defined in terms of its pitch-class content, relative to transposition, and no pre-compositional ordering or segmentation of the set is assumed. Clearly there is only one analogously unordered set of all 12 pitch classes. About 1920 Hauer and Schoenberg independently arrived at concepts of 12-note set structure that make it possible to differentiate between one 12-note set and another, and among transformations and transpositions of any given 12-note set.

See also Atonality and Serialism.

Twelve-note composition

1. 12-note tropes.

In Hauer's system the 12 pitch classes are divided into discrete, mutually exclusive segments. The order of segments within a 12-note set and the order of pitch classes within each segment are not pre-compositionally defined. Each such set and its 12 transpositions represent what Hauer called a 'trope'. The only tropes that Hauer investigated systematically are those that divide the pitch classes into two hexachords. Let the integers 0 to 11 represent the successive pitch classes of an ascending chromatic scale of unspecified transposition. If pitch-class numbers 2, 3, 5, 7, 9 and 10 are chosen as one hexachord, the trope will be completed by the hexachord formed by the remaining pitch classes: 0, 1, 4, 6, 8 and 11. The hexachords (8, 9, 11, 1, 3, 4) and (6, 7, 10, 0, 2, 5) are a representation of this same trope since they are its transposition by a tritone of (i.e. the

addition of 'T-no.6' to) each element of the original. Hauer demonstrated that there are 80 non-equivalent hexachords. Eight of these will each form a trope by combination with its own transposition. (For example, the whole-tone hexachord (0, 2, 4, 6, 8, 10) may be combined with a transposition of itself by any odd T-no.) The remaining 72 hexachords are paired to form 36 tropes, and so there are 44 independent hexachordal tropes.

Hauer's is the earliest known attempt at any general formulation of the resources of a 12-note sound world. His concept of hexachordal tropes was a remarkable anticipation of subsequent developments in 12-note composition and theory. It is doubtful, however, that he had any direct influence on what is significant in these developments. His own compositions are simple-minded exercises, and his 12-note theory was embedded among mystical and megalomaniac assertions. The fact remains, however, that he was the first to discover the all-important principle of segmentation – the partitioning of the collection of 12 pitch classes into mutually exclusive sub-collections – as a basis for classifying the pitch-class material of 12-note music.

2. 12-note series.

If the 12 pitch classes are regarded as an unsegmented collection, sets can be differentiated only by the ordering of their elements. In Schoenberg's system ordered sets ('series' or 'rows') that may be transformed into one another by transposition (i.e. the addition or subtraction of a constant T-no., mod 12), by retrograding, by inversion (i.e. the subtraction of each of the original pitch-class numbers from a constant T-no., mod 12) or by any combination of these operations, are all regarded as different forms of a single series. Since the series in each of its aspects – prime (P), retrograde (R), inversion (I), retrograde-inversion (RI) – may be stated at 12 transpositional levels, there will be 48 set forms in the complex generated by a single series.

3. Origins of the 12-note set.

The term '12-note music' (or 'dodecaphony') commonly refers to music based on 12-note sets, but it might more logically refer to any post-triadic music in which there is constant circulation of all pitch classes, including both the pre-serial 'atonal' compositions of Schoenberg, Berg and Webern and the 'atonal' compositions of Skryabin and Roslavets based on unordered sets of fewer than 12 elements (*see* Atonality). However, the customary sense is retained here. Occasional systematic statements of the 12 pitch classes first appeared in the music of Berg. A 12-note series is one of the principal themes of his Altenberg songs, composed in 1912, about three years before Schoenberg's first experiment with 'a theme consisting of the 12 notes' in his unfinished oratorio *Die Jakobsleiter*. Schoenberg's 'theme' is a hexachordal 12-note trope, rather than a series. By summer 1919 Berg had completed, in short score, the first act of *Wozzeck*, which contains a 12-note passacaglia theme that is often cited as an adumbration of the Schoenbergian series. Non-serial 12-note collections are found in Berg's works throughout his career. In the concluding song of op.2 (1910) a white-key glissando in the left hand of the

piano part occurs simultaneously with a black-key glissando in the right, a 12-note aggregate which anticipates by about 20 years the white-key and black-key clusters of the Athlete's leitmotif in *Lulu*. A chord consisting of all 12 pitch classes opens and closes the third of the Altenberg songs. The two mutually exclusive whole-tone scales and the three mutually exclusive diminished 7th chords generate 12-note collections in *Wozzeck*. Other examples can be cited from *Wozzeck* and the *Drei Stücke* for orchestra (1914–15).

Schoenberg has explained the concept of a 12-note series as originating in the desire to avoid excessive pitch-class repetition in atonality, citing in this connection the tendency to avoid the octave in atonal compositions. Webern apparently anticipated both Schoenberg and Berg in this respect, consistently avoiding octave doublings as early as 1910 in his *Zwei Lieder* op.8. In a lecture given in 1932 (published in 1960) he described his early intuitive approach to the concept of the 12-note series:

> About 1911 I wrote the Bagatelles for string quartet (op.9), all very short pieces, lasting a couple of minutes – perhaps the shortest music so far. Here I had the feeling, 'When all 12 notes have gone by, the piece is over'. Much later I discovered that all this was a part of the necessary development. In my sketchbook I wrote out the chromatic scale and crossed off the individual notes. Why? Because I had convinced myself, 'This note has been there already'. … In short, a rule of law emerged; until all 12 notes have occurred, none of them may occur again. Were this 'rule' to be strictly applied the 12 pitch classes would be continually reiterated in the same order within a movement, thus forming a repeating series.

The principle of non-repetition, however, is clearly not a sufficient explanation of the serial concept. One of the characteristic features of a melodic theme in tonal music is, after all, the order assigned to its pitches, but this feature is inseparable from others – rhythm, contour, tonal functions – any and all of which may be varied within certain limits without destroying the identity of the theme. The interdependence and interaction of these elements are far more ambiguous and problematical in atonality. The pitch-class content of a group of notes may be exploited independently of its other components, and in one of Schoenberg's last pre-dodecaphonic works, the first of the *Fünf Klavierstücke* op.23, the pitch-class order of the initial melodic line is treated as an independent referential idea (ex.2). The melodic figure which begins the second piece of the same opus serves as nothing less than an ordered set, though it is only one of the sources of pitch-class relations. Both pieces were completed in July 1920. A month later Schoenberg was at work on op.24 no.3, the Variation movement of the Serenade. This is the earliest example of an entire movement exclusively based on a totally ordered – though not yet 12-note – set. The 14-note series, comprising 11 pitch classes of which three occur twice, is employed in all four aspects, but there is no change in the initial transpositional level (as there is in op.23 no.2). The earliest 12-note serial piece, the *Präludium* of the Piano Suite op.25, was composed during the period 24–9 July 1921. The series, sole source of pitch relations, is

employed in all four aspects and at two transpositions separated by the interval of a tritone. Since the tritone, which is invariant in its pitch-class content under transposition by a tritone, is significantly represented in the structure of the set, important invariants are generated between the different set forms.

On completion of the first movement of the Suite, Schoenberg took up the Serenade again. The first movement, evidently composed in one day (27 September 1921), is largely based on the concept of strict inversional complementation, though in a non-serial context. Work on the *Fünf Klavierstücke* op.23 was resumed on 6 February 1923 and completed in less than a fortnight. No.3, based on a five-note set, is an extraordinarily complex study in the structural implications of inversional complementation and invariant relations. The concluding piece, however, Schoenberg's second 12-note serial piece, seems primitive and naive in its constant reiteration of the initial set form, as compared with his first piece in the system, composed almost two years earlier. The same may be said of the only 12-note serial piece of op.24, the *Sonett*, composed a few weeks later. Meanwhile, between 19 February and 8 March, Schoenberg composed the five remaining movements of the Piano Suite, basing all of them on the same set and the same procedures as the first movement, and thus asserting, for the first time, all the basic premises of his 12-note system.

Of the remaining movements of op.24, completed in March and April 1923, only portions of no.5, *Tanzscene*, are based on a 12-note set. The first 57 bars, dating from August 1920, make no use of anything that may be termed a set, but on taking up this movement again on 30 March 1923 Schoenberg converted the pitch-class content of the initial six-note motif into one of the hexachords of a 12-note trope, supplied the missing hexachord to complete the trope and used this as the basis of the newly composed contrasting sections of the piece. (Schoenberg had experimented with a hexachordal trope in 1915, and there is no reason to assume that he was influenced by Hauer's theory.) A tritone transposition of either hexachord of the trope of the *Tanzscene* (ex.3) leaves the pitch-class content of the hexachord unchanged, a property exploited by transpositional relations in the work. The *Tanzscene* points forwards to one of Schoenberg's late works, the *Ode to Napoleon* (1942), which is also based on a trope (self-transposable at T-no.4 and T-no.8), rather than a series.

Twelve-note composition

4. 12-note composition.

It is one thing to define a 12-note set and quite another to define 12-note composition. A general definition cannot go beyond the assertion that all the pitch-class relations of a given musical context are assumed to be referable to a specific configuration of the 12 pitch classes, a configuration that is understood to retain its identity regardless of its direction or transpositional level. Problems arise with the definition of that context and with the compositional representation of the rules of set structure.

With regard to the first question, Schoenberg noted: 'It does not seem right to me to use more than one series [in a composition]'. Of the three Viennese masters, only Webern, beginning with op.19, unambiguously

observed this principle. It is completely inconsistent with Berg's practice, even within any single movement. Schoenberg's implied definition of a 'series' does not include cyclical permutations as representations of a given series, but Berg made use of these regularly. Almost every movement in which he can be said to employ some sort of 12-note method contains 'free', that is non-dodecaphonic, or at least non-serial, episodes. And even the 12-note sections of such movements are often based on two or more independent sets – independent in the sense that no form of one set can be transformed into any form of another by transposition, inversion, retrogression, cyclical permutation or any combination of these operations. The first movement of the *Lyrische Suite* is based on not one but three sets. All three, however, are representations of the same trope (ex.4). (In the notation of set forms in the examples that follow, each accidental affects only the note it precedes.) The principal set is a serial representation of this trope (ex.5). Another series is derived by reordering the hexachordal content of ex.4 as a circle of 5ths (ex.6). Finally, the conjunct version of the trope is itself employed compositionally, not only in the form shown in ex.4, but also with various cyclical permutations of the hexachords, as in ex.7. The last movement of the *Lyrische Suite* simultaneously employs two different series throughout. In order to understand their relationship one must include the characteristic contour assigned to each series among its essential attributes. The initial series is partitioned into two segments in terms of the registral distribution of its elements, as shown by stemmed and unstemmed notes in ex.8, and these form a second series (ex.9).

Schoenberg's own practice can be said to conform to his rule of the unique series only if the term 'series' or 'row' is replaced by 'set' and if the latter is considered only partially defined by the serial ordering. The first completely 12-note work, the Piano Suite, op.25, employs a series that is partitioned into three four-note segments, and these are employed simultaneously as well as successively. Thus the set cannot be properly defined exclusively in terms of its total serial ordering. A single referential ordering can be deduced in this and in most of Schoenberg's other 12-note compositions, but this ordering tends to be secondary to another attribute of Schoenberg's sets: their segmental pitch-class content. The Third String Quartet and the String Trio are exceptional in that each employs several distinct series. If the set of the former, however, is defined as consisting of an invariably ordered five-note segment and a variably ordered seven-note segment, and that of the latter as consisting of two variably ordered six-note segments, each work may be said to be based upon a single set.

Even where a single unambiguous pre-compositional serial ordering of the set is assumed, the moment the series is used compositionally there are inevitable ambiguities. The presence of another structural attribute, in addition to that of serial order, is almost always implied: the partitioning of the series into segments. It has been shown (exx.4–6) how a set segmented into two unordered hexachords provides the basis for the association of three independent derived sets. In general, segmentation is used as the basis for the association of set forms chosen from the 48 members of the complex generated by a single series. The first movement of Webern's Second Cantata op.31, for example, employs the following forms (ex.10) and their respective retrograde versions (R_0 and RI_0). (The

level of a set form is indicated by a subscript integer; that assigned to any P or I form of an ordered set is the same as its initial pitch-class number, and that assigned to an R or RI form will be the same as its final pitch-class number; in the rest of this article pitch-class numbers 0 to 11 represent the successive elements of an ascending chromatic scale beginning on C.) Each hexachord holds five pitch classes in common with the given inversionally complementary hexachord, as shown in the example. Were P to be paired with any other transposition of I, there would be less than five elements in common between corresponding hexachords. The manner in which the hexachords are compositionally stated supports the assumption that the association of inversionally complementary segments is motivated by their maximum invariance of content.

The series on which the 12-note sections of the third movement of Berg's *Lyrysche Suite* are based begins with a four-note segment whose reordered content recurs in transposed or inverted forms within the series. The set forms given in ex.11 convert each of the reordered segments into the pitch-class collection of the initial four-note segment of P_{10}. (In the composition P_8, I_3 and P_5 are cyclically permuted to commence or conclude with the invariant segment.)

The series of Webern's Concerto op.24 is segmented into subsets which are themselves forms of a three-note series. P_{11} and RI_0, the first two set-form statements, present subsets of identical pitch-class content in the same relative positions within each set form (ex.12).

The series of Webern's Symphony op.21 consists of two hexachords related as p_0 to r_6 (ex.13). Thus each P form of the set is equivalent to the tritone transposition of its retrograde, and the corresponding relation will hold between I and RI forms. For this, as for any 'symmetrical series' (any series comprising two hexachords related as p_n to r_n+_6 or p_n to $ri_n+(_{2x}+_1)$, there are 24, rather than 48, non-equivalent set forms.

From 1928 Schoenberg systematically employed hexachordal segmentation as a basis for the association of set forms. In the Fourth String Quartet, for example, P_2 and I_7, or any other pair of equivalently related set forms, may be combined so that corresponding hexachords (vertically aligned for illustrative purposes in ex.14) produce all 12 pitch classes. Set-form association based on such aggregates of the 12 pitch classes, known as combinatoriality (*see* Set), is the governing structural principle in Schoenberg's 12-note music. The P/I combinatoriality illustrated in ex.14 is only possible where the two hexachords of the series are inversionally complementary in content. If the series of ex.14 is rewritten as a hexachordal trope (ex.15), it is clear that P_2, I_7 and their retrograde forms R_2 and RI_7, the four primary set forms of the work, are all members of the same trope.

What Babbitt has called an 'all-combinatorial' set permits P/RI as well as P/I combinatoriality. Although Webern did not observe Schoenberg's principle that combined set forms must produce 12-note aggregates, the series of his Concerto is an example of an all-combinatorial set. If P_{11} of ex.12 is considered as a hexachordal series, it is evident that it may be paired combinatorially with I_4, RI_2, P_5 or R_{11}. (The last is a trivial instance, since any series will, by definition, form 12-note aggregates with its own

retrograde.) Since transpositions of each of these set forms by the addition of T-no.4 merely reorders the hexachordal content, P_{11} may also be paired with I_8 or I_0, RI_6 or RI_{10}, P_9 or P_1 and R_3 or R_7.

Where corresponding hexachords of a pair of set forms are mutually exclusive, as in ex.14, the contents of non-corresponding hexachords will, of course, be identical. In the music of Berg set forms are associated through this invariance of segmental content. The principal pair of P and I set forms of the basic series of *Lulu* is shown in ex.16. Transpositions at the tritone will interchange the contents of the two hexachords. Progression among set forms, including members of independent complexes of set forms, may be referred principally to degrees of invariance of segmental content. Schoen's series and Alwa's series are associated through the set forms shown in ex.17, which are trichordally as well as hexachordally invariant with each other.

The principal set forms of Alwa's series, P_4 and P_9, are maximally invariant (five elements in common) with the basic series at P_0 (or I_9), as illustrated in ex.18.

Where a set is strongly characterized by segmental content as well as serial ordering in the music of Schoenberg and Berg, linearly stated set segments – functioning as 'broken chords' in a sense – often depart from the assumed ordering. In Schoenberg's *Klavierstück* op.33*a*, for example, though one can deduce an ordering for the set, segmental content is a far more significant property, and in the *Ode to Napoleon* it is the only defining property of the set. The numerous sets found in Berg's *Lulu* include series, tropes based on various types of partition, 'serial tropes' (i.e. sets whose segments are subjected, independently of the set as a whole, to such serial operations as will not revise their respective contents) and 'harmonic tropes' (i.e. sets partitioned into segments of an essentially chordal, rather than linear, character).

In Schoenberg's 12-note works the combinatorial relation between P and I or R and RI set forms is preserved by maintaining a constant difference in the respective transpositional levels of the associated set forms. In op.33*a*, for example, the succession of T-nos. is as follows: P/R 10 0 5 10 I/RI 3 5 10 3 Webern sometimes used the opposite procedure: the maintenance of a constant sum between T-nos. of associated set forms. In the first movement of the Quartet op.22, for example, inversionally complementary set forms are paired as follows: P_1 P_7 P_1 P_{10} P_{11} R_0 P_0 R_1 P_7 P_7 R_1 I_{11} I_5 I_{11} I_2 I_1 RI_0 I_0 RI_{11} I_5 I_{11} RI_{11} The sum of T-nos., 0, mod 12, remains the same throughout. The principal set forms of the second movement are P_6, I_6, R_6 and RI_6, and so here too the sum of complementary T-nos. is 0, mod 12. The significance of this procedure is that it preserves exactly the same pairs of inversionally complementary pitch classes, whatever the respective transpositional levels of the set forms. These complementary relations are shown in ex.19 for this case. In Schoenberg's op.33*a*, on the other hand, the complement of any given pitch class is different for each pair of T-nos.

Twelve-note composition

5. Pre-compositional structures.

The concepts of segmentation and inversional complementation permit a generalized description of pitch relations for 12-note music. The special properties that derive from the hexachordal organization of a given series are shared with all other serial representations of the same trope, and a series based on any other type of segmental organization may be similarly regarded as a special instance of a single pre-compositional structure. The series of Schoenberg's Fourth String Quartet (ex.14) is one of 518,400 (= (6!) (6!)) series that may be derived by reordering the elements of each hexachord of the trope in ex.15. All of these series share the structural functions that depend upon hexachordal content alone. Whatever the series, the content of each hexachord of any given P form will be duplicated in the content of the non-corresponding hexachord of one I form. The same property characterizes every series that may be derived from any of 12 other tropes. Thus 13 of the 44 tropes may be grouped together as a family, and almost every one of Schoenberg's 12-note works is based on a serial representation of one of these. (The 13 tropes of the 'Schoenbergian' type are numbered 14 to 26 under 'Six-Note Collections' in the appendix to Perle, 1962, rev.6/1991.)

The hexachordal trope illustrated in ex.4 is represented by the basic series of *Lulu* (ex.16), as well as by the three sets on which the first movement of the *Lyrische Suite* is based (exx.4–6). This trope is one of six (numbered 1 to 6 in Perle) characterized by the following properties: the relative pitch content of both hexachords is the same, that is each can be converted into the other by transposition; each hexachord is invariant under inversion, and therefore also an inversion as to unordered content of the other hexachord (since the two are transpositionally equivalent as to content). The all-combinatorial series are representations of these six tropes. Transposition by a perfect 5th above or below of any series derived from ex.4 preserves maximum invariance of hexachordal content between identical aspects of the series (five common elements), and in *Lulu* Berg made significant use of the resulting hierarchy of harmonic areas. The series on which the third of Schoenberg's *Drei Lieder* op.48 is based preserves total invariance of content either between corresponding or between non-corresponding hexachords for all set forms of the complex, since it is a representation of the trope whose hexachords are the two non-equivalent whole-tone collections. All transpositions of this trope are equivalent, since transpositions do not alter the segmental content of the trope but merely interchange the two segments.

Any given 12-note set form is one of 479,001,600 (=12!) permutations of the chromatic scale. Symmetrically related dyads are generated when equivalent permutations of two contrary chromatic scales are aligned. Ex.20 shows two such, intersecting at C and F♯ (intersections will always occur at two points separated by the interval of a tritone; the ascending scale will be termed a 'P cycle' and the descending scale an 'I cycle'). The dual axis of symmetry of each dyad will then be C and F♯, which is to say that the members of each dyad will be equidistant in opposite directions from C, and likewise from F♯. The axis of symmetry may be conveniently represented by the sum of pitch-class numbers that represent the members of any dyad. (In this instance that sum is 0, mod 12.) The interval classes generated by the aligned cycles may consistently be represented by the

number, mod 12, obtained by subtracting the pitch-class number of each element of the I cycle from that of its complementary element in the P cycle. Inversionally complementary set forms whose T-nos. are 0 and 0, 1 and 11, 2 and 10, 3 and 9, 4 and 8, 5 and 7, and 6 and 6 will permute the vertical intervals of ex.20, but the pair of pitch classes that constitute a given interval class remains the same, since the sum in each instance is 0, mod 12. All of these T-no. pairs except 4 and 8 are represented in Webern's Quartet op.22 and are the basis of its tonal structure and formal design. The opening and closing sections of the first movement of the Symphony op.21, and the middle movement of the Piano Variations op.27, are limited to paired complementary set forms of sum 6.

Any realignment that displaces one of the two cycles of ex.20 by an even number of semitones transposes the same collection of intervals. The association of inversionally complementary hexachords to form 12-note aggregates, as in most of Schoenberg's 12-note compositions, is only possible where the sum of T-nos. is odd, since otherwise there must be pitch-class duplication at two points. If the diverging chromatic cycles are aligned so that the sum of complementary pitch classes is odd, the interval classes that contain an odd number of semitones are produced and pitch-class duplication is eliminated. The principal pair of set forms of Schoenberg's Fourth String Quartet (ex.14) generates the dyadic relations shown in ex.21.

The symmetrical pitch relations produced by the one-to-one alignment of complementary chromatic cycles should not be confused with thematic inversion in earlier music. The harmonic and tonal context within which themes and motifs are sometimes 'inverted' in diatonic music exists before and apart from the operation of inversion. Thematic inversion in a diatonic context is not literal since complementation is not measured in terms of a single unit, the semitone, as it is in the 12-note system, and the functional properties of the diatonic system are not reflected by inversion, which would require that the function of the root of a major triad be assignable to the 5th of a minor triad and that the degree functions of a major scale be assignable to the symmetrically complementary degrees of a retrograde Phrygian scale.

Strict inversional complementation has been significantly employed in non-diatonic music apart from the 12-note system: the first-movement exposition of Schoenberg's Serenade op.24 is exceptional in that it is as rigorously and consistently employed there as it might be in a 12-note serial work. The periodic formal design is entirely dependent upon inversional procedures and all pitch relations are based on a single sum of complementation. Perhaps the most sophisticated use of inversional complementation is to be found in some of the works of Bartók, particularly the Fourth String Quartet. Here there is modulation from one sum of complementation to another via pivotal elements (primary among these is the tetrachordal structure illustrated in ex.22, the inversional relations of which may be interpreted in two different ways); differentiation of harmonic areas through the simultaneous or successive juxtaposition of dyad collections representing different sums; differentiation through the juxtaposition of progressions which preserve constant intervallic differences with progressions which preserve constant sums; the combining of small-

scale, non-symmetrical progressions into large-scale symmetrical progressions; the use of axes of symmetry as tone centres and so on. It is obviously necessary to discuss such a work in the same context as the 12-note music of Schoenberg, Berg and Webern, although Bartók did not use 12-note series. The basic cell of the quartet (ex.22) is also the basic cell of Berg's 12-note opera *Lulu* and generates the set – a tetrachordal trope – with which that work begins (ex.23). The role assigned to this trope in the opera is explained by its special character: it may be inverted at any odd T-no. or transposed by any even T-no. without change to its tetrachordal pitch-class content. The intervallic properties (deriving from the presence of the tritone) that explain the function of this tetrachord in Bartók's Fourth String Quartet are also those that explain its function in Berg's opera.

Wherever there is inversional symmetry based on the chromatic scale, one of two 'modes' is expressed (the one producing only odd, the other only even intervals), and that 'mode' occurs in one of its six 'keys' (the six sums that represent the different transpositional levels of the collection of symmetrically related intervals). All intervals and sums are given in the two arrays shown in ex.24; Even array and ex.24; Odd array. Dyads of the same sum class are in the same column and dyads of the same interval class in the same row. Each row of intervals is continued in the equivalent row (1/11 in 11/1 etc.); each column of sums is continued in the same column read in the opposite direction from the point of intersection (intervals 0 and 12, or 1 and 11). Any symmetrical collection, regardless of the number of its elements, can be analysed into dyads that will lie in the same column. Symmetrical tetrachords of two dyads of sum 9, which play a significant role in Bartók's Fourth String Quartet, will be formed by any pair of dyads in the 9 column, as for example C–A and E–F, with which the work opens. The same tetrachord may be read as the interval pair C–E and A–F in the 4 or 8 row, or as the interval pair C–F and E–A in the 5 or 7 row. The compositional process in the first movement is largely an unfolding of the implications of such reinterpretations of tetrachordal collections. The principal series of the first movement of the *Lyrische Suite* (ex.5) is not only a representation, as noted above, of a particular hexachordal trope, but also a representation of the collection of dyads of sum 9. These are compositionally articulated in the initial thematic statement of the series (ex.25) and again in a cyclic permutation of that statement (ex.26).

The opening section of Webern's Symphony demonstrates the simultaneous representation of different sums of complementation. The contrapuntally associated set forms, P_9 and I_9, I_5 and P_1, I_0 and P_6, and P_2 and I_4, are sum 6 complements. Although the series is of the $P_n=R_{n+6}$ symmetrically ordered type, which implies hexachordal segmentation (ex.13), it may also be segmented into inversionally symmetrical tetrachords that are invariant as to content between P_n and I_{n+3}. The eight set forms unfold a double inverted canon in which each voice consists of successive set forms that conform to this relation: canon 1: P_9 I_0 I_9 P_6 canon 2: I_5 P_2 P_1 I_4 This aspect of the set structure is clearly articulated through the assignment of an invariant timbre for each invariant tetrachordal collection in canon 1 (ex.27). (Complementary pitch classes are beamed together in the example.) The complementary pitch classes are adjacent to each other in the outer tetrachords. The middle tetrachord is identical with that illustrated in ex.22. Unlike the others it has two sums of

complementation, and the alternative sum maintains invariant two-note segments (ex.28).

6. 12-note 'tonality'.

Exx.20–21 show how any alignment of two contrary chromatic scales produces all the odd or all the even intervals around a single odd or even axis of symmetry. An equivalent result is produced by alignments of diverging cycles of 5ths. The sum 9 dyads within each hexachord of the basic set of the *Lyrische Suite* are explicitly generated in this way (ex.29). Where the second hexachord of the principal set (ex.5) is directly followed by its first hexachord – as happens occasionally in the *Lyrische Suite* and regularly in Berg's song *Schliesse mir die Augen beide*, which is based on the same set – the alternate notes of the set completely unfold the diverging cycles. A continuation of the cycles produces the retrograde form of the same set and pitch-class repetition at the point where the cycles intersect (ex.30). Berg's series, when read as in ex.30, displays a significant property that is not found in the general Schoenbergian set: the elements immediately adjacent to any member of the set (these will be termed the 'neighbour notes' of the given axis note) always form the same interval, a perfect 5th in this instance, with the respective transpositional levels of this interval inversionally complementary to the respective transpositional levels of its axis note (ex.31).

The vertically stated pitch-class collections in ex.31 comprise all the three-note segments contained in the set form illustrated in ex.30. The verticalization of set segments is the fundamental means of forming chords in 12-note music and derives from pre-12-note atonal practice, where referential pitch-class collections often occur as simultaneities as well as linear details. However, the collection of chords generated by the verticalization of segments of the general Schoenbergian set provides no basis for a total, systematic control of the harmonic dimension, as this procedure does when applied to cycles and to sets derived from cycles as in ex.30. Suppose, for example, that the verticalized segments of ex.31 were combined with corresponding verticalized segments of an inverted form of the same set (ex.32). The combined segments will yield a series of symmetrically related chords (ex.33). If the axis-note dyads are transposed, the combined neighbour-note dyads will be equivalently transposed in the opposite direction. Thus if any given axis-note dyad occurs at all of its transpositional levels, so will its neighbour-note chord at the complementary transpositional levels (ex.34). Wherever the axis-note dyad is identical in pitch-class content with a dyad segment of one of the two sets, the neighbour-note chord will be identical in pitch-class content with a tetrachord segment of the other set (see asterisked items in ex.34).

Any interval may be used to generate cyclic sets analogous to ex.30. Ex.35 shows diverging cycles of minor 3rds, intersecting so as to yield adjacencies of sum 9 as in ex.30. (The set must be partitioned into two subsets in order to produce the complete collection of such dyads.) The verticalization procedure may be applied to such sets to generate series of pitch-class collections analogous to those illustrated above, with the new cyclic interval replacing the cyclic interval of the perfect 5th in each such

collection. There is nothing to prevent the association of set forms, generated by different cyclic intervals, to produce neighbour-note chords based on two different intervals. Through the use of such sets all possible verticalizations may be systematically formulated.

The cyclic set is an ordered unfolding of a complete collection of symmetrically related dyads such as is illustrated for dyadic sums 0 and 9 respectively in exx.20–21. The pair of diverging semitonal scales that generates the sum-9 complementary relations of Schoenberg's Fourth String Quartet is equally relevant to the first movement of Berg's *Lyrische Suite* and to the first movement of Bartók's Fourth String Quartet. In a certain sense they can be said to be in the same 'key'. The replacement of a diatonic scale of unequal steps and functionally differentiated notes by a semitonal scale of equal steps and functionally undifferentiated notes completely transforms the meaning of inversion, which becomes a pre-compositional means of symmetrically partitioning the tone material, rather than a means of composing in a harmonic context that is already given. Symmetry, as represented by both the cyclic divisions of the octave and the inversional complementation of pitch classes, is thus an inherent property of the 12-note scale. In the first movement of the *Lyrische Suite* this property is mapped into the structure of the 12-note series itself.

In *Le cru et le cuit* Lévi-Strauss challenged Boulez's defence of 'serialism' as a new kind of musical thought which, 'operating in accordance with a particular methodology, creates the objects it needs and the form necessary for their organization, each time it has occasion to express itself. … There is no longer any preconceived scale or preconceived forms – that is, general structures into which a particular variety of musical thought can be inserted'. Lévi-Strauss insisted that there must be a 'first level of articulation, which is as indispensable in musical language as in any other, and which consists precisely of general structures whose universality allows the encoding and decoding of individual messages'. For Lévi-Strauss that 'first level of articulation' is provided by 'the hierarchical structure of the scale', by which he meant the diatonic scale and its triadic functional relations. Schoenberg, too, seems to have assumed that a 'first level of articulation' was a prerequisite for a musical language. In the article 'Problems of Harmony', after a tendentious and ill-informed attempt to derive the 12-note scale from the overtone series, he concluded that 'should this proof be inadequate, it would be possible to find another. For it is indisputable that we can join twelve notes with one another and this can only follow from the already existing relations between the twelve notes'. The symmetrical implications of the semitonal scale can serve as the 'first level of articulation' of a 12-note musical language, that is as the source of 'the already existing relations between the twelve notes'.

Twelve-note composition

7. Extensions and developments of 12-note composition.

The influence of Schoenberg's 12-note system in Germany and Austria before World War II was largely limited to his students and, in turn, to their students. Krenek was perhaps the only widely known composer outside this circle to adopt the system, on which he based his opera *Karl V* (1933). Under the regimes of Hitler and Stalin a ban was placed on what was

represented as an expression of 'Jewish Bolshevism' on the one hand and 'bourgeois decadence' on the other, and even where there was no political suppression, neo-classicism came more and more to dominate composition from the late 1920s until the end of the war. Immediately after the war, however, there was an astonishingly rapid and widespread growth of interest in the work of Schoenberg, Berg and Webern, and by the end of the 1950s there remained few composers in the USA or western Europe who were not in some way influenced by the concepts of 12-note composition.

Stravinsky's adoption of serial procedures was remarkable not so much because his position in the musical world had been regarded as diametrically opposed to Schoenberg's, but rather because of the way in which he was able to integrate these procedures into his own musical language. This is clearly evident in his *In memoriam Dylan Thomas* (1954), one of the most strict of Stravinsky's early serial pieces. The work is based on a five-note set, E, E♭, C, C♯, D. This use of a five-note set, under transposition and the four transformations of the 12-note system, differs from Schoenbergian serialism mainly in that every transformation does not necessarily contain different permutations of the same collection of pitch classes. Characteristic features of Stravinsky's earlier music remain, but they appear in a new context: the recurrent motivic statements of the set and emphasis on certain pitch successions such as E♭–E to emphasize cadential points; the chromatic filling-in of an interval, a major 3rd, with successions of only ascending or descending semitones or minor 3rds (compare the passage in *The Rite of Spring* at no.130, where an interval of a tritone is filled in by the alto flute using only major 2nds, minor 3rds and major 3rds); and the rhythmic alteration of similar pitch configurations in the strings at the opening of the song and at nos.2, 4 and 8 (compare the oboe solo at the beginning of the second movement of the *Symphonie de psaumes*).

In his later works Stravinsky more thoroughly incorporated traditional 12-note concepts while still achieving Stravinskian results. The set of *Movements* (ex.36), for example, is all-combinatorial, but it is not used to form 12-note aggregates. Instead Stravinsky concentrated on the high degree of trichordal segmental redundancy within hexachords. The trichords formed by elements in ordinal positions (0, 1, 2), (3, 4, 5) and (8, 9, 10) (where 0 denotes the ordinal position of the first note of the set) are of transpositionally or inversionally equivalent content, as are the trichords in ordinal positions (2, 3, 4), (6, 7, 8) and (9, 10, 11). This kind of redundancy is particularly Stravinskian, and the motivic use of these trichords generates a musical surface with precisely the kinds of intervallic repetition and emphasis found in the earlier serial works, such as *In memoriam*.

In later compositions Stravinsky independently reinvented a procedure of hexachordal rotation and transposition that Krenek had employed in 1941–2 in *Lamentatio Jeremiae prophetae*. An 'array' for *Abraham and Isaac* (1963), for example, is derived by aligning hexachordal rotations of a single transposition of a set: G G♯ A♯ C C♯ A B D♯ D E F♯ F G♯ A♯ C C♯ A G D♯ D E F♯ F B A♯ C C♯ A G G♯ D E F♯ F B D♯ C C♯ A G G♯ A♯ E F♯ F B D♯ D C♯

A G G♯ A♯ C F♯ F B D♯ D E A G G♯ A♯ C C♯ F B D♯ D E F♯ This array is used as a basis for lineal and vertical relations. Stravinsky also constructed an array in which each successive rotation is transposed so as to begin on the same pitch class as the first. This provides a succession of simultaneities whose properties are derived from the structure of the set but whose local characteristics appear quite different from those of the set itself. In the following array this procedure is applied to the first hexachord of the set: G G♯ A♯ C C♯ A G A B C G♯ F♯ G A A♯ F♯ E F G G♯ E D D♯ F G D♯ C♯ D E F♯ G F F♯ G♯ A♯ B (Pitch-class repetitions in columns occur as a function of interval duplication by pairs of pitch classes with the same differences in ordinal positions within the original hexachord. Within each hexachord the columns whose ordinal positions are complementary to 6 (with the initial column as 0) are symmetrical inversions of each other as to pitch-class content, with G as the axis of symmetry.

Many postwar developments involved an extension of the serial concept to control and interrelate the various dimensions of a composition – rhythm, pitch, timbre, dynamics, articulation and so on – in a more precise and highly determinate way. Such processes were foreshadowed in the music of Schoenberg, Berg and Webern. In Webern's Symphony op.21 and Concerto op.24, rhythm, register and orchestration are organized in such a way as to project and clarify transformations and properties of pitch and pitch class. The set of the Concerto (ex.12) has the property that certain transformations will individually permute each of its trichords. In the opening bar each trichord is assigned a different instrument and rhythm, and in bar 4 the piano's statement of RI_0 – a transformation which retrogrades each of the individual trichords and retains their original order within the set – retrogrades the rhythm and places pitch classes in the same registers as in bars 1–3, thus projecting and interpreting these invariant relations (ex.37). In the opening of the Symphony pitches are assigned symmetrically around *a*. In the canonic pairing of P and I sets at the beginning of the composition, P_9 and I_9, and P_1 and I_5, corresponding pitches in these inversionally related, matched sets are thus symmetrically deployed around *a*.

The earliest instance of a strictly serially derived duration set is in the third movement of Berg's *Lyrische Suite*. The set consists of two subsets (ex.38 shows the relative points of attack) derived by partitioning the pitch set in terms of the registral distribution of its elements (ex.39).

It was not until after the war that the first attempts were made to generalize the application of serial structure by systematically transferring the attributes of a pitch set to the non-pitch elements. The first composer systematically to apply serial procedures to rhythm was Babbitt, in the Three Compositions for Piano (1947). Serial operations have also been applied to dynamics, instrumentation and register (*see* Serialism).

Twelve-note composition

8. Conclusion.

Many difficult and troublesome musical questions are raised by such extensions of the serial concept. It is reasonable to question the sense in which dynamic differentiation, for example, can be usefully considered

outside the context of a musical composition, and even within that context whether loudness can function as a variable, independent of timbre, texture, rhythm, tempo or register, to the same degree as pitch, pitch class or, possibly, rhythm. There also arises the larger question of the extent to which it is useful, or even meaningful, to consider whether a piece is serial without saying 'how' it is serial. When, for example, every pitch of a composition has been explained in terms of its position in some 12-note set, the problem remains of how this helps understanding of the conjunction of pitch, rhythm, dynamics, timbre and other elements of that piece. Even when all other dimensions have been derived in terms of unique predetermined orders, one may question that this necessarily shows how the result is heard, particularly when most musical dimensions are so highly contextual and subject to complex interaction. In short, the depth of musical relations within a composition may be so rich that the claim which that composition has to being a unique instance of musical thought may only in part be ascribed to the varieties of interrelations between serial aspects, and even the view of that part in these terms may be seriously questioned by the result which is the product of these interrelations. It may be more fruitful to consider serial ordering as a relatively abstract idea which has excited the imaginations of many composers and helped them to reshape and rethink their compositional habits and predilections in new and interesting ways. Perhaps the most important influence of Schoenberg's method is not the 12-note idea in itself, but with it the individual concepts of permutation, inversional symmetry and complementation, invariance under transformation, aggregate construction, closed systems, properties of adjacency as compositional determinants, transformations of musical surfaces through predefined operations, and so on. Each of these ideas by itself, or in conjunction with many others, is emphasized with varying degrees of sharpness in the music of such different composers as Bartók, Stravinsky, Schoenberg, Berg, Webern and Varèse. In this sense the development of the serial idea may be viewed not as a radical break with the past, but as a particularly brilliant coordination of musical ideas which had developed in the course of recent history. The symmetrical divisions of the octave often found in Liszt and Wagner, for example, are not momentary aberrations in tonal music which led to its ultimate destruction, but, rather, important musical ideas which, in defying integration into a given concept of a musical language, challenged the boundaries of that language.

Twining, Thomas

(*b* Twickenham, 8 Jan 1735; *d* Colchester, 6 Aug 1804). English clergyman and amateur musician. As the eldest son, Twining was intended to enter the tea business founded by his grandfather, but his distaste for business and aptitude for scholarship took him to Cambridge University in 1755. There he became acquainted with the poet Thomas Gray, who modified his antiquarian tastes in music and made him aware of Pergolesi and the moderns. As a result of his classical studies Twining was vastly knowledgeable about ancient music, and he helped extensively in the preparation of the first volume of Charles Burney's *History* (1776), which would have had a completely different complexion without Twining's input in planning and content. It is possible that Burney might never have written beyond the first volume without the encouragement of Twining, whose humour and common sense enabled him to help Burney through deep depressions experienced during the writing. He refused Burney permission to mention the debt owed to him. An equal diffidence inhibited his desire to publish his own work. His translation of Aristotle's *Poetics* (published as *Aristotle's Treatise on Poetry*, 1789) contains two essays that make a valuable contribution to 18th-century theories of mimesis. There are several unpublished vocal and instrumental compositions of Twining in the Essex Record Office, Chelmsford, and in the University of Western Ontario, London, Ontario, including a rondo for keyboard in Twining's hand, dated 1776 and attributed by Twining to C.P.E. Bach. Two glees for four voices, composed in 1802, were published posthumously by his brother (London, *c*1815). The largest collection of Twining's papers is located in the British Library.

PHILIP DOWNS

Two foot.

A term used in reference to organ stops, and by extension also to other instruments, to indicate that they are pitched two octaves above the Eight foot or 'normal' pitch now based on *c*' = 256 Hz. A 'two-foot organ' is one whose biggest open Principal pipe is or would be 2' (60 cm) long at *C*, irrespective of any larger stopped pipes; nor does the terminology imply that the compass extends to *C*, since it could apply to a stop or department of any compass. The Brustwerk department of the ideal Werkprinzip organ was a two-foot positive organ incorporated in the main organ case.

Two-step

(Fr. *deux temps*).

A fast ballroom dance of American origin. It became popular in the 1890s, particularly when danced to Sousa's *The Washington Post* (1889). It spread to Europe about 1900, and remained popular until replaced by the one-step and foxtrot shortly before World War I; indeed, the term 'two-step' was often used for the foxtrot in Europe during the 1910s. The steps, to a quick–quick–slow rhythm in each bar, were done with a gliding skip similar to that of the polka. The standard ballroom position with the man and woman facing each other was sometimes replaced by one in which the man stood behind and slightly to the left of his partner, who raised her hands above her shoulders to take his hands. The term also came to refer to the type of march to which the dance was originally performed, with a characteristic skipping rhythm in 6/8 and a light, springing melody. In addition to *The Washington Post*, popular two-step marches include Louis Conterno's *Red Clouds March Two Step* and Nellie Beamish's *Thirteenth National Regiment March and Two Step*.

Tyāgarāja

(*b* Tiruvarur, Tamil Nadu, 4 May 1767; *d* Tiruvaiyaru, Tamil Nadu, 6 January 1847). South Indian composer, musician and member of the Karnatak *trimūrti* ('trinity') of singer-saints (*see also* Dīksitar, Muttusvāmi and Śāstri, Śyāma). Tyāgarāja is widely regarded by Karnatak musicians as the finest and most important South Indian composer. He was born into a climate of Hindu revivalism, and his father, Rāma Brāhmam, a *pūjāri* connected with the court of Tulajājī at Thanjavur, introduced his son to Rāma *bhakti*. Both Tyāgarāja and Muttusvāmi Dīksitar are known as having been *smārta* Brahmans, a group closely associated with the development of devotional religion in the 15th and 16th centuries. The status of the 'trinity', as Brahman musicians, contributed greatly to an increase in the social acceptability of the practice of music. The Thanjavur musician Sonti Vēnkataramana became Tyāgarāja's teacher in 1782, and Tyāgarāja studied with him for the next 20 years. There is some evidence that he also had access to musical texts in the possession of his grandfather, including the *Sangīta-ratnākara*. He was married twice, at first to Parvatī, and then on her death to her sister, Kamalāmbā. Tyāgarāja is said to have travelled widely, visiting many temples and singing in praise of

their deities, for example his *kriti 'Tera tīyagarādā'* in *rāga Gaulipantu* was sung for Śrī Venkateśvara at Tirupati. At the age of 74 he became a *sannyāsin*, and on his death he was buried beside his *guru*, Sonti Vēnkataramana, on the banks of the Kaveri.

His lifelong devotion to Rāma is well documented, and it is this which was the primary focus of his musical activity. Like the other two members of the 'trinity' he was firm in his refusal to serve at court, in the face of repeated requests, seeing it as incompatible with his role as a *bhakta*. (This resolve was reportedly the cause of some friction between Tyāgarāja and his brother.) A significant difference between Tyāgarāja and Muttusvāmi Dīksitar and Śyāma Śāstri, however, was his dedication to teaching other musicians. His many disciples included Vēnkataramana Bhāghavatar and Vīnā Kuppayyar, who, among others, preserved his compositions through notation, and Subbarāya Śāśtri, the son of Śyāma Śāstri.

Tyāgarāja is remembered both for his devotion and the *bhāva* ('emotion') of his *kriti*, a song form consisting of *pallavi*, *anupallavi* and *caranam*. This three-part form is shared by the devotional *kīrtanam* from which the *kriti* derives. Tyāgarāja's development of the *sangati* (composed variation) within this three-part structure is one of the markers that distinguishes the *kriti* from the *kīrtanam*. He is also noted for composing in a great number of different *rāga*, many of which he invented himself. The texts of his *kriti* are all, with a few exceptions in Sanskrit, in Telugu (the contemporary language of the court), and this use of a living language, as opposed to Sanskrit, the language of ritual, is in keeping with the *bhakti* ideal of the immediacy of devotion. Of his many compositions, which number over 700, particularly noteworthy are: the *pañcaratna* ('five jewels') *kriti*, one in each of the *ghana* ('heavy') *rāga Nāta* (the Sanskrit '*Jagadānandakāraka*'), *Gaula* ('*Dudukugala*'), *Ārabhi* ('*Sādhiñcenē*'), *Varāli* ('*Kanakana rucirā*') and *Śrī* ('*Endarō mahānubhāvulu*'), this grouping was suggested by Harikesanallur Muthiah Bhagavatar in 1940 and it has become a permanent feature of the annual Tyāgarāja festival in Tiruvaiyaru; and those *kriti* in which he refers to the theory of music itself as an aspect of the divine, such as '*Nāda sudhārasambilanu*' in *rāga Ārabhi*, '*Nādatanumaniśam*' in *Cittarañjanī*, '*Sōgasugā mrdangatālamu*' in *Śrīrañjanī*, '*Svara rāga sudhārasayuta*' in *Śankarābharanam* and '*Vidulaku mrokkeda*' in *rāga Māyāmalavagaula*, which praises musicologists both divine and mortal, including Sōmēśvara and Śārngadeva.

Tyard [Thyard, Thiard], Pontus de

(*b* Château de Bissey-sur-Fley, nr Mâcon, 1521; *d* Bragny-sur-Saône, 23 Sept 1605). French poet and philosopher. He studied at Paris in 1537, was canon at Mâcon Cathedral in 1552 and, after serving Henri III as reader in

astronomy, geography, mathematics and philosophy between 1569 and 1578, became Bishop of Châlon. He was the philosopher of the Pléiade and his work reflects the Platonism and Petrarchism of Maurice Scève, his friend and mentor, and the Lyons poets. The three books of his *Erreurs amoureuses* (Lyons, 1549–54) express his love, both idealized and sensual, for his musical mistress, Pasithée (probably the Lyonese Lady Marguerite de Bourg). In *Solitaire premier, ou Prose des muses et de la fureur poétique* (Lyons, 1552; ed. S.F. Baridon, Geneva and Lille, 1950), the fire of his dialogues to instruct Pasithée in humanist philosophy (inspired by Ficino's commentary on Plato's *Banquet*), the lady enchants her admirer by singing to the lute an ode 'measured in the Italian manner'. The neo-Pythagorean and Platonic conventions of Ficino and his followers such as Leone Ebreo (whose *Dialoghi d'amore* Tyard translated in 1551) are expanded in *Solitaire second, ou Prose de la musique* (Lyons, 1555; reprinted in his *Discours philosophiques*, 1587; ed. C.M. Yandell, Geneva, 1980). This attempts to relate music to ethics, metaphysics and astrology in an encyclopedic philosophy. Most of his ideas derive from Plato's *Timaeus* as commented by Chalcidius, Ficino and Champier. Tyard may have read Aristotle's *Politics* and *Problems* directly, but the majority of his references to the Ancients (such as Pythagoras, Aristoxenes, Plutarch and others) come through the intermediaries of Boethius and Gaffurius, who provide the essence of his theoretical discourse; Glarean is acknowledged in the description of the modes. Tyard also discussed at length the Greek concept of genera, including the chromatic and enharmonic which, like Vicentino, he considered to be artificial and reserved for the learned. Tyard considered musical terminology, notation (including an original example with Greek letters), proportions, harmony and mathematical propositions; but he was more interested in the mnemonic virtues and effects of music, and so extolled its 'secret' power to move the passions, recounting a contemporary report on the marvellous effects of Francesco da Milano's lute playing on his audience – an obvious transposition of Plato's acount of Timotheus and Alexander. He was also concerned with the union of music and poetry, and thus preferred monody to polyphony. He sought to adapt rhyme, metre and melody to subject matter, but he found the French language unmusical, because it was not measured quantitatively, and thus anticipated the experiments of Baïf's Académie de Poésie et de Musique.

Six of his poems were set for four voices by Pierre Clereau and one by Antoine Cartier, but most composers found his lyric verse too esoteric and unsuitable for musical setting, just as his treatises offered little to practitioners whom he dismissed as 'vagabond singers, mercenary minstrels or ecclesiastical musicians'.

<div align="right">FRANK DOBBINS/SAMUEL AUCLAIR</div>

Tye, Christopher

(*b c*1505; *d* before 15 March 1573). English composer.

<div align="right">PAUL DOE/DAVID MATEER</div>

Tye, Christopher

1. Life.

The date and place of Tye's birth are unknown, but as he later spent much of his life in Cambridge, Ely and neighbouring parishes, he may well have been born in the eastern counties of England, where the name was common. The first certain references to him are in Cambridge: in 1536 he took the degree of BMus there, and in March 1537 became a lay clerk at King's College. The Grace for the degree mentions his ten years' study of the art of music, with much experience in composition and teaching boys. Since such documents never understated years of previous experience, Tye must have begun his adult musical career after 1525, which suggests a birthdate of about 1505 or even later.

The earlier date usually proposed is based on a probable misidentification. The account books of King's College, Cambridge, record a 'Tye' as chorister in 1508–12; and in 1527 the same name (again with no first name) occurs as that of a lay clerk, who left in April 1528. At Christmas 1528, a Richard Tye then joined the choir as a lay clerk, remaining in that post with no known break until 1545, and his first name may have been included to distinguish him from his predecessor. There is no reason to identify any of these with Christopher Tye. He left some time between Michaelmas 1537 and Michaelmas 1539; the records for the two-year period are missing.

Tye's movements after leaving King's College are uncertain. His next known appointment, as *Magister choristarum* of Ely Cathedral, may date from as early as 1541; certainly he was in position by 1543, when the earliest extant accounts record payment of his annual salary of £10. In 1545 the University of Cambridge awarded him the degree of DMus, with which he is reported to have 'incorporated' at Oxford in 1548. His career strongly suggests the influence of Dr Richard Cox, a zealous reformer of the church, who entered King's College as an undergraduate in 1519, was

made Archdeacon of Ely in 1541, and became chancellor of Oxford University in 1547. From 1544 to 1550 Cox was also tutor to the young Prince (then King) Edward, during which period he was almost certainly responsible for introducing Tye to the court. Some supporting evidence for this is found in a play *When you see me, you know me* written in 1605 by Samuel Rowley, who was probably Tye's grandson. In it, Edward addresses Tye as follows:

> I oft have heard my father [Henry VIII] merrily speake
> In your high praise, and thus his highnesse saith,
> 'England one God, one truth, one doctor hath
> For musick's art, and that is Doctor Tye,
> Admired for skill in musick's harmony'.

Elsewhere Edward calls him 'our music's lecturer'. In 1553 Tye published his metrical version of *The Actes of the Apostles*, which he dedicated to Edward with a long verse preface that implies personal friendship, but does not explicitly mention a master–pupil relationship. The title-page describes Tye as 'one of the Gentylmen of hys grace's most honourable chappell'. In the light of this it is odd that his name does not appear in the ten or so lists of Chapel Royal staff extant for the period 1545–60. Nevertheless his surviving music, and the sources into which it was copied, strongly suggest that he served there in some capacity during the 1550s, and the mandate for his livery allowance for Mary Tudor's coronation in 1553, which describes him as one of the 'gentylmen of our Chapell', indicates that he was at least an 'associate' member of that body.

It is not clear whether he retained his post at Ely throughout this period. Most of the treasurer's rolls have been lost, except that for 1547, when a payment to Tye is entered. He was still in the cathedral's employ in 1551, when his name appears first in a list of eight lay clerks. The next surviving reference to him, dated 23 May 1559, records a payment from the dean and chapter 'pro diligenti servitio … hactenus impenso', and is accompanied by a statement of Tye's duties and privileges as organist and master of the choristers. By analogy with similar documents affecting later holders of the post, this seems to imply that Tye had successfully completed a period of probation following reappointment in 1558, and that he had previously been absent for a number of years. His return to Ely was doubtless instigated by his old friend Richard Cox, who had become bishop there in 1558. Shortly afterwards, however, Tye decided to take holy orders, and Bishop Cox ordained him deacon in July 1560, and priest in November of the same year. Early in 1561 Tye resigned his position at Ely (he was succeeded by Robert White) and was appointed to one of the richest livings in the land, that of Doddington-cum-Marche in the Isle of Ely. In 1564 he also acquired, in plurality, two further livings nearby, Wilbraham Parva and Newton-cum-Capella. These were subsequently sequestrated when he neglected to pay first fruits, and he formally resigned them in 1567 and 1570 respectively. He still held Doddington on 27 August 1571, but had died by 15 March 1573, when his successor was appointed. There is no record of his death at Doddington itself, nor has his will been located.

In his first year at Doddington Tye was reported to Archbishop Parker as 'Doctor Musicae non tamen habilis ad predicandum' ('not, however, very skilful at preaching'). There is certain other evidence to suggest that he tended to neglect his parishes, but whether he continued to frequent the court after his ordination is not known. Anthony Wood, not the most reliable of chroniclers, related the following anecdote about him:

> Dr. Tye was a peevish and humoursome man, especially in his latter dayes, and sometimes playing on ye organ in ye chap.[el] of qu. Elizab. wh.[ich] contained much musick but little delight to the ear, she would send ye verger to tell him yt he play'd out of tune: whereupon he sent word yt her eares were out of Tune.

The queen's reaction to this, if it is true, is not recorded. In his later years Tye evidently did not lose his propensity for writing verse, and may even be the 'C.T.' who in 1569 produced *A Notable History of Nastagio and Trauersari*, a verse translation of a story by Boccaccio.

Though family relationships are difficult to establish with certainty, it appears that Tye's wife was named Katherine, and that they had at least three children, and possibly five or more. A son, Peter, was rector of Trinity Church, Ely. (He seems to have obtained this living by fraud, and a disparaging description of him by Bishop Cox is recorded in Strype's *Annals of the Reformation*, ii, appx i, no.51.) In 1560, in the same church, a Mary Tye married Robert Rowley: they were probably the parents of Samuel Rowley, author of the above-mentioned play. An Ellen Tye, known to be Mary's sister, married Robert White. The supposition that Mary and Ellen were Tye's daughters (and White therefore his son-in-law) is borne out by a reference in the *Commentary on Samuel II* published in 1614 by Andrew Willet, Prebendary of Ely: a long *Epistola dedicatoria* addressed to the dean and chapter lists the eminent Eleans of the preceding half-century or so, including 'D. Tyum, Whitum eius generum, Farandum [= Farrant], Foxum, Barcroftum, eiusque discipulos Iordanum, Amnerum, cum aliis'.

Tye, Christopher

2. Works.

As a composer of Latin vocal music Tye was active both before 1547 and in the reign of Mary Tudor (1553–8), but his music has suffered heavily from the loss of manuscript sources, for of 22 known works only 11 survive intact. The remainder were all substantial compositions: three lack one voice, and the other eight (probably all in six parts) are known only from single voice-parts and small extracts. The earliest was possibly the Jesus-antiphon *Ave caput Christi*, the remnants of which point to a date about 1530–35. Two of the masses are Henrician also. The five-voice mass (which lacks its tenor) is in the Peterhouse Partbooks and therefore presumably dates from before 1540, although there is no evidence for the suggestion that it was Tye's BMus exercise in 1536. It is remarkably 'modern' for its date, being in duple time with short *tripla* interpolations, mainly imitative, and flexible in vocal scoring. The *Mass 'Western Wind'*, like those of Taverner and Sheppard, is a set of contrapuntal variations on a popular tune, in a manner which has been held to suggest the influence of Luther's musical ideology during the entente of the late 1530s. The three

composers may have worked in close association around 1540, although it is not known where: it is perhaps significant that both Tye and Sheppard took up new appointments in 1543. In the same source as this mass, the Gyffard Partbooks, are five other short four-voice pieces attributed to Tye.

In Mary Tudor's reign it seems that the Henrician votive antiphon was largely replaced by Latin psalm settings, which however retained the traditional antiphon structure. Tye's setting of *Miserere mei, Deus*, for example, is in two halves, one in triple and one in duple time, each constructed on a large scale, using blocks of reduced and then full texture to achieve formal effect. This pattern was also followed in *Domine Deus*, an antiphon-like prayer which refers to Mary Tudor's 'gubernacula huius regni … Catholica fide et religione restauranda'. Much of this music seems almost deliberately archaic, and some, such as the *Magnificat* settings, may indeed be older. Three works of this period are, however, much more 'up to date' in style, wholly in duple time, and highly accomplished essays in continental motet techniques. They are the two psalms *Omnes gentes, plaudite* and *Cantate Domino*, and the fine six-voice *Mass 'Euge bone'*, whose title perhaps indicates a parody of a lost antiphon. There are, rather curiously, no festal responds or hymns by Tye, although the profusion of In Nomine settings indicates that he had no aversion to cantus-firmus technique as such.

It is probable that all Tye's extant church music to English texts was written during the reign of Edward VI. The most modern work (on stylistic grounds) is the *Mass 'Euge bone'*, which he would not have composed while an Anglican parish priest in the time of Queen Elizabeth. Any Anglican music that he did compose would probably have been for Ely Cathedral, but no music by him for this repertory survives. The range of extant sources for his Anglican music tends to confirm that it was all Edwardian. It comprises anthems and Service music, of which the latter category is negligible: the Evening Service is apparently derived from a Morning Service by Parsley (and may even be by him), and only the unpretentious third *Nunc dimittis* has no rival claimant. The 15 extant anthems, however, are more varied in scale and method than those of any other early composer, even Tallis or Sheppard. One of the simplest is the offertory *Give alms of thy goods*, which is imitative and repeats some text, but has no melisma whatever. Two others, *Save me, O God* and *Deliver us, good Lord*, make use of the familiar early-anthem pattern of chordal opening followed by formal, syllabic imitation. Such is their studied restraint that the music in no way reflects the sense of the text, not even at the words 'In that dreadful day when the heavens and the earth shall be moved'. A few anthems make some obvious musical reference to their text; in *O God, be merciful* there is a florid melisma for the word 'glad' in 'rejoice and be glad', and a long rising scale opens *From the depth I called on thee*.

The longer anthems are musically more resourceful and substantial, sometimes dividing into two halves. They include *I have loved, My trust, O Lord* (a metrical version of Psalm xxxi, probably made by Tye himself), and *Praise ye the Lord*, which builds up to an impressive ending for the words 'to be a joyful mother of children', followed by a florid 'So be it' in place of 'Amen'. *I will exalt thee* is structurally interesting in that it divides up into eight sections each of which is repeated in some form (possibly for decani-

cantoris antiphony) making about 130 'bars' in all: its different procedures and textures include virtually all those used by early anthem composers. The most sumptuous of all the anthems is the six-voice *Christ rising*, whose sole (17th-century) source is liberally supplied with clashing accidentals that may or may not represent Tye's own intentions.

In *The Actes of the Apostles*, which is for didactic and recreational rather than church use, Tye again revealed the current taste for presenting biblical text in metrical form with simple four-voice musical settings, in this case the first 14 chapters of *Acts* with a double-common-metre 'tune' for each. The literary quality seems low, but the tunes are neatly turned, mostly concealing their four-square structures by means of one or more sets of imitative entries. In later centuries they were adapted into many simple anthems and partsongs, and also one hymn tune ('Gethsemane').

Tye was evidently a keyboard player, for by 1559 he was acting as organist at Ely Cathedral as well as *Magister choristarum*; but if he composed for the instrument, not a trace of the music has survived. He is, conversely, by far the best-represented composer of consort music of this period, which suggests that he must himself have been an enthusiastic viol player in the court circle of musicians. The great majority of pieces are five-part In Nomine settings, with curious enigmatic titles in the tradition of earlier Italian pieces for viols (e.g. *La stangetta* in Petrucci's *Odhecaton A*). Some are straightforwardly vocal in style, while others have angular or florid lines, or rapid repeated notes as in *Crye*. One or two even experiment with eccentric metres such as 5/4 (*Trust*) or present the cantus firmus in a different metre from that of the other parts (*Howld fast*).

Tye was clearly a composer of great talent, who could readily master the latest continental techniques in the 1530s, formulate new genres for the Anglican Church, and develop the In Nomine in an individual way. But he was fluent only within well-defined limits, for certain types of imitative and other procedures constantly recur in his music, which thus assumes a professional but slightly routine quality, lacking the rugged freshness and insularity of Sheppard, or the quiet poetic mastery of his exact contemporary, Tallis. The scant evidence of his character suggests that he was perhaps an opportunist, who liked life at the court, was not prepared to carry his Protestant principles to the extent of sharing the Marian exile of his patron, Cox, and who finally adopted the priesthood as a means of easy retirement rather than as a vocation.

Tyes, J. [?John]

(*fl c*1400). English composer. The old layer of the Old Hall Manuscript transmits a Gloria and Sanctus by him (ed. in CMM, xlvi, 1969–72; nos.19 and 122). The three-part Gloria is isorhythmic in all parts, with mensural

changes within sections; the text alternates between the upper parts. The Sanctus is a four-part setting of the Sarum 5 chant.

He is probably identifiable with the John Tyes who was a secular *organista* at Westminster Abbey in 1399/1400, one of seven lay singers who constituted the Lady Chapel choir; his duties may have included playing the organ and singing polyphony. The royal connection at Westminster might have provided a direct route into the repertory of the Old Hall Manuscript. From 1402 Tyes was contracted for 20 years at Winchester Cathedral Priory to sing and play the organ in the daily Mass, and to teach chant to up to four boys of the Priory. He was also to sing in the main monastic choir on festivals when polyphony was used.

MARGARET BENT

Tyler, James

(*b* Hartford, CT, 3 Aug 1940). American lutenist, cittern and viol player. He studied at the Hartt College of Music, Hartford, and privately with the lutenist Joseph Iadone. In 1962 he made his début with the New York Pro Musica, and after playing with various early music groups in the USA and with the Studio der Frühen Musik in Munich he moved to Britain in 1969. That year he joined the Early Music Consort of London and Musica Reservata, and with Anthony Rooley formed the Consort of Musicke, of which he was co-director until 1972. His performances of lute duets with Rooley were highly praised, not least for the interplay of their differing personalities and styles. In 1974 he joined the Julian Bream Consort. Tyler also formed a quintet (Tyler playing the banjo, with piano, guitar, bass fiddle and tenor horn) to perform ragtime; the New Excelsior Speaking Machine made its début in 1975 with a programme of original and arranged works (Scott Joplin, Rachmaninoff). In 1976 Tyler formed the London Early Music Group, an ensemble specializing in Renaissance music. Tyler's bold and exuberant playing makes him an exciting soloist and distinguishes his contribution to the various groups with which he plays. He has edited Gasparo Zanetti's *Il scolaro* (London, 1984), while his various writings on music for early plucked instruments show a fastidious approach to detail and an enthusiasm for neglected repertories. He has also composed and arranged music for several BBC television productions. In 1986 he became professor and director of the early music programme at the University of Southern California, Los Angeles.

DAVID SCOTT/R

Tyling

(*fl c*1450–75). Composer, probably Netherlandish. A three-part arrangement by him of the Dutch song *T'andernaken* survives in *I-TRmp* 87. It appears to be written for wind instruments, with the tune in the tenor and a florid 'trebulus'. There are similar textless pieces in the same handwriting added on other nearby leaves in the manuscript: one of these bears the initial 'T' and may also be Tyling. Disertori and, following him, Hamm, believed that all these compositions are English.

BRIAN TROWELL

Tylkowski, Wojciech

(*b* 1624 or 1629; *d* ? Vilnius or Warsaw, 14 Jan 1695). Polish philosopher. He was a Jesuit connected mainly with the colleges at Vilnius (intermittently from 1646 to 1694) and also with those at Braunsberg (now Braniewo), Płock and Warsaw. From 1670 to 1674 he lived in Rome. In his numerous writings he followed the traditions and models of the Roman school of Aristotelian Jesuits. They were very interested in music from the point of view of philosophical speculation, and he discussed music in two of his works. In *Arithmetica curiosa* (Kraków, 1668) he presented the proportions and relationships of harmonics. His main work is *Philosophia curiosa* (Kraków, 1669, enlarged 2/1680–90). It is divided into five parts; he treated musical matters in part ii, 'Physica curiosa' (Pythagorean connections between music and astronomy, and intervallic relationships

based on the monochord), and in part iv, 'De anima' (the existence and behaviour of sound, the anatomy of the ear and the aural imagination).

MIROSŁAW PERZ

Tympanon

(Fr.).

See Dulcimer.

Tympanum [tymbal]

(Lat., from Gk. *tumpanon*).

Ancient hand drum (a Membranophone). Approximately 30 cm in diameter, it consisted of a rim of metal or wood covered on both sides by a skin membrane. It is usually shown held in the left hand being struck by the fingertips of the right. Normally it was associated with the orgiastic cults of Dionysus and Cybele where it appeared almost invariably with the Aulos. The absence of any reference to it in Homer or the Archaic lyric poets, and its sudden appearance in the art and literature of the 5th century bce, have prompted the suggestion that it came to Greece from Asia Minor in that century with the cult of Cybele and spread thence to the cult of Dionysus; nevertheless, it may only have become more prominent then, since the almost universal appearance of hand drums and pipes in orgiastic cults might speak for its usage in the Dionysian cult of pre-classical Greece.

The use of the instrument certainly increased as the Asiatic cults became more popular. Livy described its ecstatic function in the cult of Dionysus at Rome, and the introduction of the worship of Cybele to Rome in 204 bce furthered its employment. There are many Roman literary references and pictorial representations, which usually refer to this cult usage. The popularity of the mime from late republican times also extended its use. Interludes of dance and song sometimes supplemented the acting of the *mimi* and among the instruments featured were tympana.

<div align="right">JAMES W. McKINNON/ROBERT ANDERSON</div>

Typophone.

A precursor of the Celesta.

Typp, W.

(*fl c*1410). English composer. The combination of an initial and an uncommon name permit some confidence in accepting Harrison's identification with the Fotheringhay precentor of 1438 (*HarrisonMMB*). In addition, a William Tippe can be traced as a Fellow of Corpus Christi College, Cambridge, between 1408 and 1414. He is one of the better-represented composers of the old layer of the Old Hall Manuscript, though his music is not known from other sources. All but one of his pieces are unpretentious but shapely descant settings notated in score, with considerable use of migration and *divisi* notes. The three-part isorhythmic Credo has three tenor statements in successive diminution and three taleae to each color.

Fallows (*A Catalogue of Polyphonic Songs, 1415–1480*, Oxford, 1999) reported that a further Agnus Dei (no.128; erased) bore an ascription to Typp, but it seems probable that the attribution was in fact to Aleyn as reported in Bent (*The Old Hall Manuscript: a Paleographical Study*, diss. U. of Cambridge, 1969).

Tyranny, 'Blue' Gene [Sheff, Robert]

(*b* San Antonio, TX, 1 Jan 1945). American composer and keyboard player. In the late 1950s he studied the piano with Meta Hertwig and Rodney Hoare, harmony and orchestration with Otto Wick and composition with Frank Hughes. With the composer Philip Krumm he gave several concerts at San Antonio's McNay Art Institute, sometimes giving the first performances of works by Cage, Maxfield and Corner, as well as his and Krumm's music; in other concerts he played Bartók, Satie, Webern, Schoenberg, Ives, Yoko Ono and La Monte Young. He won a BMI Student Composers award in 1961 and went to Ann Arbor, Michigan, where he rejoined Krumm and joined the ONCE group. In the 1960s and 70s, besides composing his own electronic and graph-score music, he also toured with numerous jazz and rock groups, including Carla Bley and Iggy Pop, with whose band he began using the stage name 'Blue' Gene Tyranny. At Mills College he taught music history, theory and recording-studio techniques (1971–82), and in 1976 began collaborating on Robert Ashley's landmark video opera, *Perfect Lives (Private Parts)* (1976–83).

His renown as an improvising pianist took off with the 1982 release of *The Intermediary* (1981), which included electronic reinventions of his playing. Since then he has performed internationally, combining spontaneous pianism with interactive electronics. He has composed music for dances (by Timothy Buckley, Stefa Zawerucha and Trisha Brown), plays (by Pat Oleszko and the Otrabanda Company) and videos (by Kit Fitzgerald and Kenn Beckman); like some of his other work, these scores use pop materials for the non-pop purpose of investigating the dynamics of spirit and events. In the 1990s, along with writing such commissions for pianists as *The De-Certified Highway of Dreams* (1991) and *The Drifter* (1994), he has developed the music-theatre work *The Driver's Son* (1990–99), which he describes as an 'audio storyboard'.

COLE GAGNE

Tyrolienne

(Fr.: 'Tyrolese', 'Tyrolean').

A fast triple-metre dance and song type, considered a modified form of Ländler. The name was first used in English to refer to fashionable ballet music of the early 19th century that attempted to represent the dances of Austrian and Bavarian peasants, whence it was adopted as an evocative title for pedagogical piano pieces; 'tyrolienne' was also applied to 19th-century vocal pieces intended to imitate Alpine folk music.

Tyrolese music was very popular in both England and the USA in the first half of the 19th century, partly because of the clamorous success of touring groups of Swiss and Austrian singers. The Rainer family were probably the first such group to achieve international fame. Their first visit to England, in 1827, prompted the publication of two volumes of songs from their repertory arranged by Ignaz Moscheles (*The Tyrolese Melodies,* London, 1827–9; a third volume contains a biography of the Rainers), and it apparently stimulated a constant popular demand in London for performances by similar groups (e.g. the brothers Dengg, the Steyrische Alpensänger, the Family Leo). The Rainers' North American tours began with an appearance in Boston in 1839, and stimulated the nascent vogue for itinerant singing families like the Hutchinsons (*see* Hutchinson), virtually all of whom subsequently included 'Alpine' or 'Tyrolean' songs in their programmes. The 'Tyrolean Business' was frequently introduced as a part of minstrel shows in the 1850s. Vocal tyroliennes, characterized by sentimental or pastoral texts, triple metre, waltz-like rhythms, triadic melodies, harmonies in parallel 3rds, and echo and yodel effects, proliferated in mid-19th-century sheet music on both sides of the Atlantic.

Moscheles arranged three of the Rainers' tunes for piano; another, *Der Schweizbub,* derives from the theme of Chopin's Introduction and Variations in E major on a German National Air (1826). The chorus 'A nos chants viens mêler tes pas' in Act 3 of Rossini's *Guillaume Tell*, called a 'choeur tyrolienne' in some editions, is probably the best-known example in art music. (H. Nathan: 'The Tyrolean Family Rainer, and the Vogue of Singing Mountain Troupes in Europe and America', *MQ*, xxxii (1946), 63–79)

Tyrrell, Agnes

(*b* Brno, 20 Sept 1846; *d* Brno, 18 April 1883). Moravian composer and pianist of English origin. She was the daughter of Henry Tyrrell, an English language-teacher who had established himself among the German-speaking community in Brno. She studied the piano at the Vienna Conservatory (1862) and composition with Otto Ritzler, the director of the Brno Musikverein. Her frail health prevented an active career as a pianist, though she gave some concerts; instead she devoted herself to composition, encouraged by Count Haugwitz of Náměšť, whom she visited in 1867, and Liszt, who in 1874 praised her piano studies, suggesting some alternative fingerings. These and other piano pieces were published in Vienna; she also wrote songs (some to English texts), choruses, an opera and some orchestral music. Her most adventurous compositions are her choruses, though her piano pieces show Liszt's influence, a rare occurrence in 19th-century Moravia.

WORKS

MSS in CZ-Bm, including letters and other documents

Stage: Bertran de Born (op, 2, F. Keim, after L. Uhland), unperf.
Vocal: Die Könige in Israel (orat), inc.: 20 choruses; 70 songs
Orch: Sym., C, 1875; 2 ov; Mazurka, op.16
Other inst: Str Qt; 12 Grosse Studien, pf, op.48 (Vienna, *c*1874); 2 sonatas, pf, opp.10 and 66; many miscellaneous pieces, pf

JOHN TYRRELL

Tyrrell, John

(*b* Salisbury, Southern Rhodesia [now Harare, Zimbabwe], 17 Aug 1942). British musicologist. He studied at the University of Cape Town (BMus 1963) and at Oxford, where he took the doctorate in 1969 with a dissertation on Janáček's stylistic development as an operatic composer. He served as associate editor of *Musical Times* and worked on the editorial staff of *The New Grove Dictionary of Music and Musicians* before becoming lecturer at Nottingham University (1976; Reader in Opera Studies, 1989; British Academy Research Fellow in the Humanities, 1992–4; professor, 1996–7). In 1996 he became deputy editor of *The New Grove Dictionary of Music and Musicians* and in the following year was appointed executive editor. He was appointed professorial research fellow at Cardiff University in 2000.

Tyrrell's main research interest is Czech music, particularly Janáček and his operas, and he has done more than any other writer in this area to inform English-speaking scholars, students and audiences, through his lucid and informative writings and translations of key documentary sources. With Charles Mackerras he has produced definitive editions of *Jenůfa* (1996) and *From the House of the Dead* (forthcoming).

<div align="right">ROSEMARY WILLIAMSON</div>

Tyson, Alan (Walker)

(*b* Glasgow, 27 Oct 1926). British musicologist. He was educated at Rugby
School and Magdalen College, Oxford, where he read *literae humaniores*
(1947–51). In 1952 he was elected a Fellow of All Souls College, Oxford,
becoming a senior research fellow in 1971; in 1969 he was visiting
professor at Columbia University, New York, and in 1973–4 Lyell Reader in
bibliography at the University of Oxford. In 1977–8 he was visiting
professor at the University of California at Berkeley and in 1983–4 he was
a member of the Institute for Advanced Study at Princeton University.
Earlier he had studied psychoanalysis and medicine, qualifying in 1965; he
was one of the translators of the Standard Edition of Freud's works. During
his years of medical studies he produced a large number of musicological
writings, mostly on Beethoven, relating in particular to textual and
bibliographical questions: much of this work was drawn together in *The
Authentic English Editions of Beethoven* (1963), in which the priority of
certain English editions, hitherto neglected by Beethoven scholarship, was
established. His interests lay mainly in the bibliographical side of
musicological research, including matters of authenticity, music printing
and publishing, dating, watermarks and copying, in the period 1770–1850,
centring first on Beethoven and later on Mozart but also touching
considerably on Haydn, Clementi, Field and others. He particularly threw
light on Beethoven's creative methods, as seen in his sketches, and on the
ways in which his music was disseminated. His pioneering series of articles
on the chronology of Mozart's later works through paper studies of the
autograph scores was gathered together in book form in 1987 and his
catalogue of papers that Mozart used, based on rastrology and
watermarks, was published as a supplementary volume to the Neue
Mozart-Ausgabe five years later. Tyson's writings, which include numerous
reviews (mostly in the *Musical Times*), are distinguished by their clear and
precise expression and the elegant logic of their deduction. A Festschrift in
his honour appeared in 1998.

STANLEY SADIE

Tyulin, Yury Nikolayevich

(*b* Reval [now Tallinn], 14/26 Dec 1893; *d* Moscow, 8 May 1978). Russian musicologist, theoretician and composer. He studied mathematics (later switching to law) at St Petersburg University (1912–17); at the same time he attended the St Petersburg Conservatory, where he studied with Kalafati, Sokolov and Tcherepnin. He was awarded the doctorate from the Conservatory in 1937 for his dissertation on harmony. From 1921 he lectured at the Institute for the History of the Arts, with which he was periodically associated as a scientific officer until 1958, and worked at the Experimental Monumental Studio Theatre (Mamont) attached to the State Academic Theatre (Mariinsky). He taught at the Leningrad State Conservatory (1925–67), the Tashkent Conservatory (1948–50), the Gnesin State Institute for Musical Education (1970–75) and the Moscow Conservatory (1971–8).

Tyulin became known particularly for his innovatory theory of harmony, which he described as 'a logically differentiated system of the qualitative interrelation of tones' and in which he regarded mode as the basis of all musical thought. Based on psychophysiology and acoustics, Tyulin saw mode as a multi-level and historically mobile system of direct communication, characterized by the unity of functional organization of all levels and components. For him, the system, with its origins in *Intonatsiya* (intonation), made up the basis of musical communication; the principles of the theory are expounded in his dissertation.

Tyulin advanced ideas on the main and variable functions of harmonic verticals and the 'phonism' of chords and intervals, and addressed problems in the genesis of contemporary harmony. He worked on the differentiation of the levels of musical form and musical speech, the functionality of form and the variability of its functions. He also made a significant contribution to developing the theory of traditional cultures (Russia, Armenia, Georgia, Uzbekistan, Kazakhstan, Lithuania). He proposed a new solution to the problem of pitch in folksongs, putting forward the thesis of 'the qualitative stability' of the interval when there is variability of intonation.

As a teacher, Tyulin responded to the need for reform in the education of musicians prevalent at the Leningrad Conservatory in the mid-1920s. He joined a group of theoreticians centred on Shcherbachyov, whose aim was to renew the theoretical courses, bringing them closer to real artistic practice, broadening the scientific basis and creating a new method of teaching that overcame the utilitarian and applied notion of music theory.

Tyulin's compositions follow the St Petersburg school of music of Stravinsky and especially Prokofiev. His works reflect contemporary trends: a passion for symbolist poetry in *Poéma* ('Poem' for voice and orchestra on poems by Bal'mont, op.7, 1922); an experiment in dynamic motor rhythms

in the Piano Sonata no.3 (1923) and a tribute to modernism in the piano piece *De profundis* (1924), with its wealth of polyrhythms and polytonality.

Tzamen [Aquanus], Thomas

(*fl* Aachen, 1508). German composer. He is known for one motet for three voices, *Domine Jesu Christe,* printed in Glarean's *Dodecachordon* (Basle, 1547). Adam Luyr, a former pupil of Tzamen, gave it to Glarean when the latter was studying at the University of Cologne. It also appears as a textless piece in Aegidius Tschudi's songbook (*CH-SGs* 463, no.8). Eitner, not realizing that the same composer and composition were involved, listed Tzamen and Aquanus as separate composers.
